F

FÆENZA, the ancient *Faventia*, an episcopal town of the Papal States, in the province of Ravenna, is situated in a well-cultivated plain watered by the Lamone, 20 miles S.W. from Ravenna, and has a population of about 20,000. The Zanelli Canal runs from the Lamone at Faenza to the southernmost arm of the Po. Faenza is a well-built modern-looking town, surrounded by walls, and further defended by a citadel. The streets are regular; there are a fine market-place surrounded by arcades, many palaces, churches rich in paintings, several convents, a fine bridge on the Lamone, a theatre, and a lyceum. The town has also a school of paintings, a college, an hospital, and lunatic and orphan asylums. There are several manufactures of glazed and coloured earthenware, which is called 'majolica' in Italy, and 'faience' in France, where it was introduced from Faenza. There are also manufactures for spinning and weaving silk, some paper mills, and a considerable trade by the Zanelli Canal.

Faventia was anciently a town of the Boii, and afterwards a municipality under the Romans. It was near Faventia that Sulla defeated the consul Carbo and drove him out of Italy. (Livy, 'Epitome,' 88.) The town was afterwards ruined by the Goths, and restored under the Exarcha; but its walls were not raised until A.D. 1286. It was then for some time subject to the Bolognese, but was afterwards ruled by the house of Manfredi to the end of the 15th century, when it was seized by Pope Alexander VI., and has since been annexed to the States of the Church.

FAÏOUM, a province of Egypt, to the west of the Libyan ridge, which bounds the Valley of the Nile on the west. About 12 miles N.W. from Benisouef there is a depression in the ridge six miles in length, which leads to the plain of the Faïoum. This plain is of a circular form, about 40 miles from east to west, and about 30 miles from north to south. The northern and north-western part of it is occupied by the lake called Birket-el-Keroun. A range of naked rocks bounds the lake to the north, and joins towards the east the Libyan range, which skirts the Valley of the Nile. To the west and south the plain is bounded by lower hills which divide it from the Libyan Desert. It forms in fact a basin with only one opening or outlet on the eastern side towards the Nile. The Bahr-Yussouf, or Great Canal, which runs parallel to the Nile and skirts the Libyan ridge, on arriving at the gap above mentioned, at a village called Howarah Illahoun, turns to the west, passing under a bridge of three arches, through which the water flows and forms a fall of about three feet at low water. It then runs along the valley, and on reaching the entrance of the Faïoum, at the village of Howarah-el-Soghair, a wide cut branches off from it to the right, running first north and then north-west, and passing by Tamieh meets the north-east extremity of the lake. About two miles below Howarah-el-Soghair another deep ravine opens to the south, and then turning south-west passes by Nezeh, and enters the south-west part of the lake. Between these two branches the cultivated part of the Faïoum is contained. But these two cuts have been long dyked across at their beginning, in order to economize the water of the Nile, which owing to the rising of the bed of the Bahr-Yussouf flows less copiously than formerly. Only a small part of the water finds its way to the lake by the Tamieh and Nezeh cuts. The main stream continues its course westward

towards the middle of the plain and the town of Medinet-el-Faïoum, the capital of the province. Here the water becomes distributed into a multitude of small canals for irrigation, which spread in every direction through the central part of the plain, and which are the cause of its extraordinary fertility, for the Bahr-Yussouf contains water all the year round. But that fertility exists only within the range of the canals. All the part west of Nezeh is arid and sandy, and only inhabited by a few nomad Arabs, though it bears the traces of former cultivation. The strip of land which borders the Lake Keroun is low and marshy, marking the original basin of the lake, which is separated from the cultivated lands by a considerable rise all along. The lake is described under **BIRKET-EL-KEROUN**. It is calculated that the land susceptible of cultivation in the Faïoum is about 450 square miles, of which hardly one-half is now cultivated. The villages, which are said to have been at one time above 300, are now reduced to less than 70. Still the cultivated part is superior in fertility to every other province of Egypt, from which it differs in the greater variety of its products and the better appearance of its villages. In addition to corn, cotton, and the other cultivated plants, it produces an abundance of apricots, figs, grapes, olives, and other fruit-trees, which thrive here better than in the Valley of the Nile. A vast quantity of roses also grow in the Faïoum, and this district is celebrated for the manufacture of rose-water, which is sold at Cairo and all over Egypt for the use of the wealthy.

The province is the ancient Arsinoite Nome. The remains of antiquities in the Faïoum are few. Two pyramids of baked bricks about 70 feet high stand at the entrance of the valley, one near Howarah Illahoun, and the other near Howarah-el-Soghair. There is an obelisk of red granite 43 feet high, with a circular top, and sculptured with numerous hieroglyphics, near the village of Bijige, a few miles south of Medinet-el-Faïoum. Near Medinet-el-Faïoum are also some remains of the ancient Arsinoë or Crocodilopolis, consisting of fragments of granite columns and statues. At Kasr-Keroun, near the south-west extremity of the lake, is a temple 94 feet by 63 and about 40 feet high, which contains 14 chambers, and appears to be of the Roman period. On the north-west bank of the lake, at a place called Denay, a raised pavement or cromes, about 1300 feet in length, leads to a building, partly of stone and partly of brick, 109 feet by 67, divided into several apartments and surrounded by an outer wall of crude brick, 370 feet by 270. This is supposed to be the site of the ancient Dionysias. Further to the east, but on the same bank of the lake, at a place called Kom-Waseem-el-Hogar, are the ruins of Barchis. The direction of the principal streets and the plans of many of the houses may be distinctly traced. The site of the ancient labyrinth has not yet been ascertained. At Fedmin-el-Kunois, or 'the place of churches' in Coptic, near the south-east bank of the lake, are some remains of early Christian monuments.

The mountains along the north bank of the Lake Keroun, on which the rains fall annually, are said to contain salt, and to this circumstance the saltiness of the waters of the lake is attributed by some. [**BIRKET-EL-KEROUN**.]

South of the Faïoum there is an opening through the ridge of low hills leading into a smaller circular plain or basin, with a small lake

called Birket-el-Garaq, which has one or two hamlets on its banks. A small stream from the Bahr-Yussouf runs into it. The road-track of the caravans to the smaller oasis passes through this place.

(*Description de l'Égypte*; Belzoni; Wilkinson, *Topography of Thebes*; *Handbook of Egypt*.)

FAIRFORD. [GLOUCESTERSHIRE.]

FAITH, ST., HORSHAM, Norfolk, a village, and the seat of a Poor-Law Union, in the parish of Horsham St. Faith, and hundred of Taverham, is situated 52° 42' N. lat., 1° 17' W. long., distant 4 miles N. from Norwich, and 112 miles N.E. by N. from London. The population of the consolidated parish of Horsham St. Faith and Newton St. Faith in 1851 was 1211, inclusive of 123 inmates of the Union workhouse. The living is a perpetual curacy in the arch-deaconry and diocese of Norwich. St. Faith Poor-Law Union contains 30 parishes, with an area of 47,851 acres, and a population in 1851 of 11,891.

FAKENHAM. [NORFOLK.]

FALAISE. [CALVADOS.]

FALKINGHAM. [LINCOLNSHIRE.]

FALKIRK, Stirling-shire, Scotland, a market-town and parliamentary burgh, in the parish of Falkirk, is situated on rising ground, near the right bank of the river Forth, in 56° 1' N. lat., 3° 4' W. long., distant 12 miles S. by E. from Stirling, 24 miles W. by N. from Edinburgh by road, and 25½ miles by the Edinburgh and Glasgow railway. The population of the burgh in 1851 was 8752. It is governed by a provost and 11 councillors, three of whom are bailies; and jointly with Airdrie, Hamilton, Lanark, and Linlithgow, returns one member to the Imperial Parliament.

Falkirk is in a wealthy and populous district, in the midst of collieries and manufactories, and is the chief town in the eastern part of Stirlingshire. The town consists chiefly of one street, called the High-street, which is upwards of half a mile long. The town-house is situated in the middle of this street. The parish church, a recently erected building, has a fine steeple 130 feet in height. Besides the parish church, there are chapels for Free Church and United Presbyterians, Independents, and Roman Catholics. On each side of the High-street narrow streets of old houses branch off, one of which extends upwards of a mile towards Carron, passing through the villages of Bainsford and Grahamstown. Falkirk is lighted with gas.

The iron-works at Carron, 2 miles N. from Falkirk, are the largest in Scotland. The Falkirk iron-works are also extensive, and besides these, there is a small foundry on the banks of the Forth and Clyde Canal. There are manufactories of pyroligneous acid, of naphtha, and of potash and alum. Coal is extensively wrought in the neighbourhood. There are three tanneries. The ordinary market-days are Thursday and Saturday. The Falkirk 'trysts,' or cattle fairs, are held three times a year, when black cattle, principally for the English markets, sheep and horses, are sold in very large numbers. These have long been the largest cattle-markets in Scotland. Two excellent school-houses and residences for teachers were erected a few years since. There are a savings bank, a school of arts, and a horticultural society.

Falkirk was formerly a burgh of barony, held of the family of Livingstone till the attainder, in 1715, of the earl of Linlithgow and Callander, by whose forfeiture his superiority vested in the crown. A part of the Roman wall, known by the name of 'Graham's Dyke,' still exists in the neighbourhood.

(*New Statistical Account of Scotland*; *Communication from Falkirk*.)

FALKLAND ISLANDS, a colonial settlement belonging to Great Britain, situated between 51° and 53° S. lat., 57° and 62° W. long., about 300 miles E. from the entrance to the Strait of Magellan. They form a group of islands in the Southern Atlantic, consisting of two principal islands, East Falkland and West Falkland, with a considerable number of smaller islands clustered around them and in the strait between them. East Falkland is about 90 miles long, and on average 40 miles wide; West Falkland is about 80 miles long, with a mean width of about 25 miles. They are separated from each other by Falkland Sound. The smaller islands, about 200 in number, vary considerably, from 16 miles in length and 8 miles in width, to mere islets of half a mile in diameter. East Falkland is computed to contain 3000 square miles; West Falkland is estimated at 2000 square miles. If the adjacent islands are added, the whole group may be estimated to contain about 6000 square miles.

Coasts.—The coast-line is very irregular, and the whole group is deeply indented by sounds, bays, harbours, creeks, and inlets. On West Falkland and some small islands near it, there are high precipitous cliffs in a few places exposed to the western seas; but other places are low, especially the southern portions of East Falkland.

Surface and Soil.—Very little is known of West Falkland, and it is entirely uninhabited. It is said to possess a finer climate than East Falkland; and it has several excellent harbours. At certain seasons it is visited by whalers and sealers (chiefly Americans), and by vessels in quest of guano. The average height of it appears to be greater than that of East Falkland, though the highest hills seem to be in the last-mentioned island. A chain of high hills, called the Wickham Heights, runs across East Falkland in a due east and west direction from Port William to Port Sussex on Falkland Sound. Mount Osborne, near Port Sussex, is 2300 feet above the sea; the

other hills vary in height from 800 to 2000 feet. They consist chiefly of quartz rock, which is extremely rugged at the summits, where it sometimes assumes the most wild and fantastic forms. The country north of the Wickham Heights has a hilly surface, and at several places these hills rise to some hundred feet above the general level. That portion of the island which lies south of the Wickham Hills may be considered as a level plain, gently declining towards the southern shores. In some parts of the island the bottoms of the valleys are covered by great angular fragments of quartz rock. The blocks vary in size from that of a man's chest to ten or twenty times as large. They do not occur in irregular masses, but are spread out in level sheets or great streams. These streams of stones vary from 100 feet to a mile in width.

A view of the country from one of the heights is extremely dismal. Moorland and black bog extend as far as eye can discern, intersected by numerous streams and pools of yellowish-brown water. The soil is generally peat, from 1 foot to 10 feet in depth, and below it is a stiff clay. In some parts however there are considerable tracts of dry gravelly land, without peat. The peaty land produces the heaviest growth of grass, but the cattle seem to prefer feeding on the shorter grass of the gravelly soils.

In all cases where the peaty soil has become mingled with the sub-soil, as in the bottoms of many of the valleys, by the sides of the streams, and almost always at the mouths of the streams, the soil is of the richest quality, and the grasses are remarkably thick and verdant. This kind of soil abounds south of the Wickham Heights.

Rivers and Lakes.—There are few rivers. The San Carlos is the largest. It winds very much, and is only about 30 miles in length, and navigable for boats about 8 miles from its mouth. There are however numerous springs and rivulets, and also many fresh-water lakes or ponds, varying in size from 30 yards to 3 or 4 miles in circumference.

Climate.—The climate resembles that of England, but is more equable; the summers are not so hot and the winters not so cold. The mean temperature of the year is about 47° Fahr. The summer temperature ranges between 45° and 70° Fahr.; the winter between 30° and 50° Fahr. The ice in winter seldom exceeds half an inch in thickness, and the snow is rarely more than ankle deep, and remains a very short time upon the lower lands. Occasionally snow-storms of great severity are experienced, in which many cattle are destroyed. Light passing showers are frequent, but a day of constant rain seldom occurs. The prevalent direction of the wind is west, shifting between north-west and south-west. Easterly winds are very rare. Northerly winds are more frequent, and they bring gloomy damp weather. The westerly winds commonly commence at nine o'clock, blow with a force frequently bordering on a gale through the day, and die away about four or five o'clock in the afternoon. The nights are generally calm, and the contrast of the bright and still mornings and calm evenings with the stormy mid-day is very striking.

Productions.—There are no trees in these islands; but there are three or four different kinds of bushes. The grasses, which at present are the most important production, are generally long and coarse, but they possess very nourishing qualities. One of them, called Tussock, has especially attracted the attention of naturalists and graziers. It is a gigantic sedgy grass of the genus *Carex*, and covers the great mosses. It is becoming scarce, in consequence of the great numbers of cattle which have fed upon it. Another grass of very nutritious quality, the *Arundo alopecurus*, is distributed over the country, and the wild cattle freely use it. Turnips and the common vegetables grown in England grow exceedingly well in sheltered situations. In 1850 there were 10 acres of ground laid out in garden cultivation; in 1851 there were 18 acres so laid out. Barley and oats have been cultivated successfully. The soil is not favourable to the production of wheat.

There are few indigenous animals. The only quadruped is the warrah, or wolf-fox, a peculiar species confined to this archipelago. It is about the size of an English hound, but slender, with long legs. The other animals which are found in a wild state have been brought there with the intention of being left, or remained when the European settlements were broken up. The most important are the wild cattle, the number of which in East Falkland is estimated at from 35,000 to 40,000. A small breed of wild horses is found on East Falkland, north of Wickham Heights. Mr. Lafone landed a large number of tame horses from Patagonia. Some were subsequently imported from Rio Negro; these are serviceable, sure-footed beasts, said to be worth from 8*l.* to 12*l.* each. Sheep thrive, but the quantity of pasture suitable for them is not large, and their number does not exceed 3000. Within the last two or three years a considerable extent of land has been inclosed for the grazing and domestication of sheep and cattle. Wild hogs abound on one of the islands. Rabbits are found in large numbers on the island generally. The peat, which occurs almost everywhere in the low grounds, affords excellent fuel. Hair-seals and fur-seals were formerly abundant about these islands, but they have decreased in number. Black whales are numerous in the sea west of West Falkland, where many American and French vessels are employed in taking them. The supply of fish is abundant, and there are plenty of swans, geese, ducks, and other wild fowl.

Commerce.—The commerce is small. The imports consist of timber,

lime, bricks, flour, sugar, coffee, and British manufactured goods; the exports consist of hides, tallow, salted beef, seal-skins, and a few barrels of fish-oil. Governor Rennie estimated the total imports in 1851 at 17,000*l.*, and the total exports at 8000*l.* The fisheries have been of late attracting the attention of the colonists. Guano is expected to form a small article of export. It is obtained in considerable quantities on West Falkland Island.

Government.—The chief objects of the British government in maintaining an establishment on the Falkland Islands are the advantages which they offer in affording water, fresh meat, and refreshment to the crews of vessels passing and repassing them in their voyages round Cape Horn; but though the number of vessels passing annually is about 1000, and there are no harbour-dues or any other similar charges, yet in 1849 only 12, and in 1850 only 23 English merchant vessels availed themselves of the opportunity. The number appears however to be on the increase. The aggregate tonnage of vessels resorting to the settlement in 1849 was 9200; in 1850 it was 13,672; it 1851 it was 17,538; in 1852 it amounted to 22,024 tons. Vessels frequently call for repairs and refitting. The government establishment consists of a governor, two clerks, a surveyor, surgeon, harbour-master, stipendiary magistrate, and chaplain. The entire annual expense of the establishment is about 1775*l.* The total expenditure, including buildings, &c., has hitherto been about 8000*l.*; the sum voted by the House of Commons for the year 1851-2 was 5000*l.* The fixed revenue of the settlement, which was 184*l.* 10*s.* in 1849, had increased to 442*l.* 14*s.* 2*d.* in 1850, and has probably increased in amount since that time.

History and Settlement.—With respect to the discovery of the Falkland Islands, all that is known with certainty is that they were seen in 1592 by Dr. John Davis, who accompanied Cavendish in his second voyage; and Hawkins, who sailed along them in 1594, called them Hawkins's Maiden Land. In 1690 Strong sailed through the channel which separates East and West Falkland, and called it Falkland Sound, whence the islands were afterwards named the Falkland Islands. Several vessels from St. Mala passed near the islands between 1706 and 1714, and from these they were named by the French *Les Iles Malouines*. In 1764 the French established a colony on one of the harbours of Berkeley Sound on East Falkland, and called it St. Louis; and two years later the British formed a settlement on West Falkland, on the inlet called Port Egmont. Soon afterwards the French, in 1767, ceded their settlement to the Spaniards, who in 1770 attacked the English colony and took it. After some negotiations Port Egmont was restored to the English. The British afterwards abandoned the colony, but did not give up the rights of possession. The Spaniards also withdrew their garrison from Port Louis.

In the beginning of the present century the whale fishery in the Southern Atlantic began to be prosecuted on an extensive scale by some European nations and the North Americans. Many of the whaling vessels visited the Falkland Islands, especially to kill wild cattle and refresh their crews. It was also discovered that the islands were visited by a great number of seals, and these animals attracted numerous other adventurers. Thus Berkeley Sound was seldom without the presence of some visitors. This induced the government of the newly-established republic of Buenos Ayres to take possession of East Falkland in 1820, and in 1823 they formed a settlement at Port Louis. England protested against these proceedings in 1829, and in 1833 the colony was given up to the English. For some years only a lieutenant of the navy with a boat's crew resided at Port Louis, but the British government resolved in 1840 to colonise the islands, and to send there a governor and a small establishment. They settled at Port Louis; but on examining the country in its vicinity, it was found that Port William, south of Berkeley Sound, offered greater advantages as a naval station and port of refuge, and in 1844 Governor Moody laid out a town on the southern shores of Stanley Harbour, a land-locked inlet, sheltered from every wind. The population of the colony in March 1847 was 270, including 106 in the employment of Mr. Lafone, a wealthy merchant of Monte Video, to whom the British government, in consideration of a payment of 60,000*l.* by instalments, granted an extensive tract of land and the possession of all the wild cattle and other wild stock for six years, dating from January 1st, 1848. Mr. Lafone's interests were recently purchased by a joint-stock company, possessed of a large capital. The company has obtained extensive privileges from government in respect of property in land and cattle, and is carrying out its operations on a comprehensive plan. From a despatch of Governor Rennie, dated January 8th, 1853, it appears that the general trade of the colony was then in a healthy state, and that its prospects were favourable. Unskilled labourers were receiving from 3*s.* to 5*s.* a day, and skilled labourers 6*s.* to 10*s.* A few garden allotments of one acre each, which had been put up for sale, realised 12*l.* an acre, being six times the usual government price, and double the amount realised in 1849. Several enrolled pensioners who had been settled in the colony had manifested some dissatisfaction with the manner in which they had been treated, but the secretary-at-war having intimated to them that they were at liberty to return to England if they preferred doing so, none of them had accepted the permission. The opening of the ship canal connecting the Atlantic and Pacific oceans, if accomplished, would of course do away with the necessity for vessels calling at the

Falkland Islands for refit or refreshment: and this being their chief use, the settlement might probably be abandoned.

(Weddell, *Voyage towards the South Pole*; Fitz-Roy and Darwin, *Narrative of the Surveying Voyages of the Adventure and Beagle*; *Parliamentary Papers*.)

FALMOUTH, Cornwall, a municipal and parliamentary borough and market-town, and the seat of a Poor-Law Union, is situated at the mouth of the river Fal, in 50° 9' N. lat., 5° 3' W. long.; distant 30 miles S.W. by S. from Bodmin, and 269 miles W.S.W. from London. The population of the municipal borough in 1851 was 4953. The borough is governed by 4 aldermen and 12 councillors, of whom one is mayor; and conjointly with Penryn returns two members to the Imperial Parliament. The population of the parliamentary borough of Penryn and Falmouth was 13,656 in 1851. The living is a rectory in the archdeaconry of Cornwall and diocese of Exeter. Falmouth Poor-Law Union contains 10 parishes and townships, with an area of 25,850 acres, and a population in 1851 of 21,049.

The port of Falmouth is first spoken of in the reign of Henry IV., when the duchess dowager of Bretagne landed here, in progress to celebrate her nuptials with that king. Until 1613 the site of the present town was occupied merely by the huts of fishermen. Shortly after this period Sir John Killegrew, having obtained permission from James I., constructed a new quay and laid the foundation of the present town. The subsequent establishment, about 1688, of the post-office packets to the West Indies, Lisbon, &c., contributed much to the prosperity of the place.

The town consists chiefly of one narrow street, which extends along the south-western shore of the harbour for about a mile. The public buildings are the town-hall, the market-house, the jail, the Public Rooms, a handsome building situated in the centre of the town, and the Polytechnic hall. In the Polytechnic hall are held the meetings of the Royal Cornwall Polytechnic Society. This society, which was founded in 1833, on a plan somewhat similar to that of the Society of Arts, London, has been very successful; the society publishes its transactions. Falmouth is a neat and tolerably well-built town. It is lighted with gas, and is abundantly supplied with water. The suburbs are adorned with terraces and villas, which, with the harbour, when seen from the surrounding hills, present a very beautiful appearance. The parish church, dedicated to Charles the Martyr, was built in the time of Charles II. The Baptists, Wesleyan Methodists, Quakers, Roman Catholics, Jews, and Unitarians have places of worship in Falmouth. There are National, British, and Infant schools; a public library; two church libraries; an atheneum and mechanics institute; a savings bank, a dispensary, and coal and clothing societies. A county court is held in Falmouth. The market-days are Tuesday, Thursday, and Saturday; fairs are held on August 7th and October 10th.

The quay is convenient, and there is sufficient depth of water to allow vessels of considerable burden to discharge their cargoes on the wharf. The harbour is extensive, conveniently situated, and well protected. It is defended on the west by Pendennis Castle, and on the east by St. Mawes Castle. These castles were built by Henry VIII., and subsequently improved and strengthened by Queen Elizabeth. Pendennis long resisted the attacks of Oliver Cromwell, whose lines of encampment may yet be seen. It now contains commodious barracks, storehouses, and magazines. A lighthouse has been erected at St. Anthony's Point, at the east side of the harbour. The Trinity Board have erected an obelisk on the height of the Black Rock, between Pendennis and St. Mawes, for the assistance of mariners in making Falmouth harbour. There is an extensive fishery of pilchards on the coast.

The number of vessels registered as belonging to the port of Falmouth on December 31st, 1853, was as follows:—Under 50 tons, 50, tonnage 1393; above 50 tons, 73, tonnage 7364; one steam vessel, 14 tons. The number of vessels entered and cleared at the port during 1853 was as follows:—Coasting trade, inwards, sailing vessels, 710, tonnage 40,271; steam vessels, 141, tonnage 29,447; outwards, sailing vessels, 215, tonnage 9195; steam vessels, 75, tonnage 7151. Colonial and foreign trade: sailing vessels, inwards, 161, tonnage 13,379; outwards, 147, tonnage 17,934. The exports from Falmouth consist chiefly of the produce of the tin and copper mines: there is a considerable trade with the island of Jersey in fruit and cider.

Borlase, in his '*Antiquities of the County of Cornwall*,' mentions the finding of a large quantity of Roman coins on a branch of Falmouth harbour, nearly the whole of which were of the coinage of the emperors Gallienus, Carinus, and Numerian, who reigned A.D. 259-284. At the western extremity of the town stands Arwinnick House, the ancient seat of the Killegrew family.

(Borlase, *Antiquities of Cornwall*; Carew, *Survey of Cornwall*; *Handbook of Cornwall and Devon*; *Parliamentary Papers*; *Communication from Falmouth*.)

FALMOUTH. [ANTIGUA; JAMAICA.]

FALSTER, a Danish island in the Baltic, due south of Seeland, and east of Laaland, between 54° 30' and 54° 58' N. lat., 11° 45' and 12° 11' E. long. The strait called the Gaabensund separates it from Seeland, and the Giddborgsund from Laaland; on the north-east the Grönsund divides it from the Island of Moen. Its greatest length from north to south is about 25 miles, from east to west about

16 miles at its widest part. The area is about 177 square miles, and the population in 1850 was 23,249. The surface is flat but it lies higher than Laaland, has better water, and a healthier atmosphere, and is accounted one of the best cultivated and most productive parts of the Danish dominions. In the south the island terminates in two long narrow tongues of land, formed by an arm of the sea called the Noret. The western tongue of land has a lighthouse upon it, beyond which a reef of rocks extends far into the sea. The corn produce is more than adequate to the consumption, so that between 30,000 to 35,000 quarters are annually exported. Flax and hemp, hops, potatoes, and other vegetables are grown. Large quantities of fruit are raised, and apples in particular are a considerable article of exportation. The woodlands occupy about one-sixth of the whole surface. Horned-cattle and sheep are bred, and the forests afford food for a great number of swine. Much wax and honey are obtained; poultry and geese are abundant. There are no rivers but the Aar, an inconsiderable stream, and the short river through which the Mariboersee, a large lake, has an outlet into the sea. There are no manufactories on the island; but the people make their own clothing, stockings, and spirits. The principal imports are colonial produce, salt, and tobacco; and the exports are grain, salt meat, butter, fruit, live cattle, potatoes, &c. There is some ship-building.

Falster is divided into two districts, the North and South Hardses. *Nykjoebing*, the chief town, is situated on the western side of the island upon the Giddborgsund; it is a pleasant well-built place, has some traces of former fortifications, contains a cathedral and church, several schools, a town-hall, an hospital, and a population of about 1600. There is an ancient castle, in which several dowager queens of Denmark have resided, called Norre Ladegaard. The town has a good corn trade. *Stubbekjoebing*, the other town, is an inconsiderable place on the Grönsund in the north-east, opposite the island of Baagoe; it is surrounded by walls, and has eight streets, a church, a school, a poor-house, and about 1000 inhabitants.

The islands of Falster and Laaland with the islets of *Famö* and *Payö*, to the north of the latter, and some other small islets round the coasts, form a stiff or province of Denmark called Falster-Laaland, which has an area of 639 square miles with a total population (in 1850) of 79,017.

FALUN, or FAHLUN, a town in Sweden, the capital of Dalecarlia, which now constitutes the Falun Län, is situated near the west shore of Lake Ruun, in about 60° 35' N. lat., 15° 35' E. long., and has a population of 4500. The town is built chiefly of timber, and contains a mining school, geological and mineralogical collections, a model room, and a technical library; it is celebrated for its great copper-mine, which is situated to the west of the town. Unlike all other mines, the Falun mine presents a large pit, about 1200 feet long and as many wide, into which people descend by a staircase to a depth of several hundred feet; the ore was formerly detached by the miners from the bottom of this hole, so that they were not obliged to use candle-light, but the mine is now worked by numerous shafts and galleries, and with admirable machinery. Gustavus Vasa worked in the copper-mines of Falun. The vapours which continually rise from the mine, or to speak more correctly, from the smelting-works about it, have destroyed every trace of vegetation in the neighbourhood, and even wild animals and birds are rarely seen. To the fumes of the copper, it is said, the town owes its exemption from the visitation of cholera. Besides copper this mine yields some gold, silver, lead, vitriol, ochre, and brimstone. There are a few manufactures of linen, cotton, and wool, but all on a small scale.

The *Falun Län* coincides nearly with the old popular division of Dalecarlia or Dalarne, so-called from its comprising the basins of the Dal and its principal head-streams the Oster and Wiister Dal, which unite a little west of the town of Falun and south of Lake Siljar. It comprises part of the southern mountain region of Sweden and a part of the region of mines. Its area is 12,210 square miles, and its population in 1845 was 145,333. The surface and products are noticed in the articles DALECARLIA and SWEDEN.

FAMAGOSTA. [CYPRUS.]

FANÖ. [JUTLAND.]

FANO, a sea-port and episcopal town of the States of the Church in the legation of Urbino-e-Pesaro, is situated in 43° 51' 16" N. lat., 13° 1' 19" E. long., on the shore of the Adriatic, at a short distance from the mouth of the Metauro, and has about 10,000 inhabitants. The town which stands in a rich, fertile, and salubrious plain, is well-built and adorned with many handsome edifices. There is no town of the same size on the east coast of Italy so rich in churches and pictures. The scenery of the neighbourhood is very beautiful, and numerous good roads facilitate communication with the other towns in this part of Italy. The high road along the Adriatic shore runs outside the walls which still gird the town, and are strengthened towards the sea by bastions.

Fano occupies the site of the ancient *Panum Fortuna*, so called from the Temple of Fortune built here by the Romans to commemorate the defeat of Asdrubal on the Metaurus. Narses here defeated the Goths. Totila destroyed Fannum, which was rebuilt by Belisarius. A modern statue of Fortune which probably replaces an ancient one, is erected on the principal fountain. Under the Romans the city was embellished with baths and a basilica. A triumphal arch of white marble was

erected in honour of Augustus, which still remains, with part of the addition of an attic with columns built upon it by Constantine. On an adjoining chapel is a carved representation of the arch as it originally stood. The walls were erected by Augustus, and repaired by the sons of Constantine.

Fano has a cathedral and thirteen other large churches, most of which, besides being fine buildings, are rich in marbles and frescoes, and contain several masterpieces of the great Italian painters. In the cathedral are, amongst other treasures of art, sixteen frescoes by Domenichino, representing the principal events in the life of the Blessed Virgin. In the church of Santa Maria Nuova are the Annunciation, and the Madonna with the Infant Saviour of Perugino. In the church of San Paterniano, named after the first bishop of Fano, who was elected A.D. 360, is the Sposalizio, or Espousals of the Virgin by Guercino. The church of San Pietro is enriched by a picture of the Annunciation—which is considered to be the masterpiece of Guido—and by the frescoes of Viviani. The Guardian Angel of Guercino is preserved in the church of Sant Agostino, and in the Folfi College is the celebrated picture of David with Goliath's Head, by Domenichino. Many of these churches are rich also in specimens of monumental architecture.

Fano contains also several religious houses, a public library, a college, several schools, and one of the finest theatres in Italy, which was built by Torelli, a native artist, and ornamented with paintings and scenery by Bibiena. The port of Fano, formerly the resort of the traders of the Adriatic, was repaired by Pope Paul V., from whom it was called Port Borghese. It is now nearly choked up with sand, and the commerce of the town has declined; only small coasting-vessels can enter, which are engaged in the corn trade. The town has some important silk manufactures. Pope Clement VIII. was a native of Fano. The first printing-press known in Europe with Arabic types was established here by Pope Julius II. in 1514.

FANTEES, or FANTINS, a nation inhabiting a part of the Gold Coast in Western Africa. Since the commencement of the present century the country of the Fantees has been overrun by the Ashantees, and its recent history will be found in the article on that people. [ASHANTEE.]

FARALIONI ISLANDS. [ÆTNA.]

FAREHAM, Hampshire, a market-town, and the seat of a Poor-Law Union in the parish of Fareham, is situated at the head of the north-west branch of Portsmouth harbour, in 50° 50' N. lat., 1° 10' W. long.; distant 12 miles S.E. from Southampton, 73 miles S.W. by S. from London by road, and 85 miles by the South-Western railway. The population of the town in 1851 was 3451. The parish is under the management of a Local Board of Health. The living is a vicarage in the archdeaconry and diocese of Winchester. Fareham Poor-Law Union contains nine parishes, with an area of 31,394 acres, and a population in 1851 of 13,925.

Fareham is situated at the intersection of the road from London to Gosport with that from Chichester to Southampton. A bridge at the town crosses the head of Portsmouth harbour, which is here narrowed to the dimensions of a small river. The prosperity of Fareham is chiefly dependent upon its proximity to Portsmouth. The town is lighted with gas, and is well supplied with water. The chief buildings are a handsome assembly-room, and a market-hall. The parish church is of various dates and styles; the chancel, which is early English, was rebuilt about 40 years ago. The Independents and Wesleyan Methodists have places of worship, and there are a Free school, National, British, and Infant schools, a literary institute, a savings bank, and a lunatic asylum. Coach-building and ship-building are carried on; cordage, sacking, and coarse pottery are made. Vessels of 300 tons can get up to the port. The trade is chiefly in corn, coal, and timber. The market is held on Monday, and there is a yearly fair for cattle and cheese on June 29th and 30th. Fareham is much resorted to in summer for sea-bathing.

[Warner, Hampshire; Communication from Fareham.]

FARINGDON, or FARRINGTON, Berkshire, a market-town and the seat of a Poor-Law Union, in the parish of Great Faringdon, is situated in 51° 40' N. lat., 1° 33' W. long.; distant 36 miles N.W. by W. from Reading, and 69 miles W. by N. from London. The population of the parish of Great Faringdon in 1851 was 2456. The living is a vicarage in the archdeaconry of Berks and diocese of Oxford. Faringdon Poor-Law Union contains 31 parishes and townships, with an area of 65,880 acres, and a population in 1851 of 15,465.

The Saxon kings had a palace at Faringdon, wherein Edward the Elder died in 925. In 1202 Stephen founded at Faringdon a priory of Cistercian monks. During the civil war Cromwell made an attack upon the town, which was successfully resisted. King Charles was at Faringdon after the second battle of Newbury. The town of Faringdon is pleasantly situated; it is lighted with gas, and is neat and clean. The streets diverge from the centre of the town, where is situated the town hall. The parish church is a large and handsome gothic structure, with a low square tower. The Independents, Baptists, and Wesleyan Methodists have chapels. There are National and charity schools, and a savings bank. The market-day is Thursday. There are three annual fairs besides a statute fair on the 18th October for hiring servants. A great cattle market is held on the first Tuesday

of each month, and an annual horse fair on the 13th of February. Petty sessions and a county court are held in the town.

FARNBOROUGH, Hampshire, a village and the seat of a Gilbert Poor-Law Incorporation, in the parish of Farnborough, is situated in 51° 17' N. lat., 0° 44' W. long.; distant 40 miles N.E. by N. from Southampton, 32 miles S.W. from London by road, and 33 miles by the South-Western railway. The population of the parish in 1851 was 477, inclusive of 46 inmates of the workhouse. The living is a rectory in the archdeaconry and diocese of Winchester. Farnborough Gilbert Incorporation contains four parishes, with an area of 12,222 acres, and a population in 1851 of 2386. Farnborough is a small agricultural village, close to the Surrey border. It has stations of the South-Western and the Reading, Guildford and Reigate railways. The parish church is an ancient structure in the decorated style: the doorways north and south are Norman. Schools in the village are supported by two of the neighbouring proprietors.

(Warner, *Hampshire*; *Communication from Farnborough*.)

FARNBOROUGH, [KENT.]

FARNE ISLAND, [NORTHUMBERLAND.]

FARNHAM, Surrey, a market-town and the seat of a Poor-Law Union, in the parish of Farnham, is situated near the right bank of the river Wey, in 51° 13' N. lat., 0° 48' W. long.; distant 10 miles W. by S. from Guildford, 38 miles S.W. by W. from London by road, and 41½ miles by the South-Western railway. The population of the town of Farnham in 1851 was 3515. The living is a vicarage in the archdeaconry of Surrey and diocese of Winchester. Farnham Poor-Law Union contains five parishes and one chapelry with an area of 29,824 acres, and a population in 1851 of 11,804.

Farnham was a place of some importance at a very early period, and at one time returned members to Parliament. The manor of Farnham was given by Ethelbald, king of the West Saxons, to the see of Winchester, to which it has ever since belonged. On the north side of the principal street, and on the summit of a hill, formerly stood a castle, built by Henry de Blois, brother of King Stephen, and bishop of Winchester. After the Restoration Dr. Morley, bishop of Winchester, expended a considerable sum in erecting the present castle, which is of brick, covered with stucco, embattled, and of a quadrangular form. Adjoining the castle is an extensive park, through which the river Loddon flows. On the borders of the park is Waverley Abbey, a neat modern mansion, which derives its name from a monastery of Cistercian monks, the ruins of which are in the vicinity.

Farnham consists chiefly of one street, running east and west. It is lighted with gas. The parish church was formerly a chapel of ease to Waverley Abbey. Some portions of the building are of the 12th century; other portions are of the 15th and 16th centuries. The Independents have a chapel, and there are National and Infant schools, and a savings bank. The Grammar school, founded about 1611, had fallen into decay, but was recently revived as a Commercial school. The income from endowment in 1887 was 22l. a year. The number of scholars in 1853 was 25. A county court is held in the town. Farnham is noted for its hop plantations. The great mart for the Farnham hops is Weyhill fair. The market-day is Thursday. Three fairs in the year, for horses, cattle, sheep, and hogs, are held.

(Stevenson, *Survey of Surrey*; Manning and Bray, *History of Surrey*; Brayley, *Surrey*; *Communication from Farnham*.)

FARNINGHAM, [KENT.]

FARNWORTH, [LANCASHIRE.]

FARO in Italian and Spanish, *pharus* in Latin, *phare* in French, is the name given to lighthouses in the Mediterranean. The first lighthouse is said to have been that raised by Sostratus of Cnidus B.C. 283, on the island of Pharos at the entrance of the new harbor of Alexandria. [ALEXANDRIA.] The name *pharos* became afterwards an appellation for lighthouses, and in some instances it has been given to the towns near which a lighthouse was built. Such, for instance, is the town of Faro in Algarve. Torre di Faro, a lighthouse on Cape Pelorus, in Sicily, has given its name to the Strait of Messina at the entrance of which it is placed, between Calabria and Sicily, and which the Italians call Faro di Messina. The Kingdom of the Two Sicilies is divided, with regard to its administration, into *Dominj di qua del Faro*, or 'dominions on this side of the Faro' (speaking as from Naples) meaning the continental part, and *Dominj di la del Faro*, or 'dominions on the further side of the Faro,' that is to say, the island of Sicily.

FARO, [ALGARVE.]

FAROE, FEROE, or FAROERNE ISLANDS, a group of islands twenty-two in number, seventeen of which are inhabited; they are about 300 miles W. of the coast of Norway, and about 200 miles N.W. of the Shetland Isles, between 61° and 63° N. lat., and 8° and 6° W. long. They were discovered between the years 858 and 868 by some Norwegians, in the time of Harold Harfager, king of Norway, and at present belong to Denmark. Their whole area is estimated at about 495 square miles. The population in 1850 was 8150.

These islands mostly consist of steep rocks, some of them rising gradually from the sea, by two or more sloping terraces, covered with a thin stratum of earth, which produces grass. Close to the sea the land consists in general of perpendicular cliffs, from 1200 to 1800 feet in height. The most westerly island is Myggenæs, the most southerly

is Suderoe, the most easterly are Svinoe and Fugloe, and the most northerly are Kalsoe and Videroe. The interior is composed of hills, usually separated only by narrow ravines, in which there are brooks or rivulets which are in general so swollen in the rainy season as to become impassable: there are no valleys of any extent. The greatest elevations in these islands are the basalt mountain Skaellingfield, 2430 feet high, in the south part of the largest of them, Stromoe, which is nearly the central island of the group, and divided by narrow straits from Vaagoe and Osteroe; and the Skattaretinel in Osteroe, which is said to attain an elevation of 2864 feet. There are several lakes, among which the largest are the Soorvagsvatn in Vaagoe, which is three miles long, and the Saudsvatn in Sandoe; and there are some falls of water, the most considerable of which is the Fosna in Stromoe, which has a double fall, nearly 200 feet in height. Among the mineral springs the most esteemed is that of Varmakilde in Osteroe. The climate is bleak, and the summer lasts only through the months of July and August; yet it seldom freezes more than one month in the year, nor are the harbours ice-locked except in very severe winters. Violent storms prevail at all seasons, which prevent the growth of any large trees, and compel the inhabitants to fix their dwellings between the hills. The soil is stony, and in many parts covered with earth only four inches deep. In some islands there are majestic groups of basalt formation, similar to the caves of Staffa. Neither the soil nor climate admits of any extended tillage; and the sudden variations in the temperature induce the cultivator frequently to gather in his crops in a half-ripe state, and dry them by artificial heat. They consist principally of barley and rye, the growth of which is scarcely adequate to the consumption; potatoes, parsnips, turnips, and carrots are also raised; but it is extremely difficult to raise any other vegetable. Landt states the proportion of the cultivated to the uncultivated land to be about 1 to 60, and that the corn-fields are not more than from 8 to 12 feet in breadth. The pasture-lands are luxuriant, and the chief wealth of the islanders consists in their flocks, often containing from 300 to 500 sheep, which graze in the open air the whole year round, and yield wool of good quality. Horses of small stature, but strong, swift, and sure-footed, are bred in considerable numbers: the horned cattle are also diminutive, yet become exceedingly fat. Few swine are fed. Seal-catching, and the whale, cod, herring, and other fisheries are another main resource of the people. Independently of domestic animals, the islands contain only rats and mice. There is an immense number of wild-fowl, such as eider-ducks, swans, geese, pigeons, solan-geese, puffins, cormorants, plovers, &c. The feathers of the wild-fowl are among the articles exported.

There is no timber on the islands. Turf is used for fuel. Beds of coal were discovered in the island of Suderoe in 1703, and some mines have been opened from time to time; but the coal is of inferior quality. Copper is found in the island of Nolsoe. Jasper and opal are met with here and there.

The inhabitants are of Norman (or Norwegian) descent, and speak the Norwegian language with a Danish accent. Their food consists of milk, fish, mutton, poultry, wild-fowl, and barley groats; bread and salt are considered luxuries. Their clothing is of coarse woollen, woven by their own hands. They are either hereditary proprietors of the soil which they cultivate, or farm lands under grant from the crown, from which circumstances they have the respective appellations of *Odelbonde* or *Kongsbonde*. They profess the Lutheran faith. The *amtman*, or bailiff, is at the head of civil affairs: in judicial matters the *landvoigt*, or judge, is assisted by sidesmen from each parish.

Ship-building is carried on with success. Woollen-yarns, cloths, and stockings are manufactured; and there are a few tanneries. The exports consist of hose and trowsers, fish, feathers, skins and hides, butter, tallow, train-oil, &c.: the imports, of grain, bread, malt, brandy, salt, hemp, iron, timber and deals, linen, &c.

The larger islands are Stromoe, 27 miles long and about 7 miles in breadth, population about 2000: its capital Thorshavn, on the south-east side of the island, is the seat of government, and has a neat wooden church, a Latin school, a fort, and about 750 inhabitants. The streets are exceedingly narrow. Osteroe, to the east of Stromoe, is in length about 20 miles, and in its greatest breadth about 10 miles: population, 1700. It has two fresh-water lakes, and several deep fjords, or inlets of the sea, on the eastern side. A curious basaltic hill about 420 feet high, consists of pentagonal and octagonal columns, on a foundation of trap 300 feet in height. At the north-north-west point of the island there are two rocks, with the appearance of colossal statues, which are called Risiu and Kiedlingen, and are 240 feet high. On the south-west side is a safe harbour, the Kongshavn. Sandoe, to the south of Stromoe, is about 13 miles long and one and a half mile broad: population, 500. It has a large lake called Sandsvatn which abounds in trout, five villages, three churches, and is the residence of the *Amtspost*, who is the head ecclesiastical authority. Suderoe, lying south of the preceding, is about 17 miles in length and 5½ miles in its greatest breadth, and contains ten villages, six churches, and upwards of 1000 inhabitants. It is full of rocks and precipices. Puthavn, its port, is almost the only spot where there is a safe landing. Vaagoe, to the west of Stromoe, is nearly 13 miles long and about 5 miles broad: population, 600. Its principal lake, Soorvaag, is the

largest in the Faroe islands, and is full of trout. It has four churches, the parochial one being at Midvaag, a village and sea-port. Myggenæs, to the west of Vaagoe, is an inconsiderable island about 3 miles broad. The remainder of the seventeen inhabited islands are Fugloe, Svinoe, Videoe, Bordoe, Konoe, Kalsoe, Kolter, Hestoe, Nolsoe, Skuoe, and the greater Dimon.

FARS, or FARSISTAN. [PERSIA.]

FASANO. [BARI, TERRA DL.]

FAVERSHAM, Kent, a market-town, a municipal borough, a member of the cinque port of Dover, and the seat of a Poor-Law Union, in the parish of Faversham, is situated in 51° 18' N. lat., 0° 53' E. long., distant 8 miles W. by N. from Canterbury, and 47 miles E.S.E. from London. The population of the town of Faversham in 1851 was 4595. The town is governed by 4 aldermen, or jurats, and 12 councillors, one of whom is mayor. The living is a vicarage in the archdeaconry and diocese of Canterbury. Faversham Poor-Law Union contains 25 parishes and townships, with an area of 44,052 acres, and a population in 1851 of 16,513.

Faversham is situated on a stream running into the East Swale, to the left of the road from London to Dover. King Stephen founded here an abbey for Clunian monks, in which himself, his queen Matilda, and his eldest son, Eustace of Boulogne, were buried. Portions of the outer walls still exist. The town consists chiefly of four streets, forming an irregular cross, and having the guildhall and market-place in the centre. The streets are well paved. The church is a commodious cruciform building, constructed of flint; it has some portions in the decorated style, the remainder is of later date. At the west end is a light pinnacled tower surmounted with an octagonal spire. The Independents, Baptists, and Wesleyan Methodists have places of worship. The Grammar school, founded in 1575, has an income from endowment of about 160*l.* a year, and had 50 scholars in 1853. There is a National school. Faversham Creek is navigable up to the town for vessels of 150 tons. On December 31st, 1853, the number and tonnage of vessels belonging to the port were—225 under 50 tons, with an aggregate of 4936 tons; 82 vessels above 50 tons, aggregate tonnage, 10,355; and 1 steam-vessel of 9 tons burden. The vessels which entered and cleared at the port during 1853 were as follows:—Inwards, 1532 vessels, 116,381 tons; outwards, 1478 vessels, 44,983 tons.

The oyster fishery employs between 200 and 300 persons. There is a considerable import and export trade; much agricultural produce is sent to London by hoys. The market-days are Wednesday and Saturday: fairs are held on February 14th and August 1st.

FERMANAGH, an inland county of the province of Ulster, in Ireland, lies between 54° 7' and 54° 37' N. lat., 7° 8' and 8° 10' W. long., and is bounded N. by the counties of Donegal and Tyrone, E. by the county of Monaghan, S. by Cavan, and W. by Leitrim and Donegal. Its greatest length from east to west is 45 miles, from north to south 29 miles. The area comprises 457,195 acres, of which 289,228 are arable, 114,847 uncultivated, 6155 in plantations, 210 in towns, and 46,755 under water. The population in 1851 was 116,007.

Surface, Hydrography, and Communications.—Fermanagh county belongs almost entirely to the basin of Lough Erne. The drainage of a small district in the extreme west falls into Lough Melvin, the superfluous waters of which are carried to the Atlantic by the Drowes River. Lough Erne, which extends from south-east to north-west for above forty miles, divides the county into two nearly equal parts, and is itself divided into the Upper and Lower Lakes, the former stretching from Wattle Bridge, on the borders of Cavan, to the neighbourhood of Enniskillen; the latter from Enniskillen to Belleek, on the borders of Donegal. The Upper Lake is about 18 miles in length, and has an extreme width of about 4 miles; it is thickly studded with hilly islands, some of which are of considerable size, and all are clothed with wood or with rich pastures. Within two or three miles of Enniskillen the lake becomes narrow, and assumes a river character, which it retains for a mile below the town, where, opposite the grounds of the royal school of Portora, the Lower Lake commences, expanding into a magnificent sheet of water, much less incumbered with islands than the Upper Lake, and having opposite the town of Kesh a width of not less than six miles. The singularly varied and beautiful scenery of these lakes is said by Inglis and other tourists

not to be surpassed in Europe. On approaching Belleek the lake again contracts, and flows as a deep rapid river through a rather swampy tract, crossed near the village by a rocky ledge, over which the stream rushes impetuously, forming a fine cataract. From Belleek the river flows with rapid course west by north, forming another fine fall of about sixteen feet at Ballyshannon, a little below which it enters the Bay of Donegal. Vast numbers of salmon ascend to Lough Erne and its feeders to spawn; the ascent of the fish up the falls of Ballyshannon and Belleek is eagerly watched as a very gratifying spectacle. Lough Erne also abounds in trout, pike, perch, and bream; it is frequented by large flocks of wild ducks, wild geese, and other water-fowl. The outlet of Lough Erne is navigable for vessels drawing 12 feet water up to Ballyshannon; between the town and Belleek the rapidity of the stream renders it useless for purposes of navigation. The depth of the Upper Lake varies from a few feet to 75 feet; the Lower Lake is said in some places to have a depth of 200 feet. Formerly some of the connecting reaches of the Upper Lake were in parts so shallow that only flat-bottomed boats, called 'cots,' could navigate them. These channels have recently been deepened, and the lakes are now navigated by small steamers, which convey goods of various kinds between Belleek, Enniskillen, Lisnaskea, Belturbet, and the Ulster Canal, which enters the Upper Lake near Wattle Bridge, connecting Lough Erne with Lough Neagh, and completing the water communication between Enniskillen, Newry, and Belfast. The chief articles of traffic on the lake are timber, coals, butter, eggs, corn, and other agricultural produce.

The most southern part of the county, extending from the Woodford River [CAVAN], which forms part of the boundary between Fermanagh and Cavan, to a few miles below Enniskillen, presents a belt of rich land of considerable but varying width, gently undulating in parts, but level along the lake-shore, and the whole backed by high mountains. Between the Woodford and the Claddagh (a feeder of Lough Erne, which rises near the head-waters of the Shannon in the county Cavan), the back-ground is formed by the northern slopes of the Legavrega Mountains. Between the Claddagh and the Arney, at about four miles from the lake, runs the main ridge of the Dowbally Mountains, which form part of the watershed between Lough Erne and the Shannon. This range, the highest in the county, reaches in its culminating point, Cuilcagh, the height of 2188 feet above the sea; its slope towards the lake is in general rapid, in some places precipitous. At its northern base is the fine mansion and extensive domain of Florence Court, the seat of the Earl of Enniskillen. Westward from the Cuilcagh Mountains, on the confines of the counties of Leitrim, Cavan, and Fermanagh, is Lough Macnean, of which the eastern part, called Lough Nitty, is connected by a strait with the western and larger part, properly called Macnean. The outlet of Lough Macnean is the Arney, which flows eastward to Lough Erne, through a beautiful well-wooded country. A little north of Lough Nitty is Belmore Mountain, which attains a height of 1312 feet, and forms a striking feature in the scenery of Lough Erne on the approach to Enniskillen. [ENNISKILLEN.] The approaches to this town on both sides of the lake are adorned with many pretty residences. About two miles south-east of Enniskillen, situated in a very extensive and beautiful demesne, is Castle Cooke, the most splendid mansion in the north of Ireland, and the seat of Earl Belmore. The structure is built of Portland stone.

All the rest of the southern part of the county, between Lough Macnean and Lower Lough Erne, is with little exception mountainous. The mass of the Shean-North runs along the Lower Lake in many places close to the shore, towards which it descends with a very rapid slope. The highest part of the range, called Phoul-a-Phouen, rises to the height of above 1150 feet, and sinks down almost precipitously within a few rods of the shore. South of these masses, but separated from them by the undulating basin of the Sillies River (which enters Lough Erne about a mile above Enniskillen), are the Glenalong Mountains, which have an altitude of about 900 feet. The greater part of this region is wild in the extreme, consisting of irreclaimable mountain, brown bog, and coarse pasture. In the basin of the Sillies however, particularly in the neighbourhood of Church-Hill and Derrygonnelly, there is some good arable and pasture land.

West of the Lower Lake, as far as Pettigoe, a small village partly in Fermanagh and partly in Donegal, the surface is hilly, with only a narrow level margin along the shore. In this district, and near the western extremity of the lake, is the beautiful demesne and seat of Castle Caldwell. South of Pettigoe is Boa Island, the largest in the Lower Lake, containing 1400 acres of fine land; it is however almost treeless. Occupying a beautiful situation on one of the larger islands near the west shore of the lake stands Ely Lodge, the fine seat of the Marquis of Ely. Eastward from Pettigoe to Kesh and Lisnarrick the land slopes down gradually from the mountains on the confines of Tyrone to the lake-shore, and presents some of the finest soil and most picturesque scenery in the county. The views between Kesh and Castle Archdall, a splendid mansion and demesne near Lisnarrick, are particularly fine. The mountain ridge to the north of this district forms part of the watershed between Lough Foyle and Lough Erne; most of the streams thence run into the lake by the Kesh River. From Lisnarrick to Ballinamallard and the eastern side of the valley of the Ballicassidy River (on which there are large flour-mills), the

surface is undulating, and generally the land is very fertile, with tracts of bog however in the low grounds. The mansions and demesnes of Necarne, near Irvinestown, and Jamestown and Crocknacreeve, near Ballinamallard, are the most worthy of remark in this region. From a short distance east of Enniskillen a range of round-backed hills, called the Toppit Mountains, stretches in a general northern direction, and joins the Tattymoyle mountains in Tyrone, a few miles south of Fintona. On the western slope these hills are generally cultivated; the eastern side is in many places very steep, and overgrown with heath. This range forms the western limit of the basin of the Drummany, the largest river-basin in the county, the eastern limit being formed by the Slieve-Beagh (commonly pronounced Slabay) Mountains, which have a width of 7 miles and a length of about 13 miles. This mountain mass extends in a northern direction from Lisnaska, and the small hamlet of Donough along the eastern border of Fermanagh into Tyrone. The summits of Carnmore and Brochderg in this range reach 1080 feet in height. The eastern side slopes down in general gradually to the high plain of the county Monaghan, being skirted on that side by a gently undulating country, containing several small lakes, bogs, and marshes, and drained by the Finn River, which carries all the waters of the eastern slope into Lough Erne. The broad round summits of these mountains and a great portion of the eastern slope are bleak and barren, quite unsheltered and treeless; the surface presents only coarse hungry mountain pasture, bare rocks, or undrained bogs, resting on clay, and covered with stunted heath. The descent on the western side is by a series of rapid slopes, each succeeded by its level district of irregular shape and varying width, so as to present a succession of natural terraces. On this side cultivation is more extended.

The basin of the Drummany River stretches out to westward from the base of these mountains for about five miles, and extends in a direction north and south of about ten miles. It may be characterised as a plain inclosed by a ring-fence of mountains except to the southward, where it opens on Lough Erne, fine views of which are commanded from several points. There are however several low hills and round outlying eminences in this plain. The land is generally good, but varies considerably. In the north-west of this basin is the small village of Tempo, near which is Tempo House, formerly the seat of a branch of the noble Irish family of Magnire, and now belonging to Sir E. Tennent. Four miles south-east from Tempo, the pretty village of Brookborough stands on a slight elevation at the western foot of the Lisnalore Hills, an offshoot of the Brochderg Mountain. About two miles north of Brookborough is Colebrooke House, situated in an extensive well-wooded demesne. Colebrooke House, the finest mansion in this part of the county, was erected by the late Sir Henry Brooke, and is built of a beautiful white freestone found in the southern part of the Slieve-Beagh Mountains. The main branch of the Drummany River rises in the northern part of these mountains, and runs with rapid winding course towards the west till it enters the Colebrooke demesne, whence it runs southward, and about a mile to the west of Brookborough and through Magnire's Bridge: about four miles below this place the river falls into Lough Erne. This river, as well as all the streams in the county and the lake itself, is subject to floods. To the west of this river, between Brookborough and Lisbellaw, there is a very extensive tract of bog, containing Lough Eyes and some smaller lakes.

The immediate neighbourhood of Lough Erne, all the way from Enniskillen along the north shore of Upper Lough Erne to the confines of Cavan, presents a flat district of great fertility, with here and there small tracts of bog and sedgy swamps, backed by a country of hills and dales, which contains some of the best corn and grass land in the county. Of the islands on the lake mention must be made of the large island of Belleisle, which is joined to the north shore by a causeway and bridge. The first Earl of Rosse built a fine mansion on this island, portions of which still remain in the residence of the present proprietor, who is a descendant of Dr. Porter, formerly bishop of Clogher. This island is situated nearly opposite the mouth of the Arney, and commands fine views of lake and mountain scenery; the beautiful green and lofty hill of Knockninny, on the south shore of Lough Erne, forms a much-admired feature of the landscape. Crum Castle, a mansion of the Earl of Erne, situated on a peninsula of Lough Erne, about 4 miles S. from Newtownbutler, near the south-eastern extremity of the lake, and near it the remains of old Crum Castle, are worthy of remark for the extent and beauty of the well-wooded demesne in which they stand, and which includes several islands. Further south-east, on the borders of Cavan, there is the handsome residence and grounds of Castle Sanderson, a short way from which, on the road to Lisnaska, is a large district of barren bog. The interior of the county, from the hamlet of Donough to Newtownbutler and Clones, presents an undulating surface of pasture and arable ground.

The county is traversed by excellent roads. Along the north and south shores of the Upper Lake run two mail-coach roads, which diverge from Butler's Bridge in the county of Cavan, and unite in Enniskillen, whence a fine road runs to Ballyshannon and the west coast of Ireland. Opening on these three lines of road are numerous others connecting Enniskillen with all parts of the county. The Armagh, Belfast, and Enniskillen mail-coach travels by the main

road along the north shore as far as the neighbourhood of Newtownbutler, whence a road runs to the eastward, leading to Clones and Monaghan. Even the mountain roads of the county are good, but many of them are impracticable for carriages. A railroad to connect Enniskillen with Londonderry is in course of formation, and is open between Londonderry and Droimore: other lines are in progress or projected to join Enniskillen with Newry, Dundalk, and Dublin.

Geology, &c.—Upper Lough Erne lies on a bed of blue clay, and is surrounded on all sides by limestone strata. The Dowbally Mountains, and the mountains south of the lower lake, are composed chiefly of sandstone and limestone. Where the limestone prevails in the south and south-west of the county, there occur numerous cavities and subterraneous water channels. The Roogagh River, which brings down the waters of several small lakes and tributary streams to Lough Melvin, is absorbed in the rock, and emerges, after running a distance of about 30 perches underground. In like manner the Claddagh and several brooks which run into Lough Erne from the Shean North, dip underground in their course. A natural bridge of rock crosses a stream which forms part of the boundary of the district on the south; and throughout the central parts, caves (as near Ballicassidy) and deep holes in the rock are of very frequent occurrence. The Toppit Mountains consist of yellow sandstone and conglomerate, but limestone lies along the lower slopes, and in most parts of the county the isolated hills adjacent to the higher ranges contain limestone, sand, and gravel. The Slieve-Beagh Mountains are famous towards their southern extremity for a beautiful white sandstone, said to be superior to Portland stone; but these mountains consist chiefly of millstone grit, which is found of superior quality at Carnmore, and yellow and old red-sandstone: the limestone strata however lie close upon the range on the eastern and western sides. On the western slopes of the Slieve-Beagh, traces of coal and iron have been found, and also a slaty-blue clay resembling rotten limestone, which becomes readily pulverisable on exposure to the air, and forms good manure for moory soils. Marl and potter's-clay are found in several places.

Climate, Soil, Agriculture, &c.—The climate is very moist, but mild and healthy, except in the neighbourhood of Upper Lough Erne, where, in low districts, marsh fever sometimes prevails in the summer and autumn. The prevailing winds are the west, south-west, and south; the west winds blow at times with tremendous violence, uprooting trees, and sweeping away the roofs off the houses. The soil in the low grounds is a rich deep loam, in some places peat, resting on a subsoil of clay; the sandstone districts have mostly a cold thin soil; in the limestone tracts the soil is generally good, and easily worked. Improved methods of industry have been to some extent introduced. The chief crops are oats, wheat, potatoes, turnips, flax, and hay. The number of acres under crop in 1851 was 107,735, namely:—Wheat, 2613; oats, 43,845; barley, bere, and rye, 5584; beans and peas, 1010; potatoes, 13,059; turnips, 5724; mangel wurzel, roots, and cabbage, 2074; vetches and other green crops, 498; flax, 2800; rape, 30; and meadow and clover, 30,468. On 15,566 holdings in 1851 there were 6518 horses, 4749 mules and asses, 88,651 cattle, 11,371 sheep, 17,843 pigs, 443 deer, 3055 goats, and 195,674 head of poultry. The county exports oats, butter, eggs, and some other articles of agricultural produce: the principal markets for wheat and other descriptions of corn are Enniskillen and Lisnaska. The fields are inclosed by hedges in the low country, on the mountains by walls of loose stone. The farm-buildings, which are generally erected by the tenant, are pretty good; but the mud hut and the cabin of peat sods, the residences of the poorer classes, meet the eye in all directions. Except in the neighbourhood of Lough Erne, and to some distance round Enniskillen, the county has a bare, cold appearance, in consequence of the paucity of timber-trees, which are grown chiefly on the demesnes of large proprietors. The county is entirely agricultural: the only manufactures worth naming are confined to Enniskillen; linen is woven for domestic use.

Divisions, Towns, &c.—Fermanagh county is comprised in the diocese of Clogher, with the exception of the district which extends eastward from the Arney and Lough Macnean; this belongs to the diocese of Kilmore. The county is divided into 8 baronies:—1. Clanawley, which lies between the Sillies River on one side and the Arney and Lough Macnean on the other; 2. Mugherahey, which includes the rest of the western division of the county from the left bank of the Sillies and the south shore of the lower lake; 3. Knockninny, which extends between the Arney and the Woodford rivers; 4. Coole, embracing the south-eastern district; 5. Clankelly, which includes the district between the ridge of the Slieve-Beagh Mountains, in the county of Monaghan; 6. Magherastephana, which is generally coincident with the basin of the Drummany River; 7. Tyrkenney, which extends from Enniskillen northward to Tyrone, including both slopes of the Toppit Mountains; 8. Luag, which comprises the north west of the county.

There are few towns of consequence in Fermanagh: ENNISKILLEN, the county town, LISNASKEA, and LOWTHERSTOWN, are described in separate articles: the following places we notice here:—

Belleek, population of the village 228 in 1831, is situated on the right bank of the river Erne, about 2½ miles below the point where the lower lake narrows to the dimensions of a river. The remarkable

cataract formed by the river Erne near this village has been already noticed. A bridge spans the river at this place. The stream runs here with a very rapid current. Fairs are held at Belleek on February 3rd, May 17th, June 19th, and October 10th. *Derrygonnelly*, population 319, is situated in a wild and picturesque district, about 7 miles W.N.W. from Enniskillen, and about 3 miles S. from the shore of Lough Erne. There are here a small church and chapels for Roman Catholics and Wesleyan Methodists. Fairs are held on the 24th of each month. *Kesh*, population 257, situated on the small stream called Kesh, near its entrance into Lough Erne, about 11 miles N. by W. from Enniskillen, contains stations of the constabulary and revenue police. Petty sessions are held, and there are fairs on March 28th, April 28th, June 1st, October 2nd, and November 20th. *Lisbellaw*, population 334, about 4 miles S.E. from Enniskillen, possesses a chapel of ease, and chapels for Roman Catholics, Presbyterians, and Wesleyan Methodists. There is here a small spindle manufactory. Seven fairs are held in the course of the year. Petty sessions are held monthly. *Maguire's Bridge*, population 773, situated on the Drummany River, about 7 miles S.E. from Enniskillen, has received its name from a bridge which crosses the river at this place. It contains chapels for Roman Catholics, Presbyterians, and Wesleyan Methodists, and a dispensary. Fairs are held monthly. *Newtownbutler*, population 477, situated near the head of Upper Lough Erne, contains a church, two chapels for Methodists, one chapel for Roman Catholics, a constabulary barracks, a bridewell, and a dispensary. Quarter and petty sessions are held. Fairs are held once a month. *Pettigo*, population 466, situated on the river Termon, near the northern extremity of Lough Erne, is a great thoroughfare of the pilgrims to Lough Derg. There are here a church, a chapel for Presbyterians, and one for Roman Catholics. *Rosslea*, population 323, situated on the river Finn, near the eastern border of the county, contains a chapel for Roman Catholics and a dispensary. Petty sessions and a monthly fair are held here. *Tempo*, population 407, about 6 miles E.N.E. from Enniskillen, is picturesquely situated, and has a neat appearance. The village contains a church, a chapel for Roman Catholics, and a dispensary. A fair is held monthly.

Assizes are held at ENNISKILLEN, which is the only large town in the county; here are the county prison and the county infirmary. There are fever hospitals at Enniskillen, Lisbellaw, and Lisnaskea. The county is entitled to send 21 patients to the Armagh Lunatic Asylum. Quarter sessions are held in Enniskillen and Newtownbutler, and petty sessions in twelve places. The Poor-Law Union workhouses are at Enniskillen, Lisnaskea, and Lowtherstown. The county is in the military district of Belfast, and there are barrack stations at Enniskillen and Belleek. For purposes of police the county is divided into five districts—Enniskillen, Arney, Derrygonnelly, Kesh, and Lisnaskea. The number of police, including officers, is 191: Enniskillen is the headquarters. Revenue police are stationed at Brookborough, Kesh, and Belcoo, a small village situated between Upper and Lower Lough Macnean.

At the end of 1851 there were 130 National schools in operation, attended by 4918 male and 3315 female children. Besides these there are several other rudimentary and classical schools. Of superior schools the principal is the royal school of Portora, the buildings of which are situated in beautiful grounds on a gentle eminence above Lower Lough Erne, a short distance west of Enniskillen. This school was founded by Charles I., and is richly endowed. Fermanagh returns three members to the Imperial Parliament, two for the county and one for the borough of Enniskillen. In 1851 there was one savings bank in the county, at Enniskillen. The total amount owing to depositors on November 20th, 1851, was 37,034*l.* 7*s.* 1*d.*

History and Antiquities.—Fermanagh was first erected into a county by statute of the 11th of Elizabeth; but it was not till the time of the plantation of Ulster that it was finally brought under civil government. Having fallen to the crown by the attainder of Maguire, it was divided in like manner with the other five escheated counties among Scotch and English undertakers and native Irish. The chief proprietors under the new settlement were the families of Cole, Blennerhasset, Butler, Hume, and Dunbar. The subsequent forfeitures of 1641 affected a large portion of Fermanagh, and considerably increased the possessions of those from whom many of the present proprietors are descended. The forfeitures consequent on the war of the revolution affected only 1945 acres in this county.

The principal antiquities are the beautiful round tower and some ruins of ecclesiastical buildings on the island of Devenish, about a mile below Enniskillen; the remains of Lisgool Abbey, on the south side of Lough Erne, about a mile and a half above the same town; the ruins of Aghalurcher church, about two miles above Lisnaskea, on the northern shore of the upper lake; and numerous raths, or rude hill forts, of unknown antiquity.

FERMO, a division of the Papal State, is bounded E. by the Adriatic, along which it extends from the mouth of the Chienti to the mouth of the Tronto; N. by the province of Macerata; W. by that of Spoleto, and S. by the Abruzzi. It forms part of the old province of the Marches, the ancient Picenum, which is subdivided into three provinces, Ancona, Macerata, and Fermo. The province of Fermo is hilly, being occupied by various offsets of the Apennines, which, detaching themselves from the central ridge, extend to the coast

of the Adriatic, and form numerous valleys watered by rivers or rather torrents, the principal of which are, from north to south, the Chienti, the Tenna, the Aso, the Tesino, and the Tronto. The length of the province along the Adriatic coast is 30 miles, and its breadth from the sea to the central Apennines is about the same. The chief products of the country are wheat, maize, silk, cattle, wine, honey, liquorice, and oil. The fisheries along the coast are valuable. The division is now formed into two delegazioni, or provinces—Fermo, north of the river Aso, and Ascoli, south of the Aso. Their area and population are as follows:—

Delegazioni.	Area in Square Miles.	Population in 1853.
Fermo	317	104,116
Ascoli	460	84,217
Total	777	188,333

The principal towns are *Ascoli*, the capital of the southern province, which has been already described [*ASCOLI*], and *Fermo*, the capital of the northern province, which is a pleasant archiepiscopal town, built on high ground, about 4 miles from the sea, and surrounded by old walls and ditches. It has a cathedral, several other churches and convents, and about 7000 inhabitants, who carry on some trade by means of a small harbour on the Adriatic, called Porto Fermo. The exports are chiefly corn, silk, and wool. The ancient *Firmum*, a town of the Piceni, afterwards a Roman municipium, was destroyed in the 5th century by Alaric, and the present town was rebuilt near its ruins. *Sant'Elpidio*, near the mouth of the river Tenna, has 3000 inhabitants. *Ripatransone*, a walled town about 5 miles from the coast and near the Tesino, has 2000 inhabitants. *Grottamare*, a thriving town on the coast, at the mouth of the Tesino, near the site of Cupra Maritima, an ancient Etruscan colony, carries on some trade by sea, has sugar refineries, and about 4000 inhabitants. Pope Sixtus V. was born in this place. *Offida*, on a hill south of the Tesino, has a handsome collegiate church, some manufactories of lace, and about 3000 inhabitants. *Montalto*, a walled but decayed town, has about 1000 inhabitants.

FERMOY, East Riding of the county of Cork, in Ireland, in the parish of Fermoy, a military station, post and market-town, and the seat of a Poor-Law Union, is situated on the Blackwater River, in 52° 8' N. lat., 8° 18' W. long., distant 18 miles N.E. from Cork, and 133 miles S.W. from Dublin. The population of the town in 1851 was 5825, exclusive of 2682 persons in the workhouse, and 19 in the bridewell. Fermoy Poor-Law Union comprises 24 electoral divisions, with an area of 143,268 acres, and a population in 1851 of 41,687.

Fermoy was a miserable hamlet in 1795; it owes its origin as a town to Mr. Anderson, the introducer of mail-coach travelling into Munster, who became proprietor of the Fermoy estate, and began to build the town about the commencement of the present century. The importance of the site in a military point of view, commanding as it does an important pass of the Blackwater and one of the principal northern approaches to Cork, induced the government to erect here infantry and cavalry barracks. A coach-factory, a brewery, a paper-mill, and a bolting-mill, erected by Mr. Anderson, caused an increase of employment in the town. The principal part of the town, which is regularly laid out and contains several good streets, stands on the right bank of the river, and is connected by a stone bridge of 13 arches, erected in 1689, with a smaller portion on the left bank, the brow of the hill above which is occupied by the barracks. The infantry barracks consist of two distinct quadrangles, of which the smaller one is now used as the Union workhouse. The other public buildings are a handsome church, a large Roman Catholic chapel, a court-house, and a bridewell. A Roman Catholic college, a nunnery, and schools, are situated on a hill above the town. There are in Fermoy several large flour-mills, a brewery, a tanyard, a savings bank, loan fund, and several schools. The staff of the North Cork militia is stationed in the town, which is also the head-quarters of the Fermoy district police. The view from the bridge is much admired; it takes in the town and the rich valley of the Blackwater, which is here shut in by fertile hills adorned with handsome villas. Fermoy has still a good share of business, and at the weekly markets much agricultural produce is disposed of.

FERNANDEZ, JUAN. [*JUAN FERNANDEZ*.]

FERNANDINA DE AGUA. [*CUBA*.]

FERNANDO PO, an island situated on the western coast of Africa, about 25 miles from Cameroon's Point, on the mainland, in the Bight of Benue, 8° 25' N. lat., 8° 50' E. long., is about 44 miles long and 20 miles wide. It rises in bold precipitous cliffs from the sea, and the surface, which is very uneven, towards the centre of the island forms a lofty mountain ridge, some of the peaks of which attain a great altitude; Clarence Peak, near the northern end of the island, is 10,650 feet above the sea. The rocks are wholly of primitive or volcanic formation; no alluvial deposit having, according to Mr. Thompson, been found in the island. The surface is mostly covered with wood, and is everywhere well watered and fertile. Yams, palms, and other tropical plants are grown abundantly; and turtles and fish are plentiful. The climate is considered healthy, though the rainy

season lasts from May to December, and is succeeded by dense fogs. There are several small harbours; the largest is Port Clarence, on the northern shore, which is formed by a headland called Point William, rising 150 feet above the sea, on which stood the English settlement of Clarence Town. The natives are of a lighter complexion than the inhabitants of the neighbouring mainland, and have less of the characteristic marks of the negro physiognomy, the face being rounder, the cheek-bones less high, the nose not so flat, the lips thinner, and the hair longer and softer. The language of the natives of West Bay and the southern parts of the island is unintelligible to those of Clarence Cove and the northern parts. There are said to be in the island from 10,000 to 12,000 native inhabitants, who occupy 15 villages. This island was discovered in 1471 by the Portuguese, who in 1778 ceded it to Spain. The Spanish government tried to settle it, but the inhabitants destroyed the colony. In 1827 the English, with the permission of Spain, formed a settlement on the island, but abandoned it in 1834, and in 1844 the Spaniards again took possession of it, and gave to it the name of Puerto de Isabel.

FERNEY. [AIN.]

FERNS, a bishop's see in the archdiocese of Dublin, in Ireland, comprehends the county of Wexford and a small part of Wicklow. The diocese was founded in 598; it was united to the see of Leighlin in 1600. In compliance with the Church Temporalities Act, the sees of Leighlin and Ferns have been consolidated with the see of Ossory. The chapter consists of a dean, precentor, chancellor, treasurer, arch-deacon, 10 prebendaries, and a vicar-general. The number of benefices is 61. The income of the united bishopric is 3850*l*.

The town of Ferns is a place of considerable antiquity, but much decayed. In 1851 Ferns contained 637 inhabitants. The cathedral, which is also the parish church, is a mean building; but the palace, built by Dr. Cope, is handsome and commodious. There are some remains of an abbey founded by Dermot Mac Murrough, king of Leinster, and a ruined castle, said to have been his residence at the time of the English invasion.

(Fraser, *Handbook of Ireland*; Thom, *Irish Almanac*.)

FERRANDINA. [BASILICATA.]

FERRARA, the most northern province of the Papal State, situated for the greater part within the Delta of the Po, is bounded N. by the main branch of that river called Po d'Ariano, which divides it from Austrian Lombardy, E. by the Adriatic, W. by the duchy of Modena (from which it is separated partly by the Panaro), and S. by the provinces of Ravenna and Bologna. Its greatest length from east to west is about 50 miles, from north to south between the Po d'Ariano and the Po Primario on the Ravennese frontier 30 miles, but the province becomes much narrower towards its western extremity, where the breadth from the point at which the Reno enters the Ferrarese above Cento to the Po, at the mouth of the Panaro, is only about 16 miles. Its area is 1053 square miles, and the population in 1843 was 218,786, distributed among 5 cities, or walled towns, 17 terre, or small towns, having a communal council, and 133 ville, or villages and hamlets. The soil is naturally rich, but the greater part of it is swampy, and a considerable portion of the surface in the east part of the province is constantly under water. The chief productions are rice, corn, pulse, hemp, grass, hay, wine, and a vast quantity of fish. The province is traversed in several directions by canals.

The principal towns, exclusive of the capital, *Ferrara*, which is noticed in the next article, are the following:—

Bagnacavallo, a small walled town, with 3500 inhabitants, stands a few miles E. from Lugo, on the road to Ravenna. It has a cathedral, and a circus for the game of 'pallone.' Roman inscriptions and other antiquities have been found on this site. In some maps Lugo and Bagnacavallo are set down in the territory of Ravenna.

Cento, a pretty town, 18 miles W. by S. from Ferrara, with 4600 inhabitants, was formerly celebrated for its college of San-Bigio, which was suppressed by the French. Cento is peculiarly interesting to the art-student as being the birthplace of Guercino, the interior of whose house (still preserved) is covered with his paintings. The church of the Rosary, the principal church in the town, is called the gallery (Galleria), from the number and arrangement of Guercino's works upon its walls. Cento was formerly famous for its fair, which, though still held on September 7th, has greatly fallen off. A short distance from Cento on the right bank of the Reno is *Pieve di Cento*, a walled village of 4000 souls, in the church of which is the Assumption of the Blessed Virgin by Guido. The villagers rose in arms against the French, who wished to remove this picture in 1797, and they succeeded in preventing the robbery.

Comacchio, 28 miles E.S.E. from Ferrara, is a walled town, with 5400 inhabitants, situated on an island in the midst of extensive swamps which communicate with the Adriatic, and receive its water. These swamps, called Le Valli di Comacchio, are divided into estates or tenements for the purpose of fishing. Immense quantities of fish of various sorts, and especially large eels, are caught here and pickled at Comacchio for exportation. The fishery in these marshes is celebrated by Tasso and Ariosto. It is needless to add that the neighbourhood is very unhealthy.

Lugo, 30 miles S.S.E. from Ferrara, on the Senio, has a population of about 10,000 including the commune. It has a handsome square,

the porticoes of which are formed into shops during the September fair, which lasts from the 1st to the 19th of the month. It stands in the southern part of the province, near the borders of Ravenna: this town was plundered and nearly destroyed in 1796, for having revolted against the French.

The air in general throughout the greater part of the province of Ferrara, especially in the vicinity of the great swamps, is more or less unwholesome, particularly in summer, though the malaria is not so bad as in the Pomptine marshes. The country is flat, and in many parts much below the level of the Po, the water of which is kept in by strong dykes; but the river sometimes breaks through and produces dreadful inundations. The cost of keeping the dykes in repair is one of the heaviest charges on the province, and watching the rising of the river during the floods is a constant care of the peasantry. The Po, in the territory of Ferrara, divides itself into three principal branches—the main one, or Po d'Ariano, the Po di Volano, and the Po di Primaro or southernmost branch, which last receives the Reno, the Santerno, the Senio, and other numerous streams which flow from the Apennines of Bologna. These various branches of the Po communicate with one another by canals. The Naviglio of Bologna communicates between that city and Ferrara, and the Canal di Cento between this town and the Po.

The province of Ferrara is governed by a Papal legate, and is hence called a Legation (Legazione). The Legate resides in Ferrara, the capital of the province. It formerly constituted the greater part of the duchy of Ferrara, which was long governed by the house of Este. Alfonso II., the last duke, having died without legitimate male issue, the duchy was annexed to the Holy See in 1598. The French seized the Ferrarese in 1796, and included it in the department of the Lower Po in the kingdom of Italy. In 1814 it was restored to the States of the Church, with the exception of a portion that lies between the Po di Goro and the Po della Maestra, which was annexed to Austrian Italy.

FERRARA, an archiepiscopal city in the States of the Church, capital of the Legation or province of Ferrara, is situated in the midst of a flat unhealthy country, not more than 7 feet above the level of the sea, on the left bank of an arm of the Po, in 44° 49' 56" N. lat., 11° 36' 33" E. long., about 4 miles S. from the main channel of the Po, which forms the boundary between the Papal and the Austrian states, 26 miles N.N.E. from Bologna, and 38 miles N.W. from Ravenna. It is a large and well-built town, with streets wide and straight, the principal of which, called San-Beneletto, is about 2000 yards in length. But the city, though it retains many features of former grandeur, wears a deserted look: grass grows on its once well-trodden pavements: its magnificent palaces are untenanted and falling into decay; and its walls, which once inclosed a population of 100,000, now hardly contain a fourth of that number. Of the 25,000 inhabitants about 2000 are Jews, who reside in a separate quarter called Il Ghetto. Besides being inclosed with walls, Ferrara is defended on the west side by a citadel regularly fortified, which, agreeably to a stipulation of the Congress of Vienna, is garrisoned by Austrian soldiers, as well as the neighbouring town of Comacchio. The Austrians, dreading the liberalism that manifested itself in central Italy after the election of Pope Pius IX., took military possession of the city also in August 1847—a step which led to lively remonstrances from the Holy See. The troops were withdrawn from the city in December following. But since the miserable termination of the insurrectionary movements in Italy in 1849, the Austrians have military occupation not only of Ferrara but of all the cities and strongholds in the legation.

In the middle of the town is a castle, flanked with towers and surrounded by wet ditches, which was once the residence of the dukes of Ferrara, and is now that of the legate. The population is collected together chiefly round this castle, and but thinly scattered over the remainder of the site. Ferrara has a cathedral and numerous other churches, most of them rich in paintings by the great masters of the schools of Bologna and Ferrara. The finest churches are—the cathedral of St. Paul, consecrated in A.D. 1135, adorned with sculptures, bronze statues, and frescoes; San-Benedetto, in which Ariosto was buried: his monument however has been transferred to the University: in the hall of the refectory of the adjoining convent is the painting of Paradise, by Garofalo, the friend of Ariosto, who introduced in it the likeness of the poet; San Domenico, which has several valuable paintings and the monument of Celio Calcagnini, one of the restorers of learning in the 16th century; Santa-Maria-del-Vado, the oldest church of Ferrara, which is celebrated for its magnificent paintings by Carlo Bonone and other masters of the school of Ferrara, and contains the tombs of Bonone, Garofalo, Bastianino, Ortolano, and other native painters; the church of San-Francesco, which is rich in the works of Garofalo, and is famous for its echo, which has sixteen reverberations; i. Testini, &c. Most of these churches, and more especially that of the Campo-Santo, which occupies the site of the old Certosa convent, contain many finely-sculptured monuments of historical or otherwise eminent personages. Among the palaces of Ferrara, the finest are those of Villa and Devilaqua. The theatre is one of the largest and finest in Italy. The house of Ariosto, which he purchased himself, is shown to strangers, but his favourite garden has disappeared; the old house of his family

in which he had been brought up still exists, and is called Casa degli Ariosti. The Casa Guarini, still inhabited by the marquises of Guarini, recalls the name of the author of 'Il Pastor Fido.' The great square (Piazza Grande) was named after Napoleon till 1814, when it got the name of Piazza d'Ariosto, which it retains. The University of Ferrara (Studio Pubbico), which is attended by about 800 students, enjoys a high reputation as a school of medicine and jurisprudence. It contains collections of medals and of Greek and Roman antiquities, and a valuable library of 80,000 printed volumes and 900 manuscripts, among which are autographs of Ariosto, Tasso, Guarini, and many editions of the 15th and 16th centuries, when the presses of Ferrara were amongst the most active in Europe. In one of the apartments of the library is the tomb of Ariosto, which was removed hither by the French from the church of San-Benedetto in 1801, when they occupied that fine convent as barracks. In the hospital of Santa-Anna is still shown a small room on the ground floor in which Tasso was confined for seven years and two months by Alfonso d'Este, duke of Ferrara.

Ferrara is one of the most interesting and handsome of the modern towns of Italy, for it has no claims to classical antiquity, having risen after the fall of the empire. It was walled round by the Exarchs in the 6th century. The bishopric of Ferrara dates from 661, the archbishopric from 1735. From the 10th century the city was connected with the family of D'Este, first as magistrates and after 1210 as hereditary princes, generally holding their power from the Pope, but sometimes asserting their independence. Ferrara remained under the sway of the house of D'Este until the extinction of the legitimate branch in 1597, when it was finally attached to the States of the Church. During the last century of its existence Ferrara was the most distinguished city in Europe for literature and refinement; the names of Ariosto, Tasso, and Guarini throw an inextinguishable glory around its little court during this period. The Ferrarese school of art was founded and fostered by the house of D'Este. Under Duke Ercole, Calvin and other French reformers found an asylum in Ferrara when driven from France in the early part of the 16th century. It lost part of its population in the 17th century in consequence of having lost its sovereigns, and become a provincial town. It carries on a considerable trade in corn and other produce of the soil by means of large canals and the Po, which connect it with the large towns of Northern Italy. A good deal of caviare is made from the roes of sturgeon taken in the Po.

FERRO. [CANARIES.]

FERROL. [GALICIA.]

FERRY-PORT-ON-CRAIG. [FIFESHIRE.]

FERTÉ-MILON, LA. [AISNE.]

FESTINIOG, or FFESTINIOG, Merionethshire, a village and the seat of a Poor-Law Union, in the parish of Festiniog, is situated on a lofty hill at the head of the beautiful vale of Festiniog, in 52° 59' N. lat., 3° 55' W. long.; distant 16 miles W. by N. from Bala, and 210 miles N.W. by W. from London. The population of the parish of Festiniog in 1851 was 3460. The living is a rectory with the curacy of Maentwrog annexed, in the archdeaconry of Merioneth and diocese of Bangor. Festiniog Poor-Law Union contains 15 parishes, with a population in 1851 of 16,158.

The town has considerably increased during the last 30 years in consequence of the opening of several slate quarries. Copper has recently been discovered. The parish church is an elegant structure erected in 1846, in the Norman style. Wesleyan and Calvinistic Methodists and Independents have places of worship, and there are National and British schools, an hospital, and a savings bank. The market is held weekly on Saturday. The scenery of the vale of Festiniog is rich, varied, and picturesque. The two waterfalls of Cynfael are situated in a beautiful glen about half a mile from the village.

FEVERSHAM. [FAVERSHAM.]

FEZ. [MAROCCO.]

FEZZAN, the *Phazania* of the ancients, a country in northern Africa, between 24° and 31° N. lat., 12° and 17° 30' E. long., may be considered as the greatest oasis of the Sahara, by which it is inclosed on the west and east, and partly also on the south. On the north it borders on a less desert region belonging to Tripoli. Its length from north to south is about 300 miles, its breadth is 200 miles; but where it borders on the desert, its boundary of course is not exactly fixed. On all sides it is surrounded by nomadic nations; on the north and east by Arabs, and on the south and west by the Tibboos and Tuaricks.

Fezzan, according to Richardson, consists of a "great central tableland, not quite clearly marked to the eye on some of its northern approaches, but dropping sheer to the plain at other parts." Its northern part is traversed by two ridges of stony and sandy hills; which in places attain an elevation above their base of 1200 feet. They are called in the eastern district El Harush, but in the western they take the name of Ghurian Mountains and Soudah Mountains. The country south of these ridges contains large plains, covered

with sand, or pebbles and small stones, and without any traces of vegetation; but some ridges of hills from 300 to 600 feet high, rise above the plains, and inclose valleys between them, which are the only parts capable of cultivation. The cultivable portion of the country hardly exceeds one-tenth of its surface. The hills have rugged, irregular, and peaked summits, and are composed of thick beds of blue clay, alternating with sandstone, beds of alum-slate, and thick strata of porphyritic clay-stone (Denham); the tops consist of sandstone. The soil in the valleys is a stratum of sand, lying on chalk or clay, which is rendered fit for agricultural purposes by irrigation. As there are no rivers or brooks, and only very few natural springs, the irrigation is effected by wells, water being commonly found at a depth of about 100 feet. The heat in summer is very great, but in winter, during the northern winds, the cold is unpleasant even to Europeans. Rain is very rare; and it rains very little at a time. Violent gales are rather frequent, especially from the north and south, which fill the air with clouds of sand.

Date-trees, which constitute the principal wealth of the country, grow plentifully near the towns and on some plains, where the soil is impregnated with saline matter. Some patches of wheat, barley, durra, maize, and other grains are cultivated, but not enough for the consumption, though two crops are obtained yearly; flax is cultivated at Mourzuk, as are also figs, water-melons, vines, pomegranates, &c. in orchards; onions, parsley, and other vegetables are likewise grown. Cultivation is carried on without much skill or industry, but a rudely managed irrigation is practised. Goats and asses are reared in great numbers; cows, sheep, horses, and camels are not so numerous. All these animals feed on dates or their kernels.

Fezzan is very thinly peopled: from the most recent estimates founded on the tribute returns of the Turkish authorities, it does not appear to contain more than 26,000 inhabitants, who occupy the little oases scattered over this wide tract of half-desert country. Richardson says that the inhabitants of Fezzan consist of the "three varieties of the human race which overspread all Central Africa, namely, the Arabs and Moors, the Tuaricks, and the Negroes—and these all mixed and blended together of all shades of colour, stature, and configuration. The Arabs and Moors abound this side [north of] Mourzuk. Sebhah, and Zeghen are all Arabs and Moors. The Tuaricks are found in the Wadi Gharbi, and are occupied chiefly in a pastoral life leading their flocks through open desert. . . . The Negroes begin at Mourzuk and extend south in all the districts of Fezzan as far as the Tibboos." They are all Mohammedans, and commonly use the Arabic language, except in the most southern districts where the Tibboo and Bernon languages are spoken. Until recently they were governed by a native chief who assumed the title of Sultan, and exercised despotic power, though nominally dependent on the Bey of Tripoli. In 1842 the Turks taking advantage of a dispute respecting the succession, demanded the acknowledgment of Turkish supremacy. This being refused, they sent an army to take possession of the country. The sultan of Fezzan, Abd-el-Geeel, being defeated and forced to surrender, was put to death, and Fezzan has since remained a Turkish pashalic.

The inhabitants formerly depended to a great extent on the caravans which passed through the country, but this trade has been almost wholly lost, and Fezzan has in consequence become greatly impoverished and depopulated. The oases are capable of yielding an ample supply of the necessaries of life, but cultivation is neglected, and several oases have been altogether abandoned. The manufacturing industry of the inhabitants is limited to the making of coarse blankets, which form the principal dress of the lower classes.

Fezzan is divided into ten districts: El Hofrah, the principal and most fertile, is nearly in the centre; it contains the capital, Mourzuk, and several smaller towns; on the north are Wadi Ghudwah, containing only the town of the same name; Sebhah containing two towns with a good population; Bonanea, containing three towns, a considerable population, and an immense number of date-palms; Shati, consisting of small oases, each having its little village and plantations of date palms; El Jofrah, the most northern district, containing Sockna, the town next in importance to Mourzuk, and nine or ten smaller towns; on the east Sharkeenah, containing the ancient capital Zuilah, and some villages; on the west, Wadi Gharbi very similar in character to Shati; on the south are Ghartroun and Tagerhy, containing three small towns, the inhabitants of which districts are all black. In native phraseology Fezzan contains 101 towns and villages. There are really not more than six or eight places which deserve to be called towns, and the villages, though numerous, have for the most part very few—many of them less than fifty—inhabitants.

Mourzuk, the capital and the residence of the pasha, is much the most important town. It is a walled town, about 3 miles in circumference, occupying a slight depression, in 25° 54' N. lat., 14° 12' E. long. and 420 miles in a direct line S. from Tripoli, with a population of about 3500. The houses are built of sun-dried bricks, and for the most part mere hovels. The castle has a ruinous appearance; connected with it are rather extensive barracks. Since the Turkish occupation Mourzuk has however been much improved, a new mosque has been erected, as well as a guard-house, and a colonnade to the principal street while the town has been rendered more healthy. Mourzuk wa

formerly a somewhat important commercial town, Fezzan being the most frequented road by which Soodan communicated with the countries along the Mediterranean. From October to January or February numerous caravans used to arrive at Mourzuk from Cairo, Bengazi in Barca, Tripoli, Ghatames, Twat, Bornou, and Soodan; and the neighbouring Tibboos, Tuaricks, and Arabs then visited its market. The traders were accustomed to dispose of part of the produce of their respective countries at Mourzuk, and carry the rest farther on. This commerce has however greatly declined, owing to the preference now given by the caravans to the route through Ghat, though many caravans still follow the Mourzuk route, and others trade to Mourzuk from Cairo without visiting Tripoli. Mourzuk is also the mart of many British goods from the Levant; a British consul is maintained here. The principal articles of traffic from the interior are slaves, senna, and ivory; according to Mr. Richardson the value of the merchandise which changes hands here during the great mart is from 40,000 to 60,000 Spanish dollars. The town is surrounded by gardens and orchards.

Sokna, the next most important town, is situated midway between Mourzuk and Tripoli; it is a tolerably built place, the houses being of stone, and contains about 2000 inhabitants, who are nearly all Moors. A good deal of commerce is carried on, the merchants having the reputation of being richer than those of Mourzuk. Sokna is celebrated for its dates; much grain is grown around the town. *Houn*, in the same district, is said to be nearly as large as Sokna. *Tutlah*, formerly the capital of Fezzan, and the site of a Roman colony, is now chiefly remarkable for its antiquities.

(Hornemann, *Journey from Egypt to Fezzan*; Denham and Clapperton, *Narrative of Travels*; Richardson, *Travels in the Great Sahara*; and *Narrative of a Mission to Central Africa*.)

FICHELGEIRGE is a mountain-mass in Germany, situated between 50° and 50° 15' N. lat., 11° 45' and 12° E. long. Its greatest length from north-east to south-west, between the towns of Asch and Baireuth, does not exceed 35 miles; and its average width is about 28 miles.

The whole mountain-mass is furrowed on all sides by narrow valleys and glens; its most elevated parts extend in plains, on which a few summits rise in the form of domes. These summits form a series arranged along the axis of the mass from south-west to north-east. Those which attain the greatest elevation are the Kösseine, which rises to 3024 feet; the Ochsenkopf, to 3328 feet; and the Schneeberg, to 3424 feet above the level of the sea. The base on which the whole mass rests is about 1700 feet above the sea-level towards the south and west, and towards the east and north about 1800 feet.

The Fichtelgebirge is the centre, in which three extensive mountain ranges unite, and from which they may be considered to issue. The Erzgebirge begins at its northern extremity near Asch, and runs off in an east-north-east direction, dividing Saxony from Bohemia. From its north-western extremity branches off another range, which is first called the Frankenwald (or Forest of Franconia), and farther on takes the name of the Thüringerwald (or Forest of Thuringia); the Harz itself may be considered as the most northern branch of this range. The third range, which is immediately connected with the Fichtelgebirge, is the Böhmerwald (or Forest of Bohemia), which runs off in a south-eastern direction. [BOHEMIA; BAVARIA; ERZGEBIRGE.]

In consequence of this disposition of the mountain ranges which issue from the Fichtelgebirge, the waters collected on its slopes run off to the four cardinal points. On its southern declivity rises the Naab, which joins the Danube, by which its waters are carried to the Black Sea; the Main, rising on the western declivity, mingles its waters with the Rhine; and the Eger, which carries off the waters from the eastern slopes, falls into the Elbe, as does also the Saale, which rises near the northern extremity and runs northward.

The nucleus of the mass is composed of granite, gneiss, and mica-slate; but on the north-western side it is surrounded by extensive beds of clay-slate and grauwacke. Its mineral wealth is not great. It contains extensive beds of iron ore, which is the only metal that is worked on an extensive scale. Copper ore occurs frequently, but always in such small quantities that it cannot be worked. Gold was formerly obtained by washing the sand of some rivulets. Alum, serpentine, and coal occur in some places in rather large quantities. In other places there are some precious stones, as garnets, tourmalines, &c.

FIESOLE. [ETRURIA; FLORENCE.]

FIFESHIRE, a maritime county in the east of Scotland, comprising the peninsula between the Frith of Forth on the south, the German Ocean on the east, and the Frith of Tay on the north, and bounded on the west by the counties of Perth, Kinross, and Clackmannan. It lies between 56° and 56° 26' N. lat., 2° 35' and 3° 40' W. long. The outline is very irregular. The length of the county from east to west is about 44 miles, and from north to south 18 miles. Its area is 503 square miles, or 322,031 statute acres, of which more than four-fifths are arable and pasture, while one-fifth consists of hills, moss, moors, roads, and woods. The population in 1851 was 153,516. Fifeshire returns one member to the Imperial Parliament.

Coast-line.—The northern boundary of the county forms the southern bank of the Frith of Tay, along which from Newburgh to Ferry-port-on-Craig it extends about 18 miles. On the edge of the

Frith the ground is nearly level; farther inland there is a hilly range, a continuation of the Ochils, but none of the eminences attain any great height. In Forgan parish however where the estuary is narrowed, the coast is bold and rocky. On this part of the coast is the village of Woodhaven, with a harbour capable of accommodating vessels of from 100 to 150 tons. The ferry to Dundee, which was formerly at Woodhaven, is now at the village of Newport, opposite Dundee and about one mile and a half distant from it. There is here a ferry pier 350 feet long and 60 feet wide. Eastward of Newport the coast continues bold and rocky, as far as the village of Ferry-port-on-Craig, where is a small pier and a regular ferry to Broughty, on the opposite coast of Forfarshire. Eastward of this village, the shore is flat and sandy, and continues so along the north coast of the Bay of St. Andrews to the estuary of the river Eden, which is navigable as far as the Guard bridge, a little way from its mouth, where there is a small harbour, which vessels of considerable burden can enter, but at spring tides only, there being a bar at the mouth of the river. Beyond St. Andrews the coast is again rocky, the sandstone in this extreme eastern part of the county running out to the sea in long ridges. Fifeness, the most eastern point, is situated in 56° 17' N. lat., 2° 35' W. long. The shore is composed of cliffs much worn by the action of the waves. Westward of Crail to St. Monans the shore still presents sandstone cliffs to the Frith of Forth. Here are the burghs of Easter and Wester Anstruther, westward of which are the small harbours of Pittenweem and St. Monans. Off the coast here is the island of May, with its lighthouse, which are noticed in the article CRAIL. The population of the isle (in 1851) is returned with the parish of Anstruther Wester. The isle is claimed by the parish of Crail, but it is considered by the Commissioners of Northern Lights not to be part of any parish. The Bay of Elie, a small but very convenient harbour, is formed by two promontories in the Frith, composed of basalt greenstone and trap. The shore on each side of these promontories is low and sandy; as is the coast generally along the Bay of Largo to the mouth of the river Leven, after which, turning southward, the coast again, in Wemyss parish, presents a line of rocks which extend occasionally a good way into the Frith. On this part of the coast is the small harbour of Buckhaven, and farther south are the more important towns of Dysart, Kirkcaldy, and Kinghorn. Turning Kinghorn-ness, opposite which is the island and lighthouse of Inchkeith, about 3 miles westward is the town of Burntisland, and farther west are Aberdour and Inverkeithing. The coast in the neighbourhood of Aberdour is rocky and steep. Wood has been planted close to the shore, which continues rocky and occasionally sandy westward to Inverkeithing and along the tongue of land at the extremity of which is North Queensferry. The remaining part of the coast to the westward is generally low. Some of the strata of the great carboniferous formation on which this part of the county rests, crop out at one or two places on the shore.

Surface, Hydrography, Communications.—In the northern part of the county is a continuation of the Ochils, gradually diminishing in height as the range approaches the east. The Lomonds, or Lomond Hills, a small range about 4 miles long, run nearly parallel to this northern range, in the middle of the county. The Eden traverses the valley, or Strath of Eden between these ranges, and the Leven and Orr rivers water the valley south of the Lomonds, formed by the eminences on the shore of the Forth. The Ochils are composed of trap rock. In the north-eastern part of the county, their elevation does not exceed 100 feet, but in the extreme west of the county they reach a much greater height. The Lomonds have three peaks called respectively East, Mid, and West Lomond hills. They slope to the south, and to the north are generally steep or precipitous, in some places presenting regular columns of trap rock to the view. The West Lomond is said to be 1720 feet above the sea. The other eminences of the county are generally single hills, such as the Largo Law, which is above 900 feet high, and the Brinnarty Hills between Loch Leven in Kinross-shire and Loch Orr in this county.

Fifeshire is watered by numerous streams, of which the Eden and the Leven are the chief. The Eden, which rises in the Lomond Hills, flows about 20 miles east and north-east through the central vale, or Howe of Fife, sometimes called Stratheden, past the town of Cupar into the German Ocean. The stream is slow, and of little force; art however has made it available for the movement of mills and of powerful manufacturing machinery. [CUTAN.] Red and white trout, pike, and eels are abundant in the deeper parts, and salmon are taken near its mouth. The Leven issues from Loch Leven in Kinross-shire, and taking an easterly direction, receives the Orr Water from Loch Fitty, and flows into the Frith of Forth at the village of Leven. In its course of 12 miles it turns a great many mills for cotton, flax, paper, corn, &c. The water being very clear and soft is well adapted for bleaching. Before the establishment of bleaching-works along its banks, it was the best trout stream in the county. Fine salmon were taken in the loch, and thousands of eels in their passage thence to the sea. There is still a salmon fishery at the mouth. Many of the numerous small lochs of this county have been drained, and their sites have become cultivated fields. Several of those which remain greatly enhance the picturesque beauty of the scenery. The Loch of Lindores in the north-west is a beautiful sheet of water, covering 70 acres, with a depth of 20 feet. Loch Fitty, near Dunfermline, is

the next in magnitude. There are mineral springs in various parts, particularly two chalybeates of great repute, near the town of Dysart.

About three-fourths of the county boundary are formed by the ocean and the great estuaries or Friths of the Forth and the Tay. Along this extensive line of coast are many commodious harbours. Steam-boats ply regularly between the principal ports of Fifeshire and those of the adjacent counties, especially with Leith on the south and Dundee and Perth on the north. The principal roads in the county are those which, commencing at Burntisland and Kinghorn opposite Leith, lead to Perth, Cupar, St. Andrews, and Dundee.

The Edinburgh and Northern railway runs through the county from Burntisland on the Frith of Forth to Ferry-port-on-Craig on the Frith of Tay—passing on its route through the towns of Kirkcaldy, Dysart, Cupar, &c. The ferries on the Friths of Forth and Tay are worked by means of the railway company's steamers.

Geology, Mineralogy, &c.—Coal and limestone are found in abundance in almost every part of the county south of the Eden; but they are not found in the upper division, north of that river. Along the shore of the Forth, from Torryburn in the west to Pittenweem in the east, the strata of coal are generally regular, dipping to the east and south-east. They terminate on the one hand at the distance of 2 or 3 miles from the water's edge, and on the other they are continued beneath it. Another tract of coal, to the north of this, extends through the higher ground, nearly parallel, from the north of Dunfermline to Leslie, and thence to the parish of Denino, a little to the south of St. Andrews. The dip of these strata is almost invariably north and north-east. In the irregular hills along the right bank of the Eden the strata are found in every variety of position. The collieries are numerous, and employ a large number of hands. The working of coal at Dysart is said to have commenced upwards of 350 years ago.

Limestone quarries are numerous in the southern district. The lime-works, 3 miles east of Torryburn, are perhaps the most extensive in Scotland; in the parish of Burntisland, and in many other places, quarries are constantly worked. Ironstone is plentiful, especially near Dysart, and in the parish of Balgonie. It yields from 40 to 60 per cent. of metal, and several thousand tons are annually conveyed to the great foundry of the Carron Company. Lead mines have been worked in the Lomond Hills. Freestone of a superior quality is found in great abundance south of the Eden, particularly in Burntisland. Freestone, well adapted for paving, is quarried in Strathmiglo, and near Dunfermline and north of the Lomond Hills are vast rocks of white freestone, susceptible of a fine polish. Along the sides and summits of the northern hills are boulders of the primitive rocks—granite, gneiss, quartz, mica-slate, with garnets and primitive greenstone, many of very large dimensions. Whin or greenstone is abundant, especially in the north; it is hard, firm, and durable; and is well adapted for building. On the shore near Burntisland, and in some other places, are found beds of a hard dark-coloured stone, which endures exposure to the most intense heat for several years without injury; it is therefore much used for grates and ovens. Marl is found, but it is not much used by the farmers for manure. Clay is abundant for making bricks, not only of the common kind, but also fire-bricks, of an excellent quality. Peat in some parts is plentiful. Agates and very beautiful crystals of carbonate of lime and sulphate of barytes are imbedded in the whinstone rocks of Monimail and Newburgh; and agates, carnelians, jaspers, and rubies have been found in the bed of the Eden and at Earl's Ferry. In the parish of Dysart fossil trees and other remains have been found.

Climate, Soil, Agriculture, &c.—The air in general is dry, healthy, and exhilarating. Agues are almost unknown, and fevers have a comparatively mild character. Along the coast of the Frith of Forth the air is mild and salubrious; but in the west and north-west districts, which have greater elevation, with a soil more moist and less cultivated, the air is comparatively damp and cold. In consequence of the hills of Fifeshire lying generally from north-east to south-west, the valleys are much exposed to severe easterly and north-easterly winds. But the greatest inconvenience experienced in this county, as in every part of Scotland, is occasioned by the frequent sudden changes in the weather.

The soil is of various kinds. In the most fertile districts it consists principally of a rich loam; in the poorer tracts it is mostly a wet clay, resting on a cold bed of till. A level tract of deep, rich, and very fertile loam extends from east to west along the whole southern side, varying in width from 3 miles to 1 mile from the shore of the Frith of Forth. It produces luxuriant crops of all the common kinds of grain and vegetables. A wide strip of land extending from the town of St. Andrews to the extremity of the county north-west of Dunfermline, consists of wet clay, with moss, moor, and rocky hills. The western and north-western parts are also of little agricultural value, being partially covered with barren moor, and heathy mountain land. The valley drained by the Eden commences at the mouth of that river and extends to the borders of Perthshire. From Cupar westward its width is from 3 to 4 miles. Its soil varies in different parts from a light friable and sandy mould to a strong and heavy loam, but the whole is generally well cultivated and very productive. The northern side of the county along the Frith of Tay exhibits a

series of rocky hills partially covered with furze, but intersected by numerous fertile valleys and carefully cultivated slopes.

Fifeshire is well cultivated, has an unusual proportion of gentlemen's seats and plantations, and its coast is thickly studded with villages and towns. There is little natural wood. The plantations are numerous; and the timber, which is mostly aged and valuable, consists of ash, elm, beech, fir of different kinds, limes, chestnut, sycamore, and oak. Many hundred acres of waste land have been planted with forest-trees. Owing to the number of opulent proprietors who reside on their estates in Fifeshire, gardens are numerous, extensive, and well managed.

Four-fifths of the county are arable. Farms vary in extent from 50 to 500 acres: the average may be about 120 acres. Property in land is perhaps more equally divided, and distributed among a greater number of proprietors than in any other county of Scotland. The rural dwellings and farmsteads were in the end of the last century of the most wretched description. The farmers lived in low, smoky, badly-lighted cottages, without any interior divisions except those made by the furniture. These have been replaced by neat and commodious houses; and the farm-offices, which formerly were awkward and filthy, have given place to greatly-improved structures. By far the greater portion of the county is inclosed, and the fences consist either of stone dykes or thorn hedges. Drainage having been very extensively and effectually executed on tracts of flat and swampy lands, has greatly improved both the productiveness and the health of the county. The sites of several considerable lakes now bear fine crops of grain.

The principal crops are of oats, wheat, and barley. As oats are more generally adapted to the soil and climate, the cultivation is more extensive than that of any other kind of grain; and though the poorest families now eat wheaten bread, oatmeal is still much used as an important article of food. Barley is raised to some extent; the meal of this grain is used for bread among some of the poorer class of labourers, who sometimes mix it for this purpose with pea and oatmeal. Wheat being adapted only to some parts of the soil, and requiring more care and expense than oats and barley, is not extensively raised; the crops however are generally very good. The exportation of oats, wheat, and barley is carried on chiefly at the port of Kirkcaldy. Peas and beans thrive best in the northern and southern districts. Of potatoes a sufficient quantity is planted on every farm for the tenant and his cottagers, and abundant supplies are raised in the vicinity of every town and village. Some cargoes of potatoes are exported to the London and other markets. Turnips are extensively used for fattening cattle and feeding milch cows and young stock in sheds. Flax is an important crop in Fifeshire; the produce is consumed in the large linen manufactures of the county, principally at Dunfermline. Rye, cabbage, colewort, kail, tares, and carrots are cultivated to a small extent.

The county has been long distinguished for the excellence of its breed of cattle. The prevailing colour is black, though in the true county breed every variety of colour is found. They are hardy, fleet, travel well, are tame, and fatten quickly. The cows are of high repute in the dairy. Sheep are not numerous. The flocks are chiefly of the Cheviot breed. Hogs are kept by all the farmers and cottagers. The breed of horses has been greatly improved. Poultry and pigeons are abundant. Modern improvements in agricultural implements are adopted throughout the county. Thrashing machines, some of which are driven by steam, iron ploughs, &c., are in common use. Leases are generally for 19 years. There are several active agricultural societies in the county. Most of the indigenous and other animals of Britain, wild and tame, are found. Game-birds are abundant, and the lochs are visited by wild geese, ducks, teal, and occasionally by wild swans. Among the rarer birds are the Bohemian and silken chattering, the siskin, kingfisher, and passenger-pigeon.

Industry, &c.—Small breweries and distilleries for the manufacture of malt liquor and malt spirits are numerous. The manufacture of sea-salt has been established in Fifeshire for several centuries, chiefly at Dysart, Kirkcaldy, and other places on the coast. The produce of the coal-fields in the western parishes of Aberdour, Dalgety, Inverkeithing, and Dunfermline is very considerable. Ox and cow-hides, calf-skins, and some seal-skins are tanned and dressed at Kirkcaldy, Cupar, Auchtermuchty, and Falkland. The manufacture of linen employs a much larger number of hands than any other manufacture in the county.

Besides considerable salmon-fisheries in the rivers Leven and Eilen, and at Newburgh, the herring-fisheries along the north-eastern, eastern, and southern coasts are extensive, and large exportations of the produce are made. Cod, turbot, haddock, and the other common species of sea-fish are taken off the eastern coast and conveyed to the market of Edinburgh.

The shipping belonging to the small ports of Fifeshire consists chiefly of brigs and sloops for the coasting trade, as the contiguity of the great ports of Leith and Dundee affords the convenience of steam conveyance to London and other distant places. Numerous vessels, principally belonging to Kirkcaldy, are engaged in the Baltic, American, and Australian trade, and a few are employed in the Greenland whale fishery.

Divisions, Towns, &c.—The county is divided into 61 parishes. For

ecclesiastical purposes it is divided into four presbyteries, namely, St. Andrews, Cupar, Kirkealdy, and Dunfermline, forming the provincial synod of Fife. According to the 'Census of Religious Worship and Education,' taken in 1851, it appears that, so far as was ascertained, there were then in the county 219 places of worship, of which 77 belonged to the Established Church, 49 to the Free Church, 45 to the United Presbyterian Church, 12 to Independents, 9 to Baptists, 7 to Episcopalians, 3 to Roman Catholics, 3 to Mormons, and 14 to other bodies. The number of sittings provided in 199 of these places of worship is stated to be 91,377. The number of day-schools in the county for which returns were received, was 285, of which 173 were public schools with 17,208 scholars, and 112 were private schools with 5937 scholars. Of evening schools for adults there were 19, attended by 263 males and 176 females: of Sabbath schools there were 183, with 14,753 scholars. Of these schools 53 belonged to the Established Church, 47 to the Free Church, and 37 to the United Presbyterian Church. Of literary and scientific institutions the county possessed 7, of which 5 were returned as having an aggregate of 483 members.

The county town, Cupar, and the other principal towns, DUNFERMLINE, ST. ANDREWS, CUPAR, and KIRKCALDY, EAST and WEST ANSTRUTHER, BURNTISLAND, CRAIL, and DYSART, are noticed under their respective titles. Besides these, the royal burghs which are also sea-ports are Inverkeithing, Kilrenny, Kinghorn, and Pittenweem; but they have greatly declined from their ancient prosperity, owing partly to the loss of their original exclusive privileges of trading, partly also to the union with England, after which all the towns on the coast of Fife experienced more or less depression and loss of trade. AUCHTERMERRY, Earlsferry, Falkland, and Newburgh are also royal burghs.

Earlsferry, population 436 in 1851, a royal burgh from time immemorial, is situated on the shore of the Frith of Forth, about 9 miles S.E. from Cupar. There are a town-house and a jail, but the place is generally regarded as a part of Elie. The burgh is governed by 2 bailies and 7 councillors.

Elie, a burgh of barony, population 732, is agreeably situated on the shore of the Frith of Forth, and is resorted to in summer by the inhabitants of Edinburgh for sea-bathing.

Falkland, population of the burgh 1330, about 8 miles S.W. from Cupar, was made a royal burgh by James II. in 1458. It is now governed by 2 bailies and 10 councillors, of whom one is provost. The town still possesses several old houses which were occupied by the household of James VI. The palace will be noticed later in the article. Two streets in the town are named Parliament-square and College-close. The inhabitants are chiefly hand-loom weavers.

Inverkeithing, population 1852, a small market-town and sea-port about 4 miles S.E. from Dunfermline, is situated at the bottom of a bay which affords an asylum for large vessels lying in Leith Roads. The town consists chiefly of one street. William the Lion granted a charter to Inverkeithing as a royal burgh. James I. resided here. The burgh is governed by 2 bailies and 10 councillors, one of whom is provost; and, in conjunction with Culross, Queensferry, and Stirling, returns one member to the Imperial Parliament. There are exports of coal and stone from the interior, and of whisky, firebricks, and magnesia manufactured in the town. There is here a ferry across the Forth, and steam-vessels regularly call at the port in passing up and down the river. The provost of Inverkeithing was in ancient times entitled to ride next after the provost of Edinburgh at the opening of the Scottish Parliament.

Kilrenny, population 1862, situated a short distance E. from Anstruther, was at one time a royal burgh, sending a representative to Parliament, but since 1672 it has been a burgh of regality. By the Act 15 & 16 Vict. cap. 32, the burgh is placed under the government of 2 bailies and 7 councillors, one of whom is provost. About 100 fishing-boats, of from 10 to 20 tons burden, belong to the harbour. Kilrenny unites with St. Andrews, the two Anstruthers, Crail, Cupar, and Pittenweem in returning a member to the Imperial Parliament.

Kinghorn, population 1568, a royal and parliamentary burgh, is situated on the shore of the Frith of Forth, opposite Leith. The burgh is governed by 2 bailies and 7 councillors, of whom one is provost; and unites with Kirkealdy, Burntisland, and Dysart in returning one member to the Imperial Parliament. The harbour is small. Some fishing-boats belong to the place, and steam-vessels and coasters call when the tide permits. The town-house and the burgh school are handsome buildings. Besides the parish church there are a Free church and a chapel for United Presbyterians. There are here extensive flax-spinning mills. The houses are well-built, and the streets are clean and well-paved. Near the town is a precipitous rock, over which Alexander III. was thrown from his horse and killed.

Newburgh, population of the burgh 2638, a royal burgh and market-town, is situated on the northern shore of the county, near the junction of the rivers Tay and Earn, which form the Frith of Tay. The inhabitants are chiefly engaged in the weaving of dowlas sheetings. The corn-market is well attended. Several vessels engaged in the coal-trade belong to the port. The harbour is formed by several piers running into the Tay. The town is well-built, and it is lighted with gas. The church and the town-house are handsome structures. There are two chapels for United Presbyterians. The town was made

a royal burgh by Charles I. Near the town are fragments of an ancient cross in honour of St. Magriddin.

Puthewal, population 3977, a burgh of barony, forms part of the parliamentary burgh of DYSART.

Pittenweem, population 1450, a royal burgh and port on the north shore of the Frith of Forth, adjoins Anstruther, from which it is about a mile westward. It is a member of the St. Andrews district of parliamentary burghs, and is governed by 2 bailies and 10 councillors, of whom one is provost. The town consists of two principal streets and several cross streets. The parish church is an ancient structure. The town is clean, and the houses are neat and substantial. Fishing and fish-curing are the chief occupations of the inhabitants.

The following villages and small towns may here be briefly noticed:

—*Abbotshall*, population of the town 4312, forms part of the parliamentary burgh of KIRKCALDY. *Abdie*, population of the parish 1486, is situated near an inland lake called the Loch of Lindores. A stream from the loch is used to drive saw-mills, bone-mills, and other mills. Near the village is a hill called Norman's Law, 850 feet in height, which has on its top a curious fortification of three concentric circles of stone. The stone-circles have been attributed to the Danes. *Aberdour*, population 1945, a short distance W. from Burntisland, possesses a small harbour. The inhabitants are chiefly engaged in handloom-weaving. The village is resorted to in summer for sea-bathing. *Balgownie*, population returned with Markinch parish, is noticeable for its ancient castle, to which reference is made elsewhere. The inhabitants are chiefly employed in the extensive flax-spinning mills in the neighbourhood. *Balmerino*, population of the parish 945, is believed to have been a seat of the Culdees, who were succeeded by a body of Cistercians. Of the Cistercian abbey, which was an extensive building, a few ruins still remain. Some of the inhabitants are engaged in weaving for Dundee manufacturers and others in salmon-fishing. *Buckhaven*, population 1769, situated on the shore of the Frith of Forth, about 8 miles N.E. from Kirkealdy, is inhabited chiefly by fishermen. For the improvement of the pier and harbour, constructed originally by their own contributions, the fishermen have collected among themselves about 3000*l.*—an effort which the Board of Fisheries rewarded by making a grant of public money in aid of the work. There is here a chapel for United Presbyterians. *Charlestown*, or *Charleston*, population included in Dunfermline parish, is situated on the shore of the Frith of Forth, and has a small harbour, at which the produce of the neighbouring lineworks is shipped. Numerous fossils have been found in the limestone. *Colinsburgh*, population returned in Kilconquhar parish, situated about 3 miles N. from Elie, possesses a weekly market well attended by the neighbouring farmers, and two annual fairs for cattle. There is a large establishment for currying leather. *Dairsie*, population of the parish 708, contains the ruins, which are still well preserved, of Dairsie Castle, where a parliament was held in 1335. The parish church was built by Archbishop Spottiswoode in 1615. The inhabitants are chiefly occupied in flax-spinning. *Dalgaty*, population of the parish 1513, contains extensive coal-mines and salt-works. The old village of Dalgaty has been removed, and the site included within the inclosures of the Earl of Moray. The produce of the mines is shipped at St. David's, which is within the parish. Donibristle Castle, the scene of the murder by the Earl of Huntly of the Earl of Moray, son-in-law of the Regent Murray, is in the parish of Dalgaty. *David's, St.*, a convenient harbour, situated a mile and a half N. by W. from North Queensferry, with 17 feet depth of water, admits vessels of 500 tons. Coal is shipped in great quantities, the collieries in the neighbourhood being very extensive. There are also large salt-works. *Ferry-port-on-Craik*, population 2051, is a neatly-built village on the south shore of the Frith of Tay. The inhabitants are chiefly engaged in handloom-weaving for Dundee manufacturers. It contains a Free church and a chapel for United Presbyterians. *Gallatown*, or *Gallowtown*, population 1436, is a village situated about 2 miles N.W. from Dysart, and forming a part of Dysart parish. *Largo*, population of the parish 2800, is situated in Largo Bay, and is much frequented for sea-bathing. There are flax-works and a salmon-fishing station. The steamers of the river call here, and there are a few small trading vessels belonging to the village. It contains several partly-endowed schools, the parish church, chapels of the Free Church and the United Presbyterian Church, a small hospital, a savings bank, and a library. *Leslie*, population 1342, situated about 11 miles S.W. from Cupar, is inhabited chiefly by weavers and persons employed in agriculture. Besides the parish church there are two chapels for United Presbyterians, and a Free church. *Leven*, a burgh of barony and port, situated at the mouth of the river Leven, at the western extremity of Largo Bay, consists of two parallel streets and several lanes: population of the village 2083, chiefly employed in linen-weaving. The harbour is a natural one, but is being gradually improved. It admits at high tide vessels of between 300 and 400 tons. One or two vessels in the American trade and several coasters belong to it. The town is cleaned and lighted by the police board: the parish contains a foundry, and several flax and other mills. *Limekilns*, population included in the parish of Dunfermline, is a small port from which the produce of the neighbouring lime-quarries is exported in considerable quantities. Several vessels belong to the port. The United Presbyterians have a chapel here. *Markinch*: population of the parish, 5843. Besides the village of Markinch the

parish contains the villages of *Milton* and *Thornton*, each of which has a chapel of ease. Besides the parish church there are chapels of the Free Church and the United Presbyterians. Coal is extensively wrought, and there are several paper mills, woollen, linen and flax mills; also several bleach-works. The *Leven* and *Orr* rivers, which traverse the parish, supply water for the various manufactures. *Markinch* was a seat of the Culdees. *Monans, St.*, a burgh of barony in the parish of *Abercrombie* (formerly called *St. Monans*), on the north shore of the *Frith of Forth*: population of the village 1241, who are chiefly employed in fishing and fish-curing. One or two coasting vessels belong to the harbour, which has a long pier and 20 feet depth of water at high tides. The burgh has a handsome church erected not many years ago, the former one, said to have been built by *David II.*, having become ruinous. There is also a prison. The spot occupied by *St. Monan's* cell is still pointed out. *Pettycur*, a village situated on the coast a short distance S. from *Kinghorn*, possesses a harbour and a small shipping trade. *Strathmiglo*, population of the parish 2509, about 10 miles W. by S. from *Cupar*, is a large village, the inhabitants of which are chiefly occupied in linen-weaving. *East Wemyss*, a village with a population of 802, and *West Wemyss*, a burgh of barony, population 1013, are situated about a mile apart, on the shore of the *Frith of Forth*, about 3 miles N.E. from *Dysart*.

History, Antiquities, &c.—In ancient times Fife was one of the most cultivated and improved, and at the same time the most warlike of the Scottish counties. It was frequently styled the 'Kingdom of Fife.' *Falkland* and *Dunfermline* were royal residences. But the county does not appear to have been the scene of any events of national importance except those which occurred during the earlier part of the Scottish Reformation, and which are more properly referred to in treating of the different localities in which they occurred. The county contains a great number of ancient edifices now either fallen or falling into decay. Some of these ruins are striking monuments of the taste and opulence of the feudal and monkish builders. [*ST. ANDREWS; DUNFERMLINE.*] Near *Newburgh*, in the middle of a large and fertile field, rising gently from the *Tay*, stand the ruins of the abbey of *Lindores*, founded by *David*, earl of *Huntington*, in 1178, in commemoration of his taking *Ptolemais*, in the *Holy Land*. It was one of the most richly endowed monasteries in Scotland. Stately fruit-trees rise from the floors of its halls and lofty aisles, interspersed with ivy, hazel, and wild flowers of various and brilliant hues, which cling to the mouldering fragments of the walls. The whole produces a very picturesque effect. In the same neighbourhood are the remains of two very curious ancient crosses. One, called the *Cross of Mugdrum* or *Magridin*, consists of a pediment or plinth, with an upright shaft adorned with singular sculptures of animals and scrolls. Many similar crosses, found in this and the adjoining counties, are traditionally assigned to the age of *King Arthur*. The other is the famous cross of *Macduff*, on the *Ochil Hills*, overlooking the beautiful valley of *Strathearn*. It now consists only of one large block of freestone, forming the base of a sculptured shaft, which, in 1559, was destroyed by the Reformers on their way from *Perth* to the abbey of *Lindores*. It forms the subject of a well-known poem by *Sir Walter Scott*. Besides that of *Lindores* there are remains of the abbey of *Inchcolm* and *Balmerino*, the priory of *Pittenweem*, and other ecclesiastical buildings. The large palace of *Falkland* deserves notice as one of the seats of the *Macduffs*, thanes of *Fife*. *James V.* greatly enlarged it, and made it a royal residence. The south front is yet entire and partly inhabited. In the parish of *Monimail* stands an old tower, known as *Bethune's* or *Beaton's Tower*. It formed part of the palace of the archbishops of *St. Andrews*, and in 1560 was the residence of *Cardinal Beaton*. The castle of *Rosyth*, near *Inverkeithing*, stands on a rock surrounded by the sea. It consists of a large square tower in the midst of the ruins of an extensive pile of buildings. Sculptures and inscriptions remain on some of the interior walls. The castle of *Loch Orr* stands in the middle of the loch, in the parish of *Bainry*. It was built in the time of *Malcolm Canmore*, and consists of a tower and other buildings surrounded by a strong wall. The ruins formed a beautiful object in the lake before it was drained. *Seafeld Tower* is an old ruin on a rock by the shore, in the parish of *Kinghorn*. The castle of *Ravensraig* stands also on a precipitous crag projecting into the sea in the parish of *Dysart*. It was inhabited in the time of *Oliver Cromwell*. *Macduff's Castle* at *East Wemyss* stands on a high cliff overlooking the sea. Two square towers and a portion of the surrounding wall still remain. *Craig Hall*, in the parish of *Ceres*, is an extensive ruin on the bank of a beautiful glen filled with luxuriant trees. In the same parish is *Tarvet Tower*, an old fabric of hewn stone, 24 feet square and 50 feet high. It stands on elevated ground, and is seen at a great distance. It appears to have been a place of refuge and defence. *Balgonie Castle*, in the parish of *Markinch*, is a fabric of great antiquity and strength. It stands on the right bank of the river *Leven*, about 40 feet above the water. The ruins of the tower of *Bulwario*, in the parish of *Abbotshall*, are interesting, as having been the residence of the famous *Sir Michael Scott*. The walls are nearly seven feet thick. Numerous other remains of the feudal times will be found described in the 'New Statistical Account of Scotland.'

In this county are also found a remarkable number and variety of the vestiges of the Caledonian and Pictish inhabitants, and of their

Roman and Danish invaders, ancient military forts and mounds of encampment, stone circles, cairns, tumuli, barrows, stone coffins, Celtic sepulchral urns, spear and arrow heads of flint, swords and battle-axes of brass and bell-metal, Roman and other coins, weapons, &c. A cairn opened a few years ago in the parish of *Seconie*, contained, besides a large quantity of loose human bones, 20 stone coffins, formed with rough slabs cemented with clay. They held some mouldering skeletons and small urns filled with calcined bones. In the parish of *Leuchars* an urn, containing about 100 perfectly preserved silver coins of the Roman emperors, was turned up by the plough. Part of the church in this parish was built about the year 1100, and exhibits the most interesting specimen in Scotland of Norman architecture.

In 1852 the county possessed four savings banks, at *St. Andrews*, *Cupar*, *Dunfermline*, and *Kirkcaldy*; the total amount due to depositors on 20th November 1852 was 69,521*l.* 4*s.* 4*d.*

FIGEAC. [LOT.]

FIGUEIRA. [BEIRA.]

FIGUERAS. [CATALUÑA.]

FINALE. [ALBENGA; MODENA.]

FINCHLEY. [MIDDLESEX.]

FINISTÈRE, or FINISTERRE, the most western department in France, comprehending a part of the former duchy of *Bretagne*, lies between 47° 44' and 48° 47' N. lat., 3° 22' and 4° 50' W. long.; and is washed on the northern, western, and southern sides by the Atlantic Ocean; on the east it touches the departments of *Côtes-du-Nord* and *Morbihan*. The greatest length from north to south is 78 miles; from east to west 63 miles; but the average width does not exceed 44 miles. The area of the department is 2593.8 square miles; the population in 1851 was 617,710, which gives 238.14 to the square mile, being 63.43 below the average per square mile for the whole of France. The department is named from its comprising within it the extreme point (*Finis terræ*) of France towards the west. This point is the *Cape St. Matthieu*, on which there is a small chapel called *Notre-Dame fin de terre*.

A number of islands and rocky islets lie off the coast. The most important of these are the isles of *Bas* and *Ouessant*. *Bas* has been already noticed under its proper head. [*BAS.*] *Ouessant*, known to the Romans by the name of *Uxantis*, and called by the English *Ushant*, is 13 miles from the mainland, from which it is separated by the *Passage du Four*. It is about 18 miles in circuit, and fertile; but the coasts are rocky, precipitous, and very difficult of access. Horses and sheep are reared. The population, which is of unimixed Celtic descent, amounts to about 2300, many of whom are pilots and fishermen. They speak the purest Breton, which is a dialect of Celtic. Besides the village of *St. Michel*, there are on the island several hamlets, a strong castle, some druidical structures, and a lighthouse of the first class. The French and English fleets, under *Comte d'Orvillers* and *Admiral Keppel*, respectively fought a bloody and undecided battle off *Ouessant* in 1778. The group of the *Balances* and the isle of *Beniguet* lie between *Ouessant* and *Cape St. Matthieu*, at the entrance to *Brest Harbour*. *Scin*, a low, barren, and rocky island, nearly 2 miles W. from *Cape Raz*, is inhabited by fishermen. The *Glénans* is a group of nine islets on the south coast, opposite *Cape Trevignor*.

The department presents to the sea a bold barrier of granite rocks, at the foot of which there are here and there extensive sands and beaches. The coast line measures above 360 miles, reckoning all its windings: it is indented by a great number of bays and inlets, corresponding to an equal number of valleys or depressions in the land, out of which flow as many rivers or brooks. The largest of these inlets are those on the west coast, forming the harbour and roads of *Brest*; the *Bay of Douarnenez*, famous for its pilchard fishery; the *Bay of Audierne*, south of *Raz Point*; *Benodet Bay*, south of *Quimper*; and farther east the *Bay of Forêt*. On the northern coast there are many small bays and inlets: the largest is the roadstead of *Morlaix*, which is admirably sheltered, but is difficult of access in consequence of islets, rocks, and ledges with which the approaches are incommoded. The coast is dangerous to mariners, and exposed to great storms from the south-west. Lighthouses are built on all the principal headlands. The interior of the department is hilly; two offshoots of the *Armorican range* [*Côtes-du-Nord*] cover a great part of the surface, namely, the *Arrée Mountains* in the north, and the *Montagnes Noires* in the south; but they nowhere exceed 900 feet in height.

The rivers are very numerous, but their course is short. The most important are—the *Aulne*, which flows from *Côtes-du-Nord* westward, past *Châteauneuf* and *Châteaulin*; from this last town to its entrance into *Brest Roads* it is a tide river and navigable; its principal feeders are the *Elléze*, the *Douffne*, on the right bank, and the *Hidre* on the left: the *Elorn*, which also enters the *Brest Roads*, and forms the harbour of *Landerneau*; the *Odet*, which passes *Quimper*, where it receives the *Benodet*, and becomes navigable to its mouth in the *Bay of Benodet*; and the *Ellé*, which enters the south-eastern angle of this department from that of *Morbihan*, receives the *Isok*, or *Issole*, at *Quimperlé*, whence, to its entrance into the *Bay of Biscay*, it separates *Morbihan* from *Finistère*. The *Ellé* below *Quimperlé* is sometimes called the river of *Quimperlé*. The scenery along these rivers is exceedingly beautiful, and in most of them there is good trout-fishing.

The department contains 1,660,032 acres. Of this surface 675,141 acres are arable, 101,094 are natural pasturage, 84,521 are covered with woods and forests, 24,797 are laid out in orchards, nurseries, and gardens, and 658,681 consist of heath and moorland. The best soils are near the coast or in the neighbourhood of the rivers. The old district of Léon, which forms the western part of the arrondissement of Morlaix, is the best soil in all Bretagne; but the eastern part of the arrondissement, which is called Trégnier, is poor and ill-cultivated. The arrondissement of Brest comprises some very fertile lands; a remarkable breadth of land is appropriated here to the growth of strawberries. With the exception of the canton of Pont-l'Abbé, which consists of excellent well-tilled soil, the arrondissement of Quimper has but little good land. The arrondissement of Quimperle is a pretty and well-wooded country, but the soil is in general light. The most unproductive part is the arrondissement of Châteaulin, which consists almost entirely of vast moors and heaths. Here, the people being for the most part shepherds and cattle-breeders, sheep, horses, oxen, and cows, all of the Breton breed and small, form their chief wealth. Almost the only crop raised in this district for the sustenance of man is black oats; and whenever this fails the district is visited by famine.

It is not unrequently said that the state of agriculture in this department is backward; but this is not exactly correct, the land under crops is in almost every instance well tilled, however unscientific the method may be. More of the land might be cultivated it is true; but the cause of this apparent neglect is want of capital. Notwithstanding this drawback, and that more than a third of the surface consists of nothing but barren heath and hungry moor, the department is made to yield more wheat and rye than are required for consumption for a tolerably dense population. Barley, oats, buckwheat, great quantities of peas and beans (which form a large part of the food of the peasantry), and kitchen vegetables, are also grown. Other objects of cultivation are flax, hemp, tobacco, and cider fruits, yielding annually about 1,540,000 gallons of cider. The fields are generally divided by hedge-rows, in which oak, ash, white-thorn, and broom flourish. Besides the animals before mentioned, great numbers of excellent pigs are bred. Bees and game (deer, wild boars, partridges, &c.) are abundant. Eels, trout, salmon, lobsters, and oysters are plentiful; but the pilchard fisheries along the coast afford the most profitable occupation to the Breton fishermen. In this pursuit more than 1000 vessels of small size, and about 4000 men are employed, and a gross annual value of 2,000,000 francs is obtained. This includes the value of the enormous quantities of the common pilchard (4,400,000 lbs.), the anchovy pilchard, caught off Concarneau in Forêt Bay (1,100,000 lbs.), and a large quantity of oil pressed from fish which are not cured. These fisheries form an excellent nursery for the French navy, which draws its best seamen from Bretagne.

Iron, coal, lead, bismuth, and zinc-mines are worked. An excellent stone, easily worked, and capable of resisting the action of the weather, is found at Daonkes and one or two other places near the Brest Roads: it is of a light green colour, and when worked presents the appearance of bronze. It is called 'Kersanton' stone, and of it several of the churches in the department are built. Granite, marble, building stone, and slates are quarried; potters'-clay, kaolin, and whetstones are found. There are cold mineral springs at various places in the department. The manufactures consist of sailcloth, linen, soda, soap, seed oil, candles, ropes, pottery, paper, leather, refined sugar, litharge, and tobacco. Ship-building is carried on at Brest and in most of the towns on the coast. The commerce of the department is composed of the various products already named, and of wine, brandy, beer, Dutch cheese, butter, salt, and colonial produce. About 450 fairs are held. Roadway accommodation is afforded by ten royal and five departmental roads. A railway is in course of construction from Paris to Brest through Chartres and Rennes, which is now (June 1854) open as far as Le Mans. A section of the canal from Nantes to Brest traverses the arrondissement of Châteaulin.

The climate is damp and foggy; the average number of days on which rain falls is 220; sometimes the rain falls almost without cessation for weeks together. Frost and snow are rare. Fine days are few even in summer; and in the same day one may experience the climate of the four seasons, so great is the variation of temperature. Storms are very frequent along the coasts; and nowhere in the world are the terrible sublimities of a raging sea seen to greater advantage than near the village and promontory of Pennarek, at the junction of the Atlantic with the Bay of Biscay; the sound of the waves dashing against the rocks is often heard to a distance of 12 and 18 miles inland. The prevailing winds are the west, south-west, and north-west.

The Bretons are an interesting people, strongly attached to the Catholic religion, to their old customs, and to their language, which is a dialect of the Celtic; hospitable, humane, and courageous enough, but easily excited to anger and to quarrel. Many of them understand French, but few of them speak it. They are imaginative and superstitious, the air and all the other elements are peopled by millions of genii, every field has its fairy, every buried treasure its guarding giant, every well its sprite and healing qualities. The song of birds, the howling of dogs, the distant roar of the ocean, are each

invested by the imaginative peasant with a power of communicating future good or ill, according to circumstances. All the members of a Breton family (we here speak of the mass of the peasant class) eat at the same table, the master of the house commencing first, next his male children and men-servants, then the wife, daughters, and female servants. In everything the men take precedence of the women. The labourer's food is porridge, or stirabout, a sort of thick soup made of oatmeal, barley-bread, or bread made of barley and wheaten meal mixed; meat they seldom get. The habitations of the peasantry are mostly long, narrow, smoky huts, with a single window, and divided by a frail partition into two apartments, one of which is occupied by the man of the house, his wife, children, and it may be his grandchildren; the other contains the cows, calves, pigs, and other animals of the farm. Two large cupboards without doors, consisting of two stories, and separated into several small apartments or berths, which are strewn with hay or straw, form the sleeping places of the whole establishment. Feather-bed or mattress is equally unknown; a blanket is rare, the most usual night cover being a cloth made of coarse tow-yarn, or sometimes a piece of haircloth. The men, who in general wear their hair long, are dressed in broad-brimmed hats, short waistcoats, breeches of vast size, gaiters, and sabots; in some districts they are wrapped up in goat-skins. The costume of the women is in general neat and attractive. In connection with the Breton churches, many of which are fine structures, there are 'reliquaires,' or bone-houses, into which the bones of the dead are gathered after a certain number of years by the surviving relatives, and in which the skulls, each marked with the name or initials of its former owner, are arranged on shelves open to view. The department contains many druidical remains.

The department is divided into five arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Quimper . . .	9	62	117,489
2. Brest . . .	10	85	241,765
3. Châteaulin . . .	7	59	105,638
4. Morlaix . . .	19	58	112,863
5. Quimperle . . .	5	20	46,935
Total . . .	41	284	617,710

1. In the first arrondissement the chief town, *Quimper*, which is also the capital of the department, is built in a pretty situation on the slope of a hill at the junction of the Eir with the Odet, 330 miles W. from Paris, and has 9664 inhabitants in the commune. The town is in general ill built; but the more modern part of it contains some good houses. The principal public buildings are—the cathedral, which dates from 1424, and is the largest of the cathedrals of Basse-Bretagne; the church of St. Matthieu, an ugly edifice; the church of the priory of Locmaria, which stands at the end of a long and beautiful promenade on the left bank of the Odet, and part of which has stood since the 10th century; the manor-house of Poulquinan, which stands on a height near the last-mentioned church, and is said to have been the residence of the Breton king Grallon. The other remarkable objects are—the military hospital, the theatre, the public baths, the residence of the prefect, and behind it a fine promenade, cut out in zigzag avenues up a wooded hill above 650 feet high, from which there is a very extensive view. The town has tribunals of first instance and of commerce, an ecclesiastical school, and a communal college, held in a large building which formerly belonged to the Jesuits. Vessels of 300 tons come up to the town. The chief industrial establishments are potteries, tan-yards, breweries, nurseries, and ship-building yards. The pilchard fishery is actively carried on, and there is a good trade in corn, wine, brandy, honey, butter, dry and salt fish, iron, wool, hemp, flax, linen, and cattle. Steamers ply regularly from this town to Nantes. Quimper is sometimes called *Quimper-Coréatin*, in honour of its first bishop. It was in the 5th century the capital of the Armoric Cornwall (Cornouailles), whose first king was the famous Grallon. It was first inclosed with walls in A.D. 1209, but these were soon demolished by the advice of the then bishop of Quimper. Pierre de Dreux caused it to be surrounded with a terraced-wall faced with cut stone, and flanked with massive towers, which, as well as the ramparts, were surmounted by projecting parapets with machicolations. A great part of these fortifications still exist. In 1344 Charles of Blois took the town by assault. During the wars of the League Quimper took part with Henri IV., but it was besieged and taken by Marshal d'Amont. In revolutionary nomenclature Quimper was styled *Montagne-sur-Odet*. Among the other towns of the arrondissement we give the following, with the remark that the population throughout is that of the commune:—*Brie*, 9 miles N.N.E. from Quimper, population 5149. *Concarneau*, partly on an island in the Bay of Forêt and partly on the mainland, is a small fortress with 1984 inhabitants, who are almost all engaged in the fisheries along the coast, and take from 12,000 to 15,000 barrels of pilchards and anchovies every year. *Douarnenez*, at the head and on the north shore of the Bay of Douarnenez, has 3646 inhabitants engaged in the profitable fishery of

the bay, the yearly produce of which is about 85,000 barrels of pilchards and 15,000 to 16,000 barrels of oil. The islet of *Tristan*, which contains storehouses for the fish, stands near the town, and is defended by a battery of twelve guns. *Pouévant*, a village S. of Quimper, and near the sea, has 3172 inhabitants. *Pont-Croix*, 18 miles W. from Quimper, has an ecclesiastical school and 2175 inhabitants; it stands on the top of a high hill, and consists of ill-built houses and steep streets; there is a splendid view of the storms of the Bay of Biscay and the Atlantic from this place. *Pont-l'Abbe* stands at the head of an inlet from Benodet Bay, and has a good harbour and 3825 inhabitants, who manufacture linen, and trade in wine and agricultural produce.

2. In the second arrondissement the chief town is *Brest*, which is the largest and most important town in the department; and is noticed in a separate article. [BREST.] Among the other towns are the following:—*Landerneau*, a small seaport 15 miles E. from Brest, has 4906 inhabitants. It stands at the mouth of the Elorn, which here forms a harbour surrounded by hills, high and steep on the left bank of the river, but sloping gradually on the right bank into a plain on which the chief part of the town is built. The upper town contains some very ancient structures; a house on the bridge over the Elorn bears the date 1518. The town has a very agreeable appearance; clear streams run from the hills through all the streets into the harbour, which is lined with extensive quays. The principal buildings are the church of St. Houardon, the marine hospital, and barracks. A promenade, nearly a mile in length and well planted, leads from the town to a vast building occupied as a nunnery. The chief manufactures are leather, linen, and glazed hats. There are also bleaching establishments, and a good trade in canvass, linen-yarn, pitch and tar, Dutch cheeses, corn, horses, &c. *Lannilis* stands 15 miles N. from Brest, in a picturesque country watered by the Aber-Benouhic, and has 3124 inhabitants. *Lescuer* stands on a height that rises from the middle of a fertile plain, 9 miles N.N.W. from Landerneau, and has an hospital and 2832 inhabitants. Near this place is the church of Notre-Dame-de-Folgoat, which is built of Kersanton stone, and for the delicacy of its sculptured and carved work, its beautiful portals and windows, but especially for its magnificent rood-loft, is acknowledged to be without a parallel in this part of France; it was founded by John de Montfort, and finished under his son John V., duke of Bretagne in 1423. *Plabennec* stands on a hill 9 miles N.E. from Brest, and has 3555 inhabitants. *Plouarzel*, N. of Brest, has 2214 inhabitants; on a hill close to it is a 'menhir' or druidical granite monolith, which is 43 feet high. *Ploudalmézeau*, 12 miles N. from Brest, contains some ancient houses of remarkable construction, and has 3209 inhabitants.

3. In the third arrondissement the chief town, *Châteaulin*, an ill-built place, with a population of 2758, stands in a very pretty country, on the Aulne, which divides it into two parts, and forms a small harbour to which barks of 80 tons go up. On a hill above the river are seen the ruins of the ancient castle of the lords of Châteaulin, which was built in A.D. 1000 by Budic, count of Cornouailles. The trade of the place consists in cattle, fish, butter, iron, lead, slates, &c. *Le-Peu* is a small place at the head of the Bay of Brest, with some remarkably built timber-framed old houses, and a population of 975. *Carhair*, an ill-built town, stands on a high hill above the little river Illiers, nearly in the centre of Basse-Bretagne, and has a population of 2021. It is considered important in a military point of view; six great roads lead from it to Brest, Quimper, Châteaulin, Vannes, St. Brieuc, and Morlaix. *Châteauneuf-du-faou*, beautifully situated on the southern slope of a hill above the Aulne, which here winds its way through rich meadows and turns several corn-mills, has a population of 2536. *Crozon* is situated on the peninsula, between the Bay of Douarnenez and Brest roads; there are caverns near it inhabited by vast numbers of sea-birds. The population of the commune is 8858. *Huelgoat*, a small place, with 1156 inhabitants, and *Poullaouen* near it, with 3700 inhabitants, have rich lead mines and smelting furnaces, which yield 10,000 cwt. of lead and 1500 lbs. of silver annually. *Pleyben* E. of Châteaulin, has a fine gothic church and 4672 inhabitants.

4. In the fourth arrondissement the chief town *Morlaix*, a sea-port with 11,698 inhabitants, is very prettily situated at the foot of two hills, and at the junction of the Jarleau and the Kevlent, which throw their waters into a creek from the English Channel that forms the harbour. Vessels of 300 to 400 tons come up to the quays at low tides, which rise from 13 to 23 feet; the entrance however is very intricate and dangerous, from the number of rocks and islets. The river and the harbour divide the town into two quarters, the side of Léon to the west, and the side of Tréguier to the east. In the latter the houses are almost all ancient and the streets irregular. The side of Léon is more regular; it has a large square, surrounded by handsome modern houses, and in the centre of it, on the site of the old town-house, which was demolished in 1836, stands an elegant structure occupied by the tribunals of first instance and of commerce, the mayor's offices, and by the linen and corn markets. Modern structures have replaced many of the curious timber-framed houses of the old town; but in parts of it are still seen façades ornamented with sculptures, and also some very remarkable interiors. The St. Martin quarter, built on high ground, which is ascended by a great number

of steps, is the finest part of the town; it has a pretty modern church surrounded by fine gardens, from which there is an extensive view. The other remarkable objects are—the churches St. Matthieu, St. Méline, the tobacco manufactory on the hill of Léon, and the Cours Baumont, a beautiful promenade which extends above a mile along the harbour. The town has tribunals of first instance and of commerce, a college, a school of navigation, manufactures of linen, oil, and candles, besides a considerable trade in butter, corn, seeds, hides, pigs, cattle, sheep, horses, linen, linen-thread, paper, flax, hemp, wine, and brandy. It is an entrepôt for foreign produce. The winding channel between the town is navigated by steamers, and affords much delightful scenery. Mary, queen of Scots, landed here in 1548 on her way to Paris to espouse the Dauphin. Morlaix was formerly surrounded with walls and defended by a strong castle. Its defences were demolished under Henri IV. *Landrisiau*, a well-built town, stands on a high hill 12 miles W. from Morlaix on the road to Brest, and has 3217 inhabitants: it is remarkable for its church, which has a lofty bell-tower, supported on slender columns; these under certain aspects are lost to the view of the approaching traveller, so that the tower seems suspended in the air. *Lanmeur*, an ancient place, with 2750 inhabitants and two very ancient churches, one dedicated to Notre-Dame-de-Keruitroun, which was built about the middle of the 12th century and is perfectly preserved, and the church of St. Mélaire, which dates from the early part of the 11th century, and is built over a crypt which belongs to a much earlier period. In the crypt there is a fine fountain, for which the Bretons have great reverence. *Plouescat*, near the coast, has 3314 inhabitants: near it are seen some Druidical stones of great size. *Roscoff*, a small town on the coast opposite the isle of Batz or Bas, has a pretty good harbour sheltered by a jetty: the population, which consists chiefly of smugglers and sailors, amounts to 3640. *Sizun*, S.W. from Morlaix, has 3758 inhabitants, who are engaged in agriculture and the linen manufacture. *St. Pol-de-Léon*, on a hill above the sea, 10 miles N.N.W. from Morlaix, is a clean but ill-built town. It possesses two noble churches—the former cathedral, which is remarkable for its delicate wood-carving and sculptured ornaments, and contains the tomb of St. Léon; and the church of Kreizker (middle of the town) built towards the end of the 14th century by John IV., duke of Bretagne. The square bell-tower of this church, surmounted by a cornice and an elegant balustrade, from which springs a lofty spire flanked by four turrets, the whole built of granite, is the finest work of the kind in France. The summit of the spire is 404 feet above the ground, being the highest spire in France, except that of Strasbourg. A suburb called Penpoull is built on the sea-shore, and forms the port; it contains several houses of remarkable construction; some of them are fortified. The population amounts to 6655. This town, formerly the seat of a bishop, is now going to decay. *St. Thégonnec*, S.W. of Morlaix, is the centre of a considerable linen manufacture, and has 3929 inhabitants, and a fine church built of granite. *Toulé*, N. of Morlaix, has paper-mills, and 2905 inhabitants.

5. In the fifth arrondissement the chief town *Quimperlé*, a small sea-port situated at the junction of the Isole and the Ellé, and surrounded by high hills, has a communal college, and 5261 inhabitants, who manufacture leather, paper, and sabots. Vessels of 50 tons come up to the town, and unload their cargoes at a large quay lined with stores and handsome houses. The Benedictine convent, now the residence of the mayor, is an imposing building; behind it is the interesting round church of Sainte-Croix, which dates from the 11th century. On one of the hills above the town stands the gothic church of St. Michel, the Capuchin and Ursuline convents, which with several pretty houses, gardens, and orchards, render this a very agreeable part of the town. *Bannalec*, N.W. of Quimperlé, famous for the wrestling-matches held near it every September, at which every variety and oddity of Breton costume may be seen among the numbers drawn together to witness and take part in the national game, has a population of 4264. *Pont-aven*, a small place near the mouth of a little river with the pure Celtic name of Aven, and 11 miles W. from Quimperlé, has a small harbour for vessels of 60 or 70 tons: population, 834. *Scor*, N.W. of Quimperlé, stands on an eminence on the right bank of the Isole, and has 4005 inhabitants. From the tower of the church of Scor is one of the most extensive views in Bretagne. Near the town is the beautiful well of Sainte-Candide, the basin of which is 76 feet long, 16½ feet wide, and 7½ feet deep.

The department forms the see of the Bishop of Quimper, is comprised in the jurisdiction of the High Court of Rennes, and belongs to the 16th Military Division, of which Rennes is head-quarters.

(*Dictionnaire de la France; Statistique de la France; Annuaire pour l'An 1853.*)

FINLAND, the Grand-duchy of, forms a Russian government composed of Finland, the two Lapmarks of Kemi and Tornio, and the province of Wiborg. It lies between 59° 48' and 70° 6' N. lat., 38° 10' and 50° 25' E. long.; and is bounded N. by Norwegian Finnmark; N.E. by the governments of Archangel, Olonetz, and St. Petersburg; S. by the Gulf of Finland; and W. by the Gulf of Bothnia and Sweden. Its present name was given to it by the Swedes; but the natives call it *Suomenna*, the 'Region of Lakes or Swamps.' Its area is estimated at 145,432 square miles; and the population, according to the census of 1852, amounted to 1,636,915. The Lapmarks of Kemi

and Tornea, which constitute Russian Lapland, are included in Uleaborg län. They occupy the whole northern districts of the principality of Finland, and lie almost entirely within the polar circle, and are extremely sterile and thinly peopled; frequently not a single dwelling is met with for 80 or 100 miles together.

The surface of Finland is very uneven. In the eastern and central parts it is intersected by lakes, rivers, and swamps, between which there are flats of sand overgrown with moss and studded with low hills. In the northern parts it is covered with mountains belonging to the great Scandinavian chain, the highest points in which are the Poldoivi and the Unastunturi, on the borders of Norway, which are said to have an elevation of 2000 feet. The Maanselkä Mountains stretch from Norway southward all through Russian Lapland, whence they send out branches in all directions; the main range running parallel with, and at some distance from, the eastern coast of the Gulf of Bothnia, until it gradually subsides, and at last disappears to the north of Björneborg. The loftiest summits in this range are Naran-gavaara and Iivaara, from which the sun may be seen during the whole twenty-four hours at Midsummer. It is said however that the highest point is not more than 3500 feet above the surface of the sea. In the more southern latitudes of the principality the valleys between these mountains contain good arable and rich meadow land. The west coast is generally flat, but very rocky near the Quarken; indeed, the coasts both of the Gulf of Bothnia and Finland are lined with precipices, reefs, and rocky islands, which render navigation very hazardous. Many of these islets, as those of Sweaborg, which command the entrance to the harbour of Helsingfors, are strongly fortified. The most numerous group of islands is the Åland group, which lies between the Gulf of Bothnia and the Baltic, and gives name to the Åland Archipelago. [ÅLAND.]

The centre of Finland is an elevated plateau from 400 to 600 feet above the sea, full of lakes, and covered with low rocky elevations, mostly composed of red granite. The Maanselkä Mountains, which terminate above Björneborg (61° 27' N. lat., 21° 40' E. long.), chiefly consist of primitive rocks. In some parts of the lowlands the surface is overspread with enormous blocks and boulders of granite. Many of the lakes in the interior of Finland have their outlet in the Gulf of Bothnia or Finland. Independently of Lake Ladoga [LADOGA], which occupies a considerable portion of the south-eastern part of Finland, the largest of these waters is Lake Saima, or *Saima Vesi*, a little to the north of Wiborg, which is more than 300 feet above the level of the sea, nearly 180 miles in length, and from 20 to 25 miles in breadth. It is full of islands, the basis of which is granite, and it flows through the *Vonoxa*, or *Voxa*, into Lake Ladoga. Next to this is Lake Enare, in the northernmost part of Lapland, which covers above 1000 square miles, receives several small rivers, and discharges its superfluous waters into the Frozen Ocean by the *Palsyoki*, or *Pasvig*, which falls into Varanger Fjord. In the south-west of Finland the lakes are very numerous; they are almost all united together by rivers and waterfalls round the central lake of Pyhäjärvi.

There are no rivers of any considerable length. The *Voxa*, which originates in the collected waters of numerous smaller rivers and lakes, in the northern part of the district of Kuopio, flows southward into Lake Saima, and thence eastward into Lake Ladoga. It is so full of granite rocks and falls as to be of little use for navigation. The *Kymene* is a broad stream, issuing from Lake Pemenä to the west of Lake Saima, seldom less than 250 to 300 feet in width, and varying from 50 to 150 feet in depth; it falls into the Gulf of Finland near Kymmeneborg, but, owing to the frequent falls, is not navigable. The *Kemijoki* flows from a lake still more to the west, and falls into the Gulf of Bothnia near Björneborg. The *Yanunus*, an outlet of Lake Yläsjärvi, flows into Lake Ladoga. The *Sestra* is the boundary between the governments of Finland and St. Petersburg. The *Tornea* and *Muonio*, tributaries of the Gulf of Finland, separate Finland from Sweden, and the *Tana* divides it from Norway. The line of the *Tana* is first from south-west to north-east at Paluajärvi, where it quits the Finland border and flows through Norwegian Finnmark north by east into the *Tana Fjord*, an inlet of the Frozen Ocean. Among the other rivers are the *Wanda*, or *Helsing River*, the *Kyro*, and the *Uloa*.

The waters of Finland and its numberless swamps and moors occupy more than a third of its surface; but the climate is on the whole salubrious, and there are many cases of great longevity. The average duration of the summer, which is accompanied by great heat, is not more than three months; the winter, which lasts from eight to nine months, is exceedingly severe, particularly in the north. During the latter season there is a direct road across the frozen Gulf of Bothnia to Sweden. In the northern parts of Russian Lapland the sun disappears entirely from the end of November to the close of January; but during this period the moon and stars frequently shine with exceeding splendour throughout the twenty-four hours. In the southern and central parts the climate is less severe; winter lasts five or six months. Improved drainage and the extension of agriculture have rendered the climate milder, but night frosts frequently injure the crops in the open season, and thick cold fogs are common. Violent storms which are not infrequent in the winter sometimes devastate the forests; uprooted trees and snapped trunks of pines marking the course of the irresistible tornado.

There are extensive forests of firs and pines in the south, inter-

spersed with oaks, elms, &c. both on the mainland and the islands; they are of peculiarly luxuriant growth on the soils which receive the exhalation from the lakes and swamps. In northern Lapland these trees are replaced by the birch, until, in the coldest districts, trees cease altogether. The mountains and hills are in general naked; but even where they are wooded, the wood is low and stunted.

The greater portion of the soil is either stony or sandy. Rich vegetable earth is of rare occurrence, and scarcely ever unmixed with sand. In order to manure his land, the agriculturist is in the habit of setting fire to his forest of underwood. By this means he is enabled to grow his rye or oats for two or three years in succession, after which he plants the ground afresh and lets it lie for twenty or thirty years, until the wood is sufficient for another burning. Barley and rye are chiefly cultivated; oats are often sown the year after the land has borne rye; a little wheat is raised; and some gray peas and beans. The frost however sets in so soon and the weather is so uncertain, that it is common for the farmer to use the precaution of gathering in his crops while they are green, in the early part of August, and afterwards to dry them. Hemp and flax, hops, and a little tobacco are also cultivated. Potatoes are extensively cultivated, the annual yield being estimated at 6,000,000 bushels. Carrots, coleworts, parsnips, and onions are also partially raised; but wild berries are the only fruit, except perhaps in the vicinity of Åbo. The crab apple grows wild, but none beyond 60° N. lat. The oak does not thrive beyond 61°, nor the ash beyond 62°. The cereal crops cease to the north of 67° N. lat. The forests have suffered greatly, particularly near the sea-coast, from wasteful use and firing; but large quantities of timber are still exported in the shape of deals, masts, &c.; and much tar, pitch, and potash, as well as fire-wood, are sent abroad. The pasture-lands and meadows though ill-managed are good and afford sufficient food for horses, cattle, sheep, goats, and reindeer of Finland. Butter is made to the amount of 2,000,000 stones yearly. Moss, in the bleaker regions, is the only food for domestic animals, for which the reindeer is an inestimable substitute. The horse of Finland is small, but strong and active. Fowl and other wild game are plentiful. Bears, elks, wolves, foxes, martens, &c., afford a large supply of furs and skins. Reindeers abound in Uleaborg län, in which the tame reindeer number 30,000. These animals constitute, in fact, the wealth of the Laplander; they supply him with food, clothing, and other necessities, as well as the means of barter for his principal luxuries, brandy and tobacco; nor is he accounted affluent unless he be owner of 200 or 300 of them.

Finland is divided into eight län, or provinces, of which the area, with the population, and an estimate in bushels of the chief agricultural products, in 1852, are given in the following table.

Läns.	Area in sq. miles.	Population in 1852.	Rye.	Barley.	Oats.
Uleaborg	63,734	157,000	440,000	810,000	20,000
Wasa	16,018	257,854	1,440,000	1,200,000	180,000
Åbo	10,326	292,098	1,680,000	1,200,000	400,000
Nylands	4,951	160,252	1,000,000	840,000	260,000
Wiborg	16,481	273,011	800,000	320,000	800,000
Kuopio	16,928	196,155	1,200,000	1,200,000	360,000
St. Michel	9,120	148,039	1,000,000	480,000	800,000
Tavastehus	7,258	152,526	1,040,000	240,000	280,000
Total	141,819	1,636,935	8,600,000	6,120,000	3,080,000

Wheat is grown only in the districts of Åbo and Nylands, which yield respectively 44,000 and 24,000 bushels a year. In Wiborg, 48,000 bushels of buckwheat are annually grown, and in Tavastehus about 64,000 bushels of peas.

The following table is an estimate in round numbers of the different kinds of stock in each of the provinces in 1852:—

Läns.	Cattle.	Horses.	Sheep.	Swine.	Goats.
Uleaborg	95,000	18,000	98,000	5,000	610
Wasa	139,000	32,000	178,000	23,000	1,400
Åbo	150,000	38,000	182,000	28,000	14,000
Nylands	95,000	23,000	90,000	20,000	6,000
Wiborg	117,000	34,000	78,000	37,000	1,000
Kuopio	80,000	38,000	79,000	35,000	1,000
St. Michel	102,000	23,000	50,000	32,000	1,000
Tavastehus	89,000	21,000	78,000	24,000	8,000
Total	867,000	233,000	833,000	204,000	33,010

Fish is the chief food of the Laplander, whose streams, such as the *Tornea* and *Tana*, are well provided with salmon, pike, eels, red-eyes, &c. The pearl mussel is found in some of the lakes and rivers of the western parts.

Finland has few mineral products. There are tin and copper mines, which yield to the amount of 800,000 silver rubles annually; these mines are in West Nylands and Karelia, the richest are at Pitkäranta, on the north-eastern shore of Lake Ladoga. Bog iron is obtained in some parts; lead is also found. Marble is quarried in the district of Ruskala and the island of Arasati in Lake Ladoga. Slate is

plentiful, and chalk abounds in some places. The want of salt is severely felt.

Population.—The majority of the population is of Finnish extraction. The *Fins* call themselves 'Suomalans' or 'Suomes,' but they are denominated 'Tschudes' by the Russians. They are divided into two branches, the Tavasts, who inhabit the south-west of Finland; and the Karelians, who dwell in the north-eastern part. They are slow, grave, and self-willed, but peaceable, brave, and hospitable, temperate and industrious: their complexion is dark, their countenance and manner are serious, and they are of robust make. They are all free, and many of them are landholders. The Baltic Fins are distinguished for their trading propensities, and the seamen are by far the best among all the subjects of Russia. The dwellings of the peasantry are built of wood, and are low, dark, and unclean. The Laplander is of the same extraction as the Finlander, and calls himself a 'Sameladz,' or 'Saine.' They resemble the Finlanders in all respects except that the upper jaw projects more, and their hair is of a deeper tint. There are about 1000 of them in this government; they lead a wandering life, and are divided into two classes, the reindeer Laplanders and the fishing Laplanders. From 7000 to 8000 Russians have settled in the districts of Wiborg and Kozholm, especially in the trading towns. Åland, the coast of Nyland, the south of Wasa län, and the adjacent islands are inhabited by about 125,000 Swedes.

Education.—Of the inhabitants about 1,500,000 profess to be Lutherans, who are under the Archbishop of Åbo. The rest of the population belong chiefly to the Greek Church. Finland is divided into two dioceses, Åbo and Borgo. The followers of the Greek ritual are under the archimandrite of St. Petersburg. The official language of the country is Swedish. The university of Åbo was transferred to Helsingfors in 1828 by the emperor Nicholas, and is styled the Alexander University. There are also five academies and twelve superior elementary schools. The emperor has done a great deal for public education in Finland, and has especially promoted the knowledge of Finnish which had been neglected by Sweden. A professor of the Finnish language was appointed to the university in 1850. There are inferior schools in the majority of the parishes.

Agriculture, the breeding of cattle, and in some parts the fisheries, constitute the principal occupations of the people. There are few manufactures, although the Russian government gives very liberal support to enterprise of this kind in Finland. The cotton-mills and glass manufactures are the most important. In 1851, 148 factories employed 3364 persons, and gave a gross revenue of 1,295,621 silver rubles. In the larger towns, iron-ware, sail-cloth, and stockings are made. The peasantry make what coarse woollen and linen they require under their own roofs; they also prepare tar, potash, and charcoal, make articles of wood for their own use and for exportation, and in some of the ports vessels are constructed.

Navigation is much impeded by the severity of the winter, which shuts the harbours from six to seven months in the year. The internal trade, which is unimportant, is facilitated by the Suina Canal, completed in 1844. The foreign trade is considerable, the exports consisting of planks, potash, tar, cattle, butter, meat, hides, tallow, and fish, amounting in value to 3,000,000 silver rubles annually; and the imports—salt, colonial produce, cotton, and woollen stuffs—to about the same amount. In 1852, 467 vessels of 107,000 tons were engaged in the export trade. The coasting-trade was carried on by 900 small vessels with an aggregate tonnage of 50,000. The exports are sent chiefly to St. Petersburg, Sweden, and England.

Government, &c.—There is a distinct secretary of state at St. Petersburg for the government of this vast province. The governor-general and imperial senate reside at Helsingfors, the new capital, and are at the head of the administration. Each län has its governor. Three high courts of law are held in Åbo, Wasa, and Wiborg. Though Finland has a constitution of its own, by which the inhabitants are classed in four orders,—nobles, clergy, burghers, and peasantry—the land-taxes, or diets, have not been convoked since 1812. The senate in fact has superseded them. The Russian revenue from the government is estimated at only about 60,000*l.* sterling a year.

Before its annexation to Russia in 1808 Finland was subject to Sweden for about six centuries. The Russians have accorded every sort of favour to the Finns, and treated the Swedish element of the population with great severity. Amongst the Finns themselves there is a small party, including some influential men, who desire a reunion with Sweden; a second party, belonging to the nobility and including the higher class of public functionaries, but not very numerous or powerful, are attached to Russia; whilst a third party, including the large majority of the race, desire to have Finland for the Finns, and to form a nation independent of both Sweden and Russia, towards both of which however they are said to be animated by friendly feelings. A strict censorship of the press is exerted against foreign and especially Swedish books. The national literature is treated in a more liberal spirit.

Towns.—The län of Wiborg, has the town of the same name for its capital, which was the ancient capital of Carolia; it stands on a bay of the Gulf of Finland, is well fortified, and has about 3000 inhabitants, exclusive of a large garrison. [WIBORG.] In this circle is

Frederikshamn, on a peninsula on the Bay of Finland, a strong fortress, containing about 1400 inhabitants: it was here that the treaty of September 1809 was concluded, by which Sweden made over Finland with part of Lapland and the Åland Islands to Russia.

The län of St. Michel, which is north-west of the preceding, contains *St. Michel*, a small town, and *Nyslott*, another small town with a strong castle.

In Nyland län, west of Wiborg, is *Helsingfors* (60° 9' 42" N. lat., 24° 57' 30" E. long.) the capital, on a tongue of land in the Gulf of Finland, with about 16,000 inhabitants, and the strong fortress of *Swaborg*, at the entrance of the harbour. [HELSINGFORS.] East of Helsingfors lies *Borgo*, a small episcopal town on the river of the same name, with a cathedral, a church, gymnasium, manufactures of linen, sailcloth, refined sugar, and tobacco, and about 3000 inhabitants. West of Helsingfors is *Eknäs*, or *Ekenes*, a small fortified sea-port town of about 2000 inhabitants, situated on the east shore and near the head of an inlet of the Gulf of Finland. To the west of Eknäs lies the peninsula of Hango-Udd at the extreme point of which is the fortress of Gustafsvörn, lately destroyed by the fleet of Sir Charles Napier. *Lowisa*, north-east of Borgo, is a very pretty sea-port, with two churches, and about 3600 inhabitants.

The län of Tavastehus, north of Nyland, has for its capital *Tavastehus*, lying on a lake, with a strong castle, a church, and about 2000 inhabitants.

Åbo, the westernmost län of Finland, includes the islands of Åland in the Gulf of Bothnia [ÅLAND]; its capital is *Åbo*, on the south-western coast of Finland. [ÅBO.] In this circle are also *Björneborg*, near the mouth of the Kumoyoki, a maritime town of about 4600 inhabitants, well built, with a church, grammar school, boat-building yards, and some trade. *Raumo*, a town with 1700 inhabitants; and *Nystad*, a sea-port of about 2000 inhabitants, where the treaty by which Sweden relinquished the Baltic provinces and part of Finland to Russia in August 1721 was concluded.

North of this län is that of Wasa, on the Gulf of Bothnia. Its capital is *Wasa*, on the Gulf of Bothnia, a regularly built town, with a handsome stone church, a school, an infirmary, and 4000 inhabitants. South of Wasa lies *Christinistadt*, a good sea-port on a peninsula, with a church, and about 1200 inhabitants.

Kuopio län lies east of the preceding, and contains the town of *Kuopio* on a promontory of Lake Kallavesi, with a church, school, well-frequented fairs, and about 1500 inhabitants.

The län of Uleaborg, in the most northern part of the principality, contains *Uleaborg*, its capital, on the Ulea, a well-built town, with a town-hall, two market-places, a church, hospital, and a population of about 4500, who carry on some trade: *Brakestad*, a sea-port, with a church, and about 1200 inhabitants: *Pudasjärvi-Kousoma*, an inland town of about 1500 inhabitants: *Kemi*, a sea-port; and *Tornea*, on the river of that name at the northern extremity of the Gulf of Bothnia, a neat town, with two churches, one on an island, and about 700 inhabitants; this place is the centre of the Lapland trade in deals, salt fish, reindeer-skins, butter, &c. Steamers ply from Åbo and Helsingfors along the coast towns and to St. Petersburg and Stockholm. The principal road is one that runs along the coast from Åbo through Helsingfors, Borgo, Lowisa, Frederikshamn to Wiborg, and thence to St. Petersburg; but except the section between Wiborg and St. Petersburg no public conveyance runs along it. Another road runs northward from Åbo along the coast of the Gulf of Bothnia to Tornea. Travelling is effected along these roads by posting for the most part in carriages without springs.

FINLAND, GULF OF. [BALTIC SEA.]

FINMARK. [NORWAY.]

FIRENZE, one of the five provinces into which Tuscany is divided, is bounded N. by the duchy of Modena and the Papal province of Bologna, N.E. by the Papal province of Ravenna, E. by the Tuscan province of Arezzo, S. by that of Siena, and W. by that of Pisa and by the duchy of Lucca. Its greatest length from east to west is about 70 miles, and its breadth about 60 miles; its area is 2252 square miles, and its population in 1852 was 700,015. The surface of the country is in great measure mountainous, being intersected from north-west to south-east by the central Apennine range. That part of the province which lies on the north slope of the Apennines is called Romagna Granducule, and consists of highlands and narrow valleys, which form the upper basins of numerous rivers that flow towards the Adriatic. The greater and by far the finest part of the province of Firenze lies south or rather south-west of the Apennine chain, and consists of the great valley of the Arno, which crosses it from east to west, and of numerous lateral valleys which follow the course of the rivers that flow into the Arno. The principal of these valleys on the left bank of the Arno are—the Val di Grove, below Florence; Val di Pesa; Val d'Elsa; Val d'Era, on the borders of the province of Pisa: on the right bank of the Arno are—the Val di Sieve, called also Mugello, north of Florence; Val di Bisenzio, or of Prato; Val d'Ombione, or of Pistoja; and Val di Nievole. To the north-west, near the borders of Lucca, the Firenze territory includes part of the Val di Lima, which belongs to the basin of the Serchio; and at its southern extremity it extends over part of the valley of the Cecina, a river that flows into the Mediterranean through the Marcmma of Pisa. The valleys produce corn, wine, oil, silk, and

abundance of fruit. The mountains are planted with chestnut and timber trees, and afford abundant pasture. The farms are generally very small, and are mostly let to tenants-at-will on the metayer system. A great resource of the country people is the manufacture of straw-hats, the straw for which is that of a peculiar description of wheat cultivated for the purpose, very thickly sown, and cut down before it is ripe. The country girls and men employ themselves in plaiting this straw, and the profit they derive from it forms a considerable addition to their means of support. The appearance of the peasantry, especially in the Val d'Arno, is pleasing; there is an air of health, comfort, and cheerfulness, a smartness of dress and a cleanliness of the person, superior to what is seen in most other parts of Italy. Many of the women wear round beaver-hats like the men. The other manufactures in the country are pottery and china ware, cloth, paper, leather, &c., mostly for internal consumption. The silk manufacture, once very flourishing at Florence, has greatly declined during the present century. The manners of the country people are simple, sober, and decent. The church-festivals, which recur at various epochs of the year, are days of mixed devotion and rejoicing to which the people are much attached. There are elementary schools in every commune. There are besides grammar schools in the towns kept by the Brothers of the Pious Schools, the Oratorians, and other religious congregations. Lancasterian schools, holiday schools, and infant schools were established through the exertions chiefly of the Abate Iambruschini. The Italian language is spoken with nearly equal purity by all classes.

The climate of the province is generally healthy; the winters are colder than in the plains of Pisa, near the sea. The highlands of the Apennines are bleak and barren; the lowlands are pleasant and very fertile, but in some parts subject to inundations of the Arno or its feeders.

For administrative purposes the province is divided into 23 districts called *cancellerie*, which contain altogether 82 communes, having each a *gonfaloniere* and a communal council. The districts have each a political governor called *cancelliere*, and they are named from their chief towns. Florence, the capital of the province, is connected by railways with Pistoja, Pisa, Leghorn, and Siena. It is noticed in a separate article. [FLORENCE.] We here briefly notice the more important of the other towns. There are few towns of any importance in the part of the province north of the Apennines, although the valleys are pretty thickly inhabited. In this part are—*Firenzuola*, situated in a deep valley, 27 miles N.E. from Florence, on the left bank of the Santerno, population 1500; *Modigliana*, on the Marzen, a feeder of the Lamone, a walled town 40 miles E.N.E. from Florence, has several churches, a college, and 2500 inhabitants; and *Terra-del-Sole*, which stands on a hill above the left bank of the Montone, 45 miles from Florence, and has about 3500 inhabitants.

On the south side of the mountains are—*Borgo San Lorenzo*, on the left bank of the Sieve, or Mugello, 14 miles N.E. from Florence, population 3300; *Castel Franco di Sotto*, on the Arno, population 3280; *Castel Fiorentino*, on the Elsa, with 2700 inhabitants; and *Scarperia*, in the valley of the Upper Sieve, or Mugello, containing 5 communes and 22,870 inhabitants.

Empoli, situated in a very fertile country, on the Florence-Leghorn railway, is a thriving well-built town on the left bank of the Lower Arno, with several manufactories of cotton, leather, straw-hats, glass, and 5500 inhabitants.

Fiesole, situated on a steep hill above the valley of the Arno, 3 miles N. by E. from Florence, occupies the site of the ancient *Fesule*, one of the twelve confederate cities of Etruria. It is a small place of about 2500 inhabitants, but interesting on account of its ancient remains, which include polygonal walls, an amphitheatre, &c. The town gives title to a bishop, and has a cathedral built in the 11th century, a diocesan school, and a commercial hall. Many of the Florentines have country houses in and about Fiesole: in the neighbourhood are large quarries of sandstone. *Figline*, 16 miles S.E. from Florence, near the left bank of the Arno, has a population of about 4000. *Fucecchio*, near the Lake of Fucecchio, 20 miles W. from Florence, near the right bank of the Lower Arno, population 4200. *Monte-Catini*, a village of 2600 inhabitants, near the western border of the province, is celebrated for its warm springs.

Pescia, a walled town, W.N.W. from Florence, on the Pescia, a feeder of Lake Fucecchio, is the seat of a bishop, and has about 4700 inhabitants, who manufacture paper, broadcloth, and silk. The vicinity of the town is planted with olive and mulberry trees. *Pistoja*, 21 miles by railway through Prato from Florence, is an ancient and still considerable town with about 13,000 inhabitants. It forms the subject of a separate article. [PISTOJA.]

Prato, in the valley of the Bisenzio, 11 miles by railway N.W. from Florence, at the foot of the Apennines, is a bishop's see, has a handsome cathedral, a college, besides a seminary for ecclesiastical students, a public library, a printing-press, an hospital, a monte di pietà, copper smelting works and foundries, several manufactories of woollens, strawplait, leather, hats, soap, silk-twist, &c., and about 12,000 inhabitants. The road from Florence to Prato crosses a fine level country, highly cultivated, and thickset with gardens and villas. *Prato Vecchio*, in the upper Val d'Arno, is a walled village with about 3500 inhabitants. *San Miniato*, an episcopal town of 2000 inhabitants, is situated

on a hill at a little distance from the railway between Empoli and Pontedera. It has a cathedral, and is said to be the cradle of the Bonaparte family.

FIRMIN, ST. [ALPES, HAUTES.]

FISHGUARD. [PENBROKESHIRE.]

Fiume (formerly St. Veit and Flaum, in Illyrian Reka), the chief town of the palatinate of Fiume in the Austrian crownland of Croatia, is situated in a narrow valley at the efflux of the Fiumara into the Gulf of Quarnero in the Adriatic, at a distance of 36 miles S.E. from Trieste by the road across Istria, and has about 11,000 inhabitants. The approach to the town by the Luisen Strasse, which connects Fiume with Carlstadt on the Kulpa in the interior of Croatia, presents scenery of a very wild character. The road passes down the defile called the Porta Hungarica, along the left wall of which the road is earned by terraces and shelves, excavated from the solid rock, so high above the Fiumara that the roar of its waters struggling over its rocky bed at the bottom of the chasm is scarcely heard. The view of the town, with the castle of Tersat above it, and the green islands in the Adriatic in front, from the extremity of the defile, are most charming by contrast with the wild savagery of the rocky pass. Fiume is composed of the old and new towns. The new town lies next the sea, has a cheerful aspect, broad, handsome, and well-paved streets, and a number of fine buildings, private as well as public: among the latter are the flesh, fish, and bread markets, ranges of shops with colonnades; and the casino, a spacious structure, containing coffee-rooms, a casino, &c. The old castle of Tersat is situated on an adjacent height, and behind the new town is a steep rock on which the old town is built. The latter is a gloomy spot, laid out in steep narrow streets, and almost entirely inhabited by the lower classes. In this part of the town are an ancient Roman arch; the elegant cathedral church of St. Veit, built in imitation of the church of Santa Maria della Salute in Venice; and a column which marks the spot where, according to the legend of the Santa Casa of Loretto, the holy House of the Virgin stopped on its way from Nazareth. The other buildings of note in Fiume are—a large building formerly used as a sugar-refinery, a nunnery, a gymnasium, a lazaretto, the government offices, and an hospital. Fiume has manufactures of linens, leather, woollens, rosoglio, sugar, wax, tobacco, paper, &c. A handsome promenade with avenues of plantain-trees and public gardens are at one end of the new town; several stone-jetties and a fine quay of freestone also embellish it. It has been a free port ever since the year 1722, but the harbour admits only small vessels; large ships come to anchor in the bay at a distance of three miles from the shore. The trade of Fiume is greatly fallen off. The chief exports are rags, staves, and timber. Fiume was formerly the port of Hungary, and traded extensively in timber, wheat, oil, tobacco, wine, seeds, &c.; but steam-navigation on the Danube, the introduction of railways, and the superior advantages of Trieste as a commercial harbour, have operated powerfully against the trade of Fiume. The territory of Fiume used to belong to Hungary, and was called the *Littorale*, from its position along the shore of the Adriatic. It now forms the palatinate of Fiume in Croatia, which has been severed from Hungary since 1848. [CROATIA.]

FLAMBOROUGH. [YORKSHIRE.]

FLANDERS (*Flandercn*), formerly an extensive county in the Low Countries, extending along the southern shore of the North Sea, between the mouths of the Aa and the Schelde. It was bounded W. by Artois, which however was long united to it, S. by Hainault, and E. by Brabant. The country thus indicated was, in Roman times, included in Gallia Belgica, and comprised portions of the territories of the Morini, the Menapii, and the Nervii, who were amongst the most savage and warlike tribes of Gaul, and the last to submit to the yoke of Caesar. About the end of the 3rd century after Christ the Franks obtained settlements in the eastern part of the territories of the Nervii, whence, issuing under Clovis, they extended their sway over a great part of Gaul. From the time of Clothaire II. Flanders was governed by an officer of the royal household, who was styled Grand Forestier, or High Ranger, and whose office was hereditary. The country was then covered chiefly with forests and marshes.

In the time of Charlemagne, who settled many of the Saxons among the Flemish, the high ranger was named Lideric, whose great-grandson, Baudouin d'Ardenne, surnamed Bras-de-Fer, or Iron-Arm, succeeded his father as third Count of Flanders in A.D. 861. Baudouin, by his union with Judith, daughter of Charles the Bald, king of France, obtained Artois, which was held by his successors until its reunion to France by Philippe Auguste. He died in Arras, his capital, in 879, after a turbulent life, during which however he laid the foundation of the greatness of Flanders by establishing the order of weavers, and attracting workmen skilled in woollen and other manufactures to settle in his states. The country continued for centuries to be governed by counts, under whom the Flemish townsfolk early obtained charters of freedom conferring upon them the rights of electing their own magistrates, of managing their own civil and commercial affairs, and defending their walls against invaders by manning them with a militia consisting of the stout burghers themselves. By means of these privileges, for which they paid a fixed revenue to the count, the Flemish towns worked out for themselves an amount of freedom, and attained a degree of prosperity, without

a parallel in the north of Europe. The country became the centre of the greatest commercial and manufacturing operations in Europe; the Flemish towns were up to the 16th century more populous, as they continue to this day to be better built, than those of any neighbouring country.

After several wars and revolutions, which rendered it independent or subject to the crown of France, Flanders was united to the duchy of Bourgogne, as the result of the marriage of Marguerite, only child of Count Louis II., to Philippe le Hardi, duke of Burgundy. By the marriage of Mary of Burgundy Flanders passed to the house of Austria.

About the beginning of the 18th century it was divided into three parts:—French Flanders, which now forms the department of Nord in France, and is described in the article NORD; Austrian or Imperial Flanders, which under the French empire formed the department of Lys, and is now distinguished by the name of West Flanders; and Dutch Flanders, now East Flanders, which during the French empire formed the department of Escaut. East and West Flanders, at the peace of 1814, were included in the kingdom of the Netherlands. Since the revolution of 1830 they form part of the kingdom of Belgium, with the exception of a narrow strip to the north of East Flanders, along the south shore of the estuary of the Schelde, which is still retained by the Dutch, and forms part of the province of Zeeland. In the remainder of this article the Belgian provinces alone are described.

East Flanders, a province of the kingdom of Belgium, is bounded N. by the Dutch province of Zeeland, E. by South Brabant and Antwerp, S. by Hainault, and W. by West Flanders. It extends from 50° 42' to 51° 22' N. lat., 3° 25' to 4° 26' E. long. The area is 1232 square miles. The population in 1849 was 781,143.

The principal rivers that traverse this province are the Schelde, the Lys, and the Dender. It is further watered by several smaller streams and brooks, all of which are tributaries to the Schelde; and the trade of the province is facilitated by numerous canals. The *Schelde* enters the province on the south-west, and flows north-north-east past Oudenarde to Ghent, where it receives the Lys. Thence it runs eastward to Termonde, where it receives the Dender on its right bank, and soon after takes a north-eastern course down to Antwerp. [SCHELDE.] The *Lys* rises in the French department of Pas-de-Calais, and flows first north and then east, past Therouenne and Aire, and entering the department of Nord passes the towns of Estaire and Armentières. Hence running north-east along the Belgian boundary, past Menin, it enters Flanders and joins the Schelde on the left bank at Ghent. The *Dender* rises in Hainault, to the north of Mons, and flows north-west to Ath, and thence north-north-east, past Grammont and Alost, in this province, to Termonde, where it falls into the Schelde on the right bank. All these rivers are navigable.

East Flanders is low and level. In many parts of the province there are beds of peat. The chief productions of the earth are wheat, rye, barley, oil-seeds, oats, potatoes, flax, hemp, hops, madder, and tobacco. There is but little wood of large growth in the province. Coal, turf, and potters'-clay are found. The chief manufactures are lace, damasks, fine linen and woollen cloths, bobbin-net, silk, cordage, bricks, hats, and soap; and there are also cotton-factories, potteries, sugar-refineries, distilleries, and breweries.

The trade of Flanders is greatly facilitated by means of good common roads, numerous canals, and railroads. There are railways from Ghent to Antwerp, Malines, Ostend, and Courtrai. From Courtrai a line runs westward to Ypres; and another curves north and east through Thourout to Bruges. A branch from the Ghent-Malines line stretches to Alost; and another branch from the Ghent-Lille line, which it leaves at Deynze, is in course of construction to Furnes.

The draught horses bred in the neighbourhood of Ghent and Alost are large, well-formed, and powerful animals. Many of them are sent to London, where they are used for drawing the brewers' drays. Oxen are seldom used in Flanders for purposes of labour.

The capital of the province is Ghent, which is described in a separate article. [GHENT.] Alost and Dendermonde are noticed under their proper heads. [ALOST; DENDERMONDE.] Of the other towns of the province we give the following:—*Basseeveld*, a market-town, with about 3800 inhabitants, including the whole commune, is situated about 10 miles N. from Ghent. *Deynze*, 11 miles by railway S.W. from Ghent, is a very ancient town, and is celebrated for the fine quality of the gin distilled there: the population is about 3600. *Eecloo* is situated on the high road between Ghent and Bruges. It has manufactures of woollens and cottons, soap, tobacco, chocolate, and hats; and there are distilleries, tanneries, salt-refineries, and oil-mills. It has a large weekly market for grain: population, 9200. *Grammont* is situated on both sides of the river Dender, 18 miles S.S.E. from Ghent. It contains two churches, four chapels, a town-hall, a college, and an hospital. Cotton-spinning, dyeing, bleaching, tanning, soap-boiling, distilling, brewing, and oil-crushing are the chief branches of industry; lace, fine linen and damask, and woollen stuffs also are manufactured: population about 7500. *Lokeren*, 11 miles by railway N.E. from Ghent, stands on the Durme, a feeder of the Schelde. It has several well-built streets, a large market-place, a town hall, parish church, three chapels, an hospital, and a prison.

The parish church is surmounted by a lofty tower, and is famous for its magnificently-carved pulpit, which represents Our Saviour among the Doctors. Among the fabrics produced are cotton, linen, and woollen cloths, hosiery, lace, hats, and sail-cloth; and there are extensive bleaching-grounds, breweries, dye-houses, tobacco factories, and tanneries: population, 16,500. *St. Nicholas*, 20 miles by railway N.E. from Ghent, is said to have one of the largest markets for flax in the world. It is the seat of a tribunal of commerce, and has a town-hall, a college, prison, and a large square surrounded by handsome houses. Its industrial products comprise cotton and woollen stuffs, tobacco, soap, and hats; and there are tanneries, dye-houses, breweries, salt-refineries, and potteries: population, 20,500. *Ninove*, 20 miles S.E. from Ghent, is situated on the north-west bank of the Dender. It is a well-built town, and has two churches, a fine abbey, a town-hall, and an hospital. Among its industrial establishments are several flax-mills, some potteries, tobacco manufactories, and oil-mills: population about 5000. *Oudenarde* (Oudenaarden, called by the French Audenarde), 15 miles S. by W. from Ghent, is situated on the right bank of the Schelde. It is a place of great trade, being the centre of a district in which the linen manufacture is carried on, and is the market in which its products are sold. The town-hall of Oudenarde, built in 1525 in the florid gothic style, is small, but one of the handsomest structures of the kind in Belgium. Among the other public buildings may be named the elegant gothic churches of St. Walburga and Notre-Dame (the latter dates from 1239), an old tower called Het-Sacksen, and the bridge of the Porte d'Eyne. Margaret, duchess of Parma, natural daughter of Charles V., who governed the Low Countries under Philip II., was a native of Oudenarde. The town has given name to the victory gained by Prince Eugene and the English over the French, July 11, 1708. The town is well built, and has large breweries and tanneries; there are also salt-refineries, cotton-mills and oil-mills, an hospital, and two orphan-houses: population, 5670. *Renaix* is 20 miles S. by W. from Ghent. It is a flourishing place, and has extensive manufactures of fine linen and damask, woollen stuffs and hats, tobacco, chicory, beer, &c. The town has three churches, an hospital and an old castle: population, 13,000.

The civil government of the province is administered by a governor, who resides at Ghent. Courts of assize are held at Ghent, Oudenarde, and Termonde. A court of appeal, which has jurisdiction likewise over the adjoining province of West Flanders, is established at Ghent. That city is also the seat of a bishop. It has also a Normal school supported by the government. Education is very generally diffused by parish schools and by the religious houses, most of which take boarders or keep schools for the poor.

West Flanders, a province of Belgium, is bounded N.W. by the North Sea, N.E. by the Dutch province of Zeeland, E. by East Flanders, S.E. by Hainault, and S.S.W. and W. by France. The area is 1512 square miles. It lies between 50° 41' and 51° 23' N. lat., and between 2° 33' and 3° 30' E. long. The population in 1849 was 326,847.

The principal rivers of the province are the Lys, which is noticed above, the Schelde, which forms part of the south-eastern boundary towards Hainault, the Yser, and the Yperlee. The *Yser* rises in the department of Nord, in France, and entering West Flanders near Ixellesbrugge, it flows north-east to its junction with the *Yperlee*, which flows northward from Ypres. The united stream then runs under the name of the *Yperlee* to Dixmude, whence its course is north-west to Nieuport, where it falls into the North Sea. There are several other inconsiderable streams in the province, and the communications between different places are facilitated by means of navigable canals: the most important of these are the canals between Ghent and Bruges, Bruges and Ostend, Dunkirk, Furnes, and Nieuport.

The surface is flat, with the exception of a few low hills in the south-west and south-east of the province, and the sand-hills which line the coast. The soil is for the most part sandy. The sand is in some parts covered with a stratum of vegetable mould, but in most other parts the soil is very light and poor. In some places the surface is marshy. Wheat, oats, flax, rape, trefoil, turnips, carrots, potatoes, and tobacco are all cultivated. The quality of the tobacco raised in the neighbourhood of Werwick is much esteemed. Brick and pipe clays and peat are dug.

There are considerable woods in the arrondissements of Bruges, Ypres, and Courtrai, the greatest part of which belong to the state. The principal trees are the birch, oak, ash, hornbeam, elm, beech, poplar, pine, plane, lime, larch, chestnut, and elder. Willows are frequently seen, but always as pollards.

The horses of the province are large and heavy, fit only for draught. Horned cattle are numerous, and of good breed. Many oxen are fattened and sold, and a considerable quantity of butter is made for exportation. There are also many sheep.

A great proportion of the inhabitants of the province are employed in spinning flax and weaving and bleaching linen. The manufacture is chiefly a domestic one, and is carried on in the farm-houses during winter, and at other times when the operations of the field are necessarily interrupted. Damask and table-linen are made in the towns of Courtrai and Bruges. Much lace is made at Bruges, Ypres, Courtrai, and Menin, the thread for which is spun at Courtrai. There are in

the province a great number of dyeing establishments; the largest are at Courtrai, Bruges, Poperinghe, and Roulers. Woollen cloths are made at Bruges, Ypres, and some other parts of the province. The principal articles imported are groceries, dyo-stuffs, metals, timber, wine, and salt: the exports consist chiefly of linens, lace, linseed-oil, rape-oil, gin, horned cattle, and grain.

Towns.—The capital of the province is *Bruges*, which is described under its proper head. [BRUGES.] Of the other large towns, COURTRAI and OSTENDE are given in separate articles. *Commines*, or *Comines*, a town on the left bank of the Lys, which separates it from the French town of the same name, has a population of about 3000, who manufacture ribands, thread, cotton handkerchiefs, and tobacco. The town is 10 miles S.S.E. from Ypres. *Dixmude* is 16 miles S.W. from Bruges, on the right bank of the Yser. It contains a large gothic church, in which is a stone rood-screen of beautiful workmanship, and an altarpiece by Jordaens, representing the Adoration of the Magi: population about 3000. *Furnes* is situated about 3 miles from the coast of the North Sea, between Nieuport and Dunkerque. The town is well built, but is unhealthily situated among marshes, and has 4600 inhabitants. The town-hall is a profusely ornamented gothic building. There are some interesting remains of the abbey of St. Willebrod, which escaped destruction in the French revolution. The town has a cathedral, two churches, an hospital, a college, and several convents. A very important linen market is held in Furnes, and there is also a brisk trade in agricultural produce. It was formerly fortified, but the fortifications were demolished after the peace of 1815. Four great lines of canal meet at Furnes, whence one extends through Dunkerque to Calais, another through Bergues to St. Omer, another through Nieuport to Bruges and Ghent, and another to Dixmude and Ypres. *Iseghem*, 8 miles by railway N. by W. from Courtrai, has manufactures of linen, cotton and woollen stuffs, tape, and hats: population about 9000. *Menin*, or *Meenen*, a fortified frontier town, is situated on the left bank of the Lys, by which it is separated from France, and is 30 miles S. from Bruges. It has a considerable trade in agricultural produce, and there are manufactures of linen, lace, woollen goods, tobacco, and soap, besides oil-mills, breweries, and salt-refineries: population about 8000. *Nieuport*, or *Nieuport*, a fortified port, little frequented except by fishermen, is 6 miles N.W. from Furnes. The chief public buildings are—a town-hall, a handsome church, two hospitals, and an orphan asylum. The population, numbering about 3400, are engaged chiefly in fishing, ropemaking, and building small coasting vessels. *Poperinghe*, or *Poperinghe*, a flourishing town, is 26 miles S. by W. from Ostend. The town has two parish churches, and five other churches which belong to convents. Coarse woollens, lace, and linen are manufactured, and there are several oil-mills. A large trade is carried on in hops, which are grown in the neighbourhood of fine quality and in great abundance: population about 10,500. *Roulers*, or *Rousselaer*, is situated on the Mandel, a small affluent of the Lys, 18 miles S. from Bruges. The inhabitants are chiefly occupied in the manufacture and bleaching of linen. Flax is largely cultivated in the neighbourhood. The pasture land in the vicinity is also very rich, and many fine cattle are reared: population above 10,000. *Thielt* is 15 miles S. by E. from Bruges, on the road from Dixmude to Bruges. It is a well-built town, with many good modern houses, two handsome churches, establishments for bleaching linen and flax, several breweries, and flourishing manufactures of woollens and linens, gloves, starch, tobacco, &c. It has an important flax and linen market: population about 12,600. *Thourout* is situated on the railroad from Bruges to Courtrai, and distant 11 miles from the former. It is a well-built town, with a population of about 8500, who have a considerable trade in linen, flax, and linseed. *Warnton*, or *Waerton*, is situated on the left bank of the Lys, 6 miles S.S.E. from Ypres, and has a population of about 6000, who manufacture beer, starch, chocolate, and salt. *Werwick* (pronounced and sometimes written *Verrick*), is also situated on the left bank of the Lys, 10 miles by railway S.W. from Courtrai, and has a population of about 5700. *Ypres*, or *Yperon*, is a strongly fortified town, situated in a fertile plain on the banks of the Yperlee, in 50° 50' N. lat., 2° 53' E. long., at a distance of about 20 miles by railway W. from Courtrai, and has a population of above 16,000. The situation is somewhat unhealthy on account of the surrounding marshes, but less so than formerly, as these have been partially drained. It is however a flourishing town, and has manufactures of lace, linen, serges, and other woollens, cotton, thread, and silk, and there are many tanneries, oil-mills, dyo-houses, and bleaching-grounds. Thread is a staple manufacture of the town. The kind of linen called 'diaper' was formerly made here, and the name is said to be a corruption or mispronunciation of *d'Yperon*. The town-house is a gothic building of large size, with a tower in the centre, and there is a large gothic cathedral, an exchange, and a royal college. Jansen, the founder of the sect called from him Jansenists, was bishop of Ypres; he died in 1633, and was buried in the choir: population, 15,750. In the 14th century Ypres had a population of 200,000, and was an important manufacturing town. At that period there were 4000 looms constantly at work in the town. The town originally sprung up about a fortress built by Baudouin III., count of Flanders, in A.D. 960. In 1388, Philippe the Bold, duke of Burgundy, enlarged the town and surrounded it with walls. The French in the time of

Louis XIV. held it for a long time, and greatly strengthened the fortifications. Under the French empire Ypres was the capital of the department of Lys, which coincided with West Flanders. The history of the town presents a long series of sieges.

Agriculture.—Flanders was remarkable for the cultivation of its soil long before any other country north of the Alps or Pyrenees. This was the natural consequence of its commercial prosperity; and although very little change has taken place, and very few improvements have been introduced for more than a century, it still ranks very high amongst agricultural countries.

It is not the richness of the soil which is the cause of the abundant harvests which the Flemish peasants reap, but their indefatigable industry. The greater part of the land in Flanders is naturally poor; and in extensive districts, which now have the appearance of the greatest richness at harvest-time, the original soil was once little better than the blowing sands which are met with in the neighbourhood of the sea. Neither is it a genial climate which brings forward the fruits of the earth in abundance: for the climate is inferior to that of France or the southern parts of Germany; and if there are not so many or such sudden changes of weather as in Great Britain or Ireland, the winters are longer and more severe. The average temperature in summer may be somewhat higher than in the counties which lie in the same parallels in England, and the time of harvest somewhat earlier; but this does not make a difference of more than a week in the maturity of every kind of grain. The winters are more severe in ordinary years, and the snow lies longer on the ground.

The soil may be divided into two classes: the first consists of the alluvial clay-loams near the coast; the second, of various sands and light loams which are found in the interior. The most fertile is that of the low lands which have been reclaimed from the sea by embankments: it is chiefly composed of a muddy deposit mixed with fragments of marine shells and fine sea-sand. These lands are called 'polders'; and their great natural fertility causes them to be cultivated with less art and industry than those lands which are much inferior.

The cultivation in the polders has nothing remarkable to entitle it to much notice. Barley seems peculiarly suited to the soil, and very heavy crops of this grain are obtained; especially in those polders which, having been more lately embanked, are not much exhausted. Eight and even ten quarters per acre have been obtained with little or no manure; and the second crop of barley sown in succession has often been the best. Oats are also very productive and of good quality, from ten to twelve quarters per acre. But these heavy crops soon reduce the natural fertility, and after a few years the produce is greatly diminished, and the land requires to be recruited by manure and cleansed by fallows. The extent of the farms in the polders is from 100 to 250 acres. The farmers in general are in good circumstances, and the buildings substantial. The air of the polders is unhealthy, and all those who are not inured to the climate are subject to fevers and agues. On this account land lets at a lower rate, and the wages of labour are higher in the polders than in more healthy districts.

In the interior of East and West Flanders the soil varies considerably, but the principal part is of a sandy nature. The sand and a heavier loam are found much intermixed. These layers are not of great thickness; and the accidental circumstance of the washing away of the sand in some places, and the depositions from the rivers in others, easily accounts for this variety. Some of the elevations, which are nowhere considerable, consist of a very poor sand, and suggest the idea of their having once been the sands of the sea blown up to hills, as is observable on the coast. These hills have gradually been cultivated and improved, and only a few remain covered with heath or wood.

At a distance from large towns it would be impossible to obtain the requisite quantity of manure, and accordingly it is made on the farm. The cattle are the principal source of the supply; but every expedient is resorted to in order to increase the quantity and improve the quality. Every kind of vegetable or animal matter is carefully collected, and made to undergo the putrefactive fermentation by being mixed with others already partially decomposed. Nothing excites heat and putrefaction more than urine when it is poured over substances subject to decomposition. In every farm-yard there is a vaulted cistern or pit into which the objects to be acted upon can be thrown, and into which the urine or drainings of the dunghill can be made to flow: by frequently moving and stirring the mass, the decomposition goes on rapidly, heat is evolved, and the fibres and dried juices of vegetables are decomposed, and become soluble in water, in which state their effect on vegetation is greatest. This manure is generally ploughed into land in an active state of fermentation.

In the tillage of the land the Flemings use few and very simple instruments. The common plough for light lands is a small light plough without wheels, and drawn by one or two horses. It is the most perfect plough for light sands, acting like a shovel at the fore part of the turn-furrow, which is concave, and completely turns over the soil. In the stiffer soils the turn-wrest plough, with two wheels, is sometimes used, made much smaller and lighter than the heavy Walloon plough.

An instrument peculiarly Flemish is the 'traineau.' This is a

wooden frame of a triangular shape, covered with boards, which is drawn over the ground to smooth the surface and press in the seed. The harrows in common use are also triangular, and made entirely of wood; the pins are driven obliquely and point forwards, so as readily to enter into the ground when the harrows are drawn by the angle.

The most important instrument in Flemish agriculture is the spade, which is used to a much greater extent than in England; and in some instances is the only instrument of tillage. The trenching spade is made light and long, and is well adapted to the loose sandy soils. The first step to improvement is generally a complete and deep trenching; and in the Waes district a sixth part of the whole farm is trenched every year; and where this is not done, the intervals between the stitches in which the land has been ploughed are dug out with the spade a foot or 16 inches deep, and the earth thrown evenly over the beds in which the seed has been sown. By shifting these intervals a foot every year, the whole of the land which lies in stitches 6 feet wide is dug, and the upper and under soil mixed regularly. This process is extremely useful in producing an even crop, especially of flax, the roots of which strike deep.

Flax is everywhere a most important crop, for it much exceeds all other crops in value. Where it can be raised of a tolerable quality, every other crop has a reference to this; and the rotation of crops (which system of farming is very generally adopted) is arranged accordingly. There is no country where more attention is paid to flax than in Flanders, especially in the neighbourhood of Courtrai. The land is brought into the highest state of richness and cleanness before flax is sown in it; and the most abundant manuring with refuse oil-cake and urine is thought essential to raise this crop in perfection.

On the heavier loams colza, or rape, is an important crop for the seed from which the oil is expressed. Potatoes and beetroot are raised in considerable quantities, but the farmers prefer to beetroot turnips and carrots, a crop of which can be raised on the same land that has borne another valuable crop the same year. In the heavier loams, which are chiefly to be met with in West Flanders and about Alost, the following rotation is adopted:—flax, clover, barley or oats, beans, wheat, rye and turnips, potatoes, colza and carrots, flax; or flax, colza, wheat, rye and turnips, oats, clover, wheat, rye.

There are some very rich pastures in Flanders about Furnes and Dixmude, where excellent butter is made. A great many beasts are fed in summer. The best cows and oxen are of the Dutch breed; those which are bred in Flanders are inferior. The breed of horses in Flanders is large and heavy, but deficient in activity and clumsy in form. The mares were once in repute for heavy carriages, but at present an equipage drawn by Flanders mares would be an object of wonder, if not of ridicule. Many horses have been imported into England from Flanders as cart-horses. The Flemish sheep are coarse in the wool, and inferior in carcass. The pigs too are as badly shaped, but a better breed has been recently introduced.

The farm buildings are very good and convenient in general. The farms are small, compared with those in other countries; 120 acres is considered a very considerable occupation. In the Waes country, which lies in the north of East Flanders near Antwerp, and is cultivated like a garden; the farms are very small, 50 acres being amongst the largest, and the average is not above 15 acres. A farm of this description requires only one horse to cart the manure and plough the land; four or five cows are the usual complement, with two or three pigs.

FLECHE, LA. [SARTHE.]

FLEETWOOD. [LANCASHIRE.]

FLEGG, EAST and WEST, two hundreds in the eastern division of the county of Norfolk, which have been constituted a Poor-Law Union. The incorporated hundreds of East and West Flegg are bounded N. by the river North, separating West Flegg from the hundred of Happing; E. by the North Sea; S. by the river Bure, separating East Flegg from the hundred of Wulsham, and W. by the hundred of Walsham. East and West Flegg hundreds comprise an area of 29,087 acres, and a population in 1851 of 8497. East and West Flegg Poor-Law Union contains 20 parishes, with an area of 25,035 acres, and a population in 1851 of 8499.

FLENSBURG, a town at the southern extremity of the Flensborg Fjord, an inlet of the Baltic, and in the centre of the duchy of Schleswig, stands in about 54° 47' N. lat., 9° 27' E. long., and has about 16,000 inhabitants including the suburbs. The town is encircled by hills on the three sides facing the fjord. It is a pleasant well-built town, inclosed by an old wall and ditch, outside of which there are three suburbs. The streets are well paved and lighted. Flensborg has three German churches and one Danish, three market-places, a town-hall, an orphan asylum, an hospital and school of midwifery, a public library, a grammar school, an exchange, a theatre, and a house of correction. It has several large manufactories, particularly of spirits, refined sugar, tobacco, sailcloth, soap, paper, &c. There are shipbuilding yards, and the people of the town are owners of between 200 and 300 vessels. There is a good harbour, deep enough for large ships, but the entrance is difficult. The trade is considerable: there are large imports of linseed, timber, coals, and raw materials; the exports are spirits, corn, hides and skins, oil, soap, tallow, fish, &c. A railway, 43 miles in length, connects the town with Tönning near the mouth of the Eyder. Flensborg is the capital of a bailiwick of the same name, which has an area of about 336 square miles.

FLINT, Flintshire, a market-town, sea-port, and parliamentary borough, is situated on the left side of the estuary of the Dee, in 53° 15' N. lat., 3° 6' W. long.; distant 197 miles N.W. from London by road, and 191 miles by the North-Western, and Chester and Holyhead railways. The borough of Flint is governed by four aldermen and twelve councillors, one of whom is mayor; and with St. Asaph, Holywell, Mold, and four other places, returns one member to the Imperial Parliament. The living is a perpetual curacy in the archdeaconry and diocese of St. Asaph. The population of the borough of Flint in 1851 was 3296.

Flint, from which the county derives its name, was formerly the county town, but for some time past the assizes have been held at Mold. Flint was probably a Roman station; many Roman remains have been dug up in the neighbourhood. Traces exist of Roman works for smelting lead ore. The castle appears to have been built by Henry II., and strengthened by Edward I. It was taken by the Welsh in 1282. In the civil war of Charles I. it was garrisoned for the king, but taken by the Parliamentarians. It shortly after fell again into the hands of the Royalists; but was finally taken by General Mytton, and with other Welsh castles was dismantled in 1647 by order of the Parliament. The remains of the castle stand to the north-east of the town, on the summit of a rock of freestone. It was a square building with a round tower at each of the four corners. One of these towers, of much larger dimensions than the others, was used as a keep, and was separated by a deep moat from the rest of the building, with which it communicated by a drawbridge.

The public buildings are a handsome gothic church of recent erection, a county jail built in 1785, a neat town-hall recently built, a national school-house, almshouses for 12 poor burgesses, and a chapel for Dissenters. The trade of the port is small. The estuary of the Dee is many miles wide, but the low water channel is narrow and shallow. The shifting sands in the channel of the Dee render Flint harbour inaccessible to any but small vessels. The neighbouring lead and coal mines, and the works for smelting the lead give extensive employment, and furnish the principal articles of export. A portion of the miners drawn from the inland part of Wales speak Welsh only, but the great majority of the inhabitants speak English. The market has fallen into disuse. There are three yearly fairs. The town is resorted to in summer for bathing; there are several hot and cold baths. Some pleasant walks are in the vicinity. There is a ferry boat to the Cheshire side of the estuary. Small boats for the conveyance of passengers ply between Chester and Flint.

(Parry, *Cambrian Mirror*; *Land We Live In*, vol. iii.; Cliffe, *Book of North Wales*.)

FLINTSHIRE, a county in North Wales, in the north-eastern part of the principality. The main portion of the county extends along the estuary of the Dee, between 53° 4' and 53° 22' N. lat., 2° 53' and 3° 29' W. long.; and there are two outlying portions. The principal outlying portion is bounded N.N.E. by the county of Chester, E.S.E. and S.S.W. by Shropshire, and W.N.W. by Denbighshire, from which it is separated by the Dee. The smaller outlying portion is situated between the main portion of the county and the larger outlying portion; it is bounded on every side by Denbighshire, and is very small. Flint is the smallest county in Wales; its area is only 289 square miles, or 184,905 statute acres; the population in 1851 was 68,156.

Coast, Surface, Hydrography, and Communications.—The only promontory on the coast is the Point of Air. The coast is low, and is skirted in almost every part by sands. On the north-west coast are several pools, called Trewyn pools, forming a line along the shore of about two miles.

Flintshire has no hills of great elevation: the south-west boundary lies along the hills which skirt the valleys of the Upper Alen and the Clwyd; and a range of hills connected with these extends through the county from north-west to south-east, separating the Alen and the lower part of the Clwyd from the estuary of the Dee. Garreg Mountain, towards the north-west extremity of this range, is 835 feet high, and Gwaunysgaer Down, still farther to the north-west, is 732 feet high. From the slopes of this range of hills a number of small streams flow, on one side into the Dee, and on the other into the Clwyd and Alen. These rivers, though they have part of their course on or within the border of Flintshire, rather belong to other counties. [CLWYD; DEE; CHESHIRE; DENBIGHSHIRE.] The new channel of the Dee below Chester is indeed for the most part within the county, and constitutes the only inland navigation which it possesses.

Two main lines of road run through the county in a north-western direction. One of them enters Flintshire from Chester near Shepherd's House on the Dee, and passes through Broughton, Hawarden, and Holywell, where it divides, one of the branches running through St. Asaph, the other through Rhuddlan. The other main road enters Flintshire near Caergwrle, from Wrexham in Denbighshire, and passes through Mold to Bodfarris and thence to Denbigh. Cross roads connect these main lines with each other, and with the villages in the interior of the county. The Chester and Holyhead railway passes along the whole of the estuary of the Dee and the coast-line of this county. The Mold branch quits the main line near the Saltney station, and runs first south-west and then north-west to

Mold, about 11 miles. There is a small railroad from the coal-pits near Mold to the Dee.

Geology, Mineralogy, &c.—The new red-sandstone or red marl, the uppermost of the rocks of this county, occupies the two outlying portions; and is found on the north-west coast, in the lower part of the vale of Clwyd, and in that part of the county which is on the north-east side of the new channel of the Dee. The coal-measures occupy the coast of the estuary of the Dee, and the coal-field forms a belt extending from the Point of Air to the south-east side of the county, gradually increasing in width inland. The seams of coal vary in thickness from three-quarters of a yard to five yards, and the dip varies from one yard in four to two yards in three. Common, cannel, and peacock coal are found. Beds of shale and sandstone, answering in position and character to the shale and millstone grit of Derbyshire, underlie the coal-measures, and crop out from beneath them on the south-west side of the coal-field, forming a belt more inland than the coal-field, but parallel to it and to the shore of the Dee, and separating the coal-field from the district occupied by the carboniferous or mountain limestone. The mountain limestone occupies all the remainder of the county, except a small tract occupied by the old red-sandstone. Lead-mines are worked in the limestone near Holywell, and between Holywell and Hawarden. Silver is extracted from the lead-ore. Ironstone is abundant in the coal seam; and in the mountain limestone rich hematitic iron-ore is found. Copper, zinc, and calamine are also found.

Divisions, Towns, &c.—The present division is into five hundreds. Prestatyn, in the north, along the coast; Rhuddlan, in the west, towards Denbighshire; Mold, in the east and south, towards Cheshire and Denbighshire; Colleshill, in the north-east, along the estuary of the Dee; and Maylor, comprehending the larger detached portion of the county, and one or two parishes in the south-east of the main part. The smaller outlying portion is in the hundred of Mold. Flintshire contains one city and contributory borough, ST. ASAPH, on the Elwy; one principal borough and ex-county town, FLINT, on the estuary of the Dee; six other contributory boroughs, HOLYWELL, near the estuary of the Dee, MOLD, the present county town, CAERGWRLE or CAERGWYLE with Hope, on the Alen, Overton, in the larger outlying portion of the county near the Dee, Rhyddlan or Rhuddlan on the Clwyd, and Caerwis, or Caerwys, not far from Holywell on the road to Denbigh. Of those printed in small capitals an account is given under their respective titles. The other places in the county requiring notice we mention here, with the population of each in 1851:—

Bagillt, on the left side of the estuary of the Dee, population of the ecclesiastical district 3303, is situated 10 miles N. by W. from Mold. Bagillt has acquired some importance from the establishment of lead-works and collieries. Lead-smelting is carried on; there are also establishments for manufacturing the lead into various articles for sale, and for making red-lead. There are in Bagillt a district church, several Dissenting chapels, and a National school. At this place is a station of the Chester and Holyhead railway.

Caergwrle, or *Caergwyle*, in the parish of Hope, or Queen Hope, is on the right bank of the Alen, about 7 miles S.E. by S. from Mold: population of the borough, 719. The name Caergwrle has been derived from *Caer Gawr lle*, 'the camp of the giant legion,' from the 20th Roman legion, which was named 'Victrix,' and had its headquarters at Deva (Chester). The legion probably had an outpost at Flint; on the tiles of a Roman bath found here was the inscription 'Legio XX.' Some vestiges of Roman roads and other works were formerly visible in the neighbourhood. The castle appears to have been known by the English under the name of Hope Castle, giving name to the district of Hopedale. The castle is now a mere ruin. The hill on which the castle stood is precipitous on one side and of steep ascent on the other: on the accessible parts it was protected by deep ditches cut in the rock. This rock, which is a breccia of small pebbles lodged in grit, was formerly quarried for millstones. The neighbouring hill, called Caergwrle Hill, affords limestone, of which a great quantity is burned into lime. In the parish are part of the ancient Wat's Dyke, and an ancient British post, called Cner Estyn. About a mile distant from Caergwrle is the village of Hope, on the left bank of the river Alen. Fairs are held at Caergwrle on Shrove Tuesday, May 10th, August 12th, and October 27th.

Caerwys is in Rhuddlan hundred, near a small stream which runs into the Clwyd, 12 miles N.W. from Mold: population of the parish, 635. The assizes for Flintshire were held here till the year 1672, when they were removed to Flint. Caerwys is believed to have been a Roman station. In the middle ages the Eisteddfod, or general meeting of the Welsh bards, was held here. The last legally called meeting of this kind was held at Caerwys by summons from Queen Elizabeth. The first modern revival of the Eisteddfod took place here in 1798. Caerwys is now a mere village. It possesses a neat church, with chapels for Wesleyan and Calvinistic Methodists, and a National school-house. A little woollen-cloth is made, and there is a small wire-mill. Caerwys is now chiefly important for its cattle fairs, which are the largest in the county, and attract numerous purchasers from England. Eight fairs are held in the course of the year.

Hawarden is a mile and a half from the left bank of the Dee, on

the road from Chester to Holywell, 6 miles E.N.E. from Mold, population of the township 586, a considerable decrease having taken place in consequence of the discontinuance of the Hawarden iron-works. There was a castle here at a very early date: it was the residence of the barons of Mont-Alto or Mold, stewards to the powerful earls of Chester. It was rebuilt before 1280. On the night of Palm Sunday, 1282, during a tempest which favoured the design, it was stormed by David, brother of Llewelyn, prince of North Wales, in the last struggle of the Welsh with the English. At the close of the civil war of Charles I. it was dismantled. The remains are a fine circular tower or keep on the summit of a mound, a few walls, and part of the foundations. The town is well built, and consists principally of one street nearly a mile long. The church is a plain building. There are chapels for Wesleyan and Calvinistic Methodists. Several extensive coal-pits, brick and tile-works, and potteries are in the parish, and railroads convey the produce of the works to the river. The market is on Saturday, and there are two yearly fairs. Hawarden Castle is a modern castellated mansion; the ruins of the old castle are within the park. About 2 miles N.W. from Hawarden are the remains of Ewloe, or Owloe Castle, an ancient keep or stronghold, picturesquely situated on the margin of a wooded glen.

Overton is pleasantly situated near the right bank of the Dee, 18 miles S.S.E. from Mold: population of the borough, 1479. Edward I. granted Overton a weekly market, but it has been for some time discontinued. The church is a handsome building, and the churchyard is remarkable for some fine yew-trees. A Wesleyan chapel, a National school, and a house of correction are in Overton.

Rhuddlan, or *Rhyddlan*, is on the right bank of the Clwyd, rather more than 2 miles above its mouth: population of the borough, 1472. Llewelyn ap Sitsylt, prince of Wales, built a castle here in the early part of the 11th century. In 1063 it was surprised and burnt by the Saxons under Harold. It was soon restored, but shortly afterwards re-conquered by Robert, nephew of Hugh Lupus, earl of Chester. In 1282 it was attacked by Llewelyn, the last prince of Wales, and his brother David, but without success. Edward I., sensible of the importance of the place, built a new castle a little to the northward of the former one. In this castle Edward's queen, Eleanor, gave birth to a princess. Edward made the town a free borough, and bestowed upon the inhabitants many immunities. He also assembled here, in 1283, a parliament or council, in which Wales was divided into counties, ancient laws and customs which appeared detrimental were abolished, new ones introduced, and many important regulations established, by what was called the 'Statute of Rhuddlan.' An old building near the centre of the town has an inscription on its wall, placed there by Dr. Shipley, late dean of St. Asaph, intimating that in that house Edward held the council referred to. Rhuddlan Castle was in the great civil war garrisoned for the king, but was taken by General Mytton in 1646. The Parliament gave orders that it should be dismantled. The village of Rhuddlan consists of a main street running down to the Clwyd, and some smaller streets. The principal buildings are the castle, the church, the ancient priory, and places of worship for Wesleyan and Calvinistic Methodists, Independents, and Baptists. There is a bridge over the Clwyd of two arches, rebuilt or repaired about 1595. The castle erected by Edward I. was built of red-sandstone from the neighbouring rocks, and formed a square externally, having at two opposite angles double round towers, and single ones at the other angles; the court-yard was an irregular octagon. Some of the towers are tolerably entire. About half a mile south of the castle stood the priory of Black Friars, founded some time before 1268, and which continued till the dissolution. The Toot-hill and the ruins of the priory are comprehended in an extensive area surrounded by a fosse which communicates with the castle ditch. The river Clwyd is navigable up to the bridge at spring-tides for vessels of 60 tons. Lead-mines give employment to many of the inhabitants. There is a large export of corn. A steam-packet plies between Rhuddlan and Liverpool. There are four fairs in the year; the weekly market has been discontinued for several years.

Dyserth, 20 miles N.W. from Mold, population of the parish 1030, is on the road from Holywell to Rhuddlan, about 3 miles from the sea. The church, which is situated in a hollow, was erected in 1603; the east window contains some painted glass. In the burying-ground are some curious tombstones, two ancient crosses, and some old yew-trees. The ruins of Dyserth Castle stand on a lofty eminence commanding a fine view of the Vale of Clwyd. Near the castle are the valuable lead-mines of Tudargoch. *Greenfield*, on the left bank of the estuary of the Dee, 13 miles N.N.E. from Mold: the population is returned with Holywell parish. At Greenfield are extensive copper, zinc, and paper works, which afford employment to many of the inhabitants. South-east of the village are the remains of Basingwerk Abbey. Of the abbey buildings but a few fragments are left. *Halkin*, 7 miles N.N.W. from Mold: population of the parish, 1777. Porcelain clay of superior quality has been found in Halkin Mountain, though not much worked of late. *Newmarket*, 18 miles N.W. from Mold, population of the parish 642, was formerly a market-town, with a town-hall in which quarter sessions were held. The place is now a mere village. Horse-races were once held near the village. The Endowed Free Grammar school has fallen into abeyance. In the churchyard are an ancient stone cross, curiously carved, and some

elaborately wrought tombstones. Numerous objects of interest are in the neighbourhood. On the summit of a hill called Cop'r Leni is an extensive tumulus formed of limestone, and covering a space nearly an acre in extent. From the hill is obtained a fine view of the estuaries of the Dee and the Mersey, as well as inland. On the top of Axton Mountain stood formerly a fortress called Castell Edwin. Northop, 4 miles N. from Mold, population of the township 719, occupies a pleasant site in a fertile district, and has in its vicinity many good family mansions. The church is in the perpendicular style, with a lofty tower. Northop is the mother church of Flint, from which it is about 4 miles distant. Rhyl, on the shore of the Atlantic, near the mouth of the river Clwyd, 22 miles N.W. from Mold: population of the ecclesiastical district, 1563. Rhyl has risen into some importance as a watering-place; and the usual conveniences have been provided for summer visitors. There are numerous lodging-houses, bathing-machines, hot and cold baths supplied with sea-water, news-rooms, bowling-green, &c., at Rhyl. There are here a new district church, and chapels for Independents and other Dissenters. Steamers ply regularly between Rhyl and Liverpool, and occasionally to Bangor and Beaumaris. The Chester and Holyhead railway has a station at Rhyl.

Divisions for Ecclesiastical and Legal Purposes.—The county of Flint is in the diocese and archdeaconry of St. Asaph, and in the ecclesiastical province of Canterbury. It contains 32 parishes or parochial chapelries. According to the 'Census of Religious Worship,' taken in 1851, it appears that in the two registration districts of Holywell and St. Asaph (population, 66,335), there were then 215 places of worship, of which 110 belonged to various sections of Methodists, 41 to the Episcopal Church, 34 to Independents, 21 to Baptists, and 9 to minor bodies. The total number of sittings provided was 53,865. The county is divided by the Poor-Law Commissioners into three unions: St. Asaph, Hawarden, and Holywell, which include 43 parishes and townships, with an area of 187,971 acres, and a population in 1851 of 76,529; but the boundaries of the unions extend beyond those of the county. Flintshire is included in the North Wales and Chester circuit; the assizes and quarter sessions are held at Mold; but the county jail is at Flint, the former county town. County courts are held at Holywell, Mold, and St. Asaph. To the Imperial Parliament two members are returned from Flintshire, namely, one for the county, and one for Flint and the contributory boroughs.

History and Antiquities.—Flintshire, with the rest of North Wales, was comprehended in the territory of the Ordovices, except those parts eastward of the Dee, which may be considered as having belonged to the Cornavii, who occupied the present county of Chester and much of the midland part of England. In the Roman division of Britain the Ordovices were comprehended in the district of *Britannia Secunda*; the Cornavii in that of *Flavia Caesariensis*. Two Roman stations are by antiquaries fixed in or closely upon the borders of this county, *Varæ* or *Varis*, at or near Bodfari (in the latter part of which name the Roman designation may be traced), and *Bovium*, at or near Bangor on the Dee. There seems reason to suppose that the Romans had posts at or near Flint, Mold, Caergwile, and Caerwys. It is probable that they worked the lead-mines of the neighbourhood, and that the posts were established with the view of protecting or carrying on that branch of industry.

In the Saxon invasion Flintshire suffered. At Banchor, or BANGOR (the Roman *Bovium*) was a vast monastery. The great dyke which Offa, king of Mercia, carried along the frontier of his own dominion and that of the Welsh, may yet be traced to the hills which skirt the valley of the Clwyd, running across the south-western part of Flintshire. The greater part of the county was on the Mercian side of the dyke. Wat's Dyke, another ancient rampart, is also to be traced running through a considerable part of the county. The territory between the two is said to have been neutral. About a year after Offa's death (795), a fierce battle was fought within the border of the county in the marshes between Rhuddlan and the sea, between the Britons, or Welsh, and the Saxons: the Welsh were defeated with dreadful slaughter, and lost their king, Caradoc: a plaintive Welsh air, 'Morfa Rhuddlan,' preserves the memory of this disastrous day. Immediately after the capture of Chester by Egbert of Wessex, Flintshire was overrun by the Saxons, who gave new names to the towns, villages, and hamlets, and many Saxons settled in the county. It appears however to have come again under the power of the Welsh princes, and was ravaged in the reign of Edward the Confessor by the Saxons under Harold: it was re-conquered from the Welsh by Robert de Rotheland (Rhuddlan), nephew of Hugh Lupus, earl of Chester, who re-fortified Rhuddlan Castle. Many contests took place before the Welsh were subdued: Flintshire especially continued to be a debatable ground, and was the frequent scene of petty hostilities. In 1277 Edward I., who had determined on the final subjugation of Wales, rebuilt Flint Castle, and strengthened that of Rhuddlan, and prepared, by making good roads, for the advance of his troops. In 1282 the Welsh princes, Llewelyn and his brother David, rose in arms. David stormed Hawarden Castle, and, in conjunction with his brother, invested Flint and Rhuddlan, the only places left to the English in the county: the former surrendered, and the latter was hard pressed. The advance of the English under Edward changed the face of affairs; Caergwile was taken by them, the siege of Rhuddlan raised, and the

war carried westward into Caernarvonshire. Flintshire appears to have been constituted a county in the time of Edward I.; it was part of the earldom of Chester, and long continued to be under the jurisdiction of the chief justice of Chester. The county and the borough of Flint, with its contributories, received the privilege of sending representatives to Parliament in the reign of Henry VIII. In the civil war of Charles I. this county was the scene of contest. Hawarden Castle, Flint Castle, and Rhuddlan Castle were taken and retaken by the Parliamentarians and Royalists. All these castles were ordered by the Parliament to be dismantled.

Among the remains of past ages the castles are the principal: those of Flint, Mold, Caergwile, Rhuddlan, and Hawarden are noticed elsewhere; the others are Ewloe and Basingwerk. Ewloe consists of two parts, an oblong tower, rounded at the side and guarded on the accessible places by a strong wall at some distance from it; and an oblong yard, at one end of which are the remains of a circular tower. The only vestiges of Basingwerk Castle appear to be the foundation of a wall on the verge of Offa's Dyke, in the parish of Holywell.

Of the ancient religious edifices the principal are the cathedral of St. Asaph; the churches of Mold and Northop, near Flint; the Cistercian abbey of Basingwerk, and the chapel over the celebrated spring at HOLYWELL. Basingwerk Abbey is of uncertain foundation. Henry II. established here a house of Knights Templars. The remains consist of the refectory, the chapel of the Knights Templars, and some remains of offices. The refectory is almost entire; the Templars' chapel is spacious, with long narrow and pointed windows, and slender and elegant pilasters between them on the inside. The architecture is generally in the early English style.

In 1852 the county possessed four savings banks, at St. Asaph, Holywell, Maylor, and Mold. The amount owing to depositors on 20th November 1852 was 98,507*l.* 10*s.* 10*d.*

FLORENCE, Department of. [FIRENZE.]

FLORENCE (*Firenze, Fiorenza*), the capital of the grand duchy of Tuscany, and an archbishop's see, is situated in the valley of the Arno, which river divides it into two unequal parts, the larger or original city being on the right or northern bank. Its shape is a pentagon about six miles in circuit; it is inclosed by walls and has eight gates, six of which open to high roads leading to Arezzo, Siena, Pisa, Pistoja, Bologna, and to the Vallombrosa and the Casentino. On the north and north-west a fine plain a few miles in breadth is interposed between the town and the Apennines, which rise to the height of more than 3000 feet above the plain, and the upper ridge of which has a naked and barren appearance. To the north-east the hill of Fiesole, covered with gardens and country-houses, almost touches the city walls. That part of the town which is south of the Arno runs up the declivity of a rather steep hill, which is partly inclosed within the walls; the gardens of Boboli and the fort of Belvedere crown the higher grounds within the inclosure. Five bridges over the Arno (one a suspension-bridge, erected in 1844) connect the two parts of the city; the handsomest of the other four is the Ponte Santa Trinita, which is adorned with marble statues, and the middle arch of which is 90 feet in span. In the central or most ancient part of Florence (for the town has been repeatedly enlarged, the actual line of walls dating from the 14th century), which lies chiefly between the cathedral, the old market, the town palace, and the river, the streets are mostly narrow and irregular, and many of the houses have a mean or dilapidated appearance, though here and there are fine churches and massive square stone palaces which look like fortresses, and were partly intended as such during the civil contentions of the commonwealth. But the streets which lead from this central part to the present gates, and which from their more recent date are still called *Borghi*, or suburbs, are laid out on a regular plan; the outer part of the town also is handsomely built, the houses being interspersed with gardens, especially in the neighbourhood of the city walls. The most remarkable structures in Florence are:—1. The Duomo, or Cathedral of Santa-Maria-del-Fiore, which was begun at the end of the 13th century by Arnolfo di Lapo, was continued by Giotto and other successive architects, until Brunelleschi completed it in the 15th century by raising the noble cupola (381 feet high), which excited the admiration of Michel Angelo. This magnificent building is surrounded by an open place; on one side of it rises a detached square tower or belfry 266 feet high, and in front of it is the baptistery of St. John, an octagon chapel rich with sculptures and mosaics. The whole group of buildings is cased in marble, partly-coloured black and white. 2. Il Palazzo Vecchio, or town-house, which was the seat of the government of the Florentine republic, a square massive-looking structure surmounted by a tower 260 feet high, from which the great bell used to toll to assemble the citizens or call them to arms. The square in front is adorned with a noble fountain and with marble and bronze statues. 3. Between the Palazzo Vecchio and the Arno is the handsome building called Gli Uffizi, with arcades forming three sides of an oblong court 400 feet in length, raised by the Grand Duke Cosmo I. The first story is occupied by the archives, the treasury, other public offices, and the Magliabocchi library, which contains 150,000 printed volumes and 12,000 manuscripts. The second story contains the celebrated galleria, or museum, formed by the Medici, which is one of the richest existing collections in sculptures, medals, cameos, bronzes, paintings, and other works of

art. 4. The church of San Lorenzo, built by Brunelleschi, the numerous altars of which are adorned with the paintings of Florentine masters. In the body of the church is the modest tomb of the elder Cosmo, called Pater Patriæ; in the old sacristy is that of his father, Giovanni, the princely merchant, the head of his family and the founder of this church; and in the new sacristy are the celebrated monument of Giuliano de' Medici, and of Lorenzo, duke of Urbino, by Michelangelo. Behind the choir of the church is the sepulchral chapel of the grand dukes of the house of Medici, rich in marble, jasper, agates, lapis lazuli, and other valuable stones, on which account it has received the name of 'Cappella delle Pietre dure.' Annexed to the church is the building begun by Michael Angelo and finished by Vasari, containing the valuable library of manuscripts called Laurentiana, collected in great part by Cosimo, Lorenzo, and the other members of the first house of Medici, but considerably increased since. 5. The church of Santa Croce is remarkable chiefly for the sepulchral monuments of Machiavelli, Michelangelo, Galileo, and Alfieri. 6. The Pitti palace, the residence of the grand duke, begun by Brunelleschi and finished by the Grand Duke Cosmo I., has a splendid gallery of paintings, and a library of 70,000 printed volumes and 1500 manuscripts, chiefly Italian, among others the correspondence of Machiavelli and that of Galileo. The adjoining gardens of Boboli are extensive, and afford a pleasant promenade to the public, but they are laid out and the trees are cut in the old formal style; the fountains are remarkably fine.

Besides the above, which are the most remarkable edifices in Florence, there are numerous other structures which would be considered as an ornament to any city, such as the Riccardi palace, with its valuable library, now the property of the community; the Strozzi palace, one of the most remarkable specimens of the old massive and stern Florentine architecture; the modern palaces Corsini, Borghese, and many others; the churches of San Marco, Santa Maria Novella, l'Annunziata, Ognissanti, &c.; the two principal theatres (there are seven others); the academy of the fine arts; the hospitals; and the public walks outside the gates.

Florence contains many charitable and other useful institutions. There are several elementary schools for boys and girls, besides the schools kept by religious congregations; the Istituto della Santissima Annunziata, in which 800 girls are boarded and instructed and provided for when they leave the house; besides asylums for the orphan, the blind, the deaf and dumb, and other unfortunate persons; and 'confraternità,' or associations of charitable persons for attending the infirm and burying the poor dead. The medical and surgical college attached to the hospital of Santa Maria Nuova is one of the best medical schools in Italy. The principal academies are that of La Crusca, to which is united the University of Florence, founded in 1438; that of the fine arts; and the Academy dei Georgofili, which encourages agriculture, and publishes a quarterly journal. Connected with the astronomical observatory, which is a magnificent establishment, are a museum of natural history, a botanic garden, &c.

The people of Florence are civil, industrious, sober, steady, economical even to parsimony, loquacious and satirical, but docile and quietly disposed. Among the wealthy and fashionable class great outward decorum is maintained. Fortunes are moderate, and mostly derived from landed property. Among the Tuscan nobility are many individuals distinguished for their learning, and for the liberality with which they exert themselves in promoting useful and charitable institutions, such as schools, savings banks, and works of public utility.

Florence is upon the whole the most pleasant place of residence in all Italy. Strangers have also the advantage of the best reading-rooms in the whole peninsula, which are supplied with foreign journals and literary novelties.

The price of provisions is moderate, the country very fine, and the climate generally healthy, though at times foggy in the autumn and cold in the winter. The whole neighbourhood of Florence is studded with villas, country-houses, and gardens, which made Ariosto say, that if they could be all collected within the inclosure of a wall and joined to the actual city, Florence would be more than equal to two Romes. Florence is situated in 43° 46' 41" N. lat., 11° 15' 55" E. long., 43 miles E. from Pisa, 51 miles S. by W. from Bologna, and 145 miles N.N.W. from Rome. It is joined by railways to Pisa, Leghorn, and Siena. The population of the city in 1852 was 110,714. The manufactures comprise chiefly silks, carpets, straw-hats, mosaics, porcelain, and jewellery.

Florence owes its origin to a colony of Roman soldiers sent by Octavianus after the victory of Perugia, to whom he allotted part of the territory of the colony of Fiesulæ, established about forty years before by Sulla. In the reign of Tiberius we find the Florentines mentioned by Tacitus ('Annal.' i. 79) as having sent a deputation to Rome to deprecate the intended diversion of the course of the Arno into the Arno, by which their fields would have been exposed to inundation. Little else is known of Florence under the empire, and hardly any remains exist of that period except some relics of an amphitheatre and a few inscriptions. Christianity seems to have been established at Florence in the 3rd century, and several martyrs are recorded there under Decius. In the year 313 Felix, bishop of Florence, attended a council at Rome. About 405 the town was

threatened by the Goths under Radagaisus, but was saved by Stilicho, who defeated the barbarians in its neighbourhood. In 542, being again attacked by the Goths under Totila, it was successfully defended by the garrison which Belisarius had left in it. The Longobards occupied Florence apparently without violence, and Tuscany became one of the duchies of their kingdom. Charlemagne having conquered the Longobards, organised the various provinces of their kingdom: he appointed at Florence a political chief called duke, and afterwards count, under whom were various officers, who were to be chosen by the count and the people together. Thus a municipal government was early given to Florence. In the 12th century, when Italy began to be involved in the long quarrel between the church and the empire, Florence with the greater part of Tuscany was under the jurisdiction of the Countess Matilda, who dying about 1115 left her inheritance to the Roman see. From that time the towns of Tuscany began to govern themselves as independent commonwealths, and the popes favoured this state of things. Florence had then a very limited territory, extending only a few miles round its walls; but the industry and speculative spirit of its citizens wonderfully enriched them. They had commercial establishments in the Levant, in France, and in other parts; they were money-changers, money-lenders, jewellers, and goldsmiths. In 1078 they first enlarged the circuit of their town. In 1113, while the Countess Matilda was still living, the citizens of Florence took up arms to repel a new delegate sent by the emperor, and accompanied by a troop of armed men. They met him at Monte Cascioli, then an estate of the counts Cadolingi, about six miles west of Florence: Robert the imperial vicar was killed in the conflict, and his men were routed. This was the first military exploit of the Florentine community, and from that time Florence was numbered among the towns attached to the popes and opposed to the emperors, or, as they were afterwards called in the following century, the Guelph party, although many of the neighbouring feudatories were of the opposite or imperial party; and as several of them at various epochs became citizens of Florence, or became connected by marriage or otherwise with Florentine families, the seeds of internal discord were thus sown within its walls. For above two centuries after the city was torn with dissensions, first between the Guelph and Ghibeline factions, and subsequently by the Neri and Bianchi, each of which as it got the upper hand oppressed or exiled the leaders of the losing faction. Nevertheless Florence went on increasing in territory and wealth.

In 1252, upon the death of the emperor Frederick II., the head of the Ghibelines as the Pope was of the Guelphs, the Guelphs, who had gained the ascendancy in Florence, defeated the Pisans and subdued the Ghibelines in the valley of Mugello and in the Valdarno; so that this year was thenceforth remembered by the Florentines as the 'year of victories.' In 1254 they took Volterra; and it was then that they first coined their golden florins, which were considered the finest coins in all Europe.

The Ghibelines, supported by Manfred, king of Naples, and led on by Farinata degli Uberti, surprised the Florentines and other Guelphs of Tuscany at Montecatini, on the banks of the Arbia, a few miles from Siena, on the 4th of September, 1260, and completely defeated them, with the loss of 10,000 killed and a number of prisoners. The Ghibelines entered Florence in triumph, the principal Guelphs who survived fled to Lucca, their property was confiscated, their houses were razed, and a new magistracy was formed from among the Ghibeline party, who took the oath of allegiance to Manfred. At a general diet of the Ghibeline cities, held soon after at Empoli, it was proposed to raze Florence to the ground, and distribute the inhabitants among other towns, as the bulk of the population was too much Guelph to be trusted; but Farinata indignantly resisted the proposal, saying he would rather join the Guelphs than see his native town destroyed: this threat had its effect, and Florence was saved. Dante has justly praised Farinata for this patriotic act, in which the feelings of the citizen rose above the passions of the partisan.

In 1265 the defeat and death of Manfred at Benevento turned the scale against the Ghibelines. The Florentines in the following year drove away the garrison left by Manfred, and offered their allegiance for ten years to Charles of Anjou, king of Naples, who sent them 800 French horsemen under Gui de Montfort as his vicar.

In 1268 the expedition of Conradin gave a momentary preponderance to the Ghibelines, but they were soon expelled again from Florence. In 1273, by the mediation of the Pope, peace was made between the two parties, and the Ghibelines were recalled; but this harmony did not last long. In 1280 Cardinal Latino Orsini, legate of Pope Nicholas III., made a new peace: the more violent Ghibelines were banished for a time, but their property was restored to them, and the rest of their party were allowed to return, and to participate in the offices of the state. But the Guelphs, being stronger, did not keep their promises towards them. For the next thirty years internal feuds prevailed, in which Dino Compagni, the chronicler of the time, and the poet Dante acted a part; and the names of Guelphs and Ghibelines gave way, or rather were replaced, by those of Neri and Bianchi. Blood was openly shed in the streets with impunity.

After the feuds of the Bianchi and the Neri, and the banishment of the former, the Florentines besieged and took Pistoia by famine in the year 1306. In August 1315 Uguccione della Faggiuola, at the

head of the Ghibelins of Pisa, completely defeated the Florentines, joined by the other Guelphs of Tuscany, at Monte Catini, in the Val di Nievole. Uguccione was succeeded in the command of the Ghibelins of Tuscany by Castruccio Castracani, lord of Lucca, who took Pistaja, and defeated the Florentines in a pitched battle at Altopascio, near the marshes of Bientina, in September, 1325. Castruccio advanced to within a mile of Florence, but the Florentines received timely assistance from the Anjou king of Naples; while the emperor Ludovic V. came into Italy to support Castruccio and the Ghibelins, whose cause however met soon after with an irreparable loss by the death of Castruccio in September, 1328. Charles, duke of Calabria, on whom the Florentines in their distress had conferred the signoria or lordship of their city, died about the same time, and his death perhaps saved them from having a master. While they were threatened by Castruccio, one of their principal merchant houses failed for the sum of 400,000 golden florins, which added greatly to their distress. In 1333 a great flood of the Arno carried away three bridges, part of the walls, laid most of the streets of Florence under water, and caused heavy damage. Some years afterwards two more commercial companies, Peruzzi and Bardi, failed in consequence of the loss of 1,365,000 golden florins, being capital and interest of sums which they had advanced to Edward III. of England, and which he was unable to repay.

These facts give an insight into the sources of the extraordinary wealth and resources of the Florentines. These sources were twofold, the numerous manufactures at home and the trade and banking speculations carried on by Florentine merchants abroad. Among the manufactures the most important were those of woollens, silks, and jewellery. The citizens of Florence were classed from 1266 into 12 arti, or companies of trades or professions, seven of which were called arti maggiori, namely—1, lawyers and attorneys; 2, dealers in foreign stuffs; 3, bankers and money-changers; 4, woollen manufacturers and drapers; 5, physicians and apothecaries; 6, silk manufacturers and mercers; 7, furriers. The arti minori, or lower trades, were originally five—smiths, shoemakers, butchers, carpenters, and masons; but they were afterwards increased to 14. Every citizen who wished to be eligible to office was required to inscribe his name on the rolls of one of the trades. Danto had his name inscribed on the roll of the apothecaries, although he never exercised that profession. Of the importance of their foreign trade, and the influence which the Florentine merchants or bankers had attained in foreign countries, we have a proof in the fact, that when Pope Boniface VIII., after his election, received the congratulatory addresses of foreign states, it was observed that no less than twelve envoys accredited to him on the occasion were citizens of Florence.

Their armies were chiefly composed of mercenaries and auxiliaries, and commanded by a foreign captain, or condottiere. The towns and districts subject to Florence retained their local statutes, and elected their own magistrates, but they had no share in the central government of the republic.

Fresh dissensions among themselves and an unfortunate campaign against Pisa made the Florentines look out again for a foreign protector. Weary of feuds they elected Gaultier de Brienne, of French extraction, but born in Greece, who bore the title of Duke of Athens, but was an officer in the service of Robert, king of Naples, lord of Florence for life, in 1342. He began by putting to death or sending into exile a number of citizens of the wealthier popular families who had till now kept the government in their own hands, and who were obnoxious both to the nobles who were excluded from office and to the inferior orders who attributed to them all their troubles. Having a foreign force of Frenchmen and Neapolitans at his disposal, his sentences were summarily executed. In the course of ten months he contrived to draw 400,000 golden florins, which he transmitted to Naples. He soon incurred the hatred of all parties, and having convoked for the 26th July, 1343, a number of distinguished citizens to consult with them on the affairs of state, but really for the purpose of putting them to death, the people, who were already prepared, rushed to the palace at the cry of 'popolo, popolo,' dispersed the duke's cavalry, and obliged him to capitulate on the 3rd of August, when the bishop of Florence had him conveyed safely with his men outside of the territory of the republic. Thus Florence recovered its independence, and the memory of that deliverance, called 'la Cacciata del Duca d'Atene,' is still solemnised at Florence by the display of the flags of the various trades on the 26th of July.

It was now agreed that the grandi, or ancient nobles, should have a share of the offices of the state, but as they soon assumed too much, they were driven away again from the town-hall. Upon this they took up arms, and a battle ensued in the streets of Florence, in which the grandi were defeated and their houses plundered and burnt. This was the last struggle of the nobles at Florence. (Machiavelli, lib. 11.) But a few years after a new quarrel broke out between two wealthy citizen families, the Albizzi and the Rucchi, which divided the city into two parties again. The Albizzi at length preponderated, and after exiling a number of citizens of the opposite party, they formed a government composed entirely of popolani grassi, or wealthy citizens. The lower trades, instigated by the Rucchi and the Medici, who began at that time to court notice and popularity, broke out into insurrection in 1378, forced the town-hall, burnt the archives, and after three

days of anarchy, elected a woolcomber, Michele Lando, as chief magistrate. Lando, who was a man of natural good sense, succeeded in re-establishing order and checking the rioters. After several years of troubles, the popolani grassi, with the Albizzi at their head, resumed power in 1382, and formed a new aristocracy, which succeeded in retaining the reins of government for 52 years, not however without occasional tumults, conspiracies, and insurrections, until the year 1400. From that year, Machiavelli says, the city remained internally quiet till 1433, the longest period of tranquillity which Florence had ever known. The Florentines acquired possession, partly by force and partly by purchase, of Cortona, Arezzo, Livorno (Leghorn), part of the Romagna, and lastly of Pisa, which they took through famine and treachery in September 1406.

The administration of the Albizzi was overthrown by Cosimo de' Medici, a popular citizen and a princely merchant, in 1431.

The first house of Medici respected the republican forms, and were contented with exercising the chief influence in the state without emerging from the class of citizens. But the foreign wars which desolated Italy in the 16th century effected the fall of that republic, when a member of a lateral branch of the Medici, the line of Cosimo having become extinct, was placed by Charles V. as Duke of Florence. The ducal dynasty of the Medici continued to rule till the year 1737, when, becoming extinct, they were succeeded by Francis of Lorraine, afterwards emperor of Germany, and husband of Maria Theresa of Austria. From this period the history of Florence merges in the history of Tuscany. [TUSCANY.]

FLORENCE. [ALABAMA.]

FLORENT, ST. [CORSICA.]

FLORES. [AZORES.]

FLORIANA. [MALTA.]

FLORIDA, the most southern of the United States of North America, comprehends a narrow tract of land extending along the northern shore of the Gulf of Mexico, between 83° and 87° 45' W. long., and the peninsula, 320 miles long, and in its broadest part 120 miles wide, which forms the north-eastern boundary of the Gulf of Mexico: the peninsula and adjacent country as far west as the Appalachicola River were formerly called East Florida, and the tract west of that river West Florida, but these names are now only employed as local designations. Florida lies between 25° and 31° N. lat., and 80° and 87° 45' W. long. It is bounded N. by the states of Alabama and Georgia, E. by the Atlantic Ocean, and S. and W. by the Gulf of Mexico. Its area is estimated at 59,268 square miles, or about 3000 square miles more than that of England. The following table shows the population and the proportion of free coloured persons and slaves in this state according to the decennial returns, from the first state census in 1830. The total population in—

1830 was	34,730,	including	844 free coloured persons and	15,501 slaves.
1840 "	54,477,	"	817 "	25,717 "
1850 "	87,445,	"	932 "	39,310 "

The federal representative population given by this census is 71,720, in which number three-fifths of the slaves are included. This entitles the state to send one representative to Congress. To the Senate, like each of the other United States, Florida sends two members.

Coast-line, Surface.—Florida has a coast-line considerably more than 1000 miles in length, but so obstructed by shallows and sand-banks as to afford few available harbours. The whole of the eastern coast is flat, and skirted by low narrow islands of sand, which lie parallel to the mainland, and are separated from it by narrow and shallow lagunes, which cannot be navigated even by vessels of small burden. This coast has no harbours, except those formed by rivers and inlets at the northern extremity, where that of St. Augustine has 10 feet, St. John 15 feet, and St. Mary 20 feet water at high tides.

Opposite the southern extremity of the peninsula there is a series of small rocky islands called keys (a corruption of 'cayos') mostly covered with wood. They begin on the west with a cluster of rocks and sand-banks called the Tortugas, and continue for some distance eastward, but afterwards turn to the north-east and north, and terminate at Cape Florida, 25° 47' N. lat. These islands, which are called the Florida Keys, are skirted towards the south and east by a long narrow coral reef, called the Florida Reef, and both the Florida Keys and the Florida Reef may be considered as constituting in this place the left bank of the Gulf Stream, the beginning of which may be fixed between the Tortugas and the coast of Cuba, near the Havana. The Gulf Stream rapidly increases in velocity, and between Cape Florida and the Bimini Islands sometimes runs five miles per hour. It continues with nearly the same velocity along the eastern shores of Florida up to the mouth of St. Mary's River. The chief of the keys, Key West (a corruption of Cayo Hueso), is about six miles long and two miles broad, with a spacious harbour which affords shelter to vessels of the largest size. Key West, long the haunt of pirates and smugglers, is now an important state naval station, and bands of 'wreckers' are placed here for the assistance of vessels in distress, this part of the coast being extremely dangerous. Thirty vessels in distress put into Key West in 1850 which had been ashore on the reef. The island, which commands the Florida Channel entrance into the Gulf of Mexico, is strongly fortified; Fort Taylor at the north-west angle of the island, about 1000 feet long by 250 feet deep has been constructed in the most substantial manner at a cost

of about 1,500,000 dollars. In this key are salt-ponds which yield annually upwards of 30,000 bushels of salt. The Tortugas received their name from the immense number of turtles which frequent them, as well as the neighbouring keys and mainland, in order to deposit their eggs. These turtles form a considerable article of traffic.

The western coast of the peninsula is also flat, and as well as that of Florida, west of the peninsula, is like the part already noticed encompassed by elongated narrow sandy islands, though they do not form such a continuous barrier as along the eastern coast, some parts being quite free from them. But this coast also has shoals stretching off from it, and affords few harbours. Carlos Bay, or Charlotte Harbour (between 26° and 27° N. lat.) has no great depth of water. Tampa Bay is spacious, and admits vessels of considerable burden. Appalachee, or Appalachicola Bay is a much more important one, affording anchorage for large vessels, though its mouth has only three feet of water at low tide. West of Appalachee Bay the coast is bolder than elsewhere in this state, and there are two or three harbours, but only one is of much importance, Pensacola, which has 21 feet water on the bar, and from 23 to 36 feet in the interior, which is spacious and convenient. It admits vessels drawing 20 feet, and is the deepest port on the northern coast of the Gulf of Mexico.

On the eastern coast there are lighthouses on Amelia Island at the entrance to St. Mary's River; at the mouth of St. John's River; on the island at the entrance to St. Augustine; and on Cape Canaveral; on Cape Florida; off the southern end of the peninsula, on Key West, on Sandy Key, and on the Bush Islands, the westernmost islands of the Florida Reef; on the coast of West Florida, on Cape St. George, and Cape Blas at the entrance to Appalachee Bay; on Dog Island and Egmont Key at the entrance to Tampa Bay; at the entrance to St. Mark's Harbour in Appalachee Bay; and at the entrance to Pensacola Bay. There are also floating lights off Key West, and Carysfoot Reef.

The southern districts of the peninsula nearly as far north as 29° N. lat., are low and flat, being mostly covered with swamps called everglades, and containing only moderate tracts of dry land intermixed with the marshy ground. During the rainy months, from June to October, it is impossible to make a land journey across this part of the peninsula. The river swamps, or those formed by the overflow of the rivers, are generally covered with a heavy growth of timber of various kinds; the pine-barren swamps, or those resulting from the drainage of the surrounding country, are overgrown with pine and cypress. The country north of 29° N. lat. has a more uneven surface, but the higher grounds in the interior rarely rise to the elevation of hills. This division contains better water, and is better drained; the swamps are not numerous, and are only of moderate extent. It is besides better wooded: this part of the peninsula, consisting chiefly of pine forests, interspersed with savannahs, marshes, and low sandy hillocks, or as they are called here as well as in Georgia, hummocks, or hummocks. The savannahs afford good natural pastures; the hummocks when cleared of the wood, which generally covers them in their natural state, yield excellent arable land, and the barrens are mostly overgrown with pine forests. The soil in this northern part of the peninsula, though generally sandy, is more fertile than in the southern part. West of the peninsula is the most uneven part of the state, but it contains no elevations of any consequence. In the northern part limestone is the prevailing rock, and some of the rivers run in different places for some distance under ground.

Hydrography and Communications.—The peninsula is drained by the St. John's and by several smaller rivers. The main branch of the *St. John's River*, the Ocklawaha, rises nearly midway between both seas, and runs north for about 80 miles, whence it turns east, and joins the other branch, or proper St. John. Both rivers in their upper course form several shallow lakes, and after their union, the channel of the river is more like an inlet of the sea than that of a river, being very wide and nearly without current for the remainder of its course, which exceeds 80 miles, and is directed to the north. It is navigable for vessels drawing 8 feet of water to Lake George, 20 miles above the place where both branches unite. *Indian River*, which falls into the Atlantic about 27° 30' N. lat., forms for a considerable distance a lagoon, divided from the sea by a narrow sandbank. The other rivers which belong to the eastern side of the peninsula are all small, except the *St. Mary's River*, which, for the greater part of its course, forms the boundary-line between Florida and Georgia. It rises in the latter state near 31° N. lat., and flowing first southward about 40 miles, then turns with a bold sweep northward, in which direction it continues about 30 miles. The remainder of its course lies to the east: where it falls into the Atlantic it forms St. Mary's Harbour, the deepest port in the United States south of the Chesapeake Bay, on the Atlantic coast. The whole course of this river is about 110 miles; and it is for a considerable distance a fine navigable stream. The rivers belonging to the western side of the peninsula are more numerous than those belonging to the eastern side. They are however all small; the principal are the Amazura, the Hillsborough, the Astoral, and the Charlotte.

The rivers which fall into the Gulf of Mexico, west of the peninsula, rise either in Georgia or in Alabama. The most eastern is

the *Suwanee River*, which rises in Georgia with two branches, the Alapaha and Suwanee, which unite in Florida and fall into the Gulf of Mexico at the northern extremity of the peninsula of Florida, after a course of upwards of 200 miles. The bar at the mouth of the Suwanee has only 6 feet of water at high tide. Further west is the *Ocklockonnee*, which also rises in Georgia: it falls into Ocklockonnee Bay at the head of Appalachee Bay after a course of about 125 miles. Farther west is the *Appalachicola*, the largest river of Florida. Its principal branch, the Chatahoochee, rises near 35° N. lat., on the southern declivity of the high table-land of the Appalachian system, and runs first south-west and then south, in which direction it enters Florida, receiving on its boundary the Flint River, which rises between 33° and 34° N. lat., and flows 210 miles before it joins the Chatahoochee. The united river is called Appalachicola, which flows nearly due south about 75 miles, and is navigable for vessels of considerable burden in all its extent. The basin drained by the Appalachicola and its tributaries is estimated at nearly 20,000 square miles. West of the Appalachicola are the Choctawhatchee, the Escambia, and several smaller streams, all of which have their source in Alabama, and flow in a generally southern course through Florida to their outlet in Choctawhatchee, and Pensacola bays. The *Pedrido* is a small river, and only remarkable as the western boundary between Florida and Alabama.

Florida has a considerable number of lakes, the largest of which are in the swampy districts of the peninsula. Some of these lakes are of great depth, and appear to receive perennial supplies from subterranean springs. The Lake of Macaco (between 26° and 27° N. lat.) is the most southern, and also the most extensive; in the dry season it is 25 miles long and 18 miles wide, but after the rains have set in, it is greatly increased in size. The Eustace and Simmons lakes are also in the southern part of the peninsula. Lake George, which is an expansion of the St. John's River, is 18 miles long and 12 miles wide; the depth of its water is on an average 12 feet. In the west are the Mickasneke, which is 12 miles long, the Wakulla, the Jackson, and the Imonia. In the districts where the limestone formation prevails there are also numerous lakes; but they are generally of small extent.

Florida is not well provided with roads. In the south the military roads are almost the only means of land communication. In the north several good coach roads have been constructed. The only railways yet completed are the St. Joseph's, 28 miles, and the St. Mark's and Tallahassee, 26 miles long. Several others of greater magnitude have however been projected, as well as a ship canal, or, according to another plan, a railway across the neck of the peninsula: and there is little doubt but some of these projects will be carried into execution.

Climate, Soil, and Productions.—The climate of Florida is very mild, and in the southern districts hot. The average mean temperature of the state is about 73° and the difference between the summer and winter is said nowhere to exceed 25°. South of 25° N. lat. snow is unknown, and frost, though occasional, is rare. The temperature of this tract approaches that of the West Indies. In summer the thermometer generally rises to between 84° and 88°, and in July and August even to 94° Fahr. The east side of the peninsula is warmer than the west, which is probably to be attributed to the high temperature of the Gulf Stream. At the equinoxes, especially in autumn, rain falls abundantly every day from 11 to 4 o'clock for several weeks. At this period strong gales are frequent. The climate of Key West and some of the other large keys is said to be as equable as that of Cuba, and equally grateful to the invalid: the difference of the mean temperature of summer and winter is only 11 degrees.

The entire peninsula is of alluvial formation. The whole of the southern and eastern part is of sand and clay resting on calcareous rocks, which crop out in the north and west, mostly in the shape of a crumbling limestone. This limestone is in many places cut through by springs and subterranean streams, which form cavities from a few yards to several acres in extent, locally designated 'sinks.' The soil over by far the larger part of the state is naturally indifferent, or poor and stubborn. The most fertile portions are in the central districts by the banks of the lakes and ponds, and along the water-courses. Westward it becomes poorer; but the strip of land along the northern shore of the Gulf of Mexico is more productive. Yet, though so much of the soil is thus naturally indifferent, the warmth and humidity in a great measure compensate, and the labours of the agriculturist are rewarded by rich and varied crops.

The vegetation, both natural and cultivated, is chiefly, though not exclusively, that of a tropical climate. Over the northern part of the peninsula extend vast forests of pine with little underwood; the hummocks are covered with red, live, and water oaks, mahogany, palmetto, dogwood, magnolia, &c.; and in many parts the swamps and barrens abound with majestic cypresses, chestnuts, and cypresses. The exportation of timber is one of the chief sources of the wealth of Florida.

Among the cultivated plants, increasing importance is being attached to the growth of cotton, the Sea-Island or long-staple cotton being, it is said, now produced in Florida equal to that of South Carolina. The sugar-cane succeeds well in all the maritime parts: the quantity

raised in 1850 (2,752,000 lbs.) was nearly ten times as great as in 1840 (275,317 lbs.); the increase in the cotton raised in the same year was not quite 50 per cent. Tobacco, coffee, rice, indigo, Sisil hemp, New Zealand flax, maize and other grains, and a great variety of vegetables are successfully cultivated. The cochineal cactus is indigenous. The fruits are exceedingly numerous, and form valuable articles of export: among those most raised are oranges, which flourish excellently and are of fine flavour, lemons, shaddocks, limes, olives, grapes, pine-apples, and all kinds of melons.

Over the extensive grassy prairies, or savannahs, immense herds of cattle constantly roam, requiring and receiving no care from their owners either in summer or winter. Swine likewise, throughout the larger part of the state, find for themselves abundant food in the roots and mast of the country. Game is said to be more abundant than in any other portion of the United States. Besides deer, wild turkeys, geese, ducks, and curlews are abundant. Alligators and snakes are numerous. Turtle and a great variety of fish are extremely plentiful all round the coast, and about the keys; and an equally plentiful supply of fresh-water fish, and the delicious soft-shelled turtle, is found in the lakes, rivers, and creeks of the interior. Sponges abound on many parts of the coast, and form a profitable branch of trade.

Agriculture and commerce are the principal occupations of the inhabitants. Sugar, cotton, tobacco, and rice, with timber, are the staple exports. In 1850 the number of farms under cultivation in the state was 4304. The extent of improved lands was 319,019 acres, of unimproved lands, 1,246,240 acres, which together were valued at 6,323,109 dollars. The total produce of the principal crops in 1850 was as follows:—Wheat, 1027 bushels; rye, 1152 bushels; maize, 1,996,809 bushels; oats, 66,586 bushels; potatoes, 7828 bushels; sweet potatoes, 757,226 bushels; rice, 1,075,090 lbs.; sugar, 2,750,000 lbs., and molasses, 352,893 gallons; tobacco, 99,614 lbs.; ginned cotton, 18,052,400 lbs.; peas and beans, 135,359 bushels; hay, 2510 tons. The value of orchard products was 1280 dollars; and of market-garden products, 8721 dollars. Very little wine is made.

The number of horses in the state in 1850 was 10,848; asses and mules, 5002; milch-cows, 72,876; working oxen, 5794; other cattle, 182,415; sheep, 23,311; swine, 209,453. The products of animals were thus returned:—Wool, 23,247 lbs. (in 1840, 7285 lbs.); butter, 371,498 lbs.; cheese, 18,015 lbs.; value of animals slaughtered during the year, 514,685 dollars; silk-cocoons, 6 lbs.; bees'-wax and honey, 18,971 lbs.

Manufactures, Commerce, &c.—Florida is an agricultural and commercial state; the manufactures are small in value, being merely of such articles as the immediate requirements of the population render indispensable. None of the staple manufactures of the United States have been introduced here, the manufactured goods required being brought from the manufacturing states and exchanged for agricultural produce. Even ship-building, though this is a commercial state, is hardly to be considered as a branch of its industry; the only vessel built in Florida in 1852 being one schooner of 30 tons burden. In 1850 the number of manufacturing establishments producing to the value of 500 dollars and upwards was 121. The total capital invested in manufactures was 1,209,107 dollars; the value of raw material used, fuel consumed, &c., was 412,030 dollars; value of products, 962,114 dollars; the average number of hands employed was 1112 males and 80 females. The 'home-made manufactures' were valued at 75,582 dollars.

Florida has a very considerable foreign export trade, but its coasting trade is much larger: of the cotton exported in 1851, 70,547 bales were sent direct to foreign ports, while 111,532 bales were sent coast-wise; and the other staples are said to bear a like proportion. The foreign exports however appear to be steadily increasing in value: in 1852 the value of the exports of domestic produce to foreign ports was 2,511,976 dollars; in 1845 it was 1,514,745 dollars. The direct foreign imports, on the other hand, are regularly decreasing: in 1842 they were 176,980 dollars, while in 1852 they were only 30,713 dollars. The greater part of the exports of the state are cleared from Appalachicola, which is likewise the outlet for eastern Alabama and the south-west of Georgia, their produce being brought down the river in steamers. The shipping entered at all the ports in the state in 1850 amounted to 17,980 tons, of which 10,462 tons were foreign. The amount of shipping cleared amounted to 22,156 tons, of which 12,134 tons were foreign. The total shipping owned in the state amounted to 11,272 tons, of which 2185 tons were navigated by steam.

Divisions, Towns, &c.—Florida is divided into 28 counties. Tallahassee is the capital of the state, but Key West and Pensacola are the largest and most commercial towns, and St. Augustine is the oldest. There are few other places of sufficient importance to require notice here: the population is that of 1850:—

Tallahassee, the capital of Florida, stands on elevated ground, some distance from the left bank of the Ocklockonnee, in 30° 28' N. lat., 84° 36' W. long., distant 896 miles S.W. by S. from Washington in a direct line: population, 1391. The city was founded and settled in 1824 on its site being selected as that of the capital of the state. The streets are regularly laid out at right angles, and there are several public squares. Its public buildings are the state-house, court-house, market-house, United States land-office, jail, three churches, and an

academy. Two newspapers are published here weekly. In winter it is a place of considerable resort on account of the warmth of its climate. It is connected with St. Mark's, its port in Ocklockonnee Bay, by a railway 26 miles long. A good mill-stream runs close by the town.

Key West, stands on the key of the same name, in 24° 32' N. lat., 81° 48' W. long., 480 miles in a direct line from Tallahassee: population, exclusive of slaves, 1943. The town has grown up entirely within the last 25 years, but is now the largest in the state. It contains the usual county buildings, a district-court which has cognisance of all cases of wrecks and other shipping disasters, a spacious marine hospital, four churches, and a county orphan school. As already mentioned, in speaking of the island, the inhabitants are chiefly dependent on wrecking, but there is a good deal of general trade, and sponge collecting and salt-making are considerable sources of profit. Steamers to the Savannah call here. The shipping belonging to Key West in 1850 amounted to 6766 tons, of which 27 vessels of 1539 tons belonged to wreckers. The climate of Key West is considered to be singularly adapted to invalids.

Pensacola, the capital of Escambia, stands on the west bank of Pensacola Bay, 10 miles from the Gulf of Mexico, and 176 miles W. from Tallahassee: population, 2161. The city is built on a slightly elevated sandy plain, and is regularly laid out. The streets are wide, and there are two public squares. It contains two churches and the usual county buildings. Pensacola is the principal port of the state, and carries on a considerable trade. The shipping belonging to the district in 1850 amounted to 1794 tons. Convenient wharfs have been constructed for the shipping. About midway between the city and the entrance to the harbour is the United States navy-yard, containing a dry-dock and various workshops and officers' buildings, and occupying altogether an area of nearly 80 acres. About a mile below are the naval hospital, and the Barrancas barracks. On two small islands at the entrance to the harbour are two forts and a lighthouse.

St. Augustine, situated on an inlet on the east coast, about 2 miles from the Atlantic, and 170 miles E. by S. from Tallahassee, population, 1934, is the oldest settlement in the Union, having been founded by the Spaniards in 1564. It has an appearance of antiquity unusual in the towns of the United States, and its inhabitants like to call it the 'ancient city.' The streets are narrow and the houses, irregularly placed, are mostly of two stories, the upper story being of wood and projecting over the lower which is of stone. The principal feature of the town is the large public square which fronts the sound, and around which are the chief public buildings. Many of the inhabitants are the descendants of the former Spanish and French population. The Roman Catholic church is a very hand some edifice; there are three other churches, the usual county buildings, barracks, and a fort. St. Augustine is much frequented by invalids from the northern states.

Appalachicola occupies a plot of ground one mile square, on the right bank of the Appalachicola River, at the entrance to Appalachicola Bay, 62 miles S.W. from Tallahassee. It is a port town considerable coasting trade; and in 1850 possessed steamers amounting to 2050 tons burden, all engaged in navigating the Appala River. In the foreign trade there cleared in the same year 10 tons, and entered 12,196 tons. *Jacksonville*, the capital of county, on the left bank and about 20 miles from the mouth of the St. John's River, 162 miles E. by S. from Tallahassee: population, 1045. The town contains the usual county buildings, and carries on a good trade with the interior, whence large quantities of cotton are brought to Jacksonville for shipment. The river is here above a mile wide. The town is much frequented by invalids from the north. *Miami*, on Key Biscayne Bay, is another flourishing village, the resort of persons of delicate health. *Panama*, on the left bank of the St. John's River, 178 miles E.S.E. from Tallahassee, is a port of delivery, and the place for the re-shipment of goods from the Upper St. John's and Ocklawaha rivers. It has regular steam-boat communication with Savannah and Charleston. As the chief port for the export of the cotton, sugar, and rice of the St. John's cane-brake marshes, it is a place of considerable trade.

Government, Judiciary, &c.—The right of voting belongs to all free white male citizens, 21 years of age, who have resided for two years in the state, and six months in the county where they offer to vote. The legislative body, styled the General Assembly, consists of a senate of 19 members, and a house of representatives consisting of 40 members, who are elected biennially. The governor, who has a qualified veto on all votes of the legislature, is elected for four years: his salary is 1500 dollars. No officer in a banking company, while he is serving in the bank or for twelve months afterwards, is eligible for the office of governor, senator, or representative: nor can a duellist, or second in a duel, hold any office under the state.

The revenue from all sources amounts to about 60,000 dollars, the expenditure is somewhat less. Florida, according to the 'State Returns,' under 'public debt' has 'absolute debt none; contingent debt, none.' But it is to be remembered that in these governmental returns the repudiating states, of which Florida is one, altogether omit the repudiated debt. Before its admission into the Union as a state, Florida had contracted a very considerable public debt; but it

now not only refuses to pay either debt or interest, but even to admit its liability to pay either, on the ground that the debt is not recognised in the state constitution. The assessed value of all real and personal property in the state in 1850 was 22,784,837 dollars. The state militia is composed of 12,122 men, of whom 620 are commissioned officers.

The judiciary consists of a supreme court, presided over by a chief justice and two associate justices, and of circuit-courts presided over by four judges; all the justices and judges have salaries of 2000 dollars a year each. By a law passed in the last General Assembly, the election of the justices of the supreme court and the judges of the circuit-courts is to be given to the people.

Florida is but badly provided with schools, though the state possesses ample school-funds. There is no college or professional school. The total number of public schools in 1850 was 69, the number of scholars 1878; the whole number of children in the state attending school in the year was 4746. Among religious sects the Methodists are the most numerous, and next to them the Baptists: in 1850 the Methodists had 57 churches, affording accommodation for 20,015 persons; the Baptists 56 churches, with accommodation for 11,985; Presbyterians 16 churches, with accommodation for 5900; Episcopalians 10 churches, with accommodation for 3810; Roman Catholics 5 churches, with accommodation for 1850; other sects 3 churches, with accommodation for 1400 persons. Ten newspapers, circulating 319,800 copies annually, are published in the state.

History.—Florida was discovered by the Spaniards in 1512; the first Spanish settlement was formed in 1564 at St. Augustine, which town therefore may be considered as the oldest European settlement on the North American continent, except those on the Mexican isthmus. The Spaniards kept possession of Florida till 1763, when it was ceded to England. It was retaken by the Spaniards in 1781, and remained in their hands at the peace of 1783. In 1819 the United States entered into a negotiation with Spain for the cession of Florida, and a treaty to that effect was ratified by Spain in 1821. The Spanish government however was not inclined to cede the country; but the feebleness to which it was then reduced rendered it incapable of any resistance, and in 1821 Florida was taken possession of by General Jackson, by order of the government of the United States. The Spanish population nearly all left the country upon its cession. Since its possession by the United States the most important event in the history of Florida was the war which in 1835 broke out between the Seminole Indians, who occupied the central portion of the peninsula, and the American settlers. This war was protracted until 1842, when the Indians were forced to succumb, and were nearly all transferred beyond the Mississippi. The few Indians then permitted to remain have been lately removed westward beyond the limits of the white settlements. Florida was admitted into the Union as an independent state in 1845.

FLORIS, an island in the Indian Archipelago, lying between 8° and 9° S. lat., 120° and 123° E. long. Its length is about 200 miles from east to west, and its average breadth about 35 miles. The surface of the island is hilly, particularly on the south side, where there are several high volcanic mountains, from one of which there was an eruption in 1810. Cotton is one of the products. Sandal-wood, bees'-wax, horses, and slaves are exported to Singapore. The principal port, Endé, is on the south side of the island: it has an excellent harbour. Larantuka, a town on the east side, on the straits of Larantuka, in 8° 45' S. lat., 123° E. long., is in the possession of the Portuguese, who have succeeded in bringing many of the natives to the profession of the Catholic faith. This is the only part of the island in possession of Europeans. Endé was formerly subordinate to the Dutch presidency at Coopang in the island of Timor; but in 1812 the Bugis inhabitants succeeded in expelling all Europeans. The coast is mostly colonised by Bugis and Malays, but the interior is inhabited by aborigines, a dark curly-headed race, who resemble the Papuans of New Guinea. The island gives name to the Strait of Floris, which separates it from the islands of Solor and Adenar on the east.

FLOTTA. [ORKNEY ISLANDS.]

FLOUR, ST. [CANTAL.]

FLUSHING (*Vlissingen*), the birthplace of Admiral de Ruyter, a fortified sea-port on the south coast of the island of Walcheren, in the Dutch province of Zeeland, is situated on the north shore of the estuary of the West Schelde, the passage of which it defends. The port is formed by two moles, which break the force of the sea, and beyond these are two canals which enter the town, in the interior of which they form two perfectly secure basins; one of them is of considerable size, and has sufficient depth of water to receive the largest ships of war. The town has extensive dockyards and a handsome town-hall. Flushing came into possession of the French in 1795, and was much used by them as a place of rendezvous for their fleets. The batteries by which the port is defended command to a great extent the south entrance to the Schelde. The town is well built, and the population is about 8000. It was besieged in 1809 by the English expedition under Lord Chatham, well known as the 'Walcheren expedition,' and was taken, but evacuated very shortly after, the port and town having been much damaged by the English. Flushing is the seat of an admiralty board. It carries on a considerable foreign trade.

FOCHABERS. [ELGINSHIRE.]

FOGGIA. [CAPITANATA.]

FOGO. [CAPE VERDE ISLANDS.]

FÖHR, a Danish island off the northern coast of the western part of Schleswig, about 25 miles in area. It is divided into Osterland-föhr, which forms part of Schleswig, and contains the port of Wyk, 54° 43' N. lat., 8° 40' E. long., 500 feet long, 112 feet broad, and 10 feet deep, which has a bathing establishment; and Westerland-föhr, which forms part of North Jütland. The islanders are engaged in navigation, fishery, and woollen-stocking manufactures. Oysters are exported to Hamburg. The Schleswig part of the island has a population of 2650, and the part belonging to Jütland 2100 inhabitants.

FOIX, the name of a town and former county of France. The town is noticed under ARIÈGE, of which department it is the capital. The county was in ancient times partly in the territory of the Volce Tectosages, and partly perhaps in the territory of the Consoranni. It afterwards belonged to the counts of Carcassonne, but upon the death of Roger I., count of Carcassonne, who divided his estates between his family, it became, about the beginning of the 11th century, a separate jurisdiction, which fell to Bernard, second surviving son of Roger. The separate jurisdiction was afterwards erected into the county of Foix. Gaston IV., count of Foix, came into possession (by inheritance from his father-in-law) of the kingdom of Navarre; and the county of Foix, thus united to the other possessions of the house of Navarre, fell to the crown of France upon the accession of Henri IV. in 1582.

The county of Foix was small: its greatest extent was from north-by-east to south-by-east about 50 miles; its greatest breadth about 35 miles. It was bounded E., N., and N.E. by Languedoc; W. by the district of Conserans; and S. by the crests of the Pyrenees. The territory thus described is watered by the Ariège, which runs through it in the direction of its greatest length. The chief towns were Foix and Pamiers. The county is now included in the department of Ariège, under which head the nature and products of the county are described. [ARIÈGE.]

FOKIEN. [CHINA.]

FOKZAN. [MOLDAVIA.]

FÖLDVÁR. [HUNGARY.]

FOLEMBRAY. [AISNE.]

FOLESHILL, anciently termed **FOLKESHUL**, Warwickshire, small manufacturing town, and the seat of a Poor-Law Union, in the parish of Fole-hill, is situated in 52° 26' N. lat., 1° 25' W. long.; distant 15 miles N.N.E. from Warwick, and 94 miles N.W. from London. The population of the parish of Folehill in 1851 was 7810. The living is a vicarage in the archdeaconry of Coventry and diocese of Worcester. Fole-hill Poor-Law Union contains 12 parishes and townships, with an area of 17,667 acres, and a population in 1851 of 18,528. The inhabitants are chiefly engaged in weaving ribands for manufacturers in Coventry. Besides the parish church and a chapel of ease, there are chapels for Independents, Wesleyan Methodists, and other Dissenters.

FOLKESTONE, Kent, a market-town, member of the Cinque Port of Dover, bathing-place, and sea-port, in the parish of Folkestone, is situated on the south-eastern coast, in 51° 5' N. lat., 1° 11' E. long.; distant 15 miles S. by E. from Canterbury, 70 miles S.E. by E. from London by road, and 83 miles by the South-Eastern railway. The population of the town of Folkestone in 1851 was 6726. The town is governed by 4 aldermen and 12 councillors, one of whom is mayor. The living is a vicarage in the archdeaconry and diocese of Canterbury.

Folkestone was at an early period a place of importance. There are still some remains of entrenchments on a high hill in the neighbourhood where the Romans had a tower. A monastery which anciently stood here was destroyed by the Danes. A castle erected by the Saxon kings of Kent, and rebuilt by the Normans, has been almost wholly swept away, with the cliff on which it stood, by the gradual encroachment of the sea. The public buildings of Folkestone include the market house and guildhall, which were rebuilt a few years since. The parish church is a cruciform structure of early English date, with a tower rising from the intersection. Christ church, built and endowed by the Earl of Radnor, was consecrated in 1850. The Independents, Baptists, Wesleyan Methodists, and Quakers have places of worship. There are a Public Grammar school, British and Infant schools, a dispensary, and the Harveian Literary and Scientific Institution. A county court is held in the town.

The opening of the South-Eastern railway, the establishment of the steam-packet service between Folkestone and Boulogne on the French coast, and the erection of Folkestone into a custom-house station, have contributed to the rapid and extensive improvement of this port. In custom-house receipts alone the increase has been from 40087. in the year 1847 to 101,8567. in the year 1851. On 31st December 1853 there were registered as belonging to the port of Folkestone, 7 vessels of the aggregate burden of 137 tons, and 7 vessels of 900 tons aggregate burden. During 1853 there entered the port 305 sailing vessels of 30,350 tons, and 431 steam-vessels of 64,781 tons aggregate burden; and there cleared 9 sailing vessels of 719 tons, and 420 steam-vessels of 64,638 tons. Folkestone Harbour has received considerable extension within the last few years, and a fine pier has been

constructed: a battery protects the town. The works of the South-Eastern railway along the coast are of considerable magnitude, including at Folkestone a magnificent viaduct across the valley in which the town stands. The sands are well adapted for bathing, and the place is resorted to by numerous visitors. Many of the inhabitants are engaged in the fishing on the coast. The market-day is Saturday; a fair is held on June 28th. Folkestone forms part of the parliamentary borough of Hythe. Harvey, the discoverer of the circulation of the blood, was a native of Folkestone.

FONDI. [LAVORO, TERRA DI.]

FONTAINEBLEAU, a town in France, the capital of an arrondissement in the department of Seine-et-Marne, is situated in 48° 24' 23" N. lat., 2° 42' 15" E. long., on the high road and railway from Paris to Lyon, 37 miles S. by E. from the former city, and has 8278 inhabitants in the commune. There was a palace or royal residence in the forest of Fontainebleau in the time of Louis VII., who had erected in 1169, for the use of the royal house, a chapel, which was dedicated by Thomas à Becket, archbishop of Canterbury, during his stay in France. The spot was a favourite one both with Philippe Auguste and with St. Louis, who founded here an hospital and two chapels. François I. caused a magnificent château to be erected here by the architect and painter Primaticcio; and this structure has been further embellished by the taste or extravagance of succeeding princes. The kings Philippe the Fair, Henri III., and Louis XIII. were born here, and the first of the three died here. It was the favourite residence of Henri IV., who made great improvements in the palace and the park; and here his daughter, Henriette, widow of Charles I. of England, made her abode. Louis XIII., son and successor of Henri IV., was born in Fontainebleau, where also Louis XIV. spent part of his youth. The building was completed in this last monarch's reign. Christiana, queen of Sweden, after her abdication, resided here, and has imparted to the place a sad celebrity by the death of her secretary, Monaldeschi, whom she ordered to be executed in a gallery of the château. Here, in 1685, the Revocation of the Edict of Nantes was signed; and here, in the following year, the great Condé died. Louis XV. was married to Maria Leczinski at Fontainebleau in 1724; and his son, the dauphin, died in the same chamber in which the great Condé ended his glorious career. After the first French revolution the palace was occupied by the military school, afterwards transferred to St.-Cyr, and continued in a state of neglect and disrepair till it was completely restored by Napoleon I. to its original splendour and destination as a royal residence. In this palace Pope Pius VII. lived for eighteen months a prisoner during the reign of Napoleon I.; and here Napoleon himself took final leave of his guards and signed his act of abdication of the throne of France in 1814. From the downfall of Napoleon I. the palace was again neglected and almost forgotten, till 1830, when it was put into a state of complete repair by King Louis Philippe. The present emperor of the French, Napoleon III., occasionally resides at Fontainebleau.

The town is situated in the midst of the forest of Fontainebleau, and is well built, with handsome, wide, and straight streets. The town has a college, two fine cavalry barracks, several other remarkable edifices, a Château d'Eau, or ornamental waterworks, containing a reservoir fed by a spring, the waters of which supply the different fountains and basins of the royal palace; the hospitals founded by Anne of Austria and Madame de Montespan; and the public baths and library. Near the south entrance to the town there is an obelisk, erected in 1786 to commemorate the birth of the children of Queen Marie Antoinette. The palace has six court-yards, each of which is nearly or quite surrounded with buildings. There are three principal entrances to it.

The park and gardens are in a style of magnificence corresponding to that of the palace: they are adorned with a canal and cascade (nearly three-quarters of a mile long, and above 120 feet wide), with several smaller canals, a variety of jets d'eau, and with statues in bronze and marble. An attempt to assassinate Louis Philippe, king of the French, was made in this park by Lecomte on the 16th of April 1846.

The forest of Fontainebleau contains 40,620 acres, or nearly 64 square miles; it surrounds on nearly every side the plain on which the town stands: its surface is unequal and its soil sandy, interspersed with blocks of granite, which are quarried for the pavement of Paris. It is pierced by a great number of fine avenues, and presents much picturesque beauty and many extensive and charming views. The forest contains a great quantity of game: wild boars are numerous.

FORDHAM, GREAT. [ESSEX.]

FORDINGBRIDGE, Hampshire, a market-town and the seat of a Poor-Law Union, in the parish of Fordingbridge, is situated on the

right bank of the river Avon, in 50° 56' N. lat., 1° 47' W. long.; distant 18 miles W. by N. from Southampton, and 59 miles S.W. from London by road. The population of the parish of Fordingbridge in 1851 was 3178. The living is a vicarage, with the parochial chapelry of Ibsley annexed, in the archdeaconry and diocese of Winchester. Fordingbridge Poor-Law Union contains 9 parishes, with an area of 23,907 acres, and a population in 1851 of 6143.

At Fordingbridge the Avon is crossed by a stone bridge. The town was once of greater extent than at present. Besides the parish church, which is a fine building, restored a few years back, there are chapels for Wesleyan Methodists, Independents, and Quakers; National and British schools, a literary and scientific institution, and a savings bank. A county court is held. There are manufactures of sail-cloth and of bed-ticking. The market is held on Friday, and there is a yearly fair.

(Warner, *Hampshire*; *Communication from Fordingbridge*.)

FORDWICH. [KENT.]

FOREHOE, a hundred in the eastern division of the county of Norfolk, which has been constituted a Poor-Law Union. Forehoe hundred is bounded N. by the hundreds of Taverham and Eynsford; E. by the hundred of Humbleyard; S. by the hundreds of Shropham and Depwade; and W. by the hundreds of Mitford and Wayland. It comprises 24 parishes, with an area of 40,397 acres, and a population in 1851 of 13,897. Forehoe Union contains 23 parishes, with an area of 36,403 acres, and a population in 1851 of 13,562.

FORENZA. [BASILICATA.]

FOREZ, a county in France, the largest of the three subdivisions of the old province of Lyonnais. It was for the most part comprehended in the territory of the Segusiani; and Feur, or Feurs, one of its chief towns, was the Forum Segusianorum of the ancients—a town of some importance, and probably a Roman colony. From this town the district derived the designation of Pagus Forensis, whence Forez. It was comprehended, in the division under Honorius, in the province of Lugdunensis Prima, and afterwards formed part of the kingdom of the Burgundians, from whose dominion it passed to that of the Franks. It was bounded N. by Bourgogne, N.E. by Beaujolais, E. by Lyonnais Proper, S. by Velay and Vivarais, W. by Auvergne, and N.W. by Bourbonnais. The territory thus defined consists for the most part of a portion of the valley of the Loire, and of the slope of the hills which separate that valley on the east from Lyonnais and on the west from Auvergne. It comprehends a coal-field of the best quality in France: produces iron and lead, and is the chief seat of the hardware manufacture: St.-Étienne, the Birmingham of France, is within its limits. It produces also abundance of fir-timber and excellent turpentine; and corn, wine of good quality, and excellent hemp. It is watered by the Loire and several of its tributaries, and extends in one part across the hills on the east side down to the river Rhône.

The district of Forez was subdivided into Haut-Forez, capital Feurs; Bas-Forez, capital Montbrison; and Roannais, capital Roanne. It is now comprehended almost entirely in the department of Loire; a small portion is included in that of Haute-Loire.

Forez, Beaujolais, and Lyonnais constituted in the middle ages a county which was rendered hereditary by Guillaume, one of the officers of Charles the Bald, in the 9th century. In the course of time Beaujolais and Lyonnais became separate lordships; and in the middle ages the county of Forez came into the hands of the Dukes of Bourbon, and was, together with their duchy, united to the crown.

FORFAR, Forfarshire, Scotland, a royal and parliamentary burgh and market-town, and the chief town of the county, is situated in 56° 40' N. lat., 2° 50' W. long., in a hollow at the east end of the valley of Strathmore and near a small lake, which formerly inclosed the town on the north and north-west sides. It is 54 miles N. by E. from Edinburgh by road, and 76 miles by railway. The population of the burgh in 1851 was 9311. The town is governed by a provost, twelve bailies, a treasurer, and 11 councillors, and unites with Montrose, Arbroath, Brechin, and Bervie in returning one member to the Imperial Parliament.

The town consists chiefly of one irregular line of street called the High-street, about a mile and a half in length, which is crossed by Castle-street near its centre. The houses are generally well built and roofed with gray slates. In the centre of the town are the county buildings, containing the court-house and town-hall. Besides the parish church there are a chapel of ease, a Free church, and chapels for United Presbyterians, Independents, and Episcopalians. Forfar academy, the parish school, and other schools amply supply the educational demands of the burgh. There are a mechanics institute, a public library, and a news-room. The county jail is situated in the outskirts of the town.

Forfar was made a royal burgh in the reign of David I. Anciently the staple trade of the burgh was the manufacture of 'brogues', or coarse shoes. At present the manufacture of Osnaburghs and coarse sheetings is carried on in workshops in the dwellings of the weavers. About 2500 hand-looms are thus employed.

The castle of Forfar was a residence of several of the ancient kings of Scotland, and the seat of their courts and parliaments. The castle stood on a mount of about 50 feet in height, on the east side of Castle-street. The summit of the mount is now occupied by an

ancient market-cross. On a peninsula (at one time an island in the lake) a minnery anciently stood, said to have been the residence of Margaret, queen of Malcolm III., and still called Margaret's Inch. From the Inch a causeway runs westward a considerable distance into the loch. The Loch of Forfar abounds with perch and pike, and has a few trout. It also affords cover for wild fowl. In a moor about a mile and a half north-east from the town, are the remains of a trench, believed to have been a portion of a Roman encampment. Some ruins of the priory of Restennet are within the parish. Eight annual fairs for sheep, cattle, and horses are held in the town.

(*New Statistical Account of Scotland; Communication from Forfar.*)

FORFARSHIRE, a maritime county in the east of Scotland, bounded E. by the German Ocean, S. by the Frith of Tay and Perthshire, W. by Perthshire, N. by Aberdeenshire, and N.E. by Kincardineshire. It lies between $56^{\circ} 27'$ and $56^{\circ} 59'$ N. lat., $2^{\circ} 25'$ and $3^{\circ} 23'$ W. long. The extreme length of the county from south to north in a straight line is 38 miles, and its breadth from east to west 26 miles. Its area is 889 square miles, or 568,750 statute acres, of which a great part is moor and mountain. The population of the county in 1851 was 191,264. The county returns one member to the Imperial Parliament.

Coast-line.—The chief towns and harbours on the coast are Dundee, Arbroath, and Montrose, the former situated on the estuary of the Tay, and the latter on a sandy peninsula at the mouth of the South Esk River. Between the Buddon Ness and Montrose, which embraces nearly the whole line of sea-coast, the most remarkable feature is the line of sandstone cliffs extending from the neighbourhood of Arbroath to the Redhead, and containing several curious marine caves, the most of which open only to the sea, while a few are accessible from the beach. The shore of the Frith of Tay and the sea-coast from Buddon Ness to Arbroath is for the most part a tract of sand, though many parts of it are of considerable fertility. The Basin of Montrose, a shallow pool through which the Esk empties itself into the sea, contains an area of 4 square miles. It is flooded only at high water. Broughty Ferry and Carnoustie, two thriving villages on the coast, are much frequented for sea bathing: the fishing villages of East and West Haven, Auchmithie, Usan, and Ferryden are inhabited almost solely by fishermen. Auchmithie is picturesquely situated among the cliffs, about 5 miles E. from Arbroath. Seaward, about 13½ miles E. from the Buddon Ness is the Bell Rock lighthouse. [BELL ROCK.] The other lighthouses on the coast are the two at Buddon Ness, which with the two lighthouses at Ferry-port-on-Craig on the Fife side of the Frith of Tay, guide ships in navigating the river.

Surface.—There are four natural divisions of the surface of the county:—1. The Grampian district, comprising the greater part of the north-western half of the county, exhibits a tract of irregular mountain-ridges, for the most part having a shallow moorish soil, covered with short heath and large tracts of peat-moss; but the many valleys by which they are intersected are fertile and picturesque. The Grampians are here called the 'Braes of Angus'; they rise in several places to an elevation of 3400 feet, and exhibit much of the scenery of an alpine country. The principal valleys are Glen Isla, Glen Prosen, Glen Clova, Glen Lethnot, and Glen Esk. 2. The great valley of Strathmore, which extends across the centre of the county from south-west to north-east. In it are the towns of Cupar, Forfar, and Brechin. Its length is 33 miles, the width from 4 to 6 miles. The surface is undulating, diversified with streams, plantations, and villages. 3. The Sidlaw Hills, which run parallel with the Grampians, from the south-west extremity of the county, and terminate in the promontory on the coast called Redhead, which rises to about 1500 feet above the sea. Some of these hills are upwards of 1400 feet high, in many parts covered with short heath, and in others cultivated up to their summits: they contain several fertile valleys. The length of this district is about 30 miles, its width from 3 to 6 miles. 4. The maritime district is included between the Sidlaws and the Tay and the ocean, and extends from the boundary west of Dundee to the hills about 7 miles S. from Montrose, varying in width from 3 to 8 miles, and sloping gently towards the shore to the east and the south. This tract is generally fertile, under high cultivation, and adorned with numerous villages, plantations, farms, and villas. Near the shore of the Tay are mounds of loose sand, containing extensive beds of sea-shells, at least 60 feet higher than the present level of the sea.

Numerous large trees found in the mosses and marshy ground indicate that formerly the lower part of the county was covered with forests. Some of the Grampian glens are partially clothed with oak and hazel coppices and natural birches; others are covered with thriving plantations, but trees do not grow on the higher parts of the mountains. Plantations are confined chiefly to thin moorish soils resting on clay or gravel. On the declivities of the Sidlaw Hills extensive tracts have been planted with forest-trees, chiefly larch, oak, ash, elm, plane, beech, and poplar.

Geology, Mineralogy, &c.—The Grampians are composed of—1. Granite of various qualities, formed of crystallised rhomboidal felspars, commonly intermixed with laminated talc or mica. In the cavities and fissures are found yellow and smoke-coloured topazes: when they are white they are named rock-crystals. Their usual form is that of pentagonal prisms, sometimes 12 or 14 inches in length. 2. Next to the granite a very large proportion of the Grampians is composed of fine-grained, hard, and grayish gneiss, and mica-schist. This is always

stratified; the beds lie at various angles, and are often perpendicular. The rock is of a lead colour, but is occasionally brilliant with the mica, which covers the surface of its plates. Among the schistose rocks are veins and detached masses of quartz, frequently of a red colour from the presence of iron. It is thickly studded with small garnets, varying in colour from a flint to a deep crimson. Porcelain-stone is abundant on some of the Grampian heights. Its colour is generally white, inclining to gray, or reddish, owing to the presence of iron. Lead-mines were wrought in the Grampian range above a century ago, and the ore is said to have yielded 1-64th part of silver. Limestone is plentiful in various parts of this mountainous district. At Glencesk on the banks of the North Esk, and at Cortachie on the South Esk, large masses of jasper are imbedded in schistose and micaceous rocks. 3. The third component of the Grampian rocks is porphyry. It occurs in broad veins contiguous to the schistose rocks, and forms numerous hills, is generally of a brown, yellowish, or whitish colour, and is interspersed with grains of quartz and rounded felspars. The transition rocks, lying between the granite and flint, appear on the declivities of the Grampians towards the valley of Strathmore. They consist of schistose-granwacke slate, in which occur beds of slate, spar, and elliptical masses of jasper, measuring 30 feet by 10 feet. Greenstone, basalt, and dark-coloured limestone are also prevalent, with compact felspar in extensive beds of a reddish-brown colour. The flint rocks of this lower district, which rest upon the transition rocks, present much variety of composition, but may all be referred to the red-sandstone formation. This sandstone is often fine-grained, and valuable for architectural purposes. It is traversed by extensive beds of conglomerate limestone, greenstone, basalt, amygdaloid, clinkstone, felspar, and porphyry, and contains veins of heavy spar, and traces of copper ores. Pearls have been found in the bed of the North Esk.

In descending from the Grampians to Strathmore the first rock that occurs after the porphyry is a coarse pudding-stone, gravel-stone, or breccia. It is sometimes called 'yolky stone,' from being composed of numerous rounded pebbles resembling yolks of eggs, which are held together by a ferruginous cement of great hardness. This rock has evidently been formed from fragments detached from the rocks above described, which, in their progress towards their present position had been rounded by the action of water. As we descend along the beds of the streams which form the rivers South and North Esk, the pudding-stone graduates into rubble-stone, which is of a brown or red colour, and consists of particles of sand united by the cement which combines the pebbles in the pudding-stone. Lower down, this first species of sandstone graduates into one which is softer, of a deep red colour, and has beds of red clay interposed between its strata. It consists of particles of silex cemented by ferruginous clay. It often occurs in laminae, or slates, fit for roofing, and is easily cut with the chisel. Its beds frequently contain detached yolks or rounded pebbles, and pudding-stone is often found with it in alternate beds. Shell-marl, formed from the exuviae of several kinds of fresh-water shell-fish, abounds in the lakes in various parts of Strathmore.

The mountain ridges of the Sidlaw Hills are composed chiefly of sandstone, the strata of which lie almost horizontally towards the south, and decline towards the north at an angle of 45° . It is of various colours—red, brown, gray, white, and greenish. Interposed between these strata of sandstone are large beds of the yolky-stone, varying from 50 to 100 feet in thickness. The rounded stones imbedded in this species of rock consist of white and red quartz, jasper, whinstone, porphyry, and gray and red granite, all combined with a ferruginous sandy cement. The superficial stratum of this range of hills is formed of several varieties of whinstone, which appears in the various forms of basalt, greenstone, porphyry, and a cellular stone by some believed to be volcanic lava. The colour varies also from red, brown, and gray, to green, dark blue, and black. All the kinds of agate and onyx enumerated by mineralogists are found on these hills. Limestone of a peculiar structure is extensively wrought. It is composed of rounded fragments of various colours cemented together in a crystallised spar, and is, in fact, a species of mottled marble. Large beds of clay marl occur in several parts of this district along the ravines and alluvial bottoms. On the south-east declivities of the Sidlaw Hills are large quarries of sandstone flags of superior quality for pavements, steps, tomb-stones, &c. Those which split off from half an inch to an inch in thickness are much used for roofing. The slabs from these quarries are exported from Arbroath to Leith, London, and other places. Their strata form a broad continued zone from the south-west to the north-east side of the county. Lead has been discovered in small quantities, also some copper ore.

In the maritime district beds of red-sandstone, including rounded fragments as before, occur frequently to the south and east of the zone of sandstone flags. Veins of whin and porphyry intersect the sandstone, and form numerous hills. Near Montrose limestone is extensively wrought. The stratum lies deep, and is 25 feet in thickness. The stone is hard, white, and of a fine grain. Rock and clay marl are abundant in the district round Montrose. Numerous large boulder stones of Grampian granite lie scattered in the lower parts of the county, and shapeless detached masses several tons in weight, evidently of the same origin, are found in the Strathmore and

maritime districts. Very little coal is found. Peat, brushwood, broom, and furze are used for fuel by the poor.

Hydrography, Communications, &c.—Formerly there were few parishes in this county in which there was not a lake. The number is now much reduced. Some have been drained to gain arable land, but many more have been wholly or partially drained than the marl found in the beds of the lakes might be used as manure. The principal which remain are Loch Lee, in the Grampians, the source of the North Esk River, a mile in length, embosomed among groups of lofty mountains; Lentrathen Loch, a beautiful sheet of water at the base of the Grampian range, nearly circular, and a mile in diameter: it is inclosed by magnificent mountain scenery, and its banks present some rare botanical plants; and the Loch of Forfar. Eastward from Forfar is the Loch of Rescobie, of about a mile in length, and in connection with it is the Loch of Balgavies abounding in waterfowl. All these lakes abound in pike, perch, and eels, and the Highland lakes also contain abundance of trout.

The following are the principal rivers, or, as they are provincially called, waters:—the *North Esk* (Gaelic *Uig Water*) issues from Loch Lee, which is fed by mountain streams from the west. Descending in a winding course to the east and south-east it receives almost innumerable mountain torrents until at Burn it becomes the northern boundary line of the county, when, after receiving the West Water and the Water of Cruick, it flows south-easterly through a fertile district, and falls into the sea about three miles north of Montrose. No part of this stream is navigable. The *South Esk* issues from the north-west summits of the Grampians, and having received numerous mountain streams descends into the valley of Strathmore, where it is further augmented by several brooks: continuing easterly by the town of Brechin it passes through the Basin of Montrose into the sea. On several of its falls are erected flax-spinning-mills, and other machinery. The *Isla* rises from numerous torrents among the Grampian summits on the north-west side of the county. Its course is south-west to near Rnithven, where it turns off to join the Tay, in Perthshire. Like the North Esk at Burn in escaping from the Grampians it has worn a chasm in the granite rocks more than a hundred feet perpendicular: and it forms cascades of the greatest beauty. One has a clear precipitous fall of at least 35 feet. The banks are very steep and richly wooded for several miles, and the scenery, at the junction of the Melgum Water is rendered highly romantic by the extensive ruins of the ancient fortified castle of Airlie. The Dean, Lunan, Dighty, and other smaller streams are not of sufficient magnitude to require particular notice.

The principal roads branch off from Dundee—1, to Arbroath, Montrose, and thence to Aberdeen; 2, to Forfar and Brechin; 3, to Cupar Angus and westward. And, other lines of internal communication, are kept in good order. There are numerous stone and wooden bridges across the small streams. The principal one is over the North Esk, on the road from Montrose to Kincardine. The railways in the county are the Scottish Midland Junction railway, which enters Forfarshire at Cupar Angus and joins the Aberdeen railway through the Arbroath and Forfar railway at Forfar; the Arbroath and Forfar railway is connected with the Aberdeen railway and also with the Dundee and Arbroath railway, a line which runs along the coast from Arbroath to Dundee, where it communicates with the Dundee and Perth railway by means of a line of rails carried along the Docks of Dundee. This line is used only for horse haulage. The Edinburgh and Northern line, from Dundee to Edinburgh through Fife, is connected with the Dundee and Arbroath line at Broughty Ferry. A communication between Dundee and the Scottish Midland Junction railway is effected by the Dundee and Newtyle railway, which joins the Midland line at Meikle in Strathmore.

Climate, Soil, Agriculture.—The great variety of elevation causes a corresponding variety of climate. On the highlands among the Grampians, where the snow lies on the summits during the greater part of the year, the air is generally cold and piercing. In the great midland valley, and in the sheltered parts of the maritime district, the climate is comparatively mild and genial. On the coast the easterly and south-west winds are occasionally very severe. The heaviest rains are from the east and south-east, and the deepest falls of snow from the north and north-east.

On the Grampians the soil is a thin stratum of moorish earth, through which the rock often juts from a subsoil of whitish clay. In the glens the alluvial soil is loose and friable, having a predominance of sand. In the lower parts of the county the primary soils are generally thin, mossy, and encumbered with loose stones. The primary soils on the sandstone rocks are chiefly tenacious clay, naturally unproductive, though when properly wrought producing excellent crops of wheat. In the valley of Strathmore the soils are all alluvial, but seldom fertile. Some parts of this valley are gravelly, others exhibit a soil of barren sand. Fine tracts of rich black and brown vegetable mould occur at the western extremity of the basin or lake of Montrose, and in some other places. On the whole, the Grampian district and the declivities of the Sidlaw Hills may be said to be generally covered with coarse clay and moor pasture; and all the lower lands have partly retentive subsoils, and partly alluvial soils. Along the coast, north of Montrose, between Arbroath and Dundee, around the latter place and in the inland district between

Brechin and Forfar, are downs of loose sand partially covered with stunted grass, and useful only as burrowing ground for rabbits. The principal bed of peat is called the Dilty Mass, on a ridge of the Sidlaw Hills. On the Grampians the best peat-beds occupy the hollows on the highest summits, which renders it difficult to obtain this fuel in the populous lowland districts.

About a century ago a great proportion of this county was in the hands of a few ancient families; but since the introduction of trade and manufactures landed property has changed hands frequently, and has become much more divided. Farms vary much in size, some consisting only of 20 or 30 acres, others of 800 acres. They are generally from 100 to 250 acres, but many are less than 100 acres. The county is well farmed, and the farms are generally held by enterprising tenants on improving leases. Almost every useful improvement has been adopted in the modes and implements of agriculture. Draining of various kinds is practised extensively. Inclosures are made chiefly by stone-dykes in the highlands, and by stone-dykes and quick-thorn hedges in the plains of Strathmore and towards the sea. Breeds of stock have been much improved, and several active agricultural societies exercise a great influence in the introduction of superior modes of culture and breeding. The chief crops are of oats, barley, and wheat, and the rotation of crops is varied according to different soils. Wheat is now successfully cultivated at all elevations less than 1000 feet above the level of the sea. Considerable quantities of wheat are annually exported to London and other ports, and American, Danzig, and other foreign wheats are largely imported to mix with that produced in the county. Barley is extensively cultivated. Peas, beans, vetches, and turnips are grown. The Swedish turnip is much used for feeding milch-cows. Red and white clover are common, and are mixed with rye-grass. Potatoes are extensively cultivated and exported. In the neighbourhood of the towns there are market-gardens and nurseries for the supply of the inhabitants.

The ancient breed of horses in this county, commonly called Garrons, is small but hardy, and capable of enduring much fatigue. They are still numerous in the Grampian district. Their colour is gray; they feed chiefly on the stunted grass which they find on the sides of the mountains. The cattle were formerly diminutive, but they have been greatly improved. The original sheep of this county is the small white-faced breed. Some small flocks of these still remain in the Grampians, but generally they are much crossed with the black-faced breed of Tweeddale, which constitute a large proportion of the whole stock of the county. Superior and more delicate breeds are reared in the parks and lawns of the resident proprietors. Hogs are kept by every farmer and cottager. There are two principal breeds: one, a thin-backed, raw-boned animal, with long bristles, a tapering snout, and projecting tusks, appears to be the descendant of the ancient wild boar of the forest; the other is the small common Chinese breed, which is by far the most numerous. Poultry and pigeons are generally kept by every farmer. Bees are also commonly kept.

Game is plentiful; wild rabbits traverse the extensive plantations and glens of the Grampian and Sidlaw hills. They are small, timid, and untameable. In ancient times the red-deer or stag abounded among the Grampians, but is now very rarely seen. The large antlers of the moose-deer are found in the mooses, together with enormous horns of the ancient Caledonian cattle. The alpine hare, whose fur in winter is snowy white, is found in the highest parts of the Grampians. Otters and seals frequent the rocks on the eastern sea-coast. During the salmon-fishing season numbers of seals and porpoises frequent the mouths of the rivers, especially the estuary of the Tay, where they destroy large quantities of fish. Wild geese and swans visit the county in November. The Grampians are frequented by eagles, kites, and hawks.

Industry, &c.—The deep-sea fishing off the eastern coast is very productive, and large quantities of salmon and smaller fish are taken in the Frith of Tay, and at the mouths of several streams thence to the North Esk. The villages of Ferryden, Usan, and Anchnithie are extensively engaged in the sea-fishery, which employs the whole of their population: the villages of Broughty Ferry and Carnoustie also contain a considerable fisher population. In favourable seasons large supplies of salmon are sent to the London market packed in boxes of pounded ice. The most abundant kinds of fish are salmon, cod, herrings, haddocks, turbot, soles, sprats, lobsters, and crabs. The lochs and principal streams supply abundance of pike, perch, trout, and eels.

This county is so favourably situated for commerce that a ready market for its agricultural and manufacturing produce can always be relied upon, and its exportation of linen fabrics, cattle, corn, and salmon is very extensive. The coarser kinds of linen fabrics, as lincabacks, canvasses, sheeting, sacking, &c., are manufactured in this county to a large extent. Finer bleached linens for shirting and sheeting, and coloured thread, are also extensively manufactured. A great deal of the weaving is performed by the hand-loom, but the spinning is wholly done by steam and water power. Of the whole steam-power employed in the linen manufacture in Scotland, Forfarshire possesses about three-fourths. It thus forms the great seat of the linen manufacture of the country.

Divisions, Towns, &c.—There are in Forfarshire 58 parishes.

According to the 'Census of Religious Worship and Education,' taken in 1851, it appears that, so far as could be ascertained, there were then in the county 187 places of worship, of which 67 belonged to the Established Church, 51 to the Free Church, 23 to the United Presbyterian Church, 10 to the Independents, 8 to Episcopalians, 6 to Original Seceders, 5 to Roman Catholics, 5 to Methodists, 4 to Baptists, and 8 to other bodies. Of 170 of these places of worship, the number of sittings is stated at 92,931. The number of day schools returned was 303, namely—181 public schools, with 15,961 scholars, and 122 private schools, with 6159 scholars. Of evening schools for adults, 35 were stated to be attended by 673 males and 657 females. The number of Sabbath schools returned was 230, with 18,158 scholars, of which 84 schools belonged to the Free Church, 63 to the Established Church, and 29 to the United Presbyterian Church. Returns were obtained from 5 literary and scientific institutions in the county, of which 4 had an aggregate membership of 970. With these institutions were connected 5 libraries, containing an aggregate of 5311 volumes.

The county town is FORFAR. The most important town in the county is however DUNDEE, and after it is MONTROSE. ARBROATH, anciently Aberbrothwick, BRECHIN, ALYTH, and CUPAR ANGUS, are described under their respective titles. The place next in importance is *Kirriemuir*, an ancient burgh of regality and market-town in the parish of Kirriemuir, situated 5 miles N.W. from Forfar, on the edge of a mountain glen overlooking the valley of Strathmore; the population of the town in 1851 was 3518. It consists of several irregular but handsome streets, and has an elegant church, an episcopal chapel, a town-hall, and other public buildings. Its market is well attended. Coarse canvass and various kinds of brown linen are manufactured. Many plash-mills, in addition to corn-mills, have been established on a rivulet called the Gaire, which flows near the town. There are several schools, two of which are well endowed; libraries, reading-rooms, and a savings bank.

In addition to the villages of Auchmithie, Broughty Ferry, Carnoustie, East and West Haven, Ferryden, and Usan, referred to in our notice of the coast-line, the following may be mentioned:

Edzell, population of the parish 1084, has a handsome reading-room, and there are spinning-mills in the parish. *Fricksheim*, in Kirken parish, population of the parish 1763, is mostly inhabited by weavers. It has sprung up from the extension of the linen manufacture. The railway to Aberdeen here leaves the Arbroath and Forfar line. *Glamis*, about 12 miles N. from Dundee, population of the parish 2152, consists of an old and a new town. Dressings and sheetings are largely manufactured. There are a library, two friendly societies, and two schools, besides the parochial school. Glamis Castle is noticed below. *Letham*, in Dunnichen parish, population of the parish 1884, is inhabited chiefly by weavers. The village is finely situated on an elevation commanding an extensive prospect. *Newtyle*, population of the parish 1111. The village has risen from the construction of the Dundee and Newtyle railway, which here joins the Scottish Midland line.

History, Antiquities, &c.—The history of this county is treated of under the different towns, there being no events of general importance of which it was the theatre. Brechin is believed to have been a seat of the Culdees. It was afterwards an important bishopric. [BRECHIN.] The Abbey of Aberbrothwick, or ARBROATH, the Priory of Restennet, [FORFAR], and the monastic church of Dundee have been elsewhere noticed. Many smaller monasteries stood in various other parts of the county.

Of the ancient vitrified forts, which occur at regular intervals along the heights of the northern parts of Scotland, there are three principal remains in this county. The fort called the Castle of Finhaven, is on Finhaven Hill, 1500 feet above the surrounding country. It is quadrangular, 176 feet by 83 feet and 125 feet, and constructed on the edge of an elevated and precipitous rock. The remains of another of these forts is on the summit of a mount in Drumsturdy Muir. The third is on the top of the Law of Dundee, a remarkably high conical hill on the north of Dundee town. Of hill forts there are many in this county. The most important is on the summit of a steep hill in the parish of Menmuir, north-west of Brechin; the area within the walls, which are of great thickness, is oval, 134 yards by 60 yards. On a hill to the east, separated from this only by a deep ravine, is another of these forts, formed entirely of earth. Two miles south-west of Glamis, on the Sidlaw Hills, is one of a semicircular form, with a wall 335 feet in circuit, 27 feet high, and 30 feet in thickness. On the hills of Dumbarrow, Caerbuddo, and several others, the remains of similar forts are to be traced. There are remains of several extensive Roman camps, which seem to have formed a chain of military positions in a line from the south-west to the north-east sides of the county, including the towns of Forfar and Brechin. The encampment at Harefaulds, north of Caerbuddo, traces of the inner and outer works of which remain, might contain 60,000 men. Similar camps occur in the parishes of Forfar, Brechin, and Oathlaw. Many curious specimens of early antiquities have been discovered in this county, as stone coffins and urns in sepulchral cairns, battle-axes and other weapons, sculptured stones, coins, &c. On some of the uncultivated Grampian moors are vestiges of the ancient Caledonian dwellings, consisting of large slab stones placed together in a circle without cement.

Of baronial castles there are several magnificent specimens. At Broughty, near Dundee, are the remains of a noble castle, consisting of several massive towers and walls, standing on a rock which juts into the water of the Frith. On the shore of Lunan Bay are a square tower and other remains of Red Castle, so called from being built of red sandstone. Edzell Castle, the Castle of Invermark, Kelly Castle, the Castle of Affleck, and several others, present similar remains. There are numerous vestiges of less important baronial structures. Glamis Castle, the residence of the earls of Strathmore, is a venerable castellated mansion, about a mile from the village of that name. In the time of Charles II. it was a large quadrangular mass of buildings, with lofty towers and gateways opening beneath them into two spacious courts. Much of the original structure remains, and great additions were made of wings and turrets under the direction of Inigo Jones. Brechin Castle stood a siege by Edward III. in 1302, during three weeks. Many additions to the old building were made by the Earl of Pannure in 1711. Pannure Hall, 10 miles north-east from Dundee, is a large ancient edifice, much dilapidated from neglect. It is surrounded by an extensive park and stately plantations. The modern mansions in the county are numerous; some of them are distinguished for architectural magnificence and picturesque beauty of situation.

In 1852 the county possessed two savings banks at Dundee and Montrose; the total amount owing to depositors on 29th November 1852 was £2,340*l.* 9*s.* 3*d.*

FORLÌ, a legation or province and town in the Papal States. The province is bounded N. by the province of Ravenna, W. by Tuscany, S. by the province of Urbino-Pesaro, and E. by the Adriatic. Its area is 682 square miles, and in 1843 its population was 202,315, distributed in 5 towns, 32 terre having a communal council, and 404 villages or hamlets. The province is watered by the Rabbi, Ronco, Savio, the Rubicone (the sacred boundary of the Roman Republic), Marecchia, and other rivers which have their sources in the Tuscan Apennines, and empty themselves into the Adriatic. The Marecchia at one part of its course separates the province from the republic of Sanmarino. The country is in part hilly, being occupied by offsets from the Apennine chain, which extend towards the Adriatic; and partly flat, especially towards the north, where there are some extensive marshes near the coast. Excepting in the marshy district the climate is healthier than that of the neighbouring flats of Ravenna. In summer the heat is very great, and the rivers frequently are dried up. The principal productions are maize, hemp, hay, and wine. Among the other products are barley, a little oats, rye, and rice; beans, pulse of various kinds, flax, fruits, madder, cummin, saffron, anise seed, &c. Only a small number of cattle are reared. Honey is very abundant. A large quantity of fish is taken along the coast. There are manufactories of silk, linen, and oil-cloth, and refineries of sulphur, which is found of good quality in the province.

Towns, &c.—The town of *Forlì*, the ancient *Forum Licii*, is said to have been founded after the victory of the Metursus, and to have taken its name from M. Livius Salinator, one of the two consuls who defeated Hasdrubal. It stands on the ancient Æmilian Way in a fertile plain between the Montone and the Ronco, 44° 13' 25" N. lat., 10° 1' 37" E. long. The present town is well built: the streets are lined with arcades. It has a fine square, a cathedral, several handsome palaces and churches adorned with paintings by Carlo Muratti, Guido, Guercino, Cignani, and other masters, a lyceum, and fine public walks. Forlì is a bishop's see and the residence of the legate. The population is about 16,000. The town is surrounded by old walls which are little worth as a defence. The French took Forlì in 1797. The citadel, famous for its noble defence by Catherine Sforza in the 15th century, is now a prison.

Cesena, a pretty town in a fertile country near the foot of the Apennines, watered by the river Savio, over which there is a fine bridge, has a handsome town-house on the market-place, which is adorned by a colossal statue of Pius VII., who, as well as his predecessor, Pius VI. was a native of this town. Cesena is a bishop's see, has a college for clerical students, and a valuable public library, collected by the Malatesti, who were lords of the Romagna in the middle ages. The library is rich in manuscripts, among which is a curious work of St. Isidore, bishop of Seville in the 7th century, entitled 'Etymologia,' which is a kind of cyclopædia. In the Capuchin church is a fine painting by Guercino. Cesena is an ancient place. It has given title to a bishop since A.D. 92, when its first bishop, St. Philemon, was appointed under Pope Clement I. On a high hill about a mile from the town is the handsome church of Santa Maria del Monte, reputed to be a work of Bramante, and near it is a Benedictine monastery in which Pius VII. took the vows. To the south of Cesena are valuable sulphur mines, the produce of which is sent to Bologna and Rimini. These mines are said to yield about 4,000,000 lbs. of sulphur yearly. The population of Cesena is about 9500.

Between Forlì and Cesena is the little town of *Forlimpopoli*, the ancient *Forum Popilii*, with a collegiate church, a castle built by Cesare Borgia, and about 4200 inhabitants. Near Forlimpopoli is *Bertinoro*, famous for its wines; population of the commune 4800.

Savignano, on the road from Cesena to Rimini, near the site of the ancient Compitum, has some good buildings and about 4000

inhabitants. Near Savignano flows a small river, called Rugone, which is believed by some to be the ancient *Rubicon*: it joins, below Savignano, another stream, called Pisatello, after which the united stream enters the Adriatic. A Roman bridge is thrown across the Fiumicino, or Savignano, a small stream which joins the other two, and with them enters the Adriatic at Due Bocche. Near the Fiumicino on a pillar, is an apocryphal inscription (which has been mistaken by some for an ancient one), containing the senatus consultum, which forbade, under the heaviest penalties, any commander to cross the Rubicon in arms. The true Rubicon however, which still is called by the peasantry *Il Rubicone*, is nearer Rimini, and flows direct into the Adriatic from the Apennines, where it rises, between Monte Taffi and Sarcina. It flows nearly parallel to the Marecchia, and has a length of about 25 miles.

Rimini, the Roman *Ariminum*, a considerable town with about 10,000 inhabitants within the walls, is situated near the mouth of the Marecchia, which is crossed by a handsome marble bridge of five arches and 220 feet long, begun under Augustus and finished under Tiberius, and still in very good preservation. The sea having receded all along this coast, the ancient harbour of Ariminum is now choked up with sand; but there is a small harbour at the mouth of the Marecchia, which admits vessels of light burden, and by which Rimini carries on some trade by sea. At the eastern entrance of the town, on the road to Rome, there is a fine triumphal arch, raised in honour of Augustus for repairing the roads, and now called *Porta Romana*. This arch is larger than any of the arches in Rome; it is built of white marble in a simple massive style, with two Corinthian pillars on each side. Between the arch and the pillars are medallions of Neptune and Venus on one side, Jupiter and Minerva on the other. There are also some remains of an amphitheatre, besides inscriptions and other marbles found on the site of the ancient harbour. Rimini, with its Roman monuments, appears a fit entrance into the limits of the classical part of Italy. Among the modern buildings is the noble cathedral church of *San Francesco*, which Leon Battista Alberti raised by order of the Malatesti, lords of Rimini, and which is adorned with the mausolea of that distinguished family of the middle ages, many beautiful bas-reliefs, and other works of art. The fortress was also erected by the Malatesti, but it is now disfigured by unsightly barracks. The city of Rimini has several other fine churches besides the cathedral. In the market-place is a stone in the form of a pedestal from which, as stated in the inscription, Julius Caesar harangued his army after crossing the Rubicon. A handsome fountain in the square before the town-hall (*palazzo publico*) is surmounted by a bronze statue of Pope Paul V. Rimini has a good library of 30,000 volumes, founded in 1617 by the advocate Alessandro Gambalunga, and which contains manuscripts, chiefly concerning the history of the town, a museum of antiquities, and a college. The supposed site of the house in which resided Francesca da Rimini celebrated in the '*Divina Commedia*' of Dante, is still shown. Numerous fishing craft frequent the harbour of Rimini; and there is a good trade in silk manufactures, fish, glass, and earthenwares. Sulphuric and nitric acid, and verdigris are also among the industrial products of Rimini. Ariminum, originally an Umbrian city, was important as a position and for its situation at the junction of the Flaminian and Æmilian Ways. In all their great wars in Italy the Romans, who colonised it early, made a point of occupying Ariminum with their troops. It was also a flourishing commercial town. The soldiers of the triumvirs were settled in the lands of Ariminum, and the city itself was embellished by Augustus. Under the Eastern empire it was one of the cities of the Pentapolis which was governed by the exarchs till the invasion of the Lombards. A great ecclesiastical council was held in Ariminum in A.D. 359. Rimini stands in 44° 4' N. lat., 12° 34' 43" E. long.

Sarsina, at the foot of the Apennines, south-west of Rimini, an ancient city of the Umbri, and the birthplace of Plautus, is now a decayed town surrounded by walls, with only 3000 inhabitants.

Cesenatico, on the sea-coast, north-east of Cosena, midway between Ravenna and Rimini, in a plain abounding with wheat, Indian corn, and hemp, has 4000 inhabitants.

The province of Forlì is one of the finest and richest in the Papal States, and the road from Rimini to Bologna is one of the pleasantest in Italy, leading through a succession of neat, considerable, and cheerful-looking towns, in a fine well-cultivated country, with a landscape heightened by a constant view of the Apennines of Tuscany.

FORMENTERA. [BALEARIC ISLANDS.]

FORMOSA. [TAI-WAN.]

FORMOSO, RIO. [BENUE RIVER.]

FORRES, Elginshire, Scotland, a royal and parliamentary burgh and market-town in the parish of Forres, is situated in 57° 37' N. lat., 3° 36' W. long., distant 12 miles W. from Elgin, and about 160 miles N. from Edinburgh. The town is situated on a declivity, sloping northward to the estuary of the river Findhorn, and is about 3 miles S. from Findhorn, the port of Forres. The population of the parliamentary burgh in 1851 was 3468, that of the municipal burgh 3339. It is governed by a provost, 3 bailies, and 13 councillors; and unites with Inverness, Nairn, and Fortrose, in returning one member to the Imperial Parliament.

The town consists of one chief street, forming a part of the highway between Elgin and Inverness, with several smaller streets branching off from it. The houses are mostly modern and well built. The town is well supplied with water. Besides the parish church, which is a plain building, there are a Free church and chapels for Episcopalians and United Presbyterians. The jail is a substantial building. Corn-markets are held weekly. The most important of the schools in Forres is that endowed by the late Jonathan Anderson of Glasgow, which occupies a neat and commodious building. The town dates as a royal burgh from the time of William the Lion. Its castle, now in ruins, was the occasional residence of some of the early kings of Scotland.

A tower in memory of Nelson has been erected on the top of the Cluny Hill near the burgh, from which a most extensive view is to be had. In the immediate vicinity of Forres is the celebrated ancient pillar called Sweno's Stone, considered one of the finest memorials of the Danes that exist in Scotland. It is a hard sandstone of the country, and well preserved, showing on its four sides numerous figures of men and horses, in marching and in battle array. A handsome suspension-bridge crosses the river Findhorn here.

(*New Statistical Account of Scotland; Communication from Forres.*)

FORTH, a river in Scotland, which rises in the mountains separating Loch Katrine from Loch Lomond. It is formed by two branches, which after a course of 16 and 12 miles respectively, unite at Aberfoyle; this united river receives the name of Forth. The first of these streams, which rises on the north side of Benlomond, is called the Duchray; the other is formed by the junction of three rivulets, which proceed from three small but very beautiful highland lakes, called Loch Con, Loch Dow, or Dhu, and Loch Ard. At Aberfoyle the Forth issuing from the mountains, enters a wide valley, surrounded by hills of moderate elevation. From the north it is joined by three tributaries of some note—the Teith, which drains the mountainous country north of Loch Katrine; the Allan, which runs through Strathmore; and the Devon, which brings down the water collected in the greater portion of the Ochil Hills. No considerable river joins it from the south. Where it unites with the Devon the river, which higher up is only of moderate size, begins to widen, and gradually assumes the appearance of a gulf. This gulf, called the Frith of Forth, increases in width in its progress to the east, and joins the North Sea between Fifeness and the rocks of Tantallon Castle, where it is about 15 miles across. The source of the Forth is not much more than 30 miles from the mouth of the Devon in a straight line, but as it flows with many sinuosities, its real course exceeds twice that length. The length of the Frith from west to east rather exceeds 50 miles. The Forth is not a rapid river below Aberfoyle, and may be navigated by vessels of 70 tons as far as Stirling; but it is not much navigated above Alloa, which may be regarded as its principal port. On the southern shore of the Frith, near the mouth of the river Carron at Grangemouth, commences the canal which unites the Forth and the Clyde; and contiguous to it on the east, between Grangemouth and Queensferry, is good and secure anchoring ground in the bay. The countries along the northern and southern shores of the Frith of Forth comprehend the most fertile and best cultivated parts of Scotland.

FORTROSE, Ross-shire, Scotland, a royal burgh, market-town, and port, in the parish of Rosemarkie, is situated in 57° 34' N. lat., 4° 8' W. long., on the western side of the Moray Frith, nearly opposite Fort George, from which place there is a regular ferry, the Frith being here about 2½ miles broad. It is about 10 miles N. from Inverness by land, and about 7 miles by water. The population of the burgh in 1851 was 1148. The town is governed by a provost and 14 councillors; and conjointly with Inverness, Forres, and Nairn, returns one member to the Imperial Parliament. Fortrose is described by historians as having during the 16th century been the seat of art, science, and divinity for that corner of the kingdom, and possessed of considerable trade. Rosemarkie, a village about a mile eastward, was constituted a royal burgh by Alexander II.; and Chanonry, the episcopal see of the bishop of Ross, was united with it by a charter of James II. in 1444, under the name of Fortross.

The town is finely situated. The harbour has a depth of 14 feet water at high tide. There are some remains of the ancient cathedral, one part of which is used as a prison and court-house. Besides the parish church, which is at Rosemarkie, there are in Fortrose a Scottish episcopal chapel, and chapels for Free Church and Baptist congregations. At Fortrose is an extensive distillery. A public academy was founded in 1791.

FOYLE, LOUGH, an inlet of the sea on the north coast of Ireland, between the counties of Derry and Donegal, extends from south-west

to north-east about 16 miles. Its entrance, which, between Magilligan Point on the east, and Greencastle on the west, is a mile across, lies about the point $55^{\circ} 12' N.$ lat., $6^{\circ} 58' W.$ long. The lough is widest at its southern extremity, where it has a breadth of about 10 miles. At low-water a great part of the area of the lough is left bare; the west side alone is navigable; the eastern side presents a flat strand, fringed by a sandy beach, which stretches round Magilligan Point to the mouth of the Bann; on this eastern shore the base of the Ordnance survey of Ireland, 53,200 feet in length, was measured. Northward from the entrance of the lough, and between it and Innishowen Head, is a shoal called the Tuna, over which the sea sometimes breaks with great violence. At the harbour of Greencastle is a pier, which affords shelter for small coasting vessels. Vessels of 600 tons ascend Lough Foyle, and its principal tributary, the river Foyle, as far as the city of LONDONDERRY. The railway from Londonderry to Coleraine runs along the east side of Lough Foyle.

FRAMLINGHAM, Suffolk, a market town in the parish of Framlingham, is situated on the left bank of the river Ore, in $52^{\circ} 13' N.$ lat., $1^{\circ} 19' E.$ long., distant 14 miles N.E. by N. from Ipswich, and 87 miles N.E. from London. The population of the parish of Framlingham in 1851 was 2450. The living is a rectory, with the curacy of Saxted annexed, in the archdeaconry of Suffolk and diocese of Norwich.

The Castle of Framlingham was during the middle ages an important fortress. Of the castle the outer walls are still standing; its form approaches to a circle, and it is strengthened at intervals by 13 square towers. The walls are 44 feet high, and 8 feet thick; the towers are 58 feet high. The principal gateway is on the south side, opposite the town. There are some remains of the outworks, and a double ditch. It was to this castle that Queen Mary retired on the death of her brother, Edward VI., till the succession to the throne was settled. The town of Framlingham consists of a spacious market-place, and a few streets branching off from it, which are irregularly laid out. The town contains many neat and substantial houses, and is lighted with gas. The church, a commodious and stately edifice, is situated in the centre of the town. It is built of black flint, and consists of a nave, chancel, and aisles, with a tower 96 feet in height, in which are eight bells. The roof of the nave is of curiously carved oak. The Independents, Wesleyan and Primitive Methodists, and Unitarians have places of worship. There are Free schools, British schools, several almshouses, a parochial library, an agricultural society, and a savings bank. Petty sessions for Framlingham division and a county court are held. The market is held on Saturday for corn and provisions, and there are two yearly fairs.

(White, *Suffolk*; *Communication from Framlingham*.)

FRANCE, the most westerly of the kingdoms of continental Europe, with the exception of the Spanish peninsula. Its form is very compact, and resembles an irregular polygon, the general contour and dimensions of which, with the latitude and longitude of the extreme points, are given in the subjoined diagram. From this it appears that it is comprehended between $42^{\circ} 25'$ and $51^{\circ} 5' N.$ lat., $8^{\circ} 17' E.$ and $4^{\circ} 46' W.$ long.; that the aggregate length of the circumscribing lines of the polygon is 2157 miles, of which 1188 miles are coast (929 miles on the ocean and 259 miles on the Mediterranean) and 969 miles of land frontier. If all the less important windings of the coast, or of the frontier, were followed these numbers would be of course materially increased. The longest diagonal is from south-east to north-west (E to M on the diagram), about 660 miles; and the next longest from north-east to south-west (B to I), about 615 miles.

The area of France, including the island of Corsica, amounts to 204,953 square miles, or to 201,576 square miles exclusive of that island. According to official census returns, the population (including Corsica) in 1840 numbered 34,138,726, and 35,781,628 in 1851. Excluding Corsica the numbers become respectively 33,917,263 and 35,545,377. The census of 1851 gives the average number of persons on each square mile of France, including Corsica, to be 174.584, or without Corsica 176.336. Paris, the capital, is the second European city in respect of population, being inferior only to London. The population of Paris is 1,053,262. The observatory of Paris, from which the French measure longitudes, is situated in $48^{\circ} 50' 13'' N.$ lat., $2^{\circ} 20' 22\frac{1}{2}'' E.$ long. (from Greenwich). The summit of the lantern of the Pantheon, from which point the French engineers have calculated the geographical position of Paris, is in $48^{\circ} 50' 49'' N.$ lat., $2^{\circ} 20' 57\frac{1}{2}'' E.$ long.

Coast, Islands, and Frontier.—That part of the coast which faces the north-north-west (M to A in the diagram, 481 miles) lies along the channel which separates England from the Continent, to which the French gives the name of La-Manche. The coast is generally irregular in its outline. It forms two large bays, separated from each other by the peninsula of Cotentin, of which Cape La-Hague (O in diagram) forms the north-west extremity. Near the middle of the northern coast of Cotentin, and a little east of La-Hague, is the strongly-fortified naval harbour of Cherbourg. Of the bays just named the more easterly is divided into two subordinate bays by the rounded projection of the coast about Fécamp and St-Valery. One of these subordinate bays receives the Somme, the other the Seine, at the mouth of which the town and port of Le-Hâvre (P in diagram)

are situated. This part of the coast is mostly low and shelving, lined in many parts with sand-hills, which prevent the tide from overflowing the lands that are below the level of the sea. About Cape Gris-Nez, or Grinez, there are cliffs, and west of the mouth of the Seine the shore is skirted by rocks. The peninsula of Cotentin has, besides Cape La-Hague, another considerable promontory to the north-east—Cape Barfleur. The coast of this peninsula is commonly shelving, interrupted however by groups of rocks. The bay of St-Malo, the second of those formed by the coast of La-Manche, is a deep bay, the sides of which, facing respectively the west-by-south and the north, form an acute angle with each other in the neighbourhood of Mont St-Michel, in Cancale Bay. The coasts of the Bay of St-Malo are rocky and much broken, especially to the west of Mont St-Michel, by a multitude of small inlets with their intervening promontories. No important river falls into this bay, but many of the inlets are the maturaries of small streams. The remainder of the coast of the ocean faces the south-west and west, and extends 448 miles. At its north-western extremity (L to M in diagram) it is broken by a deep inlet, the subdivisions of which form the roadstead and naval harbour of Brest and the Bay of Donarnenez. The coast here is lofty and precipitous. From the Bec-du-Raz (L) the coast runs facing the south-west, and continues for some distance to present the same general features as the adjacent parts of the Channel coast—a broken outline, frequent inlets with intervening promontories, and a shelving coast interspersed with rocks. As it proceeds south-eastward from the mouth of the Loire (which falls into the ocean midway between K and L) it becomes less broken in its configuration, low, and lined with salt-marshes. This character it retains to the mouth of the Gironde (a little to the southward of the point K), from which the coast runs in a nearly straight line, broken only by one small inlet, the bay or basin of Arcachon, and skirted by sandy downs to the foot of the Pyrenees (at I), near which it assumes a rocky and precipitous character. This coast forms one side of that bay known familiarly to us as the Bay of Biscay, but designated by the French the Bay of Gascogne.

The coast of the Mediterranean forms by its sinuosities the two great bays of Lyon and Genoa, which are separated from each other by the projection of the coast about Toulon (F in diagram). The Gulf of Lyon, or, as perhaps it ought to be called, Lions (the name, it is said, being derived not from the city of Lyon, but from the violence of the tempests by which it was supposed to be agitated—"It is called the Lion's Sea because it is ever rough, tempestuous, and destructive"—) is characterised by the étangs, lagoons, or shore-lakes by which its coast is skirted; it receives the waters of the Rhône. This part of the coast is commonly low, but towards the foot of the Pyrenees (H in diagram) and near Toulon (F) it assumes a bolder character. The coast of the Bay or Gulf of Genoa, of which only a part belongs to France, is elevated and broken. It has many smaller inlets, as the harbour of Toulon, the road of Hières and that of Bormes, and the bays of Grimaud, Fréjus, Napoule, and Juan.

Along the coast are several islands. In the Manche, or English Channel, are Guernsey or Guernsey, Jersey, Aurigny or Alderney, and Gers or Sark, which, though belonging to France by geographical position, and connected with it by the language and origin of their population, are politically united to the British Isles, and form indeed the sole relic of the once extensive Norman or other French possessions of the early English kings; the islands of Brehat, les Sept Îles (the Seven Islands), and the Isle of Bas, are of minor importance. At the western extremity of France are the Isles of Ouessant or Ushant, and along the remainder of the coast of the ocean are the Isles of Glénan, Groix or Groix, Belle-Île, Noirmoutier, Ile-Dieu or d'Yeu, Ré, Oléron, and others of less importance. In the Mediterranean are the islands of Hières and Corse, or Corsica. All those are noticed either under their respective heads, or in the articles on the departments to which they belong.

The land frontier of France is, for the most part, formed by great natural barriers. On the southern or Spanish frontier are the Pyrenees, along the crests of which from the Mediterranean to the ocean (H to I in diagram) the line of demarcation runs. On the south-east the frontier towards the continental dominions of the king of Sardinia (from between C and D to E in diagram) is formed by the lofty ridges of the Alps; and that towards the Swiss Confederation (from C towards D) by the lower but still considerable heights of the Jura. On the east the broad stream of the Rhine (B to C) separates France from the dominions of the grand duke of Baden. The remaining part of the frontier (A to B) is purely conventional, and has varied materially, as the fortune of war has enabled the French to extend or obliged them to contract their dominions. The contemporary states are Bavaria, Prussia, and Belgium.

Surface, Geological Character, Hydrography.—The loftiest mountains in France are those on the Sardinian and Spanish frontiers, the Alps and Pyrenees. Of the Alps the loftiest summits lie beyond the boundary of France, in Savoy or Switzerland; but some of those on or within the line of the frontier are of great elevation: as Mont Olan, in the valley of Godemard, on the upper waters of the Drac, 13,120 feet; the peak of the Pelvoux-de-Vallouise, south-west

* "Mare Leonis nuncupatur quod semper asperum, fluctuosum, et crudele."
—William of Nangis, a monk of the 13th century, quoted by Malte Brun.

of Briançon, about 14,000 feet; a peak west of the village of Maurin 13,107 feet; Mont Trois Ellions, 12,737 feet; and others. Of the Pyrenees the highest point is in Spain, but other points which nearly equal it are in France, several of the peaks of the Vignemale group, at the head of the valley of Cauteretz, reaching to nearly 11,000 feet; Mont d'Or, in the Jura, has a height of 4920 feet, and Le-Gros-Taureau, near Pontarlier, 4351. [ALPS; PYRÉNÉES; JURA MOUNTAINS; ALPES, HAUTES; DOUBS.]

feet high; Le-Bressoir near the source of the Meurthe, 4049 feet; and Le-Ballon-d'Alsace, 4124 feet. [VOSGES.]

From the heights of Langres a range of high lands (including the Faucilles Mountains, the Argonne hills, and heights of the Ardennes), extends in a north-west direction to the coast of La-Manche, about Cape Griz-Nez, separating the streams which belong to the basins of the Rhine and the Escaut from those which belong to the river systems of central France. A branch from these heights divides the basins of

A, the frontier towards Belgium meets the coast.
B, the frontier towards Bavaria meets the Rhine.
C, the frontier towards Switzerland meets the Rhine.
D, junctions of the Rhône and the Guiers.
E, mouth of the Var.

F, Cape Notre-Dame, on the coast near Toulon.
G, mouth of the canal of Aigues Mortes.
H, the frontier towards Spain meets the Mediterranean.
I, the same frontier meets the ocean.
K, mouth of the Sèvre of Niort.

L, Bec-du-Raz.
M, on the coast north-west of Brest.
N, Mont St.-Michel, in Cancale Bay.
O, Cape La-Hague.
P, Le-Hâvre, at the mouth of the Seine.
Q, Cape Gris-Nez, between Calais and Boulogne.

The Cévennes are separated from the Pyrenees by a valley, through which the great canal of Languedoc runs; they extend in a north-north-east direction, and after sending off branches to join the group of primitive and basaltic mountains of Auvergne, turn to the northward and skirt the valley of the Rhône and the Saône: in this part of their course they are known (according to the districts through which they pass) as the heights of Vivarais, Forez, Lyonnais, Beaujolais or Charollais. Mont Mezen, the culminating point of the Cévennes, is 5800 feet high. The mountains of Auvergne surpass the Cévennes in height. The Pic-de-Sancy, the highest of the Monts-Dores or Mont d'Or Mountains, is 6196 feet high, and the Plomb-de-Cantal is 6095 feet above the level of the sea. There are several other 'Puys,' or volcanic summits, of inferior height among the Auvergne Mountains. [ARDECHE; AUVERGNE; CANTAL; CÉVENNES; PUY-DE-DÔME.]

The comparatively humble slopes of the Côte-d'Or of Bourgogne (Burgundy) may be regarded as a continuation of the Charollais heights, and serve with the heights of Langres to connect the Cévennes with the Vosges, whose branches extend to the south-east so as to unite with the Jura, and whose wild and wooded steep slopes form the western boundary of the valley of the Rhine. The principal summits of the Vosges are Le-Ballon-de-Soultz, or Guebwiller, 4695

feet high; the Seine and the Somme. From the Charollais heights a range of hills of gradually diminishing elevation extends to the neighbourhood of the Loire, separates that river from the streams which flow into the Seine, and connects the mountain system of central France with the heights of Beauce, which are a prolongation of the Menez Mountains of Bretagne. These run from the headlands near Brest in an easterly direction. A range which proceeds in a north-west direction from the central group of the Auvergne Mountains toward the mouth of the Loire, and is called the heights of Gâtine, separates the basin of the Loire from that of the Garonne; and another range, which branches off from the Pyrenees near the Pic-du-Midi, and runs north-west till it subsides in the Landes near Bordeaux, separates the basins of the Garonne and the Adour.

The Cévennes, the heights of Langres, the Faucilles Mountains, and the uplands of the Ardennes, separate the western or oceanic slope from the eastern; the latter is subdivided by the Faucilles Mountains, and by a branch of the Vosges which unites with the Jura, into the north-eastern or Rhenish slope, and the south-eastern or Mediterranean slope.

The western slope includes the basins of the Adour, the Garonne, the Charente, the Loire, the Vilaine, the Orne, the Seine, the Somme;

and a number of others of less importance. The basin of the Adour is bounded by the Pyrenees and the range which extends from these to the mouth of the Garonne: the length of this river is about 200 miles. The basin of the Garonne is bounded by the heights last mentioned, by the Pyrenees, the Cévennes, the mountain group of Auvergne, the heights of Gâtine, and a small branch from these which divides the basins of the Garonne and Charente. The general course of the Garonne is to the north-west; that of its principal tributaries which flow from the Cévennes and the Auvergnat group (as the Dordogne, the Lot, and the Tarn) is to the west-by-south; that of the Pyrenean tributaries, which are smaller, to the north-by-west; the Dordogne is the last tributary of importance which it receives in its course to the ocean; and their joint estuary is called the Gironde, a name which like that of our own Humber applies to the estuary alone. The length of the Garonne is about 360 miles; its basin is inferior in extent to that of the Loire, but exceeds that of the Seine. [GARONNE.] The basin of the Charente is bounded by the heights of Gâtine or their branches, and the length of the river is 200 miles. [CHARENTE; CHARENTE-INFÉRIEURE.]

The basin of the Loire, the largest river that wholly belongs to France, is bounded by the heights of Gâtine, the Auvergne Mountains, the Cévennes in which it rises, the Charollais heights, the hills which connect these with the plateaux of Orléans and Beauce, and the offsets of the Menez Mountains. The direction of a line drawn from the source of the Loire to its mouth would be north-west, and it would lie nearly along the ridge of the heights of Gâtine, but from the great bend which the river makes, its course is first north and then west; its principal tributary, the Allier, has a northward course nearly parallel to and not far distant from the upper part of the Loire: the Cher, the Indre, and the Vienne, have a north-west course. These all join the Loire on the left bank; the most important tributary which it receives on the right bank is the Mayenne. The length of the Loire is above 600 miles; that of the Allier is about 250 miles; that of the Cher, 215 miles; that of the Vienne, 207 miles; and that of the Creuse, an affluent of the Vienne, 166 miles.

The basin of the Vilaine is bounded on the north by the Menez Mountains, and on the east by a branch of the same mountains which separates it from the basin of the Loire; the length of the Vilaine is about 124 miles. The basin of the Orne is bounded by the Menez Mountains, or their branches; the length of this river is above 82 miles.

The basin of the Seine is bounded by the heights of Beauce and those of Langres, with their connecting range; and by the hills which branch off from the heights of Langres toward the Channel. The length of the Seine is 480 miles; that of its principal tributary, the Marne, is 268 miles. The basin of the Somme is bounded by the heights that run from those of Langres to the coast of the Channel; the length of the river is about 110 miles.

The north-eastern or Rhenish slope comprehends parts of the basins of the Escaut or Schelde, the Meuse, the Moselle, and the Rhine. Only a comparatively small part of the course of each of these rivers belongs to France; no part of the course of the Rhine is entirely included in that country, of which it only forms the boundary.

The Mediterranean slope comprehends the basins of the Aude and the Rhône, and of one or two other streams, which are too small to require notice. The basin of the Aude comprises part of the slopes of the eastern Pyrenees, the southern slopes of the Montagnes Noires, the most southern part of the Cévennes, and the great depression between these two mountain systems. The Aude is about 100 miles in length; its course is at first northward as far as Carcassonne, and then eastward to the Gulf of Lyon, which it enters below Narbonne. The basin of the Rhône is bounded by the Cévennes, the heights of Charollais, the Côte-d'Or, the heights of Langres, the Vosges, the Jura, and the Alps: its greatest extension is from north to south, and it is comprehended partly in Switzerland and the Sardinian states, but chiefly in France. The course of the Rhône in Savoy, Switzerland, and part of France is nearly west; at the great city of Lyon it bends to the southward: its whole course is about 525 miles; that of the Saône, its principal affluent, is 304 miles; that of the Isère and the Durance, two other affluents, about 190 and 220 miles respectively; and that of the Doubs, a feeder of the Saône, about 210 miles.

Geological Character.—The sands, clays, limestones of later formation, marls, and sandstones, which constitute the strata above the chalk (including the alluvial and diluvial beds), occupy several extensive districts. 1. The largest of these districts is in the south-west of France; it comprises the countries that lie between the foot of the Pyrenees from the ocean to the Mediterranean, and a line drawn from the mouth of the Gironde below Blaye to the shore-lake of Sigéan, near Narbonne. It comprehends nearly the whole of the valleys of the Adour and the Garonne, with the intervening 'landes,' or heaths; the lower part of the valleys of the Dordogne, the Lot, the Tarn, the Aride, and the other streams which join the Garonne on the right bank; the whole of the valleys of those streams which join it on the left bank, except such as have their sources in the higher part of the Pyrenees; and a narrow belt from the valley of the Garonne to the Mediterranean, along the coast of which beds of this formation, probably alluvial, extend to the border of Spain. 2. The next district in

extent is what is designated 'the Paris basin,' extending for several miles in every direction round that city, bounded by an irregular line drawn from the neighbourhood of Gisors, on the north-west of Paris, to La Fère on the Oise; thence to the neighbourhood of Épernay on the Marne; from Épernay to the Seine, at the junction of the Loing, and along the valley through which the canals of the Loing and of Briare have been cut, to the valley of the Loire, along which valley these formations extend upwards to Cosne, and downwards below Blois: from this last point they are bounded by a line drawn northward to the neighbourhood of Gisors. 3. The third district extends along the valley of the Saône on the east side of that river from the junction of the Doubs to Lyon, and then along the east side of the valley of the Rhône to below the junction of the Drôme: this long strip has a breadth of several miles on the east side of the Saône and Rhône, but does not extend to the west of these rivers, except between the junction of the Doubs and the Canal du Centre with the Saône. 4. The next district comprehends the alluvial formation of the delta of the Rhône, and the lower part of the valley of that river, and of its tributaries the Aigues, Ouvèze, and Durance. 5, 6, 7. There are three other narrow portions occupied by these later formations, extending along that part of the valley of the Rhine which belongs to France; along the valley of the Allier, from near Brioude to below Moulins; and along the valley of the Loire from near Feurs to the junction of the Avron. 8. That small part of France which lies to the north of a line drawn from Calais by St-Omer to the Belgian frontier, is occupied by those formations which extend into Belgium, and occupy a large part of that country.

The chalk-formation skirts the district occupied by the super-cretaceous deposits on the north-east side alone, extending from the coast between the Gironde and the Charente to the river Lot, southward of which it is not found: the breadth of this belt of chalk is tolerably uniform—about 25 or 30 miles. The Paris basin is surrounded on almost every side by the chalk, which forms a circular belt of very variable breadth, from 24 or 25 miles (between Reims and Reims), to more than 100 miles (between Clermont-sur-Oise and the coast near Calais): the continuity of this belt is only interrupted by the extension of the super-cretaceous strata up the valley of the Loire toward Cosne. The chalk formation occupies the coast of the channel from Cape Grinez to the west of the mouth of the Seine, except near Boulogne, where it is interrupted for a short interval by the strata of the formations below it, which here rise to the surface.

The group, which comprehends the oolitic and other formations from the chalk-marl (which underlies the chalk) to the lias, surrounds the chalk belt of the Paris basin on the west, south, and east sides. On the west side the district occupied by these formations is narrow, except just on the coast of the Channel, along which it extends from near the mouth of the Seine to the peninsula of Cotentin. On the south-west it becomes wider, and extends to the chalk belt which bounds on the north-east the first super-cretaceous district above defined: along this belt it extends, forming an outer belt from the ocean, to the river Lot; and from the Lot it extends towards the south-east, skirting the super-cretaceous district. Along the south side of the chalk of the Paris basin, these underlying strata have a variable breadth: on the south-east and east they extend, interrupted only by the more ancient strata of the Vosges, to the valley of the Rhine and the upper waters of the Saône, and across that river to the Jura, the heights of which consist of these formations. From the Saône and the Jura these formations extend southward to the Mediterranean, bounding the third super-cretaceous district on the east, and then, extending westward across the Rhône, inclose the fourth super-cretaceous district between their branches. A belt of these strata extends, with one or two interruptions, along the foot of the Pyrenees, on the south of the super-cretaceous district, from the ocean nearly to the Mediterranean.

The new red-sandstone or red marl, and the magnesian limestone which underlies it, formations which in England spread over a great extent of country, occupy only a small part of France: they are found in the Vosges, the Cévennes, and one or two other places.

The coal-measures, the slates, and the granites and other primitive rocks occupy several extensive districts. 1. The whole of Bretagne and the adjacent part of Normandie, and the other conterminous provinces in the west. 2. The mountain district of Auvergne, part of the Cévennes, the hills of Vivarais, Forez, and the Charollais, and a large extent of country west of Auvergne, as far as the banks of the Vienne and the sources of the Charente: this region is intersected by the sixth and several super-cretaceous districts; and here the oldest and the latest formations may be found in juxtaposition, without the intervention of any of the intermediate strata. 3. The Alps. 4. The Pyrenees, in which calcareous formations abound, and organic remains are found at a vast height. 5. The Vosges, where they are not occupied by the new red-sandstone or magnesian limestone, by which formations the primitive district is nearly surrounded. 6. A considerable insulated district in the southern part of the Cévennes, between districts 2 and 4. 7. A small tract in the northern part of France, between the Sambre and the Meuse.

The great primitive district of central France (the second in our enumeration) abounds in extinct volcanoes, and in the rocks, such as trachytes, basalt, lava, &c., which have arisen from them. Several of

the 'Puys' of Auvergne consist of the craters of these volcanoes resting on the granite, which is the prevailing rock of the district, and on other crystalline rocks. [AUVERGNE.] The Cévennes and the valley of the Rhône (even in those parts occupied by the strata between the chalk and the primitive rocks) exhibit traces of volcanic agency, as likewise the isolated primitive district between Auvergne and the Pyrenees. Others are observed in the ancient Provence, near the sources of the Argens, and one or two in the north-east of France.

The mineral riches of France are considerable. Granite, sienite, porphyry, variolites, and serpentine are quarried in the department of Hautes-Alpes, in Corsica, and in some of the departments of the north-west; lava in Auvergne, and marble of great variety and beauty in the Pyrenees, in Corsica, and in various other parts. Vast slate quarries are wrought at the foot of the Pyrenees and in the department of Maine-et-Loire, as well as in the Ardennes district near the Belgian frontier; and excellent limestone quarries for building abound. Lithographic stone, clay for bricks and tiles, kaolin, or porcelain clay, pipeclay, gypsum, chalk, pavingstone, and millstones are found at various points. Of the metals—iron, manganese, antimony, and lead there is a great abundance. The mining or manufacturing of iron enters into the industrial occupation of the inhabitants of no less than 52 of the departments of France. Silver, gold, and platina are found in the department of Isère. Some copper-mines are wrought, the most important in the neighbourhood of Lyon. Gold is found in the soil brought down by some of the streams which rise in the Pyrenees and the Cévennes, by the Rhône, and by the Rhine.

No less than 46 coalfields are explored in 34 departments, the greater number yielding chiefly good bituminous coal, some lignite; and others anthracite. Sulphate of iron, alum, asphalt, bitumen, and petroleum are also found. The most productive coal-districts are near Valenciennes in the north, and St-Etienne in the south of France. Much coal is dug in the departments of Saône-et-Loire, Aveyron, and Gard. The department of Meurthe contains brine-springs and rock-salt; the rock-salt field of Vie, discovered in 1819, has an extent of not less than 30 square leagues. There are in France 240 mineral springs, of which more than 150 are collected in baths for the reception of patients. Of hot springs the most famous are those of Barèges, Cauterets, Bagnères-de-Bigorre, Eaux-Chaudes, among the Pyrenees; those of Aix and Digne at the foot of the Alps; those of Vichy, Chaudes-Aigues, and Neris in the Cévennes region; those of Bourbonne-les-Bains in the Vosges; and those of St-Amand in the Ardennes. The hottest of the springs in France is that of Chaudes-Aigues in the Auvergne region, department of Cantal, the temperature of which is not less than 190° Fahr. The administration of the several hot and cold springs is under the inspection of physicians appointed by the government.

Climate.—The northern and western parts of France are drier than the southern and eastern. In the department of Isère, the mean annual quantity of rain is 32 inches; in the mountainous part of Haut-Rhin 30 inches (French measure); in the plains of the same department more than 28 inches; and in the department of Rhône (Lyon) above 29 inches; while in the department of Ile-et-Vilaine it is only 21 inches; in those of Orne and Eure, between 20 and 21 inches; and at Paris, in the department of Seine, between 19 and 20 inches. Of the difference and the variations of temperature in different parts of France, a judgment may be formed from the following table:—

Place.	Average Temperature.	
	Summer.	Winter.
Clermont in Auvergne	64°40'	34°52'
Dunkerque	64°64'	38°66'
Paris	64°58'	38°66'
St-Malo	66°02'	42°08'
Nantes	68°54'	46°46'
Bordeaux	70°88'	42°08'
Marseille	72°50'	45°50'
Montpellier	75°74'	44°06'
Toulon	75°02'	48°38'
Nîmes	73°40'	48°28'
Agon	83°70'	36°50'

Agriculture.—France has always been considered one of the most agricultural countries in Europe; but until very recent times the system of husbandry has remained almost unimproved for centuries, and even yet the changes for the better are far from being general. The want of ready communication by roads and canals in times gone by, prevented any great exertions being made to increase the produce of the soil, beyond the immediate demand of the neighbourhood. One part of France often had a deficiency of corn approaching to a famine, when plenty reigned in another. The price of grain in the south of France varied so much from that in the north, that there was a difference in the duty paid on the importation of foreign corn in different ports. Arthur Young, in his tour through France in 1787, was surprised to find the state of cultivation so low in every province, except those bordering on the Netherlands. His observations have been acknowledged to be just by the French agricultural writers themselves, and a certain spirit of improvement has been

excited by his remarks. Since the revolution in 1793, every encouragement to agriculture has been held out by the government; but notwithstanding the numerous excellent publications which have been produced, and the establishment of agricultural schools, and model farms, the progress towards a more general adoption of improved methods of cultivation is slow. In most parts of France the farmer resides in or near the village, and the land which he cultivates is dispersed over a considerable extent of distant unclosed fields. He loses much time in going and returning, and he has a great way to carry the little manure which he makes. Artificial grasses are cultivated to a considerable extent, especially in the southern provinces, but not sufficiently to maintain as much stock as would produce the requisite quantity of manure; and the very small demand for animal food, at a distance from the large towns, gives little encouragement to the feeding and fattening of cattle, except where natural meadows abound, which is chiefly along the course of the rivers, and in the provinces of Normandie and Brittany.

The great division of property which arises from the law of equal distribution among all the children at the death of the parent, tends much to lessen the size of farms. In a country where there are domestic manufactures to give employment to the labourer or peasant, when his plot of ground does not require all his time, a more careful cultivation is the consequence of small occupations. Habits of constant employment excite industry; and the ingenuity is sharpened by the practice of the mechanical arts. But in an ignorant peasant leisure produces idleness; and if a mere sufficiency of food can be procured from a small possession, for which no rent is paid, it is seldom that a great surplus is raised.

The proportion of the population of France which is occupied in agriculture, is much greater than in those countries which are chiefly engaged in manufactures and commerce. There are in France very few large proprietors of land, who, like the English country gentlemen, spend a great part of their time in the country, and take an interest in agricultural pursuits. There are not many speculative farmers who have capital, and are possessed of a superior practical, as well as a theoretical knowledge of agriculture, and who make it a means of acquiring wealth. Few expensive instruments can consequently ever be tried, or brought into general use, nor any extensive improvements undertaken. All these causes concur in preventing a rapid improvement in French agriculture.

The northern part of France, on the confines of Belgium, and in the immediate neighbourhood of Paris, are the best cultivated. In most other parts, except where maize is cultivated, the old system of two or three crops of corn and a fallow is generally adopted. If the fallows were well worked and clean, the crops would be better; but this is by no means the case. The variegated appearance of the corn in May, from the abundant blossoms of weeds, proves that they have not been extirpated. When they appear likely to choke the corn they are sometimes weeded out; but as the method of sowing the seed in rows or drills with an instrument is unknown or undervalued, there is no possibility of hoeing the intervals between the growing plants, and all the weeding must be effected with the hand.

Arthur Young divides the whole of France into four distinct climates as regards agriculture. In the northern the vine does not thrive so as to make good wine. This district lies north-west of a line which passes north of Paris, and is parallel to the line of the French coast on the Channel. The next division is that in which wine is made, but maize or Indian corn does not thrive. The boundary of this district to the south is nearly parallel to the line first mentioned, and passing through Nancy in Lorraine divides France nearly into two equal parts. The third division is that in which both maize and wine abound, but where the climate is still too severe for the olive or the white mulberry; this is bounded on the south-east by the Jura and a line passing to the north of Lyon. The last division consists of the southern provinces from the last-mentioned line to the Pyrenees, where the olive and the mulberry abound as well as maize and the vine. In this part the year often yields two harvests of corn, but the soil is not well adapted to permanent pastures except at a considerable elevation above the sea.

The finest climate is in the third division, where corn, maize, and wine are good and abundant. The heat is not so oppressive as in the southern provinces, and there is the greatest scope for agricultural operations. The most fertile lands are towards the north and east. The Beauce immediately south of Paris is also a fine wheat country, and so are Touraine, Alsace, and the plain of the Garonne. The worst soils are in Champagne, Sologne, and along the coast of the Bay of Biscay. The cultivation of rice has been in recent years introduced into the Isle of Camargue, in the department of Bouches-du-Rhône, with we believe tolerable success.

The Comte du Gasparin, in his 'Cours d'Agriculture,' divides France into three zones, which he names regions of cereals, vines, and olives, according to the most important product of each. The cereal region comprises all the north of France to a line drawn from the mouth of the Loire to the Rhine, a little north of Paris. To the south of this is the region of vines, which extends to a line drawn nearly parallel to the former through the town of Orange. The remainder of France forms the zone of the olive.

According to a recent return of the whole surface of France (131,069,931 acres), including Corsica, there were 13,808,171 acres under wheat; 11,715 acres were sown with spelt; 2,251,439 with mixed corn (maisin); 6,369,879 with rye; 2,936,453 with barley; 7,416,297 with oats; and 1,561,372 with maize: and the products were in bushels—191,284,670 of wheat; 374,348 of spelt; 32,530,982 of mixed corn; 76,482,175 of rye; 45,819,020 of barley; 134,474,408 of oats; and 20,955,726 of maize. This gives a total cereal produce of 501,921,629 bushels, and the average corn produce for the whole of France at only 14.6 bushels per acre. The average yield of wheat per acre for the whole of France is hardly 14 bushels. In England no strictly accurate statement of the average can be given for want of agricultural statistics; it is however all but certain that the average yield of wheat per acre for all England is about 28 bushels.

Since the above return was published the corn-produce has increased considerably in favourable years, and France has since the abolition of the English corn-laws exported corn largely. The increased facilities for transit by means of railroads has no doubt also, among other causes, operated as a stimulant to agricultural industry. The cultivation of the vine, of the artificial grasses, of pulse, and above all of potatoes, has greatly increased within the present century. Beet-root is extensively grown for the manufacture of sugar. The esculent roots and table-vegetables are common. Flax, hemp, and oleaginous seeds are cultivated extensively. Hops, tobacco, and madder are grown. The olive and the mulberry are also extensively cultivated: of the latter there are between fifteen and twenty millions of trees planted in the departments that lie in the basins of the Rhône, the Garonne, and the Upper Loire. The departments of Gard, Drôme, Vaucluse, and Ardèche are the most distinguished for their mulberry plantations, and for the produce of silk. The industry of the peasants in some of the more sterile districts is very great: in the Cévennes and in Auvergne they build walls to retain the alluvial soil brought down by the mountain streams, and cultivate the sides of the mountains by means of the terraces thus formed.

In the south the soil of the hills is stony, which suits the vine, but is unfit for the growth of corn; between the hills there are valleys which abound in every kind of produce, and where there is a command of water to irrigate the fields the most productive water-meadows may be made. The French bean is extensively cultivated for its seeds, which when boiled are said to contain more nutritive matter than any other seed in the same compass. The arable land and pastures are not intermixed as in England, but generally lie wide of each other. The horses and cows are fed chiefly on clover, lucern, sainfoin, and other artificial grasses, of which no greater extent is raised than is absolutely necessary. More attention is now given however to the feeding of cattle for the markets, and cattle-shows are coming into vogue in Paris and the chief provincial towns.

The agricultural implements in use in France are in most instances few, and not of an improved kind. Each province has its own fashion in making ploughs, most of which are rude and do their work imperfectly. At cattle-shows there are, as in England, exhibitions of improved agricultural instruments, which will thus come immediately under the notice of farmers, and no doubt cause a general amelioration in this respect. The corn is reaped with the sickle. In the northern parts the barns are very large, to hold the whole crop of the farm; for stacking corn, or even hay, is almost unknown. In the south the corn is thrashed out in the field, and put into granaries immediately after harvest. The size of farms in France is much less than the average of English farms.

Model farms and establishments for the diffusion of agricultural knowledge have been established in various parts of France. At Grignon, near Paris, is an agricultural establishment supported by the government; and in several of the provinces similar establishments have been founded of late years. They cannot fail gradually to introduce improved methods of cultivation.

The vine is one of the most important objects of cultivation in France. In 10 of the 86 departments it is not grown for the purpose of making wine, or at all upon a considerable scale: in the other departments it is more or less an object of attention. The amount of land occupied by this culture is about 5,000,000 acres. The average yearly produce of the French vineyards is estimated at 42,000,000 hectolitres (about 924,000,000 gallons), of which about one-seventh is converted into brandy. The departments drained by the Garonne, the Charente, and the Adour; those lying along the Rhône and the Saône; the basin of the Loire; the region of the Moselle; valleys of the Seine, the Yonne, and the Marne, produce wines of the finest growth and the greatest variety. The banks of the Charente produce no wines of reputation, but the grapes grown on them yield the best distilled spirits in the world, Cognac brandy. The department of Gers also is famous for a mild and delicate brandy called Armagnac. The wines of Languedoc, Provence, and Roussillon are remarkable for fulness of body. The average annual produce of the vineyards is estimated at 720,000,000 of francs, or about 28,500,000*l*. In the departments of the north and north-west, which do not produce the vine, cider forms the usual drink of the poorer classes. The actual quantity of wine produced during the last few years is as follows:—

1848 . 1,135,667,344 gals.	1850 . 983,786,166 gals.	1852 . 626,133,222 gals.
1849 . 782,214,686 „	1851 . 867,443,058 „	1853 . 493,557,774 „

Of the fruit-trees which are cultivated on a considerable scale in France, the mulberry is one of the most important: it is reared for the nourishment of the silk-worm. This branch of culture has much increased of late years. The olive, the orange, the lemon, the pistachio, are grown along the shore of the Mediterranean: the plum when dried furnishes a considerable article of export. The apple and the pear are grown in Normand and Bretagne for making cider and perry, which furnish the peasantry with their common drink: the apple is also exported in a dried state. The chestnut furnishes the peasantry of the more barren districts with an important article of food, and the walnut is grown for its oil.

Of forest-trees France has the oak, the cork-tree, which is cultivated in the departments of the south-west, the elm, the ash, the beech, the birch, the poplar (white and black), the larch, the juniper, the wild cherry, and the pine. The box, the cornel, the maple, and others furnish the cabinet-maker with ornamental wood. The eastern part of central France is the best wooded district, and the former province of Bretagne is the most destitute of wood. As in France wood is almost universally used for fuel, it is an object of considerable attention; and it is calculated that about one-seventh of the whole country is occupied as woodland. The principal forests are on the various mountain ranges; except on the Alps and Pyrenees, which are rather bare of wood. The ranges of the Jura and the Vosges furnish good deals; and the forests of the maritime pine enable the peasant of the Landes between the Garonne and the Adour to turn that otherwise barren tract to some account: these forests yield charcoal, rosin, and pitch.

Animals.—The domesticated animals of France are, for the most part, similar to those of Great Britain.

Horses in France are by no means equal either in number or in excellence to what they might be under a better system of agriculture. A considerable number are imported annually, although the richness of the soil should rather enable the French to export. Considerable pains have been taken by the establishment of government studs and by other means to improve and increase the breed. The horses of the provinces of Normand, Picardy, and Alsace are well adapted for war, posting, and agriculture; those of the departments of Orne and Calvados are excellent for the saddle or the carriage; those of the departments of Maine-et-Loire and Sarthe, and the departments adjacent to the mountain chains of the Alps and the Jura, are adapted for light cavalry; the horses of Limousin, Auvergne, Guienne, Gasconne, and Béarn are in the highest repute for the combination of lightness and strength. The horses of Bretagne are a rough hardy breed.

The ass, though probably superior to that of Great Britain, is, except in the department of Vienne, far inferior to the ass of Spain or Italy. Mules are bred in many parts, and some of them are exported. Oxen in France are much employed in the labour of the field instead of horses: they are of many different breeds and sizes: among the smallest are those of Bretagne, and the mountain cattle of the Alps, Pyrenees, and Cévennes. Oxen are frequently bred in one part of the country and fattened in another part. The rich plains of Lower Normand afford pasturage to great numbers of oxen which are brought thither from various quarters, especially from the hilly districts of central France where they are bred. The sheep are of various breeds, some of which have been so far improved as to furnish a wool equal to that of Saxony. The number of sheep in proportion to the population is by no means equal in France to what it is in England; they are most numerous in the former provinces of Berri, Bourbonnais, Normand, Picardie, Ile-de-France, Orléanais, Rouergue in Guienne, and part of Languedoc. The sheep of Poitou and Picardie, and of some parts of Normand, the Ile-de-France, and Guienne, are the fattest; those of Bourgogne and the Ardennes are most esteemed for their mutton: but the best mutton on the whole is fed on the sandy districts near the sea. The sheep of Roussillon approach nearest to merinoes in the fineness of the fleece. Some goats are bred in the mountainous districts: the Tibet goat, the hair of which is woven into Cashmere shawls, has been naturalised in the Pyrenees. The swine are of three races: the original breed, which existed in the time of the Celts, and which is still found in Normand, especially in the valley of Auge; the Poitevin breed, and that of Perigord: from the crossing of these breeds a number of varieties have resulted. The trade in salt provisions forms an important branch of industry in the department of Basses-Pyrénées (where the Bayonne hams are cured), and in the frontier departments of the east and north-east.

The rearing of poultry is in most parts much attended to. By a peculiar mode of treatment the livers of the duck and goose are rendered very large and very delicate. The duck-liver pies of Toulouse and the goose-liver pies of Strasbourg are known to epicures.

Of wild animals the black and brown bears have their haunts in the French Pyrenees; the lynx is found, though very rarely, in the recesses of the higher Alps; and the wolf and the wild boar are common in the forests. The chamois and the wild goat are found on the summits of the Alps and the Pyrenees. The stag, the roebuck, the hare, and the rabbit are common. The marmot inhabits the Alps and the Pyrenees, and the ermine and the hamster are found in the neighbourhood of the Vosges.

The red squirrel, the alpine squirrel, and a species of the flying squirrel are also found in the forests of the Vosges and in the woods on the banks of the Moselle or on the slopes of the higher Alps. The smaller beasts of prey and vermin, such as the fox, the badger, the hedgehog, the polecat, the weasel, the rat (of which the original black species has been, as in England, exterminated and replaced by the invasion of a larger kind), the mouse, the mole, and the field-mouse are sufficiently numerous in their respective haunts. Among the amphibious animals are the otter and the water-rat.

Of birds the chief songsters and the birds of passage are much the same as in England, with the addition of the hoopoe and one or two others.

The flamingo is found on the shores of the Mediterranean. Of game, there are the red partridge, common in the departments of the centre and west, and the gray partridge, common in the south; the quail, the ortolan, the beccafico, the pheasant, the woodcock (abundant in Picardie), and the snipe in Auvergne. The plover, lapwing, wild duck, and others are taken in great numbers on the coasts of the Channel and the Ocean, especially in the department of Charente-Inférieure.

Of other animals we mention only a few: the gecko of Mauritania is found on the Mediterranean coast. There are several species of vipers and of harmless snakes: the latter are in some places regarded as fit for food. Frogs are numerous and of many species: one, the prickly frog, is of a great size and hideous form.

The tortoise, the salamander, the scorpion, and a kind of spider closely resembling the tarantula of Italy, are found. The honey bee (which is reared in great numbers) and the silk-worm are the most valuable insects; the Spanish fly is sufficiently numerous to furnish an article of exportation. Leeches are found in many parts.

Fisheries.—The coasts abound in fish of various kinds, the taking of which occupies a number of hands: the herring, the mackerel, and especially the sardine or pilchard, are the chief objects of attention to the fishermen of the coasts of the Channel and the Atlantic: the tunny and the anchovy, to the fishermen of the Mediterranean. The oyster, crab, lobster, and other *Crustacea* are in great demand. The best are found on the coast of the departments of Manche, Calvados, and Charente-Inférieure.

Divisions Civil, Ecclesiastical, Judicial, and Military.—Before the revolution of 1789 France was divided into 33 governments or provinces of very unequal extent. It is now divided into 86 departments, which are named from the principal rivers that drain them, from the mountains within their limits, from their situation, or from some remarkable locality. The arrondissements are always named from the chief town in each. These 86 departments are divided into 363 arrondissements, 2847 cantons, and 36,835 communes, which, except that they have a corporate form of government, do not generally differ much in extent from parishes. Each department is administered by a prefect; each arrondissement by a sub-prefect; and each commune by a mayor (maire). In each department there are also several officers connected with the arrangement and receipt of taxes, an engineer of roads and bridges, a military sub-intendant, and a company of gendarmes. In the chief towns of departments courts of assize are held; each arrondissement has its tribunal of first instance, and each canton a judge of the peace. The more important departmental capitals are seats of high courts of justice and appeal, and head-quarters of Military Divisions.

The prefect is appointed by the central power and is invested with the civil, financial, military, and in some respects judicial administration. He regulates the articles of the departmental budget, which he discusses with the council-general. He presides at the conscriptions for recruiting the army, and overlooks the whole financial administration, including direct and indirect taxes, public domains, woods and forests, &c. Assisted by his council he forms a tribunal of first instance. In all these capacities he communicates with the ministers of the crown. Once a year a council-general of department, composed of as many members as the department has cantons (but not exceeding 30), assembles to examine the accounts and proposals of the prefect, to assign to each arrondissement the proper share of taxation, to determine upon the demands for reduction made by councils of arrondissement, &c., and to settle the amount of taxes for departmental purposes. The council of arrondissement, which consists of not less than 9 members, has similar duties in conjunction with the sub-prefect, only in a narrower sphere; it addresses its opinion on the state and requirements of the arrondissement to the prefect, who decides. Finally the communal council (composed of 10 to 36 members according to the importance of the commune), considers with the mayor the special interests of the commune, its octroi duties, roads, communal property, receipts, and local expenses. The members of the departmental councils are chosen by the electors of the department; those of the municipal councils by the communal electors.

The old governments or provinces of France, as well as all their more important subdivisions, are noticed in this work. The departments and all the large towns are also described.

In the following table the area and population of each of the 86 departments is given as returned in the official census of 1851:—

Department.	Area in Sq. Miles.	Population in 1851.
Ain	2,242.0	372,930
Aisne	2,843.0	558,989
Allier	2,821.8	336,758
Alpes (Basses-)	2,679.9	152,070
Alpes (Hautes-)	2,136.8	132,038
Ardèche	2,133.8	386,505
Ardennes	2,021.6	331,206
Ariège	1,889.6	267,435
Aube	2,317.2	265,247
Aude	2,436.7	289,747
Aveyron	3,384.4	394,183
Bouches-du-Rhône	1,984.9	428,989
Calvados	2,131.6	491,210
Cantal	1,999.2	253,320
Charente	2,295.6	382,912
Charente-Inférieure	2,626.9	469,992
Cher	2,779.8	306,261
Corrèze	2,265.0	320,864
Corse	3,377.5	236,251
Côte-d'Or	3,382.7	400,297
Côtes-du-Nord	2,659.0	632,613
Creuse	2,150.0	287,075
Dordogne	3,536.8	505,789
Doubs	2,019.0	296,679
Drôme	2,519.2	326,846
Eure	2,689.4	415,777
Eure-et-Loir	2,208.7	294,892
Finistère	2,593.8	617,710
Gard	2,250.5	408,163
Garonne (Haute-)	2,431.0	480,794
Gers	2,424.9	307,479
Gironde	3,760.9	614,387
Hérault	2,393.1	389,286
Ille-et-Vilaine	2,597.5	574,618
Indre	2,629.7	271,938
Indre-et-Loire	2,360.6	315,641
Isère	3,201.1	603,497
Jura	1,928.3	313,299
Landes	3,599.1	302,196
Loir-et-Cher	2,452.2	261,892
Loire	1,841.8	472,388
Loire (Haute-)	1,916.0	304,615
Loire-Inférieure	2,634.3	535,664

Vaucluse	1,372.4	264,618
Vendée	2,596.6	383,734
Vienne	2,692.4	317,305
Vienne (Haute-)	2,130.3	319,379
Vosges	2,347.6	427,400
Yonne	2,868.0	381,133
Total	204,952.9	35,781,628

The ecclesiastical division of France before 1789 was into 18 archbishoprics, exclusive of Avignon. Of these one (Cambrai) was reduced to a simple bishopric, but has since been restored to its former higher

dignity; four were united with others, namely, Arles and Embrun with Aix, Vienne with Lyon, and Narbonne with Toulouse: the addition of Avignon makes the present number 15. Of the dioceses 49 were suppressed at the first revolution; the remainder, with the new sees of Nancy, St.-Dié, and Moulins, make up the present 65 bishoprics.

In general throughout France a bishop's see is co-extensive with the department in which the town is from which he takes his title. In a few cases two departments are united under one bishop, and in four instances (the archdiocese of Reims; the archdiocese of Aix, Arles, and Embrun; and the bishoprics of Châlons and Marseille) the see is less than the department. In the articles on the episcopal towns and the departments of France, the extent of each see is expressly stated.

We here merely name the dioceses, which, with the arch-see given in italics, are comprised in each of the 15 ecclesiastical provinces of France:—

1. *Paris*.—Chartres, Meaux, Orléans, Blois, and Versailles.
2. *Cambray*.—Arras.
3. *Lyon-et-Vienne*.—Autun, Langres, Dijon, St.-Claude, and Grenoble.
4. *Rouen*.—Bayeux, Évreux, Séez, and Coutances.
5. *Sens-et-Auxerre*.—Troyes, Nevers, and Moulins.
6. *Reims*.—Soissons, Châlons, Beauvais, and Amiens.
7. *Tours*.—Lo-Mans, Angers, Rennes, Nantes, Quimper, Vannes, and St.-Brieuc.
8. *Bourges*.—Clermont, Limoges, Le-Puy, Tulle, and St.-Flour.
9. *Alby*.—Rodez, Cahors, Mende, and Perpignan.
10. *Bordeaux*.—Agen, Angoulême, Poitiers, Périgueux, La-Rochelle, and Laçon.
11. *Auch*.—Aire, Tarbes, and Bayonne.
12. *Toulouse-et-Narbonne*.—Montauban, Pamiers, and Carcassonne.
13. *Aix, Arles, et Embrun*.—Marseille, Fréjus, Digne, Gap, and Ajaccio. Algérie forms a bishopric of this province.
14. *Beauvais*.—Strasbourg, Metz, Verdun, Belley, St.-Dié, and Nancy.
15. *Avignon*.—Nîmes, Valence, Viviers, and Montpellier.

The French Lutherans, who are chiefly resident in Alsace, are under the consistory of Strasbourg. The French Calvinists, a much more important body, have meeting-houses in 51 departments, and are governed by consistories, five forming a synod.

Judiciary.—The administration of justice in France is uniform. As before stated each canton has its justice of peace, who is always a professional man, and has summary jurisdiction in matters of less importance, and all suits must come before him with a view to an amicable settlement if possible; failing which, they are carried before a higher court. The mayors of communes also act as inferior magistrates. The large towns are divided into several cantons. In each arrondissement the tribunal of first instance takes cognisance of civil and police causes, in accordance with the code and the laws of the state; and 26 high courts, formerly called royal courts (*Cours Royales*), take cognisance of appeals against the judgments of the tribunals in their respective jurisdictions. Before these courts are tried all offences against the state. In cases of misdemeanour the first jurisdiction rests with the justice of peace, who may send the person or persons charged before the tribunal of first instance, which then acts as a tribunal of correctional police; from these the accused parties may appeal to the high court. In matters of grave character the criminal is finally brought before the court of assize (the judges in which are one or more members of the high court), where he is tried before a jury of 12, drawn by lot, from a list of the electors of the department in which the assizes are held. Courts of assize are held in the chief towns of the departments three or four times a year.

Commercial causes are carried before tribunals of commerce, the judges in which are elected for three years by the leading merchants of the arrondissement, subject to the approval of the central power. In matters that involve amounts exceeding 1500 francs, an appeal lies to the high court of the district. These courts exist with the greatest advantage in nearly all the great commercial and industrial districts of France. Where there are not tribunals of commerce their functions are discharged by the tribunals of first instance.

In the maritime and manufacturing towns there are besides councils of *Prud'-Hommes* ('experienced men'), with summary jurisdiction in matters to the amount of 100 francs. If the amount in dispute exceeds 100 francs, an appeal lies to the tribunal of commerce. These councils are composed of master manufacturers and workmen elected annually; they do not suffer lawyers to plead in their courts: they sit in the evening when the workpeople leave the shops and factories, and take cognisance also of disputes between masters and apprentices, manufacturers and their workmen. The council of *Prud'-Hommes* is one of the most extensively useful institutions in France: in Lyon alone above 5000 cases are decided annually, appeals are rare, and a reversal of the decree of the council rarer still.

Finally, in each military division and naval head-quarters, councils of war and maritime councils are held to decide (subject to a council of revision) upon the offences of soldiers and sailors.

The high court of appeal from all these courts and tribunals, and for the whole of France, is the 'court of cassation,' which sits in Paris, and the judges of which are appointed from amongst the most distinguished French lawyers.

A high court of justice chosen from amongst the high magistracy, and having as jury members of the councils-general of all France, takes cognisance of all attempts against the chief of the state and the public safety.

The following is a list of the high courts, showing the departments within the jurisdiction of each:—

1. *Agen*.—Gers, Lot, and Lot-et-Garonne.
2. *Aix*.—Basses-Alpes, Bouches-du-Rhône, and Var.
3. *Amiens*.—Aisne, Oise, and Somme.
4. *Angers*.—Maine-et-Loire, Mayenne, and Sarthe.
5. *Bastia*.—Corsica.
6. *Beauvais*.—Doubs, Haute-Saône, and Jura.
7. *Bordeaux*.—Charente, Dordogne, and Gironde.
8. *Bourges*.—Cher, Indre, and Nièvre.
9. *Cuen*.—Calvados, Manche, and Orne.
10. *Colmar*.—Bas-Rhin, and Haut-Rhin.
11. *Dijon*.—Côte-d'Or, Haute-Marne, and Saône-et-Loire.
12. *Douai*.—Nord, and Pas-de-Calais.
13. *Grenoble*.—Drôme, Hautes-Alpes, and Isère.
14. *Limoges*.—Corrèze, Creuse, and Haute-Vienne.
15. *Lyon*.—Ain, Loire, and Rhône.
16. *Metz*.—Ardennes, and Moselle.
17. *Montpellier*.—Aude, Aveyron, Hérault, and Pyrénées-Orientales.
18. *Nancy*.—Meurthe, Meuse, and Vosges.
19. *Nîmes*.—Ardèche, Gard, Lozère, and Vaucluse.
20. *Orléans*.—Indre-et-Loire, Loiret, and Loir-et-Cher.
21. *Paris*.—Aube, Eure-et-Loir, Marne, Seine, Seine-et-Marne, Seine-et-Oise, and Yonne.
22. *Pau*.—Basses-Pyrénées, Hautes-Pyrénées, and Landes.
23. *Poitiers*.—Charente-Inférieure, Deux-Sèvres, Vendée, and Vienne.
24. *Rennes*.—Côtes-du-Nord, Finistère, Ile-et-Vilaine, Loire-Inférieure, and Morbihan.
25. *Riom*.—Allier, Cantal, Haute-Loire, and Puy-de-Dôme.
26. *Rouen*.—Eure, and Seine-Inférieure.
27. *Toulouse*.—Ariège, Haute-Garonne, Tarn, and Tarn-et-Garonne.

Military Divisions, &c.—By a decree dated December 26, 1851, France is now divided into 21 Military Divisions, each of which comprises one department or more. They are each named from the chief town, which is the head-quarters of the officer in command of the army corps of the division. These divisions, with the departments included in each, are as follows:—

1. *Paris*.—Seine, Seine-et-Oise, Oise, Seine-et-Marne, Aube, Yonne, Loiret, and Eure-et-Loir.
2. *Rouen*.—Seine-Inférieure, Eure, Calvados, and Orne.
3. *Lille*.—Nord, Pas-de-Calais, and Somme.
4. *Châlons-sur-Marne*.—Marne, Aisne, and Ardennes.
5. *Metz*.—Moselle, Meuse, Meurthe, and Vosges.
6. *Strasbourg*.—Bas-Rhin, and Haut-Rhin.
7. *Beauvais*.—Doubs, Jura, Côte-d'Or, Haute-Marne, and Haute-Saône.
8. *Lyon*.—Rhône, Loire, Saône-et-Loire, Ain, Isère, Hautes-Alpes, Drôme, and Ardèche.
9. *Marseille*.—Bouches-du-Rhône, Var, Basses-Alpes, and Vaucluse.
10. *Montpellier*.—Hérault, Aveyron, Lozère, and Gard.
11. *Perpignan*.—Pyrénées-Orientales, Ariège, and Aude.
12. *Toulouse*.—Haute-Garonne, Tarn-et-Garonne, Lot, and Tarn.
13. *Bayonne*.—Basses-Pyrénées, Landes, Gers, and Hautes-Pyrénées.
14. *Bordeaux*.—Gironde, Charente-Inférieure, Charente, Dordogne, and Lot-et-Garonne.
15. *Nantes*.—Loire-Inférieure, Maine-et-Loire, Deux-Sèvres, and Vendée.
16. *Rennes*.—Ile-et-Vilaine, Morbihan, Finistère, Côtes-du-Nord, Manche, and Mayenne.
17. *Bastia*.—Corsica.
18. *Tours*.—Indre-et-Loire, Sarthe, Loir-et-Cher, and Vienne.
19. *Bourges*.—Cher, Nièvre, Allier, and Indre.
20. *Clermont-Ferrand*.—Puy-de-Dôme, Haute-Loire, and Cantal.
21. *Limoges*.—Haute-Vienne, Creuse, and Corrèze.

For purposes of naval conscription the territory of France is also divided into maritime provinces, of which there are five, named from the great naval harbours of France—Cherbourg, Brest, Lorient, Rochefort, and Toulon.

The territory of France is admirably defended by nature against foreign enemies except towards the north-east. The Atlantic coast on the north and west with few harbours of any depth, and those that are deep being difficult of access or strongly defended, warn off the invader by sea. The Pyrenees would be impassable in the face of united France; the eastern frontier with the wall of the Alps, the Jura, and the Vosges equally so. But towards the north-east, on the Belgian, Prussian, and Bavarian frontiers, the country has no natural defence. But in this quarter military science has done its utmost in constructing fortresses to command all the leading approaches, and in no country in the world are there so many strongly fortified towns in the same extent of territory. Along this frontier are the fortresses of Dunkerque, Lille, Douai, Cambrai, Valenciennes, Condé, Maubeuge, Avesnes, Rocroy, Givet, Charlemont, Mézières, Sedan, Thionville, Metz, Bitche, and Wissembourg. Along the Rhenish frontier (the

proper defence of this quarter however is not the Rhine but the Vosges Mountains) are the fortresses of Haguenau, Strasbourg, Schelestadt, and Neuf Brisach; Belfort, Bésançon, and the Fort-de-l'Écluse command the approaches from Switzerland: towards the Alps and the Sardinian frontier are Grenoble and Briançon; the Pyrenean passes are defended by Perpignan, Bellegarde, Mont Louis, St.-Jean-Pied-de-Port, and Bayonne. In the interior many of the towns are strongly fortified, but Paris, with its continuous wall and detached forts, is the most important in every point of view. The detached forts erected in recent times round Lyon, also render that city a very important military position. The great naval dock- and building-yards are Brest, Toulon, Rochefort, Cherbourg, and Lorient. Sloops of war are built also at Bayonne, Nantes, and St.-Servan, a suburb of St.-Malo.

Government.—The constitutional monarchy and representative government which had prevailed in France under King Louis Philippe, the head of the younger branch of the Bourbons, were abolished by the republican revolution of 1848. A republic in form, governed by a president and a national assembly, the members of which were elected by ballot, with a suffrage all but universal, succeeded.

On December 2, 1851, Prince Louis Napoleon Bonaparte, president of the republic, issued a decree dissolving the Legislative Assembly, establishing universal suffrage (the assembly had considerably restricted the suffrage), proposing a president for ten years, and a second chamber, or senate. On the 20th and 21st of December the French people, by 7,439,216 affirmative votes against 640,737 negative ones, adopted a 'plebiscite,' or decree of the people, maintaining the authority of Louis Napoleon Bonaparte, and delegating to him the powers necessary for establishing a constitution on the bases proposed in the above proclamation. The power thus conferred upon the president resulted in the important state paper issued January 15, 1852, which contains the constitution under which France has been since governed.

According to this proclamation the president, while he wisely retained that title, assumed more than royal authority. He is responsible to the people alone, who had elected him, and not to a national assembly: the command of the land and sea forces, the exclusive initiation of new laws, the right to declare the state of siege, were among his leading attributes. A Senate was appointed, whose number was not to exceed 150, the members to be named for life by the president, who may also grant them salaries. A lower chamber, called the Legislative Body, consists of 261 members, one for every 35,000 electors, and chosen for ten years by universal suffrage, but without the ballot. The sittings of both chambers to be private; official reports only of the proceedings to be published. No member of either chamber has the power to originate any law; if amendments are adopted they must be sent to the council of state, and cannot be discussed if not also adopted by this body. The president convokes, adjourns, prorogues, and dissolves the Legislative Body. In case of a dissolution a new one is to be convoked within six months. The session of the chambers to last three months.

A council of state, composed of 40 or 50 salaried members, nominated and presided over by the president, draws up the projects of all laws. The Senate is not to be transformed into a court of justice. For crimes against the chief of the state and the public safety a high court (as above explained) is appointed. Ministers cannot be members of the legislature. Petitions may be addressed to the Senate, but none to the Legislative Body. The mayors of communes are appointed by the executive.

In this draught of the constitution the name of republic was retained, and the title of president; but on December 2, 1852, in accordance with a decree of the Senate dated November 7, 1852, and a plebiscite carried by 7,839,552 votes against 254,401, the name of the government was changed, the empire was re-established, and Louis Napoleon Bonaparte became emperor of the French under the title of Napoleon III., the throne being hereditary to his legitimate male descendants, failing which, the succession rests in Prince Jerome Napoleon Bonaparte and his direct legitimate descendants in the male line by order of primogeniture. Since the establishment of the empire some very slight modifications have been made.

Revenue, Expenditure, &c.—The general revenue of France is derived from direct and indirect taxes, and from customs and import duties. The budget of the minister of finance having been voted by the chambers the amount of the direct taxes is distributed among the 86 departments of France according to their extent, industrial progress, population, and presumed degree of prosperity. The prefect, aided by the council-general of each department, allots to each arrondissement its share of the amount imposed on the whole department; the sub-prefect, in concert with the council of arrondissement, divides this quota among the cantons and communes; and, finally, the mayor, with the assistance of the municipal or communal council, assigns to each inhabitant the amount he has to pay. The indirect taxation comprises land and assessed taxes, the duties on wines and spirits, the navigation of rivers, tithe of the octroi duties of towns, licences, stamps, sale of state property, post-office and mail service, import and export duties, profits from the state forests, &c.

According to the budget for 1854 the total receipts amounted to 1,520,639,572 francs; and the expenses voted to 1,516,820,459 francs. The expenditure is thus distributed:—Interest on the public debt,

396,503,439 francs; expense of the chambers, 36,604,180 francs; credits to ministers, 756,073,254 francs; expense of collecting taxes, &c., 151,973,334 francs; drawbacks, &c., 86,106,242 francs; extraordinary expenses for public works, &c., 89,560,000 francs.

The budget for 1855 estimates the receipts at 1,566,012,213 francs; and the expenditure at 1,562,030,308 francs. The expenditure includes the following grants:—

Ministry of State . . .	12,146,400 fr. or 341,650 fr. more than in 1854.
Justice	27,443,380 fr. or 802,600 fr. more than in 1854.
Foreign Affairs . . .	9,621,600 fr. or 391,000 fr. more than in 1854.
Finance	711,964,619 fr. or 20,584,261 fr. more than in 1854.
Interior	130,991,220
War	315,897,791 } together, 16,933,145 fr. more than in 1854.
Marine	127,602,402 }
Public Instruction and Public Works . . .	65,719,722 fr. or 90,586 fr. more than in 1854.
Agriculture, Commerce, and Public Works . . .	156,735,242 fr. or 5,400,000 fr. less than in 1854.
Interest on New Loan . .	15,407,933 fr.

The total receipts of customs duties in France were:—In 1816, 153,958,908 francs; in 1847, 134,117,730 francs; and in 1848, the year of the revolution, only 80,448,458 francs.

The amount of indirect taxes (which supplies a certain test of the condition of the people) in 1848 was 676,000,000 francs; in 1849, 707,407,000 francs. From the last year they increased to 846,000,000 francs in 1853.

The imports and exports of France in 1851, 1852, and 1853 were as follows:—

	1851.	1852.	1853.
Imports	1,157,700,000 fr.	1,438,200,000 fr.	1,630,600,000 fr.
Exports	1,629,700,000 fr.	1,681,500,000 fr.	1,866,800,000 fr.
Totals	2,787,400,000 fr.	3,119,700,000 fr.	3,497,400,000 fr.

The ships employed in the import trade in 1853 numbered 20,779, measuring 2,750,699 tons: of these vessels 9210 were French, carrying 1,065,688 tons; and 11,569 foreign, carrying 1,685,011 tons. The imports by sea were valued at 1,028,400,000 francs; by land, at 602,200,000 francs.

The export trade in the same year employed 15,841 ships, measuring 1,854,665 tons, and including 6625 French and 8856 foreign vessels, carrying respectively 796,350 and 1,058,315 tons.

The totals of the imports and exports given above, when turned into English pounds sterling, are 111,496,000*l.*, 124,788,000*l.*, and 139,896,000*l.* respectively. This last sum shows an excess over 1852 of 15,108,000*l.*, and over 1847, the year before the revolution, of 35,480,000*l.*

The tonnage representing the arrivals and departures of loaded vessels by sea engaged in the foreign trade amounted to 4,605,000, or 303,000 tons more than in 1852, and 308,000 tons more than in 1847. From this, and the preceding paragraph, it appears that value has increased more than tonnage, showing a great increase in the commerce over the land frontiers of France, consequent on the extension of railway communication.

Of the imports into France in 1853, valued as above (in English money), at 65,224,000*l.*, to the amount of 44,120,000*l.* were for home consumption. Of the exports, the value of which in pounds sterling was 74,672,000*l.*, 54,520,000*l.* represent French produce; the difference, exceeding 20,000,000*l.*, shows the importance of the transit trade of France.

The principal articles of import and export during the last three years are given in the following table, with the values of each in pounds sterling:—

	1851.	1852.	1853.
Imports.—Breadstuffs	80,000	200,000	3,840,000
Coal	1,480,000	1,520,000	1,680,000
Iron	200,000	240,000	440,000
Cotton	4,160,000	5,120,000	5,320,000
Raw Silk	3,680,000	5,360,000	5,200,000
Wool	1,360,000	2,000,000	1,720,000
Exports.—Breadstuffs	3,800,000	2,360,000	1,160,000
Cotton manufactures	6,600,000	6,000,000	6,560,000
Silk manufactures	8,120,000	9,040,000	11,520,000
Woollen manufactures	5,280,000	5,120,000	5,840,000
Linear manufactures	1,080,000	1,200,000	1,360,000
Wines	3,200,000	3,400,000	3,030,000
Gloves and hosiery	1,480,000	1,480,000	1,800,000

The consolidated debt of France on the 1st of January, 1851, amounted to a total of 5,345,637,360 francs. Besides this, the floating debt, according to a report of the finance minister, in February, 1853, amounted to 690,000,000 francs: this sum included the deposits in savings banks (190,000,000 francs), deposits of communes and public establishments, security money of the receivers general of the taxes, 88,000,000 francs deposited by the Paris-Lyon railway company, 122,000,000 treasury bills and other items. The amount applied as a sinking fund amounted at the same date to 37,960,300 francs.

The consolidated debt has been increased in consequence of the

war with Russia, by the loan of 250,000,000 francs, contracted in the spring of 1854.

Military Forces; Navy.—The effective of the French army in January 1853 amounted to 350,000 men and 80,000 horses; but these numbers have been recently increased considerably in consequence of the war with Russia.

Infantry.—100 regiments of 2000 men each; 10 battalions of Chasseurs-à-pied of 800 men each; 3 regiments of Zouaves; 3 battalions of African light infantry; 12 training companies (fusiliers and pioneers); a foreign legion numbering 2600 men; 3 battalions of native African tirailleurs; and 6 veteran companies.

Cavalry.—12 regiments of reserve; 20 regiments of the line; and 26 regiments of light cavalry; besides 3 regiments of Spahis and 4 companies of remonte.

Artillery.—14 regiments with 16 batteries, and 1 regiment of pontoon men; 12 companies of workmen, and 1 company of armourers; 4 train squadrons; and 5 companies of veteran gunners.

Engineers.—3 regiments of sappers and miners; 2 companies of workmen, and 1 company of veterans.

Gendarmerie.—25 legions spread over the departments of France, with about 5000 men for special purposes, make a total of 25,572 men.

Of general and superior officers there were, marshals 6; generals of divisions, 80; in reserve, 69; generals of brigade, 160; in reserve, 172;—colonels, 30; lieutenant-colonels, 30; chiefs of squadrons, 100; captains and lieutenants, 400; adjutants, &c., 246.

At the end of 1852 the French fleet numbered 25 sail of the line (6 of 120 guns, 4 of 100 guns, 9 of 82 to 90 guns, and 6 of 80 guns), 37 frigates (12 of 60 guns, 14 of 50 to 52 guns, and 11 of 40 to 48 guns), 30 corvettes, 44 brigs, 43 small armed vessels, and 32 transports—in all 211 sailing vessels.

The steam fleet included 3 screws (one of 90 guns, a second of 80 guns, and a third of 120 guns), one ship of the line (90 guns, 960 horse-power), 20 frigates of 450 to 650 horse-power, 5 corvettes (320 to 450 horse-power), 22 corvettes (220 to 300 horse-power), and 57 small vessels—in all 108 steamers.

There were besides 49 sailing-vessels and 7 steamers building in the naval dockyards. Many of these have been finished and launched in consequence of the Russian war.

The number of officers in the navy in 1852 was 1874, including 2 admirals, 12 vice-admirals, 20 rear-admirals, 110 captains of men-of-war, 230 captains of frigates, 650 lieutenants, 550 ensigns, and 300 aspirants. The seamen enrolled numbered 100,000; but only 27,000 were on active service. The marine infantry numbered 11,868 men including 483 officers; the marine artillery, 2971 men; medical officers, &c., 1233.

Population, Religion, Educational Establishments, &c.—The principal stock from which the French nation derives its origin is the Celtic. At the period of Julius Cæsar's invasion the Celts occupied nearly all the midland, western, and southern parts of the country. The south-western corner of the country was occupied by the Aquitanians, whose territory extended from the Garonne to the Pyrenees, and probably some Ligurian tribes were intermingled with the Celts on the shore of the Mediterranean. Some Greek settlements, of which Massilia (Marseille) was the chief, existed along that coast. The north-eastern parts of the country, from the Seine and Marne to the Channel and the Rhine, were occupied by the Belgæ, a Celtic people, some of whom in Cæsar's time were mixed with Germans, without however having lost their national characteristics. The immediate vicinity of the Rhine was occupied by some tribes who affected a Germanic origin. The subjugation of the country by the Romans produced an intermixture of Romans with the natives. The modern French language shows how extensive and how permanent has been the influence of the Latin tongue.

At the breaking up of the Roman empire, three of the invading tribes possessed themselves of France: the Visigoths south and west of the Loire, the Burgundians in the south-east, extending from the Saône and Rhône to the Jura and the Alps, and the Franks in the north and east. A branch of the Celtic nation, migrating from the British Isles, settled in the extreme west, and have transmitted to the present age their peculiarity of language and the name of the island (Britagne or Britain) from which they came. Politically the ascendancy of the Franks extinguished the independence of their co-invaders; but the tribes which succumbed to their yoke remained in the settlements they had acquired, and have influenced more or less the characteristics of their descendants. But notwithstanding these admixtures, the Celts may still be considered as the main stock of the French people.

As the predominance of the Celtic race may be inferred from that of their adopted language in the greater part of France, so the local predominance of other tribes is indicated by that of their peculiar tongue. The Breton, an adulterated form of the language imported by the British settlers, is still the language of the rural districts of Bretagne; the Basque is yet found at the foot of the Pyrenees, and may be considered as the representative of the ancient dialect of the Aquitanians. In Alsace the German language is predominant; a circumstance which may be ascribed to that province having been more completely occupied by those tribes who overthrew the Roman empire, and who have preserved their own language; and also to the long incorporation of Alsace with Germany, and its com-

paratively late annexation to the rest of France. The dialect of Lorraine, the adjacent province to Alsace, may be considered also as having strong affinity to that of Germany, from similar causes to those stated above.

The population of France at the commencement of the 18th century was about 19,669,320, exclusive of Corsica and part of Lorraine, which were not then united to France. In the year 1763 the population had increased to 21,769,163, inclusive of Corsica and the whole of Lorraine. In 1784 it had further increased to 24,800,000.

The population, according to the different census returns of the present century, has been stated to be as follows:—

1801	27,349,003	1836	33,540,910
1811	29,092,734	1841	31,230,178
1821	30,461,875	1846	33,101,761
1831	32,569,223	1851	35,781,623

The predominant religion of France is the Catholic; the Protestants, who reside chiefly in Alsace and in Languedoc, number about 1,500,000, of whom two-thirds are Calvinists, and the remainder Lutherans, Methodists, &c. The Jews number about 80,000. Both Catholic and Protestant clergymen are paid by the state. Those of the Catholic hierarchy who have the dignity of cardinal have a yearly income of about 1300*l.*; the archbishops have about 800*l.*; and the bishops about 600*l.* Of the working clergy the incomes are from 20*l.* or 30*l.* to 40*l.* or 60*l.* a year. The total number of priests rather exceeds that of the communes, which is 36,835. Before the first French revolution, the country abounded with monastic establishments. The abbey and convents for men have been, with very few exceptions, abolished. The nunneries and abbey for women for the most part remain. The French nuns do not, except a few, lead a life of pure meditation, but are actively engaged in attendance upon the sick, or in the instruction of youth.

The Catholic clergy are chiefly educated in seminaries established for the express purpose of clerical instruction. There is one establishment for the higher studies at Paris; and above 200 seminaries scattered throughout France. Strasbourg is the chief place of instruction for the clergy of the Lutheran Church; Montauban for those of the Calvinistic or Reformed Church.

Before the revolution France had 23 universities, of which that of Paris was the most important and enjoyed great privileges. Under Bonaparte a body was organised with the title of University, which has continued with some modifications to hold to the present time the chief direction of education. Of this body, which is incorporated, and which possesses large disposable funds arising partly from real property, partly from public grants, and partly from the payments of pupils, all public teachers are members. The highest officer of this body is the minister of public instruction, who has a seat in the cabinet; he fills up all appointments in this branch of the administration, and all vacancies in the academies and colleges, upon the recommendation however of the local authorities, by whom strict examinations are instituted. Twenty-six university-academies were established in different parts of France, and the whole territory was divided into as many circuits, one to each. The seats of these university-academies were—Aix, Amiens, Angers, Besançon, Bordeaux, Bourges, Caen, Cahors, Clermont, Dijon, Douai, Grenoble, Limoges, Lyon, Metz, Montpellier, Nancy, Nîmes, Orléans, Paris, Pau, Poitiers, Rennes, Rouen, Strasbourg, and Toulouse. The number of these institutions has we believe been recently increased, and the bishops in their respective dioceses have obtained a share in the management and superintendence. Each academy consists of a rector, who inspects all schools and places of public instruction within his circuit, and communicates with the higher authorities at Paris. He is assisted by a council of ten members. These form the administrative portion of the academy. The plan of instruction, if the institution is complete in all its parts, comprehends the five faculties of theology, law, medicine, literature, and the sciences, together with a college or high school. The preparatory instruction to the academies is furnished in the colleges, which are established in almost all the chief towns of arrondissements. Besides these establishments there are several colleges and schools of high repute in Paris. The lay religious order of the Christian Brothers devotes itself exclusively to the education of boys, and a very large number of schools is conducted by its members. Almost all the orders of nuns are actively engaged in the education of girls.

Nearly every commune has one school of elementary instruction. Every commune, the population of which exceeds 6000, has a school for superior instruction (elements of geometry, and its application to the arts; elements of chemistry and natural history; elements of history and geography, and more especially the history and geography of France). Every department has a normal school for the instruction of schoolmasters, either by itself or by uniting with some other department. These schools are supported partly by private foundations, donations, and legacies; partly by the communal, departmental, or general government.

All the poor who are incapable of paying for the instruction of their children have them educated gratis at the elementary schools, and a certain number selected after an examination are educated gratis at the schools of superior instruction.

Commercial and Manufacturing Industry.—The woollen manufac-

tures of France are important in value and superior in quality. They are not confined to two or three great centres of production, but are spread over the whole empire. The principal seats of the woollen manufacture are Metz, Moutiers, Nancy, and Mühlhausen in the east; Beauvais, Elbeuf, Louviers, Vire, Abbeville, and Sedan in the north; in the south at Dijon, Vienne, Clermont, Lavelanet, Carcassonne, Lodève, Castres, Bédarieux, Montauban, Limoges, &c.; and in the centre at Tours, Châteauroux, Romorantin, and Châteaurenard: light woollen fabrics at Paris, Rouen, Amiens, and Beauvais; hosiery at Paris, Troyes, Orléans, and at different places in Picardie, in the north of France; and in the south at Nîmes, Lyon, and Marseille: carpets at Paris (La Savonnerie and Les Gobelins), Abbeville, Beauvais; and at Aubusson and Felletin in central France: cashmere shawls are made at Paris, Lyon, Nîmes, and St.-Quentin.

The cotton manufacture is still more important, and since the introduction of steam-machinery it has increased and extended very rapidly. The north and east of France are the chief seats of this manufacture. Rouen may be considered the Manchester of France; and Paris, Amiens, Troyes, St.-Quentin, and the towns of the department of the Nord, also participate largely in this manufacture. The cotton manufactures are established also in Lyon, Tarare, Nîmes, Montpellier, and many other towns in the south. Printed calicoes are made at Rouen and Beauvais; and at Colmar, Mühlhausen, and other places in the department of Haut-Rhin, the printed cottons of which are much approved.

French silks surpass those of any other country for pure brilliancy of colour and the exquisite taste of the patterns. The silk manufacture is carried on chiefly in the south. Lyon is its principal seat. The other chief seats of the silk manufacture are—Nîmes, Avignon, Annonay, and Tours. Ribands are made at St.-Étienne and St.-Chamond, towns to the south-west of Lyon. A part of the raw silk required for these various fabrics is grown in France. The white mulberry-tree, as before stated, is most extensively cultivated for the rearing of silkworms.

Linens of the finer sort are made in Flanders, at St.-Quentin, Cambrai, Valenciennes, Douai, &c.: the damask linens of St.-Quentin rival those of Saxony and Silesia. Coarser linens and sail-cloth are made in Bretagne and various other districts. The linen manufacture is also carried on in Dauphiné. Lace is made at Caen, Alençon, and Bayeux, in Normandie; also at Valenciennes, Douai, and several other places.

The working of metals, especially iron, has much increased of late years, owing to the introduction of steam-machinery and railroads. The quality and appearance of the steel and wrought-iron goods have much improved, yet the quality of the French iron is inferior. The principal iron-works are in the departments of the valley of the Loire, especially about Nevers, and the district of Forez about St.-Étienne. The introduction of railways has originated many steam-engine factories. In the manufacture of jewellery, marquetry, bronze ornamental work, and furniture, the French are almost unrivalled.

In the manufacture of clocks and watches France is eminent; for chronometers and instruments for scientific purposes it is not surpassed by any country. The inventions of the French chemists and the improvement of chemical science have done much in producing with economy and expedition the many chemical agents employed in the various branches of manufacture, and particularly dyeing.

Among other branches of industrial occupation must be mentioned the manufacture of buttons; embroidery; hats (at Paris, Lyon, Bordeaux, and Marseille); cutlery (at Langres, Thiers, Châtelleraut, and St.-Étienne); glass manufactures of all kinds; gloves; dressed skins used in manufactures of various kinds to the value of above 12,000,000*l.* sterling a year; musical instruments; essential oils; household furniture; wearing apparel; hardware, &c.

The commoner sort of French earthenware improves in beauty of design. Fine porcelain is made at Sèvres, Paris, and Limoges. The cut-glass is nearly equal to that of England in beauty of workmanship, and it is perhaps superior in elegance of form.

Sugar from beet-root is a most important manufacture in France. It originated in the necessity of finding a substitute for colonial sugar, which was prevented from entering France by the vigilance of the English cruisers during the last war. In 1852 there were 329 beet-root-sugar factories (25 more than in 1851) in operation; and the quantity of sugar turned out of all these establishments amounted to 75,369,158 kilogrammes, or 1,483,561 cwt*s.*

The commercial transactions of France, as we have before seen, are of a most extensive character. The countries from which the imports chiefly come are the United States of America, Sardinia, Belgium, the United Kingdom, Switzerland, Austria, British India, Germany, Spain, and Russia. The imports from England consist of linens and linen yarn; cotton goods and cotton yarn; wool, woollen yarn, and woollen goods; brass and copper goods; iron, steel, and hardware; coals, enamel, and cinders; tin, tin-plate, and tin wares; machinery and mill-work; lead, &c.

The chief articles of the general imports are—raw silk, wool, hemp, flax, cotton, hardwares, iron and steel, lead, copper, tin, gold, silver, tobacco in leaf, sugar, coffee. Among the miscellaneous imports are—raw hides, tallow, bones and horns, olive-oil, hard woods for cabinet-ware, cheese, sulphur, wax, &c.

The exports to the French colonies are not so great as those to the

United States, to the British dominions, and to some other of the European states.

The leading exports are—wine, brandy, liqueurs, salt, linen, hempen cloth, woollens, silks, cottons, besides hats, jewellery, and household furniture. The values of the leading imports and exports have been given above.

The total number of ships into and out of all the ports of France, including those engaged in the foreign, the coasting trade, and the fisheries, in 1852 was 240,778, measuring 11,734,325 tons, and carrying 1,241,254 men.

The principal sea-ports of France on the Atlantic are—Bayonne, Bordeaux, Nantes, Rochefort, La-Rochelle, Lorient, Brest, Cherbourg, Havre, Rouen, Dieppe, Boulogne, Calais, Dunkerque; on the Mediterranean—Marseille, Cette, and Toulon.

The cod and whale fisheries of France have been increasing for many years past.

Communications.—The means of internal communication in France are, as in other neighbouring countries, roads, canals, and railways. The roads are divisible into those maintained by the central government, and designated Royal, National, or State roads, and those which are kept up at the cost of the several departments to which they belong, and designated Departmental roads. Besides these there are communal and bye-roads. The state or high-roads are divided into three classes. Those of the first class are from 43 to 65 feet wide, and frequently planted on each side with chestnut or other large trees, forming long avenues. About one-eighth of all these roads are paved like a street, but in the reign of Louis Philippe the system of Macadam was usually adopted in making repairs. Those of the first class have a common point of departure, and the distances are measured from the cathedral of Notre-Dame in Paris. There are altogether 28 of these state roads with a total length of somewhat more than 22,700 miles. Diligences run with passengers on the great roads before the introduction of railways. There are no tolls. The total length of roadway afforded by the state and departmental roads is 44,400 miles.

The inland water communication is carried on by means of the great rivers and by the canals which have been formed. The Scheldt or Escaut, the Scarpe, the Sambre, and the Aa, with the canal of Deule, 41 miles long, and several other canals, abundantly supply the department of Nord with the means of water communication. The canal of the Somme and the canal of St.-Quentin connect the port of St.-Valéry, at the mouth of the Somme, with the Escaut and the Oise. The navigation of the Seine commences at Troyes; that of the Aube at Arcis-sur-Aube; that of the Yonne at Auxerre; that of the Marne at St.-Dizier; that of the Oise at Channy; that of the Aisne, a feeder of the Oise, at Neufchâtel, between Rethel and Soissons; and that of the Eure at Pacy. Several canals connect the navigation of this important river system with other parts of France. The canal of St.-Quentin connects the Oise with the Somme and the Escaut; the canals of Briare and of the Loing connect the Seine, just below the junction of the Yonne, with the Loire at Briare; and the canal of Orléans, 45 miles long, branching from the canal of the Loing, opens another communication with the Loire lower down, at Orléans. The canal of Bourgogne connects the navigation of the Yonne, between Auxerre and Joigny, with that of the Saône at St.-Jean-de-Losne, and being continued by another system of inland navigation ultimately communicates with the Rhine. The canal of the Ourcq, near Paris, is 58 miles long. The canal of Nivernais, connecting the Yonne with the Loire, at some point above Briare, 109 miles long, is in course of execution. Havre is the chief port for the basin of the Seine.

The water communication of the western part of France consists chiefly of the navigation of the river Vilaine from Rennes, of some smaller rivers which are navigable only for a few miles, and of three canals. The canal of the Ille and the Rance connects the Rance, a small stream which falls into the Bay of St.-Malo, at St.-Malo, with the Vilaine, at the junction of the Ille, one of its feeders, at Rennes, and saves a tedious and dangerous navigation round the whole peninsula of Bretagne. This canal is 53 miles long. The canal of the Blavet renders the river Blavet navigable up to Pontivy. Another canal, yet unfinished, but open in part for navigation, is designed to connect Brest with Nantes, avoiding the navigation of a dangerous coast, and affording secure communication in case of a war with England.

The navigation of the Loire commences at Roanne, in Forez; that of the Arroux below the little town of Toulon; that of the Allier above Vichy; that of the Cher at St.-Aignan; that of the Indre at Loches; that of the Vienne at Châtelleraut; that of the Sarthe at Le-Mans; that of the Mayenne at Laval; and that of the Loir at Château-du-Loir. The canals connecting the Loire with the Seine have been noticed. The canal of the Centre, or of the Charollais, opens a communication between the Loire, near the junction of the Arroux, and the Saône, at Chalon-sur-Saône. Its length is about 73 miles. A canal is in course of execution, intended to shorten the navigation of the Loire, by avoiding the great bend which that river makes between the junction of the Allier and that of the Indre, called the canal of Berri. Nantes is the port of the district watered by the Loire.

The navigation of the Garonne commences at Cazères, several miles above Toulouse; that of the Aridege at Auterive; that of the Tarn at Gaillac; that of the Baise at Nérac; that of the Lot at Entraygues;

that of the Dordogne at Mayronne, near Souillac; that of the Vézère, its tributary, at Montignac. The only navigable canal connected with this river system is the Great Canal of Languedoc, or Canal-du-Midi, the most important in France. It connects the Garonne, near Toulouse, with the Mediterranean. It follows for some distance the valley of the Lers, a feeder of the Garonne, and passing through a depression between the Cévennes and the Pyrenees follows the valley of the Aude, and the line of the coast to the sea at the port of Cette. Its length is more than 150 miles, and its large dimensions, its immense reservoir, and its numerous sluices, bridges, and aqueducts, render it one of the most magnificent canals in the world. It was opened in the reign of Louis XIV., A.D. 1681.

The navigation of the Adour commences at St-Sever; that of the Midouze, its tributary, at Mont-de-Marsan. The port of Bayonne is the channel for the exports and imports of the basin of the Adour.

The navigation of the Rhône is liable to interruption after it leaves the Lake of Geneva: it recommences a little above Seyssel, on the frontier towards Savoy, and remains open throughout the rest of the course of that river. The navigation of the Saône begins at Seveux, between Gray and Vesoul. The canal of the Centre, which unites the navigation of the Saône with that of the Loire, and the canal of Bourgogne, which unites the Saône with the Yonne, have been noticed. The canal of Monsieur, or the Canal-du-Rhône-au-Rhin, unites the Saône near St-Jean-de-Losne with the Ille, a feeder of the Rhine, just above Strasbourg. A canal was opened in October 1853 from the Marne to the Rhine, which unites the valleys of the Marne, the Meuse, the Moselle, the Meurthe, and the Rhine. There are many great works in its course—tunnels, cuttings, and aqueducts, with 180 locks. There are several other canals in France, all of which are noticed in the articles on the departments.

Steam-boats ply on the Seine, the Loire, the Charente, the Garonne, the Adour, the Rhône, the Saône, the Rhine, the Somme, and some of the other rivers of France.

The railway system of France converges upon Paris, whence trunk-lines and branches, either finished or in course of construction, stretch out to all the more important points on the frontiers, and pass through most of the great manufacturing centres. Looking northward from the capital we see the Great Northern of France passing through Creil, Amiens, Arras, Douai, and Lille, a little east of which it is linked to the Belgian railway system at Monscon. From Creil a branch runs up to the important industrial town of St-Quentin, whence it is in course of construction to the Belgian frontier, near the coal-field of Charleroi. From Amiens an important branch runs northward through Albeville to Boulogne, on the English Channel. From Douai a line runs to Valenciennes, and joins the Belgian system between that town and Mons. From Lille the main line runs north-west to Calais, through Hazebroucke, whence a secondary branch runs nearly due north to Dunkerque.

The second trunk-line runs north-west from Paris down the valley of the Seine to Rouen and Havre, with a branch northward from Rouen to the port of Dieppe. A very important branch, now in course of construction, leaves this trunk-line at the Rosny station, near Mantes, to pass through Caen and Bayeux, and terminate at the naval harbour of Cherbourg. Other branches are being made to connect the towns of Lisieux, Evreux, and Bernay with the main line.

The western trunk-line from Paris to Brest is open through Versailles and Chartres to Le-Mâns, whence through Rennes to Brest it is still unfinished. From Le-Mâns a line in course of construction runs northward through Alençon and Seez to the Caen line between Caen and Lisieux. Between Alençon and Seez this branch is joined by another unfinished line from the La-Loupe station, on the Paris-Brest railway.

Two short lines connect Paris with Versailles, another with St-Germain, and another with Corbeil.

South-west from Paris run the great completed lines to Bordeaux and Nantes. The main line runs through Orléans and Blois to Tours, whence the Nantes line runs west down the valley of the Loire through Angers, and the Bordeaux southward through Poitiers and Angoulême. Bordeaux is joined by a short line with Tête-de-Bœuf, a small port to westward, on the Bay of Arcachon, and from the point in this line where it crosses the Leyre a railway is in course of construction to Bayonne. A line is projected from Bordeaux up the valley of the Garonne to Toulouse, thence into the valley of the Aude and along the coast to Cette. From Orléans a railway runs southward to Vierzon, whence two branches diverge, one south-west to Châteauroux, the other south-east through Bourges, Nevers, and Moulins to Varennes.

The Paris-Avignon line, now open to Lyon, runs first south-east from the capital through Montargis (whence a branch runs up the valley of the upper Seine to Troyes) to Dijon; from Dijon it runs nearly due south through Chalon, Mâcon, Lyon, Viennes, and Valence, to Avignon. From Avignon the line is completed to Marseille, through Arles, whence a railroad runs westward to Nîmes, Montpellier, and Cette. Lyon and St-Etienne are united by a railroad, one of the first completed in France; from St-Etienne a line runs northward up the Loire to Roanne, with a short branch to Montbrison. A short branch runs north-west from Nîmes to the coal-field of Alais. A branch in course of construction projects east-

ward from the main line, between Vienne and Valence, to Grenoble; and from Dijon a line has been planned to Beaunçon and Mülhausen.

The Great Eastern trunk-line runs from the capital through Meaux, Châlons-sur-Marne, and Nancy to Strasbourg, where it is connected by a line along the left bank of the Rhine, through Colmar and Mülhausen, with Bâle in the north of Switzerland. A short branch connects Mülhausen with the manufacturing town of Thann. Lastly, from Nancy a branch runs northward to Metz, and thence eastward to the frontier, where it joins, at Forbach, the Bavarian line, which reaches the Rhine opposite Mannheim.

The total length of the completed railways in France is now (June 16, 1854) 2684 miles.

Life Statistics.—In the interval of 34 years, from 1817 to 1850, there were born in France 16,953,957 boys, and 15,972,905 girls. These numbers give the annual averages of male and female births to be respectively 498,646 and 469,791, which are nearly in the ratio of 17 to 16.

This ratio is general throughout France, difference of climate between the north and south having no sensible effect upon it. It was not constant however throughout the interval. In the first eight years (1817-1824) the ratio was 1.0654; in the last eight years (1843-1850) 1.0563; the mean on the whole interval is 1.0614. In other words during the first period (1817-1824) for every 10,000 female there were 10,654 male births, and in the last period (1843-1850) there were 10,563 boys born for every 10,000 girls; the average on the 34 years being 10,614 male against 10,000 female births.

In the same interval of 34 years the number of illegitimate children born throughout France was 1,202,208 boys and 1,155,690 girls, which numbers are nearly in the ratio of 25 to 21, showing in this class of infants a nearer approach to equality in the number of the sexes at birth, than in the case of legitimate children.

The ratio of the deaths of the two sexes during the interval has also varied. In the first eight years (1817-1824) it was 1.0215, or 10,215 males died for every 10,000 females; in the last eight years (1843-1850) it was 1.0039, and the means on the whole period give the ratio 1.0143, or on the average of the 34 years 70 males died for 69 females. For the whole interval the mean annual number of births was 968,437; of deaths, 812,227; of increase of population, 156,210; and of the marriages, 258,333. These numbers afford ready means for checking the census returns.

The population increased continuously throughout the interval (1817-1850). The mean annual increase 156,210, as just stated, is extremely small, being only 1.211th part of the mean population of France for the whole interval, which was 32,972,000. This increase is so small, that if it continue to bear the same ratio to the population, it would take France no less than 86 years to increase her population by one-half, and 147 years to double its present amount.

The ratio of the population to the births increases continuously also throughout the period. In the first eight years (1817-1824) it was 31.8; in the last eight years (1843-1850) 36.4, and the mean on the 34 years is 34.0. These numbers multiplied into the corresponding births give the population of France. But in the case of a population that is stationary (as that of France may be almost considered to be), the population is equal to the annual births multiplied by the mean duration of life. The numbers 31.8, 34.0, and 36.4 therefore represent approximately the mean duration of life in France for each period. Thus in 1817 the mean duration of life was 31.8 years; 17 years later it had increased to 34 years; and now it is 36.4 years. Before the first revolution the mean duration of life in France was according to Duvillard's tables of mortality, 28.3 years. Since that time then it appears that there is an increase in the mean duration of life of rather above seven years; a result to be attributed to the introduction of vaccination, to improved sanitary conditions, and to the more easy circumstances which the people enjoy.

The French colonies, with the area and population of each at the end of 1841, are as follows:—

	Area in sq. miles.	Population in 1841.
In Asia.—Pondichéry in the Carnatic, Karikal in Tanjore, Mahé on the Malabar Coast, and the factories of Yaman and Chandernagor in Bengal.	518	167,790
In Africa.—The establishments on the Senegal, the Isles of St-Louis and Gorée, the Isle of Rennon (Bourbon), and Sainte-Marie-de-Madagascar.	1,013	131,300
Algérie.	105,850	216,338
In America.—The islands of Martinique, Guadeloupe, St-Martin, Marie-Galante, Desirade, and the group of the Saintes.	1,343	235,689
Part of Guyana, with the Isle of Cayenne.	10,961	22,010
The Isles of St-Pierre, and Miquelon off Newfoundland.	148	1,333
In Australasia.—The Marquises or Marquesas.	508	20,200
Total.	120,321	814,925

In September 1853 France took formal possession of New Caledonia, a group of islands that lies east of New South Wales, in about 23° S. lat., 165° E. long.

History.—Gallia, or as we have Englished it, Gaul, was the general term by which this country was designated by the Romans. Little was known of it till the time of Cæsar, who found in it the three races of Aquitani, Celts, and Belgæ, with an intermixture of some Germans, Ligurians, and Greeks: of these the Belgæ occupied the north and north-east, the Celts the western, central, and south, the Aquitani the south-western part. The Celts, who were probably the oldest race, must have settled in Gaul at an early period, as the wants of an increasing population led them, in the reign of the elder Tarquin of Rome, about B.C. 600, to send out two vast emigrating bodies, one into Italy, the northern part of which was subdued and peopled by them, and the other eastward, into Germany and Hungary. The part of Gaul with which the Greeks formed the earliest acquaintance was the Mediterranean coast, on which they established colonies. The earliest and most important of these colonies was *Massalia*, or *Massilia* (now Marseille), founded by the people of Phocæa (itself a Greek colony of Asia Minor), B.C. 600, and augmented by the emigration of the main body of the Phœceans when they sought refuge, B.C. 546, from the pressure of the Persian monarchy. The power or influence of Massilia extended over the neighbouring districts, and several colonies were founded on the coasts of Gaul, Italy, Spain, or Corsica, by its inhabitants, such as Agatha (Agde), Antipolis (Antibes), Nicæa (Nice), &c.

At the commencement of the second Punic war Hannibal marched through Gaul in his route from Spain into Italy; and Scipio, the Roman consul, who had conveyed his army by sea to Massilia to intercept him, sent a small body of cavalry up the banks of the Rhodanus (Rhône) to reconnoitre, and these had a smart skirmish with a body of Hannibal's Numidians. Hannibal however marched onward into Italy, to which country Scipio also returned, sending his army forward under his brother Cnæus into Spain.

After the close of the Punic wars the Romans gradually extended their power in Gaul. Fulvius Flaccus and his successor, Sextius Calvinus, conquered the Salves, Vocontii, and some other tribes. The coast of the Mediterranean was now secured by the foundation of the Roman colony of Aquæ Sextiæ (Aix), B.C. 122; and that portion of Transalpine Gaul which the Romans had subdued was shortly after formed into a prætorian province (B.C. 118), of which Narbo Martius (Narbonne), colonised the following year (B.C. 117), became the capital. Massilia, nominally in alliance with, but really in subjection to Rome, was within the province. In the migratory invasion of the Cimbri, Teutones, and Ambrones, the Roman province of Gaul was for several years the seat of war: the Roman armies were repeatedly defeated; in one dreadful battle (B.C. 104) they are said to have lost 80,000 men. The province was however rescued from the invaders by the great victory obtained by Marius (B.C. 101) over the Teutones and Ambrones near Aix. The Cimbri had marched into Italy.

The conquests of Cæsar nearly reduced the whole country between the Rhenus (Rhine), the Alps, the Mediterranean, the Pyrenees, and the Ocean, into subjection to Rome. The Aquitani and the tribes who inhabited the Alps were not subdued till afterwards; the former were conquered by Messala: some of the Alpine tribes retained their independence till the time of Nero.

Under Augustus Gaul was divided into four provinces—Narbonensis, Celtica, or Lugdunensis, from the colony of Lugdunum (Lyon), Belgica, and Aquitania: the limits of the last extended beyond the limits of the country of the Aquitani, being augmented by the addition of the country between the Garunna (the Garonne) and the Ligeris (the Loire). Shortly afterwards the province of Belgica was dismembered by two provinces being formed out of the districts along the Rhenus (Rhine), to which the names of provinces of Germania Prima and Germania Secunda, or of the First and Second Germany, were given: and at a subsequent period the number of provinces reached, by successive dismemberments of the larger provinces, its maximum, seventeen.

In the decline of the Roman power Gaul was ravaged by the Franks, the Burgundians, and the Lygians (who had been all driven out by Probus, A.D. 277); again by the Franks and the Allemans, who were repulsed by the emperors Julian (A.D. 355 to 361) and Valentinian (A.D. 365 to 375), and by the piratical Saxons who ravaged the coasts. The Roman power still sufficed to keep these barbarians from settling in Gaul; it could not however abate the constant pressure on the frontier.

The Franks (namely, the freemen) were a confederacy of German nations, the Salians, the Bructerians, the Ripuarians, the Cauci, the Cherusci, the Chamavi, the Catti, the Teneteri, and the Angrivarians. These tribes preserved their independence while confederated, and each had its king. Like the Saxon chieftains who professed all to derive their lineage from Woden, the Frankish princes claimed a common ancestor, Meroveus (Meer Wig, Warrior of the Sea), from whom they bore the title Merovingians. The era of Meroveus is not ascertainable. In the fourth century the Franks were settled on the right bank of the Rhine from the junction of the Mein, or Mayn, to the sea, and in the latter part of that century and during a considerable part of the next appear to have been in alliance with the empire.

The Allemans dwelt on the same bank of the Rhine from the Mayn upwards.

Upon the downfall of the Roman empire Gaul became a prey to the barbarous nations by which the empire was dismembered. There was no revival of national independence as in Britain. The nationality of the Gauls had been lost, when the extension of the right of Roman citizenship to all the natives of the provinces by Caracalla, A.D. 212, merged the distinction previously maintained between the conquerors of the world and their subjects; and the national religion, Druidian, had sunk beneath the edicts of the emperors and the growing influence of Christianity.

On the last day of the year 406 the Rhine was crossed by a host of barbarians who never repassed that frontier stream. They consisted of Vandals, Alans, Suevians, Burgundians, and other nations. The Vandals, who first reached the bank, were defeated by the Franks who defended, as the allies of the empire, the approach to the frontier; but on the arrival of the Alans, the Franks in their turn were overcome, and the passage was effected. Armorica (the present Bretagne), into which the settlement of the British soldiers who had followed Maximus the usurper into Gaul [BRETAGNE] had infused a military spirit, assumed and established its independence; but the rest of Gaul became a prey. The Suevians, the Alans, and the Vandals crossed the Pyrenees into Spain: the Burgundians settled, with the sanction of the Roman government, in the east of Gaul, on both sides of the Jura, and on the west bank of the Rhine, from the Lake of Geneva to the confluence of the Rhine and the Moselle; and the Visigoths, who had been long ravaging both the Eastern and Western empires, were induced, just before the settlement of the Burgundians (A.D. 412 to 414), to accept the cession of that part of Gaul which lies to the south and west of the Loire. Toulouse was their capital. Both Burgundians and Visigoths took the name of Romans, and professed subjection, which was however merely nominal, to the emperor of the West. Hostilities were before long renewed between the troops of the empire and these new-settled nations; but their settlement opportunely supplied Gaul with the means of defence against a fresh invasion. In A.D. 451, Attila, king of the Huns, with an immense host of barbarians, passed the Rhine at or near the confluence of the Neckar, destroyed Divodurum, or Mediomatrici (Metz), and Atuacna, or Tungri (Tongres), and besieged Genabum, or Aureliani (Orléans). Ætius, the Roman general, supported by the Visigoths and the Burgundians, and numbering in his ranks Franks, Saxons, Alans, and other barbarians, advanced against Attila and obliged him to raise the siege and retire towards the frontier. At Durocatalaunum, or Catalauni (Châlons-sur-Marne), a battle was fought in which victory was doubtful, but which was attended with a dreadful slaughter of his forces, and induced Attila to evacuate Gaul.

During these events the Franks had attracted little notice; their subdivision into tribes weakened their power, and perhaps their fidelity to the empire restrained them from pressing it with their attacks. They retained their possessions on the right bank of the Rhine; but had obtained by concession or conquest some settlements on the left bank or along the banks of the Escaut, or Scheldt, and the Meuse.

It was not until the reign of Clovis, who commenced his career as king of the Salians, one of the Frankish tribes settled at Tournay, about A.D. 481, that the Franks assumed a commanding position. The empire of the West had now fallen, and Italy was under the government of the Ostrogoths; but a relic of the empire remained in Gaul; and the territory in which the patricians Ægidius and his son Syagrius upheld the name of Rome was between the possessions of the Visigoths and Burgundians and the settlements of the Franks. This territory was among the early conquests of Clovis (A.D. 486). He then defeated the people of Tongres and (A.D. 496) subdued a portion of the Allemans, who had made an inroad into Gaul: the conquered people recognised Clovis as their king; his opportune conversion to Christianity advanced his popularity and his power in Gaul, as well as his profession of the faith in what was deemed an orthodox form, while all the other princes who shared among them the once extensive territories of the empire were the supporters of Arianism or some other form of doctrine that was looked upon as heretical.

The sway of Clovis extended from the banks of the Lower Rhine, the cradle of his power, to the Loire, the Rhône, and the Ocean, for Armorica had submitted to him. He now determined, on the pretext of uprooting Arianism, to attack Alaric II., king of the Visigoths, whom he defeated and slew at Vouglé in Poitou. The Burgundians hoping to share in the spoils of the conquered nation supported Clovis; but the Ostrogoths of Italy supported the Visigoths and prevented their entire subjection. A large part of their territory, including Bordeaux and Toulouse, and extending perhaps to the foot of the Pyrenees, fell into the hands of Clovis; but the Visigoths preserved the coast of the Mediterranean, together with Spain, which they had conquered: the Ostrogoths had Provence, and their king Theodoric held the sovereignty of the Visigoths also as guardian of their king, his grandson Amalric. The assassination of the various Frankish kings by Clovis rendered him undisputed head of the tribes of his own nation, and his sovereignty extended over Gaul, with the exception of the parts retained by the Ostrogoths, Visigoths, and

Burgundians. Clovis may be considered the real founder of the French monarchy: he died A.D. 511.

The death of Clovis brought on the dismemberment of a monarchy which had been established too short a time for consolidation. The four sons of Clovis had each his share of the regal inheritance, but though the sovereignty was divided, the nation was regarded as one, and all the kings claimed their thrones by virtue of descent from Clovis. The Franks now first invaded Italy, though without success: but their power was increased by the subjection of the Burgundians and the cession of Provence to them by the Ostrogoths: and ultimately the dismembered monarchy of Clovis was reunited, together with these accessions, under Clotaire, the youngest of his sons. Under the successors of Clotaire, France was again repeatedly divided and reunited: it is needless to describe changes which it is difficult to trace and to remember, and which left no other permanent effects than the weakness of the nation and the decline of the kingly power. The Merovingian kings, the descendants of Clovis, ceased with Childeric III., who was deposed A.D. 752; but the kingly power had already come into the hands of the hereditary dukes of Austrasia, Pepin l'Heristal, Charles Martel, and Pepin le Bref; while the governors of provinces had acquired all but absolute independence of the crown.

The accession of Pepin le Bref to the crown, upon the deposition of Childeric III., reanimated the spirit and power of the Franks. Pepin waged war with the Saxons and with the Saracens, who had possessed themselves of the coast of the Mediterranean, which he wrested from them; and the subjugation of the duchy of Aquitaine reunited the empire of Clovis with new acquisitions in the hands of Pepin, who reigned A.D. 752-768; but the splendour of his achievements faded before the superior glory of his son Charlemagne, who extended his power over Italy, except the southern part, then held by the Greek emperors, and over the greater part of Germany. His reign (in conjunction with his brother Carloman, A.D. 768-771; alone, 771-814) was distinguished by the attention which he paid to the revival of letters. But the fabric of empire which he had raised fell to pieces under the less vigorous sway of his son and successor (A.D. 814-840) Louis le Débonnaire.

In the confused history of the Carolingian princes, successors of Charlemagne, it is difficult to trace the events which belong to France, or to separate its annals from those of Italy and Germany. Divisions and subdivisions of the Frankish empire took place; and the wars of rival princes, and the degeneracy of the descendants of Charlemagne delivered up France a prey to the ravages of the Northmen, or Normans, who acquired possession as a fief of the crown, by cession from Charles le Simple (A.D. 911), of the territory subsequently known as the Duchy of Normandie. The governors of provinces established an hereditary authority in their several governments: the cities, destitute of protection from the government, declined in wealth and population, and in many cases lost their municipal rights and privileges; the number of serfs, or villains, increased, and the mechanic arts were exercised by the slaves of the great lords. The power of Hugues le Grand, count of Paris, surpassed that of the later Carolingian kings, and on the death of Louis V. the Carolingian dynasty expired, and a new family was called to a sovereignty little more than nominal, in the person of Hugues Capet, son of Hugues le Grand, who was elected by his army and consecrated at Reims, A.D. 987.

From the time of Hugues Capet the history of France is less involved: the crown descended with tolerable regularity to the son or other successor of each deceased king, and the divisions and reunions of the parts of the kingdom ceased. The kingly power was indeed feeble; but it gradually acquired strength, and the royal domain (as distinguished from the domains of the great feudal lords) was progressively enlarged by the conquest, forfeiture, inheritance, or acquisition by other means of the greater fiefs.

The following chronological table of the kings marks the principal extensions or diminutions both of the regal domains and of the kingdom at large; and those changes which form the characteristics of the periods in which they occurred:—

(987.) Hugues Capet, son of Hugues le Grand, count of Paris.

The dukes of Bourgogne and Normandie, the latter especially, were among the most powerful of the French lords: and of the rest the principal were—the Count of Champagne, the Count of Vermandois (part of whose inheritance passed to the counts of Blois, and elevated them to a degree of consideration which they had not previously possessed), the Count of Flanders, the Count of Anjou, the Count of Poitou and Duke of Aquitaine, the Count of Toulouse; and, though at a somewhat later period, the Duke of Bretagne. The six paramount feudatories, who afterwards became exclusively peers of France, were—the dukes of Bourgogne, Normandie, and Aquitaine, the counts of Flanders, Champagne, and Toulouse. The vassals of Hugues, as count of Paris and Orléans, made such approaches to independence, that at his death the authority of his successor extended little beyond the walls of Paris and Orléans.

(996.) Robert, son of Hugues Capet, born A.D. 970.

(1031.) Henri I., son of Robert, born A.D. 1005.

(1060.) Philippe I., son of Henri I., born A.D. 1053.

The power of the first four Capetian kings was very small, and the kingdom over which their nominal sovereignty extended was not co-extensive with modern France; Lorraine, Transjurane Bourgogne,

and Provence were subject to the imperial crown. Their reigns constitute the era of the rise of chivalry. The reign of Philippe I. was marked by the conquest of England by William of Normandie. The communes or municipalities of France originated in leagues of the inhabitants of towns for defence against baronial oppression, formed in the reign of Philippe, though commonly ascribed to the reign of his successor. Philippe was engaged repeatedly in hostilities with the Anglo-Norman kings, William I. and William II. The first crusade took place in Philippe's reign, and by exhausting the power of the nobles prepared for the emerging of the regal authority from its depressed condition.

(1108.) Louis VI., *le Gros*, son of Philippe I., born A.D. 1078.

This reign comprehends an important period in the history of the French, whether by the progress of the people in the communes, the rights of which had scarcely received at this epoch their first legal sanction; or by the progress, not less marked, of the central authority in the power of the crown, which, instead of remaining unnoticed, as under Philippe I., between the Seine and the Oise, began really to make itself felt from the Meuse to the Pyrenees; or, lastly, by the development in the same interval of the feudal system. This system, profiting by the progress of intelligence and the study of other systems of legislation, acquired a regularity and authority which no one dared any longer to dispute with it.

(1137.) Louis VII., *le Jeune*, son of Louis *le Gros*, born A.D. 1120.

The king carried on the policy of his father, of establishing his authority in his own domains. He married Eléonore of Guienne, from whom he was afterwards divorced. She subsequently married Henry Plantagenet, afterwards Henry II. of England; this marriage made the power of Henry superior to that of Louis: he had Normandie, Anjou, Maine, Touraine, Poitou, Limousin, Angoumois, Saintonge, Berri, Marche, part of Auvergne, Guienne, and Gascogne; but his quarrels with Becket and with his sons prevented his availing himself of his superiority. Louis *le Jeune* was personally engaged in the second crusade, but he met with no success.

(1180.) Philippe II., *Auguste*, son of Louis VII., *le Jeune*: born A.D. 1165.

The predominance of the Anglo-Norman power united the other great vassals of Philippe more closely in alliance with the crown; and the exhaustion of the Anglo-Normans from their civil dissensions, from the crusades, the heavy ransom of Richard I., *Cœur de Lion*, and the weakness of John, enabled Philippe to raise the power of the crown above that of his puissant vassals. Philippe displayed considerable warlike activity: he was engaged in the third crusade 1189-91, in conjunction with Richard *Cœur de Lion*, and in hostilities with Richard and John, and with the emperor Otho, whom he defeated at Bouvines, near Lille, A.D. 1214. He united Normandie, Maine, Anjou, Touraine, and Berri, to the domain of the crown; increased the previously small domain of the crown in Auvergne, and other parts of the south of France; and consolidated the regal power by substituting constitutional forms for individual caprice. This reign was marked by the blood-stained crusades against the Albigeois in the south of France, which weakened the power of the count of Toulouse who protected the Albigeois. France, in its present extent, was at this time divided between four sovereign princes—the king of France; the emperor, who held the provinces of the east and south-east; the king of England; and the king of Aragon, who had considerable territories near the Pyrenees and the Mediterranean.

(1223.) Louis VIII., *Cœur de Lion*, son of Philippe Auguste, born A.D. 1187.

Louis conquered Poitou, and engaged in the crusade against the Albigeois.

(1226.) Louis IX. (*St. Louis*), son of Louis VIII., born A.D. 1215.

(1270.) Philippe III., *le Hardi*, son of St. Louis, born A.D. 1245.

(1285.) Philippe IV., *le Bel*, son of Philippe, *le Hardi*, born A.D. 1268.

(1314.) Louis X., *le Hutin*, son of Philippe *le Bel*, born A.D. 1289.

(1316.) Jean I., a posthumous son of Louis *le Hutin*, lived only three or four days.

(1316.) Philippe V., *le Long*, second son of Philippe *le Bel*, born A.D. 1294.

The accession of Philippe established the Salic law: he was preferred to the daughter and heiress of his elder brother, Louis *le Hutin*.

(1322.) Charles IV., *le Bel*, third son of Philippe *le Bel*, born A.D. 1295.

The direct line of the Capetian kings ended with Charles IV.

The reign of St. Louis, one of the most equitable and virtuous of princes, and the reigns of his successors, some of them as remarkable for the opposite qualities, are marked by the consolidation of the power of the law as distinguished from that of arms. This beneficial change was however accompanied under the successors of Louis with the most revolting acts of injustice under the forms of law. Many of the nobles were despoiled of their fiefs; the order of the Templars was extinguished in the blood of its members; the Jews and Lombards grievously oppressed; and trade ruined by the abasing of the coinage. Persecution assumed a more systematic form by the establishment of the inquisition at Toulouse. In this period the greater part of Languedoc was added to the domains of the crown, which were considerably augmented in other places.

COLLATERAL BRANCH OF VALOIS.

(1328.) Philippe VI., *de Valois*, born A.D. 1293, grandson of Philippe *le Hardi*, by his third son Charles of Valois.

(1350.) Jean II., *le Bon*, son of Philippe *de Valois*, born A.D. 1319.

(1364.) Charles V., *le Sage*, son of Jean II. *le Bon*, born A.D. 1337.

The reigns of these three kings are marked by the wars of the English in France under Edward III. (who claimed the throne of France in the right of his mother), and his son the Black Prince. The French were defeated in the great battles of Sluys (naval) A.D. 1340, Crécy, A.D. 1346, and Poitiers 1356. But the premature infirmity of Edward III. and the death of his son, who had at one time received the cession of a large territory in the south-west of France, under the title of the principality of Aquitaine [Bordeaux], caused the downfall of the English power, and tended ultimately to the extension of the domains of the French crown.

(1380.) Charles VI., *le Bien Aimé*, son of Charles *le Sage*, born A.D. 1368.

(1422.) Charles VII., *le Victorieux*, son of Charles VI., born A.D. 1403.

The reigns of these two kings were marked by another desperate struggle with the English under Henry V. and his successor Henry VI. At one time the success of the English was so decided that Henry V. was recognised as heir to the throne of France, to succeed on the death of Charles VI.; but the perseverance and spirit of the French ultimately triumphed, and of all their splendid domains in France the English monarchs retained only Calais. This was a period not only of foreign invasion, but of civil dissensions and of the most frightful massacres and assassinations. The dukes of Bourgogne, who descended from a younger son of Jean II., were acquiring a vast territory and great power.

Charles VII. was the first to substitute a standing army for the military service of the feudal vassals.

(1461.) Louis XI., the first entitled *le Roi Très Chrétien*, son of Charles VII., born A.D. 1423.

Louis, a crafty and intriguing prince, did for France what Henry VII. did for England in breaking down the feudal system. Upon the death of Charles *le Téméraire*, duke of Bourgogne, he seized a portion of his inheritance. [BOURGOGNE.] The domain of the crown was now become very extensive, though parts of Picardie in the north, Bretagne in the west, several parts of Gascogne in the south, Limousin, Perigord, Auvergne, Bourbonnais, Orléanais, and several districts of the centre were not included.

(1483.) Charles VIII., son of Louis XI., born A.D. 1470.

In him ended the direct succession of the house of Valois.

BRANCH OF VALOIS ORLEANS.

(1498.) Louis XII., *le Père du Peuple*, born 1462, descended from a younger son of Charles V., *le Sage*.

BRANCH OF VALOIS ANGOULÊME.

(1515.) François I., *le Père des Lettres*, descended from the same stock, born 1494.

In the reign of this prince the arts, commerce, and literature began to revive. The domains of the crown were augmented by several additions, as of Auvergne and Bourbonnais in the centre, parts of Picardie in the north, and parts of Gascogne in the south; and virtually of Bretagne in the west; if indeed we may not rather ascribe this last acquisition to the reign of Louis XII.

(1547.) Henri II., son of François I., born A.D. 1519.

In this reign the French reconquered Calais and its territory, the last relic of the English possessions in France. [CALAIS.]

(1559.) François II., eldest son of Henri II., born A.D. 1544.

(1560.) Charles IX., second son of Henri II., born A.D. 1550.

(1574.) Henri III., third son of Henri II., born A.D. 1551.

The reigns of the last two princes were distinguished by the religious wars of the Catholics, at the head of whom were the dukes of Guise, of the family of Lorraine, and the Huguenots under the Prince of Condé and admiral Coligny, afterwards under Henri of Navarre.

The dreadful massacre of St. Barthélemy was perpetrated by the Catholics who formed the celebrated Confederation of the League, at the head of which were the Guises. The court, which had previously supported the Catholics, was driven by the fear of this powerful and ambitious family to an alliance with the Protestants, and Henri III. perished by the hand of a Catholic assassin A.D. 1589. In him ended the direct succession of the branch of Valois Angoulême.

BRANCH OF VALOIS BOURBON.

(1589.) Henri IV., *le Grand*, born A.D. 1553, descended from Robert, Count of Clermont, younger son of St. Louis, and brother of Philippe III., *le Hardi*.

In the reign of Henri IV., the resources of France were so far developed that the country began to assume that station in European politics to which its territorial extent, population, and social improvement entitled it. A fairer prospect seemed to be opening to the rulers of that country. The earlier kings had to struggle with the spirit and the institutions of feudalism; and when, at the close of the direct line of the Capetians, the predominance of the law over the armed violence of feudalism seemed to be gaining consistency and

strength, the accession of the house of Valois brought on the struggle between the kings of France and England for the right and possession of the crown. The excesses of the disbanded soldiery, the struggles of the contending factions (the Bourguignons and the Armagnacs), and the rising of the commons of Paris and of the peasantry or 'jacquerie,' as they were termed, were added to the ravages of the enemy; and when, after more than a century, the contest terminated in the almost entire expulsion of the English, the kings of France had to watch or struggle with rivals of almost equal strength in the dukes of Bourgogne, and the other nobles whose power, the result of the feudal system, still survived when the spirit of the system was gone. The reviving strength of the crown and the kingdom under Charles VIII., Louis XII., and François I., was repressed by the rising power of Spain and the ascendancy of the imperial house of Austria, and exhausted by the unsuccessful attempts made to gain possession of Italy. Then came the ascendancy of the house of Lorraine, and the wars of religion which desolated France for thirty years. At length however the exhaustion of the Lorraine party, or 'the League,' and the opportune conversion of Henri IV. to the Catholic faith, restored peace. The French frontier was now advanced to the Pyrenees, except on the side of Roussillon, which alone remained to the Spaniards of their possessions in Languedoc, and the districts, such as the Nivernois and Auvergne, over which any of the nobility retained territorial sovereignty, were of little importance when compared with the royal domain, now augmented by Bearn, and the other portions of Henri's patrimony. The generous disposition and popular manners of Henri acquired for him the love of his people; and the wisdom of Sully, his chief minister, promoted the prosperity and husbanded the resources of the country. Henri granted to the Protestants the enjoyment of many important rights and privileges by the edict of Nantes, A.D. 1598, and was more desirous of improving the condition of his people than of extending his frontier by foreign conquest.

(1610.) Louis XIII., *le Juste*, son of Henri IV., *le Grand*, born A.D. 1601.

Cardinal Richelieu, the minister of this prince, had in view to crush the nobility, to humble the Protestants, and to set bounds to the power of the house of Austria. His attempts to humble the Protestants led to a renewal of the religious wars: the Duke of Rohan and his brother, the prince of Soubise, were at the head of the Protestant party, but their talents were exerted without success: the court triumphed, and the Protestants lost the towns which they held as securities: the edict of Nantes was not however revoked. To abase the house of Austria, Richelieu supported the Protestants of Germany in the 'Thirty Years' War; but the French armies obtained little distinction until the next reign.

(1643.) Louis XIV., *le Grand*, son of Louis XIII., *le Juste*, born A.D. 1638.

The minority of this prince was marked by the dissensions and hostilities of the courtiers and powerful nobles, and by the splendid success of the French armies under the Prince of Condé and the Marshal Turenne. The dissensions of the nobles so weakened their power, that the king was enabled to assume and exercise a more despotic power than any of his predecessors had possessed. The nobility were reduced to be mere dependents on the court; their titles descended to all their children, and a noble held the pursuit of commerce, and even of the liberal professions to be a degradation: the country was burdened by the expenses of a court which had such a body of retainers, and the privileges and exemptions from taxation, which the nobility possessed, and other relics of the feudal system were among the principal causes of the French revolution.

The military successes of the French in this reign were splendid, except near the close, when the arms of the coalition against France, under the guidance of Marlborough and Eugene, gained the ascendant. The boundaries of France were however considerably enlarged in this and the preceding reigns by the addition of Roussillon, Artois, part of Flanders, Franche-Comté, and Alsace: the boundaries of France thus became nearly what they are at present. The manufactures and trade of France made considerable progress in this reign under the able management of Colbert.

(1715.) Louis XV., *le Bien Aimé*, great-grandson of Louis XIV., *le Grand*, born A.D. 1710.

The long reign of Louis XV. presents little worthy of notice, except the changes in the public mind which were preparing the overthrow of all the ancient institutions of the kingdom; and the increasing dilapidation of the finances. These circumstances, with the gross sensuality of the king, and the disputes of the Jesuits with the Jansenists, and of the clergy and the crown with the parliaments or courts of justice, all tended more or less to prepare the way for great changes.

In this reign Corsica was added to France; the last relics of the feudal sovereignties, the duchies of Lorraine and Bar, and the principality of Dombes, were added to the domain of the crown. Le Comtat d'Avignon and Le Comtat Venaissin remained in the hands of the Pope.

(1774.) Louis XVI., grandson of Louis XV., *le Bien Aimé*, born A.D. 1754.

In this reign the catastrophe of the revolution, which had been

long preparing, took place. The population of France, previously to the first revolution, was politically divided into three classes called *états*, or states—the clergy, the nobility, and the commons, or *tiers état*. The clergy, as a political body, was divided into the old French clergy and the foreign clergy, that is, those belonging to the provinces which had been united with France since the reign of Henry II.

The nobility of France was exceedingly numerous; for not only all the children of a noble belonged to the class of their father, but that class was continually increased by the creation of new nobles. There were about 4000 offices or places in the country which conferred nobility. The nobility possessed great privileges. The third class of the inhabitants of France comprehended the whole population except the nobility and clergy, and constituted somewhat more than $\frac{2}{3}$ parts of the whole. The *tiers état* were crushed by the burden of a most injudicious taxation, the weight of which pressed almost exclusively on them. This was rendered still more intolerable by the oppression of the landowners or their agents, and by the grossest abuses of the manorial jurisdiction. A consequence of all this was the greatest misery among the people, and a deeply-rooted hatred towards the higher classes, which manifested itself in the terrible acts of revenge and bloodshed which accompanied the revolution in France.

The revenue was derived from direct and indirect taxation. The direct taxation consisted:—1st, of a land-tax called *taille*, levied only on the lands belonging to the non-privileged classes; 2nd, the capitation, to which all classes were equally subject; 3rd, a property tax, principally assessed on lands. These taxes were in many respects very oppressive; but the indirect taxes were still more so. They consisted—1st, of customs, levied not only on goods imported from abroad, but on those which passed from one part of France to another; 2nd, of the monopoly of *auff* and tobacco; and 3rd, the monopoly of salt. This last was a complete fiscal tyranny, both in its nature and in its mode of collection. The oppression caused by this system of taxation was increased by the custom of farming out the indirect taxes, and by injudicious corn-laws. (Young's 'Travels in France,' 'Police of Corn,' i. 488, 2nd ed.)

The revenue extorted from the people by this system of taxation was squandered in the most profligate manner. Louis XIV. and Louis XV. shamelessly paid their courtisans and favourites out of the public purse. Louis XVI., on whom the storms of popular indignation subsequently fell, was far less obnoxious to these charges than his predecessors.

The royal power, which had long been limited by the feudal institutions, gradually became absolute. The meeting of the states-general (*états généraux*) had been discontinued since 1614. Some provinces, as Artois, Bretagne, Languedoc, &c., had their provincial states, which were composed of the deputies of the nobility, clergy, and *tiers état*; all their powers however consisted in making the assessment of the taxes in order to raise the quota of the general revenue which was required of these provinces. The municipal institutions, which were flourishing in France during the middle ages, were almost entirely abolished, and the offices of towns were generally either hereditary or acquired by purchase. The offices of state and the courts of justice were all so regulated as to give the people as little voice as possible in the national affairs. This caused a fierce though repressed indignation, which showed itself, with terrible effect before the close of the 18th century.

After the decapitation of Louis XVI. in 1793 the state was declared a republic; after a time Napoleon Bonaparte became its first consul, and then its emperor, until 1815, when, on his final overthrow, the Bourbon dynasty was again restored. In 1830 another revolution took place, by which Charles X. was dethroned and Louis Philippe substituted. In 1848 another revolution displaced him, and again a republic was declared, of which, after a time, Louis Napoleon, the nephew of the first Napoleon, was elected president. In December 1852 Louis Napoleon was elected by universal suffrage emperor, with nearly despotic powers, and has assumed the title of the Emperor Napoleon III., recognising the title of the son of Napoleon I. by the daughter of the emperor of Austria, in whose favour he had abdicated in 1815, though the act was never acknowledged either by the nation or the allied sovereigns.

French Language.—The dominion established in Gaul by the Romans ultimately destroyed the ancient languages of the country. It is also probable that the Greek colony of Massilia (Marseille), established about six centuries before our era, had diffused in some parts of southern France the use of the Greek tongue. No monuments of the poetry of the Celts of Gaul have reached us, although we may conjecture that they had one similar to that of the Scottish Gaels. Under the Roman dominion Latin became the general language of the country, which produced many writers in that tongue, such as Ausonius, Sidonius Appollinaris, Salvianus, Sulpicius Severus, &c.

The invasion and settlement of Germanic nations in Gaul produced a corruption of the Latin by the admixture of foreign idioms. The influence of the Visigoths, who established themselves in the southern provinces, was however, in respect to language, not considerable, and their northern idiom was soon absorbed by the Latin. Yet this Latin, which, except among the educated, had probably never been spoken with great purity by the population of Gaul, became still more corrupted by the admixture of a foreign race, and degenerated into a

peculiar idiom called the *Romanzo*, or *Lingua Romana Rustica*. This idiom became not only the language of France, but of many other parts of southern Europe, where the barbarians of the north established their dominion on the ruins of the Roman empire.

The conquest of Gaul by the Franks hastened the corruption of the Latin tongue. The conquerors however seem for a long time to have preserved their native tongue; as the council of Tours, held in 813, recommends the bishops to translate their homilies into two languages, the Roman and the Theotisk, or German. The same injunction was repeated at the council of Arles in 851.

It appears that the separation of the German from the Roman language dates from the division of Charlemagne's empire among the sons of Louis le Débonnaire, when the German part of it became separated from France. The most ancient monument of the French *Romanzo* is the oath of Louis the Germanic, son of Louis le Débonnaire, on the occasion of a treaty with his brother Charles the Bald of France, concluded at Strasbourg in 847. The German monarch took the oath in Roman, and the French in Teutonic.

The *Romanzo* of France had a variety of idioms, according to the provinces where the influence of the invaders was more or less exercised. These were however but shades, and the language of France in general could be divided into two principal idioms, separated by the Loire. These were called respectively from their affirmatives, the southern the *Langue d'Oc*, and the northern the *Langue d'Oïl*, or *d'Oui*.

The *Langue d'Oc*, or as it was frequently called the Occitanian language, is better known under the appellation of the Provençal, as the rulers of Provence united at the beginning of the 12th century under their dominion the greatest part of southern France.

The Provençal language was rather formed by a modification of Latin words, than by the admixture of foreign words and idioms. Many favourable circumstances united with the beautiful climate of those countries to promote the early development of a poetical literature in the Occitanian language. The poetry of Provence was not like the northern, of a melancholy and meditative character, but rather of a sprightly and animated tone; and it bore the appropriate name of the merry science (*Gaya Ciencia*). It was cultivated by the Troubadours, who spread its glory over all Europe. The dialect of northern France, or the *Langue d'Oïl*, although formed like the *Langue d'Oc* from the Latin, had a greater admixture of the Germanic element. It underwent still greater changes, owing to the establishment of the Normans in France at the beginning of the 10th century. The first authors who wrote in the *Langue d'Oïl* were descendants of Normans, who introduced the romance of chivalry. This kind of composition was originally a versified chronicle, which though often founded on facts was disfigured by the most extravagant fictions. Robert Wace, an Englishman educated in Normandie, who lived at the court of Eleanor of Aquitaine, mother of Richard Cœur de Lion, wrote the 'Brut d'Angleterre' about the middle of the 12th century. He is also the author of the celebrated 'Roman de Rou.' Many other romances were written about that time. Their principal theme was King Arthur, and his Knights of the Round Table. The exploits of Charlemagne and the crusades are also the subject of many romances; and some of them are founded on ancient history, for instance the romance of 'Troy,' written about 1170, by Benoit St. More; and the celebrated romance of 'Alexander,' written in the beginning of the 13th century, which is the origin of the Alexandrine verses of twelve syllables which are still used by modern French writers. ('Corps d'Extraits de Romans de la Chevalerie,' par Tressan; Dunlop, 'History of Fiction;' and Huet, 'De l'Origine des Romans.')

The poets who wrote in the *Langue d'Oïl* were called 'Trouvres,' and like their namesakes of Provence, the Troubadours, reckoned among their body several persons of high rank, such as Thiebaut, count of Champagne, and king of Navarre (1201-53), who imitated with great success the poets of Provence. His poems were published in 1742 at Paris, under the title 'Poesies du Roi de Navarre,' 2nd edit. 1824. Another kind of poetry which belongs to this period is the *Fabliaux*, or tales, which are partly of oriental origin, and were imported by the crusaders into Europe. They are generally written in verse, and sometimes alternately in verse and prose. They often contain a great deal of wit and fun, but are also frequently disfigured by a coarse licentiousness. The poets of other countries have borrowed from them, and Boccaccio has largely drawn from this source. A fine edition of the *Fabliaux*, printed from the manuscripts of the Royal Library, was published by Barbazan in 1756, 3 vols.; and a new edition of the same collection in 4 vols., by Meon, 1808, and in 2 vols. 1823. The most entertaining of these *Fabliaux* were translated into modern French by Legrand d'Aussy, and published in 1779 under the title of 'Fabliaux, ou Contes du 12me et 13me Siècles'; a new edition by Raynouard appeared in 1829.

The persecution of the Albigenses, whose tenets were embraced by many of the Troubadours, plunged the south of France during the 13th century into an abyss of misery, and destroyed the literature of Provence. The Troubadours, who had spread the glory of the language of Provence disappeared for ever, and the language itself sunk to the condition of a patois, or country dialect. Divided into many dialects, it is still spoken over all the south of France, and is the idiom of a part of eastern Spain, extending from Figueras to

Murcia, as well as of the populations of Sardinia and the Balearic Islands; but in all those countries the educated classes have adopted the Castilian, Italian, and French. This decline of the Occitanian language on the one hand, and on the other the establishment of the seat of government for France and of a university at Paris, rendered the northern dialect, or the Langue d'Oïl, the predominant language of all France.

FRANCE, ISLE OF. [MAURITIA.]

FRANCHE-COMTÉ, a province of France, and one of the thirty-two military governments into which in ante-revolutionary times that kingdom was divided. Its greatest length from north-north-east, near the head of the Saône, to south-south-west, near the town of St-Julien, on the Sarraand, a feeder of the Ain, is above 130 miles; and its greatest breadth at right angles to the above, from near the river Vingeanne to the banks of the Doubs, more than 90 miles. It was bounded N. by Lorraine, E. by Switzerland, from which it was separated by the Jura, S. by Bresse, W. by Bourgogne, and N.W. by Champagne. It now forms the departments of Jura, Doubs, and Haute-Saône.

The province is wholly in the basin of the Rhône: it is watered by the Saône and the Ain, feeders of the Rhône, the Doubs, and Oignon, feeders of the Saône, and several other streams belonging to the same system. The lower and more level parts of the province are fruitful in grain; the upper parts produce pasturage for a vast number of cattle. The capital was Besançon; amongst the other towns were—Dôle, Saint-Claude, Pontarlier, Gray, and Vesoul.

Franch-Comté was in the time of Cæsar inhabited by the Sequani, a Celtic people, one of the most powerful in Gaul. Their contentions with the Ædui led them to call in the Germans under King Ariovistus, by whose aid they effectually humbled their opponents; but the warlike strangers whom they had introduced became the tyrants of that part of Gaul, and especially of the unhappy Sequani. Cæsar drove out the Germans (B.C. 45); but it was for the natives only a change of masters, and the Sequani, with the rest of Gaul, passed under the yoke of Rome. Under the Roman dominion Franche-Comté, with Switzerland and part of Bourgogne, constituted the province of Maxima Sequanorum.

Upon the downfall of the Roman empire Franche-Comté was comprehended in the kingdom of the Burgundians, upon the overthrow of which it became subject to the Franks. In the division of the territories of Clovis among his sons and descendants it formed part of the kingdom of Austrasia, and afterwards of Lotharingia, or Lorraine. In the reign of Charles the Simple, king of France, to whom after several changes this district, then called Haute-Bourgogne (Upper Burgundy), or the principality of Outre-Saône (beyond the Saône), had fallen, Besançon with the surrounding districts was formed into a county, called the county of Bourgogne, in favour of Hugues, the first count (A.D. 915). Some writers however represent Franche-Comté to have been part of the kingdom of Bourgogne Transjurane, and postpone the erection of the county of Bourgogne till A.D. 995.

Renaud III. (A.D. 1127-1148), count of Bourgogne, whose dominions had acquired great extent, reaching from Bâle to the Isère, refused homage on various pleas to Lothaire, emperor of Germany, to whose predecessors the counts of Bourgogne had paid homage, and maintained his refusal during his life. It is supposed that the county derived from this circumstance its designation of La Franche-Comté. The marriage of Renaud's daughter to the emperor Frederick Barbarossa brought the county into the hands of that prince, who made Besançon a free imperial city. He resigned the county to his son Otho, by the marriage of whose descendants the county passed into various hands, as of the kings of France and the dukes of Bourgogne of the first and second race of the blood royal of France. On the death of Charles le Hardi, last duke of Bourgogne of the second race, the county passed, with a considerable portion of his inheritance, to the Archduke Maximilian, from him to his grandson Charles V., and so to the Spanish branch of the Austrian family. In 1668 Louis XIV. of France conquered Franche-Comté from the Spaniards, but restored it by the peace of Aix-la-Chapelle in the same year. He again conquered it in 1674, and it was ceded by Spain to France at the peace of Nimeguen in 1678.

FRANCISCO, RIO. [BRAZIL.]

FRANÇOIS, CAPE. [HISPANIOLA.]

FRANCONIA. [BAVARIA.]

FRANEKER. [FRIESLAND.]

FRANKENBERG, in the bailiwick of Chemnitz, in the kingdom of Saxony, is an agreeable town situated on the Zachopau, and in a picturesque valley: it is well built and regularly laid out, and contains 6273 inhabitants. Next to Chemnitz it has the largest factories in Saxony for printing cottons, and employs upwards of 600 hands in this branch alone: it also manufactures cottons, linens, and leather, and has extensive bleaching-grounds in the vicinity. The copper-mines near it produce but small quantities of the metal.

FRANKENSTEIN. [SILESIA.]

FRANKFORT. [KENTUCKY.]

FRANKFURT on the Main, a small republic in the western part of central Germany, so named from its capital Frankfurt-am-Main, which forms the subject of the next article. The town is supposed to date its origin from the times of the Merovingian princes. Charle-

magne built a palace in the town, in which he held a council of the church in the year 794. Lewis the Pious surrounded it with walls and ditches in 838. In consequence of the treaty of Verdun, by which Aix-la-Chapelle fell to the share of Lotharius, Frankfurt became the capital of the empire of the Eastern Franks, and hither Lewis the German transferred the fairs held by the Austrasians. A palace, called the Roemer (Roman palace), was also built here by its sovereigns, who held their courts of ceremony under its roof from time to time, though it was not their fixed abode. In the records of the middle ages Frankfurt is mentioned as one of the principal cities in the German empire, and the emperor William pledged himself, in 1254, that it should never be mortgaged or alienated—a pledge which made it an immediate dependence of the empire itself. A golden bull confirmed the privilege which Frankfurt had long enjoyed, of being the place of all imperial elections. In the early part of the 13th century the Roemer, which had become the property of one of the burgesses about fifty years before, was purchased and converted into a town-hall by the magistrates, who about this time availed themselves of the prodigality of the German emperors to buy their monopolies and domains in and near the town. The emperor Richard conferred additional immunities on it in 1257; in 1272 Charles IV. sold the bailiwick of the empire to the magistracy; and in 1329 Lewis the Bavarian empowered them to redeem all the properties, tolls, &c., in Frankfurt or its vicinity which he or his predecessors might have pawned to others. The great Easter fair, in addition to the Michaelmas fair, which had been held since the days of Lewis the German, was instituted in 1330. In 1390 the town acquired the lands on the left bank of the Main, on which Sachsenhausen now stands, by which acquisition it completed its present extent of territory. In 1555 Charles V. endowed it with the right to the free navigation of the Main. The treaty of Westphalia recognised all its immunities, and it was taken under the special protection of the empire by the imperial rescripts of 1682 and 1683. The noblemen who settled in the town and connected themselves with the wealthier class of inhabitants, gradually formed clubs, or exclusive companies, and these societies ultimately engrossed nearly the whole government; but the Congress of Vienna in 1815 put an end to the abuse. The emperor Charles VII. resided here from 1712 to 1744, and the German diets were at that period transferred to Frankfurt from Ratisbon. It was the place of assembly for the states of the electorate of the Upper Rhine; and dating from A.D. 753, 21 German diets were held here. Under the settlement of the empire in 1803 all the ecclesiastical property within the boundaries was made over to the town, on condition of its paying certain annuities to the amount of 34,000 guildens, about 3000*l.* sterling. The arch-chancellor of the empire, who had a large property in the town, became a member of the Confederation of the Rhine established by Napoleon in 1806, accepted the title of 'Prince-Primate,' and was placed at the head of the government; Napoleon reserving to himself the right of nominating his successors. This was a short-lived dignity; for Napoleon, finding it convenient to separate lay from ecclesiastical jurisdictions, put an end to the prince-primacy in February 1810, added the principalities of Fulda and Hanau, with some small exceptions, to the town and territory of Frankfurt, erected the whole into the 'Grand Duchy of Frankfurt,' and appointed Prince Eugene, viceroy of Italy, its sovereign. This grand duchy contained an area of about 1990 square miles. It fell to pieces with the downfall of its founder, and a resolution of the congress of Vienna on the 9th of June, 1815, re-established the city of Frankfurt and its former territory as a free state.

The small extent of territory (38 square miles) which Frankfurt possesses beyond its walls, lies immediately round them on both sides of the Main; it is quite level, and its soil, a deep sand covered with a layer of lava, has been at every point brought into a high state of productiveness. It is watered by the Main, and produces corn, though not in quantity sufficient for the consumption; potatoes, vegetables, fruit, and wine; many horned cattle and sheep are also bred. The inhabitants of the eight villages on the extramural dominions are partially employed in manufacturing and mechanical pursuits within the walls of the city itself; but the most lucrative occupation they follow is that of carriers through many states of Germany. The population of the whole territory of the republic in 1811 amounted to 47,372; in 1849 it was 77,950; namely, 62,500 in the city and 10,650 in the eight villages, and 4800 federal troops. The Jews, who number about 6000, are admitted to enrol themselves in the class of burgesses. The majority of the inhabitants are Lutherans; the numbers of Reformed Lutherans being about 3000, Roman Catholics 8000. There are 14 Lutheran places of worship (of which 7 are in the town), 2 Reformed Lutheran, 3 Roman Catholic, and 2 Jewish.

The constitution, promulgated on the 15th of May, 1816, vests the sovereign power in the burgesses. This power is delegated to three superior authorities: the senate, the permanent committee of burgesses, and the legislative body. The senate is composed of 20 members, with the two burgomasters as its presidents, who are elected annually; the head burgomaster draws up all reports to the senate and has the control of the military department, while the junior controls all affairs relating to the police, the corporation, and criminal proceedings. The senators discharge all the administrative functions

and compose the civic tribunal as well as a secondary court of appeal; the highest court of appeal being the supreme tribunal at Lübeck. The permanent committee is composed of 61 members, and its principal office is to control the income and expenditure. The legislative body consists of 85 members, 20 of whom are senators, and as many are members of the permanent committee; the remaining 45 are chosen from an electoral college of 65 burghers, elected by the three civic orders; the patrician, or men of letters, the merchants, and the tradesmen, mechanics, &c. They are elected for the session only, which opens in November and sits for six weeks; their sanction is requisite to all new laws as well as to the budget. The nine deputies who are returned by the rural dependencies of Frankfurt do not assist at the deliberations, excepting when matters connected with the interests of their constituents are brought forward. The senate and permanent committee are chosen, as vacancies occur, from among the other members of the legislative body. Foreign consuls reside at Frankfurt. Alterations were made in the constitution of the republic in 1848 and 1849, during the revolutionary epidemic in Germany; but as all efforts made during four years to make the new constitution work proved ineffectual, the German Diet, in August 1852, decreed a return to the former system.

The public income, according to the budget of 1853, is estimated at 1,655,200 florins, and the expenditure at 1,686,140 florins. The debt in the same year amounted to 8,680,000 florins, exclusive of 6,768,700 florins owing for the construction of railways.

The Lutherans have a consistory and the Calvinists two presbyteries, which direct all their respective ecclesiastical affairs. The Roman Catholics are under the bishop of Limburg-on-the-Lahn.

Frankfurt is a member of the Germanic Confederation, and in conjunction with the other free towns, Lübeck, Bremen, and Hamburg, occupies the seventeenth place in the limited Council of the Diet, but enjoys its independent vote in the full council. It furnishes a contingent of 693 men to the army of the confederation, and pays a quota of 47 florins 35 kreutzers towards the annual expenses of that body.

FRANKFURT-AM-MAIN (Frankfort-on-the-Main). This celebrated commercial city, the seat of the German Diet, stands on the right bank of the Main, across which there is a stone bridge, which unites it with the suburb of Sachsenhausen. It is situated in 50° 6' 43" N. lat., 8° 41' 24" E. long., and had, in 1849, a population of 62,500. The valley and the town are commanded on the north by the gentle heights of the Rüdberg, and at some leagues distant behind them by the range of the Taunus; and on the side of Sachsenhausen, in the south, by the Mühlberg, Sachsenhausenberg, and Lerchesberg, offsets of the Odenwald. The old walls and ramparts, with their stagnant ditches, were razed between the years 1806 and 1812, and the site converted into spacious park-like grounds; the glacis too is now covered with vineyards and gardens, which are externally bounded by a broad road; and beyond this road the adjacent ground is embellished with a profusion of villas, pavilions, and private gardens.

The principal public entrances are nine large gates, which were formerly flanked by cumbrous quadrangular towers: most of these have in modern times been replaced by handsome buildings, modelled from the ancient temples of Athens, Rome, &c. Of the nine entrances Frankfurt has seven and Sachsenhausen two. In front of the north-eastern entrance is the monument erected by Frederick William II., king of Prussia, to the memory of the Prince of Hesse-Philippsthal and his gallant followers, who fell at the successful storming of the town on the 2nd of December, 1792: it consists of a quadrangular block of German marble, surmounted with appropriate trophies, bearing a commemorative inscription, and resting on an artificial rock. The Bockenheimer gate, which is the western entrance, is built on the model of the temple of Apteral Victory at Athens, and the Upper-Main gate is an imitation of the porch of the Campus Militum at Pompeii. The adjacent buildings are neat structures appropriated as guard-houses and for the use of the custom-house officers. The Eschenheim gate, the north-western entrance, is the only specimen extant of the ancient gates; it is a lofty massive tower, crowned by five turrets, and is a fine specimen of the German architecture of the 14th century.

Frankfurt, inclusive of Sachsenhausen, contains nearly 4000 houses; between 400 and 500 of them being in the latter suburb. They form 6 large and 14 minor squares or open spaces, and above 220 streets and lanes. The places of worship include 7 Lutheran, 2 Calvinist, and 3 Roman Catholic churches, and one synagogue.

The city is divided into 14 quarters, numbered from A to O, 12 within the walls and 2 in the Sachsenhausen suburb. The Belle Vue and other streets built along the Boulevards, which form a handsome screen to the more ancient part of Frankfurt, have been erected since the fortifications were demolished. The largest square, called the Rossmarkt, is surrounded by fine buildings, and connected with the square of the theatre by a spacious avenue of lime-trees and acacias. There are fountains in the centre of the Ross-Markt, as well as in the squares of the Liebfrauen and Roemerberg. The right bank of the Main, from the upper to the lower gate, which is nearly the whole length of the city, is edged by a spacious quay, and behind this lies an uninterrupted line of buildings. During the fairs a

portion of the quay, on which rows of booths are erected, presents a scene of the most animated description.

The most remarkable buildings in the town are the 'Roemer,' or Guildhall, an irregular structure, with lofty roofs in the old Frankish style. Under its roof are the Wahlzimmer, or Hall of Election, a spacious and handsomely-furnished apartment, in which the electors and their representatives were wont to assemble and partly conduct the business of electing the emperors of Germany. It is now used for the meeting of the senate. Next to it is the Kaisersaal, or Imperial Hall, where the emperor upon his election held his public dinner, at which he was waited upon by the counts and the high officers of the empire. There are niches in this hall which contain portraits of the emperors of Germany from Conrad to Leopold II.; but there was not one left unoccupied for receiving the portrait of Francis II., the last of those sovereigns. A sort of ante-hall with a painted cupola, and furnished with specimens of the pictorial talent of the Frankfurters, opens into the Election Hall. Here is also the Depository of the Archives, surrounded by walls six feet in thickness. It contains, among other valuable records, the celebrated 'Golden Bull' promulgated by Charles IV. in 1356, which is written on 45 sheets of parchment. The Roemer is situated on the western side of the Roemerberg, an irregular open space or square, which has also much of historical interest attached to it. This is the spot where the people collected to welcome the newly-elected emperor, bearing his crown and sceptre in solemn procession, after he had been anointed in the cathedral.

Not far from the Roemer is the new Hall of Justice with its various courts and offices; and south of it, on one side of the Fahr-gate on the quay of the Main, stands the Saal Hof, on the site of a palace built by Lewis the Pious, Charlemagne's son, in which Charles the Bald was born and Lewis the German long resided, but of which scarcely any part is extant, save the Chapel of St. Elizabeth, a vaulted chamber with columns of red-sandstone, and walls six feet in thickness. The present building, which is private property, was raised in 1717. The Braunfels belongs to one of the old equestrian clubs; the courtyard is used for the Exchange, and the spacious saloons on the first floor are occupied, in the fair times, by dealers in all kinds of luxuries, &c., and are the favourite lounge for visitors. The Palace of the Prince of Tour und Taxis, in the north-western part of Frankfurt, is a spacious structure in the French style of 1730, richly adorned with paintings, sculptures, and ancient hangings: it contains 150 apartments, including two octagonal halls; and here the Diet of the Germanic Confederation holds its sittings. The ancient House of the Teutonic Knights in Sachsenhausen, is a sombre massive building in a low situation, but well laid out in its internal arrangements. It is at present the property of the emperor of Austria.

The two large buildings in Frankfurt, which were once public arsenals, were stripped of their contents by the French, and are now appropriated to the police as a prison, and for other purposes. The guard-house, which is chiefly used as a prison, is an unsightly structure of the early part of the 16th century, which disfigures the Parade. An old Carmelite convent, now the quarters of the garrison of the town, has cloisters covered with faded fresco paintings executed in the beginning of the 16th century; the Stone House, near the Roemerberg, is a fine remnant of the middle ages, and the Fürsteneck, near the bridge, may be instanced as one of the oldest buildings in Frankfurt. Besides these, the theatre, public library, academy of arts and sciences, the new hospital of the Holy Ghost, a Jews' hospital, and an orphan asylum, are deserving of attention.

The church of St. Bartholomew, formerly the cathedral, is built in the gothic style and in the shape of a Roman cross, and though begun in the time of the Carolingian princes, was not finished until the middle of the 14th century. Its colossal tower, 160 feet in height, is one of the latest models of the Gothic. The colossal statue of St. Bartholomew in this church is reckoned a masterpiece of sculpture. On the right of the grand choir is the chapel, in which the electors accepted the German emperor elect as their sovereign after he had been crowned and anointed at the high altar. The tower was begun in 1415 and finished in 1509. At a short distance north of the town is the public cemetery, laid out like a pleasure ground of shrubs; and adjoining it an equally well-arranged burial place for the Jewish community. There are four hospitals, one of which is for lunatics and epileptic persons; an orphan asylum, a house of refuge for sick poor, and several other benevolent institutions. Among the scholastic establishments are a gymnasium of six classes, conducted by a director, six professors, and nine masters; a normal school of 13 classes, 7 for boys and 6 for girls, and a variety of other seminaries. The public library contains about 60,000 volumes, among which are a complete collection of works relating to German history, and many rare manuscripts, early editions, and engravings.

The scientific institutions of Frankfurt comprise a Medical Institute, founded in 1763 by the liberality of Dr. Senkenberg, which is composed of a medical library, an anatomical theatre and lecture-rooms, and botanical garden. The Senkenberg Society of Naturalists was united to this establishment in 1817, and in the adjoining buildings possesses an extensive museum, to which Rüppell, the explorer of north-eastern Africa and the parts adjacent, who travelled partly at the society's expense, has contributed several valuable collections in

natural history. Frankfurt also possesses a philosophical society, a society of the useful arts, which has a mechanics school; a society of industry; Stödel's Institute of the fine arts, which possesses a choice collection of paintings, &c., bequeathed by the founder, who left an endowment for lectures and instruction in such branches of knowledge as are connected with the fine arts; a school of design, a society for the fine arts, the Bethmann museum of antiques; a society for encouraging the study of the German language, &c. Dr. Senkenberg also endowed the town hospital. The libraries of the cathedral and the Dominicans are also rich in rare manuscripts and old editions. There are 22 booksellers' establishments, 14 printing-houses, and 3 type-foundries in Frankfurt.

With the exception of Sachsenhausen, whose inhabitants are principally agriculturists, gardeners, and day-labourers, the citizens of Frankfurt derive their subsistence from commerce, money operations, and manufactures. It is a place of considerable transit for German and foreign produce. The chief articles of trade are wines, English, French, and Italian goods, Bavarian timber, German wools, colonial produce, and German manufactures. There is scarcely any article of colonial or European produce which may not be found at the Frankfurt fairs. The sale of books too is very important. The fairs, held at Easter, and in August or September, are no longer what they were in the 16th century, when they were frequented at times by as many as 40,000 strangers; but they still present an animating and attractive scene. The chief manufactures are carpets, table covers, tobacco, cards, cottons, silks, woollen stuffs, jewellery, printers' black, &c.

Frankfurt was made a free city A.D. 1154. It derives great wealth from transactions in banking, commission, and the public funds. The aggregate capital of its bankers is said to be about 20 millions sterling, and the annual transactions in bills of exchange are estimated at about 12 millions sterling. The city is connected by railways with all parts of Germany; steam packets ply regularly on the Main. The Constituent Assembly, elected in 1848 to frame a constitution for Germany, held its sittings in Frankfurt, and chose the Archduke Johann of Austria as Lieutenant-General of the Empire. The archduke was solemnly installed in office July 11, 1848. In April following the assembly elected the king of Prussia as hereditary emperor of Germany, an honour which the king declined, as well as a constitution which they had framed for his own kingdom. Austria also protested against all the decisions of the assembly; its representatives withdrew, those of Prussia were soon after recalled, and the assembly on the 30th of May, 1849, agreed to transfer its sittings to Stuttgart.

FRANKFURT (an-der-Oder), capital of the circle of Frankfurt in the Prussian province of Brandenburg, is pleasantly situated on the left bank of the Oder, in 52° 22' N. lat., 14° 46' E. long., at an elevation of 116 feet above the level of the sea, and at a distance of 50 miles by railway E. by S. from Berlin. It is regularly built, and encircled by walls with towers, and a ditch. Outside the walls, which are pierced by five gates, are three suburbs, one of which, the Damm, situated on the opposite bank of the Oder, is joined to the town by a wooden bridge. The population numbers about 26,000. Frankfurt has six Protestant churches, a Roman Catholic church, and a synagogue. The Upper church has some fine windows of painted glass. The university, founded here in 1506, was transferred to Breslau in 1810. Frankfurt possesses a gymnasium with a library, a grammar school, a school of midwifery, an orphan asylum, two hospitals, a house of correction, and a free school for 300 soldiers' children, founded in memory of Leopold, duke of Brunswick, who lost his life here in April 1785, while endeavouring to save a man from drowning. A monument is erected to him at the eastern end of the bridge across the Oder. In front of the Guben gate is a triangular pyramid in memory of Kleist, the poet, who fell in the battle of Kunersdorf in 1759, when Frederick the Great was defeated by the Austrians. The manufactures of the town consist of woollen and silk fabrics, mustard, brandy, tobacco, sugar, gloves, stockings, linen, leather, &c.; its trade is extensive, and much facilitated by its position on a navigable river, by canals, and railways. Three annual fairs, instituted in 1253, are held in February, July, and November, and are well frequented, particularly by Polish dealers. At these fairs, woollen, cotton, linen, and silk manufactures, feathers, wool, hardware, iron, porcelain, glass, &c., are among the principal articles sold. The inhabitants are engaged also in the navigation of the Oder, on which above 2000 vessels and craft annually pass Frankfurt.

FRANKLIN. [MISSOURI.]

FRANZENBRUNN. [EGER.]

FRASCA'TI, a town of the Campagna, 8 miles E.S.E. from Rome, is situated on the north-west slope of the Tusculan Mount. On the summit of the mountain, which is 2000 feet above the sea, and about two miles above Frascati, are the ruins of ancient Tusculum, a town of Latium, built long before Rome, and often mentioned in Roman history. After the subjection of Latium to Rome it was governed as a municipium. Several distinguished Roman families, such as the Mamilia and the Porcia, came from Tusculum. It was a strong place both from its position and the solidity of its polygonal walls, which enabled it to resist the attack of Hannibal. Tusculum continued to exist after the fall of the empire, and was governed by counts till the end of the 12th century. It was the occasional residence of several popes, among others of Alexander III.,

who here received the ambassadors of Henry II. to assert the king's innocence of the murder of the Archbishop of Canterbury. In 1169 the Tusculans fought and defeated the Romans, but in 1191 the Romans took Tusculum and destroyed it. Remains of the walls of houses and of the citadel are still extant, as well as a small theatre and a curious crypt with a kind of arched roof of primitive construction. The hill of Tusculum is volcanic, and is separated from the central mass of the Alban Mount by the Alban valley, through which runs the Via Latina.

After the destruction of Tusculum the inhabitants built themselves huts on the lower slope of the hill towards Rome, and covered them with 'frasche,' boughs of trees, from which the modern town has taken its name. It has some good buildings, 5000 inhabitants, and is a bishop's see. Many of the older houses date from the 13th or 14th century: the church of San Rocco, formerly the cathedral of San Sebastian, and still called Duomo Vecchio, dates from 1309. The principal modern building, the cathedral of San Pietro, was completed in 1700. It contains a monument to Cardinal York, who was bishop of Frascati, and another erected by the cardinal in memory of his brother, Prince Charles Edward, the young Pretender, who died in Frascati, January 31, 1788. The air is wholesome, the place being above the region of the malaria, and the country around is planted with fine trees. But its villas form the great attraction of Frascati, it being a place of resort of the Roman nobility and cardinals in the summer and autumn. One of the most splendid of these residences is the Villa Aldobrandini, called also Belvedere, adorned with numerous fountains, and water-works, and paintings. The villas Taverna and Mondragone, belonging to the Borghese family; the Villa Bracciano, with frescoes by Dominichino; the Villa Conti, with its fine groves; the Villa Falconieri, and others, are also worthy of attention. The site of the Tusculanum of Cicero is not exactly known: some believe it to have been near Grotta Ferrata, on the road from Frascati to the Alban Lake; others place it near La Rufinella, on the hill of old Tusculum. The Villa Rufinella formerly belonged to Lucien Bonaparte. On the slopes of a hill within the grounds are planted in box the names of celebrated ancient and modern authors, constituting the Parnassus of the prince just named. There are remains of ancient buildings all about this neighbourhood. Near Frascati is the Canaldoli, one of the finest and most beautifully-situated monasteries in Italy. Grotta Ferrata is an abbey of Basilian monks, established in the 11th century, who retain the Greek liturgy. The church is adorned with fine frescoes by Dominichino, and the convent has a library with many Greek manuscripts.

• (Valéry, *Voyages en Italie*; Mattei, *Memorie Storiche dell' antica Tuscolo oggi Frascati*; Gell, *Topography of Rome*; *Handbook for Central Italy*.)

FRASERBURGH, Aberdeenshire, Scotland, a market-town and seaport in the parish of Fraserburgh, is situated on the east coast of the county, in 57° 44' N. lat., 2° 0' W. long., distant 42 miles N. from Aberdeen. The town is built on the west side of the Bay of Fraserburgh, which is bounded S.E. by Curnbulg Point and N.W. by Kinnaird's Point, on which there is a lighthouse. The population of the burgh in 1851 was 3093. The town took the name of Fraserburgh from Sir Alexander Fraser of Philorth, who in 1613 obtained for it a charter as a burgh of regality. The streets are generally wide and clean, and the houses substantial, and many of them elegant. The town-house, the market-cross, and the tolbooth were erected by Sir Alexander Fraser. In addition to the parish church there are an Episcopal chapel, a Free church, and a chapel for Independents. Fraserburgh is the head-quarters of an extensive fishing district. Fishing begins in July and lasts till September, and during its continuance the population of the town is augmented by some 1200 persons. The harbour is good, but not sufficiently capacious for the accommodation of the vessels which resort to it in the fishing season. The bay affords good anchorage. Rope and sail making are carried on. The exports include barley, oats, and potatoes, cattle, dried and pickled cod, and herrings. Freestone is quarried in the parish; the piers and some of the houses are built of it. There are in the parish the ruins of two ancient chapels, one of which belonged to the Cistercian abbey at Deer. At the west end of the town is an old quadrangular building of three stories, designed by Sir Alexander Fraser for a college; he had obtained a charter from the crown in 1592 for the institution and endowment of a college and a university, but the plan was never carried into effect. There are in the town a savings bank and a parochial library. The fishing village of Broadsea adjoins Fraserburgh on the west.

FRAUENREUTH. [BERCHTESGADEN.]

FRAUSTADT. [POSEN.]

FREDERICKSBURG. [VIRGINIA.]

FREDERICKSHALL, FREDERICKSTADT, and FREDERICKSVAERN. [AGGERHUUS.]

FREDERICKTOWN. [MARYLAND; NEW BRUNSWICK.]

FREEBRIDGE LYNN, a hundred in the western division of the county of Norfolk, which has been constituted a Poor-Law Union. The hundred of Freebridge Lynn is bounded N. by the hundred of Smithdon, E. by the hundreds of Gallow and Launditch, S. by the hundreds of Clackclose and South Greenhoe, and W. by the hundred of Freebridge Marshland. Freebridge Lynn hundred comprises 34

parishes, with an area of 83,667 acres, and a population in 1851 of 14,536. Freebridge Lynn Poor-Law Union, which is not so extensive as the hundred, contains 32 parishes, with an area of 64,738 acres, and a population in 1851 of 13,468.

FREETOWN. [SIERRA LEONE.]

FREIBERG, a mining town in the kingdom of Saxony, is situated on the Münsbach, a feeder of the Mulde, on the northern slope of the Erzgebirge Mountains in 50° 55' N. lat., 13° 21' E. long., about 25 miles S.W. from Dresden, and has about 12,000 inhabitants. Freiberg is the centre of administration for the Saxon mines. It is surrounded by walls; the streets are regular, well-built, well-lighted, and paved; and it has a suburb, besides the Freudenstein, or Freistein, an old castle, now used as a storehouse for mining produce. It contains six churches, to which a Roman Catholic church was added in 1831. The High church (once a cathedral) is a fine specimen of the architecture of the middle ages. It contains a handsome monument in memory of Prince Maurice of Saxony, who fell in the battle of Sievershausen in 1553, and another to the memory of Werner, the great mineralogist, who died in 1817. Among the other buildings of note in the town are the town-hall, the high school, and the mining academy, which was opened in 1767, and comprises class and lecture-rooms, Werner's mineralogical collection, a museum of models of mining machines, and a library of 18,000 volumes. Werner and A. von Humboldt studied in the mining academy of Freiberg, which is conducted by seven professors and other teachers. Freiberg has also a number of benevolent institutions, among which are an hospital, an orphan asylum, a house of industry, and infirmaries.

The manufactures consist of gold and silver lace, brass wares, white lead, gunpowder, shot, iron and copper wares, linen, woollen goods, ribands, tape, leather, and laces. There are several large breweries in the town. In the vicinity are about 130 mines of silver, lead, copper, cobalt, &c. About three miles from the town at Halsbrücke are the extensive amalgamation and smelting works for this rich mining district.

FREIBURG (Freyburg), an archiepiscopal town in the southern part of the grand-duchy of Baden, is situated on the Treisam, 83 miles by railway S. by W. from Carlsruhe, 40 miles N. by E. from Basle, stands at an elevation of about 940 feet above the level of the sea, in 47° 59' N. lat., 7° 53' E. long., and has a population of about 16,000 including the suburbs. The town is surrounded with walls pierced by three gates, a fourth having been removed. It is in general open and well built, the 'Kaiserstrasse' in particular being broad, and lined with handsome houses. Among the public edifices are the former house of assembly for the states, which is at present the archbishop's palace; the grand duke's palace, on the site of the former citadel; the government buildings; the edifice containing the courts of justice and post-office; the old and the new university buildings, the latter of which was once a college of Jesuits; the town-hall, museum, granary, theatre, and house of correction. Freiburg has several squares, in the centre of one of which, the fish-market, is a fountain surmounted by a statue of Duke Berthold III. of Zähringen, the founder of the town, represented in the habiliments of his time. Besides three Catholic churches and one Lutheran church, the religious establishments have several churches and chapels attached to them. The most attractive feature in the town is the cathedral or minster, probably the most beautiful and perfect specimen of gothic architecture in Germany. It is a work of the 12th century, begun in 1122, and not completed until 160 years afterwards; the tower, which is 386 feet high, is peculiarly remarkable for its lightness and elegance. Though not quite so lofty as St. Stephen's at Vienna, or the cathedral at Strasbourg, it is deemed to excel both in purity of style, symmetry of proportions, and boldness of construction. The structure is built of red-sandstone, in the form of a cross, and contains several windows of finely-painted glass, sarcophagi of the dukes of Zähringen, and paintings by Grien, Holbein, and other artists. Holbein's Assumption of the Virgin, which forms the altar-piece, is esteemed his masterpiece.

The university, which was founded under the name of 'the Albertina' by the archduke Albert VI. of Austria, in the year 1454, enjoys endowments to the extent of upwards of 2500*l.* a year, and is possessed of a library of more than 100,000 volumes, as well as a museum, an anatomical theatre and clinical establishment, a botanic garden, &c. It is likewise supported by an annual grant of about 3400*l.* from the States. The university of Freiburg is famous as a school of Catholic theology. There are also a gymnasium, a normal school, a civic school, many private seminaries, several Sunday and holiday schools, and a garden of industry, where the management of forests, orchards, and gardens is taught. There are three hospitals and an orphan and foundling asylum.

The manufactures of Freiburg consist of leather, chicory, paper, sugar, starch, tobacco, soap, bells, musical instruments, &c. There are also bleaching and dye-works.

Freiburg was founded by Berthold III. in 1118; it was formerly the capital of the Breisgau. The fortifications were levelled by the French in 1754. The archbishop of Freiburg is the head of the Catholic Church in the grand duchy of Baden; his province includes the whole of the grand duchy, the principalities of Hohenzollern, and the bishoprics of Mainz (in Hesse-Darmstadt), Fulda (in

Hesse-Cassel), Rottenburg (in Wiirtemberg), and Limburg (in Nassau). A statue was erected in memory of Berthold Schwartz, the inventor of gunpowder, in Augustin Platz, near St. Martin's church, in 1853.

FREISTADT. [ENS.]

FREJUS. [VAR.]

FREMANTLE. [WESTERN AUSTRALIA.]

FREYBURG, or FRIBURG, one of the Swiss cantons, is bounded N. and E. by the canton of Bern, S. by Vaud, and W. by Vaud and the Lake of Neuchâtel, which divides it from the canton of Neuchâtel. Its length from north to south is 40 miles; its breadth, which is very unequal, is about 28 miles in the widest part. The area is 563 square miles; and the population in March 1850 was 99,805, of whom 87,753 were Catholics, 12,133 Calvinists, and the remainder foreigners and Heimathlosen. The south part of the canton is very mountainous, being covered by offsets from the great Alpine chain which divides the waters that fall into the Rhône, and the Lake of Geneva from those which flow into the Aar. The canton of Freyburg belongs to the basin of the latter river, being watered in its length from south to north by the Sarine or Saane, one of the principal affluents of the Aar; the general slope of the ground is towards the north and north-west, down to the plains which border the lakes of Morat and Neuchâtel. There is but a very small fraction of the south-west part of the canton which slopes southward towards the Lake of Geneva. The highest summits in the south part of the canton, and on the left bank of the Sarine, are the Moléson, 6700 feet, and the Dent de Jaman on the borders of Vaud, which is 4500 feet. On the right or east bank of the Sarine the Dent de Branleire is above 7700 feet, and Mount Berra is about 5300 feet high. The Sarine or Saane rises near the head of the Saletsch Pass, the most western pass in the Bernese Alps in the canton of Bern. It flows first northward through the valley of Gsteig; but on approaching the village of Saanen, or Gessenal, it runs a few miles westward in the canton of Vaud, and then resuming a northerly direction it traverses the canton of Freyburg from south to north, passing Gruyère and Freyburg. A few miles below Lampen where it re-enters the canton of Bern, it joins the Aar on the left bank after a rapid course of about 79 miles. The Charmey, one of its feeders on the right bank, waters the valley of Bellegarde, which opens upon the Sarine a little below Gruyère. Besides the Sarine and its affluents, which drain more than two-thirds of the territory of Freyburg, the Broye, which has its source on the borders of Vaud, runs northward, crossing the western part of the canton, enters the Lake of Morat, and issuing from it at the opposite end, empties itself into the Lake of Neuchâtel.

The climate is cold in winter and subject to sudden changes of temperature in the spring and autumn. The principal productions of the soil are wheat, rye, barley, potatoes, and oats. There is good pasture, both natural and artificial. Vines and other fruit-trees are grown in the lowlands near the lakes of Morat and Neuchâtel, where the climate is milder than in the south of the canton. Some tobacco is grown in the same district. Timber from the forests and peat are important products. In common years the canton produces sufficient corn for its own consumption. The principal wealth of the greater part of the country consists in its pastures and its cows, sheep, goats, pigs, and horses, which are very numerous in proportion to the area of the canton, and of excellent breed, especially the horses and cattle, which are the best in all Switzerland. Dairy husbandry is much attended to and well understood. The cheeses made in the canton of Freyburg are among the best in Switzerland. The cheese properly called Gruyère is made on the left bank of the Upper Sarine and in the valley of the Charmey, in the south part of the canton. It is estimated that about 40,000 cwt. of cheese is made yearly; and of this quantity the valleys of the Upper Sarine and the Charmey furnish the greater part.

The manufactures are considerable—straw-plat, leather, kirsch-wasser, tobacco. There are some unimportant iron-works, glass-works, and paper-mills. Coals are dug in the valley of Bellegarde, and are sold at Freyburg. Turf is cut in the marshes of Morat and elsewhere.

The game consists of hares, chamois, red partridges, woodcocks, wild ducks, &c. Wolves and bears have become very rare, and stags and boars are extinct. The rivers and lakes abound with trout, carp, pike, tench, and eels.

The natives of the canton are generally robust and well made. The Roman Catholic is the only religion of the canton, with the exception of the district of Morat, the inhabitants of which are Calvinists. Elementary education is given in above 200 schools. There is also a normal school for teachers. Before the late revolution in Switzerland the college of Freyburg, under the direction of the Jesuits, was attended by about 500 students; a boarding-school was kept by the Jesuits, and a grammar-school also at Freyburg, founded in 1835. Since the expulsion of the Jesuits in 1847 we know not how these establishments are regulated. There is a Protestant college at Morat. Over the greater part of the canton a French patois is spoken; in the valley of the Upper Sarine the language spoken is a dialect of the Romansche; in the northern and eastern districts, which approach Bern, a Swiss-German dialect is spoken, but educated people everywhere speak French. The territory composing the canton of Frey-

burg, together with the neighbouring parts of Bern, was known in the middle ages by the name of (Edland, Uechtland, and Desertum Helvetiorum, the country having been utterly desolated by the irruptions of the Alemanni and other barbarous hordes, after the fall of the Western empire. It formed part of the kingdom of Burgundy till the 11th century; it was afterwards governed as a fief of the empire by the hereditary dukes of Zähringen, who built Freyburg ('free town'), to which they gave a municipal government, independent of the neighbouring petty feudal lords. After the extinction of the house of Zähringen, Freyburg passed under the house of Kyburg, and from this into that of Habsburg. Rudolph of Habsburg, the founder of the Austrian dynasty, confirmed and increased the municipal liberties of Freyburg in 1274. At that time the territory of Freyburg extended only about eight miles round the town, and is still known by the name of 'alto landschaft,' 'the old country.' In 1450 the Duke Albrecht of Austria, being unable to give assistance to Freyburg, which was assailed by Bern and the other Swiss cantons, released the citizens from their oath of allegiance, and they remained for some years under the protection of the dukes of Savoy. In the war with Burgundy it took the part of the Swiss against Charles the Bold, in recompense for which it was received into the confederacy as a sovereign canton or state in 1481. By that and the subsequent wars Freyburg increased its territory to its present extent, at the expense of the neighbouring lords and of the dukes of Savoy.

The government, which was originally a popular municipality like that of Bern, all the burghers having the elective franchise, became for a long time aristocratic. In December 1830 a new constitution was framed, by which all natives of the canton aged 25, and who are neither servants nor in the service of a foreign state, have the right of voting in the primary assemblies, which choose the electors in the proportion of 1 for every 100 souls. The electors assemble in the head town of their respective districts, forming what is called the electoral colleges, which elect the members to the Great Council of the canton in the proportion of 1 for every 1000 souls. The members are appointed for nine years. The Great Council holds two ordinary sessions every year, in May and November. It appoints the council of state, or executive, composed of 13 members for eight years, and the court of appeal of 13 judges for life. The avoyer is president of the council of state, and is elected by its members for two years. Under the new constitution for the general government of Switzerland Freyburg returns 5 members to the National Council. [SWITZERLAND.] The canton is divided for administrative purposes into 13 districts. The capital, FREYBURG, is the subject of the next article. Among the other towns the more important are here noticed.

Morat, on the right bank of the Lake of Morat, has about 1600 inhabitants, a college, a public library, an hospital, an orphan asylum, and a castle, built in the 13th century. Near it is a pyramid raised in 1822, in commemoration of the battle against Charles of Burgundy, the old chapel and ossuary having been destroyed by the French in 1798.

The *Lake of Morat*, in German Murtensee, is about 5 miles long and 2 miles broad, and about 160 feet in its greatest depth; it abounds with fish. It is subject to floods, at which times it overflows the neighbouring plains, which are mostly towards the north, in the direction of the Lake of Bienné. It is separated by a flat tract of land from the Lake of Neuchâtel, into which it discharges its superfluous waters by the Broye.

Bulle, midway between Freyburg and Vevey, being about 18 miles from each, is the chief dépôt for Gruyère cheese. It has a population of 1500.

Gruyère, a small decayed place of under 400 inhabitants, is built a short distance from Bulle, near the left bank of the Sarine, and on a hill, the top of which is crowned by one of the best preserved feudal castles in Switzerland.

The projected railway from Bern to Geneva skirts the south shore of the lake, and passes the town of Morat.

FREYBURG, or FRIBURG, the capital of the canton of Freyburg, in Switzerland, is built on several steep hills on both banks of the Sarine, and its appearance is extremely bold and picturesque. Part of the houses rise along the slope of the hills, others are supported by massive substructions and buttresses, and separated from each other by deep ravines. Naked rocks, gardens, trees, and green fields are seen intermixed with churches, convents, and other buildings, the whole being surrounded by ramparts flanked with towers, and pierced by fortified gates. Four bridges join the two banks of the Sarine, one of iron and two of wood; the fourth, an iron suspension-bridge, erected in 1834, is one of the finest in the world; its length is 905 feet, its breadth 28 feet, and it stands 174 feet above the level of the river. The other remarkable structures in the town are—the town-house, built in the 16th century, in which the Great Council meets; the collegiate church of St. Nicholas, built in the 12th century, and famous for its curious bas-relief of the Last Judgment, and for its splendid organ, built by a native of the town; the college of St. Michel, founded by the Jesuits, with an establishment for boarders, in which several hundred young men are educated; the monastery of the Ursulines, who keep the female elementary schools; the lyceum, opened in 1805, annexed to which are collections of medals, mineralogy, zoology, &c.;

the chancellery, in which the council of state sits, and the archives and other offices of government are kept; the Franciscan convent, of which Father Girard, the zealous promoter of popular education, was an inmate; and several other convents and churches. The population of the city is about 8500. The manufactures are few: the principal are woollens, pottery, hardware, leather, tobacco, and straw-hats; there are also sugar refineries, dye-houses, two printing-presses, and several booksellers' shops in the town. Freyburg has several libraries and learned societies, public baths, a prison, a diocesan school, museum, an hospital, and a savings bank. A market is held every Saturday, besides five cattle fairs in the course of the year. Freyburg lies 16 miles S.W. from Bern, and 32 miles N.E. from Lausanne. It is the residence of the bishop of Lausanne.

FRIENDLY ISLANDS are situated in the Pacific, between 18° and 23° S. lat., 173° and 176° W. long. They consist of three separate groups, which contain several hundred islands: 15 of them rise to a considerable height, and 35 attain a moderate elevation. The remainder are low. The most southern group, the Tonga Islands, were discovered by Tasman in 1643. The largest of them, Tonga, is about 20 miles long and 12 miles wide in the broadest part. It rises about 80 feet above the sea, and its summit is a level plain. On the northern side an excellent roadstead was discovered by Cook. The population of the island is about 8000. The larger among the other islands of the group are Boscawen and Keppel islands. The central group, called the Hapai islands, is composed of a considerable number of small islands. The largest of them is Lefuoga, about 8 or 9 miles long and 4 miles wide. All these islands are low and very fertile. The most northern group is formed by the Vavaoo Islands, which are likewise small and low, except the island of Vavaoo, which is about 36 miles in circumference; its surface is uneven, and on the northern side it rises to a considerable elevation. On its southern side is Curtis Sound, or Puerto de Refugio, one of the safest and most spacious harbours in the Pacific. The most northern island belonging to this group is Amargure, or Gardner Island, in 17° 57' S. lat. The most southern of the Friendly Islands is Pylstuart, in 22° 26' S. lat.

These islands are remarkable for the mildness of their climate, their fertility, and the great variety of their vegetable productions. For food there are cultivated and planted cocoa-nut trees, bread-fruit trees, bananas, yams, sugar-cane, and the sago palm; the Chinese paper mulberry-tree is cultivated for its inner bark, from which the clothing of the inhabitants is made. Hogs and dogs are numerous, and both are used for food. Fish is plentiful, and also different kinds of birds, as fowls, pigeons, parrots, and the tropic bird, whose beautiful feathers here, as in other islands, are used as an ornament.

Cook called these islands the Friendly Islands, because he was received by the inhabitants in a very friendly manner; but it is now well known that they intended to kill him and seize his vessels. They are a very industrious people, and pay great attention to the cultivation of the soil. They apply themselves also to fishing, and evince much ingenuity in the manufacture of their clothing and of their domestic utensils. The inhabitants belong to the Malayan race, and speak a language which does not materially differ from that spoken in many other islands of the Pacific. The political constitution is a despotism, supported by an hereditary aristocracy. The number of the inhabitants is estimated to amount to 200,000. Many of the inhabitants have been brought to profess Christianity by English missionaries, who hold important depôts on the principal islands.

(Cook, *Voyages*; Mariner, *Account of the Tonga Islands*; *Missionary Reports*.)

FRIESLAND (*Vriesland*), the most northern province of the kingdom of Holland, situated between 52° 40' and 53° 28' N. lat., 5° 24' and 6° 20' E. long., is bounded N. by the North Sea, E. by the provinces of Groningen and Drenthe, S.E. by that of Overijssel, W. and S.W. by the North Sea and the Zuiderzee. Foreigners sometimes call it *West Friesland*, in order to distinguish it from *East Friesland* in Hanover. The area is 1261 square miles, and the population on the 31st December 1852 was 255,915.

The surface, as well as the soil itself, are so identified in character with those of the province of North Holland that there cannot be a doubt that they formed one and the same country antecedently to the convulsion out of which the Zuiderzee, which now separates them, arose. There are many parts of Friesland which, like North Holland, lie lower than the level of the sea, and are protected from the storms of the North Sea by costly artificial dykes. The whole land is flat and intersected by canals; nor is there an eminence throughout it excepting some mounds, here called 'terpen,' on which the ancient Frisians were accustomed to take refuge in seasons of marine inundations. In all parts there are deep swamps and marshy bogs, between which, especially in the south and east, tracts of sand and moor, or low meagre woodlands, occasionally interpose. The canals, which are frequently higher than the land they drain (the water being pumped up into them), and have enabled human industry to bring it under cultivation, mostly join the great canal, which begins at Haarlingon, a port on the west coast, and leads through Franeker, Leeuwarden, and Dokkum to Groningen. Near Leeuwarden this canal is joined by another, which runs southward to Sneek whence the water communication is continued by the junction of several small lakes to the

Zuiderzee at Lemmer. A great part of the surface is below the level of the sea, and the provincial administration of the water-stant exercises a watchful superintendence of the dykes, sluices, and canals, for the maintenance of which the land-owners of the province pay an assessment called a dyke tax. The lowlands near the coast, particularly in the north-west, are mostly appropriated to the feeding of cattle; and the interior of the province, where the ground is somewhat more elevated, to the growth of corn. Friesland has no river of any note, the principal are the Laver which falls into the Laver-see, a small inlet of the North Sea, on the north-east coast; the Boorn in the centre, and the Kuinder and the Linde, which unite just before their entrance into the Zuiderzee on the south of the province: the first only is navigable for small craft; the others are broad rivulets of inconsiderable lengths. There are a multitude of small lakes or ponds, the majority of which have been formed by extensive diggings for turf, and are well stocked with fish. Of late years many of them have been drained either in part or wholly, and converted into polders. The principal occupation of the people is breeding cattle, dairy farming, growing corn, fishing, and digging and preparing turf for fuel. The stock of cattle is very numerous; above 5,000,000 lbs. of butter and 1,000,000 lbs. of cheese (one kind of which called Kanter-kaas is in high repute) are annually exported, but the quality generally is inferior to the cheese of the western provinces of Holland. There are numerous flocks of sheep, but they are of an inferior breed, and the wool is coarse. A great quantity of lambs are exported; and a considerable number of horses are bred: they are strong limbed and stand high, and are much sought after as carriage horses, but like most Dutch horses they are soft in the hoof. Swine are reared everywhere, and fed with a view to the production of lard rather than for meat. The agricultural produce of Friesland is more than adequate to its consumption, and some corn is exported: the chief articles of growth are wheat, barley, rye, peas, beans, flax, hemp, potatoes, buck-wheat, and clover-seed, which last is exported largely. One of the effects of the extensive cultivation of clover is that the honey of Friesland enjoys great repute. Apples and plums are extensively grown. There are few manufactures: they include wooden clocks, woollen stuffs, linen, sailcloth, salt, paper, potatoe starch, spirits, chicory, ironmongery, and tiles. Ship-building is also carried on. Steamers ply between the towns on the west coast and Amsterdam, and small iron steam-boats ply on the canal from Lemmer to Sneek and Leeuwarden. The province is traversed by good roads.

The inhabitants are principally Calvinists; about one-ninth of the population are Catholics. Their language has a greater similarity to the German than the Dutch: in this respect indeed, as well as in their dress and manners, they have retained much that was common to their ancestors, the Frisians. In the larger towns Dutch is spoken. Elementary instruction is afforded by nine special charity schools, and in 264 other schools, in which poor children are taught gratuitously. The number of savings banks in the province is six. Charitable institutions are very numerous, including no less than 53 hospitals, 7 workshops for employing poor artisans, and numerous other institutions capable of affording relief to several thousand persons. There is also a colony, called a 'Society of Benevolence,' for the employment and maintenance of orphans, foundlings, and beggars.

Friesland is divided into three circles, Leeuwarden in the north, and Sneek and Herrenveen in the south. The chief town of the province is LEEUWARDEN. *Bolswart*, a walled town, 8 miles S. from Leeuwarden, has 4300 inhabitants, who manufacture woollen goods, and trade in butter and other agricultural products. *Franecker*, on the canal from Leeuwarden to Haarlingen, is an old well-built town, with 5200 inhabitants, a high school, a public library, botanic garden, and tile manufactories. *Haarlingen*, a fortified sea-port on the Zuiderzee, 16 miles W. from Leeuwarden, has a population of about 8000, five churches, a town-hall, and manufactures of sailcloth, gin, bricks, paper, salt, &c., and a brisk foreign trade, especially to England, whither steamers convey butter, cheese, fowls, vegetables, cattle, and wool. *Dokkum*, a well-built town, with 3800 inhabitants, two churches, a handsome town-hall, surmounted by a high tower; manufactures of beer, brandy, salt, &c., and a brisk trade in butter and cheese, is situated on the ship canal above mentioned, 13 miles N.E. from Leeuwarden, and 6 miles W. of Laver Bay. *Sneek*, situated on the canal between Lemmer and Leeuwarden, has two churches, about 7000 inhabitants, a town-hall, manufactures of pottery, linen, deals, oil, &c., and much trade in corn and butter. The district around Sneek is very marshy. *Stavoren*, a decayed sea-port town, on the most south-westerly point of Friesland, once the residence of the Frisian kings, is now a mere village. *Workum*, a port on the Zuiderzee, 13 miles S. from Haarlingen, has about 3200 inhabitants, chiefly engaged in the coasting trade and the fisheries. *Herrenveen*, a market-town, with about 4000 inhabitants, 17 miles S.E. from Leeuwarden, is built in the midst of turf moors.

The islands Schiermonikoog, Ameland, and Terschelling, which lie off the north coast, belong to the province of Friesland. *Terschelling*, the largest of these islands, is about 16 miles long and 3 miles wide; it has a population of about 2500, who are engaged in fishing and agriculture. Ameland is the subject of a separate article. [AMELAND.] *Schiermonikoog* is 6 miles long and 2 miles broad; its population, which is under 900, is engaged chiefly in fishing. All these islands

rest upon banks which have but little water on them, being apparently portions of the mainland submerged, intersected however here and there by narrow intricate channels of considerable depth.

Friesland is part of the territory inhabited by the ancient *Frisians*, a people of Germany, who formed part of the nation of the *Ingvones*. They were divided into *Frisii Minores*, who inhabited the lands north of the island of the *Batavi*—the present provinces of *Oberyssel*, *Gelders*, and *Utrecht*, and the greater part of the province of *Holland*, inclusive of the *Zuiderzee*, which at that time was mostly dry land; and the *Frisii Majores*, who inhabited the land between the *Yssel*, *Ems*, and the country of the *Bructeri*—that is, the present provinces of *West Friesland* and *Groningen*. The old *Rhine* separated them from the *Batavi*, and the *Ems* from the *Chauci*. According to *Tacitus* ('Ann.' ii. c. 24) they were the most steadfast allies whom the Romans possessed in this quarter, but upon the Roman governor *Oleumius* making an attempt (A.D. 28) to treat them as subjects, they rose in arms, massacred and expelled the Romans, and razed with one exception all their strongholds in these parts. (*Tacit. 'Ann.'* iv. 72, 73, xiii. 54.) In the 4th and 5th centuries they were in possession of all the territory along the coast of north-western Germany from the *Schelde* to the *Elbe*, and they allied themselves with the *Saxons*, whom they aided in their conquest of *Britain*. *Pepin*, major-domo of the *Franks*, put *Radbod* their king to flight, and wrested their western lands from them between the mouths of the *Schelde* and the *Rhine*. *Charlemagne* brought the eastern *Frisians* under subjection, and appointed dukes over them, whose office subsequently merged into that of chieftain (*hauptling*). The result of continued struggles for the mastery between these chieftains, who called themselves counts, was, that count *Edzard* prevailed, and established himself in that part called *East Friesland* in 1458. In 1657 count *Enno* acknowledged it as a fief of the empire under the emperor *Ferdinand*, and was raised by him to the dignity of a sovereign prince. The last prince died in 1744, and by virtue of an imperial grant in 1690, *Prussia* took possession of *East Friesland*. This province was wrested from her in 1804, and transferred to *Holland*; in 1810 it became a province of the *French empire*; in 1813 *Prussia* recovered it, and in 1815 she ceded it to *Hanover*.

The ancient *Frisians* resembled the *Germans* in their habits and mode of living, and according to *Tacitus*, the only tribute they could afford to pay the *Romans* consisted of skins. Their chief occupations in ancient as in modern times was agriculture and cattle breeding.

(*Tacitus, Annals*; *Wiarda, History of East Friesland*.)

FRIESLAND, EAST. [AURICH.]

FRISCHE HAF, a large shore-lake in the north of *Prussia*, communicating by a narrow strait with the *Baltic*, and lying to the south of the *Gulf of Danzig*, from which it is separated by a long narrow spit of land called the *Frische Nehrung*. Its length from north-east to south-west is about 60 miles; its breadth varies in different parts between 4 and 12 miles; and it occupies an area of about 310 square miles. At the north-eastern extremity of the *Frische Nehrung*, opposite to *Pillau*, there is a narrow strait, 12 feet deep and 3000 feet wide, called the *Gatt*. This passage was formed by an inundation of the waters of the *Haff* in the year 1510. In consequence of the shallowness of water in the *Frische Haff*, particularly in summer, no large vessels can navigate it, and *Pillau* is therefore the port both of *Königsberg* and *Elbing*, cargoes being conveyed to and from these towns in lighters. Among the numerous streams which find an outlet in this *Haff*, are the *Pregel*, *Frising*, *Passarge*, *Bauke*, and two arms of the *Vistula*. That the *Frische Haff* is not an inlet of the *Baltic*, as it is sometimes called, is sufficiently proved by the name, which is descriptive and means 'fresh-water sea.'

The *Frische Nehrung* projects for about 40 miles along the north shore of the *Frische Haff*. Its widest part is hardly 3 miles across, but the general breadth is under a mile. The portion of it west of the *Gatt* belongs to the government of *Danzig*, and is in parts fertile, but generally a hungry waste with a few hamlets inhabited by fishermen. On the part east of the *Gatt*, which belongs to the government of *Königsberg*, are the port of *Pillau* and the little town of *Fischhausen*, which lies on the north shore of the *Haff*.

FRITH, or FIRTH, a term which corresponds to the 'fjord' of the *Danes* and *Norwegians*, and the 'fiordur' of the *Icelanders*, is properly used to indicate a narrow and deep inlet of the sea, especially in a rocky and elevated coast. It is generally used in *Scotland* for the estuary of the more important rivers.

FRIULI, one of the old provinces of *Venice*, now the most eastern part of *Austrian Italy*, forming the province of *Udine*, is bounded N. by the *Carnic Alps*, which divide it from the valley of the *Drave* in *Carinthia*; N.E. by the *Julian Alps*, which divide it from the valley of the *Save*; N.W. by an offset of the *Carnic Alps*, which divides it from the valley of the *Piave* in the province of *Belluno*; W. by the province of *Treviso*, from which it is divided by the river *Livenza*; S. by the *Adriatic Sea*; and E. by the government of *Trieste* or *Littoral Istria*. The former limits between *Venetian Friuli* and the *Austrian district of Trieste* were marked by the river *Isonzo*, but the boundary is now placed farther west, running from *Palmanova* to the mouth of the *Ausa*, leaving out *Aquileia* and *Grado*, which make part of the circle of *Istria*. [AQUILEIA.] The boundaries of *Italy* on this side are not strongly marked by nature, the chain of the *Alps* does not approach near the sea, and the main

ridge or Julian Alps turns off to the eastward a considerable distance inland between the sources of the Isonzo and those of the Sava. The valleys of the Isonzo also and its tributaries present an opening into Carniola, and the coast of the Adriatic affords an easy access to Italy from Istria, Croatia, and other parts of Illyricum. Many centuries ago Paulus Diaconus and other writers had observed that Italy was most accessible to foreign armies on its eastern frontiers on the side of Illyricum and Pannonia, and this may explain in part, why the Germans have always found greater facility than the French in maintaining a footing in the Peninsula. Accordingly this was the road by which the Goths, the Heruli, the Huns, the Longobards, and the Hungarians, successively invaded Italy.

The name of Friuli is a corruption of *Forum Julii*, a town in the territory of the Carni said to have been founded by Julius Cæsar, on the river Natiso, one of the affluents of the Isonzo, which flows along the western base of an offset of the Julian Alps which bounds Friuli to the north-east. *Forum Julii* was most probably at first a central place of meeting for the neighbouring Carni in their intercourse with the Roman magistrates. It was long an inconsiderable place, but rose to some importance in the later times of the Roman empire. After the fall of Aquileia A.D. 452 it became the capital of Venetia, a dignity which it continued to hold under the Gothic and Lombard rulers of Italy. The date of its destruction is unknown. Excavations made in recent times under the direction of the Canon della Torre have exposed to view numerous remains of antiquity, including foundations of temples, and other public buildings in the neighbourhood of Cividale di Friuli, a small town which marks the ancient site. Alboin, who entered Italy on this side, after conquering the plains of the Po, placed his nephew Gisulfus as governor or Duke of Friuli. From that time Friuli formed one of the principal duchies of which the elective monarchy of the Longobards was composed. When Charlemagne overthrew that monarchy in the 8th century, he left Friuli to its Longobard Duke Rotogaldus, but Adalgisus the fugitive son of Desiderius having re-appeared in Italy with troops, the Duke of Friuli joined him, for which he was attacked by Charlemagne, defeated and executed. Charlemagne then gave the duchy to a Frenchman of the name of Henri, adding to his government the territories of Styria and Carinthia. Henri was assassinated A.D. 799; after which several dukes followed in succession, and among others Berengarius, who obtained the crown of Italy after the extinction of the Carolingian dynasty. Berengarius was assassinated in 924. Mention is made however of subsequent dukes of Friuli till the beginning of the 11th century, when Conrad the Salic, emperor of Germany and king of Italy, gave both the duchy of Friuli and the marquisate of Istria to his chancellor Poppo, patriarch of Aquileia. Poppo's successors held Friuli as sovereign princes, though nominal feudatories of the empire till the year 1420, when the patriarch being at war with Venice, the Venetians conquered Friuli and annexed it to their territories, leaving to the people of the towns their municipal laws and magistrates, and to the feudal lords their jurisdictions, and allowing them to retain a considerable degree of independence. The county of Goriz and the territory of Monfalcone, on the east bank of the Isonzo, belonging to the old duchy of Friuli, were given up to Austria. Friuli remained subject to Venice, till the fall of that republic in 1797, when it was ceded to Austria, by the peace of Campo Formio. It was annexed to the kingdom of Italy in 1806, but was reconquered by Austria with the other Venetian provinces in 1814. It now forms the province of Udine in Austrian Italy.

Friuli, though little visited by travellers, is a very fine and interesting part of Italy. Its length is about 60 miles from the sources of the Tagliamento to the sea, its breadth is about 45 miles, and its area about 2520 square miles. Its population in 1850 amounted to 429,844. The country is watered by numerous rivers, and has considerable plains in its southern part, producing abundance of corn and very good wine, while the northern part is hilly and affords excellent pasture and plenty of game. The climate is healthy, the inhabitants are robust and spirited, and were considered good marksmen in the time of the Venetian rule. They speak a dialect of the Italian, different from the Venetian; on the borders however German and Slavonian are spoken.

The town of *Cividale* or *Cividale di Friuli* stands on the Natiso, in 46° 4' 54" N. lat., 13° 26' 51" E. long., and has a population of above 6000 including its territory. It is surrounded by old walls and a ditch. The Natiso is at Cividale crossed by a long bridge. For a further notice of the province see UDINE.

FRODSHAM. [CHESHIRE.]

FROME, Somersetshire, a municipal and parliamentary borough, market-town, and the seat of a Poor-Law Union, in the parish of Frome, is situated on the small river Frome, a feeder of the Avon, in 51° 13' N. lat., 2° 19' W. long., distant 12 miles S. by E. from Bath, 103 miles S. by W. from London by road, and 115½ miles by the Great Western railway. The population of the parliamentary borough of Frome was 10,148 in 1851. The borough returns one member to the Imperial Parliament. The living is a vicarage in the archdeaconry of Wells and diocese of Bath and Wells. Frome Poor-Law Union contains 29 parishes and townships, with an area of 50,206 acres, and a population in 1851 of 25,325.

Frome was anciently, and is still often designated Frome Selwood,

from its position near the once-extensive forest of Selwood. The situation of the town is pleasant and healthy. The houses are irregularly built, and the older streets are narrow. Of late years new streets and roads have been formed, and new buildings erected, including a market-house, with a handsome public room in the upper part. The town is lighted with gas. A stone bridge of five arches crosses the river at the lower part of the town. The parish church is ancient, but was enlarged and altered, and five painted windows added a few years since. Two new churches have been erected. There are two Independent chapels, two for Baptists, two for Wesleyan Methodists, and a Quakers' meeting-house. Frome possesses a Blue-Coat charity school for 25 boys, an asylum for 25 girls, which clothes, educates, and apprentices the children, and charities for old men, women, and children, which distribute 1300*l.* annually. There are a literary institute with a good library and museum, and a savings bank. A county court is held in the town. The principal manufactures are those of woollen cloth, silk, and hats. There are also manufactures of fur, and of cards used by the wool combers in dressing cloth. Frome has been long noted for brewing ale. The river Frome in its course to the Avon supplies water power to numerous mills. The principal market is held on Wednesday, a lesser one is held on Saturday, and a large one for agricultural stock monthly; fairs are held on February 24th and November 25th.

One of the most active promoters of the recent improvements in Frome, Mr. T. Bunn, has at his own expense planted many thousand trees, and thereby added not a little to the pleasant appearance of the town. There are some very dilapidated remains of a monastery near Frome. In the vicinity are numerous fine mansions.

(Communication from Frome.)

FRONTIGNAN. [HÉRAULT.]

FROSINONE, a province and town in the Papal States. The province is bounded N. and W. by the Comarca di Roma, E. by the Terra di Lavoro in the kingdom of Naples, and S. by the Mediterranean. Its greatest length from north to south, from the ridge north of Anagni to Monte Circello, the most southern point of the Papal States, is about 40 miles; its greatest breadth is about 30 miles. The area is 720 square miles; and the population in 1843 was 141,930. This province includes also in its jurisdiction the small district of Ponte Corvo, which is in the valley of the Liris, within the territory of Naples, but belongs to the Pope. The province of Frosinone consists of four natural divisions: 1, the Valley of the Sacco, which is fertile; 2, the mountains north of it, the *Hernici Saxa*, or Rocks of the *Hernici*, which are mostly barren; 3, the *Monti Lepini*, *Volturni Montes*, south of the valley of the Sacco, which are partly cultivated; and 4, the *Pomptine Marshes*, extending south of the *Monti Lepini* to the sea-coast as far as Monte Circello and Terracina. The province contains 7 towns and 45 *terre*, or villages, having a communal council, and 24 hamlets. (Calindri.) Frosinone, built on a hill above the junction of the river Cosa with the Sacco, is the capital of the province, and the residence of the delegate. The nature of the surface of the province is described under CAMAGNA DI ROMA. The principal towns are here given:—

Frosinone, the ancient *Frusino*, a town of the Volsci, afterwards a Roman colony, is built on a hill at the opening of the valley of the Cosa into that of the Sacco, in the midst of a well-cultivated country, and has about 7000 inhabitants. It gives title to a bishop, and has an old castle, a college, and some remains of an ancient amphitheatre at the foot of the hill. *Ferentino*, on the site of the ancient *Ferentinum*, is an episcopal see, and has 6700 inhabitants. The existing remains of antiquity at Ferentino comprise large portions of the ancient walls, built with vast irregular polygonal blocks of limestone, patched up in many places with Roman masonry; an ancient citadel; and portions of Roman buildings. *Ferentinum* was a city of the *Hernici*. *Alatri*, built on a steep hill above the valley of the Cosa, 7 miles from Ferentino, is an episcopal see, has 8000 inhabitants, and manufactures of coarse woollen cloth. On the summit of the hill is a vast space, 660 yards in circuit, defended by a wall of massive polygonal masonry without cement. The wall of this acropolis is 12 feet thick, and in some places 50 feet high. Two gates lead into the inclosed space, where the cathedral and the episcopal palace have been built. The walls of the citadel, and those of the town itself, are built of hard Apennine limestone, and for massive solidity, and as specimens of the polygonal style of masonry, are unsurpassed in Italy. *Alatri* is the ancient *Alatrium*, another town of the *Hernici*. *Veroli*, an episcopal see, also built on a mountain, has 7000 inhabitants, mostly agriculturists. North of it, near the source of the Cosa, is the fine Carthusian convent and church of Trisulti, built in a wild glen of the Apennines; and near the village of Colleparado is a vast cave in the form of a dome, nearly 200 feet high, full of splendid stalactites. *Anagni* has been already noticed. [ANAGNI.] *Ceccano* has 5500 inhabitants; and *Ceprano*, on the Liris, above its junction with the Sacco, and on the Neapolitan frontier, has 3000. Opposite Ceprano, on the left bank of the Liris, are some ruins, which mark the site of the ancient *Fregellæ*, a Volscian city early colonised by the Romans, distinguished for its fidelity to Rome in the invasion of Hannibal, but utterly destroyed for its rebellion B.C. 125. *Signi*, the ancient *Signia*, is built on the Lepini ridge, with Cyclopean walls of four miles extent, and seven gates, and the remains

of an ancient temple, now turned into a church. The town gives title to a bishop, and has 4100 inhabitants. *Paliano*, a walled town 7 miles N.W. from Anagni, has 3700 inhabitants and a large baronial castle, which was for a long time the residence of the powerful family of Colonna. The above towns, besides several others with between 2000 and 3000 inhabitants, are situated at a short distance from each other, in or near the valley of the Sacco, which is traversed by the road from Rome to Naples, the ancient Via Latina. Many travelers prefer the lower or Appian road by the Pomptine marshes, which is better; but the country is unwholesome and desolate in summer. On the southern slope of the Monti Lepini, looking towards the Pomptine marshes, are *Piperno*, the ancient *Privernum*, with 3700 inhabitants; *Sezze*, the ancient *Setia*, an episcopal see, with 8500 inhabitants; *Cori* (*Corra*), famous for its fine temple of Hercules, its massive Cyclopean walls, and its ancient Latin bridge, population 4300; *Norma*, the ancient *Norba*, destroyed by Sulla, 1500 inhabitants. At the eastern extremity of the Pomptine marshes, on the high road to Naples, is *Terracina*, the ancient *Anxur*, which has some handsome modern buildings, many ancient remains, and 4000 inhabitants. *Terracina* gives title to a bishop.

Beyond the mountains east of Terracina, which form the boundary of the Papal States, is the town and territory of *Pontecorvo*, in the valley of the Liris, and in the midst of the Neapolitan territories, but belonging by an old donation to the see of Rome. *Pontecorvo* has a population of 6500, a cathedral, and a long bridge over the Liris, or *Garigliano*.

FROZEN OCEAN, a term used to indicate the seas surrounding the Poles, in which great masses of ice swim about. It is consequently synonymous with *Icy Sea*, and in some degree also with what are called the Arctic and Antarctic Seas or Oceans, or Polar Seas.

FRYERNING. [ESSEX.]

FUEGO, TIERRA DEL, South America, is the name by which the archipelago is designated which constitutes the southern extremity of America. It includes all the islands south of the Strait of Magalhaens as far as Cape Horn, and lies between 52° 30' and 56° S. lat., 65° and 70° W. long. Staten Island however extends more than a degree farther east, but is divided from the archipelago by the Strait le Maire, which is nearly 20 miles across. The whole length of the archipelago, from Cape Good Success, on Strait le Maire, to Cape Pillar, at the western entrance of the Strait of Magalhaens, exceeds 450 miles. Its greatest breadth, between 65° and 70° W. long., is not less than 250 miles.

Tierra del Fuego consists of one large island, four others of moderate extent, and a great number of smaller islands and rocks. The larger island forms the eastern and north-eastern portion of the group, and occupies considerably more than one half of the whole. It is called King Charles's Southland, and is more than 250 miles long and 170 miles wide; its area is near 20,000 square miles. On the south of it lie the islands of Navarin, which is about 40 miles long and 20 miles wide; and Hoste, which is 70 miles long and 36 miles wide; these islands are separated from King Charles's Southland by Beagle Channel, extending in a straight line, east and west, for 120 miles, and being only from one third of a mile to one mile across. South of Hoste is a group of smaller islands, the most southern of which is the bare rocky mass called Horn Island, the southern point of which, Cape Horn, is considered to be the most southern extremity of America. Navarin Island is separated from Hoste Island by Ponsonby Sound. To the west of King Charles's Southland are Dawson's Island, Clarence Island, and South Desolation. Dawson's Island lies in the widest part of the Strait of Magalhaens. It is a rocky mass, 50 miles long and 6 miles wide; some of the mountains attain an elevation of nearly 3000 feet. The surface of the island generally is covered with trees. Clarence Island is separated from King Charles's Southland by a crooked channel, which towards the Strait of Magalhaens is called Magdalen Sound, but towards the open sea Cockburn Sound, and which affords an easy passage between the Atlantic and the Pacific. Clarence Island resembles Dawson's Island in character, but the shores are more broken by deep inlets, and the mountains are lower, the highest summit hardly attaining an elevation of 2500 feet. The island is about 50 miles long and 12 miles wide. South Desolation, or Staines Island, which forms the most western portion of the archipelago, is separated from Clarence Island by Barbara Channel. It is nearly 100 miles long, and has a mean width of 15 miles. It is rocky and barren, the scanty vegetation being chiefly of stunted trees. Many of the mountains rise above the snow-line.

The northern portion of King Charles's Southland is a plain, on which there are a great number of low hills with a gentle ascent. No trees grow upon it, but there are shrubs and grasses. The shrubs are thinly scattered, but the grasses are abundant, and though of a harsh and dry appearance they feed large flocks of guanaco. Captain Fitzroy considers this plain more fertile than those of Patagonia south of 45° S. lat., and thinks that parts of it may be cultivated. It is at present occupied by natives, resembling the Patagonians. [PATAGONIA.] This plain is almost the only level portion of the country; it being, according to Mr. Darwin, extremely rare to find an acre of level ground: in fact, Tierra del Fuego suggested to him the appearance of a vast mountain region partially submerged. The line

of separation between the plain and the mountain country begins on the Strait of Magalhaens, on the northern shores of Admiralty Sound, and extends thence to the Strait of Le Maire. It is formed by a range of mountains, the loftiest summits of which are Mount Sarmiento (6900 feet) and Mount Darwin (6800 feet), both towards the westward end of the range; eastward the highest points are about 3400 feet. The shores of this mountain region are intersected by deep inlets, some of which form good harbours. Along the valleys is a good deal of timber; and the declivities of the mountains are covered from the water's edge up to 1000 to 1500 feet with dense forests, chiefly of beech (*Fagus betuloides*). Above the forest land are many varieties of dwarf alpine plants.

The mountainous portion of the archipelago comprehends the southern and western part of King Charles's Southland, and all the other islands besides. It presents a succession of hills and mountains, valleys and ravines; the mountains rise in general to 2000 or 3000 feet, and several attain the snow-line, which here is often 3500 to 4000 feet. In this region every valley, and almost every arm of the sea which penetrates far inland, displays glaciers of greater or less size descending into the sea. The shores are intersected by deep but narrow arms of the sea, on whose sides rise the mountains, whose summits for the greatest part of the year are covered with snow, while their steep and rocky declivities are partially overgrown with evergreens. The natives of this country differ considerably from the Patagonians: they are low in stature, varying from 4 feet 10 inches to 5 feet 6 inches in height, and live in a very barbarous condition; they have frequently no other covering than a scrap of hide, which is tied to their waists. Their colour is darker than that of copper, and like mahogany or rusty iron. "The most remarkable traits in the countenance of the Fuegian are his extremely small low forehead, his prominent brow, small sunken black eyes, wide cheek-bones, wide and open nostrils, large mouth, and thick lips." (Captain Fitzroy's 'Voyage of Adventure and Beagle,' ii. 175.) They have no government; and the neighbouring tribes, who speak different dialects, are almost always hostile. Cannibalism is practised. They never cultivate the soil; but, occupying only the sea-shore, they live chiefly on shell-fish. Almost the only vegetable production which they eat is a peculiar fungus (*Cytharia Darwinii*) which grows on the beeches.

The climate of this archipelago is extremely cold. Cloudy weather, rain, and wind prevail throughout the year, and fine days are rare. No season is quite free from frost; the thermometer, even in February, which corresponds to our August, descends occasionally some degrees below the freezing point; but even during the winter the mean temperature is, according to the observation of Captain King, 2½° above that point, though it occasionally descends to 12½° of Fahrenheit. It seems that this peculiarity of the climate is chiefly to be attributed to the high temperature of the sea, the surface of which is never lower than 45° Fahrenheit, at least in the Strait of Magalhaens. The coasts, which are exposed to the influence of the open ocean, have probably a much colder climate, as during the winter they are surrounded by large fields of ice, which at that season occur as far north as 54° S. lat., along the shores of King Charles's Southland. "Fogs are extremely rare on this coast, but thick rainy weather prevails, and strong winds. The sun shows itself but little, the sky even in fine weather being generally overcast and cloudy. A clear day is a very rare occurrence. Gales of wind succeed each other at short intervals, and last several days. At times the weather is settled for a fortnight, but those times are few. Westerly winds prevail during the greater part of the year." ('Admiralty Sailing Directions.') March is the most boisterous month in the year. Lightning and thunder are almost unknown. The level portion of King Charles's Southland suffers rather from want than from abundance of moisture, like the eastern coast of Patagonia.

The zoology of this region is very poor. The *Mammalia* of the land (for whales and seals abound in the seas) is confined to "one bat, a kind of mouse, two true mice, a *ctenomy*s allied to or identical with the *tucutuco*, two foxes, a sea-otter, the *guanaco*, and a deer. Most of these animals inhabit only the drier eastern part of the country, and the deer has never been seen south of the Strait of Magalhaens." (Darwin.) Captain King found parrots and humming-birds on the shores of the Strait of Magalhaens. A few birds, as a white-tufted tyrant, a fly-catcher, a black woodpecker, and a wren, are seen in the interior; but the most common bird is the creeper (*Oxyurus tinianus*). Reptiles are unknown. Insects are far from numerous. Fish abound in the inlets.

A current continually sets along the south-west coast of Tierra del Fuego from north-west towards south-east as far as Diego Ramirez Islands; it then takes a more easterly direction, setting round Cape Horn towards Staten Island, and so off seaward about east-south-east. It sets rather from the land, thereby much diminishing the danger to vessels approaching this part of the coast.

(Fitzroy, *Narrative of Surveying Voyage of H.M.S. Adventure and Beagle*; Darwin, *Journal of Researches*; Hall, *Journal*, &c.)

FUENTE-OVEJUNA. [CORDOVA.]

FUENTERRABIA. [BASQUE PROVINCES.]

FUERTEVENTURA. [CANARIES.]

FULBOURNE. [CAMBRIDGESHIRE.]

FULDA, a province of the electorate of Hesse-Cassel, between 50°

and 51° N. lat., 9° and 10° E. long., is bounded N.E. by Saxe-Weimar, E. and S.E. by Bavaria, and W. by the grand-duchy of Hesse-Darmstadt. Its area is 720 square miles, and its population at the end of 1846 was 140,713. It contains part of the former grand-duchy of Fulda, the principality of Hersfeld, and the seignior of Schmalkalden, which last is an isolated territory lying east of the Werra, and surrounded by Saxe-Gotha, Saxe-Meiningen, and the Prussian share of the county of Henneberg. [ERFURT.] The former territory of Fulda was one of the oldest ecclesiastical endowments in Germany, having been founded by St. Bonifacius and his colleague Sturm, in the year 744; it ceased however to be under episcopal jurisdiction in 751, was revived as a bishopric in 1752, fell to the prince of Nassau-Orange as a secularised principality in 1803, was incorporated by Napoleon with the grand-duchy of Frankfurt in 1810, and in 1815, after being ceded to Prussia, was immediately afterwards made over to Hesse-Cassel. The soil is not so rich as that of other parts of the electorate; the country is intersected by branches of the Rhön and Vogel ranges, and watered by the Fulda, Kinzig, Werra, Haune, and other rivers. It produces corn, flax, potatoes, and timber, in considerable quantities. The rearing of cattle is one of the principal occupations of the inhabitants: among the mineral productions are brown coal, potters'-clay, and small quantities of salt.

The province is divided into the circles of Hersfeld, Schmalkalden, Hünfeld, and Fulda. *Fulda*, the capital of the province, is situated 56 miles N.E. from Frankfurt-am-Main, 52 miles S. from Cassel, at an elevation of 834 feet above the level of the sea; in 50° 34' N. lat., 9° 44' E. long., and has about 10,000 inhabitants. It is built on the banks of the Fulda, which is crossed by a handsome stone bridge. Fulda is a pretty town, with eight suburbs outside its walls. The walls, which are decayed, have seven gates. It contains a market-place and two squares, one of which is a public promenade shaded by rows of lime-trees, an electoral palace and grounds, 11 churches, one of which is Lutheran, a Roman Catholic lyceum, a Protestant high-school, a Forest-school, a training school for teachers, an hospital, public library, &c. Fulda gives title to and is the residence of a Roman Catholic bishop, whose spiritual jurisdiction comprises the whole of Hesse-Cassel. There is a handsome cathedral or minster, built between the years 1700 and 1712, and memorable as the place of sepulture of St. Bonifacius, whose remains were deposited below an altar in an underground chapel in A.D. 755, the year of his death. The manufactures of Fulda consist of linens, woollens, stockings, saltpetre, tobacco, leather, articles in wood, &c. The mineral spring, on St. John's Hill near the town, resembles Seltzer water. About five miles out of Fulda is the electoral country-seat called the Fasanerie, where there are valuable collections of paintings, china, and subjects in natural history. St. Bonifacius's Well, in the midst of some well laid out shrubberies, is also close to the town.

Hersfeld, on the Fulda, is a walled town, with a spacious market-place, a castle, 2 churches, a Calvinist gymnasium, and 6700 inhabitants, who manufacture woollens, drapery, serges, and leather. *Schmalkalden*, on the Schmalkalde, a small feeder of the Werra, is surrounded by double walls, and has 3 suburbs, 2 castles, 2 churches, one Lutheran, the other Calvinist, a gymnasium, and valuable salt-works. The population is about 5500. Large quantities of iron and steel ware are made here, besides salt, stockings, white lead, arms, buttons, pipeheads, woollen yarn, paper, &c. The Protestant princes of Germany formed a league here for their mutual defence in 1531. *Steinbach*, a market village on the Hasel, east-south-east from Schmalkalden, has 2600 inhabitants, who manufacture iron-ware. *Hünfeld*, on the Haune, 10 miles N.E. from Fulda, is a walled town, has two churches, and 2100 inhabitants. *Brötterode*, 7 miles N. from Schmalkalden, an irregularly built town, with 2100 inhabitants, has manufactures of tin, tobacco, brass- and steel-ware, &c.

FULHAM, Middlesex, a village, and the seat of a Poor-Law Union, in the parish of Fulham, is situated on the left bank of the Thames, in 51° 27' N. lat., 0° 12' W. long., distant 4 miles S.W. from Hyde Park Corner. The population of the parish in 1851 was 11,886. The living is a vicarage in the archdeaconry of Middlesex and diocese of London. Fulham Poor-Law Union contains 2 parishes, with an area of 3967 acres, and a population in 1851 of 29,669.

Fulham, now in effect a suburb of London, is the residence of many genteel families, and contains numerous good houses and villas, many of which have been erected within the last few years. A wooden bridge crosses the Thames at Fulham. The Bishop of London has a palace here, the grounds of which occupy an area of nearly 40 acres. The parish church is in the decorated English style. In the church are several fine monuments to the bishops of London and other distinguished persons. There are chapels for Wesleyan Methodists and Roman Catholics. A Free school in Parson's Green Lane is attended by about 80 children. In Fulham Fields is a Roman Catholic school. There is a savings bank. In the parish are extensive market gardens, which are noted for the growth of asparagus. Fulham was the scene of some military movements in the civil war between King Charles and the Parliament. **HAMMERSMITH** is a division, or side, of Fulham parish.

(Lysons, *Enviions of London*; *Communication from Fulham*.)

FUNCHAL. [MADEIRA.]

FUNDY, BAY OF. [NEW BRUNSWICK; NOVA SCOTIA.]

FÜNEN, or **FUHNEN** (in Danish *Fyen*), a 'stift,' or province, of Denmark, consisting of the islands of Fünen, Langeland, Taasing, and several islets. The area is 1284 square miles; the population in 1850 was 187,818. It is a bishop's see; and is divided into the two circles or bailiwicks of Odense and Svendborg, which are subdivided into 15 minor circles, or herreder, and contain 3 earldoms, 4 baronies, 9 towns, and 201 parishes. The soil is a layer of rich loam on a substratum of clay or sand: it has some hills, but no streams deserving the name of rivers. The produce is grain, vegetables, flax, &c., and great numbers of horses and cattle are reared. The whole of the towns are in the island of Fünen, with the exception of Rudkiöbing, in the island of Langeland, a fortified sea-port town, and a place of much trade, with about 2250 inhabitants.

FÜNEN, or **FYEN**, an island situated in the Baltic, between the eastern coast of the duchy of Schleswig and of Jütland, and the western shores of the island of Seeland, from which parts it is separated by the Great and Little Belts, between 55° 2' and 55° 47' N. lat., 9° 46' and 10° 51' E. long. The area is about 1170 square miles (with Langeland 1284): the population was 170,450 in 1850.

The surface of the island is a level, varied by hills in the southern districts, but they never rise above 500 feet. The north-east of the island is deeply indented with bays of the Kattegat, particularly the 'Odense Fiord,' and is more uniform and less wooded than the south. Fünen abounds in small streams, here called *Ans*, and lakes: the most considerable lakes are those of Arreskov, Brendegards, and Jnnlbye. The canal of Odense, which commences at Odense and terminates at Skibhusene, on the Odense Fiord, is about 2½ miles in length, 10 feet deep, and 50 feet in breadth at the surface. There is a good road between Odense and Middelfahrs, but the roads are in general very indifferent.

The climate is damp and variable, but milder than that of Seeland. The soil is in general rich and productive; but agriculture is still in a backward state. The principal crops are barley, oats, and buckwheat, and a considerable quantity of grain is annually exported. Much flax and hemp are raised, and hops are grown somewhat largely. With the exception of potatoes, the cultivation of vegetables is limited, but the orchards are numerous, and an inferior kind of cider is made. About 78,000 acres are occupied by woods and forests, which, with the peat-moors, supply fuel. The Fünen breed of horses is much sought after, and the stock of the island, including that of Langeland, is about 50,000: that of horned-cattle is above 80,000; of sheep, mostly of improved breeds, nearly 100,000; of swine, 25,000. Honey and wax are regular articles of exportation. There is no game besides hares and rabbits, but a great quantity of wild fowl and poultry, especially geese. The fisheries are productive. The only minerals are freestone, chalk, and limestone. There are manufacturing establishments; the peasantry however are industrious operatives under their own roofs, and make their own woollen and linen yarn, stockings, and clothing. In the towns there are now fine woollen and leather factories, and brandy distilleries. Gloves are made at Odense, and woollens and linens are printed at Svendborg. The exports of Fünen consist of corn, peas, brandy, apples, horses, oxen, butter, salted meat, tallow, hides, hops, linen, honey, and wax. Odense is the great trading mart of the island.

The principal towns in Fünen are—*Odense*, or *Odensee*, the capital and episcopal residence, population about 11,000, is pleasantly situated on the Odense-Fiord, 55° 25' N. lat., 10° 22' E. long., and is reputed to be the most ancient town in Denmark. Here are a royal castle built by Frederick IV., a town-hall, four churches (of which that of St. Canute is a noble gothic pile, erected eight centuries ago, and containing the mausolea of St. Canute, Erichslaf, John, and Christian III., kings of Denmark and Norway), a chapter seminary, gymnasium, theatre, two public libraries, an hospital, house of correction, &c. There are iron-works and woollen-mills in the town. *Assens*, on the western coast, at the entrance into the Little Belt, another old town, has an indifferent harbour, a town-hall, one church, and about 2750 inhabitants. *Bogense*, on the north coast, has one church, and about 1500 inhabitants. *Kiersteninde*, beautifully situated on a bight of the Great Belt, which is crossed by a large wooden bridge, has one church, a school, two hospitals, and about 1700 inhabitants. *Middelfahrt*, on the Little Belt, has a town-hall, church, hospital, school, and about 1500 inhabitants, and a ferry about a mile across to Snoghøi on the Jütland coast. *Svendborg*, the chief town of the bailiwick of this name, is at the south-eastern extremity of Fünen, on an arm of the Baltic which separates that island from Taasing, in 55° 5' N. lat., 10° 38' E. long. It has two churches, a town-hall, three schools, and nearly 4000 inhabitants. Ship-building is carried on; there are some distilleries, and a good deal of grain and other country produce is exported. *Nyeborg*, a fortified town on the eastern coast, contains the remains of the palace in which the kings of Denmark held their courts and national diets, with a church, town-hall, several schools, an hospital, and an infirmary, dockyards, and about 3300 inhabitants. The Swedes were totally defeated by the Danes under its walls in 1659. *Faaborg*, in the south-west, is a small sea-port town with about 2250 inhabitants, a handsome church, &c.; and a good harbour on an arm of the Little Belt, protected at its entrance by the three islands of Lyø, Avernarø, and Biønø.

FÜNFKIRCHEN (Pecs), an old town in the county of Baranya in

Hungary, and the seat of provincial administration, consists of a single street built at the foot of the lofty Mount Metasek, and at the edge of a rich and extensive valley, in $46^{\circ} 5' N.$ lat., $18^{\circ} 16' E.$ long. Solyman, the Turkish sultan, who resided here, was wont to call it 'the Paradise of the Earth.' The population is about 12,500. This town contains several handsome buildings, an episcopal palace, an ecclesiastical seminary, a gymnasium, a cathedral standing on high ground, and said to be the oldest in Hungary, a fine massively-built Jesuit church, several other churches, some of which were formerly mosques, a public library and cabinet of coins, two monasteries, two hospitals, &c.

FURNES. [FLANDERS, WEST.]

FURRAH. [SEISTAN.]

FURREEDPOOR. [DACCA.]

FURRUCKABAD, the capital of the district Furruckabad, is situated at a short distance from the right bank of the Ganges, in $27^{\circ} 24' N.$ lat., $79^{\circ} 33' E.$ long., 100 miles E.N.E. from Agra. Furruckabad is one of the principal towns of Upper Hindustan. It is inclosed by a wall and defended by a citadel. The streets are wide, and in the best parts of the town there are good houses, which are in many instances surrounded by trees, but the greater part of the dwellings within the walls are mud hovels. The population has been estimated at about 70,000. A considerable trade is carried on with Cashmere, and the town has manufactures of silk and cotton.

FÜRSTENBERG, a principality partly in Würtemberg and partly in the grand-duchy of Baden, consisting of several mostly isolated bailiwicks on the rivers Danube, Wutach, and Kinzig, the majority of which are situated in the Würtemberg circle of the Danube and the Baden circle of the Lake. They have an area of about 787 square miles, and a population of about 92,000. The principality is mountainous, and produces timber, cattle, iron, copper, silver, &c. In the upland districts, in the western region of the Black Forest, the inhabitants make many articles of wood, particularly wooden clocks. The prince's residence is Donau-Eschingen, where he has his chancery and public offices. He is also possessed of several lordships in Bohemia; and his yearly income is estimated at about 50,000*l.* sterling. *Donau-Eschingen*, in $48^{\circ} 56' N.$ lat., $8^{\circ} 31' E.$ long., is situated in the Baden circle of the Lake at the confluence of the three streams whose united waters form the Danube. [DANUBE.] It contains about 3100 inhabitants. The palace, high church, public offices, and riding-house and stables are handsome modern buildings: the town has also a gymnasium, and a very extensive establishment belonging to the prince, in which great quantities of beer and brandy are made.

FÜRTH, a town of Middle Franconia, in Bavaria, is situated in a fertile plain, and at the confluence of the Rednitz and Pegnitz, $4\frac{1}{2}$ miles by railway N.W. from Nürnberg, in $49^{\circ} 28' N.$ lat., $11^{\circ} 1' E.$ long., and has about 15,000 inhabitants, of whom upwards of 2600 are Jews, and the rest mostly Lutherans. The site was originally a 'Villa Regia,' or royal domain and mansion, in which many of the German nobles assembled in A.D. 907 in council with the emperor Lewis. The bishops of Bamberg enjoyed it by gift from the emperor Henry II.; and it afterwards became part of the margraviate of Ansbach, in conjunction with which it was annexed to the crown of Bavaria in 1803. There are three churches, one of which is Roman Catholic, a splendid synagogue, and three minor places for Jewish worship; the high church contains one of the oldest and largest organs in Germany. The Jews have a sort of university here called a Talmud school, where their learned men and rabbis are educated; two printing-houses, three minor schools, a court of justice, an hospital, and an establishment for the employment of their poor and the care of orphans. Fürth has also a town-hall, a grammar and a superior

civic school, an hospital, theatre, &c. The market-place, a large open area, occupies the tongue of land formed by the confluence of the Rednitz and Pegnitz. Independently of a brisk transit trade, Fürth is the residence of a number of small manufacturers, whose productions are looking-glasses, chandeliers, glass, sealing-wax, pocket-books, pencils, needles, spectacles, cabinet-work, turnery, clocks, jewellery, saddles and harness, locks, &c. Some cottons, caps, and stockings are also woven. There is an annual fair at Michaelmas, which lasts fourteen days.

FUTTEHGUR, a town in the district of Furruckabad, in Hindustan, 3 miles S.E. from the town of Furruckabad, situated on the right bank of the Ganges, in $27^{\circ} 21' N.$ lat., $79^{\circ} 34' E.$ long., was formerly an important military station of the British government, but only a few soldiers and certain civil officers are now stationed there. Several European merchants reside and carry on their business in the town. During the dry season the Ganges is here reduced to two or three narrow channels winding slowly through a bed of sand, and at this time the town is hardly habitable because of the clouds of dust which are continually flying about. The town contains an arsenal which is protected by a strong mud fort.

FUTTEHPOOR, a town of Hindustan, is situated 19 miles W.S.W. from the city of Agra, in $27^{\circ} 6' N.$ lat., $77^{\circ} 45' E.$ long. The walls by which it is surrounded are of great extent. The inclosed space appears for the most part to have been always unoccupied by buildings. The stone of which the walls and houses are formed is furnished by quarries in the neighbourhood. The town was inclosed and fortified by the emperor Akbar, whose favourite residence it was. It contains an extensive tomb, built by Akbar, in which several members of the imperial family were buried.

FUTTEHPOOR, a town of Hindustan, 45 miles N.W. from the city of Allahabad, in $25^{\circ} 57' N.$ lat., $80^{\circ} 47' E.$ long., contains some good houses, an elegant mosque, and a considerable population. The town is surrounded with tombs. Situated amidst the tombs is a large but ruinous serai, which however is kept tolerably clean, and is very convenient to travellers.

FYLDE, THE, Lancashire, is that portion of the county which is included between the mouths of the Ribble and the Wyre, and is comprehended in the hundred of Amonderness. The district so designated forms an extensive plain, the soil of which is well adapted for the raising of grain in the inland parts, and for pasture towards the coast. The district gives name to a Poor-Law Union, which contains 23 parishes and townships, with an area of 53,464 acres, and a population in 1851 of 21,905.

FYNE, LOCH, Argyleshire, Scotland, an arm of the sea separating the districts of Lorn and Knapdale from that of Cowal, and extending from Skipness Point to beyond Inverary, a distance of nearly 40 miles. In some places the loch is upwards of 10 miles, in others about 3 miles broad; its depth varies from 40 to 70 fathoms. Loch Gilp is a small branch loch near the junction of the Crinan Canal with Loch Fyne. Loch Fyne has long been remarkable for the herrings which are caught here, the fishing of which affords employment to the inhabitants of Tarbert, Lochgilphead, Inverary, and many other places on both sides of the loch. The fish are nearly all sent to Glasgow.

FYZABAD, a town of Hindustan, in the kingdom of Oude, is situated on the right side of the river Goggra, in $26^{\circ} 47' N.$ lat., $82^{\circ} 3' E.$ long., 2 miles W. from the city of Oude. In the reign of Shuja ud Dowlah, Fyzabad was made the capital, instead of Oude, but in 1775 the seat of government was transferred to Lucknow by his son and successor Azoph ud Dowlah. Shuja's palace is already in ruins, but the town contains a numerous population, chiefly of the lower classes.

G

GADES. [CADIZ.]

GAËTA, the ancient *Caiëta*, a strongly fortified town in the province of Terra di Lavoro, in the kingdom of Naples, is situated on a lofty promontory which projects into the Mediterranean, and forms one side of the Gulf of Gaëta, the ancient Sinus Caietanus, which almost rivals in beauty of scenery the neighbouring Bay of Naples. The islands of Ponza, Vandotena, and Ischia are seen at a distance. Inland to the northward, the Apennines rise above the wide unwholesome plains extending to the sea-coast: through these plains flows the Garigliano, or Liris, near the mouth of which stood the ancient Minturnæ, the site of which is marked by a theatre, a noble amphitheatre, and some arches of its aqueduct. In the immediate neighbourhood of Gaëta the Formian hills are covered with vineyards, olives, oranges, and other fruit-trees; and at the foot of them, in the innermost recess of the gulf, is Mola, near the site of the ancient Formiæ, which was destroyed by the Saracens in the 9th century. The exact site of Formiæ, the capital of the Laestrygonæ, is marked by the little village of Castellone di Gaëta. Cicero's Formian villa was in this neighbourhood, about half-way between Mola and Gaëta; on its site stands the Villa di Caposole, lately con-

verted into a hotel. A circular tower near Mola is vulgarly called Torre di Cicerone; it consists of two stories rising above a large square base, and is surmounted by a small lantern with windows. Tradition says that this tower was erected on the spot where the great orator, in his attempt to escape to the sea, was overtaken by the tribune and centurion, by whom he was belicaded.

Gaëta with its suburbs has a population of about 10,000 inhabitants, exclusive of the garrison. It has sustained several sieges, the last of which was in 1806 against the French. It has a harbour, and on some trade by sea. The citadel of Gaëta is one of the strongest fortresses in Italy, and the key of the Kingdom of Naples. In the tower of the citadel is the tomb of the Constable de Bourbon, who fell at the storming of Rome in 1527. The palace of the governor was for some time the residence of Pope Pius IX. after his flight from Rome in 1849. Caieta, which derived its name from being the burial-place of the nurse of Æneas, appears to have been a place of no great importance under the Romans, but its port was very much frequented by shipping: it has however some remains of antiquity, among others the circular monument called Torre di Orlando, which stands on the highest part of the promontory, and is proved by au-

inscription upon it to be the mausoleum of L. Munatius Plancus, friend of Augustus; another column with twelve faces, and inscribed with the names of the winds in Greek and Latin, is one of the most curious monuments in the town. In the cathedral is a baptismal vase of Parian marble with highly finished reliefs, besides other remains. Gaëta gives title to an archbishop. There is a royal residence here, to which the king of Naples and his family usually resort in summer. Gaëta rose to distinction after the destruction of Formiæ, and under the Normans became one of the most important cities of South Italy.

GAILLAC. [TARN.]

GAILLON. [EURE.]

GAINSBOROUGH, Lincolnshire, an ancient market-town and seaport, and the seat of a Poor-Law Union, in the parish of Gainsborough, is situated on the right bank of the river Trent, in 53° 28' N. lat., 0° 46' W. long., distant 18 miles N.W. from Lincoln, 148 miles N. by W. from London by road, and 155 miles by the Great Northern railway. The population of the town in 1851 was 7506. For sanitary purposes the district is under the management of a Local Board of Health. The living is a vicarage in the archdeaconry of Stow and diocese of Lincoln. Gainsborough Poor-Law Union contains 49 parishes and townships, with an area of 105,226 acres and a population in 1851 of 27,037.

Gainsborough consists principally of one street, running parallel to the Trent, which is here crossed by a fine stone bridge of three elliptical arches. The town is well paved, and is lighted with gas. The public buildings include the town-hall, a substantial brick building, the lower part of which is occupied as the jail; the parish church, which was rebuilt, with exception of the tower, about a century ago; three handsome district churches; and chapels for Wesleyan and Primitive Methodists, Independents, Quakers, Roman Catholics, and Unitarians. There are also a Grammar school, founded in 1589; National, Infant, and Wesleyan schools; a literary institute; libraries; a savings bank, and a dispensary. A county court is held.

Gainsborough is advantageously situated both for foreign and inland trade. By the river Trent, which falls into the Humber about 20 miles below the town, vessels of 200 tons can come up to the wharfs; and by the Keadby, Chesterfield, and other canals, a communication is kept up with the interior of the country. The gross amount of customs duties received at the port in 1851 was 35,949*l.* 7*s.* 11*d.* The number of vessels registered at the port on December 31st 1853 was as follows:—Under 50 tons 6 vessels, tonnage 257; above 50 tons 5 vessels, tonnage 363; one steam vessel of 49 tons, and 4 of 307 tons. The vessels which entered and cleared at the port during 1853 were:—Inwards, 214, tonnage, 13,292; outwards, 237, tonnage, 12,725.

Linsced oil is very extensively manufactured; malting, rope-making, and ship-building are largely carried on. The market-day is Tuesday; fairs of ten days each are held at Easter and from October 20th, for cheese, horses, and stock. Gainsborough manor-house, a fine old Elizabethan hall, has been recently restored.

(Allen, *Lincolnshire; Communication from Gainsborough.*)

GALACZ. [MOLDAVIA.]

GALAPAGOS, a group of islands of volcanic origin, situated in the Pacific, about 700 miles from the continent of South America, near the equator. They lie between 1° N. lat., and 2° S. lat., 89° and 92° W. long., and consist of six larger and seven smaller islands. The largest is Albemarle Island, which is 60 miles in length, and about 15 miles broad. The highest part is 4000 feet above the sea. Charles Island, now called La Floriana, is 20 miles long from north to south, and about 15 miles wide.

The islands consist of enormous masses of lava, rising abruptly from a fathomless sea. In the interior, valleys and plains of moderate extent occur, which are covered with shrubs and that kind of cactus which is called prickly pear. This cactus supplies with food the great elephant-tortoises, so called from their feet being like those of a small elephant. These animals grow to an enormous size, and frequently weigh 300 lbs. or 400 lbs. There are also iguanas and innumerable crabs. Pigeons abound on the islands.

The climate is moderated by the elevation of the surface of the islands (the settlement on La Floriana being 1000 feet above the level of the sea), and by the cold current which sets along the south-south-western side of the group to the north-north-west. In dry seasons most of the water-pools dry up; but at the setting-in of the rains, in November, they are again filled. Between May and December the thermometer ranges between 52° and 74°, and from January to May between 74° and 84°, and occasionally higher.

These islands were first visited towards the end of the last century by the whalers of the Pacific Ocean. In 1832 a settlement was formed by one Bilamil, an inhabitant of Guayaquil, who obtained a grant of the island of La Floriana from the government of Ecuador. Sugar-cane, sweet potatoes, and Indian corn are cultivated. It has been recently reported that an extensive deposit of guano has been found on one of the islands.

GALASHIELS. [SELKIRKSHIRE.]

GALA'TIA, a country of Asia Minor, which originally formed part of Phrygia and Cappadocia. Its boundaries differed at various times. It was bounded on the south by Phrygia and Cappadocia, on the east by Pontus, on the north by Paphlagonia, and on the west by Bithynia.

It obtained the name of Galatia from the settlement of a large body of Gauls in this part of Asia. The first horde that appeared in Asia (B.C. 279) formed part of the army with which Brennus invaded Greece. In consequence of some dissensions in the army of Brennus, a considerable number of his troops, under the command of Leonorius and Lutarius, left their countrymen and marched into Thrace; thence they proceeded to Byzantium, and crossed over into Asia at the invitation of Nicomedes king of Bithynia, who was anxious to secure their assistance against his brother Ziboetas. (Livy, xxxviii. 16.) With their aid Nicomedes was successful; and, according to Justin (xxv. 2), as the Galli received part of the conquests the country was called Gallograecia. The allies of Nicomedes now became his masters, and he, as well as the other monarchs of Asia Minor to the west of Mount Taurus, was obliged for many years to purchase safety from these barbarians by the payment of tribute. By fresh accessions their numbers became so great that Justin informs us (xxv. 2) "that all Asia swarmed with them; and that no Eastern monarchs carried on war without a mercenary army of Gauls." Instances of this kind are given in Clinton's 'Fasti Hellenici,' vol. iii. p. 424. They are also said in the second book of Maccabees (viii. 20) to have advanced as far as Babylon, and to have been defeated by the Jews. The first effectual check they received was from Attalus I. king of Pergamus, who defeated them in a great battle (B.C. 239) and compelled them to settle permanently in that part of Asia which was afterwards called Galatia. (Livy, xxxiii. 21; Polybius, xviii. 24.) Though Attalus reduced their power, they still remained independent, and gave Antiochus great assistance in his contest with the Romans. Having thus incurred the enmity of the Roman republic, Cneius Manlius the consul was sent against them with a considerable army, B.C. 189. The particulars of this war, which terminated in the complete defeat of the Galatians, are recorded in Livy (xxxviii. 12-27). From this time they were in reality subject to Rome, though allowed to retain their own native princes. In the war against Mithridates, Deiotarus, originally only a tetrarch of one of the Galatian tribes, greatly assisted the Romans, for which service he was rewarded by the grant of Pontus and little Armenia, and the title of king by the Roman Senate. He was succeeded by Amyntas, according to Strabo (b. xiii.). At the death of Amyntas, B.C. 25, Galatia became a Roman province. After the time of Augustus, the boundaries of the province were enlarged, and Paphlagonia was added to it; but in the reign of Constantine it was again reduced to its former limits, and in the time of Theodosius the Great was subdivided into two provinces, *Galatia Prima*, of which the capital was Ancyra, and *Galatia Secunda*, of which Pessinus was the capital.

Strabo (b. xii.) informs us that Galatia was inhabited by three tribes of Gauls; the Trocmi, the Tectosages, and the Tolistobogii. Each tribe was subdivided into four parts, and each division was governed by a tetrarch, who appointed a judge and an inspector of the army. The power of these twelve tetrarchs was limited by a senate of 300, who assembled at a place called Drynemetum, and who took cognisance of cases of murder, other offences being left to the jurisdiction of the tetrarchs and judges. This form of government continued till shortly before the time of Deiotarus. All the tribes spoke the same language, and had the same customs. Though they afterwards spoke Greek in common with the other nations of Asia Minor, yet they had not forgotten their native tongue in the time of Jerome, who informs us ('Prolegomena in Epist. ad Galatas') that their language was almost the same as that of the Treviri, or the people of Trèves. They did not entirely lose their original simplicity of manners, for Cicero, in his defence of Deiotarus, praises him as an extensive cultivator and breeder of cattle (c. 9).

Coin of Galatia, Trajan. Imperial Greek.
British Museum. Actual size. Copper. Weight, 427 grains.

Galatia possessed few towns of importance, with the exception of ANCYRA, Tavium, and Pessinus. Tavium, the capital of the Trocmi, was situated in the north-east part of the province, but soon fell into obscurity. Pessinus, the capital of the Tolistobogii, north-east of the river Sangarius, was a great trading-place, with a magnificent temple, sacred to the mother of the gods, who was there worshipped under the name of Agdistis. (Strabo, b. xii.) On the river Sangarius in this province was the ancient Gordium, formerly the capital of the Phrygian monarchy. Livy (xxxviii. 18) describes Gordium as a small town in his time, but carrying on an extensive commerce. The

apostle Paul appears to have visited Galatia twice, about A.D. 50 and A.D. 55 (Acts, xvi. 6; xviii. 23.) The date of his epistle to the Galatians has not been definitely ascertained.

GALENA. [ILLINOIS.]

GALICIA, the Kingdom of, is the north-eastern province of the Austrian dominions, and lies between 47° 50' and 50° 50' N. lat., 18° 54' and 26° 37' E. long. It includes the country formerly the territory of the republic of Cracow; and is bounded N. by Poland, E. by Russia, S.E. by the Bukowine, S. and S.W. by Transylvania and Hungary, and W. by Hungary, Austrian Silesia, and Prussian Silesia. The Bukowine, which was formerly included in Galicia, was separated from it by imperial patent in 1851. The area of Galicia is 80,157 square miles: the population in 1850-1 was 4,555,477. Galicia derives its name from the former principality of Haliczia or Galiczia, which, together with a considerable portion of Red Russia, once formed part of Hungary, but was incorporated with Poland in the year 1374. Its ancient connection with Hungary served as a pretext to the empress Maria Theresa, in 1772, when Poland was enfeebled by intestine divisions, to claim its restoration; a claim which the Poles were forced to concede by the treaty of the 18th September, 1773, in consequence of which that part of the republic, now termed Galicia, was surrendered to Austria, and annexed to its dominions under the name of the kingdom of Galicia and Lodomeria.

Surface, Hydrography, &c.—Galicia spreads out, in its whole length on the northern side of the Carpathian Mountains, into extensive plains: those mountains extend their arms deep into the kingdom, and on the west, the Beskide branch of them stretches as far as the banks of the Vistula, rising almost abruptly out of the lowlands into heights of from 2000 to 5000 feet. The most elevated summit in this quarter is the 'Babia Gora' (Women's Mount), 5410 feet above the sea. In the south-west, the Patra or central range of the Carpathians, with their peaked summits and desolate naked aspect, rise to still greater elevations; the great Kryvan to about 8050 feet, and the Rohicz to 7230 feet. The branches of this range penetrate much deeper into the country than those of the Beskides. The mountains are full of small lakes, which are here called *Sav*, *Plesse*, or 'Eyes of the Sea'; the largest of them, which lies to the north of the Great Kryvan, is called the Fish Lake; it is at an elevation of about 4550 feet above the level of the sea, but does not exceed 1600 paces in length, or 500 feet in breadth; it has a depth of 192 feet, and forms an almost perfect oval.

The northern part of Galicia is an extensive plain, in some parts intersected by low ranges of hills; and in the western part also a dead level begins at Skavinn on the right bank of the Vistula, and varying in width, extends to the banks of the San. The soil of the plains consists almost universally of loam and sand; the most remarkable accumulation of the latter is in what is called the Sand Mountain (*Sandberg*) near Limburg.

The rivers of the western part of the kingdom of Galicia belong to the basin of the Vistula; and those of the eastern, to the basins of the Danube and the Dniester. The Vistula forms the western boundary next to Poland for about 180 miles, flowing north-eastward from the spot where Austrian and Prussian Silesia and Galicia converge to a point, and quitting the kingdom at Popowicze, a village opposite Zawichost at its northern extremity; this river increases in breadth along this frontier-line from about 120 to nearly 200 paces, and has a rapid current until below Cracow, the difference in the elevation of its bed from the point just mentioned and that city being about 200 feet. The tributaries of the Vistula, on the side of Galicia, are—the Dunayec or Dunayez, which flows down from the Carpathians, is navigable in the low country, receives the Poprad, also a navigable stream, and other rivers in its course, chiefly northward, through the circles of Sandecz, Bochnia, and Tarnof, and falls into the Vistula near Novopole, opposite Opatowic, after a course of about 105 miles. This river, like all those which flow from the Carpathians, overflows its banks in rainy seasons, does much damage, and is dangerous to navigate. The Wysloka is formed at Yaslo out of the junction of the Dembowka, Ropa, and Yasielka, flows through the circles of Yaslo and Tarnof, and after a northern course of about 70 miles, joins the Vistula near the village of Ostróf, in the north of Galicia. The San or Saan, the most important tributary of the Vistula in this quarter, rises near Sianki, a village on one of the most northerly declivities of the Carpathians, takes a north-westerly direction to Sanok and Bynof, whence it runs eastward to the town of Przemyel, and thence flows north-westward through a low country past Yaroslaf until it falls into the Vistula near Lapiszof. Its whole length is about 180 miles, and its chief tributaries are the Wyslek and Tanef. The Bug, which has its efflux in the Vistula also, does not become a considerable stream until it has quitted Galicia; it rises near Galigory to the east of Limburg, flows westward when above the latitude of that town, and before it reaches Busk turns northward and afterwards north-westward, and leaving Galicia below Sokal, enters Poland. The Dniester, another of the considerable rivers in this kingdom, through which it flows for a distance of about 310 miles, has its source in the Carpathians in the western part of the circle of Sambor, and thence continues in a south-easterly direction till it enters Russia near Cholym. [DNIESTER.] It receives numerous

affluents on both banks, but most on the left bank, in its course through Galicia. Another large river which in part belongs to eastern Galicia is the Pruth, which rises in the Carpathians within the circle of Stanislawof, flows through that circle to the borders of the Bukowine, and passes over into Moldavia below Pentuluy. There are neither canals nor railways in the kingdom.

Geological Character.—Galicia abounds in sandstone, granite, sand of a very superior grain, quartz, slate, yellow and common clay, potters'-earth, yellow ochre, marble, gypsum, &c. Mountain crystals, agates, jaspers, ordinary opal, alabaster, &c., are found in several spots. The Carpathians are rich in metals, particularly iron, which is found along the whole line of the Carpathians, from the circle of Sandecz to the frontiers of the Bukowine; but the proportion of metal in the ore is small. Bog-iron likewise is met with in the circles of Stry and Zolkief. Gold is obtained in small quantities in two or three places. Veins of silver are found in the lead of Mount Dudul, near that place, and it is also extracted from the calamine obtained near Truskawicze. Native sulphur occurs at Svoszowice, in the circle of Bochnia, and Sklo, in that of Przemyel. Coal is found near Moszyn, Kutu, and Skwarezva. The northern side of the Carpathians contains enormous masses of rock-salt, and the country has numerous salt-springs. There are several sulphuretted and other mineral springs.

Climate, Soil, and Productions.—The climate of Galicia is colder than that of any other possession of Austria, in consequence of the proximity of the Carpathians. The summer is generally short, and the grape never ripens: the winter is very severe for six months at least, and it is not uncommon to see deep snow lying in the middle of April, or an oat-crop buried by the snow in the vicinity of the Carpathian Mountains. The moist and swampy plains in the northern part of the kingdom render that quarter also very chilly and raw.

The soil is of a very varied character. In the neighbourhood of the Carpathians, where sterile rocks or cold clay abound, the husbandman has difficulty in raising even sufficient barley, oats, and potatoes for his own consumption. But towards the plains, the soil becomes richer and more productive: the most fertile parts are those perhaps about Yaroslaf, such districts in the circle of Zloczof where limestone forms the substratum, and the greater portion of the circles of Stanislawof and Kolomea. In many parts the soil is so light that the grass, underwood, and even trees quickly wither under the heat of the sun.

Agriculture is still in a very backward state in Galicia. The productive land in Galicia (including the Bukowine, which was not then separated from Galicia), was thus occupied in 1846:—Arable, 8,266,698 English acres; meadows and gardens, 2,912,537 acres; pasture, 1,952,440 acres; and woodlands, 6,031,065 acres. The grain grown in the same year was in English quarters:—Wheat, 616,844; rye, 1,653,721; barley, 2,315,513; oats, 3,223,434; and maize, 116,081 quarters. Of potatoes, 38,199,690 bushels were obtained. The vine is very little cultivated, only 42 acres were returned in 1846 as vineyards. Peas and beans, potatoes, and other common vegetables, chicory, clover, flax, hemp, tobacco, anise-seed, rape and other seed for making oil, a few hops, &c. are also grown. The supply of fruit is scanty. The forests consist principally of pine-wood, and there are large tracts of underwood. In some parts the oak attains a majestic growth. Tar and potashes are made in considerable quantities.

A great deal of attention is paid by the government as well as by private individuals to the improvement of the breed of horses. The best native horses of the Polish breed are bred in the western circles. Large droves of horned cattle are fed, the finest being brought from Moldavia. Much has been done towards improving the race of sheep, large numbers of which are raised; and Galicia now produces some fine wools. In the eastern districts much honey and wax are made. The rivers and small lakes, and ponds, the last of which occupy an area of nearly 200 square miles, are well supplied with fish. The bear, wolf, fox, beaver, roebuck, stag, lynx, marten, eagle, vulture, swan, heron, wild goose, squirrel, and hare are the principal wild animals.

The mining industry of Galicia is chiefly confined to iron and salt. The rock-salt mines of Wieliczka are of great magnitude and well known, and produce four-fifths of the whole quantity raised; the remainder is obtained chiefly from the mines of Bochnia. A fine kitchen-salt is made from the saline springs in the eastern parts of the kingdom. A small quantity of coal is raised at Myszyn, in the circle of Kolomen, and there are sulphur-pits at Svoszowice. Mineral pitch is distilled into naphtha at the government works in the circles of Sambor, Kolomea, and Stanislawof.

The manufactures of Galicia are gradually extending, though they are still on a confined scale. The country people in general make the materials for their clothing. The spinning and weaving of flax and hemp give employment to thousands. They manufacture very coarse and durable linen, and in some parts a few fine cloths, damask and table linen, &c. The cotton manufacture is inconsiderable. Much woollen yarn is spun; both by hand and machinery; and there are small manufactures of coarse woollens in all parts. Paper of inferior quality is made to some extent. Ship-building is carried on principally in the circles of Przemyel and Rzeszof: the produce of deals, staves, &c. is considerable; and great quantities of utensils, &c. in wood are made. Brandy is manufactured on almost every large

estate; the Jews in particular are considerable distillers, and have a large number of stills at work. Much tobacco and some beet-root sugar are manufactured. Tanning employs many hands; but the production of iron, copper, and other metallic articles is limited. Pottery ware of all sorts, ordinary china, glass, and flints may be added to this enumeration. The foreign trade of Galicia is very limited. The exports consist of cattle, skins and hides, wool, grain, salt, timber, potashes, anise-seed, horses, &c.; and the imports of raw materials from Hungary, Poland, Russia, Turkey, &c., and of wines and manufactured goods and colonial produce.

Divisions, Towns, &c.—Galicia was divided into 19 circles, but has been lately directed to be formed into three divisions, Limburg, Cracow, and Stanislavof, having for their capitals the towns of the same names. LIMBURG, the capital of Galicia, CRACOW (as well as the larger towns within the circle of that name), and BRODY are noticed under their respective titles. The other more important towns we notice here: the population is that of 1850-1.

Stanislavof, or **Stanislaw**, the capital of the circle of Stanislavof, population including the suburbs about 9000, is a strongly fortified town situated between the two principal branches of the Bistritza, in 48° 54' N. lat., 24° 50' E. long., 75 miles S.E. by S. from Limburg. It possesses few public buildings of any consequence, but is a place of some trade. **Biala**, on the right bank of the Biala, 45 miles W.S.W. from Cracow, population about 4000, has some manufactures of linen cloth. **Bochnia**, 25 miles E.S.E. from Cracow, population about 5300, contains a gymnasium and several churches. In the neighbourhood are extensive mines of rock-salt. **Brzezany**, on the Zlota, 50 miles S.E. from Limburg, population 6899, contains several churches, a gymnasium, a castle, and carries on some leather and linen manufactures. **Drohobycz**, 40 miles S.S.W. from Limburg, population with the suburbs about 7400, is an ancient town, containing several churches, convents and schools. Iron- and salt-mines and pitch-wells are in the vicinity. A large yearly corn and cattle fair is held here. **Przemysl**, 55 miles W. by S. from Limburg, on the left bank of the Saan, population about 4200, more than half of whom are Jews, is an old walled town containing two or three churches, a monastery, a synagogue, a gymnasium and other schools, an hospital, and the ruins of a castle; and carries on some manufactures of linen and leather. **Rzeszow**, on the Wisloka, about 80 miles W. by N. from Limburg, population 4600, about half of whom are Jews, contains churches, schools, a castle, &c., and has some manufactures of linen and woollen cloths. **Sambor**, on the left bank of the Dniester, 40 miles S.W. from Limburg, population about 6700, contains a court-house, churches, a gymnasium, and other schools; is the centre of a salt mining district, and has some linen manufactures. About 10 miles S.W. from it is the town of **Stari Sambor**, or **Old Sambor**, with a population of 2000. **Sandek**, or **New Sandek**, 50 miles S.E. from Cracow, population 5300, is a town of some local importance; an older town of the same name, **Stari Sandek**, population 3500, lies about 6 miles S.W. from New Sandek. **Tarnopol**, on the Seret, 85 miles E.S.E. from Limburg, population with the suburbs about 10,000, contains several churches, a gymnasium and other schools, and is a place of a good deal of trade. **Trembowla**, 20 miles S. from Tarnopol, once the capital of an independent principality, is now a small town of about 3000 inhabitants. **Wieliczka**, 9 miles S.E. from Cracow, population 4700, is chiefly famous for its salt-mine, perhaps the largest and most remarkable in the world; it yields 35,000 tons of salt annually, and contains within it a rivulet and lake of fresh-water, and a chapel carved out of the salt-rock. **Zbaracz**, 12 miles N.E. from Tarnopol, population 5642, contains three churches, a monastery, and an ancient castle.

Government, Education, &c.—The government of Galicia is on the same footing as that of the other hereditary possessions of Austria. The highest authority in civil affairs is the Board of Provincial Administration at Limburg. The court of appeal and chief criminal court are in the same town, where also are the head-quarters of the commander-in-chief for Galicia.

Of the inhabitants above half are of Polish descent, chiefly located in the western provinces, and next in number are the Ruthenes or Russniaks, a rude, uncivilised race of men, who have spread into the centre of Russia, and are also numerous on the Hungarian side of the Carpathians: they inhabit the circles of Galicia east of the San. The remaining part of the population consists of 328,806 Jews, who are scattered throughout the kingdom, and a mixed race of Germans, Hungarians, &c.

The majority of the inhabitants (2,236,765) are Roman Catholics: but a nearly equal number (2,194,910) are of the Greek Church, who conform partially to the rites of the Roman Catholic Church. There are besides 31,069 of Greek non-conformists, and 32,714 Protestants. The Roman Catholics are in ecclesiastical matters in charge of the Archbishop of Limburg and the bishops of Przemysl and Tarnof. The Armenians, though few in number, have an archbishop at Limburg. The Græco-Catholics, mostly Russniaks, have also their own archbishop at Limburg, and a bishop at Przemysl. The Greeks, wholly Moldavians, are under a Greek bishop at Czernovitz in the Bukowine. The Protestants are under a superintendent at Limburg.

The number of benevolent institutions is considerable, and comprises eighteen Christian and three Jewish hospitals or asylums for the

sick or diseased, an hospital of the Benevolent Brothers, six hospitals conducted by the Benevolent Sisterhood, above 300 infirmaries and refugees for the indigent, besides several poorhouses.

The public provision for the general education of the people, has been greatly increased within the last 20 years: in 1846 it consisted of a university and an academy of art at Limburg, 4 philosophical and 4 theological seminaries, 18 gymnasia, 10 special and 28 general schools: in all 61 upper schools. The popular schools numbered 3063, being 43 head schools, 2195 lower schools, 42 girls' schools, 781 adult or repetition schools, and 2 infant schools.

GALICIA, a province of Spain, is bounded N. by the Bay of Biscay, S. by Portugal, W. by the Atlantic Ocean, and E. by the provinces of Asturias and Leon. It is situated between 41° 50' and 43° 47' N. lat., 6° 50' and 9° 16' W. long. The greatest length north to south is about 130 miles; the greatest width east to west is about 120 miles. It is divided into the following modern provinces:—

Provinces.	Area in Square miles.	Population in 1840.
Coruña	15,897	511,49
Lugo		419,437
Orense		380,000
Pontevedra		420,000
Total	15,897	1,730,929

Surface.—This province is almost entirely covered with mountains and hills, and is intersected by numerous valleys, many of which are narrow, rugged, and difficult of access. There are few plains of any extent. Galicia forms in fact the western termination of the direct course of the great Cantabrian mountain range. The Sierra de Peñamarela enters Galicia from the boundary of Asturias and Leon, and taking a northern direction sweeps round by Mondoñedo, after which it turns southward, and passing by Lugo and Orense on the west terminates on the coast between Tuy and Vigo. This mountain range, under the various names of the Sierra de Peñamarela, Sierra de Mondoñedo, Sierra de Lobo, Monte Faro, and other local denominations, incloses the basin of the Miño and its tributaries, dividing it from the valleys of all the other rivers which enter the Atlantic or the Bay of Biscay. Many of the summits of this series of sierras are covered with snow during a great part of the year. Another offset from the Cantabrian mountain chain passes in a south-south-west direction through the province of Leon, and enters Galicia at the south-eastern angle, whence it extends from east to west to the coast, forming the boundary between Galicia and Portugal. This latter range shuts in the basin of the Sil, and joins it to that of the Miño, of which the Sil is the largest tributary.

The coasts of this province are much broken, and are indented by numerous bays and other smaller inlets of the sea, besides which most of the rivers terminate in an estuary, or ria. There are many promontories and headlands, which project some distance into the sea, of which the best known are Cape Estaca and Cape Ortegal on the north coast, and Cape Finisterre on the west coast.

Rivers.—The two largest rivers of this province, the Miño and its affluent the Sil, are confined within the basin formed by the series of sierras which sweep round by Mondoñedo, Lugo, and Orense. Nearly all the other rivers flow westward and northward from the exterior flanks of the same series of mountains. The Miño (in Portuguese Minho) rises in the Sierra de Mondoñedo, flows southward past Lugo, and then south by west to Orense, about 10 miles above which it receives the Sil, augmented by the Cabe, the Bibey, and other streams, all of which come from the mountains of Asturias and Leon. After passing Orense the Miño flows south-south-west, and then south-west, forming part of the boundary between Galicia and Portugal, and entering the sea below Tuy and south of Vigo. The Tea rises on the western flank of Monte Faro, and falls into the Miño above Tuy. The Lerezo, the Ulla, and the Tambre, all flow in a south-west direction, and enter the sea by wide bays or estuaries, which are named respectively the Ria de Pontevedra, the Ria de Arosa, and the Ria de Muros y Noya.

Climate and Productions.—The climate is variable, temperate on the coast, but cold in the interior as compared with other provinces of Spain. The skies are cloudy, and much rain falls. The sides of the hills are well covered with forest-trees, and also with chestnut-trees, which supply much of the food of the peasantry. The valleys supply good pasturage for large numbers of cattle, and many fine mules and asses. The soil is generally stony, but is carefully cultivated, and produces wheat, barley, maize, flax, abundance of fruit, and a considerable quantity of wine. Swine are reared in considerable numbers, and the hams are in great request. The woods abound in game and the streams in fish. The fisheries on the coast are a profitable branch of industry, and not only supply food for the inhabitants, but are exported largely into Leon and the Castiles. Linen is the chief manufacture; it is made in considerable quantity and of good quality for domestic use.

Towns.—Coruña is the capital of Galicia and the province of Coruña. [CORUÑA.] **Betanzos**, 10 miles W.S.W. from Coruña, is situated on a sort of peninsula formed by the junction of two streams which discharge their united waters into the Bay of Betanzos. It is

an old town, and some of the narrow streets are still entered by ancient granite gateways. The population, about 4800, are mostly employed in the fisheries. *Ferrol*, 14 miles N.N.E. from Coruña across the Bay of Betanzos, but more than twice the distance by land, is a sea-port town with one of the best harbours in Europe, and with a vast naval arsenal and dockyards founded by Carlos III. It is situated in a deep inlet from the north side of the Bay of Betanzos, and the harbour is entered by a narrow channel, which is defended by the castles of San Felipe and Palma, while the town is strongly fortified on the land side by a wall on which 200 cannon might be mounted, but are not. The arsenal and dockyards are now in a neglected and ruinous state. The old town is very irregular, but the new town is a parallelogram of seven streets, crossed at right angles by nine others, and has two square plazas. The Alameda, or public walk, is between the new town and the Astillero, or dockyard. The town contains three large churches, two hospitals, a prison, naval barracks, and schools of navigation and mathematics: the population in 1845 was 15,720. *Lugo*, 50 miles S.E. from Coruña, is the capital of the province of Lugo. It stands on the left or western bank of the Miño, and is inclosed by walls. It has a large square surrounded by arcades, and contains a cathedral of the 12th century: population, 7269. There are warm sulphur-baths, which were celebrated in the time of the Romans. *Mondofedo*, 50 miles W. by N. from Coruña, is situated in a cultivated valley on the high lands of the Sierra de Mondofedo. It is the see of a bishop, suffragan of Santiago, and contains a cathedral, begun in 1221: population, 6000. *Orense*, 45 miles S.E. from Santiago and 55 miles S.S.W. from Lugo, is the capital of the province of Orense. It stands on the left or eastern bank of the Miño, on a gentle ascent, and girdled by hills. It is the see of a bishop, suffragan of Santiago, and contains a cathedral begun in 1220. The streets are narrow and gloomy, but clean. It is frequented for its hot springs, which gush out of a granite rock on the west of the town almost boiling, and are applied to many uses besides medicinal ones: population, 5000. *Pontevedra*, 75 miles S.S.W. from Coruña, is situated on the south bank of the Lerez, at its entrance into the Ria de Pontevedra. There is a long bridge here over the Lerez, whence the name Pontevedra (Old Bridge). The town is surrounded by walls, is well built, well paved, and clean, and has a convenient harbour for small vessels: population, 4550. *Santiago de Compostela*, formerly the capital of Galicia, 43 miles S. from Coruña, is situated on the north bank and near the source of the Sar, an affluent of the Ulla. The town is built round the celebrated cathedral which was said to contain the body of St. James the Apostle (San Iago): the name Compostela is from 'Campus Stellæ,' because a star was said to have pointed out the spot where the body was to be found. It was formerly a place of pilgrimage of greater sanctity and frequented by greater numbers than any other place in Spain. After the Reformation the numbers began to diminish. It is the see of an archbishop, and contains the cathedral, 2 collegiate churches, and 15 parish churches, and is still visited by considerable numbers of devotees. Its numerous convents were plundered by the French in 1809, and have since been suppressed. Each of the four fronts of the cathedral looks to an open plaza. The grand facade, or western front, is modern. The body was completed in 1128. The cloisters are grand; they were completed in 1533, by Fonseca, afterwards bishop of Toledo. In one of the plazas is the Hospicio de los Reyes, the hospital for pilgrims, a fine structure built in 1504. There are several other public buildings, fountains, and other objects worthy of inspection. There are some manufactures of cottons, hats, leather, and hosiery, but the importance of the place depends chiefly on its ecclesiastical establishments. The population in 1845 was 28,970. *Tuy*, 42 miles W. from Orense, is a frontier town situated on the north bank of the Miño, opposite to the Portuguese town of Valença. It is walled, but of no great strength. It is the see of a bishop, suffragan of Santiago, is regularly built, and contains an old strongly-built gothic cathedral, begun in 1145; the cloisters, of much later date, are very fine. The climate here is delicious, and the country very fertile, and produces much excellent wine. The oranges and other fruits rival those of Andalusia: population of the town, 4000. *Vigo*, 15 miles N. by W. from Tuy, stands on the south shore of the Ria de Vigo. It has a good port, which was of great importance previous to the formation of the naval establishments at Ferrol. The town is inclosed by walls, with a trench, and is defended by two castles, which crown the heights behind it. It contains a large modern church, a theatre, and a lazaretto; and there is a pleasant Alameda, or public walk. It has a good export trade in wine, maize, and bacon, and an active pilchard fishery. It was much injured by the attacks of Drake in 1585, and by Lord Cobham in 1719: the population of the town is about 4000.

Inhabitants.—The Galicians (Gallegos, in Spanish) are a hardy, industrious, and docile people. In their habits they resemble their neighbours the Portuguese rather than the rest of the Spaniards. They speak a dialect which has considerable resemblance to the Portuguese language. Many of them visit Portugal, and numbers may be seen in the streets of Lisbon and Oporto employed as porters and water-carriers; and they have an established reputation for honesty. The population of Galicia is almost entirely agricultural; landed property is much subdivided, and the great majority of the people do

not live in towns and villages, as in most other provinces of Spain, but in detached dwellings on their lands and fields.

(Miñano, *Diccionario Geográfico de España*; Madoz, *Diccionario de España*; Ford, *Handbook of Spain*.)

GALILEE. [PALESTINE.]

GALITSCH. [COSTROMA.]

GALL, ST. (Sankt-Gallen), a Swiss canton, is bounded N. by the canton of Thurgau and the Lake of Constance, E. by the Austrian province of the Vorarlberg, S. by the cantons of Grisons and Glarus, and W. by those of Schwyz and Zürich. Its area is 758 square miles, and its population at the end of March 1850 amounted to 169,508, of whom 105,370 were Catholics, and the rest, with the exception of some Jews and foreigners, were Calvinists. St.-Gall is a new canton, which was formed at the beginning of the present century by the union of the territories of the Abbot of St.-Gall with the free town of St.-Gall, and several districts formerly subject to the old cantons, namely, the Rheintal, Sargans, Werdenberg, Uznach, Gaster, and Sax, and the town of Rapperschwyl. By the union of so many various districts which happened to be situated all round the old canton of Appenzell, that canton is now inclosed on every side by the territory of St.-Gall. The spoken language of St.-Gall is a dialect of the German, resembling the Swabian.

Surface.—The canton of St.-Gall is in great part a mountainous country, being intersected by various offsets of the Alps, the highest of which are continuations of the great chain which bounds on the north the valley of the Upper Rhine in the Grisons country, and which on entering the territory of St.-Gall at the summit called Scheide (9000 feet) divides into three branches—one running north along the frontiers of Glarus as far as the south bank of the Lake of Wallenstadt; another eastward between St.-Gall and the Grisons, forming the summit called Galanda (8800 feet high); and the third extending north-east into the canton of St.-Gall, between the rivers Tamina and Secz. North of the Lake of Wallenstadt is another chain running in a north-west direction, which divides the basin of the Linth from that of the Thur, and contains several summits between 6000 and 7000 feet high. North of the Thur, and between it and the Lake of Constance, is another extensive group of mountains known by the name of Alpstein, which cover nearly the whole of Appenzell, and extend also into the adjacent districts of St.-Gall. The general slope of the surface is towards the north and north-west.

Rivers.—The *Rhine*, coming from the Grisons, touches the canton of St.-Gall near Pfäfers, and flowing northward forms its eastern boundary for a length of about fifty miles, dividing it first from the Grisons and afterwards from the principality of Lichtenstein and the Vorarlberg, until it enters the Lake of Constance below Rheineck. Its principal affluent in the canton of St.-Gall is the *Tamina*, a rapid Alpine stream which rises in the Scheide, crosses the south part of the canton, passes by Pfäfers, and enters the Rhine below Ragaz. The *Secz* rises also in the south part of the canton, runs first north-east and then north-west, and enters the Lake of Wallenstadt. The *Thur*, which rises in the central part of the canton near Wildhaus, runs northward through part of the fine district of Toggenburg, passes Lichtensteig, receives the Necker on its right bank, and after a course of about forty miles enters the canton of Thurgau and the canton of Zürich, through which it flows in a north-west direction, and falls into the Rhine on the left bank in the latter canton. The *Sitter*, coming from the canton of Appenzell passes near the town of St.-Gall and enters Thurgau, where it joins the Thur at Bischofszell. The *Goldach*, which rises also in Appenzell, runs into the Lake of Constance. The north and north-west districts of the canton towards the borders of Thurgau are mostly level, as well as the banks of the Linth, between the lakes of Wallenstadt and Zürich, where an extensive marsh has been drained by means of the Linth Canal.

The agricultural produce of the canton consists chiefly of wine, fruits in great abundance, especially apples and cherries, some corn, maize, potatoes, and pasture. The corn produced is not sufficient for the home consumption. There are considerable forests in the southern part of the canton, and much wood is exported. The domestic animals are oxen, sheep, goats, pigs, and horses, all of which enter into the exports of the canton; the rivers and lakes abound with fish and water-fowl. There are rich iron-mines at Gunzenberg, and coals and turf are found in several districts. Manufactures constitute an important branch of industry. From the 13th century the town of St.-Gall was famous for its linen manufactures, but these have been in modern times replaced by the manufacture of cotton goods and especially muslins. Muslin and other cotton fabrics are also largely manufactured in the Toggenburg, which comprises the long and fertile valley of the Thur from Wildhaus, the birthplace of Zwingli, which stands at the foot of Mont Sents, at the head of the valley, on the watershed between the Thur and the Rhine. There are in the canton also numerous bleaching establishments, glass-works, and wax-bleaching factories. The women are also employed in embroidery. The anneries have fallen off of late years. About 3000 bullocks' hides and 2000 goats' skins are exported annually. The principal imports are corn and other provisions, raw cotton, and other materials for manufacturing purposes. The town of St.-Gall is a place of great trade with Germany and

Italy, and numbers some wealthy merchants, manufacturers, and bankers among its population.

The canton is divided into 15 districts, namely:—St-Gall, Tablat, Rorschach on the banks of the Lake of Constance, Unter Rheinthal, Ober Rheinthal, Werdenberg, Sargans, Gaster, See Bezirk (or Lake Circle) on the banks of the Lake of Zürich, Ober Toggenburg, Unter Toggenburg, Alt Toggenburg, Neu Toggenburg, Wyl, Gossau. The finest districts are the Rheinthal, Rorschach, St-Gall, Wyl, the greater part of the Toggenburg, and the See Bezirk: the remaining or southern districts are mountainous.

St-Gall, the capital of the canton, situated in a pleasant valley on the Steinach, is a well-built town, well supplied with water, and contains 11,229 inhabitants. It is still surrounded by old walls, but the ditch has been filled up and converted into gardens. The principal buildings are—the abbey-church, now the cathedral, one of the finest in Switzerland, with handsome paintings; the gymnasium, the assembly-room, the town-house, several hospitals and asylums, and the public granaries. The old abbey library has above 1000 manuscripts, many of them valuable; several of the classics which were considered as lost were discovered in the middle ages in this library. The abbey-buildings are now used for the gymnasium, and the abbot's house for public offices. St-Gall is one of the most commercial towns of Switzerland. The environs are embellished with numerous country houses and promenades. St-Gall is 40 miles E. from Zürich and 45 miles N. from Coire in the Grisons. The town sprung up round a cell founded here in the 7th century by St. Gall or Gallen, an Irish monk, who taught the people agriculture and Christianity. An abbey rose over the cell fifty years after the death of the saint under the auspices of Pepin l'Heristhal, and became a celebrated school from the 8th century. To the labours of the monks of St-Gall are owing the preservation of the works of several of the classical authors. The insecurity of the times from the beginning of the 11th century compelled the abbot to fortify his monastery, and frequently he and his monks sallied forth sword in hand against their assailants. The revenues of the abbacy increased in time so considerably, that the abbots became territorial lords of a considerable portion of northern Switzerland, and ranked as princes of the empire. In the beginning of the 15th century Appenzell threw off the yoke of the abbot; and the town of St-Gall, which owed its origin and prosperity to the abbey and its inmates, became restive under the rule of the abbots, and gained its independence at the Reformation. At the French revolution the abbey was secularised, and its revenues were soon after sequestrated. The last abbot died in 1829 in the convent of Muri.

Rapperswil is prettily situated on a peninsula projecting into the Lake of Zürich: a wooden bridge, 4500 feet long, crosses over to the south bank of the lake. The town has some manufactories and about 1500 inhabitants. **Altstätten**, in the Upper Rheinthal, in the midst of a fertile country, is a place of some trade, with sulphur springs, and about 2000 inhabitants, who manufacture muslins. **Rheineck**, in the Lower Rheinthal, on the left bank of the Rhine, has about 1500 inhabitants: the red wine made in the neighbourhood ranks high among the wines of Switzerland.

The government of St-Gall is a democracy. The members of the Great Council are chosen in their respective districts by the citizens above twenty-one years of age. They are elected for two years. The Great Council appoints from among its body the members of the Little Council or executive for four years. It also appoints those of the criminal court and of the court of appeal. The citizens of each district appoint every year their own amman, or prefect, and other local authorities. The constitution of St-Gall is one of the most democratic among the representative cantons of Switzerland: it approaches nearly to that of the pure democracies of the little cantons. The revenues of the state are derived from the income-tax; licences for shops, public-houses, and sporting; stamp-duties, tolls, monopoly of salt, post-office, and national domains. Under the new constitution of Switzerland the canton of St-Gall returns eight members to the National Council. [SWITZERLAND.]

GALLARDON. [EURE-ET-LOIR.]

GALLATOWN. [FIFESHIRE.]

GALLA-TRIBES. [ABYSSINIA.]

GALLE, POINT DE, a town, fort, and harbour on the south coast of the island of Ceylon, 72 miles S. by E. from Colombo, is situated in 6° 1' N. lat., 80° 16' E. long. The town and fort are built on a low rocky promontory named the Point de Galle. The harbour is formed between the point, which extends towards the east, and a piece of land sloping inwards from the west, thus forming a small bay. The entrance to the bay is about a mile wide, but as there are many rocks in it a pilot is required to take the vessel to the anchorage, which is abreast the town in 5 fathoms depth of water. There is a pier; a jetty was constructed in 1847, and a new wharf in 1853. The increase in the number of steam-vessels calling at the port chiefly to take in coals has caused various proposals to be made for improving the harbour, but funds are wanting. The fort, built by the Dutch, is upwards of a mile in circumference, and contains several large and commodious houses inhabited by Europeans. The town, or pettah, inhabited by natives, is extensive, contains many neat houses, and has a large population. The government schools maintained here include an elementary school with 41 scholars in

1852, a mixed school with 144 scholars, and a superior school for females which had 88 pupils in 1852. An iron lighthouse, constructed in London, was erected in 1848; the total height of the light above the sea is 103 feet. The mail-steamers stop at Point de Galle, and the letters, &c., are forwarded immediately to Colombo, whence they are transmitted to all parts of Ceylon. Letters taken by steamers from Point de Galle reach Madras in three days and Calcutta in nine days. Bombay is reached by steam-vessel in six days.

GALLI'POLI, the ancient *Callipolis*, in the Thracian Chersonese, a town of European Turkey, is situated on the northern shore of the eastern extremity of the Dardanelles, anciently denominated the Hellespont. Gallipoli is situated on a peninsula, and has two harbours, which are frequently the rendezvous of the Turkish fleet, of which the port is one of the chief stations. It was selected as the landing-place and dépôt of the first detachments of the British and French troops sent in the spring of 1854 to assist the Porte in the war with Russia. Gallipoli occupies a considerable space: the population is variously estimated; the number of residents does not probably exceed 20,000. The population includes Turks, Armenians, Jews, and some Greeks. It has an extensive bazaar, with domes covered with lead, and the shops are tolerably well supplied. The dwellings are destitute of comfort, and the streets are kept in a dirty state. Some improvement was effected in the appearance of the town in May 1854 by the allied troops, particularly the French, who set to work to write up names on the corners of the streets and to number the houses, and otherwise to introduce something like regularity. The trade of the town is chiefly in corn, wine, and oil. In the vicinity some profitable cultivation is carried on, but not to any great extent. Excellent water-melons grow in the neighbourhood. Gallipoli is interesting as being the first place in Europe where the Turks acquired dominion, having been taken by them in 1357. There are several ancient remains in the town and neighbourhood, of which the most noticeable are the magazine and cellars built by Justinian, and the tumuli to the south of the city, which are said to be the tombs of the Thracian kings. The only defences of the town are an old square castle and tower, probably built by Bajazet. Gallipoli is the see of a Greek bishop. Several foreign consuls reside in the town. Numerous steam-vessels, English, French, Austrian, and Turkish, call at Gallipoli on their passage to and from Constantinople.

GALLI'POLI. [OTRANTO, TERRA DI.]

GALLOWAY, an extensive district in the south-west of Scotland, comprising the shire of Wigtown and stewartry of Kirkcubright, with part of the shires of Ayr and Lanark. It appears to have been independent until the overthrow of the Picts, when the Scottish monarchs assumed a feudal superiority over the lords of Galloway. The lordship subsequently descended to the family of Douglas, with whom it remained till 1455, when, by the rebellion of James, earl of Douglas, the estates became forfeited to the crown.

GALSTON, Ayrshire, Scotland, a small market-town in the parish of Galston, on the left bank of the river Irvine, 22 miles S. by W. from Glasgow and 5 miles E. from Kilmarnock by road; and 39 miles from Glasgow by the Glasgow and South-Western railway. The population in 1851 was 2538. The inhabitants of the town are chiefly cotton weavers. Besides the parish church there are chapels for Free Church and United Presbyterian congregations; and an Endowed school. In the town is the ancient castle of Barr. In the neighbourhood are the remains of a Roman camp, and vestiges of a stone circle. Loudon Castle, the seat of the Marquis of Hastings, is near the town.

GALT. [CANADA.]

GALWAY, a maritime county of the province of Connaught, in Ireland, lies between 52° 55' and 53° 42' N. lat., 7° 53' and 10° 17' W. long., and is bounded N. by Mayo and Roscommon, E. by King's county and Tipperary, S. by the county of Clare, and W. by the Atlantic Ocean. The extent of coast, which is very irregular, has been estimated at 400 miles; and the Shannon and Suck, both navigable rivers, form the eastern boundary of the county. Its greatest length from east to west is 164 miles, from north to south 52 miles. The area comprises 1,566,354 acres, of which 742,805 are arable, 708,000 uncultivated, 23,718 in plantations, 1801 in towns, and 90,030 under water. The county of Galway is the largest in Ireland except Cork; its population in 1851 was 298,564, exclusive of Galway town.

Surface, Hydrography, and Communications.—With the exception of the Slieve-Baughta Mountains, which cover the south coast of the county from the Clare boundary to Loughrea [CLARE], and an extension of the Barrin Mountains on the south-west, the whole of that part of Galway which lies east of Lough Corrib is comparatively flat, and although to a great extent encumbered with bog, is pretty generally improved and productive. A low table-land running north and south and joining the Slieve-Dart Mountains on the northern boundary separates this part of Galway into two nearly equal districts, the waters of one of which run eastward into the Suck and Shannon, and those of the other westward into the head of Galway Bay and Lough Corrib. The district of the Suck is most encumbered with bogs; it contains much well-improved land, particularly in the neighbourhood of Ahascragh and Ballinasloe. The district extending eastward from the head of Galway Bay is the richest part of the county. The surface of the county east of Lough Corrib is

more diversified with hill and dale, and is generally in a good state of cultivation. The centre of this eastern district is a bare flat tract disfigured by numerous bogs and very inferior in fertility to any of the other portions.

The district west of loughs Corrib and Mask has latterly attracted much attention in consequence of its capabilities of improvement, and the wildness and beauty of its scenery. The most prominent object in this district is a group of conical mountains called Binabola, Burabola, or Twelve Pins, rising abruptly from a table-land of moderate elevation which stretches south and west from their bases to the sea. Round their bases are numerous lakes, of which the chief are Lough Inagh, under the eastern front of the group; the upper and lower lakes of Ballinahinch skirting them on the south, and loughs Kylemore and Foe lying on their northern declivities. The average height of these mountains is about 2000 feet; the highest summit is 2395 feet above the sea, and as the table-land from which they rise is only of moderate elevation, their appearance is very striking. A fine view of these mountains, of the glens that divide them, and of the lakes at their feet, is commanded by the beautiful isolated hill of Coolnacarton, 900 feet, on the western shore of Lough Inagh and at the bottom of Glen Inagh. Northward and eastward from the Binabola, but separated from them by a deep glen which is traversed by the road from Oughterard to Renvyle are the Maam-Turk Mountains, a range of equal altitude, but not of so picturesque a character, extending between the head of Killery harbour and the western shore of Lough Mask. About midway between these waters lies Lough Nafcoey or Naffoy, which has an outlet to Lough Mask and is surrounded by mountains above 2000 feet high; the highlands north of this lake to the boundary of Mayo are entirely uninhabited. The chief elevations of this group on the west are Shannonafole, about 2000 feet high, at the head of Lough Corrib; Ben Leva, the declivities of which form the isthmus between Loughs Corrib and Mask; and the range of Maam Trasna overhanging the western shore of Lough Mask. Along the western arm of Lough Corrib, there is a small plain from which the hill of Glan rises abruptly to a height of 1060 feet. To the north of this hill is a remarkable chain of lakes stretching westward from Lough Corrib to near the head of Birterbuy harbour. These lakes lie in the hollows of a great bed of granite, extending southward from the Binabola Mountains to the shores of Galway Bay and the Atlantic, from which the county gradually rises to about 300 feet, with hills to the north-east nowhere exceeding 700 feet, and presents a most bleak, dismal, and dreary appearance—vast bogs, barren moors, lakes, and morasses. The district just described is now geographically known as 'Connemara'; among the Galwegians, however, that name is applied to the country which lies west of a line drawn from the head of Killery harbour along the ridge of the Maam Turk Mountains to the summit of Shannonafole and thence to the head of Kilkerran Bay. The mountainous district east and north of this comprising the isthmus between Lough Corrib and Lough Mask is called the 'Joyce Country.' The low granite country south of both the preceding is called 'Iar-Connaught,' or Western Connought.

The islands off the coast of Galway are very numerous: the chief are the three south islands of ARRAN, lying about midway between the coasts of Iar-Connaught and Clare, in the opening of the Bay of Galway; Garonna Island between Greatman's Bay and Kilkerran Bay; and the islands of Innisturk, Innisboffin, and Innishark, which extend across the offing of Killery harbour, between the coasts of Connemara and Murrisk, and belong politically to the county Mayo. On the highest point of Innishmore or Arranmore Island, 498 feet above the level of the sea, there is a lighthouse with a revolving light, which in clear weather can be seen at a distance of 28 miles. There are also lighthouses with fixed lights on Slyne Head in Connemara, and on Mutton Island in Galway Harbour.

On the southern side of the Bay of Galway the coast is not favourable for the construction of harbours. From Burrin Quay, or New Quay, in the county of Clare, to Kinvarra, at the eastern extremity of the Bay of Galway, there is no place of shelter for craft except at Killeney in Arran, and Duras Pier on the peninsula of Duras, which is situated between Kinvarra inlet and the county Clare, opposite the town of Galway. The creek of Ballynacourty which opens into Kilcolgan Bay, and Renvyle Creek, 5 miles E. from Galway town, are good harbours for small vessels, and the harbour of Galway has lately been much improved. Westward however from Galway, and round the entire coast of Iar-Connaught and Connemara (so named from Cun-na-mar 'bays of the sea') to the boundary of Mayo, there is a succession of harbours for vessels of the largest class, unequalled perhaps on any similar extent of coast in Europe. The first of these noble roadsteads next Galway is Costello Bay, at the mouth of the celebrated fishing stream the Costello. This harbour admits large ships, and is defended by a Martello tower. Casheen Bay, Greatman's Bay, and Kilkerran Bay occur immediately west from the Costello, being separated from one another by narrow peninsulas and islands. Kilkerran Bay contains 100 miles of shore, and is capable of receiving the largest vessels. A pier, 500 feet in length, with a return of 100 feet, was constructed here in 1822. An extensive peninsula, 10 miles by 7 miles, and interspersed with lakes, separates Kilkerran Bay from the Bay of Birterbuy, which runs

inland about 5 miles, being only half a mile wide at the entrance, and from 2 miles to 3 miles wide within; it has deep water and fine ground. On the western side of the entrance to Birterbuy Bay is the opening to Roundstone harbour, a safe and capacious inlet, with clean good ground, and 2 to 5 fathoms water. At the entrance of the Ballinahinch River into the head of the harbour there is an excellent salmon fishery. A considerable village has recently sprung up at Roundstone; a road runs hither from the main line of communication between Galway and Clifden, and the harbour is the nearest point for the shipment of the fine green marble of Ballinahinch. From Birterbuy the coast stretches, with occasional anchorages, to Slyne Head, the most western point of Galway; off Slyne Head lie a number of islands with navigable sounds between them, which remained unnoticed in the maps till Mr. Nimmo's coast survey. Between Slyne Head and Achlis Head occur the bays of Mannin and Ardhear; the former possessing good anchorage, but exposed, and the latter forming an excellent harbour with safe anchorage in 6 to 8 fathoms water. At the head of this harbour a considerable town has recently grown up. [CLIFDEN.] North of Clifden harbour is Cleggan Bay, an excellent roadstead, with a pier built in 1822, to which a branch of the new coast-road has been extended. Between Cleggan Bay and Cape Renvyle, which forms the southern boundary of the entrance to Killery Bay, is the harbour of Ballynakill, well sheltered by the island of Trichelaun, and capable of receiving vessels of the largest class. Rounding Cape Renvyle there is an open bay, from the head of which two inlets run eastward between steep mountains. These are the Great and Little Killeries; the latter an arm of the sea, about 12 miles in length, by a quarter to three-quarters of a mile in width, having for a great part of its length 10 to 12 fathoms of water and clean ground. An island at the mouth completely protects it from the sea, but from being overhung on each side by steep and lofty mountains it is exposed to squalls, and not safe for sailing boats. The scenery of the Great Killery is much admired, and considered to approach nearest to the Norwegian 'fjords' of any in these islands.

No part of the district west of Lough Corrib is more than 4 miles from existing means of navigation. The harbours fit for vessels of any burden are upwards of 20 in number; it contains 25 navigable lakes of a mile or more in length, and hundreds of smaller size. Lough Corrib and Lough Mask alone have upwards of 70 miles of navigable coast; and all these waters abound with fish. The sea-shore affords a constant supply of red and black seaweed, which is used as manure, and is largely exported for that purpose, or in the manufacture of kelp, of which very large quantities are made. Banks of calcareous sand and beds of limestone are of frequent occurrence. There is an inexhaustible supply of peat fuel, which is an important article of export, and the numerous mountain streams furnish a most abundant supply of water-power. Notwithstanding these capabilities, if the neighbourhoods of Clifden and Roundstone be excepted, the population of all this western district is chiefly scattered along the coast or in the islands, leaving the interior almost wholly waste. During the famine of 1847 the inhabitants suffered dreadfully, and want and misery almost completely stifled the few germs of industrial progress which were gradually raising this remote people to a state of comparative prosperity. Since that terrible year great exertions have been made to promote the fisheries; better built boats and superior tackle have been introduced, and several piers have been erected on the coast and among the islands for the greater security of the life and property of the fishermen. The operation of the Encumbered Estates Act has produced a considerable change in this district; the great Martin estate, the largest in the kingdom, and the Darcy estates, have been sold to new proprietors; and English farmers have been attracted to Connemara as likely to prove a highly remunerative field to the skilful agriculturist.

The rivers of Galway, being either feeders of the Suck and Shannon, or descending by short courses from the western district to the sea, are in general small. The Clare-Galway River, which rises near Dunmore, in the north-east of the county, and passes near Tuam, has a course, from its source to its termination in Lough Corrib, of about 50 miles. South of Tuam it expands into a periodical lake or 'turlough'; the waters generally rise in September or October, and do not subside until May, after which a coarse grass springs up, which is generally grazed as a common by the tenants of the adjoining land. In the limestone districts are numerous subterranean cavities, which in some instances absorb considerable rivers. The Shrule, on the northern border of the county, dips underground, and emerges before it terminates in Lough Corrib. The entire waters of Lough Mask also pass more than 2 miles by subterranean channels under the isthmus of Cong into Lough Corrib. The lakes of Loughrea and Gort are fine sheets of water; the latter has well-wooded banks, and the scenery in its vicinity is very picturesque.

The Shannon is navigable all along the eastern boundary. An extension of the Grand Canal connects Ballinasloe with the line to Dublin at Shannon Harbour. A navigable canal is in progress, to unite Lough Corrib with Galway Harbour, and to form part of a water communication to Lough Mask and the navigable lakes in Mayo county. The Midland Great Western railway affords communication between Dublin and Galway. Prior to 1813, the only roads

west of Galway were a narrow coast-road to Costello Bay and a central road by Oughterard to Ballinahinch. Since then, a good coast-road has been formed, which touches the heads of all the chief inlets from Costello Bay to the Killery, where it joins an inland line leading through the heart of Joyce Country to the head of Lough Corrib, and thence across the central plain of Iar-Connaught to the southern coast-road at Costello Bay. The construction of numerous piers and fishing harbours on the coast, has greatly facilitated the improvement of the west country. Galway town is connected by good mail-coach roads with Dublin through Ballinasloe, whence another mail-road runs north-west through Tuam to Westport; with Limerick through Gort; and with Clifden through Oughterard. Besides these, there are numerous good cross roads.

Geology, Mineralogy, &c.—The whole country westward from the Shannon and the Suck, including a narrow belt along the western shore of Lough Corrib and the isthmus between loughs Corrib and Mask, belong to the great central limestone plain of Ireland, with the exception of the Slieve-Baughta and Slieve-Dart Hills, which consist chiefly of old red-sandstone and millstone grit. The granite field before noticed stretches westward from Galway to Slyne Head, and northward to the southern base of the Twelve Pins, where it is succeeded by gneiss and mica-slate, with beds of hornblende and granular limestone running east and west from Lough Corrib to Clifden. The group of Binabola consists of a schistose quartz of a grayish-brown colour, large sheets of which are exposed on the precipitous sides of all the chief eminences. On their northern bases the limestone, which shows along their southern side, disappears; and the mica-slate and hornblende rise beyond Kylemore and the passes of Maam Turk into the southern mountains of Joyce Country; these are succeeded, more northward, by a transition tract of greenstone and granwacke slate, covered by old red-sandstone and conglomerate, constituting the entire country between the head of Killery harbour and Lough Mask, and extending beyond the bounds of Galway into the mountain ranges of southern Mayo. Westward of the Binabola, the country, with the exception of the hill of Renvyle, which is a mass of quartz, consists principally of mica-slate traversed by beds of granular limestone, and in some places by veins of granite. To the east the range of mountains rising from the northern edges of the granite tract terminates in the hill of Glan; into the structure of this hill all the formations of the district enter.

The mountains of the primitive district are highly metalliferous. The neighbourhood of Oughterard is rich in copper and lead; and the same ores exist in the group of Binabola. Fine green marble is quarried at Ballinahinch at the southern base of the Binabola, and a beautiful green variegated marble is exported from Oughterard; the black and variegated marbles of Angliham and Merlin Park near the town of Galway are of a superior quality. In the eastern district ironstone has been found at Woodford, Gort, and Lawrencetown. Manganese is of frequent occurrence in the district about Gort. Pottery-clay and yellow ochre are found near Athenry. A fine grit, fit for millstones, is raised near Dunmore; and the Slieve-Baughta Mountains afford an excellent stone for polishing marbles.

Climate, Soil, and Agriculture.—The climate is mild, damp, and in some low districts unhealthy; snow rarely lies in the western district, where cattle are never housed. The coast is exposed to very heavy storms from the Atlantic, which, when they occur in August, generally destroy the potato crop on the coasts and islands, causing those occasional famines which scourge the population of the western coast of Ireland.

The richest soil in the county occurs in a tract extending from Gort through Loughrea to Portumna, Eyre Court, and Ballinasloe. The wheat produced in the southern portion of this tract is of a superior quality; and the numerous demesne lands occurring throughout it are among the most fattening pastures in Ireland. The remainder of the eastern district is more an oat and barley country. On the lighter soils great numbers of sheep are fed, principally for the supply of the Leinster graziers, who purchase them for fattening, at the fairs of Ballinasloe. Throughout this district marl is of frequent occurrence. Throughout the entire county, with the exception of demesnes, the dry-stone wall is the prevailing fence.

Large quantities of bog have from time to time been reclaimed. The system of farming pursued in the county is in general slovenly; the system of green crops and turnip husbandry is gradually extending; but the farmers who adopt new methods form a small minority. The number of acres under crops in 1853 was 235,168, of which 16,817 grew wheat; 83,840 oats; 15,751 barley, bere, rye, peas, and beans; 46,134 potatoes; 18,288 turnips; 10,764 cabbage, vetches, and other green crops; 794 flax; and 45,780 were in meadow and clover. In 1851 the total extent of plantations amounted to 26,540 acres. On 37,023 holdings in 1851, there were 23,086 horses; 12,490 mules and asses; 115,566 cattle; 327,697 sheep; 36,478 pigs; 11,711 goats; and 326,016 head of poultry.

Ballinasloe fair, the great fair for stock in the county, is frequented by sellers from all the western parts of Ireland. The occupations of the population are chiefly agricultural; but the inhabitants of the sea-coast are mostly engaged in fishing. Coarse linens, friezes, woollen hosiery, and felt hats, are manufactured; and kelp is made in large quantities on the coast.

Fisheries.—The fisheries of the coast yield a considerable produce. The fishing districts are Galway and Clifden, comprising together 217 miles of coast, which had in 1836 one decked vessel, 116 half-decked, 479 open sailing boats, and 1376 row-boats, manned by 8539 men and boys; while in 1850 there were only 833 fishing-vessels, employing 3596 men and boys. Besides the herring fishery, there is an excellent take of eel, ling, haddock, whiting, and turbot, from December to March; and of gurnet, mackerel, bream, and pollock, from May to August, together with a copious supply of salmon, oysters, lobsters, and crabs. The sun-fish deep-sea fishery is peculiar to this coast. The sun-fish, or basking-shark, has its name from only appearing about sun-rise and sun-set, at which times it is distinguishable by its tail and black-fins protruding from the water. It is killed with the harpoon like a whale; and as it is 30 feet in length, and 6 tons in weight, five or six men are required, for three hours or more, to kill a single fish. Several excellent new piers are in progress of erection for the protection of vessels engaged in the fisheries.

Divisions and Towns.—Galway is divided into 18 baronies. West of loughs Corrib and Mask are the baronies of—1, Ross, nearly co-extensive with the district of Joyce Country; 2, Ballinahinch, nearly co-extensive with the district of Connemara; and 3, Moycullen, corresponding with the district of Iar-Connaught. East of loughs Corrib and Mask, the district bordering on Mayo is occupied by the baronies of—4, Clare; 5, Dunmore; and 6, Tyaquin. The district bordering on Roscommon is occupied by the baronies of—7 and 8, Ballymoe and Kilhan; 9, Kileconnell; and 10, Clonmacnoo. The district bordering on the Shannon has the baronies of—11, Longford; and 12, Leitrim. The district extending from the centre of the county to the head of Galway Bay and to the Clare boundary has the baronies of—13, Athenry; 14, Loughrea; 15, Dunkellin; and 16, Kiltartan. The town and neighbourhood of Galway form the barony of—17, Galway; and 18, the islands of Arran constitute a barony and parish in themselves.

The following places in the county which are seats of Poor-Law Unions are noticed in separate articles, namely, BALLINASLOE, CLIFDEN, GALWAY, GLENNAMADDY, GORT, LOUGHREA, MOUNTBELLEW, OUGHTERARD, PORTUMNA, and TUAM. The village of AGURIM has also been separately noticed. Arranmore, the largest of the Arran islands, has been described under its more correct designation Inishmore, in the article ARRAN, ISLE OF.

The following towns and villages may be noticed here, with their populations in 1851:—*Ahascragh*, a small post- and market-town, situated on the left bank of the Clonbrock River, a feeder of the Suck, miles N.W. from Ballinasloe: population, 630. The town, which is clean and neat, possesses a handsome church, and a Roman Catholic chapel. On the high grounds above the town are the beautiful demesne and mansion of Castlegar. *Athenry*, one of the most ancient towns in Connaught, situated in a flat, dreary country, 14 miles E. from Galway: population, 1487. It is said to have existed previously to the Norman invasion; it subsequently gave the title of baron to the family of the De Berminghams, who built a strong castle near the town; of the castle there are still some remains. There are also extant some portions of a Dominican monastery founded here by one of the De Berminghams in the reign of John. The walls and gates which inclosed the ancient town may still be traced. Athenry returned members to Parliament from the reign of Richard II. till the Union, when the borough was disfranchised. It is now a poor desolate looking place; it has, however some share of business in consequence of the fairs, weekly markets, and petty sessions, that are held in it. *Barna*, population 482, besides 1009 in an auxiliary workhouse, is a small fishing village, situated at the head of a creek of Galway Bay, about 4 miles W. by S. from Galway. The pier at this place is of considerable advantage to the shipping on the coast. Near the town are some remains of an old castle. *Clare-Galway*, a small village on the Clare River, 7 miles from Galway on the road to Tuam, is only remarkable for the ruins of an old castle of the De Burghos, and for the remains of a Franciscan monastery founded in 1290. *Clonfert*, about 3 miles N.E. from Eyre-Court, had, until lately, the title of a city, and was the seat of a bishop. The city, the smallest perhaps in the world, stands on a rising ground on the edge of a vast bog, and comprises the former palace, an ordinary looking country house; the ex-cathedral, now the parish church, a small structure of the 12th century, and dedicated to St. Brendan; a ruined church of still more ancient date; and a few cabins. The bishopric, founded in the 6th century, was united in 1602 to the see of Kilmaedagh, and both sees were annexed to those of Killaloe and Kilmora by the Church Temporalities Act. The diocese of Clonfert lies chiefly in Galway, but comprises also parts of King's County and Roscommon. The chapter consists of a dean, archdeacon, and 5 prebendaries; the number of benefices is 11. [KILLALOE.] *Dunmore*, situated in a rather pretty country on the Dunmore River, a feeder of the Clare, contains a church attached to the ruins of an ancient monastery, the remains of an old castle built by the De Berminghams, a Roman Catholic chapel, a court-house, and an infantry barrack. It is a post and market-town, with 880 inhabitants. *Eyre-Court*, a market- and post-town, is situated 9½ miles S. by E. from Ballinasloe, on rising ground, overlooking a dreary waste of low boggy country, and has a bridewell and 940 inhabitants. *Headford*, population 1195, about 14

miles N. from Galway, is a market- and post-town, clean and tolerably neat in appearance. The chief buildings are the sessions house and a chapel for Roman Catholics. There are a handsome mansion and a glebe house, with well-wooded grounds in the vicinity. *Kinvarra*, a post-, market-, and sea-port town, is situated in a hilly country, at the head of Kinvarra Bay, 12 miles S.E. by S. from Galway, and has 1102 inhabitants, many of whom are engaged in fishing, and in the importation of turf from Connemara. Corn is exported in small craft from the quays. The town is the residence of the Roman Catholic bishop of Kilmacduagh and Kilsenora; the Roman Catholic chapel is the most important public building. *Menlough*, population 764, about 2 miles N. by W. from Galway, is a poor village situated on the left bank of the Corrib River. In the vicinity is Menlough Castle, the seat of Sir Valentine Blake, Bart. A quarry of black marble is in the neighbourhood of the village. *Oranmore*, a small post-town 6 miles E. from Galway, population 627, stands at the extremity of an inlet from Galway Bay, and possesses a large Roman Catholic chapel. Situated at the point of convergence of the roads from the county of Clare to Galway town, Oranmore is a considerable thoroughfare. Turf and sea-weed manure are imported at the quay. There are some remains of Oran Castle, a structure erected by the earls of Clanricarde to command the pass. The town has a brisk retail trade, and some share in the fisheries. *Roundstone*, population 471, besides 845 in the auxiliary workhouse, a village founded by the late Mr. Nimmo, is situated on the western shore of Roundstone Bay, 37 miles W. by N. from Galway, and has a Roman Catholic chapel, a monastery, a National school, and a small court-house. The harbour of Roundstone affords excellent anchorage for the largest vessels. From the pier the principal exports are turf, sea-weed, and corn to Galway and the ports of Clare.

Galway county is represented in the Imperial Parliament by four members, namely, two for the county and two for the county of the town of Galway.

In December 1851 there were 133 National schools in operation in the county, attended by 9620 male and 9495 female children; there are also a much greater number of other elementary schools, several classical schools, and, for superior education, Queen's College in Galway town. Assizes for the county are held in Galway, where are the county prison, county infirmary, and fever hospital. For civil business the county is divided into two ridings—East and West. Quarter sessions are held in 7 places, and petty sessions in 34.

The county expenses are defrayed by grand jury assessment. The county is in the military district of Limerick, and there are barrack stations at Loughrea, Portanna, Galway, Gort, and Oughterard: the staff of the county militia is quartered at Ballinasloe. The constabulary force in 1852 consisted of 738, including officers. Loughrea is head-quarters for the east riding; Galway town for the west riding. There are revenue police stations at Galway, Oughterard, Roundstone, and Tuam; and there are 18 coast guard stations, with a total of 74 men and 6 officers.

History, Antiquities.—The Anglo-Norman family of De Burgho and their followers, in the beginning of the 13th century, fixed themselves chiefly about Athenry and Galway, and maintained the administration of English law until the middle of the next century, when the assassination of William, earl of Ulster, led to a revolt of the entire Connaught branch of the De Burgho family. English law was again introduced by the reduction of this county to shire-ground by Sir Henry Sidney in 1585. Many of the proprietors are of English descent; but the great mass of the population are of original Irish descent, and speak the Irish language.

Galway is very rich in antiquities. The remarkable antiquities of the Arran Isles are noticed under ARRAN, ISLES OF. There are round towers at Ballygaddy, Kilbannon, Kilmacduagh, Meelick, Murrrough, and Ardahan. Cromlechs and stone circles are of frequent occurrence. The antiquities of the episcopal seats of Tuam, Clonfert, and Kilmacduagh are contained within this county. Of the numerous remains of religious houses throughout Galway, the ruined abbey of Knockmoy is the most interesting. It was founded in the year 1189 by Cathal O'Connor. Above the tomb of the founder are some fresco paintings of great interest, as exhibiting the costume of the ancient Irish. The raths or earthen fortresses of the old Irish and the castles of the Anglo-Normans are very numerous.

GALWAY, Ireland, a municipal and parliamentary borough and sea-port, a county in itself, and the head of a Poor-Law Union, is situated on the north side of Galway Bay, in 53° 16' N. lat., 9° 3' W. long., distant 130 miles W. by S. from Dublin. The town is governed by a high sheriff, recorder, local magistrates, and a board of 21 commissioners, elected triennially; and returns two members to the Imperial Parliament. The population of the town in 1851 was 20,686, besides 3009 inmates of the workhouse. Galway Poor-Law Union comprises 26 electoral divisions, with an area of 197,465 acres, and a population in 1851 of 61,397.

Galway was erected into a separate county by charter of 8th James I. The county of the town embraces a tract of 24,132 acres, of which 628 acres are in the town. This district is divided into nearly equal parts by the river, which here discharges the waters of Lough Corrib into the sea. The town of Galway is built on both sides of this river and on two islands situated in its channel; the main town stands on the left side of the river.

GEOG. DIV. VOL. II.

A fortress was erected on the site of the town in the year 1124. On the invasion of the English in 1180, Galway was put in a state of defence by the O'Flahertys, from whom Richard De Burgho took it in 1232; and in 1270 the walling and fortification of the town were undertaken by the conquerors. About this time the ancestors of many of the present leading families of Galway settled here, and from the entry of customs on the Pipe roll, it appears that the place had already become a considerable depôt of foreign merchandise. The town continued to increase in mercantile prosperity till the middle of the 17th century. On the final success of the Parliamentarians in 1652, Galway, after enduring a blockade of some months, submitted to Sir Charles Coote. On the breaking out of the war of the revolution in 1688, the inhabitants declared for James II. The town surrendered to General Gincell on July 26th 1691.

The walls have been almost entirely pulled down since 1779, and the town has extended on all sides beyond its former limits. There still remain some of the antique residences, which are generally square castellated buildings, with an interior court-yard and arched gateway opening on the street. The whole of the old part of Galway bears considerable resemblance to a Spanish town. The river is crossed by two bridges; the west bridge, built about 1442, connects the town with Ballynana Island and the opposite suburbs. The disposition of the streets within the circuit of the ancient walls is very irregular, but in the newly-built portion of the town uniformity and airiness have been more consulted. The new town is built on a gently-rising eminence stretching down to the river on the west and to the sea on the south. On the sea side a creek of the bay forms a natural harbour, which is the site of the docks. The floating docks occupy about 5 acres, with water for vessels of 500 tons. The spit of land which separates this basin from the river is quayed for a distance of 1300 feet, and terminates in a return pier. A new canal passing through the town is to form a communication between the harbour and Lough Corrib. There are also two small docks on the river side of the town. The town is lighted with gas, but is badly paved. The outskirts of the town are composed of hovels inhabited by a very poor population.

On the right side of the river is Claddagh, an extensive suburb of mean huts set down together in narrow streets, and inhabited by fishermen who will not permit strangers to reside among them. The laws of their fishery and most of their internal regulations are under the control of a functionary whom they call their mayor, and elect annually. They all speak the Irish language, and the women still retain much of the Irish costume.

The borough jail, erected in 1810, is situated on the upper of the three islands which the river here forms; and adjoining it is the county jail, connected by a bridge, built in 1831, with the county court house, a handsome cut stone building with a portico of four Doric columns, erected in 1815. The borough court-house, or 'tholsel,' erected during the civil wars of 1641, is a respectable edifice: the under part forms an extensive piazza. Opposite the tholsel stands the collegiate and parish church of St. Nicholas, founded in 1320. It is cruciform, 152 feet long by 126 feet in breadth. In the interior are various monuments of interest. Attached to the church is a singular ecclesiastical body called the Royal College of Galway, founded in 1484, when Donat O'Murray, the then archbishop of Tuam, sanctioned by Pope Innocent VIII. and King Edward IV., erected the church of St. Nicholas into a collegiate body, consisting of a warden and eight vicars choral. The presentation and election of the members of the college lie wholly with the Protestant members of the corporation. The Roman Catholics have two chapels, 3 monasteries, and 5 nunneries in Galway; the Presbyterians and Methodists have each a chapel. The chief educational establishment is the Queen's College, which opened for the reception of students in Nov. 1849. The number of students during session 1852-53 was 154, namely,—matriculated, 141; non-matriculated, 13. The building is large and handsome. Erasmus Smith's College, of which the charter is dated 1669, has an income from endowment of 1267 a year, and has several exhibitions of the value of 127 a year each, tenable for seven years, at Dublin University. There are also schools for boys and girls connected with the monasteries and nunneries.

Besides the buildings already mentioned there are a county infirmary, a fever hospital, a custom house, a Union workhouse, and extensive barracks. The chief manufacture of Galway is that of flour, which is carried on to a very considerable extent. In addition to numerous flour-mills on the Corrib River, there are oat-mills, malt-mills, and fulling-mills, driven by the same water-power. In the town and its vicinity are an extensive paper-mill, breweries, distilleries, a tan-yard, a bleach-mill, and foundries. Salmon and sea-fishing are extensively carried on. The assizes for the county and borough, and quarter and petty sessions are held at Galway. A chamber of commerce regulates the mercantile affairs of the town. Markets are held on Wednesday and Saturday; and fairs on May 31st, September 21st, and October 21st.

On December 31st 1853 the number of vessels registered as belonging to the port of Galway was—12 under 50 tons, of 359 tons; and 3 above 50 tons, amounting to 502 tons. The number and tonnage of vessels entered and cleared at the port during 1853 were:—Inwards 141, tonnage 21,613; outwards 124, tonnage 17,499. The

gross amount of customs duties received at the port during 1851 was 28,757*l.* 18*s.* 5*d.*

Galway Bay is a noble sheet of water, and with the harbour offers great advantages for an extended commerce.

(Hardiman, *History of Galway*; Inglis, *Ireland*; Fraser, *Handbook of Ireland*; Thom, *Irish Almanac*.)

GAMBIA COLONY, the British settlements on the Gambia, a river in Western Africa. The source of the Gambia has not been definitely ascertained. According to the most reliable accounts it rises in the country of the Fouta-Jalon, very near and a little to the south of the source of the Rio-Grande, in 10° 36' N. lat., 11° 18' W. long., in a valley surrounded by mountains. The river flows first east and then north till it reaches 13° 22' N. lat., whence it turns and flows south to 11° 18' N. lat., where, after having flowed upwards of 400 miles, it is less than 50 miles from its source. Its course is then generally north-west as far as 14° 30' N. lat., 13° 15' W. long., whence it flows westward with many bends to the sea, which it enters in 13° 30' N. lat., 16° 40' W. long. The Gambia has many affluents, especially in the upper part of its course. The most remarkable on the right bank are the Ba Creek, the Neolacaba, the Nyarico, the Nicolico, and the Nanijar. On the left bank it receives the Poré, the Jelata, and the Eropina, 45 miles below which the Gambia throws off a considerable branch named the Casamansa, which by numerous channels flows into the St. Domingo. The width between Cape Ste. Marie and the island of Sanguomar is about 20 miles. The width gradually diminishes. For nearly 400 miles the Gambia presents a fair water-road into the interior. Early in 1851 Governor Macdonnell, at the close of a tour of inspection on the river Gambia, proceeded up the river as far as about 160 miles above the Rock of Barraconda, which has generally been considered to be 450 miles above Bathurst. The governor's party included Mr. Bage, the colonial engineer, Staff-Surgeon Kehoe, and Lieutenant Mostyn; they proceeded in open boats, accompanied by a canoe. In their progress they observed few signs of cultivation or of inhabitants along the banks. Near the junction of the Nyarico the inhabitants of a town called Jallacoota waited upon the governor, soliciting the visits of traders to their district. The influence of the British has been beneficially exercised in abating the violence of intestine strife among the native tribes in the interior, and cultivating commercial intercourse, thereby promoting agricultural industry, and fostering conciliatory feelings amongst the tribes. By the exertions of Governor Macdonnell and Staff-Surgeon Kehoe vaccination has been brought into very extensive adoption among the native tribes on the Gambia.

The English have trading establishments at intervals along both banks of this river for many miles into the interior. The whole of the establishments are included under the title of the Gambia Colony. The colonial revenue for 1851 was 8414*l.* The exports from the Gambia are African teak, ship-timbers, ground-nuts, ivory, hides, gold, palm oil, gum-arabic, and bees-wax. The value of the exports in 1851 amounted to 186,404*l.*, of the imports to 107,011*l.* In 1852 the exports amounted to 217,856*l.*, the imports to 110,174*l.* The number of vessels arriving at the colony during 1852 was 258, tonnage 29,274, of which 31 ships of 5307 tons were British. The number and tonnage of ships cleared outwards during 1852 were:—Ships 260, tonnage 30,188, of which 30 ships of 4994 tons were British. The number and tonnage of vessels registered as belonging to the port of Bathurst on December 31st 1853 were:—Under 50 tons 49 vessels, tonnage 923; above 50 tons 14 vessels, tonnage 1270. Of the amount of exports for 1851 (186,404*l.*) the article of ground-nuts alone furnished 133,133*l.* value. The quantity of ground-nuts raised by agricultural labour in the countries immediately bordering on the Gambia River and exported from Bathurst has risen from 47 tons in 1835 to 11,094 tons in 1851. The ground-nuts are chiefly exported to France. The increased demand for this produce has tended to encourage settled and industrious habits among the native African population, many of whom travel hundreds of miles from the interior and hire from the chiefs whose lands lie on the banks of the Gambia such small portions of ground as their circumstances allow them to cultivate. After the produce of two or three years has enabled them to purchase supplies of European goods, they usually make up parties of from 20 to 100 strong and return to their homes in the interior. These migratory labourers are called 'tilliebunkas,' or men from the east. The principal establishments of the Gambia Colony are at Bathurst, on the island of St. Mary, at the mouth of the river, whence the produce of the country is shipped for England, and at Mac Carthy's Island. A colonial steamer has been stationed at Bathurst for some years, and has been of considerable benefit in facilitating communication with Mac Carthy's Island and with the trading stations on the banks of the Gambia. The land and sea breezes blow regularly over St. Mary Island for a considerable part of the year. The surface is a low plain, with a slight descent on the north and east towards the centre, which during the rainy season is much inundated. The soil is sandy, with a very small admixture of loam. In the shade the thermometer does not rise above 90°. Water is scarce and not of good quality. Bathurst town does not stand more than 12 or 14 feet above high-water mark. Many good and substantial government and public buildings have

been erected, as well as numerous handsome and convenient warehouses and dwellings; the remainder of the houses are rude African huts. The European residents average only about 50, but the number of European and American sailors and others visiting Bathurst every year is little short of 1200. There is a Roman Catholic chapel, capable of accommodating 600 persons, but no suitable place of worship for Protestants. The circumstances of the colony having been somewhat prosperous of late years several improvements are being effected. Among these may be mentioned—the placing of a light-ship at the mouth of the river; the sinking of wells in Bathurst for the use of the shipping; the erection of a public hospital, a market, a wharf, a church, a court-house, and public offices at Bathurst; and the construction of roads in the neighbourhood. About the close of 1850 a piece of ground in a very healthy spot, about 8 miles from Bathurst, was obtained from the King of Combo. The ground is about 2½ miles in length, and stretches along the shore of the Atlantic, with an elevation above the sea varying from 50 to 90 feet. It is situated near Cape St. Mary, and being intended to be built upon by merchants and others, residents of Bathurst, it has been called Clifton.

The population of Gambia Colony, according to the census taken March 31st 1851 was 5693, as follows, namely:—

	Whites.		Coloured population.	
	Males.	Females.	Males.	Females.
Island of St. Mary . .	167	13	2192	1890
Mac Carthy's Island . .	8	0	637	528
Barra Point	1	0	131	74
Cape St. Mary	1	1	36	16
Total	177	14	2996	2506

Of the total population 82 were returned as engaged in agriculture, 330 in manufactures, and 278 in commerce.

Mac Carthy's Island, the Junjan Bure of the natives, has an area of about 3 square miles, and is 180 miles from the mouth of the river, following its windings, in a populous district, 60 miles below the falls of Barraconda, up to which spot the river is navigable for vessels of 50 tons burden. Fort George, on the island, is in 13° 33' N. lat., 14° 45' W. long. Like St. Mary Island, it is but little raised above the level of the sea, and both are in a great measure covered with water during the rainy season. Tropical remittent fever occurs at both places, but with most intensity at Mac Carthy's Island. Mac Carthy's Island has a rich alluvial soil, which in the dry season becomes a mass of burnt clay. The thermometer frequently rises to 106° or 108° in the shade.

The Wesleyan Methodists have schools at Bathurst, at Mac Carthy's Island, and at Barra, opposite Bathurst; the total number of scholars is about 600. The Roman Catholics have a school at Bathurst under the care of several Sisters of Charity.

GANDERSHEIM. [BRUNSWICK.]

GANNAT. [ALLIER.]

GAP. [ALPES, HAUTES.]

GARD, a department in the south of France, is bounded N. by the department of Ardèche, E. by Vaucluse and Bouches-du-Rhône, S. by the Mediterranean, and W. by the departments of Hérault, Aveyron, and Lozère. The form of the department is irregular; its greatest length is, in a direction nearly east and west, about 76 miles; its greatest breadth, at right angles to the length, is about 70 miles. The area is 2250 square miles. The population, by the census of 1851, was 408,163, or 181¼ to a square mile, being 6·81 above the average per square mile for the whole of France. According to the census of 1841, the population of the department was 376,062. A large number of the population are Calvinists, who have consistorial churches at Alais, St.-Ambrois, Vézénobres, St.-Jean-du-Gard, Anduze, Uzès, St.-Chaptes, Nîmes, Vauvert, Aigues-Vives, Calvisson, Le-Vigan, Sommières, Vallerargue, St.-Hippolite, Sauve, and La-Salle; and above 70 meeting-houses in other localities of the department.

Surface, Hydrography, Communications.—The north-western part of the department is occupied by the branches of the Cévennes, of which the principal ridge is for the most part without the boundary of the department. From this part the face of the country gradually declines to the south-east, in which direction the principal rivers flow to the Rhône and the Mediterranean. The coast and the lower banks of the Rhône are lined with marshy lakes of considerable size.

The principal rivers are—the Rhône, which bounds the department on the east, and its feeders the Ardèche, which has the lower part of its course along the northern boundary [ARDÈCHE]; and the Cèze, which flowing from the Cévennes, in the most northern angle of the department, runs south-east into the Rhône below Bagnols, after a course of 55 miles. The feeders of the Cèze are the Luch, the Auzonet, the Aiguillon, and the Tave. The *Gard*, or *Gardon*, which gives name to the department and drains its central districts, falls into the Rhône a little above Beaucaire, after a course in a general south-east direction of about 70 miles. It is formed by the junction of three streams which rise in the Cévennes in the department of Lozère, and are distinguished by the names of Gardon-d'Alais, Gardon-d'Anduze, and Gardon-de-Mialet. All the rivers mentioned as flowing from the Cévennes are subject to inundations, which sometimes cause great ravages. The Vidourle flows

south from its source near Le-Vigan, forming below Sommières the western boundary, into the shore-lake of Mauguio, in the adjacent department of Hérault. Its course may be estimated at from 48 to 50 miles. The Vistre, which flows near Nîmes, and the Rhosny, which passes Aymargues, unite and serve as feeders to the Radelle Canal, which connects the Beaucaire Canal with the Canal-des-Étangs. The Hérault and some of its tributaries, and also the Dourbie, an affluent of the Tarn, have their sources and part of their course in the department. Of these rivers only the Rhône and the Ardèche are navigable.

The department is traversed by a navigable canal from the Rhône at Beaucaire to Aiguemortes, the principal town in the south of the department, which communicates with the Mediterranean by the Grande-Robine Canal and the Grau (a harbour formed by dykes running into the sea); and by the Radelle Canal with the Canal-des-Étangs, which last joins the Canal-du-Midi at Cette. There is another branch-canal, that of Bourgidou, from Aiguemortes to the canal of Sylveréal by which the navigation of the most western branch of the Rhône is facilitated. The length of canal navigation in the department is above 50 miles. The department is crossed by 10 national, 28 departmental, and 21 parish roads. It is also crossed by three railroads: one from the coal mines of Grand'Combe through Alais to Nîmes; another from Nîmes through Beaucaire to Marseille; and a third from Nîmes to Cette through Montpellier.

Geological Character and Mineral Products.—The department is chiefly occupied by the oolitic and other strata that lie between the cretaceous group and the new red-sandstone. In the south-east of the department the rocks of the supercretaceous group occur. The primitive rocks which form the crest and the western slope of the Cévennes appear in this department. Important iron, coal, and silver-lead mines are worked. Silver, copper, and calamine are found; but the working of the mines has been abandoned. Sulphate of iron, manganese, kaolin, antimony, fullers' and potters' clay, gypsum, building stone, &c., are also found. There are mineral springs in various places, and a good deal of salt is made in the salt marshes that line the coast. Some gold is found in the sands of the Cèze and the Gardon.

Climate.—The air in this department is commonly mild; but in March and April considerable changes of temperature are experienced within the twenty-four hours. In June, July, and August the heat is very great, the maximum in the shade being 99° 5' Fahrenheit. The department is scourged by the wind called *Mistral* (*Bouches-du-Rhône*), and, when this does not blow, by clouds of mosquitoes during the hot weather. The autumn is usually dry and cool. The greatest cold is commonly at the end of December.

Products.—The surface contains 1,440,348 acres: of this area about 350,000 acres are arable; 176,207 under vineyards; 20,711 are meadow land; 152,988 are under plantations of the mulberry, olive, &c.; 266,078 are covered with woods and forests; 390,584 with heaths and moors; and 37,391 with canals, pools, and marshes. The sheltered sides of the hills and the plains are devoted to the cultivation of the vine, the olive, the mulberry, and the almond. The arable land is contained chiefly in the valleys. The produce of the department in grain is not sufficient for the home consumption; but what wheat is grown is of superior quality. Besides wheat, the other grains cultivated are oats, rye, barley, maize, millet, and buckwheat, of which the total annual produce does not exceed 515,625 quarters. Lentils, peas, and potatoes are grown; of chestnuts immense quantities of excellent quality are produced on the slopes of the Cévennes. The vine is extensively cultivated all through the department, which yields annually 26,400,000 gallons of excellent red and white wine, one-fourth of which is consumed at home, one-sixth is distilled into brandy, and the remainder is exported through Cette, chiefly for the purpose of mixing with the poorer wines of more northern departments. Some muscadet wine is grown in the vineyards of St.-Gilles. The olive, too, is carefully cultivated in sheltered spots and on the southern slopes of the hills; the oil of the department is in high repute. The cultivation of the white mulberry, which here becomes a large and beautiful tree, is very extensive; the number growing in 1835 amounted to 5,709,466, and it has been greatly increased since then. These trees are grown almost exclusively for their leaves, which are the favourite food of silkworms: the leaves are also given to cattle and sheep, which prefer them to almost every other food. Cherries, apricots, peaches, figs, pomegranates, &c., are abundantly produced. Indeed the chief agricultural wealth of the department consists in its wines, oil, silk, and delicious fruits. Medicinal herbs, madder, and other dye stuffs, are grown.

Only a small number of oxen are reared: but sheep are numerous, and their wool is very fine. The horses are small, but vigorous and lively. Among the wild animals are wolves, foxes, otters, beavers, eagles, vultures, wild ducks, ortolans, red partridges, storks, bustards, &c.; the ponds and rivers abound with fish.

Manufactures, &c.—The industrial products of the department are varied and important. The principal are silk textures of all kinds, the chief seat of which is Nîmes; cashmere shawls, made of a mixture of Tibet wool, silk, and cotton; silk and cotton hosiery of every description; table-covers, carpets, &c.; woollen cloth, awanskins, blankets, shoe and glove leather; silk hats; ribands and gloves;

iron, steam machinery, wine casks; pottery, tiles, and bricks; glass, paper, cards; nails, plaster, and lime; cotton and woollen yarn; salt, &c. The manufacture of carpets has in recent times become of considerable importance in this department. Nîmes is the centre of this manufacture also. In Sommières and the country about it the woollen manufactures are firmly established. Leather is an important product of Nîmes, Beaucaire, Uzès, Bagnols, Sommières, Alais, St.-Hippolite, and Le-Vigan. The commerce of the department consists of the various products already mentioned. About 100 fairs are held annually. The number of wind-mills and water-mills amounts to 754; iron forges and furnaces to 135; factories and workshops, of different kinds, to 526.

The department is divided into four arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Nîmes	11	73	148,564
2. Alais	9	97	102,339
3. Uzès	8	98	90,011
4. Le-Vigan . . .	10	79	67,249
Total	38	347	408,163

1. Of the first arrondissement and of the whole department the capital is NÎMES or NISMES. The other towns are here named, the population in every case being that of the commune. *Aiguemortes*, situated in an unhealthy spot among stagnant marshes, at the junction of several canals before mentioned, presents the most perfect specimen extant of a feudal fortification. The walls, towers, gates, and ramparts are said to have been erected after the model of Damietta in Egypt by St. Louis, who twice embarked here for the Holy Land. The fosse has been filled up. The population is now only 3393. The streets are wide and straight; within the walls there are large spaces, once covered with houses, which are now cultivated as fields and gardens. The most remarkable buildings are—the Tour-de-Constance, opposite the citadel and outside the walls, which served as a prison for the Protestants taken after the revocation of the Edict of Nantes; the Tour-des-Bourguignons, a tower in which the Burgundians, slain in defence of the town in January 1421, were thrown between layers of salt to prevent the danger of miasma from their putrefaction; and the gate-tower, called La-Carbonnière, to the north of the town. Soda, fish, and salt, which is made at the great salt-pans of Peccais, in the neighbourhood, are the chief articles of commerce. There is a lighthouse 65 feet high on the north-west mole of the Grau, which forms the harbour of Aiguemortes. *Aravon*, prettily situated in a fine olive and fruit district on the right bank of the Rhône, to the east of Nîmes, has 2751 inhabitants. *BEAUCAIRE* has been noticed in a separate article. *Bellegarde*, on the Nîmes and Beaucaire railway, has 1796 inhabitants. *Catrisson*, a small town in a rich wine district, has important brandy distilleries, and 2660 inhabitants. A good deal of cream of tartar is made here, and the town gives name to a delicious claret. *St.-Gilles*, 12 miles S. from Nîmes, stands on the slope and at the foot of a hill above the canal from Beaucaire to Aiguemortes, and has 5635 inhabitants. The most remarkable structure is the church of the ancient abbey of St. Gilles, which dates from the 10th century. St.-Gilles gives name to the fine strong red wines of the neighbourhood, which are well fitted for exportation. The chief trade of the place is in these wines, and in brandy and spirits distilled in the town. *Marguerite*, situated in a rich vine district, on the Vistre and the Nîmes and Beaucaire railroad, has 1886 inhabitants. *Sommières*, 14 miles W. from Nîmes, on a hill on the left bank of the Vidourle, has important manufactures of woollens, awanskins, blankets, woollen thread, brandy, and leather, besides a good trade in wine, wool, &c. There are also several fulling-mills in the town, which has a population of 3697. *Vauvert*, 12 miles S.W. from Nîmes, has 4175 inhabitants, who manufacture silk, hosiery, brandy, spirits of wine, and saltpetre.

2. In the second arrondissement the chief town is ALAIS, which has been noticed under its proper head. *St.-Ambroix*, 12 miles N.N.E. from Alais, stands among the Cévennes Mountains on the right bank of the Cèze, and has iron-smelting furnaces, zinc-foundries, a silk-factory driven by steam machinery, and 3148 inhabitants, who trade in raw silk, olives, chestnuts, mulberry-trees, wine, and coal, which is mined in the neighbourhood. *Anduze*, W. of Alais, stands on the right bank of the Gardon-d'Anduze, between precipitous rocks on one side, and hills covered with vines and olives on the other. It is an ill-built place, but the environs present some enchanting scenery. The terrace, which serves as a dyke against the inundations of the Gardon, and from the middle of which springs a cut stone bridge across the river, deserves mention. The population amounts to 5238, who manufacture silk, hosiery, silk hats, cloth, pottery, glue, and leather; and trade in cattle, raw and thrown silk, corn, &c. *Barjac* is situated near the northern boundary of the department, at the foot of the Cévennes, 20 miles N.E. from Alais, and has 2319 inhabitants. *Génolhac*, high up among the Cévennes in the north-west of the department, has 1586 inhabitants. *St.-Jean-du-Gard*, a few miles N.W. of Anduze, stands on the left bank of the Gardon-d'Anduze, and has 4192 inhabitants. It is an ill-built place, disfiguring the scenery

that surrounds it, but it has important silk-factories, breweries, and tan-yards. A manganese mine is worked near it. *Vézénobres*, a station on the Nîmes and Alais railroad, has silk-reeling establishments, and 1066 inhabitants.

3. Of the third arrondissement the chief town, *Uzès*, stands 12 miles N. from Nîmes, among the mountains on the right bank of the Auzon, a feeder of the Gard, and has a tribunal of first instance, a college, and 6413 inhabitants in the commune. It is built on a hill, from the base of which springs the fountain of Eure, or Aure, the waters of which were (in Roman times) conducted to Nîmes by an aqueduct. The most important buildings are—the court-house; the old castle of the dukes of Uzès, which is fortified, and greatly resembles the famous Bastille of Paris; and the former cathedral. The inhabitants are engaged in the cultivation of the olive, and of the mulberry for the production of silk, and in the manufacture of silk hosiery, coarse woollens, leather, and paper. The town trades also in corn, wine, brandy, oil, cattle, raw silk, &c. *Bagnols*, on the right bank of the Cèze, in a district famous for its wines, is an ill-built place with narrow streets and 4900 inhabitants. There is a pretty square ornamented with two fountains; the college buildings, the hospital, and the canal that draws off the waters of the Cèze for purposes of irrigation, deserve mention. Coarse cloth, serge, thrown silk, cards, brandy, and leather are manufactured. *Pont-St.-Esprit*, well situated for trade on the right bank of the Rhône, is an ill-built town, consisting of narrow irregular streets, and defended by a citadel. The population amounts to 5239, who carry on a considerable trade in wine, oil, fruit, silk, and provisions. The town, which is surrounded by ramparts, was anciently called *St.-Savournin*. It took its present name from the bridge which crosses the Rhône here, and which has resisted the impetuosity of that river since 1309, the year in which it was completed. It consists of 19 large and 4 smaller arches; the expenses of its erection were defrayed from the offerings given in a chapel dedicated to the Holy Ghost (Saint Esprit), whence the name. *Remoulins*, a small place of 1370 inhabitants, is situated near that portion of the magnificent Roman aqueduct now called *Pont-du-Gard*. This aqueduct, which was constructed to convey the waters of the fountain of Eure to the city of Nemausus (Nîmes), spans a narrow gorge between two arid hills on each side of the Gard. It consists of three arcades built one over the other, 656 feet long and 173 feet high above the low-water mark of the river. The lower arcade consists of 6 arches, through one of which the Gard flows; the second is composed of 11 arches; and the third, which supports the channel of the aqueduct, of 35 arches. The whole structure, with the exception of the channel, which is 6½ feet broad and the same in depth, is built of large cut stones without cement. Between the Pont-du-Gard and Nîmes there is a portion of the aqueduct more than 7 miles long, which, being under ground, is still in perfect repair. Arrived at Nemausus, the waters were conducted by three branch aqueducts to the amphitheatre, to the public fountains, and to the supply of private houses. Several country houses also were supplied by conduits with water from the main trunk. *Roquemaure*, a town of 4471 inhabitants, stands in a rich wine district on the right bank of the Rhône, which is here passed by a suspension-bridge. It has silk-reeling factories, brandy distilleries, hydraulic saw-mills, and a great manufacture of wine-casks, of which 20,000 are made annually. The trade of the place consists of the Rhône wines, brandy, horses, and cattle. *Ville-neuve-les-Avignon* stands on a hill on the right bank of the Rhône, opposite Avignon, of which it may be called a suburb, and to which it was formerly joined by a famous bridge. [AVIGNON.] The most remarkable structures are—the former abbey of St.-André, now converted into a dwelling-house; the former Carthusian monastery; the church, which contains amongst other monuments the tomb of the Prince de Conti; and the public library. The population is 3671, who manufacture silk, linen, saltpetre, ropes, tiles, and lime.

4. In the fourth arrondissement the chief town, *Le-Vigan*, is beautifully situated at the foot of the Cévennes, 40 miles W. from Nîmes, and has a tribunal of first instance, a college, and 4945 inhabitants, who manufacture silk and cotton hosiery, white and shoe leather, and cotton-yarn. It is well built, and is considered to be the prettiest and most salubrious town in the Cévennes. In the principal square there is a monument erected to the heroic D'Assas, a native of Vigan, who saved the French army near Geldern in 1760 from a night surprise, at the cost of his life. *St.-Hippolite-du-Fort*, east of Vigan, on the Vidourle, is a modern town, which takes its origin from a fortress erected here in the 16th century. It is traversed by a canal which supplies several fountains and turns a great number of mills. The town is well built, has a tribunal of commerce, and 5297 inhabitants, who manufacture cotton and silk stockings, woollen stuffs, glue, and leather. *Quissac*, farther down the Vidourle, is a small place with 1590 inhabitants. *La-Salle*, a long straggling village on a feeder of the Gardon-d'Anduze, has 2354 inhabitants, who manufacture hosiery, silk, yarn, and leather. *Sauze*, a small place on the Vidourle, between Quissac and St.-Hippolite, has 2808 inhabitants. Near it are the hot-springs of Fonsange. *Sumène*, 8 miles from Vigan, has 2978 inhabitants and some cotton manufactures. *Valleraugue*, a prosperous little town, with a population of 3853, is situated 10 miles N. from Vigan, in an excellent mulberry district. A great deal of silk of the best quality is produced here.

The department forms the see of the bishop of Nîmes, is included in the jurisdiction of the Cour Royale, and University Academy of Nîmes, and belongs to the 10th Military Division, of which Montpellier is head-quarters. There is a diocesan seminary in Nîmes, and a secondary ecclesiastical school in Beaucaire. Besides a university Nîmes has a royal college or high school, in which the ancient languages, mathematics, and the physical sciences are taught. Communal colleges, or secondary schools, are established in Beaucaire, Alais, Uzès, and Le-Vigan. The department returns three members to the Legislative Body of the French Empire.

(*Dictionnaire de la France; Statistique de la France; Official Papers.*)

GARDA, LAGO DI, the ancient *Benacus*, the largest of the Italian lakes, is in Austrian Italy, between the province of Brescia on the west and that of Verona on the east; the boundary between the two provinces traverses the lake in its length. Its south coast belongs to the province of Mantua. The northern extremity of the lake enters the territory of Trent in the Tyrol. Its length, from north by east to south by west, is 32 miles; and its greatest breadth, which is in its southern part, is above 13 miles, but it is much narrower towards the north. From its position it is exposed to the sweep of the north winds from the Alps, which agitate its waters like a troubled sea—a fact which did not escape the observation of Virgil ('Georg.,' ii. 160). Its greatest depth is about 950 feet. It receives at its northern extremity the river Sarca, which rises in the mountains of Tyrol, and numerous other streams on its east and west banks. The Mincio issuing from its south-east extremity passes the fortress of Peschiera. Two ridges of mountains run parallel to its east and west banks; that on the east is more rugged and nearer to the coast, but the western ridge leaves a fine and fertile strip of land between it and the shore, and is known by the name of Riviera di Salò. The south coast of the lake forms part of the great plain of Lombardy; and on this side the beautiful peninsula of Sirmione, the ancient Sirmio, projects into its waters. On this peninsula was the paternal residence of the poet Catullus. The waters of the Lago di Garda are of a deep blue colour, and abound with fish. On the melting of the snow in spring its level, which is 230 feet above the sea, is raised about 5 feet. Some account of the territory along the banks of this lake, the scenery of which has been praised by Catullus, Dante, and other poets, is given under the heads BRESCIA and VERONA, THE PROVINCES OF. Steam-boats ply on the Lake of Garda, between Desenzano on its south coast and Riva at its north extremity, in the Tyrol. The lake has some small islands near its west coast, the largest of which is called *Iecchi*, from the name of the family to which it belongs: this islet is little more than one mile in circumference. The town of Gard from which the lake is now named, appears from inscriptions found there to have been inhabited in Roman times, but its ancient name is unknown. From an inscription found in the village of San Vigilio, on the east shore, it appears that Benacus was the name of the tutelary deity of the lake, the Pater Benacus of Virgil. Several inscriptions have been found also at Toscolano, on the west shore, in which the name Benacenses occurs; and it is probable that in this place there was a temple or sanctuary, which was a place of resort for all the Benacenses or people of the lake side.

GARDANNE. [BOUCHES-DU-RHÔNE.]

GARFAGNA'NA is a highland district of the northern Apennines, on the borders of the states of Tuscany, Genoa, and Modena, including the valley of the Upper Serchio above its junction with the Lima. The valley extends from the sources of the Serchio in a south-east direction for about 24 miles between the main ridge of the Apennines and the lofty group called Alpe Apuana, which divides the valley of the Serchio from that of the Magra, and also from the maritime districts of Carrara, Massa, and Pietrasanta. The most elevated summits of the Alpe Apuana, called Pisanino and Pizzo d'Uccello, are between 6000 and 7000 feet high. The climate of Garfagnana is cold and foggy, and exposed to boisterous winds from the mountains. The lowlands of the valley produce some corn, hemp, and flax, and in some sheltered and favoured spots the olive and mulberry; but the main resource of the people is their pastures and their forests of chestnut-trees, the fruit of which is to them a substitute for bread. They export some silk, cheese, undressed skins, chestnuts, wool, and timber. There are also iron and coal-mines. The Garfagnana contains 67 parishes, and is divided for administrative purposes into six jurisdictions, three of which belong to the duchy of Modena, two to the duchy of Lucca, and one to Tuscany. The principal towns are—*Castelnuovo*, with 2700 inhabitants, and some good buildings, being the residence of the Modenese governor; it has a college, an hospital, and a monte di pietà. The poet Ariosto was at one time governor of this place, of which he gives a curious account. *Galliciano*, with about 1000 inhabitants, the head place of the district, belonging to Lucca. *Barga*, with 2500 inhabitants, head town of the district, belonging to Tuscany.

GARONNE, the ancient *Garumna*, a river in the south of France, rises in the Val-d'Aran, near the foot of Mount Maladetta, in the Spanish Pyrenees, and enters France at a place called Pont-du-Roi, in the department of Haute-Garonne. From this point it runs north past St.-Béat to Montrejeau, where it is joined on the left bank by the Neste; its course is then easterly as far as St.-Martory, where it

Salat enters it on the right bank. Hence turning north-east it passes Cazères, where it becomes navigable; between this place and Toulouse it receives the Loue on the left bank; the Volp, the Arize, and the Ariège on the right. At Toulouse it is joined by the Canal-du-Midi, and turns north-west, in which direction it continues generally to its mouth, passing Verdun, Agen, St-Macaire, and Bordeaux, a few miles below which, at Bec-d'Ambès, it enters the estuary of the Gironde. Its principal feeders below Toulouse are the Giron, the Tarn, the Lot, and the Dropt on the right bank; the Save, the Gimone, the Gers, the Baise, the Avance, and the Ciron on the left.

The length of the Garonne is about 352 miles, of which 262 are navigable, but the navigation is much impeded above Toulouse. The river communicates either directly or by its navigable feeders with twelve departments, the total river navigation of its basin being about 1000 miles. The tide ascends to St-Macaire, about 25 miles above Bordeaux, and vessels of the largest size go up as far as the latter town. [BORDEAUX.] By this river and the Canal-du-Midi the Bay of Biscay is united to the Mediterranean.

The basin of the Garonne is bounded S. by the Pyrenees, E. by the Cévennes, N. by the Auvergne Mountains and their western offshoots, and W. by ramifications of the Pyrenees, which extend to the mouth of the Gironde. Its greatest length from S.W. to N.E. is about 200 miles, its greatest breadth about the same; in its lower part however the basin (including therein the Gironde) does not exceed 25 miles in width. The valley of this river is remarkable for the richness of its products in corn and wine, and for the beauty of its scenery.

The estuary of the *Gironde*, which probably derives its name from *Garunda*, a name of the Garumna, which occurs in a letter of Symmachus to Ausonius, is formed by the junction of the Garonne and the Dordogne; it runs north-west, and connects those rivers with the Bay of Biscay. From Bec-d'Ambès to its mouth the channel of the Gironde presents a succession of islets and banks, which nearly divide it into two equal branches, and render the navigation somewhat intricate. Its length is about 40 miles; its breadth at Bec-d'Ambès is about a mile and three-quarters; its greatest width is 7 miles; at its entrance into the Bay of Biscay the breadth is scarcely 3 miles. Its shores below Blaye are uninviting, and present to view only bare rocks and dreary heaths. This estuary is subject to the mascaret, or bore. [BOUE.] The crest of the bore rises from 13 to 16 feet above the surface of the river; and this great mass of water, moving along with impetuous velocity, often causes serious damage to vessels exposed to its violence, not only in the Gironde, but also in the Dordogne, which river it ascends for about 20 miles. [DORDOGNE.]

(*Dictionnaire de France*.)

GARONNE, HAUTE, a department in the south of France, derives its name from the river Garonne, which has the upper part of its course in the department. It is bounded N. by the department of Tarn-et-Garonne; E. by those of Tarn, Aude, and Ariège; S. by Spain, from which it is separated by the Pyrenees; and W. by the departments of Hautes-Pyrénées and Gers. Its greatest length, from north-east to south-west, is about 100 miles; its greatest breadth, at right angles to the length, 63 miles. It is comprehended between 42° 39' and 43° 54' N. lat., 0° 26' and 2° 1' E. long. Its area is 2431 square miles. The population by the census of 1851 was 480,794, giving 197.77 to a square mile, or 23.19 above the average per square mile for the whole of France. The population in 1841 amounted to 468,153.

Surface, Hydrography, and Communications.—The south of the department is covered with lofty mountains, including part of the crest and some of the branches of the Pyrenees, the peaks of which rise in this department, or just close to it, from 9000 to 11,742 feet high. The last number expresses the height of Mont Maladetta, from the snows and glaciers of which the Garonne springs. The lower slopes are covered with thick forests of oak, pine, fir, &c., or are occupied as sheep-walks and pasture-grounds. The mountains are diversified by beautiful lakes and cascades, and intersected by lovely valleys, such as that of Luchon. The lake and cascade of Oo, near the village of Oo, at the extremity of the valley of Larboust, are among the finest sights in the Pyrenees; the cascade, which is broken about midway in its descent, has a total fall of 1600 feet. The loud roar of torrents and waterfalls echoing among rocks and woods are heard with awe among the profound solitudes. The scenery higher up the mountains is of the most savage description: the highest part of the Pyrenees is covered with perpetual snow and ice; frightful precipices, yawning chasms, and naked rocks of enormous size are seen on their sides. The slope of the mountains is in general at an angle of about 35°, but in some places the descent is precipitous like a wall; and in the granite and primitive limestone formation it is not uncommon to see the rocks project far out of the perpendicular high overhead. The communication with Spain is kept up by the depressions in the mountains, here called 'ports.' The Port d'Oo, the loftiest pass in the Pyrenees, is 9850 feet high. The north of the department is occupied by hills of moderate elevations, separated by extensive and very fertile plains.

The department belongs entirely to the basin of the Upper Garonne, which traverses it from south to north. Of the other rivers the principal are—the Neste, the Salat, the Ariège, the Lers, the Loue, the Save, the Gimone, and the Tarn; these are all directly or

indirectly feeders of the Garonne. [GARONNE; ARIÈGE; TARN.] The department is traversed by the Canal du Midi for about 32 miles of its length, and has by means of this canal and its navigable rivers (the Garonne, the Salat, the Ariège, and the Tarn) a total navigation of about 150 miles. It is also crossed in various directions by 7 imperial, 31 departmental, and 30 parish roads. The projected railway from Bordeaux to Cette passes through Toulouse and the north-east of the department.

Geology and Mineral Products.—The supercretaceous strata extends over all the north of the department, and southward as far as the junctions of the Salat and the Neste with the Garonne. The oolitic and other kindred formations crop out beneath the supercretaceous deposits, and occupy a narrow belt to the south of these. The Pyrenees are formed of primitive limestone and other rocks. The mineral treasures of the department are iron, copper, lead, antimony, bismuth, zinc, coal, rock-crystal, slates, gypsum, marble, jet, and granite. Gold is found in the sands of the Garonne and the Salat. There is a salt spring at Salies. Mineral waters are found at various places; those of Baguères-de-Luchon are the most celebrated.

Climate and Produce.—In the higher parts of the mountains the winters are severe and long; in the lower hills and plains, which make up the greater part of the department, the climate is mild; here it rarely freezes, and a fall of snow is almost unknown. The average number of rainy days in the year is about 100; the rest of the year is dry, and almost equally divided between bright sunny and cloudy weather. The east and west winds predominate; the latter bring cold and rain. Tempests are frequent and violent. Goitrous affections are common among the mountaineers.

In the mountainous tracts it is only by dint of industry that any returns can be procured by the farmer. The valleys are very productive. The most fertile localities are the plain of Toulouse, the productiveness of which is noticed by Julius Cæsar ('De Bel. Gal.' i. 10); the valley of the Garonne generally; and the neighbourhood of Rieux, in the valley of the Arize, where two harvests are obtained in the year. The department contains 1,555,832 acres. Of this surface about one-half is arable land; 95,477 acres are grass-land; 120,858 are under vineyards; 275,357 under woods and forests; 13,853 are orchards, plantations, and gardens; 114,142 heath and moor land; and 11,654 are covered with waters, ponds, and canals. The population is not so much clustered into villages, towns, and hamlets as in most other parts of France; but is scattered over the department in farmsteads and cottages.

The arable land is well adapted to the cultivation of wheat, maize, buckwheat, millet, rye, and other grains and pulse. A great deal of garlic is grown; flax, hemp, potatoes, chestnuts, tobacco, truffles, melons, orange-flowers, fruit-trees, and medicinal plants are also produced. The quantity of wine grown in the department is 14,300,000 gallons, one-third of which is used for home consumption. The quality is generally inferior. The uplands and the valleys furnish abundance of excellent pasture; the mountains abound with wood suited for ship-building. Many oxen are bred in the extensive pastures of this department; asses, mules, sheep, and swine are numerous. Poultry is abundant. The geese and ducks are plentiful, and of great size; numbers of them are salted for household use and for exportation. A little honey and silk are produced. In the mountains there are the wild boar, the roebuck, the wolf, the fox, the heath-cock, and different varieties of the eagle. The partridge, ortolan, and quail are taken in abundance in the plains. The rivers and lakes abound with fish.

The commerce of the department is composed of the products already named, and of its manufactures, the chief of which are scythes, files, copper utensils, mathematical instruments, porcelain, pottery, tiles, coarse woollens, canvases, blankets, calico, tape, brandy, tin-ware, and leather of various kinds. There are 78 iron-furnaces, and 331 factories of different kinds, including glass-works, copper-foundries, cannon-foundries, gunpowder-mills, tobacco-factories, distilleries, marble-sawing works, &c., and 1053 wind- and water-mills. The department has considerable commercial intercourse with Spain, whither many handicraftsmen annually emigrate to exercise their callings. Fairs to the number of 360 are held in the year.

The department is divided into 4 arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Toulouse . . .	12	133	175,671
2. Villefranche . . .	6	97	65,030
3. Muret . . .	10	126	92,988
4. St.-Gaudens . . .	11	231	147,096
Total . . .	39	590	480,794

1. Of the first arrondissement and of the department TOULOUSE is the capital. The other towns of the arrondissement are small. We give the following with the population of the commune in each case:—*Fronton*, in the north of the department, is a well-built town consisting entirely of brick houses, and has 2141 inhabitants. *Grenade-sur-Garonne* stands 15 miles N. from Toulouse, on the left bank of the Save, a little above its confluence with the Garonne, and has 4291

inhabitants. It is a regular brick-built town, situated in a rich corn country, and has manufactures of coarse woollens, serge, and leather. *Villemer-sur-Tarn*, the most northern town in the department, stands on the right bank of the Tarn, which is here passed by a suspension-bridge: population, 5472.

2. In the second arrondissement the chief town, *Villefranche-de-Lauragais*, stands in 43° 23' 56" N. lat., 1° 43' 9" E. long., in a plain of great fertility on the Lers, near the Canal-du-Midi, and has a population of 2870 in the commune. It is the seat of a tribunal of first instance, and has manufactures of sail-cloth, hosiery, blankets, pottery, and leather. *Revel*, the only other place worth mentioning in this division, stands in the north-eastern angle of the department, on a hill which commands a fine view over a very fertile country. It has 5796 inhabitants, who manufacture stockings, hats, linen, liqueurs, cotton-yarn, tiles, and leather.

3. In the third arrondissement the chief town, *Muret*, is situated in 43° 27' 41" N. lat., 1° 19' 41" E. long., on the slope of a hill above a beautiful valley at the confluence of the Louge with the Garonne, which is here passed by a fine suspension-bridge. It is a pretty brick-built town with a tribunal of first instance, and 4196 inhabitants, who manufacture coarse woollens, delf, and leather. Near Muret a large army under Pedro, king of Aragon, and the counts of Toulouse, Foix, Comminges, and Béarn was defeated with great slaughter by the French under Simon de Montfort, on September 12, 1213. The king of Aragon was among the slain. *Auterive*, a town of 3272 inhabitants, who manufacture cloth for soldiers' uniforms, stands on the right bank of the Ariège, which is here navigable and is spanned by a brick bridge. *Carbonne*, on the left bank of the Garonne, opposite to where that river is joined by the Arize, is a pretty little town with a population of 2293, who manufacture cloth and bricks, and trade in oil and wool. *Cazères*, 22 miles S.S.W. from Muret, on the Garonne, is a well-built town with 2471 inhabitants. It has tan-yards, dye-houses, and hat-factories. *Cintegabelle*, at the junction of the Lers and the Ariège, has 4016 inhabitants. It is a place of some commercial activity; the iron and other products of the department of Ariège are put aboard river-craft here, the Ariège being navigable from this point. *Le-Fouasseret*, the birth-place of the Abbé Sicard, the great promoter of the instruction of deaf mutes in France, lies W. of Carbonne, and has a population of 2046. *St-Lys*, W. of Muret, has 4000 inhabitants, who manufacture linen, and trade in charcoal. *Montesquieu-Volvestre*, situated on a height close to the Canal-du-Midi, has 3745 inhabitants, and some manufactures of woollens, druggery, saltpetre, and tiles. *Rieur*, a well-built town, formerly the seat of a bishop, is prettily situated on the Arize, has a fine church, manufactures of cloth and hats, and 2128 inhabitants.

4. In the fourth arrondissement, the chief town, *St-Gaudens*, situated on a hill on the left bank of the Garonne, in 43° 6' 29" N. lat., 0° 43' 33" E. long., has a tribunal of first instance, a college, a very ancient church, and 4905 inhabitants who manufacture paper, leather, glass, delf, tiles, woollen-stuffs, tape, &c. The town has several flour, oil, and fulling-mills, and trades with Spain in corn, nails, linen yarn, mules, cattle, &c. From the Esplanade along the river there is a fine view of the scenery of the Pyrenees and the valley of the Garonne. *Aspet*, S.E. of St-Gaudens, near the torrent of Souheil, in a most picturesque situation, has iron-factories, manufactures of nails, combs, &c., and a considerable trade with Spain in pigs. The population of the commune is 2573. *Bagnères-de-Luchon*, famous for its hot sulphureous springs, stands near the head of the valley of Luchon between two mountain streams, the Go and the Pique, which unite a little north of the town to form the Neste-de-Luchon, a feeder of the Garonne. The town which is 20 miles south from St-Gaudens, and nearly opposite the middle point of the chain of the Pyrenees, is well built, with wide, straight, clean, and well-paved streets. It is in form a triangle, the points of which terminate in alleys, one shaded with planes, another with sycamores, and the third with limes. The alley of limes leads from the town to the baths, and is bordered with houses for the greater part of its length. The neighbourhood abounds with magnificent scenery. The bathing establishment is a large, elegant, and commodious building, fitted up with many marble baths, into each of which water from four springs is conducted by pipes. The waters of Bagnères were known to the Romans, by whom they were named *Aquæ Lixonienses*; the springs were re-discovered about a century ago, and they are now much frequented from the middle of May to the end of October by patients suffering from skin diseases, glandular swellings, and stiffened joints. The waters are administered in baths, douches, and as drink. Bagnères has an important chocolate manufactory; roofing slates are quarried, and copper-mines worked in the neighbourhood. *St-Béat*, near which there are white marble and slate quarries, stands on the Garonne, and in a defile through which that river flows on leaving the Val-d'Aran. The town is small, consisting of two streets on opposite sides of the river, and united by a stone bridge: the population is 1374. *St-Dertrande-de-Comminges*, a village of under 1000 inhabitants, stands on the site of the ancient Lugdunum Convenarum, near the left bank of the Garonne. It was formerly the chief town of Comminges, and the seat of a bishop; the former cathedral is a large and interesting structure. There are famous

marble quarries and marble works near this town. *L'Ile-en-Dodon*, famous for its poultry, stands on an island formed by the Save, and has 1818 inhabitants. *St-Martory*, a picturesque little town at the junction of four high roads on the Garonne, which is here crossed by a fine bridge, has 1147 inhabitants. *Montrejeau*, beautifully situated on a plateau at the foot of the Pyrenees, and near the junction of the Neste with the Garonne, is a neat and well-built town with 3081 inhabitants. The magnificent scenery of the Pyrenean Mountains contrasts beautifully with the smiling landscapes and rich valleys watered by the two rivers in the neighbourhood of this town. A fine marble bridge of six arches crosses the Garonne here. Stockings and leather are the leading manufactures of the town, which trades also in corn, cattle, mules, poultry, timber, oak-staves, &c. *Salies*, is a small place on the Salat, over which a suspension-bridge is thrown. There is a fine salt spring near it.

The greater part of the territory now included in Haute-Garonne was inhabited in ancient times by the Volcae Tectosages, whose capital was Tolosa, now Toulouse. The Romans incorporated this part of Gaul with Narbonensis. From the Romans the dominion passed to the Visigoths, who maintained themselves in the kingdom of Tolosa till the 8th century, when they were expelled by the Saracens, who in their turn were driven out by Pepin. Charles, brother of Charlemagne, founded the kingdom of Aquitaine, of which Toulouse was the capital, for his son, who being too young, the government was placed in the hands of dukes or counts in A.D. 788, and it is to this time that the creation of counts of Toulouse is referred. On the union of the kingdom of Aquitaine to the crown of France under Louis-le-Bègue, the counts of Toulouse became independent, and retained the sovereignty of the county till 1270, when it was re-united to the crown by Philippe-le-Hardi.

The department forms the see of the Archbishop of Toulouse and Narbonne, is included in the jurisdiction of the Cour Royale and of the University Academy of Toulouse, and belongs to the 12th Military Division, of which Toulouse is head-quarters. It returns four members to the Legislative Body of the French empire.

(*Dictionnaire de la France; Statistique de la France; Official Papers.*)

GARRIGILL. [CUMBERLAND.]

GARROW HILLS. [HINDUSTAN.]

GARSTANG, Lancashire, a small market-town, and the seat of a Poor-Law Union in the parish of Garstang, is situated on the right bank of the river Wyre, in 53° 54' N. lat., 2° 46' W. long.; distant 11 miles S. by E. from Lancaster, and 229 miles N.W. from London by road. Garstang station of the Preston and Liverpool Railway, which is one and three-quarter miles from Garstang, is 218½ miles from London. The population of the town in 1851 was 839. The living is a perpetual curacy in the archdeaconry of Lancaster and diocese of Manchester. Garstang Poor-Law Union contains 23 parishes and townships, with an area of 54,272 acres, and a population in 1851 of 23,454.

Garstang was incorporated by Charles II.; the corporation consists of a bailiff and seven capital burgesses, who have scarcely any functions. The town-hall, erected in 1755, is situated in the market-place. The parish church, a commodious edifice, is nearly two miles from the town, in a part of the parish called Garstang Churchtown. In the parish are a chapel of ease, and chapels for Independents, Wesleyan Methodists, and Roman Catholics. Garstang possesses a Free Grammar school, with an income from endowment of 364 a year; the number of scholars in 1851 was 26. There are also a National school, a Roman Catholic Charity school, and at Churchtown a Free school. The Lancaster Canal crosses the river Wyre by a fine aqueduct near the town. Cotton-spinning and paper-making employ some of the inhabitants; and there are corn-mills and worsted-mills on the river Wyre. The market is held on Thursday, and several fairs are held in the course of the year.

GATEHOUSE. [KIRKCUDBRIGHTSHIRE.]

GATESHEAD, Durham, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union in the parish of Gateshead, is situated on the right bank of the river Tyne, in 54° 57' N. lat., 1° 35' W. long., distant 14 miles N. by W. from Durham, 274 miles N. by W. from London by road, and 277 miles by the Great Northern and York Newcastle and Berwick railways. The borough is governed by 6 aldermen and 18 councillors, one of whom is mayor; and returns one member to the Imperial Parliament. For sanitary purposes the borough is under the management of a Local Board of Health. The population of the borough in 1851 was 25,568. The livings are rectories in the archdeaconry and diocese of Durham. Gateshead Poor-Law Union contains nine parishes and townships, with an area of 24,271 acres, and a population in 1851 of 48,085.

Gateshead forms in effect one town with Newcastle, the county town of Northumberland, on the opposite side of the Tyne, with which it is united by a handsome stone bridge, and by a magnificent high level bridge in connection with the York Newcastle and Berwick railway. Gateshead is supposed to have been a fortified Roman station. Numerous coins and other Roman antiquities have been discovered here. There are two principal streets; one descending towards the bridge is so steep as to be almost impassable for carriages.

during winter; the other, of recent construction, is of gradual descent. The town is lighted with gas, and partially paved. The parish church is an ancient and spacious cruciform edifice, surmounted with a lofty tower. Besides the parish church are St. Edmund's chapel; St. Cuthbert's church, erected in 1848; and St. John's church, Gateshead Fell, erected in 1825. The Independents, Presbyterians, Wesleyan and New Connexion Methodists, and Roman Catholics have places of worship. The Grammar school, founded in 1700, has an income from endowment of 12*l.* a year, and in 1851 had 40 scholars, of whom 12 were free. There are also National, British, and Infant schools. St. Edmund's Hospital provides for a master, 3 elder brethren, and 12 younger brethren. There are a mechanics institute, a dispensary, and an almshouse. A county court is held here. Markets are held on Tuesday and Saturday; and fairs on the 2nd Monday in April and the 1st Monday in November. Extensive coal-mines, iron-foundries, chain-cable manufactories, glass-works, brick and tile-works, soap-works, ship-building, rope-making, and chemical and other works are carried on. There is a manufactory for patent iron-wire rope, and at Gateshead Fell is a quarry for grindstones, which are exported to all parts of the world.

(Communication from Gateshead.)

GÂTINAIS, LE, a district in France, partly comprehended in the province of Ile-de-France, partly in that of Orléanais, and distinguished as Gâtinais Français and Gâtinais Orléanais, of which Melun and Montargis were the respective capitals. It extended from the Seine to the Loire, and was drained also by the Loing and the Easonne. Other towns of Gâtinais Français were Nemours, Fontainebleau, and Moret; of Gâtinais Orléanais, Chatillon, Briare, Gien, and St. Fargeau. The county so-named consists of fertile plains, and is famous for its corn products, wine, fruits, pastures, and forests. It is now included in the departments of SEINE-ET-MARNE and LOIRET.

GÂTINE, a district of Poitou, of which Parthenay was the capital, is now comprehended in the department of Deux Sèvres. [SEVRES, DEUX.]

GAUL. [FRANCE.]

GAULNA. [CANDEISIL.]

GAZA, now called Gazara, a town of Syria, or more properly speaking, of Palestine, on the south-west frontiers of that country, near the borders of the desert which separates it from Egypt. It consists of the upper town, with a castle situated on a hill, about 2 miles from the sea, and a lower part, or suburb, in the valley below. The population, including that of two suburban villages, is about 10,000. It is famous for its manufactures of soap and cotton stuffs, and carries on some trade by sea, especially with Egypt, and also by land through the desert with Suez. Gaza is greatly fallen from its ancient splendour; but it still exhibits signs of commercial activity and prosperity. It is repeatedly mentioned in Holy Writ, especially in Judges (xvi.), as one of the principal towns of the Philistines. It was besieged by Alexander the Great, and taken after an obstinate defence. At a later period it was destroyed by the Jews in one of their revolts against the Romans: in the Acts of the Apostles (viii. 26), it is mentioned as being then deserted. It became at an early period the seat of a bishop. In the middle ages it was an important frontier town. The hill upon which Gaza stands is elevated about 60 feet above the neighbouring plain, and is about 2 miles in circumference at the base. It appears to have been once wholly inclosed by walls: the sites of several of the former gates are still pointed out. The greater part of the modern city is situated on the plain below. The town being surrounded by gardens and plantations of olive and date trees, above which numerous and elegant minarets rise, has a pleasing appearance from a distance. The country around, which is hilly, is remarkably fertile. The port of Gaza, called Majuma Gaza, had special privileges conferred upon it by the emperor Constantine, who gave it the name of Constantia, and exempted it from subjection to Gaza. This was done in consequence of the inhabitants professing the Christian faith. Under Julian the people of Gaza reasserted their claim to supremacy over the port; the claim was admitted by the emperor, and the new name of the port was dropped. (Robinson; Le Quien; *Dictionary of Greek and Roman Geography*.)

GEERTRUYDENBERG. [BRABANT, NORTH.]

GELA, a Grecian colony on the south-western coast of Sicily, was founded by a joint colony from Crete and from Lindus, a city in

Rhodes, in B.C. 690, or about 44 years after the foundation of Syracuse. (Herod., vii. 153; Thuc., vi. 4.) It was situated at the mouth of the river Gela. The colony established here was one of the most powerful of the Grecian colonies in Sicily. About B.C. 582 the afterwards powerful city of Agrigentum was founded by a colony of Geloans. Gela itself maintained an influential position till the time of Gelon, who removed the greater part of its inhabitants to Syracuse; after which it rapidly sunk in importance. It was destroyed

in B.C. 405, in the great Carthaginian invasion, and although afterwards repopled, never recovered its former prosperity. The modern town of Terra Nova is supposed to have been built upon its site. The district in which Gela was situated was a very fertile corn-growing tract. It was renowned for the excellence of its lentils. The territory also produced abundance of salt. The Minotaur on the coin of Gela, above, is symbolical of the origin of the city. (*Dictionary of Greek and Roman Geography*.)

GENAPPE. [BRABANT, SOUTH.]

GENESSEE. [NEW YORK.]

GENÈVA (Genève, Genf, Ginevra), a town and canton in the south-west of Switzerland. The canton is bounded N. by the canton of Vaud and the Lake of Geneva, E. and S. by Savoy, and W. by France. It consists of the territory of the old republic of Geneva, of the district of Versoix ceded by France, and of the districts of Carouge, Hermance, and others, ceded by the king of Sardinia by the treaties of Paris, 1814, and of Turin, 1816. The area of the canton is only 91 square miles. The population of the canton in March 1850, amounted to 63,976, of whom 34,212 were Calvinists and 29,764 Catholics, who are under the archbishop of Freyburg. This number includes the population of the city of Geneva, and foreigners who to the number of 14,928 reside in the canton. The greatest length of the canton is about 17 miles, from Hermance, on the extreme north-east frontier, to Chaney, a commune on the left bank of the Rhône, south-west of Geneva, near the Fort de l'Ecluse, which is a French military outpost on that side.

The territory of Geneva extends along both banks of the Lake of Geneva and the valley of the Rhône, being confined on the west by the lower offsets of the Jura, and on the east and south-east by the mountains of Voirons and Salève, which are about 4000 feet above the sea. These mountains however are out of the territory of Geneva, which contains only some hills, the highest of which are not 400 feet above the level of the lake. The territory of the canton is divided into three districts: 1. The district north of the Rhône, including a strip of land along the west bank of the lake as far as the borders of the canton of Vaud, beyond Versoix. 2. The district south of the Rhône, and between it and the left bank of the Arve, which includes Carouge, a neat well-built town, with 4400 inhabitants, about one mile south of Geneva. 3. The district north of the Arve, and between it and the east bank of the lake, along which it extends in a narrow strip as far as Hermance. The principal place of this last district is Chêne, consisting of two large villages adjoining each other, which reckon together about 2000 inhabitants. Numerous other villages are scattered about the whole territory; and the immediate neighbourhood of Geneva, both along the banks of the lake and in the direction of the principal avenues leading to the town, exhibits extensive lines and groups of country-houses, which form handsome suburbs.

About one-third of the territory of Geneva is sown with corn, another third is pasture-land, a much smaller proportion is planted with vines, which yield an indifferent sort of wine; the rest consists of woods, orchards, and gardens. The deficiency in corn, cattle, and wine, for the consumption of the town of Geneva, is supplied by the neighbouring countries. Manufactures and commercial speculations form the principal sources of wealth. Watches and jewellery are the principal manufactures: about 100,000 watches are made annually and exported to France, England, Italy, and other countries. Other industrial products are musical-boxes, chronometers, mathematical instruments, cutlery, fire-arms, &c. There is an active transit trade carried on by steamers between Geneva and the several towns on the shores of the lake.

Geneva is one of the oldest sites in Western Europe. It is mentioned by Julius Caesar ('Bell. Gal.' i. 7). The republic of Geneva originated in the municipal government of the town, to which Charlemagne granted certain privileges and franchises, subordinate however to the bishop, who was styled Prince of Geneva, and was an immediate feudatory of the empire. Frequent wars occurred between the

Coin of Gela.

British Museum. Actual Size. Silver. Weight, 265 grains.

citizens and the bishop on one side, and the counts of Genevois, a feudal dynasty which sprung into existence from the wreck of the old kingdom of Burgundy, and which ruled the adjoining province of Savoy, which is still called Genevese, and of which Annecy is the capital. These counts claimed jurisdiction over the town of Geneva. The line of the counts of Genevois becoming extinct in the 14th century, their inheritance escheated to the house of Savoy, who obtained the investiture of it from the emperor Sigismund in 1422; and hence are derived the claims of the dukes of Savoy over Geneva, claims however never completely enforced. At the Reformation, which was established in Geneva and generally all through Switzerland by the exertions of Calvin, the bishop quitted Geneva, and retired to Annecy, and from that epoch the town governed itself as an independent municipality, and formed an alliance with the Swiss cantons of Berne and Freyburg, and afterwards Zürich. The dukes of Savoy, after several fruitless attempts to reduce Geneva by force or surprise, acknowledged its independence by the treaty of St. Julien in 1603.

In the 18th century the canton of Geneva was distracted by interior feuds between aristocratic families and the popular party. These troubles furnished the French Directory with a pretence for seizing it by force, and incorporating it with France in April 1798 under the name of the department 'Du Léman.' In 1814 it was occupied by the Austrians, and was soon after restored by the allied powers to its independence as a canton of the Swiss Confederation.

The town of Geneva, the metropolis of Calvinism on the continent of Europe, is built on two hills separated by the Rhône, where it issues out of the lake. The larger part of the town is built on the south side of the river. The Rhône forms an island within the town, which is also built upon and is a separate district, joined to the two banks by bridges. The district on the north bank is called St.-Gervais. A smaller island, at the very point where the Rhône issues from the lake, is planted with trees and forms a public promenade, which is adorned with the statue of Rousseau. A handsome suspension-bridge connects both banks of the river with the island. A handsome quay with fine buildings has also been constructed along the south or left bank of the Rhône. The streets in the old part of the town (St.-Gervais) are narrow and steep, the houses high, and the appearance of the streets rather gloomy. The most remarkable buildings are the cathedral church of St.-Pierre, the handsome front and portico of which were restored in the 18th century; the town-hall, which is a very old and massive building; the hospital; the Musée Rath, which has some good paintings; the college, with a library of 50,000 volumes; the observatory; the Hôtel des Bergues, one of the largest and finest in Europe; and the penitentiary. The house in which Calvin lived and died is still shown in the Rue des Chanoines, and also the house in which Jean Jacques Rousseau was born. Geneva abounds with means of education. There is the Academy or University with four faculties— theology, law, science, and belles-lettres, with forty professors; the schools of drawing and architecture, industrial schools where they teach mathematics, physics, and chemistry applied to the arts; a school for music; besides elementary and other schools. There are also societies of arts, of medicine, of physics, and natural history; and a reading society, which has a library of above 30,000 volumes; a museum of natural history; a cabinet of medals; a botanical garden, and other scientific institutions. Geneva is 33 miles S.W. from Lausanne, and about 80 miles S.W. from Berne. Towards this latter town a railroad has been projected following the curve of the northern shore of the lake as far as the village of Morges, thence running to Yverdon on the Lake of Neuchâtel, along the southern shores of this lake and that of Morat, and thence eastward to Berne. Steamboats ply daily on the Lake of Geneva, which is described under *LEMAN*. In May 1850 the population of Geneva and its suburbs amounted to 37,724.

By the constitution previous to 1847 a council of state consisting of 24 members had alone the initiative of the laws. The projects of laws were laid before the representative council, consisting of 274 members, which accepted or refused, and might make amendments, with certain restrictions. The members of the representative council were elected for nine years by all the natives of either town or territory above twenty-five years of age, who paid seven florins of direct taxes, and who were neither paupers, bankrupts, nor servants, and had not been condemned in any criminal process. The representative council named the members of the council of state for eight years; it also fixed the annual budget of the canton and the municipal budget of the town, and appointed the judges and magistrates. In 1846 the Catholic cantons of Switzerland formed themselves into a separate league (Sonderbund) in order to defend themselves against the attacks of the Free Corps which had invaded Lucerne in 1845 under Ochsenbein and been defeated. The General diet of the Confederation on the proposal of the canton of Zürich decided (September 5, 1846) that the Sonderbund was illegal, to which decision almost all the Protestant cantons adhered. The grand council of Geneva however declined to accede to the proposal unless means were adopted to preserve the peace of the Confederation, and to prevent any further attacks by the Free Corps. Two days afterwards (October 5) the radical party in the canton demanded the retraction of the decision, and on the 9th the council of state resigned

its power to the municipal council of Geneva, and a provisional government with the radical leaders as its members was appointed.

GENEVA, LAKE OF. [*LEMAN, LAKE.*]

GENÈVRE, MONT. [*ALPES, HAUTES; ALPS.*]

GENNESARET. [*PALESTINE.*]

GENOA, or more correctly GÉNOVA, Duchy of, one of the administrative divisions of the kingdom of Sardinia, occupies, with the intervening coast, that portion of the Ligurian Apennines which lies at the head of the Gulf of Genoa, between 44° 3' and 44° 50' N. lat., and 8° 20' and 10° 5' E. long. It is bounded W. by the administrative division of Savone, N. by that of Alessandria, E. by the duchy of Massa belonging to Modena, and S. by the Mediterranean. The area is 1257 square miles. The population in 1848 was 545,182. The small islands of Palmaria and Tino, at the entrance of the Bay of Spezzia, and that of Caprja, near Corsica, belong to the duchy of Genoa.

Coast-line, Surface.—The average breadth of the country is barely 7½ miles, but about the middle near Genoa, it is 25 miles. The coast line does not exceed 100 miles. Along the coast are numerous indentations, which form several good harbours, and two spacious bays, Rapallo, and the magnificent Bay or Gulf of Spezzia, the Portus Lunæ of the Romans. The surface of the country presents a succession of mountainous slopes and terraces, broken by valleys and ravines. The Apennines cover the greater part of the surface of the duchy, curving round the gulf at the distance of a few miles from south-west to north-east, and forming two slopes, from the northern of which descend the Borinida, the Orba, the Scrivia, the Staffora, and the Trebbia, all feeders of the Po, while the Gulf of Genoa receives from the southern slope the Polcevera, the Besagno, the Sturla, the Vara, and the Magra, all of them streams of little importance.

From the nature of the country there can only be one main line of road traversing the length of the duchy. But this road is an excellent one, running along the Riviera di Ponente (western shore) from the city of Genoa to Savona, and along the Riviera di Levante (eastern shore) from Genoa to Sarzana, and disclosing innumerable views of the most picturesque beauty. The transverse roads, which fall into this main road, are the terminations of those from Piedmont and Lombardy. The only railway in the duchy is the southern portion of the Turin and Genoa railway, which is now open to the latter city.

The prevalent rocks are of the magnesian limestone, and carboniferous systems. Statuary and other marble, alabaster, limestone, slate, coal, and asbestos are obtained. The soil is generally most part rocky and but moderately productive, but the inhabitants have turned to advantage every space capable of cultivation. The climate is temperate and on the whole salubrious, and the air is remarkably pure. The winds in the mountain ravines are however bitterly cold in winter, occasioning among the inhabitants a tendency to pulmonary complaints; and the sirocco sometimes exerts its noxious influence. The chief productions are oranges, lemons, and citrons, light wine, oil, chestnuts, silk, cotton, hemp, with figs, pomegranates, almonds, and other excellent fruits. There are extensive forests and fine pastures on the mountain slopes.

The Genoese are a robust and good-looking people; shrewd, active, industrious, frugal, and parsimonious. They speak one of the most difficult Italian dialects, and have a few books of poetry printed. They are well calculated for commerce, which is their real element. The Rivieras, or maritime districts, furnish the best sailors in the Mediterranean, and the Sardinian navy is chiefly manned by them. Genoese vessels trade to the Levant, the Black Sea, the Baltic, to America, and even to the coasts of the Pacific. The principal articles of export are silk, rice, hemp, oil, and paper. There are at Genoa manufactories of silk stuffs, of woollens, embroidered cambrics, and muslins, plain and ornamental furniture, paper, jewellery, &c.

Divisions, Towns, &c.—The duchy is divided into 4 provinces, which with the area, 'mandamenti,' and population in each, are as follows:—

Provinces.	Area in sq. miles.	Mandamenti.	Population in 1848.
Chiavari . . .	353	7	116,077
Genova . . .	357	13	285,233
Levante . . .	259	8	78,850
Novi . . .	288	6	65,013
Total . . .	1257	32	545,182

The Province of Chiavari lies between the provinces of Genova and Levante, and is watered by the Vara, a feeder of the Magra, and the torrent of Rapallo, which falls into the Bay of Rapallo. The strip of land along the coast is very productive; the mountains abound with chestnut woods. The inhabitants are chiefly employed on the sea. *Chiavari*, the capital of the province, is beautifully situated on the Bay of Rapallo; it is a well-built busy town, with about 10,000 inhabitants. The streets are narrow, and the houses, many of which are of a rather superior kind, are generally built on open arcades. It has several splendid though not very tasteful churches; the principal, that of Madonna-del-Orto, is annexed to the ecclesiastical seminary. The Franciscan convent, in the great square, is an interesting

building. There are several old and picturesque towers in the town, the largest of which is now used as the office of the podestà. The town has a Società Economica, for the encouragement of agriculture, literature, and the arts. It has a lace and twine factory, and is noted for the manufacture of light willow chairs. *Borzonasca*, a large village with about 5000 inhabitants, lies inland among the Apennines, and is of some importance for its cloth manufactures. *Lavagna*, famous for its slate quarries, has about 6000 inhabitants. It contains a fine church and a singular-looking palace. *Rapallo*, a flourishing town with 10,000 inhabitants, extends along the shores at the head of the Bay of Rapallo, about 6 miles W. from Chiavari. It is well built; the houses stand chiefly on arcades; there are many pretty churches with peculiarly graceful campanile towers, and on the sea-shore there is a fine martello tower. The chief manufactures are lace and oil.

Reghera, a pretty village on the shore, near the promontory of Porto Fino, has, including the district about it, 6000 inhabitants. *Sestri-di-Levante*, E. of Chiavari, stands on a peninsula connected with the Riviera by a long isthmus, and has 4000 inhabitants, who are engaged in the coasting trade and in the marble quarries of the neighbourhood. The surrounding scenery is very picturesque. *Sanremo*, in the interior, stands on a high hill, and has 6000 inhabitants. *Varazze*, a small town of 2000 inhabitants, lies east of Chiavari, on the Vara.

The Province of Genova lies west of that of Chiavari, and contains, besides the city of GENOA, the following towns on the east coast:—*Recco*, a pretty place with 5000 inhabitants, has some export trade, and builds vessels of small size. *Nervi*, a gay-looking town, with painted houses, situated also E. of Genoa, among luxuriant gardens close to the shore: population, 4000. It has a small port, silk and woollen manufactories, and a good fishing trade. The following towns are on the shore to the west of Genoa:—*Sestri-di-Ponente*, a flourishing place with about 4500 inhabitants. *Pegli*, population 3000. *Voltri*, a prosperous town with several fine churches, paper manufactories, and 3500 inhabitants.

The Province of Levante lies between that of Chiavari and the eastern boundary of the division. It is watered by the Magra and its feeder the Vara. The eastern part of the province forms part of the territory of Lunigiana, which was named from the ancient town of Luna, now in ruins, on the left bank of the Magra. The river Magra is interesting as having been the boundary between Etruria and the territory of the ancient Ligures. The capital of the province is *Spezzia*, which stands at the head of the fine Bay of Spezzia in a most beautiful country, and has about 10,000 inhabitants. It is neatly built, and its remarkable structures are the old Genoese citadel and the ancient castle of the Visconti. In the bay, close to the town, the remarkable appearance called 'polla' may be seen, which is a hemispherical swell of the sea, caused by the gush of a submarine spring of great abundance and power. The diameter of the polla at this place is 25 feet. *Porto-Venere* is a small but interesting town of over 2000 inhabitants, opposite the Isle of Palmaria. It contains two fine churches, one of which occupies the site of a celebrated temple of Venus. On the opposite side of the Gulf of Spezzia is *Lerici*, which is a station for coasting vessels between Genoa and Leghorn, and has 4000 inhabitants. *Levanto*, a town of 4000 inhabitants, is surrounded by overhanging hills, stands in the western part of the province. *Surzana*, on the left bank of the Magra, in the Lunigiana, is a pretty town with 8500 inhabitants. It is the seat of a bishop, and has a fine cathedral, which is a good specimen of the Italo-Gothic. The castle and the old fortifications, which are remarkable for their massiveness, add much to the picturesque appearance of the city.

The Province of Novi lies on the northern side of the Ligurian Apennines. It is drained by the Scrivia, and by the Lemmo and other mountain torrents which swell the Orba, a feeder of the Bormida. The province is not productive except in its northern part, which opens into the plain of the Po, and is planted with vines, mulberries, and other fruit-trees. The mountains supply fine pasture, or are covered with chestnut woods. *Novi*, the capital, a cheerful well-built town, stands in a plain at the foot of the Apennines, on the road from Genoa to Turin, and has a considerable transit trade and 11,000 inhabitants. It has several fine churches and palaces, and a college. *Voltaggio*, at the foot of the mountain group called La Bocchetta, has a population of 2200. *Serravalle*, on the left bank of the Scrivia, is a bustling little town with 3000 inhabitants. *Gari*, important from its position in a defile in the mountain, and commanded by a strong castle, stands on the old road from Genoa to Turin, and has 2000 inhabitants. *Pozzuolo* and *Arquata* are towns of about 3000 inhabitants each. Above the latter is a fine ruined castle.

GENOA, GENOVA, a city of Italy, belonging to the kingdom of Sardinia, is situated on the coast of the Mediterranean, at the foot of the Ligurian Apennines, in a recess of the Gulf of Genoa, in 44° 24' N. lat., 8° 52' E. long., 75 miles S.E. from Turin. The population in 1848 was 100,382.

The city of Genoa stands partly on the declivity of several hills rising in the form of a semicircle round the spacious harbour, and partly on a narrow strip of ground between them and the sea. It is enclosed on the land-side by a double line of fortifications, the external being above 7 miles in length. These fortifications have been improved and strengthened within the last few years: the

ramparts form a favourite promenade. The higher Apennines rise immediately behind, dividing the waters which run to the Mediterranean by the valleys of Bisagno and Polcevera, from those which flow northward into the Scrivia and the Bormida, two affluents of the Po. Upon the summits of these mountains, which are near enough to command Genoa, are several detached forts, called Il Diamante, I Due Fratelli, Sta. Tecla, &c. The appearance of Genoa from the sea is truly magnificent. A succession of fine buildings more than two miles in length lines the shore; numerous palaces and gardens, churches and convents, rise behind like an amphitheatre, on the steep sides of the hills that rear their dark and barren summits above, crowned with formidable ramparts, batteries, and forts; the buildings are square and lofty, and the roofs are covered with light-coloured slate, which has a neat and pleasing effect. The interior of the town is hardly so pleasant; the streets are very narrow, crooked, and steep, with the exception of a few, such as Strada Balbi and Strada Nuova, which are entirely lined with marble palaces belonging to the Genoese patricians; and the Strada Nuovissima, Carlo Felice, and Carlo Alberto, which are also on a scale of considerable magnitude. Some of the palaces in the Strada Nuova have galleries of paintings, and their internal decorations and furniture are splendid. The palaces Serra, Reale, Durazzo, Doria, and Brignole Rosso, are among the most remarkable, but there are several others very little inferior either as architectural works or for the richness of their contents. Genoa la Superba, as it was of old named, is indeed one of the finest cities in Italy, in an architectural point of view. Genoa has many handsome churches; the magnificent cathedral, L'Annunziata, and the elegant church of Carignano, are among the finest: about half of the churches of Genoa, and among them some of the finest, were destroyed by the French during their occupation of the city. The Loggia de' Banchi, where is the Exchange, the Ponti, or quays of the harbour, the Porto Franco, or free-port warehouses, the lighthouse, the theatre Carlo Felice, the promenade of L'Acquasola, the great hospital, Albergo de' Poveri, the Ospedale del Pammatone, the former palace of the Doges, the Banco di San-Giorgio, and the Goldsmiths' Street (Strada degli Orefici), are all worthy of notice.

Genoa is an important commercial city. The exports amount to considerably over two millions sterling; the imports to nearly three millions. The principal articles of export are silk and fancy goods, rice, hemp, oil, and fruits. Genoese vessels trade to the Levant, the Black Sea, the Baltic, and to North and South America; while steamers maintain a regular communication with Marseille, Barcelona, Leghorn, Civita Vecchia, &c. The fine harbour is bounded at the two extremities by substantial piers, the Molo Vecchio and the Molo Nuovo, and above the latter is a noble lighthouse 300 feet high. The Darsena, or state dock and arsenal, is a busy and well regulated establishment. Connected with it is the Bague for convicts. The Porto Franco, or free port, referred to above, consists of a collection of 355 bonding warehouses, forming a sort of town surrounded by a wall, within which neither soldier, priest, nor female is allowed to enter, except by special permission. It is under the management of the chamber of commerce. There are extensive and convenient quays along the harbour. The manufactures of the city are of considerable importance. The principal are of velvets and other silk-stuffs, embroidered cambrics, woollen goods, jewellery, surgical, optical, and musical instruments, paper, canvass, artificial flowers, coral ornaments, and various other fancy articles. In the making of rich velvet, and gold and silver articles of a peculiar kind of filagree work, the Genoese have long possessed, and still maintain, an almost unrivalled celebrity; but they are also very skillful artificers in many other of the more elegant branches of mechanical art.

Genoa is a garrison town, the residence of a governor-general, and of a senate or high court of justice for the whole duchy. The French civil and commercial codes have been retained, with some modifications. The government of the town is vested in a great town council, consisting of 40 members, 20 of whom are nobles and 20 merchants, a lower council, two syndics, with various other officers. For public instruction there is the University, attended by between 500 and 600 students, a royal college, a naval school, and six communal schools, one for each district of the town, a deaf and dumb school, an academy of fine arts, public libraries, &c. There are also 15 conservatories, or female asylums, and various convents and benevolent institutions besides those named above.

History of Genoa.—The history of Genoa, or Genua (its Roman name), is lost in the obscurity of old traditions, which would assign to it an antiquity greater than that of Rome. It is mentioned by Livy (xxi. 32) at the beginning of the second Punic war, when it appears to have been a town in friendship with Rome. Some years after, Mago, the Carthaginian general, coming with a fleet and army from the Balearic Islands to effect a diversion in favour of Hannibal, took Genua by surprise and partly destroyed it; but it was restored two or three years later by order of the Roman senate. (Livy, xxviii. 46; xxx. 1.) From that time Genua appears to have continued in alliance with Rome, but it was not a colony. Strabo (p. 201, Casaub.) mentions Genua as an emporium where the Ligures from the interior brought for sale hides, cattle, honey, and timber for ship-building, and received in exchange oil and other parts of Italy. After the fall of the Western empire, the city was again destroyed by the

Langobards, A.D. 641. Charlemagne afterwards took it, and put it with all maritime Liguria under the government of a count. After the fall of the Carolingian dynasty, and during the contests about the crown of Italy between the German emperors and the Berengarii and other claimants, the citizens of Genoa seized the opportunity of asserting their independence under the government of elective magistrates styled consuls. The names of the consuls began to be recorded from the latter part of the 11th century. The Genoese had already rendered themselves formidable by sea. After having suffered from the Saracens, who about 935 surprised and plundered their town, they applied themselves to strengthen their navy; and having allied themselves with the Pisans they drove the Saracens out of Corsica, Capraja, and Sardinia, between the years 1016 and 1021. From that time dates the dominion of Genoa over Corsica and Capraja, and that of Pisa over Sardinia. The Genoese took part in the great crusade under Godfrey de Bouillon, and obtained settlements on the coast of Palestine, especially at Acre. In 1146 they took Minorca from the Moors, and the next year they took by storm Almeria in the kingdom of Granada, where they made an immense booty. The Genoese fleet on this occasion consisted of 63 galleys and 163 transports, with 12,000 land forces. In the year after, having joined the Catalonians, they took Tortosa, which was defended by a Moorish garrison. These conquests excited the jealousy of Pisa and Venice, the two other naval powers of Italy. Pisa, being the nearest, was the first to come to blows with Genoa. Four wars took place between the two states: the first in 1070, which was short; the second in 1118, which was ended in 1132 by the mediation of Pope Innocent II.; the third in 1162, which lasted nearly a century; the fourth in 1282, in which the Pisans were completely defeated by sea near the rocks of Meloria, in sight of their own coast, when 3000 Pisans were killed and 13,000 taken prisoners to Genoa, where most of them died in chains. From that blow Pisa never recovered. In 1290 the Genoese under Conrad Doria destroyed Porto Pisano, and filled up the mouth of the harbour.

The rivalry between Genoa and Venice began to show itself soon after the conquest of Constantinople by the Franks in 1244. The Genoese having assisted Michael Palaeologus to reconquer his capital, obtained from him the suburbs of Pera and Galata, and the port of Smyrna, with full jurisdiction over those places. The Venetians disputed with them the supremacy of the Levant seas, but after several naval fights the two powers concluded a truce in 1271. After the fall of Pisa the Genoese found themselves more at leisure to renew the conflict with Venice. They put to sea with 165 galleys, each carrying from 250 to 300 men, and sailing up the Adriatic defeated the Venetians near the island of Curzola, took or burnt 84 galleys, and made 7000 prisoners, including the Admiral Dandolo. Peace was made in 1299, by the terms of which the Genoese excluded the Venetians entirely from the trade of the Black Sea, where the Genoese had formed a succession of colonies, forts, and factories all along the coast, and from which they carried their trade, and introduced Christian customs far into the interior of Asia. War broke out again in 1346, when the Genoese defeated the Venetians in sight of Constantinople, but were afterwards totally routed on the coast of Sardinia. Genoa, disheartened by this defeat and a prey to internal factions, gave itself up to John Visconti, duke of Milan. In 1372 war broke out again between Genoa and Venice for the possession of Tenedos. Genoa had meantime shaken off the yoke of the Visconti. In this, the fourth war between Genoa and Venice, the Genoese took Chioggia and besieged Venice. The Venetians were near capitulating, when Vettor Pisani and Carlo Zeno revived their spirit, formed a new fleet, with which they blockaded the Genoese within Chioggia, and obliged them to surrender. This war, called the War of Chioggia, ended in 1381.

From that time Venice and Genoa remained at peace, with trifling interruptions. Genoa was exhausted by internal factions. To the rule of the consuls had succeeded, about 1190, that of the podestà, who were chosen annually, from among the citizens of another state, in order to avoid the partialities and intrigues resulting from family connections. This lasted with some interruption till 1270, when two citizens, Oberto Spinola and Oberto Dona, distinguished for their services, usurped the supreme power, under the name of 'captains of liberty,' which they retained till 1291. They reconciled the lower classes to their usurpation by appointing a magistrate called Abate del Popolo, a kind of tribune who supported the rights of the people against the nobles. Foreign captains were next appointed, to be chosen from among the natives of places at least 100 miles distant from Genoa. Afterwards a council was instituted, first of 12 and subsequently of 24 members, half nobles and half plebeians. Feuds and fighting often took place within the town between nobles and plebeians, and between Guelphs and Ghibelines. Both the Doria and the Spinola were Ghibelines, but having quarrelled among themselves they were overcome by the Guelphs, who were headed by the families of Fieschi and Grimaldi, and who exiled their rivals. But the Ghibelines of Genoa, unlike those of Florence, were popular among the lower classes, and they re-entered by force. From 1317 to 1331, and again in 1335, these factions continued to desolate the country, so as to render it, says the chronicler Foglietta, a frightful desert. In 1339 the citizens, weary of discord and disorder, instituted a supreme magistrate, called *doge*, *est* in life, excluding by law all the nobles, both *de* *the* *3th* *to* *ever* *filling* *the* *office*.

This lasted two centuries, but not without frequent contentions between the principal citizen families, especially the Adorni and Fregosi, who proved just as factious and troublesome as the patricians had been. Several doges were elected at a time, some were exiled, and others were forced upon the community by an armed faction. The neighbours of Genoa, the Visconti of Milan, and the kings of France, taking advantage of these feuds, at various times obtained possession of Genoa. At last, Andrea Doria had the merit of delivering his country from the French yoke; and in order to avoid a recurrence of the former feuds, he changed the institutions of the country, by establishing biennial doges, and councils to assist and control them. A roll was made out of all the distinguished families, both noble and plebeian, from among whom the doges, councillors, and other officers of state were to be chosen. This aristocracy however was not wholly closed and exclusive, like that of Venice. Families might be added to it at certain times and with certain qualifications. This form of government lasted from 1528 till Bonaparte's invasion of Italy, when the democratic party, assisted by the French, rose upon the aristocracy, and, after a fearful contest, a democratic government was formed, protected by a strong French garrison within the city. In 1799 the French, under Massena, were defeated by Genoa by the Austrians and the English, and after a *septa* *a* *suc* *it* defence the city capitulated to the Austrians, but was *ag* *new* *and* to the French after the battle of Marengo. Bonaparte, then consul, gave a new form of government to Genoa, leaving to it only a nominal independence with the name of republic, but when he became emperor, he compelled the doge and senate to consent to the formal annexation of Genoa to France. In 1814 Genoa surrendered to the English forces under Lord William Bentinck, and in the following year, by a decision of the Congress of Vienna, it was united to the Sardinian monarchy.

Of all her foreign possessions Genoa retained Corsica the longest; till 1768, when she ceded it to France. Her numerous and wealthy settlements in the Levant and the Black Sea she lost after the Ottoman conquest of the Eastern empire. In the 18th century her navy was reduced to a few galleys, and her flag was insulted with impunity by the Barbary privateers. Since the last peace the spirit of commercial enterprise in her citizens has been greatly revived, and the city has regained a large measure of prosperity.

GEORGE, ST. [AZORES; BERMUDA; GRANK *et* *al*]

GEORGETOWN. [COLUMBIA, DISTRICT OF COLUMBIA; GEORGETOWN]

GEORGIA. This article comprehends not only a description of Georgia Proper, but of all the countries between the Black and the Caspian seas of which Russia either holds or claims possession, and which form dependencies of the government of Georgia, or, as the Russians call it, Grusia. This tract, commonly called Transcaucasia, or the Transcaucasian provinces, extends from 38° 40' to 43° 30' N. lat., and from about 36° 10' to 50° 12' E. long. It is inclosed on the north by the range of the Caucasus, which forms a part of the country; on the east it is washed by the Caspian, and on the west by the Black Sea; on the south it is bounded by Persia and Asia Minor, Turkey, having a line of frontier on that side of about 600 miles. Its length from east to west, from the Cape of Abkhazia or Apsheron on the Caspian Sea, to Fort Nikolaïeff on the Black Sea, is about 460 English miles, but measured diagonally so as to include Abasia, or Abkhasia, it would of course be much greater; its breadth from the banks of the Araxes to those of the Terek, is about 350 English miles. The area of the Transcaucasian provinces is estimated by the Russian authorities at 66,500 square miles; the population in 1846 at 2,648,000.

The surface is for the most part mountainous; the northern portion being almost wholly occupied by the range of the CAUCASUS; the southern portion chiefly by that of ARARAT. These mountain ranges are described under their respective titles, and to them we refer for a general notice of the physical features of the country, which will be described somewhat more in detail when we speak of the several provinces presently. But the country though generally mountainous contains some extensive plains; and the scenery is altogether of a very striking character.

The principal rivers which drain the Caucasian isthmus are the Kur or Koor, the ancient Cyrus; the Araxes; the Rion, or Faz (the ancient Phasis watering the COLCHIS of the ancients); the Kooban; and the Terek, besides numerous smaller rivers and streams. Owing to the hilly nature of the country only two of these rivers are navigable, and that only for flat-bottomed vessels—the Kur, from its confluence with the Araxes to its outlet into the Caspian Sea, for about 70 English miles; and the Rion, for about the same distance.

The present commerce of these countries by the Caspian Sea is carried on from the ports of Derbend, Baku, Shamakhi, and Lenkoran to Persia and to Astrakhan. The overland trade is with Russia and Persia, as well as with Asiatic Turkey. The commerce by the Black Sea is carried on from the mouth of the Rion with Odessa and other Russian ports, as well as with Constantinople; and there is a traffic with the highlanders of the Caucasus. The coast of the

Sea is defended by a chain of Russian forts, but the garrisons have for the most part been recently driven from them by the allied fleet.

The intercourse between the countries south and north of the Caucasus is carried on by the two roads described under CAUCASUS (vol. ii. col. 391). Almost the only roads available for traffic in the interior are those constructed by the Russian government for military purposes. But great improvement has been made by the government in this respect within the last few years. "The hills and valleys, which were formerly passable only on mules or horses, and in a few parts in waggons drawn by oxen, are now everywhere traversed by tolerable roads; the post service is under the best regulation for travelling, and intercourse is facilitated by a regular postal communication, which has been carried to the most distant communes." (Haxthausen, 'Transcaucasia,' p. 81.)

The climate though very varied is in general genial. The southern latitudes of these regions and the high mountains by which they are surrounded and intersected, produce that variety of climate which adapts them to the production of various plants and animals proper both to warm and cold climates. But the heat and the equal temperature as well as a small quantity of rain which falls in Georgia Proper and the mountainous districts over a considerable portion of the east of the Caucasus render special irrigation necessary as well for arable as for pastoral purposes. In some places, as below Kakhotia, the canals and sluices have been destroyed or suffered to go to ruin, the country has become a desert.

Of wild animals there are the panther, the jackal, the tiger, the bear, the wolf, &c. Besides the domestic animals common to the northern countries, there is a great number of camels and asses. A great variety of birds is found in these regions, of which the most remarkable is the pheasant, which is indigenous on the banks of the Rion, or Phasis, from which river it has derived its name. The slopes of the mountains are covered with large forests, which produce beech and other timber of the best description.

Agriculture is in a backward state, and the instruments employed are of a very rude kind. Among other efforts which have been made by the Russian government for the improvement of agriculture, has been that of establishing a number of German agricultural colonies, though the colonists have prospered, the natives have shown little inclination to profit by their superior skill. In Georgia Proper, the mountains of Imiretria and part of Mingrelia, the land is mostly cultivated in detached farms, without intercommunication by direct roads; in other districts there are villages occasionally of considerable size, but generally small. All over the country the larger farm-houses, and some of the smaller ones, are fortified buildings; some are surrounded by walls, and some have strong and lofty stone towers or keeps. The agricultural products embrace a wide variety. Wheat and barley are grown largely, especially in Georgia Proper. Maize and a remarkable species of millet called 'khomi,' are the chief grains raised in Mingrelia, Imiretria, Gorgia, &c. The vine, which is indigenous, grows abundantly in a wild state. The vineyards produce a great variety of grapes, and a large quantity of wine and brandy is made in the country. The wine made by the natives is far from agreeable to European palates, but the German colonists make an excellent wine. Silk is cultivated in several provinces, but this branch of industry is in a very low state, owing to the unskilful preparation of the raw material. Cotton is grown in the southern provinces, but of a very inferior quality, and insufficient in quantity for the requirements of the small manufactures of the country. It is however said that by an improved management the cotton might be brought to the greatest perfection, and its quantity increased to an unlimited amount. Tobacco is grown in Gorgia. In the circle of Syknak sugar and indigo are successfully cultivated. Madder grows spontaneously in several parts of the country, but is cultivated chiefly in the provinces bordering on the Caspian. The inhabitants of the district of Derbend are almost exclusively occupied with the cultivation of it. Rice grows almost everywhere except in the highlands; and saffron is produced in great quantities in the eastern provinces.

It is believed that great mineral wealth is concealed in the mountains, but hitherto nothing of any importance has been made available. The country is very rich in salt. The manufactures are confined to the articles required for home consumption.

This country is the seat of a great variety of tribes, or as they are sometimes termed races, of men differing in speech, habits, and many physical characters, yet bearing a certain general resemblance. From a very early time this appears to have been the case; for a Greek historian, Timosthenes, quoted by Pliny, affirms that 300 dissimilar tribes occupied the country; while Pliny adds that in his time 130 interpreters were required in the market of Dioscurias, a town of Colchis. These numbers are doubtless great exaggerations, but the latest and one of the best-informed travellers in Georgia, Baron von Haxthausen, says there exist at the present time more than 70 tribes, each having a distinct dialect; but then some of these languages or dialects is frequently spoken only in a district composed of a few villages. The study of these tribes is of singular interest to the ethnologist, and of scarcely inferior interest to those who are more interested by moral and antiquarian peculiarities. Here are first the Abkhazians, the purest members of the Caucasian type, assigned by the ethnologists as the highest class of the human race; they are also

are Circassians, who are found on the south as well as north of the Terek; the Assetes, or Irón, hardly inferior in interest even to the Georgians, and in whose habits and customs recent writers have seemed to find so marked an affinity with those of the ancient Germans; the wide-spread Armenians, from their intellect and energy, as well as from their close bond of nationality and religion, evidently destined to play an important part in the future history of this part of the globe; the Yezidis, with their worship of the evil spirit; the fire-worshippers of Buku; the Tatars, Suanians, Abasians, &c. And each of these and of the remaining tribes has "its historical traditions, its own language and usages, and in many cases its peculiar religious rites; for although in the same village Armenians, Georgians, and Tatars are found living together, they scarcely ever intermix; each people preserving its own religion, customs, dress, manners, tribunals, and police." Moreover, as the writer just quoted (Baron von Haxthausen) elsewhere observes, "All the races who have passed through this country have left memorials behind them: in fact, there exist here monuments of every period of the world's history. We find the dwellings of Troglodytes, entire cities cut out of the rock; the colossal ruins of aqueducts and canals dating from the times of the great Babylonish, Assyrian, and Persian monarchies; with Greek and Roman edifices, and rock-castles of the middle ages."

It would plainly occupy too much space to attempt to give a general account of the Georgian tribes: under the several divisions we may notice some of the more marked features of the principal ones; but here it must suffice to observe that the general characteristics of the Caucasian highlanders, although there are differences among them in origin, language, and many other respects, are a strong love of independence united with predatory habits. The men are generally indolent; much of the most laborious work is devolved on the females. Their chief indulgence is in the possession of costly weapons. Hospitality is a sacred duty among all these highlanders. Whenever a Caucasian has received a person into his house he will protect him against all his enemies, even at the risk of his own life. The law of retaliation is more strictly enforced among the Caucasians than among the Beduin Arabs: to avenge the death of a relation becomes a sacred obligation which descends from father to son, unless the quarrel is settled by a compensation accepted by the aggrieved party. Although many Caucasian tribes have been converted to Mohammedanism, the most part of them may be called idolaters, as they frequently worship some inanimate objects. It is very remarkable that the prophet Elijah is a particular object of adoration among almost all the Caucasian tribes, both Mohammedan and Pagan. There are several caverns in different parts of the Caucasus consecrated to the prophet, where the inhabitants assemble on certain days to offer sacrifices to him. If a person is killed by thunder, the highlanders say that he was killed by the prophet Elijah, and consider it a great blessing for him. The burial of such a person is accompanied with the songs and dances of his relations, who rejoice in his death instead of mourning at the event. They are much attached to their ancient superstitions and traditions, and there is little doubt that in these and many of their peculiar religious observances many vestiges of their primitive faith and habits are retained.

The attempts made by the Russian government to civilise the Caucasian highlanders for a long time proved abortive. Within the last few years however, according to the statement of a somewhat partial authority, more success appears to have attended the efforts of the Russian government to introduce European education. "In Tiflis, Nonkka, and Chamakha institutions have been established to promote the cultivation of corn, silk, and wine; and in the government department artisans and labourers are trained for this wide field of agricultural enterprise. Free instruction is provided in the excellent military schools for the sons of the numerous and poor nobles. Every chief town of Georgia contains a school, amply endowed, for the education of the sons of nobles, merchants, and the upper classes of citizens. The gymnasium, and the institute for daughters of men of rank are supported in a manner corresponding to the education required. The pupils who distinguish themselves at these institutions have free admission to the imperial universities and the polytechnic schools of St. Petersburg and Moscow. The sons of meritorious native inhabitants are received into these schools, and entire corps have been formed, principally of the sons of Mohammedans of rank, who never have passed the limits of their own country. Many of the Asiatics have made remarkable progress in science and civilisation in the schools opened expressly for them at St. Petersburg. The emperor's care is extended likewise to the religious and spiritual wants of the inhabitants. The neglected state of the dominant Greek Church, of the Armenian, the Lutheran (consisting of the colonists from Wurtemberg), and the Roman Catholic churches, as well as the two Mohammedan sects, was exchanged for discipline and order, with the aid and co-operation of the respective clergy of these religious bodies. Churches and chapels were restored or rebuilt, whilst education and a provision for the clergy of every faith were secured." (Haxthausen.)

The ecclesiastical affairs of the Armenian Church are directed by their patriarch, who resides at Echmiadzin; and those of the Georgian Church by the catholicos, or metropolitan of Georgia. The religious concerns of the Mohammedans are directed by a moostend, who is acknowledged by the Russian government as the religious chief of the Mohammedan inhabitants.

The government of these countries is concentrated in the person of the governor-general, who resides at Tiflis, and who is at the same time commander of a considerable military force called the Caucasian corps. The governor-general determines all the civil and military affairs of these provinces, and directs the minor diplomatic relations with the neighbouring countries.

Until within the last few years the several provinces and tribes were governed by certain customary laws, besides which there was a general code for Georgia known as the laws of King Vakhtang, which was recognised and administered by the Russian authorities; but in 1837 a commission was sent to Georgia with instructions to thoroughly examine the country and the condition of its inhabitants, and to draw up a project for its government. The commission completed its labours, and the new civil administration was inaugurated in January, 1841. The main object of this project was to remove the influence of the military power from the civil department, and to separate the political department from that of justice and finance; and in order to assimilate as much as possible the political condition of Transcaucasia to that of the rest of Russia, the laws and institutions in force in that country, the names of the magistrates, their functions and routine of business, were extended to Transcaucasia, with only such modifications as the condition of the country and its inhabitants required.

One of the most important alterations was the abolition of the old oppressive and vexatious system of dues and imposts, and the substitution for it of a new system of taxation, consisting of,—for the country communes, a tithe on the previous valuation of the aggregate landed property of the community, or in its place, where from local circumstances the tithe is inapplicable, a tax on the number of chimneys of from three to five rubles; both these assessments being valid for 15 years: and for the town communes, a fixed tax laid upon every trade, its amount being in proportion to the number of workmen employed; and a tax on commerce proportional in amount to the class of business. There is also a minor tax on each workman, the receipt for which serves for his passport. The reforms were doubtless well-intentioned, but it is to be feared that the very general corruption of the officials has deprived them of pretty nearly all the beneficial effect which they might have produced if properly carried into practice. It is certain that the inhabitants complain bitterly of the oppression they endure, and there is but too much reason to believe that their complaints are well founded.

The Transcaucasian provinces are divided into the Christian and Mohammedan. The Christian comprise the ancient czardoms of Georgia Proper, Imiretia, Georgia, and the vassal countries Mingrelia, Abasia or Abkhasia, and Suanetia, in which the Greek religion prevails, together with the Armenian provinces. Among the Mohammedan are classed the khanates of Karabagh, Chamakha, Nukha, Derbend, Lenkoran, inhabited by Mohammedans of the Shekah sect, anciently under the dominion of Persia, and the former Turkish pashalics of Akhaliz and Akkaltali, inhabited by Sunnite Mohammedans. Many of the highland tribes are however only nominally vassals of Russia and are in frequent revolt against her.

We proceed to notice the principal provinces:—

Georgia Proper consists of the former kingdoms of Kakhet and Kartli which were united under the domination of Prince Heraclius II. in the 18th century. It contains, according to official returns, about 25,000 square miles, with a population of about 500,000. The principal town is TIFLIS, the ancient metropolis of Georgia, the chief seat of the commerce of the country, and at present the seat of government for all the Caucasian provinces of Russia. It is situated in 41° 40' N. lat. and 45° 16' E. long., and extends along both banks of the river Kur, for about 1½ English mile. A notice of it will be found under its title. The inhabitants of the country parts have the reputation of being exceedingly attached to their religion and country, honest, simple-hearted, laborious, and brave. These honourable qualities are tinged with an admixture of vanity, irascibility, and some other defects common to less civilised nations. The townsmen are indolent, avaricious, and untrustworthy. The language of Georgia bears a great resemblance to the Armenian; but besides the Armenian, which constitutes its basis, the Georgian is full of Greek, Latin, Persian, Arabic, Turkish, and other foreign words. Georgia was converted to Christianity by Armenian missionaries, who introduced into the churches of this country the worship in the Armenian tongue, which however was not understood by the people. In 410 a learned Armenian named Mesrop invented an alphabet for the Georgians, and soon afterwards the Bible and other religious books were translated into the Georgian language. A new and more simple kind of alphabet, used for ordinary writings, was invented about the 10th century. The new alphabet is called by the Georgians *Mkhedrool*, or the Military one, and the old one *Khootzoor*, or the Ecclesiastical. The population of Georgia is divided into the following classes:—1st, the Dedeuli, or sovereign nobles; 2nd, the Tavadis (literally heads), who constitute the higher nobility; 3rd, the Anauri, or nobles; 4th, the Moklaks, or citizens (from Kalakh, a town); and 5th, the Gles, or peasants. The Russian government in taking possession of Georgia gave to the Tavadis the title of princes, and to the Anauri the title of nobles. Both these of course in Asia the same privilege is reserved to the nobles of the country. It is interesting to observe that the right to possess

the Russian dominion was established, the Tavadis were divided into three classes, distinguished by the sum of money paid for the murder of an individual belonging to their body. Thus the sum paid for the assassination of a Tavadis of the first class was double of what was paid for one of the second: and the penalty for the murder of a Tavadis of the second class was double of that for one of the third class. The Anauri were likewise divided into three classes, which stood in the same relation to each other as those of the Tavadis. The Moklaks, or citizens, live in the towns, chiefly at Tiflis, and are generally engaged in trade. The peasants are serfs in Georgia, and belong either to the crown, the church, or to the princes and nobles.

The other towns of Georgia are, Signakh or Syknakh, the chief place of the district of that name, with about 3000 inhabitants, who are regarded as the bravest of the Georgians; Telav, a well-built town in the Oriental style, with more than 3000 inhabitants; Dooch, a fortified place, with about 1500 inhabitants; Goree, a county town, with about 3500 inhabitants; and Elizabethpol, or Ganjah, formerly the capital of a Khanat, and the residence of a vassal prince. Elizabethpol is a large town, which contains even now, in its dilapidated state, above 6000 inhabitants, and several fine mosques and other public buildings. The town is fortified, and was frequently exposed to the calamities of a siege and after a long and successful defence, enumerated are capitals of districts, which are situated in the vicinity of Goree are the singular ruins of the rock-town of Uplaz Zichi, which consist of a number of dwellings which as well as numerous roads are carved out of the solid rock: the works are of unknown antiquity, but the natives generally assign them to Queen Thamar, though another tradition accounts for the name by ascribing the entire work to Uplaz, a grandson of Noah. There is another of these troglodyte towns at Vardais near Zeda Tmoghi on the Kur, which, like that of Uplaz Zichi, contains what is called a palace, as well as some other caves, evidently of a superior character; and smaller collections of similar caverns are found at two or three other places.

Imiretia, borders north on the main ridge of the Caucasus, and is separated on the east by a branch of it from Georgia Proper; on the south it borders on Akhalzik; and on the west on Mingrelia. It contains about 5000 square miles; the population about 100,000, consisting chiefly of Imiretians and a few Armenians. Being sheltered from northern winds by the Caucasus, its climate is mild, and in many parts the trees blossom and produce fruit twice a year. The large forests with which the country is overgrown prevent the free circulation of air, and engender a kind of malaria. The soil is exceedingly fertile, and the climate favourable to the cultivation of all the products of warm countries. The Imiretians speak a dialect of the Georgian language, and are politically divided into the same classes as the Georgians. Their manners and customs are also the same. The lower classes are very laborious, and remarkable for their physical strength. Many of them go to Tiflis to gain a livelihood by their labour. Kootais, on the Rion, the metropolis, and the only town of Imiretia, was formerly the residence of its kings, and is now the seat of the provincial government. It is the capital of the district of the same name, as well as that of the whole country. The place is divided into the old and new town, the former of which is of great antiquity, and contains a church built in a splendid style of Byzantine architecture. The new town is constructed in the European manner, and its streets are planted with nut, fig, and other trees. The population of the town, exclusive of the Russian garrison, is about 20,000. In the neighbourhood of Kootais is the monastery of Ghelat, which is surrounded by mountains containing sulphur springs, naphtha wells, and also a kind of black amber.

Akhalzik, or *Akhaltz*,—By the treaty of Adrianople Turkey ceded to Russia a part of the pashalic of Akhalzik which now forms the Russian province of that name. On the north it borders on Georgia, Imiretia, and Mingrelia; on the east, on Georgia; on the south, on the pashalic of Kars; on the south-west, on the part of Akhalzik which has remained under the Turkish domination. The area is above 4000 square miles; the population is about 70,000, and consists of Armenians, Georgians, Kurds, Turks, Jews, and Gipsies. The country is generally hilly, but very fertile, and the climate is healthy. The mountains contain numerous mineral springs, many of which have medicinal properties. The country is divided into ten sandjaks, or districts, some of which are governed by Russian officers, and others by natives called sandjak-begs. The principal town is Akhalzik, the capital of the province, a fortress supposed to have been built by the celebrated Queen Thamar. It contains 14,000 inhabitants.

The *Armenian Provinces* are composed of the khanates of Erivan and Nakhichevan, ceded to Russia by Persia in 1828. The area is about 7000 square miles, a great part of which is hilly, besides the mountain of Ararat. There are however many plains with a very fertile soil. The products of Erivan are the same as those of Georgia, but with the addition of a kind of opium, called by the natives *shir*. The population is about 140,000, of whom 60,000 are Armenians, and the rest Persians. The Armenians are principally engaged in agriculture and gardening. They grow wheat, barley, maize, millet, and a little flax; and pay considerable attention to the cultivation of the vine. The Persians inhabit large villages, and are chiefly engaged in breeding horses, cattle, and sheep. The most remarkable places of the province are the cities of ERIVAN the most remarkable places of the province.

the important fortress of Sardar Abad, and the convent of Echmiadzin, the residence of the Armenian patriarch and the head-quarters of the Armenian Church.

The province of *Nakhichevan*, which forms the south-eastern part of Russian Armenia, is divided into two districts—Nakhichevan and Ordoobad. The climate of the hilly part of Nakhichevan is healthy, but in the plains it is exceedingly hot and unwholesome. It contains some valuable salt-mines. The town of Nakhichevan, situated in $39^{\circ} 59' \text{ N. lat.}$, was in ancient times one of the most important cities of the Armenian empire, and the Persian historians relate that it then contained 40,000 houses. It has been many times captured and sacked, yet when it was visited by Sir John Chardin, in the 17th century, it contained 2000 houses, besides numerous caravanserais, baths, and other public buildings. Extensive ruins attest the former greatness of that city, which has now less than 4000 inhabitants, and the circumference of the town is about 4 English miles.

Near far from Nakhichevan is the fortress of Abbasabad, constructed in the left bank of the Araxes by some French engineers in the Persian service.

The district of [redacted] contains about 6500 inhabitants, of whom
 thirds [redacted], and the rest Armenians. This district
 [redacted] enjoying a particularly healthy climate, has
 [redacted] 'very paradise.' The chief place of the district is
 [redacted], which contains about 600 houses.

A large tract of land extending along the shores of the Caspian Sea, and containing the present provinces of Baku, Derbend, Shirvan (Chamaka), Kooba, Sheki, with the peninsula of Apsheron and the island of Salyan, once formed a part of Albania, which belonged to the powerful monarchy of Armenia till the 6th century, when being conquered by the Sassanide monarch of Persia, Khosroo Nooshirvan, it assumed the name of *Shirvan*. For some time afterwards it had its independent sovereigns, who took the title of shah, but were obliged, towards the end of the 9th century, to acknowledge the supremacy of the kalifa. The rulers of Shirvan long continued powerful, and had frequent wars with Persia. In the beginning of the 15th century Elnir Ibrahim of Shirvan conquered Azerbijan, Tauris, and even Ispahan, the capital of Persia. But the terrible wars which agitated that country towards the end of the 15th century, brought it under the dominion of Persia, and Shirvan never recovered its independence. Divided among several rulers nominated by the shah, it remained under the dominion of Persia until it was gradually invaded and finally subjugated by Russia. Shirvan borders on the province of Kooba on the north; on the east on that of Baku

The surface of the province, including the island of Salyan, is about 8000 square miles; the population is about 140,000. It contains many plains, and, except in the mountainous part, is exceedingly fertile.

The bulk of the population of Shirvan consists of the Tatar, or, to speak more correctly, Turkish race, with some admixture of Arabs and Persians. It may be divided into three principal classes; as the begs and agas, or nobles, the clergy, the maaft-nookers, and the peasants. All these distinctions originate under the former native governments, and are rather connived at by the present Russian government. The peasants are all free, and there are no serfs among the Mohammedans in the Caucasian provinces. Besides the Mohammedans, who form the majority of the population, there are the Armenians, some Jews, and a few Gipsies. The prevalent language of Shirvan is what is there called Toorkee, or Turkish; which is also used in Azerbaijan.

The principal products of Shirvan are rice, &c., and tobacco. The climate, particularly of the plain, some cotton, the Island of Salyan, and which is in fact the plain which is called warm and so fertile that it would produce in the year, is so many tropical plants but its natural advantages at abundance turned to little account. This island has also hitherto been industry of Shirvan consists chiefly in the manufactures. The stuffs, which are concentrated in the town of Chamof, villages in its vicinity, and which occupy about 700 requiring the co-operation of four individuals. There are cotton manufactures, as well as a few tanneries, in the district of Laguish, which is situated in the mountains. The district of Laguish, which is situated in the mountains, very cold and barren region, is inhabited by a population distinct from that of the rest of Shirvan, who are exclusively employed in the fabrication of arms, copper vessels, and sundry metal, from which they derive considerable profit, as is apparent from condition being superior to that of the rest of the province of Shirvan. The commerce which is carried on with the Caspian Sea, and with Astrakhan and Tiflis, is considerable.

The chief place of the province is the town of Shamahkee, which was celebrated for its trade during It continued to be an important city until the beginning of the century, when it was sacked (1717) in the most barbarous manner by the highlanders of Daghestan. Since that time Chamaka has been a small and insignificant place.

The khanat of *Talish*, being situated between 38° 31' and 39° 31' N. lat., is the most southern possession of Russia. On the north it borders on the Steppe of Moghan, which makes part of Shirvan; on the east on the Caspian Sea; and on the south and west it is inclosed by the Persian dominions. This province is entirely mountainous, with the exception of one great plain which runs between the mountains and the sea. Its soil, with few exceptions, is a black loam capable of producing the most luxuriant vegetation. Its situation along the sea-coast affords great facilities to its commerce. It has two ports, or rather roadsteads: Lenkoran, which is so shallow that vessels cannot approach the coast nearer than one mile, and are frequently obliged to anchor even at a greater distance; and Sara, which is the best port in the Caspian Sea. Sara is situated on the north-western side of a little island of the same name, and is about 2½ English miles from the shore. Vessels drawing 14 feet of water can come within 150 fathoms of the coast. It is the usual station of the Russian war flotilla. The industry of the district is in a very low state, and limited to the production of some silk, rice, honey, &c. The manufactures supply a few silk and cotton stuffs. The chief and only town of the province is Lenkoran, a wretched place with about 500 houses.

The province of *Karabagh*, which is separated on the south by the Araxes from the Persian dominions, and inclosed on all other sides by the Russian provinces of Shirvan, Sheki, Elizabetopol, Nakhichevan, and Erivan, has an area of about 7000 square miles, and a population of about 60,000. From its extensive forests it has received the name of *Karabagh*, which signifies, in the Turko-Tatar language, 'a black garden.' Many parts are covered with hills; the highest, called Saree Dara, is 5000 feet above the level of the Caspian. These hills are generally covered with wood or fine grass, and barren rocks are very rare. There is a vast plain, which has a soil almost universally fertile. The climate in the high parts is rather cold. The plains are hot and unhealthy. Besides the Kur and the Araxes, the province is drained by numerous small rivers and mountain streams which afford great facilities for irrigation. The products of *Karabagh*, owing to the hilly character of the country, are those of a moderate rather than a warm climate, and the forest-trees are of the same description as those of Europe, and supply timber of the best quality. The mineral products consist of a small quantity of naphtha, copper, and salt, collected from lakes.

The population of Karabagh is very mixed, but consists principally of Mohammedans, who mostly lead a nomadic life. There are also numerous Armenian families, besides some Nestorian Christians and Gipsies. The Armenians of Karabagh have a nobility, consisting of some families to whom Shah Abbas the Great granted the title of 'melikhs,' or princes, which is enjoyed by their descendants. They have a numerous clergy, comprising two archbishops, many bishops, abbots, and several convents, besides the secular clergy. Both clergy and laity are very ignorant, and their religious observances are much relaxed. Many Mohammedan, and even Pagan, rites and customs are intermingled with their religion. The Nestorians have emigrated into Karabagh from Persia since the treaty of Toorkmanchay.

The only town in Karabagh is Shoooshee, population about 6000, situated on a high rocky mountain, about 4000 feet above the level of the Caspian. It is fortified by nature and a little by art.

The province of *Shaki* is situated between 40° 10' and 1° 16' N. lat., 45° 56' and 48° 7' E. long. On the north it borders on a part of the Caucasian ridge called *Salvat-dagh* and *Shak-dagh*, by which it is separated from several independent tribes of the *Lezgins*; east on the province of *Shirvan*, south on that of *Karabagh*, west on the territory of the sultan of *Elisooy* and the district of *Elizabethpol*. Its length from north to south is something more than 70 English miles, and its breadth in the northern part is the same; but it narrows towards the south. The population is about 100,000, of which about 80,000 are Mohammedans, 17,000 Armenians, and 10,000

The country is generally mountainous, but there are also level tracts; the climate is temperate, except during the few summer months, when the heat becomes oppressive in the plains. The principal products consist of different kinds of grain, which are cultivated in the hilly part. Silk is produced to some extent in the plains, and some cotton is also cultivated. Some silks of a good quality are manufactured by the women in several villages. Great flocks of sheep and cattle are reared in the province.

lookha, the chief place of the province, contains about 6000 inhabitants. It is in a valley, inclosed on all sides by mountains, a circumstance which prevents a free circulation of air, and accounts for the unhealthiness of the place. Sheki, which is now a small village, has been a considerable place, since it has given its name to the province. Fit-dagh, a little fortress situated on a mountain of the same name, has naturally a very strong position, and in former times served as a place of refuge to the khan, when he was defeated by his enemies.

Baku is on the shores of the Caspian Sea between 48° 9' and 12' E. long. A great part of this is formed by the peninsula of Apsheron, which juts into the Caspian Sea. The population is about 30,000. The soil is, and the climate, A natural productions of petroleum, which is

E

EALING. [MIDDLESEX.] EARLSTON. [BERWICKSHIRE.]

EASINGTON, Durham, a village, and the seat of a Poor-Law Union in the parish of Easington, is situated in 54° 47' N. lat., 1° 21' W. long., distant 10 miles E. from Durham, and 263 miles N. by W. from London. The population of the township in 1851 was 916. The living is a rectory in the archdeaconry and diocese of Durham. Easington Poor-Law Union contains 19 parishes and townships, with an area of 34,780 acres, and a population in 1851 of 21,480. The village is situated on elevated ground, about 2 miles from the sea. The parish church, a lofty structure, chiefly in the early English style, with a Norman tower, erected upon high ground at the western end of the village, is a useful landmark for vessels at sea. There are places of worship for Wesleyan and Primitive Methodists, and a Free school. The inhabitants are chiefly employed in the collieries or in agriculture. (*Communication from Easington.*)

EASINGWOLD, North Riding of Yorkshire, a market-town and the seat of a Poor-Law Union, in the parish of Easingwold, is situated in 54° 7' N. lat., 1° 10' W. long.; distant 13 miles N. by W. from York, and 212 miles N. by W. from London. The population of the township in 1851 was 2240. The living is a vicarage in the archdeaconry of Cleveland and diocese of York. Easingwold Poor-Law Union contains 29 parishes and townships, with an area of 61,459 acres, and a population in 1851 of 10,211.

The situation of Easingwold, on the line of the great north road, made it formerly a place of importance. The market for agricultural produce is still large. The surrounding district is chiefly agricultural: much land is occupied for grazing purposes; and a good breed of horses is reared. The parish church overlooks the town, commanding an extensive prospect of the Vale of Mowbray and the ancient forest of Galtres. The Primitive and Wesleyan Methodists, Independents, and Roman Catholics have places of worship. The Grammar school, founded in 1784, has an income from endowment, &c., of 85*l.* a year, and had 60 scholars in 1851. A county court is held in Easingwold. Friday is the market-day: fairs are held in July and September. There are an iron and brass foundry, a tan-work, and two rope-works. In the vicinity are some chalybeate springs.

(*Communication from Easingwold.*)

EAST GRINSTEAD, Sussex, a market-town, and the seat of a Poor-Law Union, in the parish of East Grinstead, is situated in 51° 7' N. lat., 0° 1' W. long.; distant 23 miles N. by W. from Lewes, and 28 miles S. by E. from London by road. The population of the parish of East Grinstead in 1851 was 3820. The living is a vicarage in the archdeaconry of Lewes and diocese of Chichester. East Grinstead Poor-Law Union contains 7 parishes, with an area of 57,615 acres, and a population in 1851 of 13,223.

The town of East Grinstead is pleasantly situated on an eminence; it consists chiefly of one street, which is irregularly built. The parish church is a neat stone edifice, with an embattled tower. There are places of worship for Baptists, Wesleyan Methodists, and the Countess of Huntingdon's Connexion. An Endowed school, founded as a Grammar school in 1780, is now an English school: the income from endowment is about 44*l.* a year; the number of scholars in 1852 was 30. There are a National school and a savings bank. Sackville College, a quadrangular stone building, erected in 1616, is an institution founded by Robert Earl of Dorset, for aged unmarried persons of both sexes, each of whom has a separate apartment, and 8*l.* a year. Many of the inhabitants are employed in shoemaking and in pen-making. The market day is Thursday, and there is a stock market on the last Thursday in each month. Fairs are held on April 21st, July 13th, and December 11th. A county court is held in the town. East Grinstead was disfranchised by the Reform Act.

(*Horsfield, Sussex; Communication from East Grinstead.*)

EAST INDIES. The portion of the globe to which the name of India, or the East Indies, is given, is usually understood to comprehend the peninsula of Hindustan lying to the east of the river Indus, and thence eastward as far as the boundary of the Chinese empire, by which empire and by Tartary, India is also bounded on the north. The East Indies include also the islands of the Indian Ocean, which lie between Hindustan and Australia as far north as the Philippine Islands, and as far east as Papua, but without including either the

Philippines or Papua. A general description of the East Indies will be found under the article **HINDUSTAN**.

EAST PRESTON, Sussex, a village and the seat of a Poor-Law Union, in the parish of East Preston, is situated in 50° 48' N. lat., 0° 28' W. long., on the south coast, 23 miles W.S.W. from Lewes, 60 miles S.S.W. from London by road, and 66 miles by the London, Brighton, and South Coast railway. The population of the parish in 1851 was 310. The living is a vicarage annexed to the vicarage of Ferring, in the archdeaconry and diocese of Chichester. East Preston Poor-Law Union contains 19 parishes and townships, with an area of 29,890 acres, and a population in 1851 of 14,847. The population is wholly agricultural. The parish church consists of a nave, erected in the 15th century, and has a handsome stone spire. In the village is a National school. (*Horsfield, Sussex; Communication from East Preston.*)

EAST RETFORD, Nottinghamshire, a municipal and parliamentary borough and market-town and the seat of a Poor-Law Union, is situated in 53° 19' N. lat., 0° 37' W. long.; distant 33 miles N.N.E. from Nottingham, 141 miles N.N.W. from London by road, and 138½ miles by the Great Northern railway. The population of the borough and parish of East Retford in 1851 was 2943; that of the parliamentary borough, which includes numerous adjacent parishes and districts, was 46,054. The living is a vicarage in the archdeaconry of Nottingham and diocese of Lincoln. East Retford Poor-Law Union contains 50 parishes and townships, with an area of 88,730 acres, and a population in 1851 of 22,756. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. For sanitary purposes the borough of East Retford and the parish of West Retford are each under the management of a Local Board of Health.

East Retford is seated on the right bank of the river Idle, a feeder of the Trent, on what was formerly the Great North Road. In Domesday Book it is called Redeford. On the west a handsome stone bridge of five arches connects East Retford with the smaller and more modern town of West Retford. The houses in general are well built: the streets are paved, and are well lighted with gas, at the expense of the corporation. An extension of the town has of late years taken place on the south side, and is called South Retford. The town-hall is a handsome building. The market-place is an irregular quadrangle, affording ample accommodation. In the centre of the market-place is a pillar, erected on the site of an ancient cross, called the broad stone. The parish church, a spacious and handsome edifice, of various styles, was founded about 1258. It consists of a nave, two aisles, chancel and transept, and has a square tower, 97 feet high. West Retford church is a small building, with a tower and an elegant crocketed spire. The Independents and Wesleyan and Primitive Methodists have places of worship. There are in East Retford a Free Grammar school founded by King Edward VI., which has an annual income of 480*l.*; the number of scholars in 1852 was 22. The affairs of this school are in chancery. In the town are National and Infant schools; a literary and scientific institution, with a library; and a savings bank. There are almshouses for 18 poor women; Slogwick hospital is for 6 poor men. The hospital of the Holy Trinity in West Retford, founded in 1664 by Dr. John Darrell, is for a master and 16 brethren. Three coach-making establishments and two tanneries afford some employment. There are corn-mills and paper-mills. The canal from Chesterfield to the Trent at Stockwith passes through the borough: the traffic on the canal is chiefly in corn, coal, &c. The market, held on Saturday, is well supplied with dairy produce, and in autumn with hops, which are extensively raised in the neighbourhood: fairs are held on March 23rd, and October 2nd, and there is one great market yearly for horses, cattle, cheese, and hops. The low level of the town has exposed it to occasional inundations from the overflow of the Idle, which have sometimes done considerable damage.

(*Piercy, History of Retford; Communication from East Retford.*)

EAST STONEHOUSE. [PLYMOUTH.]

EAST WARD, Westmoreland, the eastern division of the county, gives name to a Poor-Law Union. The ward contains an area of 177,910 acres, and a population in 1851 of 13,660. It is bounded N. by Cumberland, N.E. by Durham, and S.E. by Yorkshire. East Ward

Poor-Law Union contains 30 parishes and townships, with an area of 175,400 acres, and a population in 1851 of 13,664.

EASTBOURNE, Sussex, a village (formerly a market-town) and the seat of a Poor-Law Union, in the parish of Eastbourne, is situated in 50° 46' N. lat., 0° 16' E. long., distant 16 miles S.E. by E. from Lewes, 63 miles S.S.E. from London by road, and 65 miles by the Brighton and South Coast railway. The population of the parish in 1851 was 3183. The living is a vicarage in the archdeaconry of Lewes and diocese of Chichester. Eastbourne Poor-Law Union contains 14 parishes and townships, with an area of 36,373 acres, and a population in 1851 of 8346.

Eastbourne is believed to be the site of the Roman station *Portus Anderida*. Many Roman remains have been found in the neighbourhood. The village consists of three portions: the oldest including the parish church and some old houses, is farthest inland; a hamlet, containing a new church, and some good shops, inns, and private residences, is nearer the shore; and close to the beach is a cluster of dwellings known as Sea Houses, to which have been recently added a beautiful esplanade, and many fine mansions. The parish church consists of a nave, with side-aisles, a large chancel, and a lofty antique tower. In the church are some interesting monuments. The new church, a handsome edifice recently enlarged, is near Sea Houses. There are three small places of worship for Dissenters, National schools, and an Infant school. Eastbourne is much resorted to for sea-bathing. Along the shore of the bay are situated some of the martello towers erected about the beginning of the present century. There is also a fort capable of accommodating 450 men, and provided with 18 guns—24- and 64-pounders—and some mortars. At Holywell, near Eastbourne, are chalybeate springs. Some remains exist of a small establishment of Black friars.

(Horsfield, *Sussex: Communication from Eastbourne*.)

EASTER ISLAND, an island in the eastern part of the Pacific Ocean, more than 2000 miles distant from the west coast of South America, is situated near the point 27° 20' S. lat., and 109° 30' W. long. It is about thirty or forty miles in circuit, with a stony and hilly surface, and an iron-bound shore. The hills rise to the height of about 1200 feet. At the southernmost extremity of the island is an extinct volcano. Lava seems to form the principal component of the hills, which rise gradually and are covered with grass. The island has no safe anchorage, no wood for fuel, no fresh water, and no domestic animals, except a few fowls. The inhabitants, who number about 2000, live on yams, potatoes, and sugar-cane. In physiognomy, language, and manners, they resemble the inhabitants of the other groups of islands lying farther west. On the island are a number of colossal statues, some of which are 15 or even 18 feet high; they stand on platforms, which have been made with a considerable degree of art.

EASTHAMPTSTEAD, Berkshire, a village and the seat of a Poor-Law Union, in the parish of Easthampstead, is situated in 51° 24' N. lat., 0° 45' W. long.; distant 11 miles E.S.E. from Reading, and 29 miles W.S.W. from London by road. The population of the parish in 1851 was 698. The living is a rectory in the archdeaconry of Berks and diocese of Oxford. Easthampstead Poor-Law Union contains 5 parishes, with an area of 27,600 acres, and a population in 1851 of 6343. Easthampstead is an agricultural parish.

EASTRY, Kent, a village and the seat of a Poor-Law Union, in the parish of Eastry, is situated in 51° 15' N. lat., 1° 18' E. long., distant 10 miles E. by S. from Canterbury, and 65 miles E.S.E. from London. The population of the parish of Eastry in 1851 was 1697, including 464 inmates of the Union workhouse. The living is a vicarage, with the curacy of Worth annexed, in the archdeaconry and diocese of Canterbury. Eastry Poor-Law Union contains 30 parishes, with an area of 45,659 acres, and a population in 1851 of 23,848. Eastry is quite a rural village, and has no trade of any consequence. The parish church is a large and handsome edifice in the early English style. The Wesleyan Methodists have a place of worship, and there are National schools.

EATON-BRAY. [BEDFORDSHIRE.]

EATON-SOCON. [BEDFORDSHIRE.]

EBERSBACH. [LAUSITZ.]

EBREUIL. [ALLIER.]

EBRO (the *Iberus* of the Romans), a river of Spain, rises in Castilla la Vieja, in 43° N. lat., 4° 3' W. long., and after a course, generally east-south-east, of about 350 miles, enters the Mediterranean Sea, in 40° 42' N. lat., 0° 50' E. long.

The source of the Ebro is in the modern province of Santander, at a great elevation, on the side of a ridge which extends from the summit-level of the Cantabrian mountain-chain southward towards the city of Burgos. The stream flows east about 10 miles past the small town of Reynosa, and then south about 10 miles more, after which its course is east past Frias, east-south-east and south-east past Miranda and Haro, and east-south-east past Logroño, Calahorra, Tudela, and Zaragoza, till it receives the Guadalupe, when it turns to the north. It then passes by Mequinzenza, where it receives the Segre, and making a semicircular bend to the south-east, passes by Mora, whence its course is south to Tortosa, and east to the Mediterranean. The main stream enters the sea opposite the island of Buda, but two branches have previously separated from it, one of which flows north

into the Gulf of Amposta, and the other south into the Gulf of Alfaques.

With the exception of the marshy land at the mouth of the river, and the level tract between Zaragoza and Mequinzenza, the course of the Ebro is generally through narrow and occasionally rocky valleys. Shoals and rapids interrupt the navigation, but a canal has been constructed which extends from near Tudela to about 40 miles below Zaragoza. It runs parallel to the south bank, and is to be extended to Tortosa when funds have been provided.

In passing through Castilla la Vieja the Ebro receives the Nebo on the northern bank, and the Oca, the Teron, and the Oja, on the southern bank. In crossing Navarra it receives the river Aragon. The principal affluents which enter it in the province of Aragon are described in the article ARAGON.

EBRSAMBUL. [ABOUSAMBUL.]

ECBATANA, (*Ekbatana*), the ancient capital of Media, founded by Deioces. (Herod. i. 98.) The genuine orthography of the word appears to be Agbatana (*Agbatana*: see Steph. Byzant. v. *Agbatana*), as it is now written in the text of Herodotus, and as we are informed by Stephanus it was written by Ctesias. It appears in the 'Itinerary' of Isidore of Charax under the form of Apobatana. In the Book of Judith (c. i.) is a curious account of the building of Ecbatana, and of the enormous strength of its walls and fortifications.

Ecbatana was situated, according to the testimony of ancient writers, in a plain at the foot of a lofty mountain called Orontes. According to an ancient popular tradition Ecbatana was founded by Semiramis (Diod. ii. 13), but Herodotus ascribes to it a later origin. Herodotus, who had probably seen the place, describes it as built on a conical kind of hill, and consisting of seven circular inclosures or walls, one within another, each wall being higher than that which surrounded it, and the innermost wall, which surrounded the palace, of course the highest of all. Ecbatana being a high and mountainous country was a favourite residence of the Persian kings during summer, when the heat at Susa was almost insupportable. The city, according to Polybius, was not only of vast strength but of extraordinary splendour: the royal palace, in particular, was of the richest materials and workmanship; the only wood used in it was cedar and cypress, and it was wholly covered with plates of gold and silver; most of these plates were, he says, carried off by the soldiers of Alexander, Antigonus, and Seleucus. Ecbatana was the scene of the great events which marked the childhood of Cyrus; and it was at Ecbatana that Alexander's favourite, Hephæstion, died; and Alexander is said to have destroyed the celebrated temple of Æsculapius there in grief for him.

The site of Ecbatana has been a matter of dispute; but the best recent geographers have generally agreed in placing it on the site of the modern Hamadan. The route of commerce between the low country in the neighbourhood of the ancient Selenceia and the modern Baghdad and the high table-land of Iran is determined by the physical character of the country, and has continued the same from the earliest recorded history of those countries to the present day. The places marked in the 'Itinerary' of Isidore as lying between Selenceia and Ecbatana are the places indicated by modern travellers as lying on the route between Baghdad and Hamadan. This question is fully discussed in No. 4 of the 'Journal of Education,' and in Thirlwall's 'History of Greece,' v. ii., App. 2.

Recently indeed a modification of the received view has been advanced by Colonel Rawlinson, and supported by him with such a well-digested array of evidence as to command respectful attention, apart from the authority of his high reputation. He believes that there were two independent Median capitals named Ecbatana; the one in the lower country (Media Magna), which occupied the site of Hamadan; the other in the mountainous country of Upper Media, or Atropatene, the site of which is now marked by the ruins of *Takht-i-Soleiman*, in the province of Azerbâijân (36° 25' N. lat., 47° 10' W. long.). This theory is shown to receive much corroboration from various passages in ancient and mediæval, as well as oriental writers, and a careful examination of the country itself. We can here only refer the reader to the evidence so ably adduced in the 'Journal of the Royal Geographical Society,' vol. x. p. 125, &c. The title merely signified a treasure city, and the above two Median capitals were not the only places which were called Ecbatana. ('Geographical Journal,' xi. 81.) It was in a city of the same name in Syria of uncertain position (Herod. iii. 64) that Cambyses died.

Hamadan, which is on or near the site of the Ecbatana of Media Magna, is near the parallel of 35° N. lat. and in 48° E. long., in a low plain at the foot of Mount Elwund, a mountain which belongs to the chain which forms the last step in the ascent from the lowlands of Irak Arabi to the high table-land of Iran. [ASIA, vol. i., col. 582.] "During eight months in the year the climate of Hamadan is delightful; but in winter the cold is excessive, and fuel with difficulty procured. The plain is intersected by innumerable little streams, covered with gardens and villages, and the vegetation is the most luxuriant ever beheld." (Kinneir's 'Persia,' p. 126.) Kinneir says that the summit of Elwund is tipped with continual snow, and seldom obscured by clouds. Hamadan is said to contain about 10,000 inhabitants, a large manufacture of leather, and also a considerable trade, owing to its position on the high road from Baghdad to Tebrân and Ispahan.

ECCLES. [LANCASHIRE.]

ECCLESALL BIERLOW, West Riding of Yorkshire, a village and the seat of a Poor-Law Union, in the parish of Sheffield, is situated close to the southern boundary of Yorkshire, in $53^{\circ} 21' N.$ lat., $1^{\circ} 31' W.$ long.; distant 54 miles W.S.W. from York, and 162 miles N.N.W. from London. The population of the township of Ecclesall Bierlow, which includes 26 hamlets, was 24,552 in 1851. Ecclesall Bierlow Poor-Law Union contains 7 parishes and townships, with an area of 26,850 acres, and a population in 1851 of 37,911. The inhabitants of the township are chiefly occupied in the same manufactures as are carried on in Sheffield, of which borough and parish the township forms an important constituent part. The Wesleyan Methodist institution called Wesley College, founded in 1838, which stands within the township, had 150 students in 1853.

ECCLESALL. [STAFFORDSHIRE.]

ECIJA. [SEVILLA.]

ECKMÜHL, a small village in Bavaria, situated on the Lober, in $48^{\circ} 47' N.$ lat., $12^{\circ} 3' E.$ long., owes its celebrity to the signal victory which the French and Bavarians, under the emperor Napoleon I., gained over the Austrians, commanded by the archduke Charles, April 22, 1809. In testimony of the skill and intrepidity which Marshal Davoust displayed on this occasion Napoleon conferred the title of Prince of Eckmühl upon him.

ECUADOR, a republic of South America, extends from north to south between $1^{\circ} 40' N.$ lat. and $5^{\circ} 50' S.$ lat., and between $70^{\circ} 20'$ and $80^{\circ} W.$ long. It is bounded N. by the republic of New Granada; E. by the empire of Brazil, S. by the republic of Peru, and W. by the Pacific Ocean. The area may be vaguely estimated at about 800,000 square miles; the population at about 665,000.

Coast-line, Surface, &c.—The southern boundary of the coast of Ecuador is the Punta de Malpello, $3^{\circ} 30' S.$ lat., the termination of the left bank of the river Tumbes, which from the Andes to the Pacific is regarded as the boundary between the republics of Ecuador and Peru. From this point to Point Mangles, $1^{\circ} 35' N.$ lat., at the mouth of the Mira River, the boundary on the Pacific between the republics of Ecuador and New Granada, the coast has a broken convex line, with a general bearing towards the north-east. Punta de Malpello forms the southern extremity of the Gulf of Guayaquil; from it to Punta de Carnero the northern extremity of the gulf is about 70 miles. At the mouth of the Guayaquil River is the large island of Puna, and several smaller islands and sand-banks lie in the channel of the estuary, but the river is navigable for vessels of considerable burden up to Guayaquil, the principal port town of the republic. From Punta Carnero to Punta Santa Elena, about 14 miles, the coast bears north-west, it then curves round to the east and north, and forms the wide open bay of Santa Elena, in which there is good anchorage in three and a half fathoms water. As the coast bears round towards Cabo San Lorenzo there are several small islands and rocks off the shore, and one, La Plata Island, of somewhat larger size, a few miles north from it. From San Matheo Point, a few miles north from Cabo San Lorenzo, the coast again makes a bold sweep round to Cape Passado and forms the large open Bahia Manta, near the centre of which is the smaller bay of Caracas, formed by the estuary of the river of the same name. From Cape Passado to Galera Point the general bearing of the coast is north-north-east, and like the entire coast from Punta Santa Elena it is bold and rocky, lofty hills and low mountains, the lower spurs of the Andes, rising to heights varying from 500 to 1500 feet. From Galera Point the coast bears away east-north-east to the mouth of the Matage River, whence it turns northward and forms Sardinas Bay; Point Mangles, the northern extremity of this bay, is the boundary on the Pacific of the territory of Ecuador. Along the coast there are no large towns; and the few small harbours which it affords are only visited by small coasting-vessels.

About one-third of the surface of the country is mountainous. Ecuador contains almost the whole of the Equatorial Andes and the hilly country between them and the Pacific. The Andes enter the country between the Bay of Guayaquil and San Jaen de Bracamoros, and thence run in a northern and north-eastern direction to the northern boundary. This chain forms in the southern and northern extremity two large mountain-knots, that of Loja, between $5^{\circ} 30'$ and $3^{\circ} 15' S.$ lat., and that of Los Pastos between $20'$ and $1^{\circ} 13' N.$ lat. The first occupies, according to Humboldt, 11,650 square miles, and the second 8700 square miles. Between these two mountain-knots the Andes form an enormous mass of rocks, covering in width an extent of 70 or 80 miles. Both declivities are rather steep, but especially that towards the eastern plains. On both edges of this mass are lofty ranges running parallel to one another, and crowned by numerous summits, several of which rise above the line of perpetual snow. The highest ridges of those ranges may be about 50 miles distant from one another; and between them extends a longitudinal valley, which measures from 15 to 20 miles across, and extends nearly 300 miles in length. At two points transverse ridges unite the two ranges, and thus the great valley is divided into three smaller valleys. The most southern of these valleys, that of Cuenca, extends from $3^{\circ} 15'$ to $2^{\circ} 27' S.$ lat., with a mean elevation above the sea of about 7800 feet. Its waters join the Rio de San Jago, a tributary of the Amazonas. The summits of the ranges which surround it rise only to about 10,000 feet and nowhere attain the snow-line,

except the range of Assuay ($2^{\circ} 27'$ to $2^{\circ} 30' S.$ lat.), which separates the valley of Cuenca from that of Alausi and Ambato, the great road over which rises near the Ladera de Cadlud to 15,520 feet. To the north of this transverse ridge extends the valley of Alausi and Ambato from $2^{\circ} 27'$ to $0^{\circ} 40' S.$ lat. Its surface is about 8000 feet above the sea. Its waters run off to the Marona and Pastaza, two tributaries of the Amazonas. On the range east of this valley are the volcanoes of Sangay 16,827 feet, Tunguragua 15,960 feet, Cotopaxi 18,875 feet, and Carguairazo 16,663 feet. A short distance south of Carguairazo is the lofty Chimborazo, the highest summit of the Equatorial Andes, being 21,242 feet above the sea. The transverse ridge which separates the valley of Alausi and Ambato from that of Quito is called the Alto de Chisimbo. It is only about 500 feet above the plains contiguous to it on the northern side, and is of inconsiderable width. At its western extremity stands the Volcano of Cotopaxi, and at its eastern the Yliniza, which rises to 17,376 feet. This Alto de Chisimbo forms the watershed between the Pacific and Atlantic seas. The valley of Quito extends from $40' S.$ lat. to $20' N.$ lat. to the mountain-knot of Los Pastos; and has a mean elevation above the sea of about 9600 feet. Its waters run off by the Rio Pita, which joins the Rio de las Esmeraldas, and thus flows into the Pacific. On the range standing east of this valley are the Volcano de Antisana 19,137 feet high, and the Cayambe Urcu on the equator 19,534 feet high. On the western range are the Volcano de Pichincha 15,986 feet high, and the Cotacachi which rises to 16,448 feet. On the mountain-knot De los Pastos are several volcanoes, as those of Chumbal 16,824 feet, Chiles and Pasto 13,740 feet; this last, which gives its name to the group, is however just beyond the northern limits of Ecuador. The elevated plains which are inhabited on that mountain region are 10,240 feet above the sea.

The country between the Andes and the Pacific is filled up with mountains of various elevations, which towards the shores mostly sink down to hills. The shores themselves are high, but not of great elevation, except in a few places, as at Cape San Lorenzo. The country along the Rio de Guayaquil forms an exception. Here a plain extends several miles in width, and is so low that part of it is covered by the inundations of the river in the rainy season, and part has been changed into a swamp. Along this valley are extensive plantations of cacao.

The great plain east of the Andes is partly wooded and partly a savannah; but in its present state it is of little importance, being only inhabited by the natives. The north-eastern portion of it is said to be occupied by a part of the low mountain range called by Humboldt the Sierra Tunahy. Numerous lakes and stagnant pools occur in the great plain.

Hydrography, Communications, &c.—The principal river of Ecuador is the Amazonas, which is here called Marañon, and sometimes Tunguragua. Where it leaves Peru, and begins to form the boundary-line between the two republics, commence the series of cataracts and rapids with which it issues from the Andes. Near San Jaen de Bracamoros is the Pongo de Rentema, where the river, according to Humboldt, is only 1232 feet above the level of the sea. Lower down between Santiago de las Montañas and Borja, is the rapid or Pongo of Manseriche, where the river is narrowed to about 150 feet, and for about 7 miles rushes down with incredible velocity. Below this Pongo the Amazonas becomes navigable, and continues so to its mouth. [AMAZONAS.] Within the boundary of Ecuador, the Amazonas receives the Marona, Pastaza, Tigre, and Napo, which descend from the eastern declivities of the Andes. The Putumayo and the Yapura, which descend from the same range and in the same direction, fall into the Amazonas within Brazil. The rivers which descend from the western side of the Andes are numerous, have a comparatively short course, and are of little importance. The most remarkable are the Rio de las Patias, Rio de las Esmeraldas, the Rio Santiago, the Rio Mira, and the Rio de Guayaquil; all of these are navigable by boats, but the Guayaquil is the only one navigated by large vessels.

The Guayaquil is formed by the union of numerous streams which issue from the western slopes of the Andes. It becomes available for commercial purposes at Babahoyo, or Caracol, about 70 or 80 miles from its mouth, river boats ascending to one or other of these places according to the season: ships of considerable burden can ascend at full tide up to the town of Guayaquil. Here the river has been swelled by the junction of its principal affluents, the Dañli and the Babo, and has increased to a great size. Opposite the city of Guayaquil it is 2 miles across, and it continues to expand largely to its mouth. Below Guayaquil the channel is impeded by numerous rocks and small islands. At its mouth is the larger island of Puna. Where the river falls into the Pacific it is known as the Gulf of Guayaquil, the extreme points of which, as already noticed, are 70 miles apart.

All the maritime commerce of Ecuador is concentrated in that of Guayaquil, from which town there is a road to Quito, running first along the banks of the Rio de Guayaquil to Caracol, and then for some miles through a low and level country. It then begins to ascend the western declivity of the Andes, and between Caluma and Guaranda the ascent is extremely steep. From Guaranda it runs over the plain to Ambato, and thence to Quito. The great road which connects New Granada and Peru runs through the high valleys of Ecuador.

It leads from Almaguer in New Granada over the Páramo de Patate (9408 feet above the sea) to Pásto (8578 feet), and hence over the Páramo de Boliche (11,504 feet), and the Alto de Pucara (10,400 feet) to Ibarra (7368 feet), and Quito (9586 feet). In the Alto de Chisinche it attains an elevation of about 10,000 feet. Hence it traverses Ambato (8864 feet), Riobamba Nueva (9472 feet), and Alausi (7984 feet), and attains on the Páramo de Assuay 15,536 feet. In passing this range many lives are annually lost. From Cuenca (8640 feet) it runs over the Alto de Pulla (10,000 feet) to Loja (6768 feet), and hence to Ayavaca (8992 feet) in Peru. From the latter place it proceeds to Truxillo and Lima. Formerly European commodities were imported into Ecuador by this road from New Granada, but nearly the whole country now receives them from Guayaquil.

Climate, Soil, Productions.—The temperature of course differs considerably in the elevated valleys which are surrounded by the high peaks of the Andes, and in the low countries on both sides of the range. In the valley of Quito the seasons are scarcely perceptible. The mean temperature of the day, all the year round, is between 60° and 67°, and that of the night between 48° and 52° of Fahrenheit. The winds, which are generally either from the north or the south, blow continually, but never with great violence. During the morning, till one or two o'clock, the sky is serene and clear; but after this hour vapours begin to rise, and the whole sky is gradually covered with black clouds, which often bring on dreadful tempests of thunder and lightning, followed by torrents of rain. At sunset the weather generally clears up, and the nights are as serene as the mornings. The rains sometimes continue all night, and occasionally, though rarely, three or four days in succession. At other times a few fine days occur without rain. The interval between September and May is called the winter, and the remainder of the year the summer. The winter is only distinguished by a somewhat greater quantity of rain, and the summer by a greater number of fine days. These valleys are subject to frequent earthquakes, some of which have been very destructive. At Guayaquil and on the other valleys along the coast the mean temperature of the year varies between 78° and 82°. From December to April the heat rises to 95°; during these months rain falls with but short interruptions, and violent tempests frequently occur. The great plain extending along the Rio Amazonas and its numerous tributaries has a hot climate. The mean temperature probably does not fall short of between 75° and 85°, and the heat sometimes rises to 95° and more. But every day at two o'clock a wind begins to blow from the east with great force and continues to sunset. Near the base of the Andes rain falls nearly every day, generally after noon, when the wind commences.

Agriculture varies with the elevation of the cultivated land above the level of the sea. Near the snow-line, which in this part of the Andes occurs at the height of 15,750 feet, the vegetation of the Páramos (flat tracts on the summit of the range, from 11,000 to 14,000 feet above the sea) is extremely scanty, consisting only of two or three species of plants. Districts like the plains in the mountain-knot of Pastos, situated at an elevation of 10,000 feet, are covered with grass, and afford good sheep-walks. The culture of European cereals and fruits prevails between 10,000 and 4000 feet, especially in the great valley of the Andes, where excellent wheat is raised, with barley and Indian corn. Lucern is also extensively grown as fodder for beasts of burden. In those parts of the country which do not exceed 4000 feet in elevation the vegetables cultivated for food are chiefly sweet potatoes, mandioc, yams, and bananas, with rice, Indian corn, and some leguminous plants. The most common fruit-trees are oherimoyers, pine-apples, papayas, and anonas. In some of the valleys are extensive plantations of sugar-cane, cotton, tobacco, and cocoa. The wide valley of the Guayaquil is especially fertile: the soil consists of alluvium; and there are few spots even between the tropics which for richness and vigour of vegetation can vie with this wide valley. It is covered with groves of every kind of intertropical fruits; only a comparatively small quantity of sugar is produced, but an immense quantity of cocoa of very fine quality is grown, and is exported to all the countries bordering on the Pacific. Among the forest-trees is that which gives the cinchona bark. This tree is most frequent on the heights of the mountain-knot of Loja, where it grows on the eastern declivities at an elevation of 6000 or 8000 feet above the level of the sea.

Sheep and cattle are reared in great numbers, the former especially in the valleys of the Andes, and on the higher declivities of the mountains. Horses, asses, and mules are sufficiently numerous to be articles of export. In some districts, especially in the valleys along the coast, a considerable quantity of wax is collected; and still higher up are some spots where the cochineal insect is reared. Along the Amazonas turtles are numerous, and their fat, called 'manteca,' furnishes a considerable article of trade. Fishing is carried on to some extent on the coast, and a good deal of salt-fish is prepared. Along the coast a murex is found, which yields a juice used in dyeing purple.

Ecuador is less rich in the precious metals than the other countries of South America which comprehend a portion of the Andes. There are several mines of gold and silver, and a few are still worked; but the annual produce is not considerable. Lead and quicksilver occur

in some places, and in others sulphur is prepared in considerable quantity. Salt is obtained from sea-water along the coast.

Formerly the manufactures of Ecuador were more considerable than those of any other country in South America. They are chiefly of coarse-woollen and cotton goods; but have diminished greatly in amount of late years in consequence of the preference given to articles of English manufacture. Lace of a good kind is made in Quito. Various articles of home consumption are made, but there is no other important branch of industry.

The commerce, as already mentioned, is almost wholly carried on at Guayaquil. The goods exported are the raw produce of the country, and vary very greatly in quantity in different years. Of cotton the average annual quantity exported may be about 150,000 lbs.; of cocoa about from 10,000,000 to 12,000,000 lbs.; sugar and tobacco are also exported to some extent. Of the imports we have no recent reliable accounts. The imports into Ecuador from Great Britain in 1851 were valued at 54,099*l*.

Inhabitants.—The population of Ecuador is composed of the descendants of Spaniards and of the aborigines. The aborigines are believed to constitute about three-fourths of the population. Those Indians who inhabit the elevated valleys belong to the race of the Peruvians, and speak the Quichua language. They are mostly agriculturists, and cultivate their lands with much care; they also make coarse stuffs of wool and cotton. The Indians who inhabit the eastern plain are much lower in civilisation. They cultivate only small pieces of ground, and apply themselves almost exclusively to fishing and hunting. The Jesuits and the monks who succeeded them had made some progress in bringing them over to a kind of Christianity and civilisation; but the political events which have taken place since 1812 have driven the monks out of the country, all the 'misiones' are in ruins, and the Indians have returned to their wild life in the forests. Three-fourths of the population dwell in the elevated valleys of the Andes.

Political Divisions, Towns, &c.—The republic of Ecuador is divided into three departments, Quito, Guayaquil, and Assuay. The population of the towns in the following notice of these departments is given according to the latest estimates, but these estimates are very vague, and the numbers are probably excessive, except when they are intended to include the surrounding district.

1. The department of Quito extends along the coast from the mouth of the Rio Mira to Cape Passado, and comprehends the two valleys of Quito and of Alausi and Ambato; to which is added a portion of the eastern plains along the upper courses of the rivers Putumayo, Napo, and Pastaza. In the elevated valleys in several places are the ruins of ancient palaces of the Incas, and in many districts there are traces of the great road which in the time of the Incas led from Quito to the southern extremity of the valley of Titicaca (from the equator to 20° S. lat.). Its principal wealth consists in its extensive corn-fields, and its numerous herds of sheep, cattle, asses, and mules; it has also a few mines of silver and gold. The capital of the republic and of the department, is QUITO. North of this place lies *San Miguel de Ibarra*, or briefly *Ibarra*, a well-built town, with about 10,000 inhabitants, situated at the foot of the Volcano of Imbabura. A good deal of grain is grown in the neighbourhood; and there are some manufactures of wool and cotton. Not far from it is *Otavalo*; it has more considerable manufactures of wool and cotton, and is said to contain 20,000 inhabitants. On the coast are the harbours of Esmeraldas, Atacames, and Carondelet, but they are not visited by foreign vessels. South of Quito is *Tacunga*, or *Lactacunga*, which, between 1693 and 1797, was four times destroyed by earthquakes; it stands at the foot of the eastern ridge of Andes, 9254 feet above the sea, and contains 5000 inhabitants. *Riobamba* was entirely destroyed in 1797. The new town which was built 4 or 5 miles farther south, is said to contain 15,000 inhabitants, and is the capital of the province of Chimborazo. In its neighbourhood, at Tescan, great quantities of brimstone are made. *Ambato*, or *Hambato*, north-east of Mount Chimborazo, with 10,000 inhabitants, and *Guaranda*, south of the same mountain, have some commerce, owing to their situation on the road between Guayaquil and Quito. The misiones in the eastern plain have almost entirely disappeared.

2. The department of Guayaquil comprehends the coast between Cape Passado and a short distance from the boundary-line of Peru, and extends inland to the upper declivity of the Andes. Its commercial wealth consists in its tropical productions, especially in cocoa, of which there are extensive plantations. *Guayaquil*, the capital of the department and the chief commercial town of the republic, population about 25,000, is situated in 2° 12' S. lat., 79° 39' W. long., on the right bank of the river Guayaquil, which is about 2 miles wide opposite the town. Vessels of considerable burden can sail up to the town, as the tide at full and change rises 24 feet. The town itself is divided into the old and new town—*La Ciudad Vieja* and *La Ciudad Nueva*. The old town, which is higher up the river, is entirely inhabited by the poorer classes. It is intersected by narrow creeks, which are full at high-water, but at half ebb the mud is uncovered and exhales the most noisome and pestilential effluvia, especially in hot weather. The new town though exempt from this nuisance, is scarcely more healthy. It occupies a low perfectly level site, which

has no drainage, and its streets during the rainy season (from December to April) are converted into quagmires. There is also a marsh at the back of the city: circumstances taken together amply sufficient to account for the malignant fevers which so often prevail in Guayaquil. The whole town extends about 2 miles along the river, but its width is inconsiderable. The houses except in the principal street, called the *Calle de Comercio*, have commonly only one story, and the framework is made of timber. None of the public buildings are distinguished by architectural beauty. As the tides rise so high, the water far above the town is brackish and unfit for drinking. Several large balsas are constantly employed to bring fresh water down the river from a distant place. Many families live entirely on board of balsas in the river Guayaquil. The commerce of the city is of considerable importance. European goods are imported into Guayaquil in considerable quantities, and sent up the river to Babayoyo or Caracol, whence they are carried on the backs of mules to the valleys of Ambato and Quito. Almost the whole of the native products are exported from Guayaquil. From 150 to 200 ships enter and leave the port annually. Some ships are built here. Guayaquil is subject to frequent visitations of terrific earthquakes. Mount Chimborazo, as well as the Volcano of Cotopaxi, is visible from the town in clear weather. On the banks of the Rio de Guayaquil are Babayoyo and Caracol, which are situated at the points where the river ceases to be navigable at different seasons, and consequently on that account are used as commercial depôts. Puerto Vejo, a small place, is the capital of the province of Manabí; its harbour is at Manta. Another harbour is at Punta de Santa Elena, where much salt is made. The island of Puna, in the Bay of Guayaquil, has an area of more than 200 square miles. At the arrival of the Spaniards it is said to have had a population of 20,000, but it is now only inhabited by a few fishermen. To this department belong the Galapagos Islands. [GALAPAGOS.]

8. The department of Assuay derives its name from the mountain ridge which divides the valley of Alausi from that of Cuenca. It comprehends the last-named valley, the mountain knot of Loja, and a few miles of sea-coast along the Gulf of Guayaquil, contiguous to the boundary of Peru, with by far the greatest part of the eastern plains. In a few places ruins of ancient temples and palaces occur. Cinchona-bark forms its principal article of exportation. This department contains many herds of sheep and cattle, and the valley of Cuenca produces grain in abundance. Some silver mines occur, but few if any are now worked. The capital is Cuenca, 8640 feet above the sea, a large but meanly-built town, with 20,000 inhabitants, and some trade in cheese and rural produce. It has a university; and some institutions for education have been established. At Asogues are mines of quicksilver. Loja, population about 10,000, in a valley 6768 feet above the sea, has some fine churches, and trades extensively in cinchona-bark. Zaruma, on the western declivity of the Andes, population 6000, is the capital of the mining district; both gold and silver mines are in the neighbourhood. The port of Tumbez, in the Gulf of Guayaquil, is the place where Pizarro made his descent on the Peruvian coast; in its neighbourhood are some mines. San Jaen de Bracamoros, near the left bank of the Marañon, has 3000 inhabitants. Borja, is a small place, where the Pongo de Manseriche terminates.

History, Government.—Ecuador was discovered by Pizarro in 1526; and came into the hands of the Spaniards at the downfall of the empire of the Incas. It remained a Spanish possession until 1812, when the inhabitants rose in insurrection and made a determined effort to throw off the Spanish yoke. Quito was then a part of the vice-royalty of New Granada, and it participated fully in the frequent vicissitudes of the war, which ended in 1823 with the complete expulsion of the Spaniards. By the convention of Cucuta in 1821 New Granada and Venezuela united and formed one republic under the name of Colombia, but this union lasted only till 1831, when these countries again separated. Ecuador, or the ancient kingdom of Quito, was then also separated from New Granada, and since that time has existed as an independent state. Ecuador declared itself an independent republic, and established a constitution, according to which it is governed by a president elected for eight years, a vice-president, council of state, and a house of representatives consisting of one member for every 40,000 inhabitants. The Roman Catholic is the established religion: the church is presided over by the Archbishop of Quito and the Bishop of Guayaquil.

(La Condamine; Ulloa; Humboldt; Caldas, in Mollien's *Travels*; Captain B. Hall; *Geographical Journal*; *Admiralty Chart*; *Parliamentary Papers*.)

EDDYSTONE or EDYSTONE LIGHTHOUSE is constructed on the sloping side of a rock which bears from Plymouth south by west, and from the Ram Head south half a point east. It is distant from the anchoring in the Sound 4 leagues, and from Ram Head about 3½ leagues. The Isle of Maystone bears from the lighthouse about north-east by north, 4 leagues distant. All the rocks near the lighthouse are on the east side, stretching to the north and south, and they are all exposed at high water; but on the west side any ship may sail close by the house in 12 or 13 fathoms water, and there are no hidden rocks. About a quarter of a mile east by north from the house there is a rock which never appears but at low spring tides.

The first lighthouse built on the Eddystone rock was constructed by Mr. Winstanley, a gentleman of Essex, who was a man of a mechanical turn. His work was begun in 1696, and completed in four years. The base was of stone, the remainder was of wood. While some repairs were making under his inspection the building was blown down in a terrible hurricane during the night of the 26th of November 1708, and he and his workmen perished. Not a vestige, except some iron stanchions and a chain, was left behind. In 1706 an act was passed for rebuilding the lighthouse, and Mr. Rudyerd, a silk-mercer, was employed by the lessee of the lighthouse to construct a new building, also of wood on a stone base. Mr. Smeaton was of opinion that Rudyerd directed the performance of his work in a masterly manner, and so as perfectly to answer the end for which it was intended, until it was destroyed by fire in 1755.

The present edifice is a circular tower of stone sweeping up with a gentle curve from the base, and gradually diminishing to the top, somewhat similar to the swelling of the trunk of a tree. The upper extremity is finished with a kind of cornice, and is surmounted with a lantern, having a gallery round it with an iron balustrade. The tower is furnished with a door and windows, and a staircase and ladders for ascending to the lantern through the apartments for those who keep watch. Mr. Smeaton undertook the task of constructing the lighthouse in 1756, and completed it in less than four years.

The materials employed in building the tower are moor-stone, a hard species of granite, and Portland-stone. The stones for the several courses were rough-worked at the quarries. Six foundation courses dovetailed together were raised on the lower part of the rock, which brought the whole to a solid level mass. These courses, with eight others raised above them, form the solid bed of the work, and take the form of the swelling trunk of a tree at its base. The general weight of the stones employed is from a ton to two tons. In the solid work the centre stones were fixed first, and all the courses were fitted on a platform and accurately adjusted before they were removed to the rock.

The base of the tower is about 26 feet 9 inches in diameter, taken at the highest part of the rock. The diameter at the top of the solid masonry is about 19 feet 9 inches, and the height of the solid masonry is 13 feet from the foundation. The height of the tower from the centre is 61 feet 7 inches; the lantern, the base of which is stone, is 24 feet; and the diameter of the tower below the cornice is 15 feet. The whole height is therefore 85 feet 7 inches, according to the scale given by Smeaton to his drawings. The upper part of the building, constructed of wood, was burnt in 1770, and renewed in 1774. The building has stood every storm unshaken.

(Winstanley, *Lighthouse*; Smeaton, *Narrative*.)

EDEN, RIVER. [CUMBERLAND.]

EDENBRIDGE. [KENT.]

EDENDERRY, King's county, Leinster, Ireland, a market-town and the seat of a Poor-Law Union in the parish of Monasteroris, is situated in 53° 18' N. lat., 7° 2' W. long., distant 35 miles W. by S. from Dublin. The population in 1851 was 1804, besides 1023 in the Union workhouse. Edenderry Poor-Law Union comprises 29 electoral divisions, with an area of 172,407 acres, and a population in 1851 of 29,791. The town is situated at the north-eastern extremity of the bog of Allen. It has been much improved by the Marquis of Downshire, on whose estate it stands; and is now a clean, neat, and rather prosperous town. The church stands on the summit of a hill 318 feet high which adjoins the town, and commands an extensive view of the surrounding country; on the same hill are also the ruins of an ancient castle. The other public buildings are a Roman Catholic chapel, a Quakers' meeting-house, the town-hall, a market-house, and the Union workhouse. The principal trade is in corn, of which large quantities are sold at the weekly markets. The Grand Canal passes within a mile of Edenderry, and a branch has been brought into the town. Fairs are held in March, June, and November.

EDENSOR. [DERBYSHIRE.]

EDESSA. [ORFA.]

EDFU, a village of Upper Egypt, on the left bank of the Nile, in 25° N. lat., remarkable for its two temples, the larger of which is one of the finest and best preserved in Egypt, though much encumbered with sand and rubbish, and with the huts of the inhabitants, who have built their village around and on the top of it. The outward access to the larger temple, which was dedicated to Noum, or Kneph, is by a gateway 50 feet high, between two enormous propylæ, or truncated pyramids, 104 feet long, 37 feet wide at the base, and 114 feet high. At the summit the horizontal section is 84 feet by 20. On the front of these moles immense figures are sculptured in a masterly style. A court is then entered 161 feet long, and 140 feet wide, surrounded with walls, on each side of which there is a row of pillars placed at some distance from the side wall, the space between the pillars and the wall being roofed over with stone, forming a covered portico. From the base of the pillars to the top of the stone covering is about 35½ feet. The court is now filled with rubbish and encumbered with wretched buildings, forming part of the modern village of Edfu, the remainder being built on the roof of the temple itself. From the entrance of the court there is a gradual ascent to the

pronaos, or portico, of the temple, which is supported by 18 pillars, six in a row, the whole height of it being about 56 feet above the lowest level of the court. The intercolumniations of the front pillars are built up to more than half the height. Passing through the pronaos we come to a doorway leading into a kind of hypostyle hall, 66 feet by 33, supported by 12 pillars, with a flat roof formed by large beams of stone crossing from each pillar to the next in the same row, the whole being covered with thick flat slabs. The pillars have the quadrilateral two-headed capital as at Denderah. From this chamber we pass into another long and narrow one, from which there are two small entrances to the side galleries, wherein we see flights of steps leading upwards to the roof of the sekos, or cell. Proceeding onwards through the middle chamber we pass into another small one, with an apartment on each side of it, probably for the use of the priests. From this last-mentioned chamber we enter the holy recess itself, an oblong room about 33 feet by 17, in which the figure of the deity was placed. Two galleries run down on each side of it, leading to a doorway at the back of it, by which the priests might walk into a large but perfectly retired space all round the sanctuary, or might ascend on the roof by a flight of steps to enjoy the air and light on the terraced roof, for below they had no light at all, except it might be from small apertures, through which the fellahs who now live on the roof with their families and cattle discharge all their dirt into the temple. The chambers of the sekos serve them as repositories for grain and other commodities. The temple, as well as every part of the wall, is covered with hieroglyphics and figures representing the progress of the sun through the circle of the hours. The outer wall, which joins the two propyla and completely incloses the court and the temple, is 414 feet on each of its longer sides, and 154 feet on its shorter side at the back of the temple. The smaller temple is also covered with hieroglyphics representing the birth and education of Horus, the son of Kneph and Athor, who were worshipped in the larger edifice.

The temple of Edfu may be compared with that of Denderah for preservation, and is superior to it in magnificence. The propylæon is the largest and most perfect of any in Egypt; it contains several apartments in the interior, which receive light by square apertures in the sides. The entrance court is the only one to be seen in Egypt in such perfection, though completely encumbered with Arab huts. The pronaos, or portico, is magnificent; but unfortunately above three-fourths of it are buried in rubbish. Upon the whole the temple of Edfu, although built much later than many of the others (the earliest part of it was erected by Ptolemæus Philometor, B.C. 181), is perhaps the most complete specimen remaining of an Egyptian temple, which can give a good idea of the respective proportion and distribution of the different parts of their exterior appearance when entire, and the strength of those formidable citadels, which while they served as a protection to the town commanded the respect of the inhabitants, and prevented or defeated any attempts to dispute the authority of their priestly rulers. Edfu marks the site of the ancient *Apollinopolis Magna*; the Coptic name is *Atbo*, in which is preserved the ancient name—(Hat)—of the district round Apollinopolis.

EDGEWORTHSTOWN. [LONGFORD.]

EDGWARE. [MIDDLESEX.]

EDINBURGH, the City of, a royal and parliamentary burgh, the chief town of Edinburghshire or Mid Lothian, and the capital of Scotland, is situated on the south side of the Frith of Forth, about 2 miles inland, in 55° 57' N. lat., 3° 12' W. long.; distant 392 miles N.N.W. from London by road; 398 miles by the North-Western, Lancaster and Carlisle, and Caledonian railways; and 402 miles by the Great Northern and North British railways. The population of the city of Edinburgh in 1851 was 66,734; of the city and suburbs, which together constitute the capital and parliamentary borough, 160,511. The city (which is divided for municipal purposes into five wards) is governed by 31 town councillors elected by the constituency, a dean of guild elected by the guildry, and a convener of trades elected by the representatives of the incorporated trades. The council of 33 thus constituted elects from its own members a lord provost, 4 bailies, and a treasurer, as the administrators of the municipal government. The city returns two members to the Imperial Parliament.

The boundaries of the capital include, besides various districts subject only to the jurisdiction of the county sheriff, the four following districts, namely:—1. Edinburgh; 2. Canongate; 3. Portsburgh; 4. Calton.

The existence of Edinburgh as a royal burgh may be traced to the middle of the 12th century. A general charter of confirmation was granted by James VI. in 1603, and another charter by Charles I. in 1636. These charters specify Leith and Newhaven as belonging to the burgh. Other grants and charters were afterwards obtained at different times from the crown prior to the Union in 1707. By a charter of George III. in 1794 the lord provost, who by previous charters was sheriff and coroner, was constituted lord lieutenant of the county of the city. By the Scotch Burgh Reform Act (3 and 4 William IV. c. 76) the right of election to corporate offices was declared to be in those persons who are entitled to vote for members

of Parliament. There are eight incorporated crafts within the burgh, all possessed of funds appropriated to the support of decayed members or the widows of such as are deceased. From an early period the property of the burgh has been administered very improvidently. In 1819 the debts of the city were stated to amount to 497,103*l.*, including 264,258*l.* incurred on account of the Leith Docks: in 1833 the amount of debts and obligations of the city were 425,194*l.*, exclusive of engagements on account of the Leith Docks. The revenue of the city amounted then to 27,524*l.*, and its annual current expenditure to upwards of 33,000*l.* Under these circumstances the city was declared insolvent, and an Act was passed in August 1833 conveying its properties and revenues to trustees for its creditors. *Canongate* is a parish and burgh of barony, of which the royal of Edinburgh is the feudal superior. It is governed by a nominated by the town council, and two bailies elected by the inhabitants of the burgh of Canongate. Its revenue, which is of small amount, is derived from petty customs levied at the Watergate, or exit to Leith. *Portsburgh*, or more accurately the Easter and Wester Portsburghs, form a burgh of barony the jurisdiction of which is on each side of the grounds of Heriot's Hospital. A baron-bailie and two resident bailies are appointed by the corporation, the feudal superior. The burgh offices are merely nominal. *Calton* is a district lying in the hollow betwixt the Calton Hill, Canongate, and the New Town. It was annexed to the city in 1725. A bailie is appointed, but no duties are attached to the office.

Site, Aspect, &c.—Edinburgh is built upon a series of hills, which, with three intervening valleys, give to the streets a remarkably undulating character. Salisbury Crag and Arthur's Seat, two high hills beyond the precincts of the city on the east, greatly enhance the grandeur of its characteristic features. The central hill, on the summit of which the castle is built, slopes gradually down, forming the High-street and Canongate; Holyrood Palace, about a mile from the castle, being placed in the valley at the base of the hill. This ridge lies nearly east and west. The west or castle end is a rock, bare and inaccessible on the west, and with slopes of almost impracticable ascent on the north and south. Southward of this central hill is another but smaller elevation; northward the elevation on which a portion of the New Town is built, rises by a gentle slope from the north valley, and then declines towards the shores of the Forth at Leith and Granton. Westward of the Castle Hill the ground is generally level. Eastward of the northern ridge, and separated from it by a valley, is Calton Hill; eastward of the hill on the south side of the city, and separated from it by a portion of the King's Park, is Salisbury Crag. Arthur's Seat is still farther east.

Civil History.—In the 7th century the southern part of Scotland belonged to the Anglo-Saxon kingdom of Northumbria; and Edwin, king of Northumbria, is said to have built a fort on the site of the present castle, the name of which was Edwinesburgh. Some antiquaries assign an earlier date to the castle. In 1215 the first parliament held by Alexander II. met at Edinburgh; and 20 years afterwards the Pope's legate held here a provincial synod. Robert Bruce bestowed on the burgh the harbour and mills of Leith. By this time Edinburgh had become the chief town, though not nominally the capital, of Scotland; parliaments were frequently held in it, and a mint was established. In 1436 Edinburgh became in name what it had long been virtually—the capital of the country. About the middle of the 15th century, on the representations of the provost and community, James II. granted the citizens licence to inclose and fortify the city. His successor erected the city into a sheriffdom within itself, and presented to the incorporated trades a banner or standard, which has since been known by the name of the 'Blue Blanket,' and is still preserved. King James IV. patronised the erection of its first printing-press; and in the succeeding reign it became the seat of the royal palace, of the parliament, and of the superior courts of justice.

The wall built in 1450 included very little more than the present High-street, from the castle to the Canongate; but by the year 1513 the city walls inclosed the southern valley, called the Cowgate, and portions of the slopes extending upwards on each side of that valley. The Canongate had a separate origin. The abbey of Holyrood was founded by David I. in the 12th century, in the low ground lying east of the city. The abbot and monks, in order to connect themselves with Edinburgh, formed a line of street from their abbey up the slope of the hill, till it joined the High-street of Edinburgh; this street received the name of the Canongate, and the burgh of Canongate was constituted distinct from Edinburgh.

Up till the middle of last century the boundary of the city was not much enlarged; the additional accommodation required for the progressive increase of the population having been met by building houses of great height, and affording on each floor residences for one or more families. Some additional space was obtained by the draining of a morass on the southern side of the city, and on the drained land were formed the Cowgate and the Grassmarket, which had for their earlier occupants the wealthier classes of the city. After the Union of Scotland with England in 1707, and the transference of the parliament and the privy council to London, many of the nobility removed thither, and the Canongate became deserted. In 1753 an Act of Parliament was obtained, and the work of renovation and extension of the city was commenced. The Royal Exchange, in the High-street,

was first built; the morass or loch in the north valley was drained, and the North Bridge across that valley was constructed. George-square, Brown-square, and other streets and squares in the southern part of the town, built by private enterprise, were immediately occupied by the wealthier inhabitants. About 1770, improvements which had been some time projected, and for which an Act had been obtained in 1767, were commenced on the north side of the city, and the New Town gradually rose into existence. St. Andrew's-square was the nucleus of the building operations; and from that time till the present the work of extension has been steadily proceeding.

Castle.—The castle covers a space of about six acres. On the east side a spacious esplanade, used as a parade-ground and a promenade, intervenes between the castle entrance and the houses at the upper end of the High-street. On the north side of the esplanade is a statue of the Duke of York. At the entrance to the castle is a drawbridge, with a dry ditch underneath, and the outer gateway is protected by low batteries. The batteries extend along the ramparts on the north side. A second strong gateway gives entrance to the inner or higher fort, which contains the oldest portion of the castle. A large pile of buildings on the east side contains what were once the state apartments of Queen Mary, and the crown-room, in which are the regalia of Scotland. The regalia consist of the Scottish crown, the sceptre, the sword of state, the Lord Treasurer's rod of office, &c. On the ramparts is Mons Meg, a huge cannon, supposed to have been cast in the time of James IV., and which, after having been in the Tower of London for three-quarters of a century, was returned to Edinburgh Castle in 1829 by George IV. On the west side of the castle rock, and on its highest part, stands a huge pile of buildings used as barracks.

From the castle ramparts a magnificent prospect is obtained northward, comprehending the new National Gallery and other buildings on the Mound, the New Town and the valley beyond, the Frith of Forth, and the Fife Hills; eastward the Old Town, backed by Arthur's Seat; north-east the railway termini in the north valley, the Scott monument, the North Bridge, the Calton Hill and the fine buildings on its side and in its vicinity; and to the west Corstorphine Hill, backed by a dim outline of mountains in the distance.

The line of street eastward from the castle to Holyrood Palace presents many objects of interest, the modern in numerous instances mingling with and superseding the ancient structures. From the Castle Hill flights of steps lead down to the valley of the Grassmarket. The new western approach to the Old Town is carried along the southern side of the Castle rock, and joins the High-street at the junction of the Castle Hill and Lawnmarket. At this point is the New Assembly Hall, which serves the double purpose of a parish church and the meeting-place of the General Assembly of the Established Church of Scotland. This building is a handsome gothic structure; at the eastern end is an elaborately-ornamented tower 240 feet high, which forms a prominent object from almost every part of Edinburgh. Near this building, in the new road, are the Normal school of the Established Church, the Episcopal church of St. Columba, and other buildings. On the northern side of the Castle Hill are the extensive buildings of the Free Church College and Free High church. The Lawnmarket, as its name imports, was once occupied as a market for linen cloth and other articles of merchandise. In the High-street, on the north side, is the Royal Exchange, and opposite to it in Parliament-square, is St. Giles's church, having under its roof the High church of Edinburgh and two other of the city churches; on the west side of the square is the County Hall. The fine range of buildings on the south side of Parliament-square comprises the Advocates Library, the Signet Library, the Parliament House (the Westminster Hall of Edinburgh), and halls in which sit the judges of the Court of Session, the High Court of Justiciary, and the Scottish Court of Exchequer. Between the Justiciary Court and St. Giles's church is an equestrian statue of Charles II., erected in 1685; it is formed of lead coated with bronze. The Parliament House just named, is one of the finest halls in Scotland. It was here that the Scottish Parliament sat until the Union with England. The hall is 122 feet long by 49 feet broad, and has a carved oak roof. Its floor is now used as a promenade for the advocates, solicitors, and litigants of the Court of Session. In the hall are statues of eminent judges. The Advocates Library is one of the privileged libraries entitled to demand a copy of every printed work published in Great Britain and Ireland; it contains a fine collection of upwards of 150,000 volumes. Among the manuscripts in this extensive collection are many valuable works on the civil and ecclesiastical history of Scotland. The Signet Library contains 50,000 volumes, and is particularly rich in works relating to British and Irish history.

The church, or as it is sometimes called, the cathedral of St. Giles, is one of the most ancient buildings in Edinburgh, although its exterior has been frequently renovated. It is mentioned in the year 1359 in a charter of David II. About a century later it was made collegiate, and 40 altars were supported in it. After the Reformation the building was partitioned into four distinct places of worship. The High church, of which John Knox was for a considerable period the minister, and which is regarded as the principal parish church of Edinburgh, occupies the eastern end of the building. Externally, the most noticeable feature of the edifice is the central tower: its top

is crowned with open carved stonework, with statues springing from the four corners, and forming a sort of crown. The Old St. Giles, popularly called the Heart of Mid-Lothian, was removed in 1867, with numerous little booths or shops called the Luckenbooths, which stood close to St. Giles's church. A little farther down the High-street, a piece of radiated pavement marks the site of the ancient cross, which was removed in 1756. At the intersection of the High-street with South Bridge-street is the Tron church, an old building, with a flat spire. A few yards eastward of John Knox's house, at the foot of High-street, is the lane formed by Leith-wynd and St. Mary's-wynd (the Holywell-lane of Edinburgh). Eastward extends the Canongate, containing many houses which by their style and decorations show that they were when first inhabited the mansions of the nobility. One formerly belonged to Lord Balmerino; another was the mint of Scotland, afterwards occupied by the Duchess of Gordon; Queensberry House, now used as an hospital, was the residence of the Duke of Queensberry; Moray House, the residence of the earls of Moray, erected in 1618, and Milton House, another of these old edifices, are now devoted to educational and benevolent purposes, Moray House being the training school for masters and mistresses in connection with the Free Church. Canongate church is a large old building with no pretensions to architectural elegance.

The ancient palace of Holyrood House nearly fronts the eastern extremity of the Canongate. By the end of the 12th century the abbey founded by David I. had become a wealthy and powerful institution, the abbot holding regular courts like other barons. The first separate royal residence here is supposed to have been a small hunting seat, built by James V. in 1528, prior to which many of the Scottish kings had on great occasions lodged in the abbey. A large part of the palace was destroyed by Cromwell's soldiers in 1650; after which the present edifice was built. From the period of the Union of the two kingdoms the dukes of Hamilton have been hereditary keepers of the palace. Charles Edward Stuart lodged here during his short sojourn in Edinburgh in 1745; here Charles X. of France resided during the revolutionary troubles, and here he again found a refuge more than 30 years afterwards, when he was driven from his throne. George IV. visited Holyrood in 1822; and Queen Victoria held a levee in it in 1842. Her majesty has on several occasions since passed a day or two in the palace on her way to or from Balmoral Castle. Holyrood House is a quadrangular building, with an open court in the centre. The front is flanked with double castellated towers. The north-west corner, containing the apartments of Queen Mary, is the oldest portion. The gallery of the kings of Scotland exhibits 106 paintings, said to be portraits, but of no merit as works of art, and of no historical authority. In the hall which contains these paintings are held the meetings for choosing the representative peers of Scotland, and the levees of the Lord High Commissioner to the General Assembly of the Established Church. The ruins of Holyrood chapel lie behind the palace, at the north-east corner. The chapel was fitted up by Charles I., who was crowned in it in 1633. James II. had it adorned afterwards for the Roman Catholic worship. The chapel contains the remains of David II., James II. of Scotland, James V. and his queen, Lord Darnley, and other illustrious personages.

The back street called the south back of the Canongate leads westward to Cowgate and Grassmarket. Over the Cowgate pass the South Bridge and George the Fourth Bridge. Three or four flats or stories of the houses next the bridges are below the level of the upper street, while three or four flats are above, the fourth or fifth floor at the back of each house being the street floor in front.

The Grassmarket is historically famous as the spot where many Protestant martyrs suffered death in days of persecution, and also as the scene of the Porteous riot in 1736. The Grassmarket was for a long time the place of public execution. It is a wide, open, oblong space. The market is chiefly for cattle, sheep, and grain. The New Corn Exchange is a handsome and commodious building in the Italian style, 152 feet long by 93 feet 6 inches within the walls. The main front is 98 feet in length, and 59 feet in height to the top of the main cornice. At the west end is a campanile 93 feet in height. The main entrance to the building is through a handsome Doric portico. This building contains besides a spacious hall, lighted from the top, for the sale of grain, a bank for the accommodation of parties attending the market, a hall 66 feet long, in which buyers and sellers may settle accounts, and a granary. Westward of the Grassmarket is the West Port, a district notorious as the place where Burke and Hare perpetrated their murderous deeds. A church, schools, and sanitary and benevolent institutions were established here a few years ago, chiefly owing to the exertions of the late Dr. Chalmers.

A little way south from the Grassmarket stands Heriot's Hospital, founded by George Heriot, jeweller to James VI., for the maintenance and education of poor and fatherless boys, or boys whose parents are in indigent circumstances, "freemen's sons of the town of Edinburgh." The building, which was completed in 1660, is quadrangular, measuring 162 feet each way, and having an open court, 92 feet square, in its centre. Over the north gateway and at the four corners of the building are projecting towers or turrets. Inigo Jones is said to have furnished the design. About 180 boys are educated and boarded in the hospital, which is under the management of the town council

and city of Edinburgh. In 1806 an Act of Parliament was obtained authorising the governors of the hospital to apply a portion of its funds to the establishment of free schools for children of both sexes in various parts of the city. Accordingly 10 schools of this description have been established, in which about 3000 children are under instruction. Near Heriot's Hospital stands George Watson's Hospital, for the support of the children and grand-children of decayed Edinburgh merchants. In this institution about 80 boys are fed, clothed, and educated. The Merchant Maiden's Hospital, founded in 1695, is for the maintenance and education of the daughters of merchant burghers of Edinburgh. Eastward of Heriot's Hospital is the Grayfriars church with its churchyard, both of historical interest. Here lie the remains of many eminent Scotsmen, among whom may be named George Buchanan, Allan Ramsay, and Principal Robertson. The churches of Old and New Grayfriars were under one roof till January 1845, when the building was destroyed by fire; one of the churches was afterwards restored. Among public edifices near this spot are a new and commodious Free church; a neat Roman Catholic chapel; a Baptist chapel; and the City Charity workhouse, a large and very plain edifice, accommodating about 750 inmates. To the south-west is a large open space, with walks planted with avenues of trees, named the Meadows, the walks of which are useful as promenades; the inclosed spaces are used for drying clothes. Beyond the Meadows stretch Bruntsfield Links, much frequented by golf players, and occasionally used for military reviews; many handsome villas are in this direction. Here is Gillespie's Hospital for the maintenance of indigent old men and women, of whom there are about 30 in the house, and for the elementary education of 100 poor boys. The Roman Catholics have a seminary at Bruntsfield Links. To the south-east of the Meadows is the suburb called Newington, occupied chiefly by wealthy merchants and professional gentlemen. Many fine residences are here, and the district is considered one of the healthiest about Edinburgh.

University.—The University is situated on the west side of South Bridge-street. The buildings form a parallelogram 356 feet by 225 feet, having an open court in the centre. The quadrangle is entered by a portico on the east side, and the doors to the several departments of the college lie around the quadrangle. The University corporation consists of a College founded by James VI. of Scotland, by a charter dated April 24th 1582. By this charter, which forms the constitution of the University, the provost, bailies, and town councillors of Edinburgh, and their successors in office, are invested with the power both of electing the professors and of dismissing them. In the non-recognition of any authority, or at least of any supreme authority, as belonging to either the entire body of the professors and students, or even to the Senatus Academicus, the University of Edinburgh differs from all other Scottish colleges. The first appointment of a professor was made in 1583. In 1620 a second Professor of Theology was appointed, and the office of Principal has since been made a mere sinecure. The property of the college is of inconsiderable amount. The deficiency is made up by the town council. A bequest was left by the late General Reid for founding a professorship of music and for other purposes. A professorship of music has accordingly been established, and in terms of the founder's will concerts have been held on several occasions. The professorships are considered as divided into the four faculties, or classes, of arts, law, medicine, and theology. The Principal is considered as the ex-officio convener of the faculty of theology. The others have each a dean or convener chosen by the faculty. The law school dates from the commencement of the last century, and the medical school from the close of the century preceding. It was not however till a considerably later period that the medical school began to acquire celebrity.

For 50 years preceding 1826 the total number of graduates in arts was only 168. During the same period 100 degrees of D.D. were conferred, and 56 of LL.D. The average number of graduates in arts of late years has been from 8 to 10 annually. The number of medical degrees was 119 in 1839, since which year the number has gradually diminished. The number of medical degrees granted in the five years 1849-1853 was as follows:—51, 67, 45, 51, and 85; being 299 degrees in the five years. The regular, or winter university session or term, begins on the first Monday in November and ends on the last day of April. Of late years a few of the classes have also been taught during a summer session, beginning on the first Monday of May, and terminating with the end of July. No academical dress is worn by the students; no theological test or attendance upon divine service is enforced; and scarcely any discipline is exercised beyond the class-room. The students are examined in several of the classes, but there is no public examination in the University. The medical students attend the hospital of the Royal Infirmary, and clinical lectures are delivered to them by the medical professors. By an Act of Parliament recently passed the subscription of the professors to the Westminster Confession of Faith is dispensed with in this as in all the Scottish universities. A collection of pictures and marbles was bequeathed for the use of the University by the late Sir James Erskine of Torry, Bart. The foundations for bursaries or exhibitions in the University are 34 in number, in the benefits of which 80 students participate. The whole amount is under 1200*l.* per annum. The library of the University occupies the

south side of the building. The principal room is 187 feet long by 50 feet in breadth, and has an arched roof from 50 to 58 feet high: this is a very fine apartment, and admirably adapted for the purposes of a library. The library contains upwards of 90,000 volumes. It is exclusively a College Library. Its income arises chiefly from fees payable on matriculation and graduation. There is also a Theological library for the students of theology. The Museum occupies several galleries and apartments, and comprises an extensive collection of specimens in natural history, and upwards of 300 manuscripts. The present university buildings were commenced in 1789.

Nearly opposite the University is Surgeons' Hall, a handsome building with a Grecian front. In this building is an extensive anatomical and surgical museum. In the Blind Asylum about 90 blind persons are maintained and instructed in the making of baskets, rugs, mattresses, and other useful articles, by the sale of which the institution is in part supported. The Royal Infirmary occupies an extensive range of buildings erected about a century ago. This institution, incorporated in 1736, is the means of great benefit to the inhabitants.

The New Town of Edinburgh abounds in spacious streets, squares, and terraces, containing many fine public buildings and elegant private mansions. The Calton Hill, at the eastern extremity of the New Town, 345 feet above the level of the sea, is a prominent object in itself, and from its summit beautiful views of the city, the surrounding country, and the Frith of Forth, are obtained. On the hill are 12 columns of the projected 'National Monument'; the Nelson Monument, a lofty shaft, on the top of which a time-ball is placed; an observatory, and monuments to Dugald Stewart and Professor Playfair. Around the eastern slope of the hill are a series of fine private mansions, named Royal-terrace, Carlton-place, and Regent-terrace. On the south side of the hill stands the new High school, a noble structure, built of fine white stone; it consists of a centre and two wings, in all 270 feet in length. The central portion of the front is a pediment supported by a range of Doric columns. This seminary is attended chiefly by the children of the middle classes: the number of scholars in 1853 was 420. On the side of the hill, nearly opposite to the High school, is a monument to Robert Burns. The jail and bridewell, which are now under the management of the Prison Board as one prison, occupy a large space on the side of the hill. Among other public buildings in Waterloo-place, leading to Princes-street, are the General Post Office, the office of Stamps and Taxes, the Calton Convening Rooms, the Waterloo Rooms, and the Theatre Royal. Facing the North Bridge is the Register House, a spacious edifice, in which are deposited the public records, registers of sasines, and other deeds. In front of this building is a statue of the Duke of Wellington. Princes-street, a fine open terrace, lined with handsome shops, and towards the west end with some good private residences, extends westward for about three-quarters of a mile. On the south side of Princes-street, in the North Valley, are the termini of the North British, Edinburgh and Glasgow, and Edinburgh, Leith, and Ganton railways. The monument to Sir Walter Scott, a kind of gothic tower or steeple, stands on the south side of Princes-street. It is 200 feet in height, and the gallery at the top is reached by a flight of 287 steps. On the basement floor of the monument is a fine marble statue of the great novelist by Mr. John Steel. In the centre of St. Andrew's-square, northward from Princes-street, is a tall column surmounted by a statue of Lord Melville. Farther west in Princes-street is the earthen Mound, connecting the Old and New Towns, on which stand the buildings of the Royal Institution, the new National Gallery, and other important structures. The other buildings in Princes-street which demand notice are—the New Club; St. John's Episcopal church, at the extreme west end of the street, a remarkably ornate and very beautiful gothic structure; and adjoining it on the south, St. Cuthbert's or the West Kirk, a large building of rather forbidding appearance, but commodious. St. Thomas's Episcopal church; St. George's Free church; the Gaelic Free church; the Unitarian chapel; Lothian-road United Presbyterian church; and the terminus of the Caledonian railway, are in this neighbourhood. Northward of Princes-street is Charlotte-square, containing residences of some of the Lords of Session and of wealthy families, with several educational institutions. On the west side of this square is St. George's church, a large and massive building surmounted with a dome. This church, the finest ecclesiastical structure in Edinburgh, was erected about 32 years ago, and cost about 33,000*l.* George-street, a straight and wide street running between Charlotte-square and St. Andrew's-square, contains among other buildings the spacious Assembly Rooms, and the Music Hall, a large and splendid hall; St. Andrew's church, the Commercial Bank, and statues of George IV. and William Pitt. The public buildings in Queen-street, to the north of George-street, are the Queen-street Hall, belonging to the United Presbyterian Synod, which has here its mission-house and offices; the United Service Club House, and the Hopetoun Rooms. In York-place are St. George's Episcopal chapel, a small, low-roofed gothic structure; St. Paul's Episcopal church, a richly-ornamented gothic building, in which the Bishop of Edinburgh officiates; and St. Mary's Roman Catholic chapel.

The northern slope of the hill on which the New Town is built, is occupied by regular and handsome streets, rows, places, and squares extending to Canonmills, and leading by Inverleith-row to Granton

and Newhaven. To the north-west of Queen-street is the Octagon, or Moray-place, which for the massive elegance of its princely mansions, may be regarded as the most striking feature of the New Town. Farther to the north-west is the Dean Bridge, a fine structure which spans the Water of Leith at a height of 106 feet above the bed of the river. Trinity Episcopal chapel, a fine gothic structure, is picturesquely situated close to the bridge. Along the banks of the Water of Leith, westward, is the curious old village of Dean, chiefly occupied by millers and their families, who in respect of manners and customs, and even of dialect, were till recently quite a peculiar class. To the westward a short way out of the city is Donaldson's Hospital, a magnificent structure, with accommodation for 150 boys and 150 girls; of those admitted a certain proportion is selected from applicants who are deaf and dumb. John Watson's Institution, for the maintenance and education of 120 destitute children, and the Orphan Hospital, for 100 orphan children of both sexes, are also in this neighbourhood.

At the north side of the town is the New Edinburgh Academy, founded in 1824, to provide for the families in the northern districts a system of education somewhat similar to that of the High school. The number of scholars in 1853 was 350. The Asylum for the Deaf and Dumb, a large and commodious building, adjoins the academy. On the Water of Leith, near Canonmills Bridge, is Tanfield Hall, which is much occupied for public meetings: to this hall the members of the General Assembly who seceded from the Established Church in 1843 walked in procession, and formed the Free Church. In this hall also, in 1847, the United Associate Synod and the Relief Synod formed a junction under the title of the United Presbyterian Synod. In Inverleith-row are the Caledonian Horticultural Society's gardens, occupying 10 acres of ground, and the Royal Botanic gardens, occupying 15 acres, to both of which access is readily obtained. Inverleith Cemetery, opened about nine years back, has ranges of well-built vaults, and a neat Episcopal chapel. The Zoological gardens are situated in Bonnington-road, at the north-east end of the city. At Rosebank, near to the Zoological gardens, is another cemetery. On the southern skirts of Bruntsfield Links is the village of Morningside, a rather favourite resort as a summer residence. Morningside Lunatic Asylum is an extensive range of buildings, having about 300 inmates. The system of treatment is mild and soothing, and has been found successful. Near Morningside is Merchiston Castle (now occupied as an academy), the residence, from the 15th century, of the Napiers of Merchiston.

By the North British, the Caledonian, the Edinburgh and Glasgow, and the Edinburgh, Perth, and Dundee railways, Edinburgh has ready communication with all parts of the kingdom. From Granton New Pier (the property of the Duke of Buccleuch), the chain-pier at Newhaven, or from Leith, there are steamers to the various towns and important villages on the Forth, to the towns on the north-east coast, and to Orkney and Shetland; and in addition to the traffic by sailing vessels, and the swift sailing 'clippers,' there are steamers to London, Newcastle, Hull, and Hamburg.

Edinburgh possesses no manufacture of any importance. Shawl-making and coach-making are carried on successfully. The printing and publishing trades of Edinburgh rank in extent next to those of London. Several extensive paper manufactories are in the neighbourhood of Edinburgh. Hair-cloth, net and lace weaving, and the manufacture of small wares, are engaged in to some extent.

Churches, &c.—There are in Edinburgh 17 parish churches and 10 chapels of ease (one of which is for a Gaelic congregation) in connection with the Established Church; the Free Church has 26 places of worship (one being Gaelic); the United Presbyterians, 15; the Congregationalists, 4, the Original Seceders, 2; the Baptists, 6; the Methodists, 3; and the Roman Catholics, 2. The Jews, Quakers, Mormonites, Rowites (or Irvingites), Unitarians, and other minor sects have chapels or hired rooms for their services. There are 9 Episcopal chapels in Edinburgh, one of them being unconnected with the Scottish Episcopal Church.

Edinburgh possesses many religious and benevolent institutions, some of which have extensive operations. Among these may be named the City Mission, the Bible Society, the Strangers' Friend Society, the Gaelic School Society, the Society for the Propagation of the Gospel in the Highlands and Islands, the Sabbath School Society, societies for supporting Ragged and Industrial schools, the Medical Missionary Society, Society for establishing Evening Schools for Apprentices and Adults, Society for providing Improved Dwellings for the Working Classes, and numerous others with similar praiseworthy objects. Among the educational institutions of Edinburgh not already noticed are the Scottish Military and Naval Academy, founded in 1825; the Hill-street Institution, opened in 1832; the Scottish Polytechnic school; the Circus-place school, having a rector and five other masters; the Southern Academy, instituted in 1829; the Ladies' Institution for the Southern Districts, founded in 1833; the Scottish Institution for the Education of Ladies, founded in 1834; the School of Arts, or Mechanics Institute; Dr. Bell's schools; the Lancasterian schools; the Canongate Burgh schools; and the Normal schools of the Established and Free churches. The Philosophical Institution is a recently founded society similar in character to the Athenæums of Manchester and some other towns. The Select Subscription Library and the

Mechanics Library have each large and valuable collections of books, and are well supported. Several medical and literary societies and legal clubs have libraries of their own. The Society of Antiquaries has a museum containing many objects of interest. Fourteen newspapers are published in Edinburgh—one three times a week, seven twice a week, and six weekly. Several quarterly, monthly, and weekly periodicals of influential character and extensive circulation are also published in Edinburgh.

Population.—The population of the city and suburbs of Edinburgh was 66,544 in 1801; 112,235 in 1821; 133,182 in 1841; and 160,511 in 1851. Of the inhabitants of Edinburgh an unusually large proportion are engaged in, or connected with, the courts of law. The number of females is also unusually large, the respective numbers in 1851 being 71,567 males and 88,994 females.

Edinburgh is lighted with gas supplied by two companies. The savings bank on 20th November 1851 had 25,751 depositors—the amount due to them being 327,208*l.* 7*s.* 5*d.*

EDINBURGSHIRE, or MID-LOTHIAN, a county in the eastern part of Scotland, bounded N. by the Frith of Forth, N.E. and E. by Haddingtonshire, S. by Peeblesshire and Lanarkshire, and W. and N.W. by Linlithgowshire, lies between 55° 37' and 56° N. lat., 2° 50' and 3° 48' W. long. The county is in length from east to west about 36 miles, and in breadth from north to south about 18 miles. Its area is 397 square miles, or 254,300 acres. The population in 1851 was 259,435. The county returns one member to the Imperial Parliament.

Coast-line.—The northern boundary of the county extends for nearly 13 miles along the Frith of Forth. From Queensferry, where the Frith may be said to begin, the southern shore of the Frith proceeding eastward is studded with towns, havens, and piers. First, is the village of Cramond, at the mouth of the Almond Water; then the newly-formed landing-place, Granton, with its excellent stone pier and spacious hotel; this is succeeded by Trinity chain-pier, and the old village and pier of Newhaven, and farther to the east are the towns or villages of Portobello, Fisherrow, and Musselburgh. At Granton, Newhaven, and Leith there is at high tide considerable depth of water, while eastward of Leith the shore is formed of an extensive breadth of sand, left dry at low water, and consequently shallow, even at high tide. Westward of Granton the shore is again composed of sand, covered only at high tide. The island of Cramond, in the Frith, about half a mile off the village, affords pasture for a few sheep which are driven to it over the sands at low water.

Surface, Hydrography, Communications.—The surface of Edinburghshire is in general uneven. The most hilly district comprises the parishes of Stow and Heriot in the south-eastern portion of the county, the Moorfoot Hills being the northern boundary of Stow parish. In this district is the Sayrs Law, 1739 feet above the sea. The continuation westward of this high ground through the parishes of Temple and Pennicuik forms the boundary between this county and Peeblesshire. It has a general elevation of upwards of 800 feet, and is rather flat and covered with bogs and mosses; but in some parts there are hills of considerable elevation, as the Coat Law, 1680 feet, and the Blackhope Scares, 1850 feet, above the level of the sea. Farther westward are several high hills, as the Cairn Hill (1890 feet), and others which belong to the Pentlands. Farther west, in the district on the Lanarkshire boundary, only isolated hills occur, the highest of which, Leven's Seat, at the south-western extremity of the county, is about 1200 feet above the sea. Between this high ground and the Frith of Forth are the Pentland Hills, the highest summits of which are from 1800 to 1900 feet above the sea, but their mean elevation probably does not much exceed 1000 feet. They terminate at the distance of a few miles from Edinburgh. In Ratho parish, to the west of the Pentlands, the Plat Hills, a small range about a mile and a half long, attain an elevation of nearly 600 feet. Dalmahoy Crags, in the same parish, are three hills of trap, which are above 600 feet high. Towards the northern boundary the county presents an undulating surface, on which a few hills rise to a moderate elevation. Corstorphine Hills, lying westward from the city of Edinburgh, extend about two miles in length, and are about 470 feet above the sea level; Braid and Blackford Hills are immediately south of the city, and Arthur's Seat is close to the Old Town on the south-east.

This county is watered by several rivers. The *Gala Water*, which falls into the Tweed, traverses Stow parish, receiving in Heriot parish the Heriot Water, which has several small tributaries, and in Stow parish the Lugate, Ermit, and Cockham Waters, besides numerous mountain streams. The *South Esk* issues from a small lake in Peeblesshire, on the borders of the county, and its tributary, the Gladhouse Water, takes its rise in the Moorfoot Hills, also on the borders. They unite after a winding and parallel northern course of about 9 miles. After passing Dalkeith the South Esk joins its waters with those of the North Esk, and the united streams form the river Esk, which falls into the Frith of Forth at Musselburgh, the South Esk and Esk having traversed about 18 miles of the county in a nearly direct line from south to north. The *North Esk* also takes its rise on the borders of Peeblesshire, and enters Mid-Lothian a few miles west of the South Esk. In its course it receives a great many tributaries from the eastern side of the Pentlands. The banks of both of these streams are generally picturesque, and occasionally romantic;

and the localities through which they pass offer many spots of great interest to the tourist. The *Water of Leith* takes its rise in the parish of Mid Calder, on the south-western border of the county. It receives several unimportant streams from the western sides of the Pentlands, and after a winding north-eastern course, in which it traverses the county for about 20 miles, passing by the north-west and north of Edinburgh, it falls into the Frith of Forth through the harbour of Leith. The *Almond Water* separates Mid-Lothian from Linlithgowshire, except as regards the parish of Mid Calder, the extreme south-western part of Edinburghshire, which is separated from the adjoining county by the Breich Water, a tributary of the Almond. The Almond receives in its comparatively straight north-eastern course the Harwood, Muirhouseton, and Linhouse Waters from the hills on the south-west of the shire; and, near the Corstorphine Hills, the small stream called the Gogar Burn. It falls into the Frith of Forth at the village of Cramond after a course (including that of its tributary the Breich) of about 20 miles. The Union Canal enters Edinburghshire about 9 miles west of the capital. A small lake at the base of Arthur's Seat, called Duddingston Loch, is a favourite winter resort of the skaters of Edinburgh.

Mid-Lothian possesses many excellent roads and bridges, and ample canal and railway communications. The chief highways are the high-road to London by the eastern coast, through Berwick, and that through Dalkeith by Lauderdale, across the Tweed at Coldstream; the high-road to Queensferry and the north-east of Scotland; and the high-roads to Glasgow through Linlithgow, Bathgate, and Mid Calder. There are also excellent roads to Lanark, Dumfries, Peebles, Selkirk; and other turnpike-roads to the whole south and south-west of Scotland. The parish roads are also kept in good order. The railways in the county are, the North British, extending along the east coast to Berwick; the Edinburgh and Hawick, a branch of the North British, to the south of Scotland; the Caledonian to the south-west and to Carlisle; the Glasgow and the Granton lines.

Geology, Mineralogy.—Mid-Lothian rests on a series of strata, connected with the coal formation, which in this district forms altogether a deposit, the depth of which is calculated to be in some places 3000 feet. The depth and character of the strata vary much however in different parts of the county. In the hilly south-eastern districts, the rocks are of grauwacke and clay-slate; quartz, spar, and steatite being found only in small quantities. The Moorfoot Hills are of grauwacke, no granite or other primitive rocks being found there. The rock of the Pentlands again is chiefly porphyry, of which the prevalent kinds are the clay-stone and felspar porphyries. Extending northward from the Moorfoot range and the Pentlands, in the wide valley of the Esk between these ranges, is the extensive mineral field of Mid-Lothian, which, when it arrives at the northern part of the county, rests on the old red-sandstone of the Craigmillar Hills, that again resting on the secondary rocks of Salisbury Crag. Coal, limestone, and sandstone, are extensively wrought throughout the whole of this district, the limestone chiefly in the neighbourhood of Dalkeith; though dislocations are of such frequent occurrence that the strata are thrown up or down sometimes from 5 to 40 fathoms. On the shore of the Frith, between Portobello and Musselburgh, the seams of shale, sandstone, and coal, can be easily traced. The stratum here exposed stretches along for a considerable distance, and lies almost vertically; yet it is said to shew but little of the depth of this extensive mineral field, in which not less than 25 seams of coal, varying in thickness from 2 to 25 feet, are found. The sandstone beds differ much in character. Freestone is wrought in the neighbourhood of Portobello, and both limestone and ironstone have been found in Duddingston parish, close to the shore of the Frith.

In the parish of West Calder, which with Mid Calder forms the south-western extremity of the county, coal, ironstone, and limestone have been wrought to some extent, though the coal is inferior, and the supply is not abundant. Ironstone is not largely produced, though both the Wilsontown and Shotts iron companies derive part of their supplies from this locality. Sandstone, whinstone, and limestone have all been wrought in Mid Calder parish.

Judging from this, and from the appearance of the strata in the different rivulets which intersect this part of the county, sandstone, shale, and limestone may be specified as the rocks which form the basis of the district. Near East Calder village, the limestone is 40 feet thick; it rests on sandstone, and is surmounted by beds of shale, and thin beds of clay-ironstone alternately. The limestone consists almost entirely of shells; the shale shews innumerable impressions of plants, and the freestone affords numerous specimens of ferns. In the strata exposed in the Almond Water, sandstone, limestone, shale, clay, ironstone, and coal are all found, the seams being occasionally traversed by trap. The clay-ironstone is found only in these beds, and parts of the shale are exclusively composed of vegetable remains. Around Edinburgh, shale, sandstone, and limestone are still the prevailing strata, the limestone having been seemingly the earliest deposit of all. Through this stratum which is about 30 feet thick, and is the lowest seam of the great mineral field of the county, the igneous trap rocks, on which Edinburgh is built, and those also which lie to the west and south of the city, seem to have been forced up. These rocks consist of greenstones, porphyries, basalts, and some others. The Castle Rock is composed

of basalt and greenstone, and, on the south and east sides of it, the trap may be seen in curious contrast with the rent and shattered sandstone. At one portion of the Calton Hill, trap and greenstone are interposed with the limestone and shale, so as to induce the supposition that there have been two eruptions of igneous rocks, the second having had the effect of raising all the strata together. This supposition is borne out by the appearance of the hills in the neighbourhood. The Calton Hill is composed of claystone and porphyry, with greenstone occasionally intervening. The same greenstone forms the rock on which the New Town of Edinburgh is built, and resembles closely that of Salisbury Crag. The base of Salisbury Crag is sandstone and shale, above which is a thick seam of greenstone. The centre and upper part of Arthur's Seat is basalt, columns of which form what are called Samson's Ribs: the precipice on the southern side shewing the different strata (sandstone and limestone chiefly), through which the trap has been forced. In the trap of the Corstorphine Hills, the greenstone again appears, the same greenstone forming the Cramond Island. Along the shore, trap of different kinds appears, interposed with the sandstone, while immense masses of greenstone are found in the sand and gravel on the side of the Frith. Freestone is wrought in the extensive quarries of Craigmyle, and also at Granton.

Climate, Soil, and Agriculture.—The eastern coast of Scotland generally is visited during the months of March, April, and May, with a cold and dry easterly or north-easterly wind; and the climate of Mid-Lothian resembles that of the adjoining coast. During the rest of the year the prevailing winds are from the west and south-west. These blow principally in August and September, and bring with them a great deal of rain. About 24 inches of rain fall annually. The temperature varies much in the different parts of the county. In the hilly south-eastern district the climate is cold, but healthy. This district is chiefly devoted to grazing; the black-faced sheep and the cattle reared here being much esteemed. The climate westward of this, and nearer the Pentlands, is cold and damp, owing partly to the proximity of extensive moorlands. In the rich and fertile valley watered by the North and South Eaks and their tributaries, the climate necessarily varies, being milder in the low grounds than in the more elevated and exposed districts. The soil in the valley is light, the subsoil porous, and the ground being very undulating, the land enjoys a natural drainage. In the higher districts the soil is a thin clay, with a retentive subsoil, but draining converts this rapidly into good arable land. Towards the Frith of Forth the lower district of the county is in general warmer than farther inland, reaping being usually commenced a fortnight earlier. Along the west side of the Pentlands the climate is, though cold, very salubrious. The soil throughout the western district is of good quality. It is in the highest state of cultivation, and grows all kinds of crops.

One-third nearly of the land in the county is devoted to pasturage. The county is generally well wooded, watered, and inclosed. The agricultural farms are of considerable size, the farm-houses are substantial and commodious, and the implements of husbandry of the best description. In the neighbourhood of Edinburgh are many nurseries and market gardens, the arable lands beyond these being principally devoted to the culture of potatoes, turnips, and other vegetables. The land where these vegetables are raised is divided into small holdings, and is amply supplied with the manure of the capital. In the more landward parts of the county, wheat, oats, and barley, beans or peas, potatoes, turnips, and clover, are the crops usually raised, the succession varying in different districts, according to the different rotations, which are sometimes a four, sometimes a five years' shift, according to the nature of the soil. The cattle throughout the county are of the best breeds. For all kinds of agricultural produce ready markets are found in the city of Edinburgh, in other places in the county, or in the immediate neighbourhood.

Divisions, Towns, &c.—Mid Lothian is divided into 33 parishes, and is within the Synod of Lothian and Tweeddale. According to the 'Census of Religious Worship and Education,' taken in 1851, there were 230 places of worship in the county, of which 68 belonged to the Established Church, 49 to the Free Church, 40 to the United Presbyterian Church, 16 to the Episcopal Church, 14 to the Independents, 9 to Baptists, and 36 to minor bodies. The number of sittings in 205 of the 230 places of worship is stated at 115,514. There were in the county 399 day schools, of which 232 were public schools, with 29,258 scholars; and 167 private schools, with 6016 scholars. The Sabbath schools in the county for which returns were received were 321, of which 80 were in connection with the Free Church, 69 with the Established Church, 60 with the United Presbyterian Church, and 112 with other bodies. The total number of scholars returned was 27,196.

The chief town of the county is EDINBURGH, and the towns next in importance to it are LEITH, the seaport of the capital, and DALKEITH, where is held an important market for grain. These will be found described under their respective titles: of the other towns we give a short notice here.

Musselburgh, about 5½ miles E. from Edinburgh, is a small sea-port, an ancient burgh of regality, and since the 1 & 2 Will. IV. c. 55 a parliamentary burgh, uniting with Leith and Portobello in the return of one member to Parliament: the population of the burgh in

1851 was 7092. The town is situated at the mouth and on the right bank of the river Esk, which flows between it and the village of Fisherrow. On the Links, or Common, between the town and the shore of the Frith of Forth, the Edinburgh races generally take place. Musselburgh is connected with Fisherrow by three bridges; the erection of the oldest of these bridges (now only used for foot passengers) has been attributed to a Roman colony that settled on Inveresk Hill immediately behind the town. Numerous Roman remains, traces of baths, &c., have from time to time been discovered at Inveresk. Musselburgh is generally well but irregularly built. It is clean, lighted with gas, and is well supplied with shops and markets. The parish church, built in 1806, will accommodate 3000 sitters. There are a Free church, an Episcopal chapel, and several chapels for United Presbyterians and Independents. The tolbooth, or jail, which is in the High-street, was built in 1590 of materials derived from a chapel dedicated to our Lady of Loretto, which had existed in the town from a very early period. The town-hall adjoins the jail. The chief bridge is an elegant and substantial structure. Tanning and leather-dressing, and the manufacture of sail-cloth are carried on; a salt-work is in the immediate neighbourhood; horse-hair cloth and fishing-nets are manufactured. The market-gardens supply vegetables for Edinburgh. There are a savings bank and two libraries in the town. The Grammar school of the burgh and two other schools are partly endowed. A few coasting vessels and small vessels from the north of Europe bringing timber, oil-cake, bone-dust, bark, hides, &c., visit the port. Slates, bone-manure, grain, and other commodities are imported from the adjoining coasts. Coals are the chief export. At the east end of the burgh is Pinkie House, not far from which was fought the battle of Pinkie. The Marquis of Hamilton, on behalf of Charles I., in 1638 met the Covenanters on the Links. In 1650 Cromwell's infantry encamped there. The inhabitants of the village of Fisherrow derive their subsistence from the sale of fish at Edinburgh.

Portobello, about 3 miles E. from Edinburgh, population 3497 in 1851, unites with Leith and Musselburgh in returning one member to the Imperial Parliament. It is much resorted to in summer by the inhabitants of Edinburgh for sea-bathing. There are hot and cold baths. The town has some good streets; a few of the older streets are narrow. There are several churches and chapels, and a good market-place. The town is lighted with gas. It is connected with the capital by the North British railway. Brick and tile-works, a flint-glass manufactory, and a paper-mill, give employment to many of the inhabitants; and there are salt-works near *Joppa*, a small village eastward of the town, but within the boundaries of the burgh of Portobello.

The following villages, with the parish population in 1851, and a few other particulars, may be mentioned:—

Borthwick, population 1614, about 12 miles S.E. from Edinburgh. The castle, built in 1430, is in the form of a double tower, of great height, and a magnificent hall, with a vaulted roof. It was here that Queen Mary retired with Bothwell after their marriage, and from this castle she fled in disguise to Dunbar. The castle was greatly injured by a cannonade from Cromwell. The houses of Borthwick village are clustered round the base of the castle. *Calder (Mid)*, population 1474, on the right bank of the Almond Water, 12 miles S.W. from Edinburgh; possesses an ancient gothic church and a chapel for United Presbyterians. In the vicinity is Calder House, the seat of Lord Torphichen. In Calder House is a portrait of John Knox, which is said to be the only authentic portrait of the Reformer. Knox preached at Calder House. *Cramond*, at the mouth of the Almond Water, contains between 40 and 50 houses; the parish is partly in Linlithgowshire. Cramond is said to have been a Roman station; many Roman antiquities have been found here. The mouth of the river affords at high tide a small natural harbour. There are iron-works a little way up the stream. *Duddingston*, at the south-eastern base of Arthur's Seat, about 2 miles S.E. from Edinburgh, population of the village, 636. The parish church in the village is of great antiquity. An iron collar hangs at the church gate, a remnant illustrative of ancient ecclesiastical discipline. *Gilmerton*, about 4 miles S.E. from Edinburgh. Coal has been wrought here, it is said, for 300 years; and the lime-quarries are supposed to be the oldest in Scotland. There are a chapel of ease, a Free church, and a partially endowed school. *Granton*, on the Frith of Forth, 2 miles W. from Leith, and 3 miles N.W. from Edinburgh, has a good pier, 1700 feet long and 180 feet broad, and an hotel, erected by the Duke of Buccleuch; also the terminus, on the south side of the Forth, of the Edinburgh, Dundee, Perth, and Cupar railway. The ferry-steamers carry the train on its deck from Granton to Burntisland, on the opposite shore of the Frith. Steamers ply regularly between London and Granton, which divides with Leith the duties connected with the port of Edinburgh. On the pier are several warehouses, with cranes, slips, jetties, &c. Several handsome houses have been built on the shore. *Inveresk*, 6½ miles E. from Edinburgh by the North British railway, is beautifully situated on a rising ground behind the town of Musselburgh, and watered by the Esk. It contains many handsome houses, and is well wooded. In this parish are extensive coal-works. *Lasswade*, about 6 miles S.E. from Edinburgh, population of the parish 5821, is much frequented as a summer residence by the inhabitants of Edinburgh. The parish church is handsome. Besides that of the parish, there are two Endowed schools. On the Esk are two corn-mills; but the paper-

mills and carpet-manufactories are the chief sources of employment. A small fragment of the old castle of Hawthornden, the residence of the poet Drummond, still exists in the neighbourhood of the modern mansion. Under the house are extensive caves, said to have served as places of concealment in the wars with England. *Newhaven*, on the shore of the Forth, half a mile W. from the town of Leith, is inhabited by the fishermen who supply Edinburgh. There is an old pier for the fishing-boats and some of the steamers of the river. Here, and at Trinity chain-pier, already mentioned, numerous villas have been erected. *Pennycuik*, or *Pennicuik*, 10 miles S. from Edinburgh, population of the parish 3003, contains extensive paper-mills. *Roslin*, 8 miles S. from Edinburgh. Here is the most extensive manufactory of gunpowder in Scotland. There are also a paper-mill and a bleach-field. Roslin chapel and castle will be noticed presently.

History, Antiquities, &c.—Mid-Lothian was in early times inhabited by the Ottadini and Gadeni, British tribes. The names of various streams, hills, and villages in the county are of British extraction. The Romans, who held possession of the county for about 400 years, included this district in their province Valentia. Anglo-Saxons from the north of England appear to have succeeded the Romans, and in ancient charters many names, evidently of Saxon origin, are found. Then followed an influx of Scots-Irish, it is said, from the west. From the time of Malcolm Canmore the history of Edinburgh, then becoming a place of importance, is closely connected with that of the district generally, though many portions of the county have been the scene of events of national as well as of local interest.

Besides the Roman remains already referred to, traces of Roman camps exist in the parishes of Crichton, Mid Calder, West Calder, and Stow. Roman coins and many implements of domestic use have been found in several parts of the county. Feudal and ecclesiastical antiquities are numerous in this county. The finest is Roslin chapel, built in 1446, by William St. Clair, earl of Orkney and lord of Roslin; which, after remaining perfect for nearly two centuries and a half, was much injured towards the close of the 17th century. The architecture is of a very florid and somewhat peculiar style. The pillars and arches of the nave are especially elaborate, one of them in particular, which is designated the 'Prentice's Pillar.' The castle of Roslin, not far from the chapel, is a mere ruin, almost inaccessible from the surrounding ground, except by a small bridge over a deep valley. Many fortalices are scattered over the face of the county, each possessing its own history of local, if not of general interest. Crichton Castle, a large quadrangular mass of ruins on the banks of the small river Tyne, a little way north-east from Borthwick Castle, is finely described in the notes to 'Marmion.' Craigmillar Castle, standing on an eminence, separated by a valley from Arthur's Seat, is a place of great antiquity, though a considerable portion of the present building was erected after the destruction of the old castle by the English after the battle of Pinkie.

Mid-Lothian, as the metropolitan county, has from the earliest times contained the residences of many powerful families; it now contains perhaps a much greater number of modern residences than it did places of strength in feudal times. The Earl of Stair has a seat, Oxenford Castle, in Cranston parish; Eldin House, near Lasswade, belonged to Lord Eldin; Arniston House, on the bank of the South Esk, in Borthwick parish, is the seat of the family of Dundas.

Industry, &c.—The more important branches of industry carried on in this county have been already referred to in connection with the different villages. Coal works and stone and lime quarries occupy the inhabitants residing in the great mineral field of the county; grazing employs the highland farmers, and agriculture those occupying the low and rich land of the districts on each side of the Pentlands, and on the shore of the Forth around Edinburgh. The ale of Edinburgh has long been celebrated. There are breweries near Musselburgh, and distilleries there, near Edinburgh, and at Ratho. Paper and gunpowder are manufactured to a considerable extent; and there are several bleach-fields and corn and other mills on the banks of the rivers Esk and the Water of Leith. In 1851 there were saving banks at Dalkeith, Edinburgh, and Leith; the total amount due to depositors on the 20th November 1851 was £57,161. 17s. 8d.

EDMONTON, Middlesex, an extensive village, and the seat of a Poor-Law Union in the parish and hundred of Edmonton, is situated in 51° 37' N. lat., 0° 3' W. long., distant 7 miles N. by E. from London by road, and 10½ miles by the Eastern Counties railway. The population of the parish of Edmonton in 1851 was 9708. The living is a vicarage in the archdeaconry of Middlesex and diocese of London. Edmonton Poor-Law Union contains 6 parishes, with an area of 47,880 acres, and a population in 1851 of 45,352.

The name of the place is given in Domesday Book as Adelmeton; it appears to have been first called Edmonton about the beginning of the 16th century. The parish church, a commodious edifice, was in great part rebuilt in 1772: the embattled tower at the west end, and some other parts of the building, are ancient. In the churchyard Charles Lamb lies interred. The Quakers, Independents, and Wesleyan Methodists have places of worship. National and Infant schools, several Endowed schools, and the Children's Establishment for the West London Poor-Law Union are in the parish. Edmonton contains many excellent villas, chiefly the residences of London merchants.

Wyer Hall, about a mile north-west from the village, is a fine old mansion, built in the early part of the 17th century.

(Lysons, *Environs of London*; *Communication from Edmonton*.)

EDOM. [IDUMÆA.]

EDRENOS. [ANATOLIA.]

EDWARD ISLAND, PRINCE. [PRINCE EDWARD ISLAND.]

EECLOO. [FLANDERS, EAST.]

EGER, a town, river, and circle, in the north-west of Bohemia. The town is situated on a rocky eminence on the right bank of the river Eger, in 50° 5' N. lat., 12° 24' E. long., and has a population of about 10,000. In former days it was strongly fortified; but most of its defences have been levelled, and the ditches have been filled up. There are several handsome buildings in the town, among which are the deanery church, six other churches, the spacious town-hall which stands in the market-place, a Dominican and a Franciscan monastery, and the barracks. In the burgomaster's house at the east end of the market-place the room is still shown in which Wallenstein was murdered in 1634. Eger has likewise a gymnasium, a military college, two hospitals, an infirmary, and an orphan asylum. Among the ruins of the Burg (citadel, or castle), the former residence of the margraves of Vohburg, which is situated in an angle of the fortifications above the river, is an ancient square tower built of black volcanic tufa. The double chapel too is very interesting, the lower one existed in 1213 and is supported by granite pillars; the upper rests upon four slender marble columns with pointed arches, and has an octagonal opening in the floor by means of which persons without being seen could hear mass celebrated in the lower chapel. In the castle hall adjoining the chapel the friends of Wallenstein were murdered previous to his own assassination. After the perpetration of this crime the castle it is said was haunted, and was consequently suffered to fall into decay. Eger has manufactures of broadcloth and kerseymeres, cottons, chintz, leather, soap, alum, &c. An avenue nearly three miles long leads northward from Eger to *Franzenbrunn*, or *Franzenbad*, famous for its cold mineral and saline springs, and for its mud and gas baths. The avenue passes a remarkable conical hill called *Kammerbühl* which is an extinct volcano. The baths are much frequented in the summer season, and rendered attractive by the beauty of the surrounding scenery. About 15,000 dozen bottles of the waters are annually exported.

The river *Eger* rises in the north-east of the Upper Palatinate in Bavaria near the junction of the *Böhmerwalde* and the *Erzgebirgo* with the *Fichtelberg* Mountains. A few miles below its source it quits Bavaria, and enters the west of Bohemia at *Hohenberg*, whence it flows eastward through a valley which abounds in picturesque scenery and forms the natural division between the regions of the *Erzgebirge* and the *Böhmerwalde* until it reaches *Theresienstadt*, where it joins the *Elbe*: from the point of their confluence the *Elbe* becomes navigable. The length of the *Eger* is about 90 miles; its banks are high, and its bed stony; no part of it is navigable. The chief towns on its banks besides Eger are *Elbogen*, *Budin*, and *Theresienstadt*. In its lower course the *Eger* flows through an extensive marshy plain.

The *Circle of Eger* comprises the basin of the *Eger*, and extends westward from the *Elbe* to Bavaria, from which it is separated by the *Böhmerwalde*. The *Erzgebirge* Mountains separate it from Saxony on the north. Numerous offsets from these two mountainous regions cover a great part of the circle, and inclose many small valleys and plains. Both these mountain ranges rise in their highest points to above 4000 feet above the level of the sea, but their average height is not more than 3000 feet. They are composed chiefly of primitive rocks—granite and gneiss being everywhere prevalent—with clay-slate, mica-slate, and near the *Elbe* sandstone. Both systems are extremely rich in metals; marble and coal are also found. [BOHEMIA.] One of the branches of the *Erzgebirge*, which crosses the east of the department to the south of *Töplitz*, is called *Mittelgebirgo*, or *Middle Mountains*; the highest point is the *Milleschauerberg*, which has an elevation of 3000 feet above the sea-level. The mountains generally are covered with forests; the southern slope of the *Mittelgebirge* however is generally a desolate region bare of trees, but abounding in bitter salt-springs, the waters or the salts of which (obtained by evaporation) are largely exported. The circle contains numerous evidences of volcanic agency at some long-distant epoch. Of these the most remarkable are—the *Kammerbühl*, a vast conical heap of scoræ and columnar basalt thrown up from beneath mica-slate, between the town of Eger and the baths of *Franzenbrunn*; the *Teufelsmauer*, a remarkable precipice of basaltic lava 1100 feet high, passed on the road from *Töplitz* to *Bilin*; and near the latter place a singular isolated basaltic rock of vast dimensions. [BILIN.] The circle is famous for the number and excellence of its cold and hot mineral springs; among the latter *Carlsbad* and *Töplitz* have a world-wide reputation, and are amongst the most aristocratic watering-places in Europe. The nature of the soil, except in a small proportion of the surface, is unfavourable for agricultural operations; in this the usual corn-products are raised, but not sufficient for the consumption. Hops of excellent quality and good wine are grown near the *Elbe*. The inhabitants live chiefly by mining, manufactures, and trade. The mineral products are silver, tin, lead, iron, sulphur, nitre, garnets, coal, &c. The manufactures are woollen and cotton stuffs, lace, hosiery, paper, china-ware, Bohemian

glass, tin- and pewter-ware, iron- and steel-ware, chemical products, papier-mâché, &c. The country is traversed by numerous good common roads leading from the valley of the *Eger* to Saxony, and by the gorges and passes of the *Erzgebirge*, and southward to *Prague* and *Pilsen*. The great railway from *Vienna* to *Dresden* through *Prague* skirts the eastern side of the circle passing through *Theresienstadt*, *Lobositz*, and *Aussig*; and a branch line runs from *Prague* to the *Eger* at *Lann*. Small steamers ply on the *Elbe* from *Dresden* to within 20 miles of *Prague*. The country is interesting to the tourist for its extensive and picturesque views, and its numerous old castles and convents are rich in historical and legendary lore. The climate is cold in winter, but except in the marshy country on the lower *Eger* it is healthy. In some of the mountain valleys of the *Erzgebirgo* goitrous affections and cretinism are prevalent. Besides the *Eger* above noticed, the only streams worth notice are its feeders, the *Töpl* and the *Striela* from the right bank, the *Zwoda* and *Weistritz* from the left bank; and the *Bila* which is joined by the *Saubach* from *Töplitz* and enters the *Elbe* at *Aussig*. The *Töpl* flows northward through a long narrow valley hemmed in by wooded offshoots of the *Böhmerwalde*, and enters the *Eger* below *Carlsbad*. Near its source are the large convent of *Töpl*, the baths of *Marienbad*, and the fine chateau of *Königswart*, belonging to Prince *Metternich*. The circle has an area of 2861 square miles, and a population of 560,732. Near the borders of Saxony and Bavaria German is spoken, but in the interior the language is a dialect of the Slavonic, which is spoken by the *Chechs*, who form the great bulk of the population. [BOHEMIA.]

Towns.—*Eger*, the capital of the circle, is noticed above. Among the other towns we give the following:—*Asch*, 14 miles N.W. from *Eger*, and the most western town in Bohemia, has about 5000 inhabitants, who manufacture cotton hosiery, woollen stuffs, and wire. *Aussig*, at the confluence of the *Bila* with the *Elbe*, is a small manufacturing town with about 2000 inhabitants. It is the birth-place of the painter *Raphael Mengs*, and is a station on the *Prague-Dresden* railway. *Bilin*, a small walled town on the *Bila*, to the south-west of *Aussig*, and famous for its alkaline mineral springs, has been already noticed. [BILIN.] *Carlsbad*, celebrated for its hot springs, is described under its proper head. [CARLSBAD.] *Ellenbogen*, *Elmbogen*, or *Elbogen*, a picturesque old town built on a rocky promontory, round which the *Eger* bends, 18 miles N.E. from *Eger*, has about 2000 inhabitants and a manufactory for china ware. The town was formerly entered by one narrow gate flanked by a wicket for foot passengers, but the construction of a handsome chain suspension-bridge across the *Eger*, which flows round the north side of the town, has necessitated the opening of a new approach in that direction. The castle of *Elbogen*, one of the oldest in Bohemia, is now used as a prison. A large mass of meteoric iron is exhibited in the town-hall. *Franzenbrunn* is noticed above. *Graslitz*, high up the *Erzgebirge*, 19 miles N.N.E. from *Eger*, near the source of the *Zwoda*, has a population of about 5000, engaged in the manufacture of cotton-yarn, paper, musical instruments, looking-glasses, &c. *Joachimsthal*, situated in a gorge of the *Erzgebirge*, at a distance of 30 miles N.E. from *Eger*, is an old mining town with above 4000 inhabitants. It was formerly a place of much greater importance than at present, owing to its silver-mines. In the silver-mines, which are said to be the oldest in Europe, 400 men are employed instead of 800 as formerly. The first silver dollars, it is said, were coined here, the German name for dollar (*thaler*, 'valley-pieces') being a contraction of *Joachimsthaler*. Zinc and cobalt are also obtained from the mines; wire, smalt, and vermilion are manufactured. *Kaaden*, on the left bank of the *Eger*, at a distance of 45 miles N.E. from the town of *Eger*, has a large corn-market and 3500 inhabitants, who manufacture woollen stuffs and hosiery. *Kommotau*, a few miles N.E. from *Kaaden*, on the road from *Prague* to *Chemnitz*, is a walled and well-built town, with a population of 3725. Woollen stuffs, cotton prints, and beer are the chief industrial products. In the environs are alum-mines and alum-works. *Königsberg*, 9 miles below *Eger*, on the right bank of the river *Eger*, has an old castle, some trade in corn and hops, and a population of 3900. *Laun*, on the right bank of the *Eger*, on the high road from *Prague* to *Chemnitz*, is a busy little town with about 2000 inhabitants. The *Eger*, which frequently overflows its banks near the town, is here crossed by a long stone bridge. The neighbourhood has rich pastures and celebrated apple-orchards. The town is surrounded by old walls; there is a branch railway to *Prague*. *Lobositz*, a small town of 1200 inhabitants, situated at the foot of vine-clad hills, on the left bank of the *Elbe*, is a station on the railway from *Vienna* to *Dresden*. A bridge connects it with *Leitmeritz* on the right bank. *Saatz*, a walled town of 5000 inhabitants, on the right bank of the *Eger*, which is here crossed by a handsome chain suspension-bridge, is about 10 miles W. from *Laun*. It is an ill-built, miserable-looking place. The principal structures are a collegiate church, a capuchin monastery, and the gymnasium. The study of *St. John Nepomuk* is still shown in the town. There is some trade in wine and hops grown in the district round the town, and the best products of the kind in Bohemia. North-east of *Saatz*, on the road to *Töplitz*, is *Brux*, a small place of about 2900 inhabitants, engaged principally in the coal-mines of the neighbourhood, and in preparing salts for export from the mineral springs. The country between *Brux* and *Saatz* is for the most part desolate, bare of trees, and devoid of fresh water, but abounds with springs, most of which are impregnated with

bitter salts. Here are the springs of *Püllna*, *Saidchuts*, and *Sedlitz*, miserable villages, not frequented as watering-places; but water from the springs to which they give name is evaporated, and the salts that remain are exported in large quantities. To the north of Bruz, and at the foot of the Erzgebirge, is the large Cistercian convent of Osseg. *Schlackenwald*, or *Schlaggenwald*, 20 miles E. from Eger, in a valley screened by forest-clad offshoots of the Böhmerwalde, and near the left bank of the Töpl, has about 8000 inhabitants, who manufacture woollen cloth, porcelain, and tin and pewter ware, and work in the neighbouring tin-mines. *Theresienstadt*, a strongly-fortified town, built by the emperor Joseph II. in the midst of the morasses at the junction of the Eger with the Elbe, has a population of about 1500, exclusive of the military. The defences of the place are very strong; the country round it can be inundated by means of sluices. The situation however is unhealthy. *Töplitz*, the famous watering-place, is noticed in a separate article. [TÖPLITZ.]

EGTAG-ALTAI MOUNTAINS. [ALTAI MOUNTAINS.]

EGYPT, AND EGYPTIANS. Egypt (*Misr* or *Misraim* in Hebrew, *Masr* in Arabic, and *Chemt* or *Chemt* in Coptic) is within the limits of Africa, though bordering on Asia. It is bounded N. by the Mediterranean; E. by the little river of El-Arish, on the borders of Palestine and the Syrian or Arabian Desert, which extends from the Mediterranean to the Gulf of Suez, and thence southward by the west coast of the Red Sea; and W. by the Libyan Desert. Egypt Proper is merely the long narrow valley of the Nile, below the rapids or cataracts of Assouan, the ancient Syene, which have been regarded as the southern boundary from the oldest time. But the political limits of Egypt have extended both in ancient and modern times further south along the Valley of the Nile into the country known by the general name of Nubia, and in modern times over the western desert as far as the Oases, and the eastern country to the Red Sea. The length of Egypt from the cataracts of Syene, $24^{\circ} 3' N.$ lat., to the most northern point of the Delta on the Mediterranean, $31^{\circ} 37' N.$ lat., measures on the map about 500 English miles; but the length of the cultivated parts of Egypt, or the Valley of the Nile, is, including the Delta, at least a hundred miles more. The Valley of the Nile and the Delta are the only parts, excepting the Oases, where there is a settled population. We may therefore consider Egypt under each of these four great divisions:—1. The Valley of the Nile; 2. The Delta; 3. The Western Desert and the Oases therein inclosed; 4. The Eastern country towards the Red Sea.

1. *Valley of the Nile*.—The Nile coming from Nubia runs through a deep and narrow valley sunk between two ridges of rocky hills, which rise in some places more than 1000 feet above the level of the river. The breadth of the valley varies considerably, but it is seldom more than 10 miles, and in many places, especially in Upper Egypt, it is not two miles, including the breadth of the river, which varies from 2000 to 4000 feet. In its course within Egypt the Nile contains numerous islands. From Assouan to Selseleh a distance of about 40 miles, the river runs nearly in the middle of the valley, leaving little cultivable land on each side. As we advance northward the western ridge recedes from the river, so as to leave a space of several miles between the left bank and the foot of the hills, while the east chain keeps closer to the corresponding or right bank of the Nile. North of Keneh the river forms a great bend to the west and north-west as far as Minyeh ($28^{\circ} 8' N.$ lat.), near which it reaches its westernmost point, which is about 120 miles to the west of the longitude of Keneh; it then inclines again to the north-east a few miles beyond Benisouef, after which it assumes a course nearly due north to the apex of the Delta. From Farshout, half way between Keneh and Girgeh, a canal runs parallel to and west of the course of the Nile under the different names of Moya Souhadj, Bahr Joussouf, &c., for about 250 miles to Benisouef, where an opening in the western ridge allows a branch of it to pass into the district of Faicum, which it irrigates and fertilises. Its surplus waters then flow into the Birket-el-Keroun, the ancient Morris Lake. [BIRKET-EL-KEROUN; FAICUM.] Another branch of the Bahr Joussouf continues to follow the course of the Nile northward as far as the Delta. The Bahr Joussouf from Ashmounein to Benisouef runs at the distance of 3 to 6 miles from the river; the western ridge being here from 8 to 10 miles, and near Benisouef 15 miles, distant from the Nile. The banks of the Bahr Joussouf, like those of the Nile, are raised higher than the rest of the valley. Consequently between the canal and the Nile there is a kind of depression. On the other or west side of the canal is a strip of cultivated land as far as the inundation or artificial irrigation extends, beyond which and to the foot of the ridge is a strip of sand, light and drifting in the neighbourhood of the cultivated ground, and coarser and mixed with pebbles near the base of the hills. Consequently the cultivable land along the banks of the Nile, both to the east and to the west of the river, by no means occupies the whole breadth of the valley. The Bahr Joussouf appears to be the same as the Oxyrhynchus Canal of ancient times, which Strabo, while sailing along it, mistook for the Nile itself, on account of its magnitude. North of Benisouef the western range, the height

of which becomes less and less as it advances northward, again approaches the river near Sakkarah, and forms in the neighbourhood of Jizeh a kind of natural terrace, on which the great pyramids stand. The ridge then continues to skirt the western or Rosetta branch of the river as far as the neighbourhood of the Canal Bahireh, which once communicated with the Lake Mareotis. The ridge here inclines to the west, and joins the hills which skirt the valley of the Natron lakes. [BAHR-BELA-MA.]

The eastern range leaves the banks of the Nile at a higher or more southern point than the west ridge. From Mount Mokattam, near Cairo, it turns off abruptly to the east, and under the name of Jebel Attaka runs to the Red Sea, near Suez. North of it the sands of the desert of Suez spread close to the eastern skirts of the Delta.

The general character of the western ridge which borders the Valley of the Nile is a limestone formation which contains numerous fossil shells. The great pyramid is built of this kind of stone. In the neighbourhood of Esneh, in Upper Egypt, a sandstone formation commences, alternating with limestone, but the mountains contain also slate and quartz of various colours. The great slabs used in the construction of the temples of Egypt, with the exception of those of the Delta, were of sandstone, as well as many of the sculptures or statues. In the neighbourhood of Selseleh are extensive quarries of sandstone.

The mountain range on the eastern side differs in some respects in its geological character from the western ridge, and it generally rises more abruptly, and often close to the edge of the river. From Mount Mokattam, near Cairo, the limestone extends southward, though with many interruptions, as far as on the western side of the Nile. But basalt, serpentine, and granite appear to commence earlier, and to characterise the eastern more strongly than the western side. Near Assouan the granite alternates with the decomposed sandstone, exhibiting an irregular and broken appearance, which has sometimes been compared to a ruin. On the east side of the Nile, near Assouan, scattered about the foot of the mountains, and occasionally close to the river, are those extensive granite quarries which furnished the ancient Egyptians with materials for their colossal statues and obelisks.

2. *The Delta*. The Nile issuing from the valley a few miles north of Cairo, enters the wide low plain which, from its triangular form and its resemblance to the letter Δ , received from the Greeks the name of the Delta. The river divides into two branches, that of Rosetta, or old Canopic, and that of Damiat, or Phatnitic. The figure of the Delta is now determined by these two branches, although the cultivated plain known by that name extends east and west, as far as the sandy desert on each side. In ancient times the triangle of the Delta was much more obtuse at its apex, as its right side was formed by the Pelusiatic branch, which, detaching itself from the Nile higher up than the Damiat branch, flowed to Pelusium, at the eastern extremity of Lake Menzaleh. This branch is now in great measure choked up, though it still serves partly for the purpose of irrigation. West of the Pelusiatic branch the Moes Canal corresponds with the Tanitic or Saitic branch of the ancients, and the Menzaleh Canal with the Mendesian branch; they both enter Lake Menzaleh, a vast salt marsh, 40 miles long, which communicates with the sea by several outlets. Between the Damiat and the Rosetta branch are numerous canals, large and small, intersecting the country in every direction. Along the sea-coast is another salt lake or marsh, called Burlos, communicating with the sea by an outlet, which is probably the same as the Sebennytic mouth of the ancient geographers. Proceeding westward we meet with the Rosetta, or Bolbitine, mouth, which with that of Damiat are now the only two entrances from the sea into the Nile, and they are accessible only to small vessels. The Nile at Rosetta is 1800 feet wide, and at Damiat 800 feet. West of Rosetta, a salt marsh, called Lake Etke, has been formed, which communicates on one side with the Nile, and on the other with the sea or Aboukir Bay, by an outlet which corresponds to the old Canopic mouth. West of Lake Etke is the Lake of Aboukir, which likewise communicates with the sea, and is divided from Lake Mareotis to the south-west of it by an isthmus, along which passes the canal of Alexandria, which was restored by Mehemet Ali and is now known as the Mahmudiyeh Canal. [ALEXANDRIA; BIRKET-EL-MARIOUT.] This canal was used for the conveyance of passengers by the overland route to India. From the mouth of this canal at Atfeh the passengers proceed along the Nile to Boulak, the port of Cairo, in steamboats constructed for the service; and thence across the desert in caravans to Suez. A railway is now in course of construction mainly for the overland service, which is intended to connect Alexandria with Suez.

The greatest breadth of the Delta, or cultivated plain of Lower Egypt, is about 80 miles from east to west; its length from the bifurcation of the river to the sea is about 90 miles. The interior of the country, which is covered with fields, orchards, and plantations, exhibits different aspects according to the various seasons. The rise of the Nile occasioned by the periodical rains of Central Africa, begins in June about the summer solstice, and it continues to increase till September, overflowing the lowlands along its course. The Delta then looks like an immense marsh, interspersed with numerous islands, with villages, towns, and plantations of trees just above the water. Should the Nile rise a few feet above its customary elevation, the inundation

sweeps away the mud-built cottages of the Arabs, drowns their cattle, and involves the whole population in ruin. Again, should it fall short of the ordinary height, bad crops and dearth are the consequences. The inundations having remained stationary for a few days begin to subside, and about the end of November most of the fields are left dry and covered with a fresh layer of rich brown silt: this is the time when the lands are put under culture. During our winter months, which are the spring months of Egypt, the Delta, as well as the Valley of the Nile, looks like a delightful garden, smiling with verdure, and enamelled with the blossoms of trees and plants. Later in the year the soil becomes parched and dusty; and in May the suffocating khamseen begins to blow frequently from the south, sweeping along the fine sand, and causing various diseases, until the rising of the beneficent river comes again to refresh the land. Showers are very rare in Egypt, except on the sea-coast; it rains three or four times in the year at Cairo, and once or twice in Upper Egypt, but perhaps not every year. The nights however are cool, and the dews heavy. Strong winds blow from the north during the summer, at the period of the inundation, and are very useful in propelling vessels up the Nile against the current.

Whatever may have been once the case, it appears to be ascertained that the coast of the Delta does not now advance; the currents which sweep along the north coast of Africa preventing any permanent accession of alluvial soil to the Egyptian shore. The gradual elevation of the soil of the Delta and Valley of the Nile has also been much exaggerated. From the most careful calculations the land since the time of the Ptolemies at the first or lowest cataract only appears to have been raised about 9 feet, at Thebes about 7 feet, at Cairo about 5 feet 10 inches, and thence, as the inundation spreads over an increasingly wider space east and west along the Delta, the elevation continually diminishes, till at Rosetta and the mouths of the Nile it is hardly perceptible: but the effect of the accumulation of soil on the Delta appears to be also counterbalanced by the gradual subsidence of the land along the coast here. With this raising of the soil from the alluvial deposits the bed of the river has also risen in proportion. The height of the inundation requisite for the irrigation of the land, making allowance for the difference of measures, appears to be nearly the same as in the time of Herodotus. The vertical increase of the cultivated soil must not be confounded with the accumulation of sand in some particular places, as round the great sphinx, &c. which has been in many instances the work of the wind.

3. *The Western or Libyan Desert.*—The nominal limits of Egypt along the sea-coast west of Alexandria are the mountains at Akabah-el-Soloum, the Catabathmus Magnus of the ancients, about 25° E. long., where the nominal limits of the pashalic of Tripoli begin, but this extensive tract of country is occupied by independent tribes of nomadic Arabs. Inland to the south is the oasis of Siwah, or Ammon. [SIWAH.] Farther to the south-east, and nearer to the Valley of the Nile, is a succession of oases, beginning with the Little Oasis, now called Wah-el-Bahryeh, or Wah-el-Beheesa, having been colonised by people from Behnesa, or Oxyrhynchus. The chief town or village is El-Kasr, about 28° 16' N. lat., 28° 51' E. long. It is three caravan days' journey S.W. from Faioum, across the desert. This Wah is fertilised by irrigation from plentiful and never-failing springs; it produces wheat, rice, barley, clover, liquorice, and a variety of fruit-trees. A short day's journey to the south of it is the small wah of El-Hayz, and three days further south is that of Farafreh. Five or six days west of the road to Farafreh is another oasis, called Wadi Zerzoora, abounding in springs and palms. Gorbabo, another wah, lies six days still farther to the west, and twelve days from Augila: the inhabitants are said to be black, probably Tibboos, and are far removed beyond the dominion of Egypt. Four days south of Farafreh is the Wah-el-Gharbee, or Wah-el-Dakhleh, which although mentioned by Arab writers was unknown to recent Europeans till discovered by Sir A. Edmonstone in 1819. It has however a temple of Roman date, with the names of Nero and Titus upon it. The condition and population of this oasis is superior to those of the others already mentioned: it contains 11 villages or towns, and a population of 6000 male inhabitants. It abounds with fruit, particularly olives and apricots; but dates, as in all the oases, form the principal produce of the district. The principal village, El-Kasr Dakhel or Dakhleh, is in about 25° 35' N. lat., 28° 55' E. long., above three-degrees W. from Thebes. There is a warm spring of the temperature of 102° Fahr., which supplies several baths attached to the mosque. Three days to the eastward of Dakhleh, in the direction of Eneh, is the Great Oasis, or Wah-el-Khargeh. It extends in length from 24° 30' to near 26° N. lat., and has many villages and springs, as well as ruins of the ancient Egyptian time, of the Roman period, and of the Christian and the Saracenic eras. Several roads lead from the Great Oasis to the Nile, to Esneh, Siout, Farahout, and Thebes. The road to Dar-fur passes through it. This oasis, as well as that of Dakhleh, are nearly on the same level as the Valley of the Nile, while the Little Oasis is about 200 feet higher than the Nile in the latitude of Benisouef.

4. *The Eastern Country.*—The large tract between the Valley of the Nile and the Red Sea has a different character from the western or Libyan Desert. Its general character is that of a mountainous region, which, although generally rocky and barren, is intersected by

numerous wadis, or ravines, fertilised by springs and clothed with vegetation. Several Arab tribes divide among themselves the whole tract, which cannot therefore be called properly a desert. In ancient times the roads leading from the Valley of the Nile to the shores of the Red Sea passed by regular stations, and villages and towns with a resident population. Mines of various metals and quarries of porphyry and other valuable stones are scattered among the mountains, and were once regularly worked. At present the only fixed habitations are at the port of Cosseir, and at the Coptic monasteries of St. Anthony and St. Paul. The convent of St. Anthony is about 17 miles from the shore of the Mersa, or Bay of Zaffarana, which terminates the Wadi Arabah. From St. Anthony to Deir Bolos, or St. Paul, is a distance of about 14 miles by the road. The Kolzim ridge lies between the two. Deir Bolos is only 9 miles from the sea to the south-east of Deir Antonios, and at Wadi Girfi between it and the sea are the remains of houses and catacombs which appear to belong to the Greek period. At Jebel Tenesep, about 15 miles S.E. from Deir Bolos, the mountains diverge into the interior to the south and south-west towards the Nile, and are succeeded near the sea by a range of primitive mountains which run down the whole way to Cosseir, at a distance of from about 20 to 30 miles from the coast, the intervening space being occupied in some places by low limestone and sandstone hills. Jebel Gharib, about 28° 15' N. lat., in the primitive range, is described as resembling in its lofty peaks the Aiguilles of Chamouny; its height is estimated at nearly 6000 feet above the sea. About 20 miles farther south, in a range of low hills, are copper mines, which appear to have been once extensively worked. At Jebel Dokhan, 27° 26' N. lat., and about 25 miles from the sea, are the ruins of a town, and vast quarries of porphyry, with ancient roads crossing the mountains in all directions, and two wells cut through a solid porphyry rock. A small temple of red granite, with an inscription of the time of Hadrian, and dedicated to Serapis, has been left unfinished; all the materials are on the spot, but not a column was ever put up, and nothing was completed. A road led from Dokham to Coptos, now Koft, on the Nile, about 100 miles to the south-west, and another road to the port of Myos Hormos, once a great mart on the Red Sea, but which was already deserted in the time of Pliny. There are some fine valleys in these mountains, but the sea-coast is marshy and unwholesome. At Fateereh, about 40 miles S.E. from Dokhan, in the old road to Cosseir, are ruins of a Roman station, with a temple of the time of Trajan, and quarries of granite. South of Cosseir the mountains continue to run parallel to the coast as far as Jebel Zabarah, or the Mountain of Emerald, which is about eight hours from the coast, and farther south-east to the ruins of BEREKICE. The coast of the Red Sea was surveyed in 1830-33 by Commander Moresby and Lieutenant Carless, H.E.I.C. service.

Ancient History.—Egypt was one of the countries earliest civilised and brought under a fixed, social, and political system. The first king mentioned as having reigned over that country is Menes or Men, who is supposed to have lived above 2000 years B.C. The records of the Egyptian priests, as handed down to us by Herodotus, Manetho, Eratosthenes, and others, place the era of Menes several thousand years farther back, reckoning a great number of kings and dynasties after him, with remarks on the gigantic stature of some of the kings and of their wonderful exploits, and other characteristics of mystical and confused tradition. (See Eusebius, 'Chronicon Canonum libri duo,' edited by A. Mai and Zohrab, Milan, 1818.) The chronology of this early period is very uncertain. It has been conjectured that several of Manetho's dynasties were not successive, but contemporaneous, reigning over various parts of the country. Something like a chronological series has however been made out from the time of Menes by Champollion, Wilkinson, and other Egyptian archaeologists, partly from the list of Manetho and partly from the phonetic inscriptions on the monuments of the country. Lepsius, Bunsen, and others have arranged the ancient history of Egypt under the Old, Middle, and New Monarchies: the Old extending from the foundation of the kingdom of Menes to the invasion of the Hyksos; the Middle from the conquest of Lower Egypt by the Hyksos to their expulsion; the New from the re-establishment of the monarchy by Amosis to the final conquest of Egypt by Persia, B.C. 350.

Menes was of This in Upper Egypt; soon after his death the country appears to have been divided into a southern and a northern kingdom, governed respectively by a Thinite and a Memphite dynasty. Other independent principalities appear to have existed at the same time. Of these the most famous were the Memphite kings, Suphis and his brother or brothers, to whom the great pyramid is attributed, and who are supposed to be the same as the Cheops and Cephren of Herodotus, although that historian has placed them much later, after Sesostrius and Mœris, and Osirtasen I., who reigned about B.C. 2080, who appears to have become confounded with Rameses II., to whom also his name under the form of Sesostrius was transferred. Abraham visited Egypt about B.C. 1920, and we have the testimony of the Scripture as to the high and flourishing state of that country at that early period. The Scripture calls the kings of Egypt indiscriminately Pharaohs, which is now ascertained to be not the proper name of the individual monarchs, but a prefix like that of Caesar and Augustus given to the Roman emperors. The word Phra in the Egyptian language meant the sun. Little or nothing is known of several successive

dynasties except the names of some of the kings. Under the 16th dynasty, about B.C. 1706, Joseph, and afterwards Jacob and his family, came to Egypt, where their descendants settled and multiplied in Lower Egypt. Egypt was then the granary of the neighbouring nations, and apparently the centre of a great caravan-trade carried on by the Arabs or Ishmaelites, who brought to it the spices and other valuable products of the east. (Genesis, xxxvii. 25.) Joseph died very old, under the 17th dynasty, which was also from Lower Egypt, and which reigned from B.C. 1651 to 1575. About this period "there arose a new king who knew not Joseph." (Exodus, i. 8.) This the head of the 18th dynasty, from Diospolis, or Thebes, which dynasty reigned 340 years, according to Eusebius, and other chroniclers, and which contains the names of the most illustrious sovereigns of ancient Egypt. The irruption of the Hyksos, or shepherds, supposed by some to have occurred during this period. Manetho's 17th dynasty consists of shepherd kings, who are said to have reigned at Memphis. These shepherds, who are represented as people with red hair and blue eyes, came from the north-east, perhaps from the mountains of Assyria; they conquered or overran the whole country, committing the greatest ravages, and at last settled in Lower Egypt, where they had kings of their own race. They were finally expelled by Amosis, the leader of the 18th dynasty, about B.C. 1530, who once more united Egypt under the dominion of a single monarchy, assuming the title of 'Lord of the Upper and Lower Country.' His succession marks the commencement of what has been termed the New Monarchy. The Exodus of the Israelites, about B.C. 1490 or 1460, occurred in the reign of Thothmes III. or his successor, some 430 years after the visit of Abraham to Egypt. Remeses II., or the Great, son of Osiri I., who ascended the throne about B.C. 1350, and reigned above 40 years, is supposed to be the Sesostris or Sesoosis of the Greek historians. He was one of the most warlike monarchs of ancient Egypt, and his wars extended far, and against many nations. Some of these are represented on the monuments of Thebes as of much lighter complexion than the Egyptians, with flowing beards, and dresses evidently Asiatic. His campaigns extended far into Asia, and the interior of Africa. That the old kings of Egypt extended their dominions to the east and north-east, as was done by their Greek and Mohammedan successors, is attested by the Scripture (2 Kings, xxiv. 7), and by the inscriptions on the Egyptian paintings and other monuments. (Wilkinson, 'Ancient Egyptians'.)

The 19th dynasty, also of Diospolis, began about B.C. 1270, and reigned till about B.C. 1170. During this period the war of Troy took place, in the reign of a Remeses, supposed to be the fifth of that name, according to Pliny. The Pharaoh whose daughter Solomon married (B.C. 1013), must have been one of the 21st dynasty. It is curious that, from the Exodus till Solomon's time, a period of nearly five centuries, no mention is made in the Scripture of Egypt, which proves that the storm of war, if such there was, passed off either to the eastward of Palestine, or that the Egyptian conquerors followed the maritime road by Gaza and the Phœnician coast, leaving the high land of Judæa to their right. (Wilkinson, 'Materia Hieroglyphica,' part ii.) The 22nd dynasty began with Sesonchis, according to Manetho, the Sheshonk of the phonetic signs, who began to reign about B.C. 978, and who is the Shishak of the Scripture, at whose court Jeroboam took refuge, and married his daughter, and who, after Solomon's death, plundered the Temple of Jerusalem in the 5th year of Rehoboam, about B.C. 971. Shishak is represented as coming to the attack with 1200 chariots and 60,000 horsemen, and an immense multitude of Libyans (probably Libyans), of Sukkiims, and Ethiopians. (2 Chronicles, xii. 2, 3.)

The 23rd dynasty, called Diospolitan, like the preceding, began about B.C. 908 with Osorkon II. Homer is believed to have flourished about this time, and he speaks of Egypt under its Greek name. The 24th dynasty, which is called Saitic, from Sais, a district of Lower Egypt, begins with the Bocchoris of Manetho, the Bakhor or Pehor of the phonetic signs, about B.C. 812. Sabacos (Sabakoph, phonetic), begins the 25th dynasty of Ethiopians, who about this time invaded Egypt, or at least Upper Egypt. Tehrak or Tirhakah, one of his successors, attacked Sennacherib, B.C. 710. Sethos, a priest of Hephæsus, the great temple of Memphis, became king, and ruled at Memphis contemporary with Tirhakah. After the death of Sethos a great confusion or anarchy took place. At last twelve chiefs or monarchs assembled at Memphis, and took the direction of affairs, which they retained for 15 years. After this, Psamatik I., or Psammitichus, the son of Nechao or Necos, who had been put to death by Sabacos, became, by the aid of Greek mercenaries, king of all Egypt about B.C. 650 or 670. His son Necos II., the Pharaoh Nechoh of the Scripture (2 Kings, xxiii.), marched against the king of Assyria to the river Euphrates: he defeated and slew Josiah, king of Judah, B.C. 610; he also began the canal that joined the east branch of the Nile with the Red Sea. It was in his reign that the Egyptians lost possession of Syria. His successor, Psamatik II., was followed by Psamatik III., supposed by some to be the Apries of Manetho, and the Pharaoh of Hophra of the Scripture, who defeated the Phœnicians, took Sidon, and invaded Cyprus, which was finally subjected by Amasis, who succeeded him on the throne. The reign of Amasis lasted 44 years, according to a date on the monuments; his successor, Psammenitus, reigned only six months, when Egypt was invaded and subjugated by Cambyses, B.C. 525.

The 27th dynasty includes the Persian kings from Cambyses to Darius Nothus, during which time Egypt was a province, though a very unruly one, of the Persian monarchy. It was during this period that Herodotus visited Egypt. Though he saw that country in a state of humiliation and depression, yet he was powerfully struck by its buildings and its highly advanced social state, as well as by the peculiarities of its manners and institutions. Egypt appears to have made upon Herodotus an impression something like that produced by England upon French or other continental travellers in the last century, being a country unlike any other. But Herodotus derived his information concerning Egyptian history chiefly from the priests of Memphis, and consequently his account is very meagre in all that relates to Thebes and Heliopolis, the two other great centres of Egyptian hierarchy. After several revolts the Egyptians succeeded in placing Amyrtæus, or Aomahorte, a Saite, on the throne, about B.C. 414. This king alone constitutes the 28th dynasty. The magnificent sarcophagus of green breccia in which this monarch was interred is now in the British Museum. He was succeeded by the 29th dynasty, of Mendesians, who defended Egypt against the repeated attacks of the Persians, with the assistance of Greek auxiliaries under Agesilanus and others. At last Nectanebos II. being defeated by Ochus, fled into Ethiopia B.C. 350, and Egypt fell again under the yoke of the Persians. With Nectanebos ends the Egyptian dynasties.

The Persians were succeeded by the Macedonians, who, after the death of Alexander, founded the dynasty of the Ptolemies, or Lagidæ, who ruled over Egypt for nearly 300 years, and restored that country to a considerable degree of prosperity. At the death of Cleopatra, B.C. 30, Egypt was reduced to a Roman province by Augustus.

Having now closed this brief summary of the history of ancient Egypt, imperfect and conjectural in part as it unavoidably is, we shall in a few words advert to the social condition of the country under its native kings. That condition is now tolerably well known by the attentive examination of its remaining monuments and their sculptures and paintings. The researches of the French in the expedition to Egypt, and of Belzoni, Champollion, Rosellini, Wilkinson, and others, have put us in possession of a series of sketches evidently drawn from the life, and descriptive of the arts, industry, and habits of the ancient Egyptians. To these works and the plates which accompany them we must refer the reader for particular details; here we can only speak as to the general results. There is no doubt that this singular nation had attained a high degree of refinement and luxury at a time when the whole western world was still involved in barbarism; when the history of Europe, including Greeco, had not yet begun; and long before Carthage, Athens, and Rome were thought of.

Egypt Proper, as we have said, consisted in ancient as in modern times of the narrow rock-bound valley of the Nile. It was at first divided into Upper and Lower Egypt, but a third province was subsequently formed out of these and called Heptanomis, or Middle Egypt: the capitals of these provinces were Thebes, Memphis, and Heliopolis. The provinces were again divided into nomes, or districts, which in the time of Sesostris amounted to 36, but were subsequently increased to 53. Each nome was presided over by a monarch, and subdivided into local governments, and these again into minor jurisdictions. This form of division of the country lasted till the time of Constantine, when it was divided into six provinces, but the subdivision into nomes lasted about three centuries longer.

The population of ancient Egypt was, if we may trust the Greek historians, much greater than that of modern Egypt. According to Diodorus, it once contained 30,000 towns and villages, and seven millions of inhabitants, though when he visited the country (B.C. 58) it only contained 18,000 towns and villages, and three millions of inhabitants. Herodotus asserts that in the reign of Amasis there were in Egypt 20,000 cities. These appear to be merely very vague statements, yet as they were obtained from the priests they may have been founded upon official data; for since in the most flourishing periods of its history the occupation of every male inhabitant was registered by the proper officer, it seems probable, though a census may not have been taken, that a tolerably correct estimate of the population may have been arrived at.

We cannot here enter into the vast and intricate ground of Egyptian mythology, and must refer the reader to the special works on that subject by Champollion, Wilkinson, and others. Their animal worship appears to have been originally symbolical, though it afterwards degenerated, at least for the vulgar, into gross idolatry.

Egypt attained its high state of material civilisation under a system of institutions and policy which resembles in some respects those of the Hindoos. It was a monarchy based upon an all-powerful hierarchy. The inhabitants were divided into a kind of hereditary castes or classes. The first of these classes consisted of the priests, who filled the chief offices of the state. They were the depositaries and the expounders of the law and the religion of the country; they monopolised the principal branches of learning; they were judges, physicians, architects; their sacred books, like their temples, were not open to the vulgar; they had a language, or at least a writing, the hieroglyphic, peculiar to themselves. The king himself, if not of their class, was adopted into it, was initiated into its mysteries, and became bound by its regulations. The priests were exempt from all duties, and a large

portion of land was set apart for their maintenance; and we read in Genesis, that when Pharaoh in a season of famine bought, by the advice of Joseph, all the land of the Egyptians on condition of feeding them out of his stores, "only the land of the priests" bought he not, for the priests had a portion (of corn) assigned them of Pharaoh, and did eat their portion which Pharaoh gave them, wherefore they sold not their lands" (xlvii. 22, and see *q.* 26). The testimony of the Scripture is here perfectly in accordance with that of Herodotus and other historians. The priests were subject to certain strict regulations: they abstained from certain meats, and at times from wine; made their regular ablutions; had but one wife, while polygamy was allowed to the other classes; and they wore a peculiar dress according to their rank.

The soldiers formed the second class, for Egypt had a standing army from a very remote period, divided into regiments or battalions, each having its standard with a peculiar emblem raised on a pike and carried by an officer. Their arms were the bow, sword, battle-axe, shield, knife or dagger, spear, club, and sling. Their besieging-engines were the battering-ram, the testudo, and the scaling-ladder. They had a military music, consisting of a drum similar to the Indian 'tomtom,' cymbals, pipe, trumpet, and other instruments. The military caste was held in high repute, and enjoyed great privileges. Each soldier was allowed a certain measure of land, exempt from every charge, which he either cultivated himself when not on active service, or let to husbandmen or farmers. Those who did the duty of royal guards had besides an ample allowance of rations. They were inured to the fatigues of war by gymnastic exercises, such as wrestling, cudgelling, racing, sporting, and other games, of which the representations still exist on their monuments. The king and the princes, and indeed all persons of rank, were always either of the military or priestly class. The navy was not an exclusive service, the officers of it being chosen from the military class.

The husbandmen formed another class, which was next in rank, as agriculture was highly esteemed among the Egyptians. They made use of the plough and other implements. They had various breeds of large cattle, sheep, goats, pigs, and a quantity of poultry reared chiefly by artificial means, the eggs being hatched in ovens, as it is the practice of the country in this day. The peasants appear to have been divided into hundreds, each with a peculiar banner, which they followed when presenting themselves before the magistrate for the registration, which was taken at stated periods, when they were obliged to give an account of their conduct, and if found delinquent were punished with the stick. The boatmen of the Nile, huntsmen, and others were included in this class.

The next class was that of the artificers, shopkeepers, and the various tradesmen who lived in the towns. The progress made by the Egyptians in the mechanical arts is evident from their monuments, paintings, and sculptures, in which the various handicrafts are represented. The mines of gold, copper, iron, and lead, which are in the mountains between the Nile and the Red Sea, were worked at a very remote date under the early Pharaohs. The Egyptians were acquainted also with the art of gilding. The art of fabricating glass was early known among them. Beads of glass, generally coloured blue, are found on many mummies, as well as other ornaments of a coarse kind of the same material. A kind of ancient porcelain, sometimes covered with enamel and varnish, is found in great quantities in Egypt. Their pottery was often of the most elegant forms. The taste displayed by the Egyptians in several of their articles of furniture is not surpassed by our most refined manufactures of modern times. Many articles of furniture, especially chairs and couches, which have been discovered, and are now deposited in our museums or are represented in their paintings, are singularly beautiful in their forms. Linen cloth, plain or embroidered, white or dyed, was an article of Egyptian manufacture highly in repute among foreign nations. (Ezekiel, xxvii. 7.) The art of making leather was also known to them.

The last class or caste included pastors or herdsmen, poulterers, fishermen, labourers, and servants. The herdsmen and shepherds appear to have been held in peculiar contempt among the Egyptians. Besides servants, they had a number of slaves, both black and white. Fish was a common article of food, except to the priests. Wine of native growth was used by the rich, and a kind of beer was the drink of the poor.

The above-mentioned five classes, as specified by Diodorus, i. 74, were subdivided into ranks according to the various callings and trades, and this has occasioned some variety in their enumeration. Herodotus reckons seven classes, Plato six, Strabo and others have not reckoned the despised shepherds as a caste, and others have counted the military as one caste with the husbandmen, as being drafted from the body of the latter. Unlike the Hindoo, every Egyptian was not required to follow his father's profession and to remain in his class, but the effect was practically nearly the same: from the lowest class it was in fact hardly possible to obtain admission into any other.

The learning of the Egyptians was the admiration of every people who had communication with them. As already mentioned it was the almost exclusive possession of the priests. In science and art they also far excelled their less civilised contemporaries. Their progress in the exact sciences has however been taken for granted without sufficient evidence. Of their astronomy we know but little, but it appears to have been confounded with mythology and astrology, and made subservient to religious polity. Their year was of 365 days: their method of correcting it was by the adoption of the Sothic Period of 1461 years. Diodorus says that they foretold comets; but he also says that they foretold future events, leaving us in doubt whether they were successful in either or both cases. That they had some practical knowledge of geometry, which indeed must have been requisite for the construction of their buildings, &c., is generally admitted. Yet they appear not to have known until a comparatively late period that the level of the Red Sea was higher than that of the Mediterranean or of the Nile. Their boats were rude and clumsy, and chiefly constructed for river navigation. It was not until the period of the new monarchy that they had their ships of war both on the Mediterranean and Red Sea, but under Apries Egypt had sufficient naval power and skill to cope with the fleets of Tyre. His predecessor Necos II. is said by Herodotus to have dispatched some Phœnician vessels by the Red Sea to circumnavigate Libya (Africa), and to return to Egypt by the Pillars of Hercules, which they effected. The truth, or at least the extent of this expedition has however been much questioned. There is a curious story in Plato's 'Critias,' of Sonchis, an Egyptian priest, having told Solon of the Atlantic Isles, which he said were larger than Asia and Africa united, which seems to imply something like a knowledge of the existence of the Western Continent.

The fine arts were cultivated by the Egyptians with considerable success, though in every branch they exhibited a certain incompleteness. In architecture they had made great progress, as the ruins of many of their works attest: in sculpture their advance was stayed at a certain point by the rigid conventional laws, which forbade any material deviation from the established types in representations of the human figure, or in the symbols and forms of their deities: in painting there was somewhat more of freedom, because the objects depicted were of a more trivial kind, but as the rules of perspective were unknown, and scarcely any attempt was ever made to combine the parts of the painting into a complete picture, painting remained in a merely rudimentary stage. Yet though the arts of Egypt were thus imperfect, it is evident from existing early examples of Greek sculpture and architecture that for a considerable period the Grecian artists formed their works on Egyptian models, and only gradually emancipated themselves from Egyptian influence. The monuments recently discovered at Nineveh in like manner show that it was to Egypt that the Assyrian sculptors looked for their guiding principles. Indeed there can be little doubt that during the long period when Egypt was the dominant nation and the centre of civilisation, it exercised a very powerful influence over the intellect of other nations less advanced in civilisation.

With regard to the principal existing monuments of ancient Egypt we refer the reader to the respective heads, such as DENDERAH, EDFU, THEBES, &c., and for the general character of Egyptian architecture to the Division ARTS and SCIENCES in the ENGLISH CYCLOPEDIA. The agriculture of ancient Egypt has been noticed in speaking of the class of husbandmen, and, as well as the commerce, incidentally in other parts of this article. For further particulars respecting the agriculture, commerce, resources, and policy of ancient Egypt, we must refer the reader to the various authorities quoted at the end of this article, especially to Heeren's 'Researches' and the works of Sir J. Gardiner Wilkinson. The money of the Egyptians was in rings of silver and gold, similar to those still used in Sennaar, and its value was ascertained by weight, and its purity by fire. Gold was brought to Egypt from different tributary countries of Ethiopia and Asia, besides what they drew from their own mines. The revenue of Egypt, derived from the taxes alone, amounted, even during the negligent administration of Ptolemy Auletes, to 12,500 talents, between three and four millions sterling.

Modern History.—Passing over the ages during which Egypt was a province of the Roman Empire (for which see Hamilton's 'Egyptiaca,' on the State of Egypt under the Romans, and 'Map of Egypt,' with the names of the Roman period, by Raoul Rochette), we begin the modern history of Egypt at the Mohammedan conquest. Under the caliphate of Omar, Amier Ebn el As invaded Egypt, A.D. 638, and took Pelusium and Babylon of Egypt, a strong Roman station, which sustained seven months' siege. John Mecaukes, governor of Memphis for the Byzantine emperor, treacherously surrendered his trust, and the Copts agreed to pay tribute or a capitation tax to the caliph, with the exception of old men, women and monks. The hatred, not only political but religious, which the Copts bore to the Greeks, facilitated the success of the Moslems. The first mosque on Egyptian ground rose with the new town of Fostat on the site of Roman Babylon.

Alexandria made a long and obstinate defence; it fell at last, and was plundered. The Saracen general asked the caliph what was to be done with the library, and Omar ordered it to be burnt. But the libraries of the Ptolemies had perished before—the Bruchion was destroyed during the siege of Julius Cæsar, and that of the Serapion was dispersed by Theophilus the Patriarch in 390; the library destroyed by Omar's order was therefore a more recent collection. The whole of Egypt as far as Syene was soon reduced to a province

of the caliphate, the capital of which was Fostat. In 868 Ahmed ebn e' Tooloon, governor of Egypt for the Abbasside caliphs, usurped the sovereignty of the country and founded the dynasty of the Tooloonides, which lasted till 906, when the caliphs retook Egypt. In 936 El Akhsed Mohammed ebn Tughg, a Turkish chief in the service of the caliph, usurped the government of Egypt, and began a new dynasty which lasted till 970, when the Fatmieh, or Fatemides, the successors of Mahdes, who had continued to rule in Africa, took possession of Egypt, which they retained till 1171. This was the period of the wars of the early Crusades, in which the Fatemides acted a conspicuous part. The Kurd Salah e' deen Yoosef Ebn Eyoob succeeded to the Fatemides in 1171, and founded the dynasty of the Eyoobites, which lasted till 1250, when El Moez, a Turkoman memlook or slave, after murdering Touran Shah, usurped the throne, and founded the dynasty of the Baharite Sultans, who took possession of Syria also. Baybers, likewise a memlook, assassinated his master in 1261 or 1262, made himself Sultan of Egypt, retook Syria from the Tartars, took Damascus, and put an end to the caliphate of Asia, and extended his conquests as far as and over part of Armenia. His descendants reigned till 1382, maintained possession of Syria as far as the Euphrates, and encouraged agriculture and the arts. Their dynasty is known by the name of Baharite Memlook Meleks, or Sultans. They did not assume the title of caliphs, but allowed the descendants of the Abbassides to retain that name, and to live in Egypt under their subjection, as a sort of state prisoners.

In 1382 Dowlet el Memeleek el Borgééh, a Circassian slave, took possession of the throne and founded the dynasty of the Borgééh, or Circassian Memlooks, which lasted till 1517, when Selim I., the Ottoman sultan, advanced into Egypt, defeated the Memlooks at the battle of Heliopolis, and caused Toman Bey, the last of their kings, to be hanged at Cairo. Selim abolished the dynasty, but not the aristocracy of the Memlooks; he even made conditions with the Memlooks by a regular treaty, in which he acknowledged Egypt as a republic, governed by 24 beys tributary to him and his successors, who appointed a pasha, or governor, to reside at Cairo. Under this form of government Egypt remained nominally subject to the porte, against whose authority the Memlooks often openly revolted, till the French invasion of 1798, when Bonaparte under the pretence of delivering Egypt from the yoke of the Memlooks, took possession of the country. The English sent an expedition in 1801 to aid the porte, which drove away the French, and restored the pasha appointed by the sultan. The Memlooks and the pasha however could not agree; scenes of bloodshed and treachery took place, and at last the late pasha Mehemet, or rather Mohammed Ali, contrived to collect most of the beys with their principal officers within the citadel of Cairo, under pretence of an entertainment, where he had them all massacred in March 1811. Thus ended the Memlook power, which had ruled over Egypt for more than four centuries.

The government of Mehemet Ali, too extravagantly praised by some, was certainly much more rational, orderly, and humane than that of the Memlooks or that of the old pashas in the other dominions of the Porte. He administered impartial justice to all his subjects, without regard to race or religion; established regular judicial courts and a good police; abolished tortures and other barbarous punishments; encouraged instruction to a certain extent; introduced European manufactures and machinery; established a printing office and a journal; and formed schools and colleges for the arts and sciences and for military and naval tactics. But his ambition and the difficulties of his situation obliged him to resort to an enormous taxation and an oppressive conscription. His ambition led him to extend his conquests until his sway stretched over at least as wide a tract of country as any of his predecessors of the Fatimite, Ptolemaic, or Pharaoh dynasties, including a considerable portion of Nubia, Abyssinia, and Kordofan, Syria, Crete, and part of Arabia. Though still nominally subject to the Porte, he had in fact rendered himself virtually independent. But the sultan, Mahmoud II., himself a reformer and a man of ambitious and energetic habits, had watched with increasing jealousy the growing power of the pasha, and at length (1832) sent a powerful army against him. Mehemet sent an equal force, under his son Ibrahim Pasha, into the field, and the Turks suffered two severe defeats. Ibrahim marched towards Constantinople, but the European powers interfered; Russia sent an army to oppose the progress of the Egyptians, and Mehemet was compelled to accept the terms proposed by the mediating powers. A hollow peace followed for some years; but in 1840 the sultan deeming himself strong enough to resume hostilities, again declared war. The Egyptians were again successful so long as they were only opposed to the Turks. Ibrahim Pasha almost annihilated the Turkish armies; the Turkish fleet placed itself at the disposal of the Egyptians, and the ruin of Turkey appeared imminent. But again the European powers interfered. An allied army dispossessed the Egyptians of various strongholds, and an Anglo-Austrian fleet bombarded Acre. Mehemet Ali was once more compelled to yield, and the European powers proposed terms, to which both Turkey and Egypt eventually assented. By this treaty, signed in London July 15, 1841, Mehemet Ali was deprived of all his Asiatic possessions, but the government of Egypt was ensured to him as a tributary to Turkey, and made hereditary in his descendants.

Present State of Egypt.—By geographers Egypt is commonly divided

into three regions, namely, Bahari, or Maritime, or Lower Egypt; Vostani, or Middle Egypt; and Said, or Upper Egypt. But the administrative division of the country is by districts, or prefectships, of which there are 15 in Lower Egypt, and 10 in Middle and Upper Egypt together. The districts are—1. Masr, or Cairo, with the town of that name, the capital of the whole country, and the town of Boulak, the port of Cairo on the Nile, Old Cairo, or Fostat [KAHIRA], and Suez, on the Red Sea; 2. Kelioub, north of Cairo, with the towns of Kelioub, in which are a large government cotton factory and iron foundry, Mataryeh, near the ruins of Heliopolis; Artrib, Choubra, where the pasha has a fine country residence, and Abouzabel, where is the new college of medicine and surgery, with a considerable number of pupils, and a large hospital attached to it; 3. Belbeys, east of Kelioub, on the borders of the Desert: the town of Belbeys is an important station on the route to Syria, has 5000 inhabitants, and contains several mosques; 4. Chibeh, north of Belbeys, with the towns or villages of Chibeh, Tell Bastah, and Heydeh; 5. Mit Ghamer, north of Kelioub and near the Damietta branch of the Nile; 6. Mansurah, north of Mit Ghamer, likewise on the east bank of the Damietta branch, with the town of Mansurah, containing a government cotton factory, a public school, and five mosques, and the village of Tmay el Emdid, which has a monolith of granite; 7. Damietta, with the towns of Damietta [DAMIETTA] and Menzaleh (which lies on the south bank of the Lake of Menzaleh, and has a good fishing trade), and the forts of El Arish and Tyneh, on the borders of the Syrian Desert; 8. Mehallet el Kebir, with the town of that name, within the actual Delta, on the left bank of the Damietta branch, and the small towns of Semennout (which contains a large manufactory of earthenware, and some remains of antiquity), and Abousir [ABOUSIR]; 9. Tantah, south of Mehallet, with the town of Tantah, situated near the middle of the Delta, one of the principal towns of Lower Egypt, remarkable for its fine mosque, and the fair which takes place three times a year, and is much frequented by pilgrims who come to visit the tomb of Seyd Ahmed el Bedaouy, a celebrated Mohammedan saint; 10. Melig, south of Tantah, with the towns of Melig and Chibn el Koum; 11. Menouf, south of Melig, and within the angle formed by the bifurcation of the Nile; 12. Negileh, with the town of that name, on the left or west bank of the Rosetta branch, and the towns of Terraneh and Wardan; 13. Fouah, north-west of Mehallet, with the town of Rashid, or Rosetta [ROSETTA], and the towns of Fouah and Deiru; 14. Damanhour, on the left bank of the Rosetta branch, north of Negileh, with the towns of Damanhour (in which are some factories of coarse woollens) and Rahmanyeh; 15. Alexandria, with the city of that name.

On entering the valley of the Nile from the Delta side we find—1. Jizeh, on the left bank of the river, opposite Cairo, a small town, the head of the prefectship of that name, near the great pyramids, and not far from the ruins of Memphis, upon which are built three modern villages, Bedreshin, Mit Rahyneh, and Memf; 2. Benisouef, south of Jizeh, on the same side of the Nile, a considerable and industrious town, in one of the most fertile districts of the valley of the Nile, with nearly 5000 inhabitants, extensive cotton-mills, alabaster quarries, and large cavalry barracks: in this province are the towns of Abou Girgeh and Samallout, farther south; 3. On the opposite or right bank of the Nile is Atfih, a town and prefectship with 4000 inhabitants; 4. West of Benisouef is the district of Faioum, with the town of Medinet el Faioum, which contains 5000 inhabitants, several mosques, Coptic churches, a manufactory of woollen goods, and some trade in rose-water; 5. South of Benisouef, but extending on both banks of the Nile, is the district of Minyeh, with the towns of Minyeh, which has some manufactures of earthenware; Melaoui, and Eshmounein (which occupies the site of Hermopolis Magna) on the left, and those of Sheyk Abadeh and El Bershel on the right bank; 6. Manfalout, south of Minyeh, with the town of that name on the left bank, and several villages on both banks of the Nile; 7. Siout, with the town of that name, the capital of Upper Egypt, and the residence of a governor: it is situated on the left bank, was a great slave-market, and the entrepôt of the caravan trade with Dar-fur and Sennaar, has a spacious bazaar and 12,000 inhabitants; it also contains a fine palace built by Ibrahim Pasha, public baths, and barracks: Siout is an important military station: in its vicinity are numerous antiquities; 8. Girgeh, south of Siout, with the towns of Girgeh, 7000 inhabitants, on the left bank, containing a government cotton-factory, several mosques, and the oldest Latin convent in Egypt; and Ekhmyim, 3000 inhabitants, on the right bank; 9. Kenéh, with the town of that name, on the right bank, which has 5000 inhabitants, and carries on a considerable intercourse with Cosseir and the opposite coast of Arabia, and is known for its manufactory of porous earthen vessels used for keeping water cool; it also contains a government cotton-factory: Kous, near the ruins of Coptos, Denderah on the left bank, and the ruins of THEBES and of ABYDOS, are in the prefectship of Kenéh; 10. Esneh, the most southern province of Egypt, contains the town of that name, on the left bank, with about 4000 inhabitants, manufactories of cottons and shawls, and pottery; it is a great market for camels, and the emporium of the Abyssinian trade: the great temple is now used as a cotton warehouse. The other towns are—EDFU; Assouan, or Syene, which contains many remains of ancient Syene, carries on a considerable trade

in dates, senna, &c., and has in its vicinity extensive granite-quarries; Koum Ombou, with a fine temple; and Selseleh, with its quarries.

For the principal towns of Egypt see the respective heads—ALEXANDRIA, KAHIRA (Cairo), DAMIETTA, ROSETTA, &c. The population of the smaller towns is very difficult to be ascertained, as no census is taken or register kept.

The whole of the cultivable land of Egypt, in the valley of the Nile and the Delta, is reckoned at 17,000 square miles. The population, according to the most careful recent estimates, does not exceed 2,000,000, of whom probably the proportions are nearly the same as those given by Mr. Lane in his 'Modern Egyptians'—namely, 1,750,000 Mohammedan Egyptians, including the fellahs or peasants and the townspeople; 150,000 Copts or Christian Egyptians; 10,000 Osmanlees or Turks and Albanians, as yet the ruling race; 5000 Syrians, 5000 Greeks, 5000 Jews, and 2000 Armenians; with about 70,000 black slaves, Nubians, Moghrebins, &c. In this calculation the nomadic Arabs of the neighbouring deserts, whose number cannot be ascertained, are not included. The language of the natives is Arabic, but Turkish is still the language of the government. The great bulk of the Mohammedan natives is of Arab stock, but many Copts or aborigines have at different times embraced Mohammedanism, and numerous intermarriages have taken place between the Arab settlers and the Copts, Nubians, &c. The townspeople may be considered as having attained as high a degree of civilisation as any in the east; and "Cairo," says Mr. Lane, "must be regarded as the first Arab city of our age. There is no other place in which we can obtain so complete a knowledge of the most civilised class of the Arabs." The men are generally well proportioned and muscular, and about five feet eight or five feet nine inches in height; the women are well formed, and not too fat. Their complexion in Cairo and the northern provinces is clear though yellowish, and their skin soft; the lower classes are darker and coarser. The people of middle Egypt are of a more tawny colour, and those of the southern provinces are of a deep bronze complexion. Their countenance in general is of a fine oval form; the nose is straight though rather thick, the lips rather full, the eyes black and brilliant, the beard commonly black and curly but scanty. For the dress and habits of the various orders see Lane's 'Modern Egyptians,' vol. i.

The climate of Egypt during the greater part of the year is salubrious. The khamseen, or hot south wind, which blows in April and May, is oppressive and unhealthy. The exhalations from the soil after the inundation render the latter part of the autumn less healthy than the summer and winter, and cause ophthalmia and dysentery, and other diseases. The summer heat is seldom very oppressive, being accompanied by a refreshing northerly breeze, and the air being extremely dry. The thermometer in Lower Egypt in the depth of winter is from 50° to 60° in the afternoon and in the shade; in the hottest season it is from 90° to 100°, and about 10° higher in the southern parts of Upper Egypt. The climate of Upper Egypt, though hotter, is more healthy than that of the lower country. The plague seldom ascends far above Cairo. Ophthalmia is also more common in Lower Egypt. The houses of the wealthier classes in the principal towns are substantially built, roomy, and commodious; but the dwellings of the lower orders, especially of the peasants, are of a very mean description, being mostly built of unbaked brick cemented with mud. Many of them are mere hovels. Most of the villages of Egypt are situated upon eminences of rubbish, the materials of former buildings, and thus rise a few feet above the reach of the inundation: they are surrounded by palm-trees.

The agricultural produce of Egypt consists of the following winter plants, which are sown after the inundation and reaped in about three or four months: wheat, barley, beans, peas, lentils, vetches, lupins, clover, flax, coleseed, lettuce, hemp, cummin, coriander, poppy, tobacco, water-melons, and cucumbers; and of the following summer plants, which are raised by artificial irrigation by means of water-wheels and other machinery: durra, maize, onions, millet, hennah, sugar-cane, cotton, coffee, indigo, and madder. Rice is sown in the spring and gathered in October, chiefly near Lake Menzaleh. Of the fruit-trees, which grow mostly in gardens near the principal towns, the mulberry and Seville orange ripen in January; apricots in May, peaches and plums in June; apples, pears, and carobs at the end of June; grapes at the beginning of July; figs in July; prickly pears at the end of July; pomegranates and lemons in August; dates in August; citrus medica in September; oranges in October; sweet lemons and banana in November.

The modern Egyptians being essentially an agricultural people, arts and manufactures are not pursued to any great extent. The domestic manufactures are chiefly of carpets, woollen cloths, pottery, glass, and other articles of home consumption, chiefly of a rude kind. The larger manufactures are for the most part a government monopoly. They consist of upwards of twenty cotton-factories, several large dyeing and printing establishments and woollen cloth factories, and one or two extensive iron-foundries, with manufactories of carpets, red caps, and fire-arms, mostly at Cairo and Boulak.

The trade with Europe is carried on through ALEXANDRIA. The traffic with Africa, which is very large, is carried on by means of caravans, which carry European and Egyptian produce in exchange for elephants' tusks, gold-dust, ostrich feathers, skins, wools, and

gums. The revenue, derived from land and capitation taxes and from the government monopolies, amounts on an average to about 2,225,000*l.*; the expenditure to somewhat less. There is no public debt. The army consists of about 148,000 regulars, of whom about 11,500 are cavalry; and an equally large body of irregular troops, militia, &c. The contingent which Egypt is bound to supply to Turkey, if required, amounts to about 40,000 men. The government may be regarded as absolute in the strictest sense of the word.

(For Ancient Egypt, the works of Champollion, Andreossi, Heeren, Lepsius, Bunsen, Kenrick, Sharpe, Gliddon, and especially Wilkinson, and the volumes on 'Egyptian Antiquities' in 'Library of Entertaining Knowledge,' should be consulted; for Modern Egypt, see especially Lane's 'Modern Egyptians,' and Murray's 'Handbook of Egypt' by Wilkinson; with the volumes of Planat, Mengin, &c.)

EHRENBREITSTEIN, a town on the right bank of the Rhine, in the circle of Coblenz, and in the Prussian province of the Rhine. It is called Thal-Ehrenbreitstein (Vale Ehrenbreitstein) from its situation at the foot of a precipitous height 772 feet above the river, opposite to Coblenz, with which it is connected by a bridge of boats, in 50° 23' N. lat., 7° 36' E. long. It occurs in records of the year 1210 under the name of Mulne or Mullenheim; but in 1533 the name appears to have been changed into Mülheim and Müllenthal. It contains two Roman Catholic churches, a synagogue, several mills, and 2400 inhabitants. The town has a tobacco manufactory, and a brisk trade in wine, corn, iron, clay for tobacco-pipes, &c. Above the town stands the fortress of Ehrenbreitstein (Honour's broad stone), one of the strongest fortified places in Europe. The platform of the rock is said to have been occupied in ancient times by a Roman castle or fort. During the middle ages it was a stronghold of the electors of Treves, who in later times had a palace at the foot of the rock, which is now used as a flour store. The French, under Marshal Boufflers, in vain besieged the fortress of Ehrenbreitstein in 1688, but they took it after a fourteen months' siege in 1799, and on their evacuation of it at the peace of Luneville (1801) they blew up its defences. Since 1814 however Prussia has spent large sums in reconstructing the fortress, the escarped rocks and steep slopes on three sides of which are defended by many mouthed batteries, numbering a total of about 400 guns. The weak point of the fortress towards the north-west is protected by three successive lines of defences. The platform on the top of the rock serves for a parade-ground, and covers vast cisterns capable of containing a three years' supply of water for the garrison, furnished from springs without the walls. A well also 400 feet deep cut in the rock communicates (it is said) with the Rhine. Ehrenbreitstein is included in the great system of fortifications which surround Coblenz. Strangers are admitted to visit it on presenting an order from the military governor of Coblenz. The views from the summit are extensive and beautiful. The road up to it from the town is about 1200 paces long; it is fortified, and rests almost entirely upon arches built over the chasms in the rock of which the height consists. [COBLENZ.]

EICHSTÄDT, a handsome town in *Bavaria*, is situated in a narrow but productive valley on the left bank of the Altmühl, in 48° 53' N. lat., 11° 10' E. long., and has about 7500 inhabitants. The town stands nearly in the centre of a triangle, in whose angles are the towns of Augsburg, Nürnberg, and Ratisbon, from each of which it is 40 miles distant. It is the capital of a small principality of about 116 square miles in extent, which was bestowed upon Eugene Beauharnois, duke of Leuchtenberg, in 1817. The town gives title to a bishop, and the family of the duke of Leuchtenberg resides here in the summer. The town is walled round, and has four suburbs. It has an ecclesiastical seminary, a grammar-school, a capuchin monastery, a nunnery, an hospital, an orphan asylum, and other charitable institutions, a cathedral church, and four other churches. Among the buildings of note are the duke of Leuchtenberg's palace, with the celebrated Brazilian cabinet, a library and museum of antiquities, &c.: the cathedral of St. Willibald, which dates from the 13th century, is built in the gothic style, and contains many curious monuments of the bishops and canons of Eichstädt; the Willibaldsburg, a castle on a height above the town, which was the residence of St. Willibald and of his successors in the see of Eichstädt; and the church of St. Walpurgis, a British saint, whose remains are interred beneath the high altar. Willibaldsburg, which is built on an eminence 1200 feet high, is said to occupy the site of Aureatum, a Roman castle, and was the abode of the first bishop, Willibald, who was the builder of the cathedral church and the adjacent dwellings for his clergy, in the middle of the 8th century. For this purpose he cleared an area covered with oaks, whence the town derives its name of Eichstädt, or town of oaks. In the romantic grounds called Aumühlwald, near this place, is a tablet of cast-iron, set in a block of marble, 198 feet square, and laid into a mass of rock: it was erected by the citizens in memory of Eugene Beauharnois. The manufactures of Eichstädt are woollen-stuffs, earthenware, beer, iron-ware, &c.

EIFEL, a wild highland region in the Prussian Rhein-Province, extends along the left bank of the Rhine between Bonn and Coblenz. Its proper geographical boundaries are the Rhine on the east, which divides it from the Westerwald; the deep valley of the Moselle on the south, which separates it from the Hoochwald and the Hunsdruck

north-eastern offshoots of the Vosges; the Our or Ourthe, the Ardennes hills, and the Meuse on the west; and the great flat plain of the Lower Rhine on the north. The name however is confined to the region that stretches eastward from the sources of the Our and the Roër to the Rhine. At the head of these rivers lies an extensive highland called *Veen*, or *Fanges* (from the Celtic 'fanoq' for bog)—a dreary waste covered with turf-bogs, morasses, and reeds, and rising between 1500 and 2000 feet high, with a length of about 16 miles every way, which connects the Eifel with the Ardennes, and offsets of which stretch nearly to the Meuse below Aix-la-Chapelle.

The Eifel is a rugged, desert, and in parts swampy table-land, with a general elevation of 1400 to 1600 feet above the Rhine. Its slopes are scored in all directions by deep glens and valleys, which are traversed by tributaries of the three great rivers named above. The flat surface of the table-land, with the exception of some rather extensive forest-tracts, presents a wild moor covered with a thin barren soil; but here and there rise up abruptly naked crags and basaltic cones of various elevations, some of them richly wooded, with widespread layers of ancient lava between. The general components of the region are clay, flint, limestone, and slate; but the hills and rocks that flank the valleys, ravines, and glens of the Eifel are in many instances composed of basalt or capped with it; indeed the Eifel almost everywhere bears traces of violent convulsions and volcanic eruptions at some long-distant period. Extinct volcanoes, cauldron-shaped depressions, tarns of circular shape filling up ancient craters and locally called 'Maare,' mineral-springs, lava-streams, columnar basalt, fossil zoophytes and shells, proving submergence under some ancient waters, are among the natural curiosities of this interesting region.

Amongst the highest points in the Eifel the following may be mentioned:—The Hohen-Acht, above Adenau, 2434 feet above the sea; Nürberg, which is also near Adenau, and is crowned with the ruins of an extensive feudal castle, 2251 feet; Kelberg, near the source of the Elz, 2098 feet; Michaelsberg, near Münster-eifel, 1860 feet; and the Schneifel, or Snow-Eifel, in the circle of Prüm, in the wildest part of the region, 2100 feet.

The Eifel has a length from east to west, between the Rhine and the Our, of about 50 miles. Along the left bank of the Rhine, north of Andernach, it extends for about 20 miles; but in the interior the breadth is in some places more, in others less than this. Rivers flow from it in all directions. On the northern slope near Münster-eifel (a small town in the government of Cologne with about 1600 inhabitants), rises the *Erfst*, which flows with rapid course down into the low country, and enters the Rhine at Grimlighausen, a short distance above Düsseldorf. The *Roër*, or *Kuhr*, also flows down the northern slope, rising in the mountains between Malmedy and Montjoie; after reaching the low country it runs north-north-west past Düren and Julich, and, entering Belgian Limbourg, joins the Meuse on the right bank at Ruremonde, after a course of above 80 miles. Both of these rivers sweep down stones and gravel from the highlands; they are subject to frequent and sudden swells, and abound in fish. Their water-power is turned to some advantage in driving machinery. Before it leaves the Eifel the Roër receives on its right bank the *Urst*, which rises near Blankenheim, and passes *Gemünd*, a small town in the government of Aachen with about 1000 inhabitants, who manufacture woollen-cloth and leather. Not far from the source of the Roër rises the *Warge*, which flows westward past Malmedy, and throws itself into the *Ambleve*, a feeder of the Ourthe, in the Belgian province of Liège. The *Ambleve* itself rises a little south of the *Warge*, which it joins a little below Malmedy. *Malmedy*, a town in the government of Aachen, stands on the *Warge*, and has about 4000 inhabitants. It is a quaintly-built place: the houses and gardens are all in the Dutch style. The town is famous for its manufacture of sole-leather: there are above fifty tanyards. It has also mineral springs; manufactures of woollen-cloth, lace, soap, potash, and glue. *Montjoie* stands in a marshy country between two high hills on the left bank of the Roër, and has a population of 3000, who manufacture woollen-stuffs, leather, and iron. A large, strong, and gloomy castle above the town is said to occupy the site of a hunting-seat erected here by Charlemagne: it is a fine specimen of a feudal fortress.

On the southern slope flows the *Our*, which passes Renland and forms below this small town the boundary between Rhenish Prussia and the Dutch province of Luxemburg to its mouth in the Sure, a feeder of the Moselle. The Sure receives also from the Eifel the *Prüm*, which rises in the wildest part of the district. Just above its junction with the Sure the *Prüm* is joined by the *Nims*. The town of *Prüm* is in the government of Trèves. It is situated to the south of the Schneifel at the foot of a beautiful wooded hill, and has 2100 inhabitants. Its name is taken by corruption from that of the Benedictine Abbey of *Ad Pratum*, founded here in the 8th century, and in which Pepin, natural son of Charlemagne, and the emperor Lothaire were monks: the latter died here A.D. 853. The abbey buildings were destroyed by fire in 1769, with the exception of a small portion which is now a school; the church near it, which is built in the Italian style, replaces the magnificent church of the abbey, of which no vestige remains. The road from Aix-la-Chapelle to Trèves passes through Prüm, and coincides at some points with the old Roman road

from Trèves to Cologne, of which there are many traces south of Prüm. Near *Bitburg*, the ancient *Bædæ Vicua*, a town of about 2000 inhabitants, midway between Prüm and Trèves, a Roman villa, in excellent preservation, and two Roman milestones, set up in the reign of Hadrian, have been disinterred.

Southwards also, and from near the source of the Roër, flows the *Kill* directly into the Moselle a little below Trèves. At *Gerolstein*, a picturesque little town of 600 inhabitants, on its left bank, the river runs between cliffs of limestone and dolomite. Near the town are an old castle, a dry crater, the surface of which is cultivated, several old lava streams, caverns, basaltic rocks, and mineral springs. Fossil shells and corals are found strewn over the fields at Auberg, in the neighbourhood of Gerolstein. Olivine and glassy felspar are found about the dry crater of Dreiser Weiher, about 6 miles east of Gerolstein.

Further east, but still on the Moselle slope of the Eifel, flow the *Lieser*, the *Ues*, and the *Elz*. The *Lieser* passes Daun and Wittlich (2600 inhabitants), and enters the Moselle at the town of Lieser, which has a population of about 1000. At the village of Daun, which has an old castle (the family residence and birth-place of Marshal Daun, who led the Austrian armies in the Seven Years War), there are three maare, or crater lakes, separated from each other by a narrow partition of slaty rock. To the southward of Daun and on the left bank of the river, is the village of Manderscheid, famous for its old castle and for the beautiful maare in its neighbourhood. On the hill of Mosenberg near it are four volcanic cones of slag, from one of which a lava stream descends to the valley of the Lieser. The Meerfelder maare is about 100 fathoms deep, and the Pulver maare, one of the largest and most beautiful of the crater lakes in the Eifel, is 330 feet deep in the centre. The village of Strötzbusch is built in a dry crater.

The *Ues* or *Iss*, which has an old Celtic name, rises near Kelberg, and enters the Moselle at the pretty village of Alf. It flows with many windings and contortions down a valley distinguished for its varied scenery, for the umbrageous foliage of its woods, for its conical hills, and basaltic cliffs. The junction of the clayslate and lava is distinctly seen at several parts of the valley. In the vale of the Issbach, as the Germans call this small river, are iron-works and the mineral baths of Bertrich.

The *Elz* rises not far from the source of the Ues, and flows south-east down a wooded gorge, in which it makes innumerable windings, bounding from side to side against the cliffs that screen it on either hand, and enters the Moselle at the little village of Mosel-Kern. The Elz forms some pretty cascades, and passes the castles of Pymont and Elz. The Elz-schloss is one of the most picturesque and best preserved old feudal fortresses in Europe; it begins to yield to decay but is still inhabited. On the opposite rock stands the rival castle of Trutz-Elz, erected by the Bishop of Trèves, against the lords of Elz. The castle of Pymont was burnt by the Swedes in 1641. Between the mouths of the Ues and the Elz, on the left bank of the Moselle, stands the town of *Kochem*, prettily situated on a hill, with two old castles frowning from the adjacent heights. Although a pretty object from the Moselle it is a very dirty place: population about 2500.

On the eastern slope flow the *Nette* and the *Ahr*. The *Nette* rises to the east of Adenau, and runs first to the south-east and then eastward into the Rhine a little above Andernach, which town has been already noticed. [ANDERNACH.] The *Ahr* (Aar) rises near Blankenheim and running eastward through a valley abounding with wild and most picturesque scenery, past Altenahr and Ahrweiler, enters the Rhine between Remagen and Sinzig. In the upper part of its course the Ahr is joined on the left bank by the Adenau near the small village of Dumpelfeld. On the basalt capped hill of Landkrone in the Ahrthal, are ruins of a castle built by the emperor Philip of Hohenstaufen in A.D. 1205. The Ahr is celebrated for its minnows, trout, and craw-fish. A fine road runs up the valley and in parts is carried by tunnels through the rocks. *Adenau*, is a small town of 1200 inhabitants, at the foot of the Hope-Acht. *Ahrweiler*, is a pretty walled town entered by four gates, and has about 2500 inhabitants, who are chiefly engaged in the growth of the vine. It is the centre of the wine trade of the valley, and has a beautiful gothic church erected in the 13th century.

The *Brohlbach*, a small feeder of the Rhine, enters that river at Brohl, a small village, midway between the mouths of the Nette and the Ahr. The stream at Brohl drives a paper-mill and several trammills, in which the volcanic tufa, quarried in the neighbourhood, is ground for export to Holland; the tufa, reduced to dust, is used by the Dutch for subaqueous cement (trass or trass), as it hardens under water. In the tufa quarries in the valley of the Brohl, land shells and trunks of trees reduced to the condition of charcoal, are found imbedded. Mineral waters, resembling Seltzer, are got from springs in the valley of the Brohl. A little north of Brohl is the castle of Rheineck, recently purchased and repaired by Professor Bethmann Hollweg, of Bonn. *Sinzig* is a small ill-built walled town of about 1600 inhabitants, with an interesting gothic church, erected in the beginning of the 13th century; an adjoining chapel contains a natural mummy, which was carried away to Paris when the French extended their frontier to the Rhine, but was restored at the peace. Sinzig occupies the site of the ancient *Sentiacum*, near which the cross with

the inscription 'In hoc Signo vinces,' upon it, it is said, appeared to Constantine when marching towards Italy against Maxentius. The ancient Roman road along the left bank of the Rhine nearly coincides with the present diligence road between Bonn and Coblenz. *Remagen*, a small place of 1400 inhabitants, occupies the site of the ancient *Rigomagus*. Roman antiquities have been found here.

About 5 miles inland, from the mouth of the Brohl, is the large and beautiful crater-lake of Laach, or *Laacher-See*, which is 666 feet above the Rhine, of nearly elliptic shape, 2 miles long and about a mile and a half broad; its depth increases towards the centre where it is 214 feet deep. The lake is hemmed in on all sides by a ridge of hills covered with wood down to the water's edge. It is supposed to occupy the crater of a volcano. A stream of carbonic acid gas issues from an opening on the north-east side of the lake; and in a neighbouring pit bodies of birds have been found killed by the noxious vapour, which circumstance has given rise to a popular notion similar to that connected with *Avernus* in Italy, that no bird can fly over the *Laacher-See*. The lake is fed by numerous springs beneath its surface, which keep its basin always full. Its waters are clear, deep-blue in colour, very cold but never freeze; and abound in fish. It has no natural outlet, but its superfluous waters are carried off by an underground emissary nearly a mile long, cut in the 12th century by the Benedictine monks of the now ruined abbey of Laach, which is a little south-west of the lake. The shores of the lake are covered with masses of scorise, cinders, ashes, pumice, and other volcanic products. Laach abbey, or *Kloster-Laach* as it is called, was suppressed at the time of the first French revolution. Part of the old buildings that remain is now converted into a farm-house; the church, a beautiful specimen on a small scale of the round-arched gothic, erected in the early part of the 12th century, has been purchased in order to its preservation, by the Prussian government. The gardens of the abbey, the lake, and village of Laach, are favourite places of resort with the inhabitants of Coblenz. Between the lake and the *Nette* are the famous millstone quarries of *Nieder-Mendig*, which have been worked in the hard porous lava for 2000 years. The lava stream in which these quarries lie is 5 miles long and 3 miles broad. The lava separates into gigantic columns, some of which are left by the quarrymen to support the roof; there are vast caverns in it, probably the result of ancient excavations. At *Mayen*, a picturesque old town, on the *Nette*, with about 3000 inhabitants, defended by a castle and surrounded by walls and gardens, there are several millstone quarries, a paper-mill, tanneries, and mineral springs. To the geologist, the botanist, and lover of the picturesque, all the southern and eastern part of the Eifel is extremely interesting. Besides the *Laacher-See* no less than 27 more, marking as many extinct craters, exist between the *Nette* and the *Ahr*.

The climate of the table-land of the Eifel is damp, and much colder than that of the plain of the lower Rhine; cold mists very frequently hover over it. In all Prussia there is no district so poor in arable land as the Eifel. The rugged surface of the region is covered with wild heath or swampy bog, the thin coating of the soil not affording nourishment for the roots of trees. Some parts of it however as before stated are clothed with forests. This is especially the case in the districts covered with volcanic deposits. The chief species of forest trees are beech, oak, and fir, which are grown for the supply of fuel and timber. The valleys and glens are all inhabited, and in these the population is gathered into small towns, villages, and hamlets, most of which have sprung up under the frowning protection of some feudal castle, and a few in the neighbourhood of ancient monasteries. On the rapid slopes along the *Ahr* valley and towards the Rhine, vines and fruit trees yield valuable crops; here every piece of cultivated land is covered with walnut, apple, pear, or cherry trees. The wine of the *Ahrthal* is of excellent quality. The commune of *Rübenach* draws a revenue of 10,000 francs annually from Coblenz for cherries alone. Walnuts are a favourite crop on the hills but not in the valley bottoms, where, it is said, the leaves of the walnut tree injure the soil. The nuts are preserved for oil. Apples and pears are sliced and strung upon pack-thread to serve as vegetables with meat in winter. The fruit of the valleys of the Eifel is good generally; but the apples and pears grown on the Moselle slope are particularly delicious and not surpassed by those of any region in Europe. The corn crops of the region are necessarily restricted in quantity; the deficiency is supplied from the neighbouring districts.

The region of the Eifel is exposed to a phenomenon called *Wolkenbruch*, or *Cloud-Burst*, being a sudden discharge of water, which brings sudden destruction on everything that it may strike; trees are rooted up and hurled down by suddenly formed torrents; cattle, houses, soil, and crops are swept away. A cloud-burst of this description destroyed the greater part of *Münstereifel* in 1818.

The principal roads through the region of the Eifel are those from *Aix-la-Chapelle* to *Trèves*, and from *Coblenz* to *Bonn*; the high road up the left bank of the Moselle from *Coblenz* to *Trèves*, and the new road up the *Ahrthal* to *Trèves*. There are also numerous cross-roads, but most of them are bad. The great Roman road made by *Agrippa* from *Trèves* to *Cologne* traversed the western part of the Eifel. Along it were numerous post-houses (*mutationes*) and six 'mansiones,' serving as military posts and hotels. *Bæda* *Vicus*, now *Bitburg*, was one of these 'mansiones.' *Zulpich* (population 1200),

near the *Nassel*, a feeder of the *Erft* in the plain, at the northern base of the Eifel, was another of the *mansiones*, and was called *Tolbiacum*. The road is still in a perfect state at *Zulpich*. Remains of an aqueduct which ran parallel to the road, and along its whole length, to supply the stations with water, are still visible at ten or a dozen different places between the two cities. The road along the left bank of the Rhine, between *Remagen* and the precipitous projection of *Rolandseck*, which is composed of prismatic basalt, and is crowned with the ruins of an old castle, is cut in the rock. In making this part of the road several Roman remains were found. Connected with *Rolandseck* is the circular crater of *Rodersberg*, which is a quarter of a mile across and 100 feet deep; its sides, which are composed of tufa and scorise, are cultivated. The castle of *Godesberg*, a town of about 1000 inhabitants, a short distance north of *Rolandseck*, is an interesting object on the road and from the Rhine. Between *Godesberg* and *Bonn*, at the north-eastern extremity of the Eifel, are the coal and alum-mines of *Friesdorf*. The coal is of the kind called lignite or fossil wood, and has evidently resulted from the subsidence of some primeval forest; fossil fishes, fresh-water shells, and very fine potters' clay are also found in these beds.

As the Eifel is a popular and not an administrative division of *Rhenish Prussia*, we have no means of stating its population. The region is divided between the three governments of *Aachen*, *Coblenz*, and *Trèves*. The inhabitants are less polished than their lowland neighbours, in their dress rather slovenly than neat, and their houses are in general rudely constructed. The principal mineral and other products have been already mentioned; here we must add iron and lead, mines of which are worked near *Gemünd*. The manufactures are unimportant, with the exception of leather. The chief exports are millstones, trass, wine, and fruit. The inhabitants are almost all Roman Catholics. Eifel is said to be an old German name for the *Ardenne*, of which region the Eifel is in reality a part. [ARDENNE.]

EILENBURG. [MERSEBURG.]

EIMBECK. [GRUBENHAGEN; HILDESHEIM.]

EINDHOVEN. [BRABANT, NORTH.]

EISENACH, a principality in the centre of Germany, belonging to the grand duke of *Saxe-Weimar-Eisenach*. It forms one of the three detached circles or provinces which constitute the grand duke's dominions, and is bounded N. by *Prussian Saxony*, E. by *Saxe-Gotha* and *Saxe-Meiningen*, S. by *Bavaria*, and W. by *Hesse-Cassel*. The detached district of *Ostheim*, part of *Eisenach*, lies to the south within the *Bavarian* confines. The principality is of greater extent than it formerly was, since it now comprehends the bailiwicks of *Lichtenberg*, *Kaltennordheim*, *Geiss*, *Dernbach*, *Vach*, *Frauensee*, *Völkershausen*, and some minor tracts which have been acquired by cession or exchange from the territories of *Fulda*, *Henneberg*, and *Hesse-Cassel*. Its area is 465½ square miles, and the population in 1853 amounted to 82,321. The greater part of this principality belongs to *Thüringia*, and a considerable portion of it is traversed by the *Thüringerwald*; between which mountains and the *Rhöngebirge* on the west, the principality comprehends a tract about 42 miles in length, and from 9 to 14 miles in width. The country presents a succession of hills and mountain heights, uninterrupted by any extensive levels, and the soil is consequently not very favourable to cultivation. It is watered by the *Werra*, with its tributaries, the *Nesse* and *Hörsel*, *Ulster*, *Fulda*, *Sulz*, *Ruhl*, and *Vach*. The climate is healthy, though from the proximity of the *Thüringian* heights, it is variable. The products consist of grain, which is not adequate to the consumption, timber, potashes, and tar, rape-seed, flax, hemp, hops, fruit, &c. Horned-cattle and sheep are reared in great numbers, as well as swine. Of minerals—copper, iron, alum, and coals in small quantities are obtained; and there are quarries of stone and marble, as well as salt-springs near *Kreutzburg*, from which about 500 tons of salt are annually extracted. Potters' clay and fullers' earth are found. The principal manufactures are linens, woollens, cottons, iron- and copper-ware, yarn, potashes, leather, earthenware, and articles of wood.

The principality fell to the dukes of *Saxe-Weimar* on the decease of the last duke of *Saxe-Eisenach*, who died without issue in 1741.

Eisenach, the chief town and seat of government of the principality, is situated at the confluence of the *Hörsel* and *Nesse*, which unite immediately north of the town, and then flow through it in one channel: the village of *Fischbach* touches it on the east; and the celebrated *Wartburg*, a mountain fastness, commands it on the south. *Eisenach* stands in about 50° 58' N. lat., 10° 18' E. long.; it is a first-class station on the *Thüringian* railway, 49 miles W. from *Weimar*, and 66 miles S.E. from *Cassel*. The town, which has a population of about 10,000, is surrounded by walls, has five gates, is well built, and has broad, clean, well-paved streets. The ducal palace (*Fürstenhaus*) is a large and handsome edifice. Among other public buildings there are five churches, a gymnasium, with an extensive library, a handsome civic school which ornaments the spacious market-place, a training school, and an academy for superintendents of woods and forests. The chief manufactures are woollens, cottons, linens, soap, white-lead, meerschaum-pipes, leather, and carpets. A steep ascent through a fine park leads to the well-known stronghold called

the Wartburg, which is about a mile and a quarter from Eisenach and at an elevation of 1818 feet above the level of the sea. The original burg was built in A.D. 1140, and was the residence of the landgraves of Thuringia until the year 1406: a large portion of it was rebuilt in the beginning of the present century. On this spot, in the early part of the 13th century, the German Minnesänger used to contend; and it is still better known as the place of refuge to which Luther was conveyed in 1521, on his way back from the Diet of Worms. The little chapel in which he frequently preached, and the cell which he inhabited, have been carefully preserved in the same state as when he used them. The Wartburg is now used as a prison.

Among the other towns, all of which are small, the principal are *Geistungen*, a station on the railway, 14 miles W. from Eisenach, on the left bank of the Werra: population, 1500; *Kreutzburg*, 10 miles N.W. from Eisenach, on the Werra: population, about 2000; *Lengsfeld*, a small walled town with two castles, and 2200 inhabitants, 15 miles S.W. from Eisenach, on the Fulda, a feeder of the Werra; and *Ruhla*, 5 miles S.S.E. from Eisenach, on the Ruhl, which here forms the boundary between Saxe-Eisenach and Saxe-Gotha; the larger part of the town, the total population of which amounts to about 3500, is in Saxe-Gotha. Ruhla has a normal forest school, manufactures of iron, hardware, pipes, gloves, stockings, and musical instruments. About two-thirds of the population belong to the Saxe-Gotha part of the town.

EISENSTADT, a royal free town in Hungary, finely situated in a noble expanse of country between the Leitha mountain range and the west coast of the Neusiedler-See, in 47° 50' N. lat., 16° 30' E. long., 26 miles S.E. from Vienna, 11 miles N. by W. from Oedenburg, has about 5700 inhabitants. The town itself is walled round, has two gates and three main streets, a church and a Franciscan monastery, in which is the sepulchral vault of the Esterházy family, a monastery and hospital of the Brothers of Charity, a town-hall, and offices for the administration of the Esterházy domains. The Schlossgrund is an extensive suburb, containing about 2600 of the population, and comprises the 'Judenstadt,' or Jew's Town, where 500 of that community reside; here are Mount Calvary, laid out in conformity with the supposed disposition of the site in Palestine, and adorned with a statue of the Blessed Virgin; and the palace called Kis-Martony, a splendid quadrangular structure, erected in 1805 by Prince Esterházy, to whose family the whole suburb belongs. The park is large, rises in terraces towards the Leitha hills, and is embellished with temples, a canal and cascades, an avenue of rose-trees, 262 paces in length, an orangery of 400 trees, nine large conservatories, containing nearly 70,000 plants, water-works impelled by steam, &c. North of the town are zoological gardens. The Prince of Esterházy has three other magnificent gothic castles in the neighbourhood of the Neusiedler-See.

EISLEBEN, a town in the circle of Merseburg, in Prussian Saxony, is situated 18 miles N.W. from Halle, 30 miles N.W. from Merseburg, on an eminence above the Böse, a small feeder of the Elster, in 51° 33' N. lat., 11° 32' E. long., and has a population of about 8000. The town has two subdivisions—the Old Town, which is surrounded by walls and ditches, and has seven gates; and the New Town; besides these it has five suburbs. It contains an old castle, four churches, a gymnasium, several elementary schools, and two hospitals. The chief manufactures are potashes and tobacco; and there are copper and silver-mines in the neighbourhood, with two smelting-works. The town has a brisk inland trade. Luther was born here on the 10th of November 1483, and died here on the 13th of February 1546. The house in which he was born was destroyed by fire in June 1689. On its site a more solid building of stone was soon afterwards erected, and on the 31st of October 1693, it was solemnly consecrated to the purposes of a poor-house and free-school. In it are shown several memorials of Luther. In the principal church (St. Andrew's), the pulpit from which Luther preached is still preserved.

EJEA DE LOS CABALLEROS. [ARAGON.]

EKATARINBURG, or **YEKATARINBURG**, the chief town of a circle in the government of Perm, in the western part of Asiatic Russia, was founded by Peter the Great in 1723. It is situated on both sides of the Iceth or Iset: the western quarter of the town is built along the slope of a gentle acclivity of the Ural Mountains, at an elevation of about 860 feet above the level of the sea, in 56° 49' N. lat., 61° E. long.: population about 11,000. The town is fortified and regularly built; the streets are long and straight, but they are unpaved, and have planks laid on each side of them by way of a foot-pavement. The greater part of the houses are of wood, but there are many handsome stone-buildings; the chief of them form three sides of a square, the fourth side of which is formed by the right bank of the Iceth: these buildings comprise the Mining Department (for Ekatarinburg is the seat of administration for the Ural mines), a museum of mineralogy, a public library, an excellent chemical laboratory, an imperial mint, works for cleansing and amalgamating metals, as well as for cutting and polishing precious stones, a school for educating miners, an hospital, storehouses, a guardhouse, &c. A handsome bridge unites both quarters of the town, and on the acclivity on the left bank of the river is a long range of wooden

tenements where the workpeople reside, with the stone residences of the public offices between them and the bridge. The merchants and dealers' houses in the town are also of stone, and would be an ornament to any city in Europe. Besides five churches, there are a Greek monastery, a public school for 300 pupils, a German school, a large bazaar, a magazine for grain, a house of correction, and several district and elementary schools. The population consists of Asiatics and Europeans, the latter principally Russians and Germans, among whom are numbers of persons exiled for public offences. There is a public hall for drugs and chemicals, and a botanic garden attached to the hospital. The greater part of the inhabitants depend upon the Ural mining concerns for their subsistence; and as Ekatarinburg lies on the high road from Russia to Siberia, it is a place of transit and of brisk trade. East and north of the town respectively lie the gold mines of Beresoff and Nivansk. A wood of pines encircles the north-western extremity of the town, and about half a mile beyond lies lake Iset.

EKATERINODAR. [TAURIDA.]

EKATARINOSLAV, or **JEKATERINOSLAV**, a province in the south of Russia in Europe. It is bounded N. by the provinces of Pultava, Kharkov, and Voronezh; E. by the territory of the Don-Cossaks; S. by the sea of Azof and the government of Taurida; and W. by the government of Cherson. An isolated part of the province, which constitutes the district of Taganrog and the territory of the Asovian Cossaks, extends round the north-eastern extremity of the Sea of Azof, and is separated from the remainder of Ekatarinoslav by the territory of the Don-Cossaks. The area and population of these three divisions are as follows:—

Provinces.	Area in Square miles.	Population in 1846.
Jekatorinoslav . . .	23,727	787,200
Taganrog and its dependencies . . .	1,680	76,000
Asovian Cossaks . . .	116	6,000
Total . . .	25,523	870,100

Upwards of two-thirds of the surface are an open steppe, destitute of wood, and adapted to pasturage only: this is peculiarly the case with that large tract which is situated east of the Dnieper. The districts west of that river are much more fertile, and are skirted by a range of hills which run northwards from Alexandrofsk along the Dnieper. Here it is principally that the arable lands of Ekatarinoslav, occupying about one-fourth of the soil, are situated. The whole extent of the woods and forests does not exceed 256,000 acres. The principal river is the Dnieper, which enters the province at its north-western extremity, and, winding through the western parts of it, quits it below Alexandrofsk. The immense blocks of granite which obstruct the course of the river at and below Kidak, give rise to 13 beautiful falls (paroghi); and below them the river is divided by islands into several channels. [DNEPER.] The Don skirts Ekatarinoslav only at its mouth; but its tributary, the Donetz, waters it partially in the east. The other streams in this province, such as the Samara, Kalmius, &c., are of no great importance. There are several lakes, the water of which is much impregnated with salt: swamps are of frequent occurrence. The climate is mild, and not exposed to much variation, and the winter is of short duration. The quantity of grain produced is scarcely adequate to the consumption; in some years it is so scanty that the supply is drawn from foreign parts. Hemp and flax, peas, beans, lentils, vegetables, fruit, and melons are cultivated. The grape ripens, and some wine is made. The forests do not furnish sufficient timber or fuel; straw, rushes, and even dung, are used for the latter. The chief kinds of trees in the forests west of the Dnieper are the oak, lime, and poplar. In consequence of the scarcity of timber, the houses are built of clay, and roofed with rushes. Cattle-breeding is carried on upon an extensive scale, for the steppes are one vast expanse of pasture-ground. The stock of horses, horned cattle, goats, and swine is immense; and numerous flocks of sheep are also kept. Cheese and butter are made of sheep's milk. The number of bee-hives approximates to 100,000, and vast quantities of honey and wax are obtained. The culture of the silkworm is a favourite pursuit, and this branch of industry is rapidly on the increase. The chase forms a means of livelihood, as wild animals and game are plentiful: under this head may be enumerated the jerboa, wolf, fox, buffalo, antelope-goat, wild cat, tiger-martin, musk-rat, pelican, wild-duck, and partridge. The sturgeon and other fisheries on the Dnieper, Don, Kalmius, and Sea of Azof are very productive. Among the mineral products of the province, which are few and not of much importance, are lake salt, granite, chalk in large quantity, clay, and bog-iron. The garnet is occasionally met with.

The population is a mixed race, composed of Russians, Cossaks, Servians, Wallaks, Magyars, Albanians, Greeks, Armenians, Tartars, Germans, a few Mohammedans, and Jews. All but the Cossak part of the population, which is semi-nomadic, have fixed abodes. The religion of the majority is Russo-Greek: the province contains 690 parishes, and the ecclesiastical head is the archbishop of Ekatarinoslav, Cherson,

and Taurida. The Greeks are under the bishop of Feodosia, and the Armenians under the bishop of Nakitshevan.

Ekatarinoslav is divided into seven circles named from the chief town in each. The principal towns are:—*Ekatarinoslav*, described in the next article [EKATARINOSLAV]; *Alexandrofsk*, on the left bank of the Dnieper below the cataracts (about 4000 inhabitants); *Novo-Moskofske*, a fortified town N.E. of Ekatarinoslav, on the Samara (3000 inhabitants); *Bachmut*, on the Bachmuta, a feeder of the Donetz (about 4500 inhabitants); near it are Tartar tombs and three lines of old fortifications; a coal mine has lately been discovered near this town: TAGANROG, on the Sea of Azof (about 16,000 inhabitants); *Mariapol*, at the efflux of the Kalinius into the Sea of Azof, with about 3500 inhabitants; *Nakitshevan*, on the right bank of the Don, which is the seat of an Armenian patriarch, and has a population of 10,000 and manufactures of silk, woollens, and brandy; and *St. Demitria Rostofskaye*, or *Rostov*, a fortress a couple of miles west from Nakitshevan; population about 2500. The town of Azof has been noticed already. [AZOF].

The manufactures of Ekatarinoslav, which are of little importance, are woollen cloths, silk, tallow and candles, leather, and beer. The number of brandy distilleries is very great. The principal articles exported are fish, wool, tallow, and other animal products.

The province of Ekatarinoslav was first constituted by the empress Catherine in the year 1784, and was composed of the districts Iyln, next the southern banks of the Dnieper (which were before this held by the Cossaks), of several large districts wrested from the Turks, and of Crimean Tartary as far as the shores of the Sea of Azof. In 1797 the emperor Paul augmented it by the addition of other lands between the Bog and the Dniester, which had been ceded by Turkey, and the peninsula of Taurida; and he designated the whole of this extensive country New Russia. In the year 1822 however the emperor Alexander reorganised New Russia, dividing it into the three provinces of Ekatarinoslav, Cherson, and Taurida.

EKATARINOSLAV, a town in South Russia, the capital of the province of Ekatarinoslav, is situated on the right bank and just above the cataracts of the Dnieper, at the junction of the Kaidak with that river, in 48° 27' N. lat., 35° 5' E. long. The first stone was laid by the empress Catherine II. in 1787. The town is built close to the foot of a hill, and according to an extended and regular plan adapted for a much greater number of inhabitants than the 13,000 which it at present contains. The streets are broad, and laid out in straight lines. There are several churches, a gymnasium, and an ecclesiastical seminary, an imperial manufacture of woollens, and several hospitals. Silk stockings are made, and some retail trade is carried on. The town is the residence of the archbishop of Ekatarinoslav, and has an ecclesiastical seminary and a gymnasium.

EL CALLAH. [ALGERIE.]

ELAM. [ELYMAIS.]

ELATMA, or YELATMA. [TAMBOV.]

ELBA, the Ilva of the Romans, Æthalia of the Greeks, is an island in the Mediterranean Sea, near the coast of Tuscany, from which it is divided by the channel of Piombino. This channel is about five miles broad in its narrowest part opposite the town of Piombino, which is on the main land. The shape of Elba is very irregular; its length is about 18 miles, from 10° 6' to 10° 25' E. long., and its greatest breadth, which is on its east side, is about ten miles, from Cape Calamita 42° 43' to Cape Vito 42° 52' N. lat.; but in its west part it is six miles broad, and towards the middle of its length it is only three miles, owing to the coast (which is high and bold) being indented by gulfs both from the north and south. Its area including some adjacent islets is 97 square miles; and the population is 20,061. The island is mountainous; the highest summit, Monte della Capanna, in its west part, is 3600 feet above the sea. The mountains are mostly naked, but the lower ridges and the valleys between them are planted with the vine, olive, and mulberry, and other fruit trees. The island produces also some wheat and Indian corn, vegetables, and water melons. Wine, both white and red, and of good quality, is made in considerable quantities. A sweet wine is also made from the muscadel grape. Horned cattle and horses are rather scarce, but there are plenty of sheep, goats, pigs, and asses. Fish is plentiful on the coast, and the tunny fishery yields a considerable profit. The salt-pans on the sea-shore produce about 50,000 cwt. of salt yearly. Elba is rich in iron, which is of the best quality, and was worked in the time of the Romans. It is found in a mountain, near Rio on the east coast, which is almost entirely a mass of ore, about two miles in circumference, 500 feet in height, and yields from 50 to 75 per cent. of pure metal. Owing to the scarcity of fuel the ore is embarked at Follonica on the channel of Piombino and taken to the mainland to be smelted, as it was when Strabo wrote. The other mineral productions of Elba are loadstone, alum, vitriol, and marble of various kinds. *Porto Ferrajo*, the capital and residence of the governor, has about 3000 inhabitants. *Porto Ferrajo* lies on the north coast of the island, and is strongly fortified with two citadels on the hill above it, and has an excellent harbour. The town has two parish churches, one hospital, and a lazaretto; it has a garrison and military commander, a civil and criminal court. From *Porto Ferrajo* a good road, five miles in length, made by Napoleon I., leads to *Porto Longone*, a small fortress and harbour, on the east coast. The other villages in the island are *Rio*, *Marciana*,

Campo, and *Capo Liveri*. Napoleon I. Emperor of the French resided in *Porto Ferrajo* after his first abdication, from May, 1814, to the 26th of February, 1815, when he set sail for Cannes. Since that time Elba has been annexed to the grand duchy of Tuscany.

ELBE, one of the largest rivers in Europe, flows like the Weser entirely within Germany. It originates in the confluence of a number of rivulets and brooks which fall down the western side of the Schneekoppe, one of the highest summits in the Riesengebirge of Bohemia, and in that part of them which separates Bohemia from Silesia. The stream thus formed runs southward to Hohenelbe, thence in a general southern direction past Arnau and Königgrätz where it is joined by the Adler, and higher up near Josephstadt by the Aupa and the Metau, all on the left bank. After receiving the Chrudimka at Pardubitz, a station on the Vienna-Prague railway, the river takes a westerly direction to Kollin, receiving in the interval the Dobrown on the left bank. From Kollin the Elbe runs north-west past Podicbrad to Nimburg, where it receives on the right bank the Cidlina. It now pursues a course due west for about 15 miles to Brandeis, above which it receives the Iser, thence north-west past Melnik, where it is increased by the waters of the Moldau on the left bank, and from which place (in 50° 20' N. lat., 14° 28' E. long.) it has an unobstructed navigation to its mouth. From Melnik it continues on a general north-west course to below Leitmeritz, a few miles above which town it is joined by the Eger on the left bank. [EGER]. From this place it flows northwards to Aussig, where it is joined by the Bila, and then takes a winding easterly course past Tetschen where it receives the Pulnitz, bends gradually north-westwards, quits Bohemia near Herrnskretschien, and enters the kingdom of Saxony, being at this point 355 feet in width. Below Tetschen the Elbe flows through a defile between the Erz and the Riesen Mountains; bold cliffs and huge natural battlements of rock rising on either side, clothed with rich foliage wherever it is possible for a tree to hang or broken by smooth plots of verdure leading away into romantic dells. In Saxony the Elbe takes a north-westerly course past Schandau, between which place and Dresden it passes through the Lusatian and Ohre Mountains of Saxony, then flows to Pirna, Dresden, Meissen, Riesa, and Strehla, and enters Prussian Saxony at Loesnitz, about seven miles above Mühlberg. From Mühlberg its course is north-westerly to Torgau, and thence to Wittenberg, above which it receives the Black Elster; here it takes a westerly direction, traverses the Duchy of Anhalt in which it receives the Saale and Mulde, and then turning northward, re-enters Prussia above Aachen, and flows N.N.E. past Magdeburg (receiving the Ohre on its left bank) and as far as Sandow, where it is joined by the Havel. Here it again takes a north-westerly direction, forming first the boundary between Brandenburg and Prussian Saxony till it passes Schneekendorf, and next for a short distance between Brandenburg and Hanover: thence it separates Hanover from Mecklenburg until it enters the north-eastern districts of that kingdom between Dömitz and Hitzacker. After traversing them as far as Boitzenburg, it divides the Hanoverian dominions from the duchies of Lauenburg and Holstein and the Hanburg territory, until it discharges itself into the North Sea. Altogether it traverses Hanover or forms its north-eastern boundary for about 120 miles. Below Winsen, which lies to the south-east of Harburg in Hanover, the Ilmenau falls into it, and below Neuhaus somewhat above Altona, but on the left bank like the former, the Oste. From Hamburg and Altona downwards to Glückstadt in Holstein and thence to the North Sea it becomes navigable for large ships. Vessels of 14 feet draught can at all times ascend the river to Hamburg. Its mouth lies north of Cuxhaven, about 85 miles below Hamburg, and is about 12 miles wide. Canals connect the Elbe with the Oder and the Trave tributaries of the Baltic. The railway from Vienna to Dresden runs at a little distance from the left bank of the river all the way from Pardubitz to Dresden (nearly 120 miles); and from this city the stream is in parts skirted and at points crossed by sections of the Saxon, Prussian, Hanoverian, Oldenburg, and Danish lines down to Glückstadt and Holstein.

In the lower part of its course, namely, between Harburg on its left bank and Hamburg and Altona on its right bank, the Elbe is divided into several arms by five large and seven small islands; these arms however unite again in a single channel at Blankenese, about five miles below Hamburg. The whole length of the Elbe is between 600 and 700 miles, and it is navigable for about 470 miles. Its mean depth is 10 feet, and its average breadth 900 feet; but it widens at some points to 1000 feet and more, and near its mouth to several miles. The height of this river above the level of the sea is as follows:—Near its source, 4151 feet; at Königgrätz, 618; at Melnik, 426; at Schandau, 320; at Pirna, 287; at Dresden, 262; at Wittenberg, 204; at Magdeburg, 128; at Tangermünde, 87; at Losenrude, 48; at Dömitz, 26; at Hitzacker, 19; at Bleckede, 11; and at Boitzenburg 9 feet.

There are 35 bridges across the Elbe between its source and Torgau, below which town the communication between both banks (except where the river is crossed by railways) is by ferries. The principal bridges are one at Leitmeritz, which is of wood and stone, and 823 feet in length; one at Dresden, of stone, 1420 feet long and 36 feet broad; one at Wittenberg, of stone and wood, 1000 feet long; and at Magdeburg, where there are three wooden bridges across the three arms of the river.

The waters of the Elbe are increased by the confluence of 17 rivers

and upwards of 70 minor streams. Since the year 1801 its depth has decreased nearly 9 inches at Dresden and about 18 inches at Magdeburg. In Bohemia, where less attention has been paid to the clearing of woodlands and drainage of swamps and marshes than in the other parts of Germany through which it flows, the diminution has been far less. The basin is estimated to occupy about 58,800 miles, and lies between 50° 2' and 53° 54' N. lat., 8° 41' and 16° 12' E. long.

The river is well stocked with salmon, eels, sturgeons, and other fish. Light steamers ascend the river as far as Melnik in Bohemia. The benefits derivable from the navigation of the Elbe have been always much curtailed by the number of duties levied by the different states through which it flows. So many and so high are the tolls imposed upon the navigation of this river and the Weser that trading along these routes has greatly diminished within the last twenty-five years. During this period the total receipts from tolls on these rivers were 260,000 rix-dollars, and the expenses 295,000 rix-dollars.

ELBERFELD, a large manufacturing town in the Düsseldorf government of Rhenish Prussia, stands in 51° 16' N. lat., 7° 8' E. long., 8 miles E. from Düsseldorf, and had 35,000 inhabitants in 1846. A railroad from Düsseldorf through Elberfeld joins the Cologne-Minden line at Dortmund. It is a long straggling town running along both sides of the Wupper, which here flows through a narrow valley screened by steep but not very high hills. Some parts of it are well built and paved, but most of the town is composed of irregular, narrow, and dirty streets. Here and there are seen spacious houses fronted with cut-stone and in the best architectural styles. The river is a most disgusting object, being the receptacle of all the sewers and offscourings of the numerous dyeing establishments of the town. The waters of the Wupper however are said to possess most valuable bleaching properties, and to this circumstance Elberfeld is indebted for its origin and prosperity. The town is the seat of an extensive cotton and silk manufacture, but is more important still for its dyeing, printing, spinning, and bleaching establishments. The cotton-printers and silk-dyers consume a large quantity of piece-goods that are woven by hand in the surrounding districts; their patterns, which are very superior, are designed on the premises of the large printers, who employ French artists at high salaries. About 40 firms are engaged in the silk manufacture. Merinos and fancy woollen goods are also manufactured here. The town has 69 dyeing establishments, 10 bleaching-grounds, 6 cotton-spinning factories, 1 large woollen mill, with machine-makers and colour-works; it has also block-pattern cutting, printing, engraving, and lithographic printing establishments. Tapes and ribands are an important article of manufacture, with which this town and Barmen (which touches Elberfeld on the east) supply all Germany. [BARMEN.] The colour called Turkey-red is produced in Elberfeld more cheaply and of better hue than in any other place in Europe. Of the public buildings the Roman Catholic church, which is in the Byzantine style, and the guildhall, in the great room of which is a beautiful frieze painted by the artists of the Düsseldorf school of painting, are the most remarkable. The town has a gymnasium, a museum, several banks, 2 orphan asylums, 3 hospitals, and a great number of educational establishments. Among these last is one for young manufacturers and the managers of factories, in which the mechanical processes in the construction of the jacquard-loom cards, and the calculations accompanying them in weaving, are taught, as well as pattern-drawing. This establishment, one of great efficiency and importance, is supported by the town, which also maintains its own poor by means of a rate. Elberfeld is well lighted with gas. (Banfield, *Manufactures of the Rhine; Handbook for North Germany*.)

ELBEUF, or ELBŒUF, a large manufacturing town in the department of Seine-Inférieure in France, stands in a beautiful valley on the left bank of the Seine, at a distance of 78 miles N.W. from Paris, and 13 miles S.S.W. from Rouen. The population amounts to above 16,000, exclusive of about 10,000 workpeople, who remain in the town only on the days they are employed at the factories, their fixed residence being in the villages of the neighbouring communes. The town is in general ill-built, ill-laid out, and badly paved; but within the last twenty years many improvements have been made. A great number of large factories and handsome edifices have been erected, the quays extended, the old streets widened, and a spacious *champ de foire*, or market-place, with side-avenues planted with chestnut-trees, has been constructed. The streets are lighted with gas, and the town is well supplied with water from eight Artesian wells, one of which feeds six public fountains. The most remarkable public buildings in Elbeuf are the churches of St. Etienne and St. Jean-Baptiste, the interiors of which are richly decorated and lighted through fine painted windows.

Elbeuf has a tribunal and chamber of commerce, a consultative chamber of manufactures, and a council of Prud'Hommes for the settlement of differences between manufacturers and their workmen. The factories of the town and neighbourhood, which exceed 200 in number and are mostly worked by steam-power, produce a great quantity of woollen cloths; the descriptions are various, and include double-milled and waterproof cloths, zephyrs, and fancy cloths of all colours. From 60,000 to 70,000 pieces of 60 yards each, at from 10 to 20 francs a yard, are produced annually. The cloth is purchased of the manufacturers by large commission-houses, of which there are

about 70 in the town, and by them it is sent to various parts of France. This town is also celebrated for the manufacture of billiard-table cloth and flannel. It contains several dye-houses, fulling-mills, and large wool-stores, besides wool-washing establishments which lie along the Seine and the Puchot, a small winding stream that traverses the town. Steam-boats ply between Elbeuf and Rouen; the Tourville station on the Paris-Rouen railway is only four miles distant from Elbeuf.

(*Dictionnaire de la France; Commercial Statistics*.)

ELBING, a fortified sea-port town, and a place of considerable commercial importance, in the Prussian government of Danzig, is situated on the Elbing River, which is united to the Nogat arm of the Vistula by the Kraffuhl Canal about 4 miles N. from the town. The town is about 5 miles from the mouth of the river in the Frische-Haff. It stands at a distance of 356 miles by railway N.E. from Berlin, 31 miles S.E. by railway from Danzig, in 54° 10' N. lat., 19° 25' E. long., in a very fertile valley, and is surrounded by high walls, towers, and ditches. It is divided into the old and new town, 3 inner and 11 outer suburbs, and has 5 land and 2 water gates, 5 Lutheran churches, a Reformed Lutheran and a Roman Catholic church, a synagogue, 5 hospitals, a convent, an orphan asylum, work-house, house of correction, house of industry, a savings bank, and a gymnasium, with a large library.

Elbing was founded by the Teutonic knights about the year 1229. It was a member of the Hanseatic League, and now ranks in the second class of towns in the Prussian monarchy. The population is about 20,000, one-fifth of whom are Roman Catholics. The inhabitants manufacture woollen cloth, tobacco, sail-cloth, soap, starch, pearl-ash, caviar, stockings, oil, and linen; there are also tan-yards, ship-building yards, chicory-mills, sugar-refineries, &c. The town has a brisk trade with Poland, from which corn, potash, woad, linen, wood, tallow, and wax are obtained; and iron, wine, manufactured and colonial goods, &c., are sent in exchange. By the Kraffuhl Canal small vessels can come up to the wharfs, but the larger ones are obliged to unload at Pillau, which is the harbour of Elbing. About 500 vessels belong to Elbing, but they are almost all of small burden. There is a considerable sturgeon fishery at Elbing.

ELBŒUF. [ELBEUF.]

ELBOGEN, or ELLENBOGEN. [EGER.]

ELBOURS, ELBURZ, or ELBRUZ. [CAUCASUS.]

ELCHE. [VALENCIA.]

ELEPHANT'A, a small island about 7 miles in circumference, situated between the island of Bombay and the Mahratta shore, from which it is distant 5 miles, and 7 miles from the castle of Bombay, in 19° 2' N. lat., 72° 57' E. long. Its name among the natives is Gorapori; that by which it is known to Europeans was derived from the figure of an elephant twice the size of life cut out of the solid black rock on the acclivity of a hill about 250 yards from the landing-place. This figure is now completely dilapidated. At a short distance from the elephant stands the figure of a horse, also cut out of the rock. On this island is a remarkable temple-cave. The entrance to this cave, or temple, occurs about half way up the steep ascent of the mountain or rock out of which it is excavated. Its length, measuring from the entrance, which is on the north side, is 130 feet, and its breadth 123 feet; the floor not being level the height varies from 15 to 17½ feet. The roof was supported by 26 pillars and 8 pilasters, disposed in four rows; but several of the pillars are broken. Each column stands upon a square pedestal and is fluted, but instead of being cylindrical is gradually enlarged towards the middle. Above the tops of the columns a kind of ridge has been cut to resemble a beam about 12 inches square, and this is richly carved. Along the sides of the temple are carved between 40 and 50 colossal figures varying in height from 12 to 15 feet; none of them are entirely detached from the wall. On the south side, facing the main entrance, is an enormous bust with three faces, which is supposed to represent the triple deity, Brahma, Vishnu, and Siva. The centre face is 5 feet in length. At the west side of the temple is a recess, 20 feet square, having in the centre an altar. The entrance to this recess is guarded by eight naked figures, each 18½ feet high, sculptured in a superior manner. The origin of this cave is quite unknown: it is frequently visited by devotees for the purpose of offering prayers and oblations. (Captain Hamilton, *Account of India*, 1744; Maurice, *Indian Antiquities*; Niebuhr, *Voyage en Arabie*; *Archæologia*, vol. vii.; *Asiatic Researches*, vol. i.)

ELEUSIS, a celebrated town of Attica, stood on rising ground near the northern shore of the Gulf of Salaria, and opposite to the Isle of Salaria, in 38° 4' N. lat., 23° 30' E. long., not far from the eastern boundary of Megaris. Eleusis gave its name to one of the twelve ancient divisions of Attica. It owed its celebrity in the historical age to its being the principal seat of the mystical worship of Demeter, who in search for her daughter Persephone (Proserpine), was said to have rested by the well Callichorus at Eleusis, and to have taught Triptolemus the use of corn on the Rharian plain. [ATTICA.] In very ancient times Eleusis is said to have been an independent state of some importance, and to have carried on a war with Athens, which resulted in its becoming subject to that city in everything except the celebration of the mysteries, of which the Eleusinians were to continue to have the management. (Thucyd. ii

15). This worship subsisted at Eleusis from the earliest period of history to the time of Alaric. The annual festival and celebration of the Eleusinian mysteries were by universal consent regarded as the holiest and most venerable in Greece. The great festival began on the 15th Boedromion, and lasted nine days. The first day was called the assembling (*ἀγυρμός*); on it all who had received the preparatory initiation in Elaphebolion at Agræ were invited to complete their sacred duty. The second day was named *ἀλάδε μύσται*, 'to the sea ye initiated!' from the words of the proclamation by which they were admonished to purify themselves. This purification took place in the *ῥεῖοι*, two streamlets of salt water running into the Gulf of Salamis, and which separated the territory of Eleusis from the rest of Attica. Of the proceedings on the third and fourth days but little is known. The fifth was called the 'day of the torches,' *λαμπάδων ἡμέρα*, on account of a lampadephoria, or torch-procession, in which the initiated marched two and two round the temple. The initiation took place on the sixth and seventh days of the feast. The sixth day, which was called Iacchus, was the chief day of the Eleusinia. On this day the statue of Iacchus was adorned with a garland of myrtle, and carried in procession with songs and shouting from the Cerameicus to Eleusis, and back again on the following day, which was named the 'return of the fully-initiated' (*νοστοῦσιν οἱ ἐπόπται*). According to Herodotus this procession was not uncommonly attended by at least 30,000 persons. The seventh day was called *ἑπίδωρια*, in honour of *Ἄεσκαπιος*, who did not arrive from Epidaurus to be initiated until after the return of the *Ἐποπτεῖ*. The ninth day was called *πλημοχόη*. The ceremony of this day consisted in the symbolical overturning of two vessels filled with wine. Those initiated at the lesser mysteries were called *μύσται*, from *μῦν* 'to close up,' because they were bound to strict silence; those who had passed through the Eleusinian ceremonies were called *ἐπόπται* or *ἐφοροί*, 'contemplators,' because they had been admitted to see the sacred objects; they were also hailed as happy and fortunate (*εὐδαίμονες*, *ὄλβιοι*). In what the initiation consisted has been the subject of much fanciful speculation. The probability is that there was, according to the prevalent belief of many of the best ancient as well as recent writers, a setting forth of a higher and purer moral faith, with the adumbration of a resurrection to a future and happier life. Every Athenian was obliged to pass through these ceremonies once in the course of his life. Bastards, slaves, and prostitutes, as well as strangers, and in later time Christians and Epicureans, were excluded from the Eleusinia. To reveal any of the mysteries, or to apply to private purposes any of the hallowed solemnities, was considered a capital crime.

The great temple of Demeter, erected in the place of an earlier one burned by the Persians, was commenced in the time of Pericles, by Ictinus the architect of the Parthenon, and finished by Philo under the auspices of Demetrius Phalerius. It was the largest, and generally regarded as one of the four finest in Greece. From the researches of the commission appointed by the Dilettanti Society, the cella, or interior of the temple, appears to have been 166 feet square, and to have had in front a magnificent portico of 12 Doric columns, each 6½ feet in diameter at the bottom of the shaft; erected by Philo. This great temple occupied the eastern extremity of the rocky height on which stood the Acropolis of Eleusis. The town itself occupied a triangular space, each side being about 500 yards in length, lying between the hill and the shore. It was surrounded by a wall, the extremities of which, as was common in Greek military architecture, were carried into the sea so as to form moles, which sheltered a small circular artificial harbour. Eleusis was in a flourishing condition under the Romans, owing to the eagerness with which the Roman nobles sought initiation into the mysteries. It was destroyed by Alaric in A.D. 396, and from that time it ceases to be mentioned in history. When Spor and Wheeler visited the site in 1676 it was entirely deserted. Some years later a few inhabitants collected about it; and the spot occupied by the great temple is now the centre of a village called *Lepsina*, until within the last year or two, but to which the ancient name has been since restored, in accordance with a recent law, by which the principal localities of Greece are to be in future called by their ancient and classical names. *Eleusis* is now a considerable village. Besides the fragments of the inclosure of the great temple there are some heaps of ruins of the propyleum, of nearly the same plan and dimensions as that of the Acropolis of Athens, and other works on the Acropolis; portions of a small temple 40 feet long and 20 feet wide, probably that of *Ἀρτεμῖς Προπύλαια*, &c. A finely executed colossal marble bust, supposed by some authorities to be that of Persephone, was brought from Eleusis in 1801 by Dr. E. D. Clarke, and is now in the public library at Cambridge.

(Leake; Wordsworth; Murray, *Handbook for Travellers in Greece*, 1854.)

ELEUTHERA. [BAHAMAS.]

ELGIN, Elginshire, Scotland, the county town, a royal and parliamentary burgh, and market town, is agreeably situated in a plain, in 57° 39' N. lat., 3° 32' W. long. The small river Lossie winds round the western and northern sides of the town, and is crossed by several substantial bridges. Elgin is 145 miles N. from Edinburgh, and 64 miles N.W. from Aberdeen. The population in 1851 was 5383. The town is governed by a provost, 4 bailies, and 12 councillors.

GEOG. DIV. VOL. II.

Conjointly with Banff, Cullen, Inverury, Kintore, and Peterhead, it returns one member to the Imperial Parliament.

Elgin, called anciently Helgyn, of which many derivations are given, most probably owes its origin to the fortress or castle on the top of Lady Hill. With the ancient fortress (a royal castle prior to the time of William the Lion, in 1188), its old jail and still more ancient church of St. Giles (its patron saint) in the centre of the town, and the cathedral and canons' houses at the east end, Elgin was a kind of ancient Edinburgh on a small scale. The modern public buildings in the town are numerous. Gray's Hospital, for the sick poor of the town and county, is entirely supported from funds left for the purpose by Alexander Gray, Esq. It is a handsome building with a Grecian portico and a cupola; it stands in a commanding and healthy situation at the western extremity of the town. A small pauper lunatic asylum, built in 1834, is within the grounds of the hospital. A pillar erected to the memory of George, the last of the dukes of Gordon, is placed on the top of Lady Hill, and forms a conspicuous object. A public fountain now occupies the site of the old jail; and in the centre of the High-street, on the site of old St. Giles, the ancient church of Elgin, is the new parish church, an elegant structure, erected in 1828. The Elgin Institution was built from and is entirely supported by the munificent legacy of the late General Andrew Anderson, who left £10,000 for "the support of the aged and the education of youth" belonging to the town and county of Elgin. It is a handsome quadrangular building, surmounted with a circular tower and a dome, is constructed of freestone, and ornamented with Doric columns and sculptured figures. The building and grounds cover an area of about three acres. There are 10 old people and 14 children living within the building, and in the school there are about 200 children receiving education gratuitously. The court-house for the sheriff and burgh courts is a new building. The jail is in its immediate vicinity. The Elgin and Morayshire Museum was built about twelve years ago by private subscription. A small but neat Episcopal chapel with a parsonage, and the Mason Lodge, or Assembly rooms, are situated in North-street. The Roman Catholics have a new and handsome gothic chapel. The covered market-place just erected supplies ample accommodation for the market traffic. The buildings of the Elgin Academy are poor; but the seminary confers great advantages upon the community. The scholars are under the care of teachers of Latin, mathematics, and English, whose salaries are partially secured by an endowment. There are in the town an Infant school, a Trades school, a scientific association, a mechanics society, and a savings bank. The corn-market is held on Friday. The town is well supplied with gas and water. Lossiemouth is the sea-port to Elgin. The industrial occupations of the inhabitants and the means of communication are mentioned in the description of the county. [ELGINSHIRE.]

The charter erecting Elgin into a royal burgh was granted by Alexander II. in 1234. At an early period the neighbourhood was adorned with extensive ecclesiastical establishments. The cathedral was first built in 1224, but it was burnt down by the 'Wolf of Badenoch,' son of Robert II., in 1390. The ruins now extant are those of the second cathedral, a magnificent structure, erected in 1414. Its length of 264 feet, breadth at the transept of 114 feet, and central tower of 198 feet, give some idea of what its size and extent must have been; while the ground-plan, studded with bases of pillars, and the numerous carved stones, indicate that considerable taste and skill had been exercised in its erection. A college was attached to the cathedral, and included within its walls the house and gardens of the bishop and those of 22 canons. On the south side of the town are the ruins of a convent of Gray friars, and on a hill west from the town are the remains of an ancient fort.

(*See Statistical Account of Scotland; Communication from Elgin.*)

ELGINSHIRE, called MORAYSHIRE, as it formed the central part of Moray, one of the provinces into which Scotland was anciently divided, a county in the north of Scotland, lying between the Grampian Mountains and the Moray Frith, is bounded N. by the Moray Frith, W. and S. by the counties of Nairn and Inverness, and E. by Banffshire. Inverness-shire intersects the county, and cuts off a small portion of its southern extremity. Elginshire is situated between 57° 10' and 57° 43' N. lat., and between 3° and 3° 45' W. long.; its extreme length is 58½ miles, and extreme breadth 26 miles. The area of the county is 53½ square miles, or 340,000 statute acres. The population in 1851 was 38,959. This county unites with Nairnshire in returning one member to the Imperial Parliament.

Coast-line.—The line of sea-coast extends upwards of 30 miles, and presents in the middle portion bold precipitous rocks of sandstone, with a few detached pieces, as the 'Holyman Skerries,' lying seaward. The two extremities of the line are for several miles formed of vast mounds and raised benches of sand and gravel. Several small harbours are situated along the coast-line. On the east, at the mouth of the Spey, lie Kingston and Garmouth. The Spey is not ordinarily navigable even by the smallest craft, and can only be entered at high tide. The lighthouse on Covesca Skerries Point is one of the best of the Scottish lighthouses; it has a revolving light. Westward of the lighthouse lie the Caves of Covesca, in former times the resort of smugglers. They consist of large natural excavations in the sandstone cliff, and are remarkable from their number, size, and intricate windings. Hopeman is a fishing-village with a small harbour. Buthard, the

most marked and commanding point on the Elginshire coast, was the last stronghold of the Danes in this part of Scotland, and is supposed to have been a Roman station. Several vestiges of antiquity are still to be seen here, as the 'Roman Well' or bath, and remains of gravel-mounds raised for defence. At the harbour of Burghhead, where steam-vessels from London, Leith, and Sutherland touch, there are 11 feet of water at neap-tides, and 14 feet at spring-tides. Findhorn, the sea-port for the burgh of Forres and the western parts of the county, stands at the influx of the river Findhorn, and at the north side of a large shallow bay.

Surface and Geology.—The portion of the county which is bounded by the Moray Frith, and averaging about five miles in breadth, is flat, and characterised by its light and gravelly soil, with occasional ridges of clay, and protrusions of the underlying rocks, which are subordinate beds of the old red-sandstone formation. In a few spots may be seen traces of oolite, with its characteristic fossils. Except some sterile sands close by the sea and the Loch of Spynie, almost the whole surface of the flat or 'How of Moray' is occupied by cultivated fields, of which wheat is the staple production, or by thriving plantations of Scotch fir, larch, and hardwood. Gneiss is the prevailing rock southward to the confines of Banff and Inverness shires, forming, with its associated granite, beds of limestone, and other primitive rocks, many high and rugged hills, which shelter numerous fertile valleys. Modern plantations have taken the place of the ancient forests of Morayshire.

Around Elgin, and at Covesca, and in several other localities, are inexhaustible quarries of sandstone of every degree of hardness and texture, and of many tints of colour, from the fine rosy hue of Newton to the deep yellow of Bishopmill. The county otherwise is destitute of mineral productions; and with the exception of the supplies of peat and wood which it affords, the inhabitants have to depend for fuel upon the coal-fields of the south. Lime is imported in large quantities from the same quarter.

Hydrography, Communications, &c.—The only portion of Elginshire that touches the sea is the coast-line already described. The rivers belonging in whole or in part to the county, are the *Spey*, the *Findhorn*, and the *Lossie*, with some of their tributaries. The 'rapid Spey' rises in Badenoch, a district of Inverness-shire, and is said to drain about 800,000 acres. In its course through Elginshire it is joined by the *Nethy*, the *Dulan*, and the *Avon*; after the junction of the *Avon* the *Spey* becomes much more impetuous than before. The river runs in a north-easterly direction along the eastern boundary of the county, and, from its numerous windings, its course is nearly 100 miles long, the direct distance being only 75 miles. The *Spey* winds its course through varied and picturesque scenery. It rises among the sterile hills of Badenoch, and passes the sylvan retreats of Rothiemurchus and Castle Grant; its banks are adorned by the mansions of Ballindalloch, Elchies, Aberlour, Arndilly, and Orton, and it waters the valleys of Dipple, Dundurcas, Rothies, Daudaleith, and Dalvoy. Its finest portion is that which lies between the villages of Rothies and Aberlour, and which has the iron bridge of Craigellachie as its centre. The *Findhorn* rises among the Monadhliath Hills in Inverness-shire, and in its course passes through a succession of rugged hills and wooded dales, alternating with rock and meadow. Only a small portion of this stream, which is about 90 miles in length, traverses Elginshire, where it falls into the sea at Findhorn Harbour; it is a broad and shallow stream, being navigable only for small craft when the tide has risen. The scenery of Dumphail and Kelugas, on the *Durie*, a tributary of the *Findhorn*, is much admired by tourists. Salmon are caught in the river *Findhorn*. The *Lossie* runs between the *Spey* and the *Findhorn*, traversing the central part of the county. The deep ravines in its course are often exceedingly picturesque. This river rises in the hills between Dallas and Strathspey. In its lower course it becomes more winding than either the *Spey* or the *Findhorn*. It is joined by the *Lochty*, or *Blackburn*, about two miles to the west of Elgin, and after sweeping round the north side of that town, and the eastern side of Barfathill, falls into the Moray Frith at Lossiemouth, or Stotfieldhead Harbour. Near its influx the *Lossie* receives the surplus waters of the Loch of Spynie. The circumference of this Loch and the quality of its waters have varied greatly at different periods. An underlying bed of marine shells shows it to have been once one of the best-furnished and most extended oyster and cockle-beds in Scotland. After it had been separated from the sea and converted into a lake or lagoon, the salt or brackish water gave place to the fresh, which destroyed all the marine mollusks, and nourished for ages large masses of *Typha* and *Cyperaceæ*, with their attendant species. At various times the waters of the Loch have been partially drained off and considerable portions of land have been reclaimed and

In August, 1829, memorable as the era of the 'Moray Flood', the Loch rose so high as to carry off the floodgate canal by which the superfluous water was never been replaced; and consequently rises and falls with the tide. The Loch of For hosts of wild fowl, particularly of the *rb*, with its island, and remains of a royal water, lying on the outskirts of the county. It trout, as does the Loch of Glonmore, in ver excels Lochindorb in scenery, as it lies in Loch Nabo, between Fochabers and Elgin,

Lochs Trevie, Dallas, and Noir, near the sources of the *Lossie*, are also habitats of the trout.

The leading lines of road are those from Elgin to Forres; from Elgin to Lossiemouth; from Orton, on the *Spey*, to Elgin; from Elgin to Burghhead; from Burghhead to Forres; from Forres to Grantown. Within the last thirty years good cross roads have been constructed in every direction over the county. Except in the winter steam-boats sail regularly from one or more of the Elginshire sea-ports, particularly Burghhead, to London, Edinburgh, Aberdeen, Banff, Inverness, Cromarty, Invergordon, and Golspie. There is neither canal nor railway in the county.

Climate, Soil, Agriculture.—The climate of Elginshire is salubrious. The open, sandy, and gravelly nature of the soil acts as a great natural drain, and, unlike the strong clays of the adjoining counties, prevents the stagnation and consequent evaporation of water, which loads the atmosphere with moisture and reduces the temperature. The northern part of the county is but little elevated above the sea level, and is not so much exposed to cold and moist winds from the German Ocean as Banff and Aberdeen, and, being surrounded on all sides, except the north, by mountains which attract the clouds, it has the reputation of having forty days of fair weather more than the other parts of Scotland. The greatest differences as to the quantity and duration of snow are observed between the higher, or southern, and the lower, or northern divisions of the county. While every operation in agriculture can be carried on without interruption along the coast and for miles into the interior, yet among the hills, south of the line where wheat can be profitably cultivated, the ground sometimes remains for months together, either covered with snow or bound by frost, so as to be inaccessible to the ploughshare. In Elginshire, as indeed on the whole east coast of Scotland, spring is the most severe and trying season. Alternations of heat and cold, with prevailing east winds, frequent snow showers, and late frosts are the usual characteristics of this season. Occasionally north-westerly winds occur, which blow at all seasons of the year, and continue for three or four days at a time.

In the lower or northern division of Elginshire wheat is the staple produce of the arable land, in the upper districts the staple is oats. Its capability to grow and ripen wheat early gave a stimulus to the agriculture of the northern district, which was anciently reputed to be the 'granary of Scotland.' Drill husbandry was early adopted on the larger farms, and now universally prevails. Under the direction and example of the Morayshire Farmer's Club, instituted in 1799, the best breeds of cattle, horses, and sheep, and the most improved agricultural implements, have been introduced. Drainage has been largely and systematically carried out on most farms. Turnips thrive well in all parts of the county; Swedish turnips have been more extensively cultivated of late years, and mangel wurzel has been introduced. On every farm, however small, a regular rotation is stipulated for by the proprietor, and includes a green crop or cleansing once every four, five, or six years. The great majority of farms are comparatively small—from 50 to 100 acres—but some contain from 400 to 600 acres. The almost universal term of lease is 19 years. The cattle chiefly used in Elginshire are the short-horned, and crosses of that breed with the old stocks of the district. Sheep husbandry is extending over the lower part of the county. In the higher part of the county the farms usually have extensive pastures attached, which are better adapted for grazing cattle than the lower districts. In the lower parts the flocks are chiefly composed of the Cheviot and Leicester breeds, with their crosses; while the linck-faced variety are found in the remoter glens and hills. Large flocks of these however are brought down to winter in the more genial valleys near to, and opening upon, the low country. The horses used for agricultural purposes, by careful crossing, have been greatly improved. The improvement in the breed of swine has also been very marked. The dense population of the villages along the shore depend upon the produce of the fisheries for their subsistence. The herring fishery in July and August is their harvest, and affords abundant employment for about six weeks. Of late years the white fish (chiefly cod and haddock), have been cured and exported to the London and other markets.

Towns, Villages, &c.—There are two royal burghs in this county, ELGIN and FORRES. Besides the places already referred to as situated on the coast, the following villages may be noticed:—*Bishopmill*, a small village separated from Elgin by the *Lossie*, contains several grain-mills. Some good villa residences are situated on the north bank, which overhangs the river, and commands a fine view of Elgin and the range of the *Manoch* which lies southward. *Fochabers*, a burgh of barony in the parish of Bellie, one of the most beautifully situated villages in the north of Scotland. In the centre of the village is a fine open square in which are the parish church and an Episcopal chapel. *Miln's Institution* for the free education of the youth of the parish, stands at the east end of the village, and is an elegant structure. The chief ornaments of the neighbourhood, although locally situated in Banffshire, are the buildings and grounds of Gordon Castle, the seat of the Duke of Richmond. *Kingston* is on the *Spey*, one of the most valuable fish rivers in Scotland. Of late years the rent of the fishing in the *Spey*, which was at one time 8000*l.* a year, has been some 2000*l.* or 3000*l.* lower. The fish have been decreasing in number as well as in

size. Kingston is the chief ship-building station on the Moray Frith. *Lossiemouth*, or Stotfieldhead Harbour, in the parish of Drinny, is the chief sea-port for Elgin, the county town, which lies $5\frac{1}{2}$ miles inland. A new harbour was completed in 1839. It has two inner basins. The depth at its entrance at low water spring tides is under 4 feet; the rise of tide at springs is 11 feet; at neaps, 8 feet, and sometimes 10 feet. There are many residences of proprietors and mansions dispersed throughout Elginshire, as Dalvoy, Brodie, Moy, and Kincoorth on the Findhorn; Sanquhar House, Invererie, Grangehall, Lea Park, and Drumduan, in the vicinity of Forres; Elchies, and Orton House on the Spoy; and Innes House, Duffus House, Gordonston, Grant Lodge, Milton Brodie, Bromoriston, Westerton, Pitgavenny, Findrassie, Palmercross, Invergie, and Newton in the neighbourhood of Elgin.

Divisions, &c.—The whole county is included in, and forms part of, the Synod of Moray. According to the 'Census of Religious Worship and Education,' taken in 1851, it appears that, so far as was ascertained, there were then in the county 64 places of worship, of which 25 belonged to the Established Church, 20 to the Free Church, 8 to the United Presbyterian Church, 4 to the Independents, 3 to Episcopalians, 2 to Baptists, and 2 to Roman Catholics. In 62 of these 64 places of worship the number of sittings is stated at 28,293. The number of day schools in the county was 96, of which 65 were public schools, with 4649 scholars, and 31 were private schools, with 1077 scholars. Of Sabbath schools there were 61, with 4213 scholars. Of these schools 22 were connected with the Established Church, 18 with the Free Church, and 8 with the United Presbyterian Church.

History, Antiquities.—The names of many places in the county are of Celtic origin. The situation and climate of Elginshire caused it to be early visited and occupied by the Scandinavian tribes, who, under their sea kings, roamed over the north-west of Europe. The early history of Moray is closely connected with their inroads and settlements, which have no doubt largely contributed to mark the distinction which Elginshire, along with the eastern counties, shows in the language, features, names, and habits of its population, as contrasted with those of the central and southern parts of Scotland. About 1160 Malcolm IV. entered the province of Moray, and subdued the rebellious spirit of its inhabitants, transferring many of them, it is said, to other parts of his dominions. Subsequent to this there is little in the provincial history distinct from that of Scotland.

Among the antiquities of Elginshire the ruins of Elgin cathedral hold the first place. [ELGIN.] The Priory of Pluscarden, situated seven miles west of the town of Elgin, was founded in 1230 for Cistercian monks. In 1460 the priory was assigned to another order of the regular clergy. The ruins, which are very picturesque, stand in a well-wooded glen. The Abbey of Kinloss, two miles N.E. from Forres, once a noble structure, now exhibits but a few scattered ruins. This establishment was largely endowed, and was presided over by a mitred abbot. The oldest ecclesiastical building in the county of which there are any remains is the church of Birnie. Standing on a small isolated knoll this structure appears to have been raised prior to 1224, when the first Elgin cathedral was built. It is of early Norman style. Some of the earliest of the bishops of Moray are buried in it. It is still used as the parish church. The Bishop's Palace at Spynie, his town house, close by the cathedral, and the ruins of the Grayfriars, are of interest to the antiquary. The other objects of antiquity in Elginshire are Randolph's Hall, in Darnaway Castle, a room 89 feet long by 35 feet broad, with its lofty roof of oak, which was built by Randolph, Regent of Scotland, in the time of David Bruce: in it Queen Mary held her court in 1564; the castles of Old Duffus, Dallas, Rothos, and Dunphail; and the towers of Burgie, Blervie, Aslisk, and Coxton.

Industry.—The inhabitants of Elginshire are chiefly dependent on agriculture. The land is cultivated either by the tenant and his family, or by servants, male and female, engaged every six months. The only factory, properly so called, is one in the vicinity of Elgin, where about 50 of the population of the town are employed in the fabrication of tweeds, tartans, plaids, &c. One of the chief manufactures of the county is that of whisky, there being seven distilleries in constant work. Two breweries at Elgin and one at Forres carry on an extensive trade. Elgin ale and table-beer have been long in repute. At Elgin there are a foundry, a tannery, and two rope works. A brick and tile work is carried on near the Loch of Spynie. In 1851 there were two savings banks in the county, at Elgin and Forres. The amount owing to depositors on 20th November 1851 was 28,540*l.* 0*s.* 8*d.*

ELHAM, Kent, a small town and the seat of a Poor-Law Union, in the parish of Elham, is situated on a feeder of the Stour, in $51^{\circ} 10'$ N. lat., $1^{\circ} 6'$ E. long., distant 10 miles S. by E. from Canterbury, and 65 miles S.E. by E. from London. The population of the parish of Elham in 1851 was 1207. The living is a vicarage in the archdeaconry and diocese of Canterbury. Elham Poor-Law Union contains 20 parishes and townships, with an area of 36,928 acres, and a population in 1851 of 18,680. The parish church is a handsome and commodious edifice; the body of the church is of the transition from the Norman to the early English styles; the clerestory, the roof, and the east window of the chancel are perpendicular; the tower is decorated. There are chapels for Wesleyan Methodists and Bryanites; National and British schools; and a Free school, founded in 1727.

(Hasted, Kent; Communication from Elham.)

ELIMBERIS. [AUCH.]

ELIS or ELEA, a district of the Peloponnesus, included between Achæia, Arcadia, Messenia, and the Ionian Sea. Its coast-line extended from the river Larassus in the promontory Araxus on the north to the mouth of the river Neda on the south: on the east it was bounded by the Arcadian Mountains, on the west by the sea. Elis was originally divided into three parts, the northern called hollow Elis (κοίλη Ἠλίας), the middle called Pisatis, and the southern Triphylia. The earliest inhabitants of this territory were the Epeans and Pylians, who occupied the whole western coast of the Peloponnesus from Araxus to Taygetum, the line of demarcation between these two tribes being on a line with Cape Ichthys. (Leake's 'Morea,' ii. p. 182.) The chief towns of the Epeans were, in the time of Homer, Elis and Buprasium. ('Iliad,' B. 615, & 630.) The Eleans were the first people in the Peloponnesus who experienced the effects of the Dorian invasion, as their territory was the landing-place of the invaders, and was assigned by them to their ally the Ætolian Oxyllus, who claimed to be descended from Ætolus, the son of Endymion, a mythical king of the Epeans. Oxyllus and his new subjects conquered Pisa and Olympia, where the Olympian games were established about B.C. 1104, though they were not regularly celebrated till Corcebus gained the prize in B.C. 776. Those games exercised a most important influence on the subsequent destinies of Elis. The reverence with which the Greeks in general regarded this festival was extended to the country in which it took place, and the districts in the neighbourhood of the cities of Olympia and Elis were always free from the ravages of war so long as the games maintained their respectability. In the earlier periods the Pisatans sometimes presided over the celebration of the games; but the wars between Messenia and Sparta enabled the Eleans to form a very intimate connection with the Spartans, which ended in a tacit understanding that the intervening sea-coast should be divided between the two powers; the resistance of the Pisatans only brought upon them the destruction of their city, B.C. 572, which from this time disappears from history, and the annexation of all Pisatis and Triphylia to Elis. The harmony between Elis and Sparta continued uninterrupted during the Peloponnesian war till the peace of Nicias B.C. 421, when the Spartans assisted the Lepreatae in their revolt against the Eleans, and the latter endeavoured to avenge this interference by excluding the Spartans from the Olympic games. After some years of misunderstanding, they were compelled to return to the Spartan alliance by the invasion of Agis, which deprived them of the greater part of their political importance. In B.C. 365 they were engaged in a war with the Arcadians, which deprived them of almost all their southern territories. The Eleans were firm supporters of the Ætolians during the social war, and never joined the Achæan league. Under the Romans Elis continued to possess a measure of prosperity, until the suppression of the Olympic games by Theodosius in A.D. 394. In 396 the country was laid waste by Alarie. In the middle ages the country was occupied by Gottfried of Villehardouin and other military adventurers, who built several fortresses, around which small towns grew up. Elis subsequently passed into the hands of the Venetians, under whom it continued to flourish for a considerable period. It has now lost nearly all its ancient prosperity, and is a poor and thinly peopled district; the only place of any importance in it being the small town of *Pyrgos*, which has an appearance of considerable industry and activity, it being the mart from which the produce of the country is exported and European goods are received.

The coast of Elis is an almost unbroken sandy level; the only protection for vessels being such as is afforded by the promontories of Araxus, Chelonatas, and Ichthys. From the nature of the coast the numerous small streams are prevented by narrow sand-banks from entering the sea and form shallow stagnant lagoons, which produce constant malaria and render the coast almost uninhabitable. During the summer months openings are made in the sand-banks, and the lagoons become speedily filled with fish, which are readily taken: this kind of fishing is believed to have been also practised here in ancient times. The fish are salted and cured on the spot, and largely exported. The principal sea-port of Elis was Cyllene, which Colonel Leake supposes to be the modern *Clarenza*. ('Travels in the Morea,' ii. p. 174.) The surface of the country is considerably diversified, but has a general elevation from the coast westward; the country consisting in fact of the eastern slopes of the Arcadian Mountains. Towards the coast the soil is sandy, in the valleys and meadows it is argillaceous, or a rich mould; and stone is found only in the mountains. (Leake, ii. p. 179.) The territory was more fertile than any other in the Peloponnesus, and very populous, and is said to have been the only one in Greece which produced flax; for which indeed the plain of Gastuni is still celebrated. A great quantity of fine timber, especially oak, still grows in Elis; wheat and cotton are cultivated. Horses, cattle, and oxen were reared in large numbers in ancient Elis. The principal rivers are the Alpheius (Rofea), which flows along a broad and fertile valley through the centre of Elis, and the Peneius (Gastuni). Its chief mountain, Pholoe, was celebrated in ancient poetry and mythology. This name appears to have been given to all the highlands of Elis north of the river Alpheius.

The plains of Elis were interspersed with numerous unwall

towns and villages; the only fortified city was the capital Elis. This city was originally called Ephrya, and, according to Colonel Leake, changed its name in the time of Oxyllus. It stood at the foot of the hill now called Kaloskopi (the Venetian 'Belvidero'), on which was the acropolis of the city. In the ancient city was a famous gymnasium, the largest in Greece, in which the athletes who contended in the Olympic games were obliged to undergo a month's preparatory training. There were besides several temples and store, a theatre, in the agora (which also served as a hippodrome) were various statues; and on the acropolis was a temple of Athena in which was a

Coin of Elis.

British Museum. Actual Size. Silver. Weight, 183 $\frac{1}{2}$ grains.

statue by Phidias of the goddess in gold and ivory. When Pausanias visited Elis the city was one of the most magnificent and populous in Greece. Now little more remains of it than "several masses of Roman tile and mortar, with many wrought blocks of stone and fragments of sculpture scattered over a space of two or three miles in circumference." (Leake, i. p. 5.) On its site are two or three collections of mean houses, which together are called *Paleopolis*.

(Leake, *Travels in Morea*; Curtius, *Peloponnesos*.)

ELIZABETGRAD. [CHERSON.]

ELLENBOROUGH. [CUMBERLAND.]

ELLESMERE, Shropshire, a market-town, and the seat of a Poor-Law Union, in the parish of Ellesmere, and Ellesmere division of Pimhill hundred, is situated in 52° 54' N. lat., 2° 52' W. long., distant 19 miles N.N.W. from Shrewsbury, and 169 miles N.W. from London by road. The population of the town in 1851 was 2087. The living is a vicarage in the archdeaconry of Salop and diocese of Lichfield. Ellesmere Poor-Law Union contains 17 parishes and townships, with an area of 70,974 acres, and a population in 1851 of 15,226.

Ellesmere owes its name to the beautiful mere or lake close to which it stands. The manor was granted by King John to Llewellyn, prince of North Wales, who married Joan, the king's daughter; but it seems only to have been held at the will of the king. In the reign of Elizabeth it was alienated to Thomas Egerton, who was afterwards Lord Chancellor, and was created Baron of Ellesmere. There are no remains of the castle; the eminence on which it stood is now used as a bowling green. The town is neat and clean, and lighted with gas. The church is large, partly of the 14th century, but various portions are of later dates. The nave, which was rebuilt in 1849, is in the early decorated style. The Independents and Wesleyan and Primitive Methodists have places of worship. There are National schools; a school at the Independent chapel; a church school; a dispensary, a provident society, a mechanics institute, and a savings bank. The market is held on Tuesday; flax and stockings are the principal articles sold. Malt and tanning are carried on. Six fairs are held in the year. The Ellesmere and Chester Canal is of great importance to the trade of the town.

(Communication from Ellesmere.)

ELICHPO'OR, a principal city in the province of Berar, is situated in 21° 14' N. lat., and 77° 19' E. long., about 100 miles W. from Nagpore. It lies in the Doab, between the Sarpan and the Beechun rivers, which form a junction near Elichpoor, and afterwards fall into the Poorna. This city is held, together with a small surrounding territory, by a petty chief, who is nominally dependent upon the Nizam of Hyderabad, but is under the protection of the English. The palace of the chief is a handsome and commodious building, and the bazaars and houses in the vicinity are built of brick. The rest of the city consists of mud houses.

ELLORIE. [CIRCARS, NORTHERN.]

ELMINA. [GOLD COAST.]

ELLO'RA, or ELLO'RA, a town situated near the city of Dowletabad, in 20° 1' N. lat., and 75° 13' E. long. It forms a part of the Nizam's dominions, these being under British protection. This place was once of considerable importance. It is to the excavations near the town that Elora owes its celebrity. These excavations, which occur in a mountain about a mile to the east of the town, were formerly Hindoo temples of great sanctity, although they are now never visited except from curiosity. They are cut out of the solid rock, and the labour which they cost must have been prodigiously great. The largest cave, which is called the Kailasa, is 247 feet long and 150 feet wide. It contains sculptures of almost every deity of the Hindoo mythology, and most of them of colossal size. This chamber contains the Great Temple, which is a monolith, or solid piece of rock hallowed out; it is 103 feet long, and its greatest breadth is 61 feet; its interior height is 18 feet; but its exterior rises in a pyramidal form to the

height of more than 100 feet. There are several other large temple-caves in different parts of the mountain. There are also numerous smaller excavations without sculptures. The date of the excavation of these caves is unknown; they were probably constructed at various times and by different princes.

(Seely, *Wonders of Ellora*; *Asiatic Researches*, vol. vi.; *Transactions of Lit. Soc. of Bombay*, vol. iii.)

ELPHIN, Roscommon, a post and market-town, and the seat of a bishop, in the parish of Elphin, is situated in 53° 50' N. lat., 8° 10' W. long., distant about 14 miles N. from Roscommon, and 77 miles W.N.W. from Dublin. The population of the town in 1851 was 1229. The town consists chiefly of one long irregular street of rather mean houses. The cathedral and the bishop's palace, which are seen from a considerable distance, give a picturesque appearance to the town. The cathedral is a plain building, 80 feet long, and 28 feet in breadth; it has a square tower; the interior of the structure is rather neat. The bishop's residence is an old building situated on the summit of the ridge on which the town stands. There is a dispensary here for the Carrick-on-Shannon Poor-Law Union. Four fairs are held in the course of the year.

The chapter consists of a dean, precentor, archdeacon, and eight prebendaries. The see of Elphin was founded about the end of the 5th century by St. Patrick, who set over it Asi as its first bishop. Asi, like many others of the primitive Irish bishops, was a distinguished worker in metals. Elphin is now united to the diocese of KILMORE and Ardagh.

ELSINORE, or ELSINEUR, in Danish *Helsingör*, a sea-port town in the Danish island of Seeland, is situated at the narrowest part and on the west shore of the Sound, opposite the Swedish town of Helsingborg, from which it is three miles distant, in 56° 2' 11" N. lat., 12° 36' 49" E. long., and has about 8000 inhabitants. It is here the Danish government collects the Sound dues from all merchant vessels except those belonging to Sweden and Denmark. [BALIC.] On a tongue of land east of it is the castle and fortress of Kronborg, the guns of which command the Sound in all directions. The castle is built of white stone in the gothic style. From the top of the great tower or from the lighthouse which rises at the north-western angle of the court-yard, fine views of the strait and neighbouring countries may be obtained. At a short distance to the north-west of the town is a handsome palace called Marienlyst, with an hospital for seamen, built upon a commanding eminence close to it. The pleasure-grounds of the palace are open to the public, and command noble views. Elsinore itself is an open town, and has been much improved of late years. It consists of a main street of considerable length, with several lateral streets. The harbour is accessible to ships of small draught. The town contains two churches, a town-hall and high school, an infirmary and hospital, a theatre, and a quarantine establishment. Independently of a good foreign trade, the townsmen are employed in making straw hats, arms, refined sugar, brandy, &c., in printing cottons, and in the fisheries. The harbour is formed by a wooden pier. Elsinore is about 22 miles N. from Copenhagen, with which it is connected by electro-telegraphic wires. It was the birthplace of Saxo Grammaticus, a celebrated writer of the 12th century, and is the scene of Shakspeare's tragedy of 'Hamlet.' Foreign consuls reside at Elsinore. Caroline Matilda, wife of Christian VII. of Denmark, was imprisoned on a charge of adultery in the castle of Kronborg until the interference of her brother, George III. of England, procured her removal to Zell. Under the castle are casemates capable of holding 1000 men. The vaults beneath are the fabled residence of Holger Danske, the great mythic hero of the Danes. Steamers ply to Copenhagen daily, and Swedish, English, and Russian steamers to ports in the Baltic, call at Elsinore. In hard winters the Sound is frozen across.

ELSTER. [ELBE.]

ELSTOW. [BEDFORDSHIRE.]

ELTHAM. [KENT.]

ELVAS. [ALEMTEJO.]

ELY, Cambridgeshire, an episcopal city, market-town, and the seat of a Poor-Law Union, is situated in 52° 24' N. lat., 0° 15' E. long., distant 16 miles N.N.E. from Cambridge, 67 miles N. by E. from London by road, and 72 $\frac{1}{2}$ miles by the Eastern Counties railway. The population of the city of Ely in 1851 was 6176. For sanitary purposes the city is governed by a Local Board of Health. The livings are perpetual curacies in the archdeaconry and diocese of Ely. Ely Poor-Law Union contains 13 parishes and 1 chapelry, with an area of 82,270 acres, and a population in 1851 of 22,816.

Ely is the capital of that division of Cambridgeshire which is called the Isle of Ely, in the northern part of the county. Etheldreda, daughter of Anna, king of East Anglia, and wife of Oswy, king of Northumberland, retired here about the year 670, and soon after founded a monastery, of which she became the abbess. In 870 the abbey was pillaged and destroyed by the Danes, and its revenues were annexed to the crown. In 970 Edgar granted the isle to Ethelwold, bishop of Winchester, who rebuilt the monastery, and provided it with monks. After repeated attacks of William the Conqueror, the inhabitants, who made a gallant defence, were obliged to surrender; many of them were put to the sword, and most of the valuable furniture and jewels of the monastery were seized; but through the

firmness of Theodwin, who had been made abbot, the property was restored.

In 1107 Ely was erected into a bishopric by Henry I. Henry VIII., after the surrender of the monastery, granted a charter to convert the conventual church into a cathedral, by the title of the Cathedral Church of the Undivided Trinity. The cathedral of Ely displays a singular mixture of styles of architecture, but taken as a whole it is a noble structure. The most ancient part is the transept, which was erected in the reigns of William Rufus and Henry I. The nave and great western tower were built in 1174; the other parts were erected at different periods between that time and the year 1534. The interior is exceedingly beautiful; the nave is supported by lofty columns, which are almost without ornament. The octagon-tower combines solidity with gracefulness; and the choir is a perfect specimen of early English architecture. The stalls are beautifully carved. The Lady chapel is a most elaborate example of early English. The length of the cathedral, including the Galilee porch, is 517 feet; and the western tower is 270 feet high. There are many interesting monuments. Ely cathedral has been for several years undergoing the most extensive repairs and restorations under the supervision of the dean and chapter. The interior has been beautifully restored, and the works have been effected in a thoroughly substantial and judicious manner.

The city is situated on a considerable eminence near the river Ouse. It consists principally of one long street; the market-place, which is in the centre of the town, contains a commodious corn exchange. The city is lighted with gas. The town-hall is a commodious building, containing in the central portion court-rooms, in the south wing a chapel, and in the north wing an infirmary; a house of correction is at the back.

St. Mary's church is a handsome building, partly Norman with portions of early English. The church of the Holy Trinity, which is attached to the cathedral on the south side, was formerly the Lady Chapel. It was commenced in the reign of Edward II., and is one of the most perfect buildings of that age. It is 200 feet in length, 46 feet in breadth, and 60 feet in height; it has neither pillars nor side-aisles, but is supported by strong buttresses, surmounted with pinnacles. There are chapels in Ely for Baptists, Independents, Wesleyan Methodists, and the Countess of Huntingdon's Connexion. The Grammar school, founded by Henry VIII. in 1541, is under the control of the dean and chapter, who appoint the master. The school is free to 24 boys, called king's scholars, who in addition to instruction receive 3*l.* 6*s.* 8*d.* each per annum. The number of scholars in 1853 was 41. There are also National schools, a Charity school, founded in 1730, a mechanics institute, and a savings bank. A county court is held in the town.

The soil in the vicinity is exceedingly fertile, and supplies great quantities of fruit, vegetables, and butter to the London market. There is a considerable manufactory for earthenware and tobacco-pipes, and there are several mills in the isle for the preparation of oil from flax, hemp, and colc-seed; lime-burning is carried on, and there are several breweries. By the river Ouse and by canal there is water communication with Cambridge, London, Lynn, and Wisbeach. The market is on Thursday for corn and cattle. The fairs are on Ascension Day and the eight following days, and October 29th for horses, cattle, hops, and Cottenham cheese.

The secular jurisdiction formerly possessed by the bishops of Ely is taken away by the 6th and 7th Will. IV. c. 87, and vested in the king, who is empowered to appoint a Custos Rotulorum for the isle. The assizes are now held by her Majesty's judges who join the Norfolk circuit.

The diocese of Ely is in the province of Canterbury. The diocese extends over Cambridgeshire, Bedfordshire, Huntingdonshire, and a part of Suffolk, and comprises 529 benefices. It is divided into four archdeaconries, Ely, Bedford, Huntingdon, and Sudbury. The chapter consists of the dean, the archdeacons, seven canons, five minor canons, and a chancellor. The income of the bishop is fixed at 5500*l.* The bishop has considerable patronage at Cambridge; he is visitor of four colleges, appoints absolutely to the mastership and one fellowship of Jesus College, chooses one out of two nominated by the society to be master of St. Peter's College, and has besides a considerable number of livings in his gift.

(Bentham, *History of Ely*.)

EMBRUN. [ALPES, HAUTES.]

EMDEN, the chief town of the province of Aurich, in Hanover, is situated in 53° 22' 3" N. lat., 7° 12' 38" E. long., a little below the outfall of the Ems into Dollart Bay, and has about 12,000 inhabitants, nearly 500 of whom are Jews. The town stands on the east shore of the bay, and is connected with the Ems by a canal about two miles long, called the Delf Canal, which was constructed in 1769. It is surrounded with walls and towers, and consists of Faldern, the old town, and two suburbs, which contain about 2250 houses. It is intersected by canals, over which are 30 bridges. Its spacious town-hall, with an old armoury and library, is one of the finest buildings in East Friesland. There are six churches, of which three belong to Dutch Calvinists, one to French Calvinists, one to Lutherans, and one to Roman Catholics. There are also a synagogue, a gymnasium, schools of navigation and design, elementary schools, a richly endowed

orphan asylum, a castle and custom-house, barracks, and societies of the fine arts and national antiquities.

The population of Emden in 1652 amounted to 20,000, and owned upwards of 600 vessels. A century afterwards the town had so much declined that the population did not exceed 8000. It came into the hands of Holland in 1808, was made the chief town of the department of Ostern in 1810, and in 1815 was, with the whole of East Friesland, incorporated with the kingdom of Hanover. The port, consisting of an outer and an inner harbour, is shallow. Emden has been a free port since 1751; but the Delf Canal, which unites the harbour with the town, and is drained and cleansed by means of five inland canals, has frequently no water in it, and can be entered at high water only; and even then it is not navigable by vessels which draw more than 13 or 14 feet water. All ships of greater draught are obliged to discharge their cargoes in the fine roadstead called Delf, into which the canal opens. There is a treckshuyt, or towing canal, about 14 miles in length, between Emden and Aurich.

Emden is the chief commercial place in Hanover; and ship-building is carried on to a considerable extent. As early as the year 1682 it had an African trading company, and in the middle of the last century an East India company. The herring fishery off Scotland, which is a source of great profit to the place, is carried on by four companies, who send out between 50 and 60 ships. Emden has brandy distilleries and sawing and oil-crushing mills, besides manufactories of flusteria, cottons, stockings, sail-cloth, cordage, needles, leather, soap, tobacco, &c. It has considerable trade in linen, thread, corn, butter and cheese, tallow, wool, hides, &c. Opposite the harbour are the small remains of the island of *Nessa*, or *Nesserland*. It is separated from Delf by a swampy arm of the Ems, and previously to the inundations, which overwhelmed it between the years 1277 and 1287, formed a beautiful spot of about 80 square miles, with a town called Torum, two market-towns, numerous villages, and several monasteries and convents. All that is left of it at the present day is a church and five or six houses, built on high mounds of earth, but protected by dams from the sea. A railway is in course of construction from Emden southward through Lingen and Osnabrück to the Cologne-Minden line, which leads to Hanover.

EMESA. [SYRIA.]

EMLY, Tipperary, a small market-town which gives name to a bishopric, is situated in 52° 25' N. lat., 8° 17' W. long., about 7 miles W.S.W. from Tipperary, and 112 miles S.W. from Dublin by the Dublin and Cork railway. It is said that Emly was anciently a city of some importance, but it is now an insignificant place. The population in 1851 was 425. The parish church is a good building. The ruins of the cathedral present little of interest. The see of Emly was founded by St. Ailbe, who died in the year 527. It was united to the archiepiscopal see of Cashel in 1568. The sees of Cashel and Emly are now united with those of Waterford and Lismore. The chapter consists of a dean, precentor, chancellor, archdeacon, and five prebendaries.

EMMERICH. [DÜSSELDORF.]

EMPOLI. [FIRENZE.]

EMS, the ancient *Amisus*, a river in the north-west of Germany, which has its source in the Teutoburg Forest, to the north-west of Paderborn, in Westphalia. From this point the river pursues a sluggish westward course between low banks to Rietberg, then turns to the north until it approaches Harsewinkel, where it bends again to the west past Warendorf and Telgte, and thence flows north-westward to Schüttdorf, in Hanover, below the town of Rheine, where it quits the Prussian territory. At Fuestrup, about 5 miles below Telgte, it is from 4 to 5 feet deep; and about 5 miles lower down it becomes navigable for small flat-bottomed vessels. It enters the Hanoverian dominions above Schüttdorf, and traverses them for about 70 miles. The general direction of this part of its course, in which it makes numerous bends, is due north, until it quits the province of Osnabrück, in passing through which it approaches within a short distance of the town of Lingen, and has that of Meppen on its right bank. The Ems in this part, though full of water in the rainy season, is so shallow in dry weather that a canal, called the Ems Canal, has been opened from Haukensfähe, about 8 miles above Lingen, which runs parallel with the river, has a depth of 5 feet, and rejoins the Ems at the confluence of the diase at Meppen. From this town to Papenburg its bed has been deepened, so that in the shallowest spots it has a depth of three feet. Just above Papenburg the river winds eastward, and then inclining somewhat to the north-east runs on to Leer, whence it pursues a northerly course till it has passed Vornhasen, and from this spot turns to the north-west, and ultimately enters Dollart Bay in about 53° 18' N. lat. The Oster (East) and Wester (West) Ems, which are formed by the sand-banks Rausel and Borkunrif, are the channels by which the Ems discharges its waters into the North Sea. Between the Rausel and Dollart the Ems is wide, and separates East Friesland from the Dutch province of Groningen. The Ems below Leer widens to a breadth of 300 feet, and between the Dutch and Hanoverian territories its width varies from 5 to 9 miles. The whole length of this river is estimated at about 210 miles, and it is navigable for vessels of 80 or 100 tons burden as high as Papenburg, where it ceases to be affected by the tides. Its principal tributaries on the right bank are the Hase, which passing Osnabrück

falls into it at Meppen, after a course of about 125 miles; the Aa, which rises in the northern part of the Teutoburger Wald, and falls into the Ems a few miles above Lingen; and the Leda, which enters Hanover from the duchy of Oldenburg and joins the Ems near Leer, after a course of about 56 miles. On the left bank the Ems receives only the little river Ahe, which passes Münster. The basin of the Ems has an area of only about 5000 square miles, the smallest area of any of the rivers which fall into the North Sea.

Dollart Bay, which was formed by the terrible inundation of 1277 [1280], is about 10 miles long from north to south, and about 6 miles across at its greatest width. At its north-western extremity the Ems leaves it by a channel about two miles wide at its narrowest part. It has been slowly filling up for centuries past, and about two square miles of land are recovered from it every forty years by pushing out embankments to protect the newly-formed alluvial soil.

ENARYA, a country in Africa, west of Abyssinia, which was visited by the Portuguese Antonio Fernandez in the 17th century. Modern travellers have collected information respecting it; according to which, this country is situated 15 days' journey from Basso, on the Nile, or twenty days' from Gondar, between 6° and 8° N. lat., 33° and 37° E. long. It is described as more elevated than all the countries which surround it. In the centre of the country is a group of very high mountains called Kheresa; on its northern declivity originate the Kibbe and the Maleg rivers, which fall into the Abai. The rivers which originate on the southern declivity of the Kheresa Mountains fall into the Goshop. A great portion of the country is covered with forests, in which several kinds of trees are found which bear edible fruits, and one of them is used for dyeing black. The coffee-tree is indigenous, and met with in such abundance that the wood is used as fuel; it attains a height of 12 to 14 feet. Elephants, giraffes, and buffaloes are stated to abound, as well as some other kinds of wild beasts. Civet cats are so numerous that civet musk forms an important article of exportation. Gold is also exported; but it is not known if it is collected in the country, or brought to it from some distant part of Africa. The capital of Enarya is *Sakka*, which appears to be a considerable place not far from the banks of the river Kibbe, and is visited by caravans which come from Basso and from Gondar in Abyssinia. These Abyssinian merchants bring to Sakka rock-salt, which under the name of 'amolé' constitutes the currency of the country, beads of different kinds, several kinds of cotton-goods, copper, daggers, knives, guns, and kitchen utensils. They export from Enarya coffee, musk, slaves, gold, and the skins of lions, panthers, black leopards, and antelopes; also ivory and horses. The inhabitants of Enarya belong to the widely-spread nation of the Gallas. A small portion of the population and the royal family are Mohammedans; but the larger number of the inhabitants are still heathens. It is said that among them a small number of Abyssinian Christians is found. (Isenberg and Krapf, *Travels in Abyssinia*; *London Geographical Journal*, vol. x.)

ENDEAVOUR STRAIT. [TORRES STRAIT.]

ENFIELD. [MIDDLESEX.]

ENGADIN, the valley of the Upper Inn, in the canton of the Grisons, in Eastern Switzerland, runs from south-west to north-east, from the sources of the Inn at the foot of Mount Maloya to the defile of Finstermünz, where the Inn enters the Tyrol, a length of about 50 miles. It is the largest valley in Switzerland next to the Valais, and one of the finest; it lies between the Lepontian and the Rhetian Alps, both of which branch off from Mount Malaya. The northern or Lepontian ridge, which contains the summits known by the names of Julier (6800 feet), Albula (7200 feet), Scaletta (8000 feet), &c., divides the waters of the Inn from those of the Albula, the Lanquart, and the Iller, which flow into the Rhine. The southern range, in which there are several glaciers, consists of the Monte dell' Oro (8000 feet), the Bernina (6200 feet), the Casanna, the Fracale, &c., and divides the valley of the Inn from the Valtellina, and from the valley of the Upper Adige in the Tyrol. More than twenty transverse valleys open into the longitudinal valley of Engadin. The width of the plain which forms the bottom of the valley of Engadin is from one to two miles in its widest parts, but it is much narrower in many places.

The slopes of the mountains are covered with pine forests or pastures. The Upper Engadin being more elevated than the lower part of the valley has a keener air and sharper winters; snow hardly disappears in June; winter commences in September, and in the short summer frosts at night are frequent. Here potatoes sometimes succeed; but the barley harvest is uncertain. The Lower Engadin enjoys a milder climate: barley, rye, peas, potatoes, and hemp succeed; in the lowest part of the valley flax is cultivated with success. The cherry and other fruit-trees are also met with. But the chief wealth of Engadin, and especially of the upper part of it, consists in its cattle; its cheese equals that of Gruyère, and is largely exported. Many of the men emigrate to Italy and other foreign countries, where they follow the trade of pastry-cooks and confectioners. Some of them make money, with which they return home and build fine houses, which are conspicuous objects in most of the villages. Bands of Tyrolese spread themselves over the valley to make the hay harvests. Masons, carpenters, and smiths are mostly foreigners. Leather is imported, while a quantity of raw hides are exported. Most of the pastures on the high Alps are let to herdsmen from Bergamo, who migrate thither with their cattle in the summer months.

The villages of Engadin are chiefly along the road which follows the course of the Inn for the whole length of the valley, and then leads into Tyrol by St. Martinsbrück, and joins the high road coming from Italy by the Stilfsor Joch to Innsbruck. New roads have been recently completed from the Val Canonica to Tirano in the Adda, and over the Bernina to Sondrio in the Valtellina. Several paths lead from Engadin into the other valleys of the Grisons.

Upper Engadin is divided into 11 communes; Lower Engadin into 10. The whole population is estimated at about 8000, of which Lower Engadin contains 5000. Upper Engadin returns three members and Lower Engadin four to the Great Council, or legislature of the canton. Every commune elects its municipal magistrates, and each of the two divisions of the valley has its landammann and its court of justice, the members of which are renewed every two years.

The people of Engadin are Reformed Calvinists, with the exception of the commune of Tarasp, which is Catholic, and which belonged to Austria till 1801. They speak the Ladin or Romansch, a dialect which has much resemblance to Italian. There are books printed in Ladin.

Schuols, or *Schulz*, in Lower Engadin, is the largest village in the whole valley; it contains 1150 inhabitants, and has a handsome parish church. *Zernetz*, pronounced and sometimes written *Cernetz*, also in Lower Engadin, has about 500 inhabitants. *Samaden*, which is the principal village of the Upper Engadin, has about 500 inhabitants, some fine houses, and three churches. [GRISONS.]

ENGHIEN. [HAIRNAULT.]

ENGLAND. The general description of this part of the island will be found under the head of GREAT BRITAIN; and that of Roman Britain under the head of BRITANNIA. We here give a short account of its state before the Norman Conquest.

England, originally Engla-land, Engle-land, and Engle-lond, means the land of the Angles, Aengles, or Engles. It is usual to speak of the people who occupied the south of Britain before the Norman Conquest by the names of the Saxons or the Anglo-Saxons; but each of these appellations is apt to lead to some misapprehension. By the Anglo-Saxon people and language seem commonly to be understood the nation and language of the English Saxons, as distinguished from the Saxons of Germany. In this sense however we believe the word is altogether a modern formation. Our ancestors before the Norman Conquest did not call themselves Anglo-Saxons, as meaning the English Saxons or the Saxons of England. Asser indeed designates Alfred as Angul-Saxonum Rex; but the meaning intended to be conveyed by this awkward compound term appears to have been, not the English Saxons, but the Angles or English and the Saxons. When the Saxon part of the population alone was spoken of, they were never called the Anglo-Saxons or English Saxons, but simply the Saxons, or, as the case might be, the West or East or South Saxons. It is true that foreigners and others did not always use the term with proper discrimination. The Welsh and the Scots of North Britain appear to have employed the designation in its more general sense. The Sassenagh is still the name given to the English by the Scottish Highlanders, by the Irish, and by the Welsh; and anciently the southern part of the present Scotland, which was chiefly occupied by a population of English descent, was known in the more northern parts by the name of Saxonia or Saxony. The prevalence again of the term Saxon in modern times, as applied to the entire population of England before the Norman Conquest, and to the language then spoken in the country, is to be attributed principally to the appropriation of the term English to the inhabitants and the language of the country since the Conquest, and also perhaps in part to the circumstance of the state which eventually obtained the general sovereignty in the times previous to the Conquest having been a Saxon state. But the name by which the entire population was commonly described in those times by natives of the country was certainly not the Saxons, but the Angles or the English; and that from the earliest date to which our evidence on the subject extends. We find the Kentish king Ethelbert subscribing himself to a charter "Ego Ethelbertus, Rex Anglorum," in virtue apparently of his dignity as Bretwalda, or supreme monarch, which he held from about the year 589 till his death in 616. The kings of Wessex, after they acquired the sovereignty of the whole country, although their own state was Saxon, called themselves, not kings of the Saxons, but kings of the Angles and of England. From circumstances like these we may reasonably conclude that the country was called England, and the people and their language English, from the time of the introduction of Christianity.

To the circumstances of that introduction we would trace this use of the names. The captives from Britain exposed for sale in the market-place of Rome, who first drew upon their country the attention of Gregory, afterwards pope, were Angles, as the well-known pun, "They would be not Angles, but angels, if they were but Christians," which the name of their nation and their fair appearance suggested to Gregory, may remind us. It was the Angles therefore that Gregory formed the desire of converting; and it was to the inhabitants of Britain considered as Angles that Augustine and his companions were some years afterwards sent as missionaries. These circumstances were enough to fix the name as the proper Christian appellation of the nation. The constant use of this appellation by the venerable Bede in his great work, 'Historia Ecclesiastica Gentis Anglorum,' may be

reasonably supposed to have had much effect in establishing its acceptance in the sense in which it is there employed. In this way the terms England and English came into universal use as the proper names of the country, the people, and the language, just as they are at this day.

According to the statement of Bede, which, repeated in the Saxon Chronicle, is the only distinct account we possess of the invaders from the Continent who effected the conquest of South Britain in the 5th and 6th centuries, they consisted principally of three nations or tribes, the Jutes, the Saxons, and the Angles. ('Hist. Eccles.,' i. 15.) In another place however (v. 10) he mentions Frisians as being mixed with these; and there are other ancient testimonies to the same effect, especially a remarkable passage in Procopius ('Boll. Goth.,' iv. 20), where, in his account of the island under the name of Britania, he describes it as inhabited by three nations, the Angles, the Frisones, and those of the same name with the island, the Britons, each of which nations had a king. Sir Francis Palgrave ('Rise and Prog. of the English Com.,' pp. 41, 42) considers the name Frisians in this passage to include both the Jutes and the Angles, as well as the Frisians proper, all these apparently being alike Belgic tribes. "By the Frisians," he adds, "Hengist is deemed to be a Frisian king; and the legend of Rowena, or, as they term her, Ronix, is incorporated in their history. A better proof of affinity is to be found in the resemblance of the Frisic and Anglo-Saxon languages, which in many instances amounts to an absolute identity. But the most conclusive argument of the unity of the nations is deduced from the judgments dictated by Wulfenar, and incorporated in their respective laws of the Frisians and Angles, showing thereby that they obeyed the dictates of a common legislator." It is to be recollected that anciently the Frisians appear to have been spread in detached settlements along the whole line of the coast from the Schelde to the North Sea. Down to the 8th century, what was called the Greater Friesland (or Frisia Major), then forming part of the empire of Charlemagne, extended all the way from the Schelde to the Weser. But the Frisians who passed over into Britain with the Saxons, Angles, and Jutes, were most probably the Strandfrisii, or inhabitants of the small district called the Lesser Friesland (Frisia Minor), lying opposite to the Isle of Northstraud, on the western coast of Schleswig.

According to the statements of the earliest chroniclers, the first of the Germanic invaders that arrived after the departure of the Romans were a body of Jutes, under two leaders named Hengist and Horsa. They arrived A.D. 449 at Ebbsfleet, now an inland spot, but then on the coast of the Isle of Thanet, and near the mouth of the Wansum, now a mere rivulet, which divides Thanet from the rest of Kent. The Jutes who came to Britain with Hengist and Horsa appear to have come immediately from what was formerly called South Jutland, and is now the duchy of Schleswig. They were probably therefore, in part at least, from the district called the Lesser Friesland, which, as already mentioned, was situated on the coast of South Jutland. The Jutes, according to Bede, were the ancestors of the people of Kent, and also of the inhabitants of the Isle of Wight, and of the part of the coast of Hampshire opposite to it: that is to say, the Jutes settled in those parts, mixing most probably with the former inhabitants.

The Jutes under Hengist and Horsa were followed in A.D. 477 by a body of Saxons under Ella, who made their descent on the coast of Sussex. The next leader that arrived was Cerdic, with another colony of Saxons, in A.D. 495. At this period the name, in its most comprehensive acceptance, appears to have been used as that, not of one nation, but of a great confederacy of nations, the territories occupied by which extended from the Baltic far into the interior of Germany. We are inclined however to derive the Saxon invaders of Britain from the immediate vicinity of the Baltic, most probably from the country now forming the duchy of Holstein, with perhaps part of the north of Hanover or the west of Mecklenburg. Thus situated, they would be the next neighbours of the Jutes and the Angles. In the account of Germany which Alfred has inserted in his translation of the 'Geography of Orosius,' the 'Eald Seaxan' are described as lying to the north of the Thyringas (or Thuringians); to the south-east of the Frisians (this must mean the Strandfrisians); to the east of the mouth of the Aelfe (the Elbe) and Frysland; and to the south-east of Angle and Sillendo (Zeland), and part of Deua (Denmark). Bede expressly brings the English Saxons from "the land now called the country of the old Saxons." They appear to have eventually occupied Sussex, Essex, Middlesex, the south part of Hertford, Surrey, Hampshire (with the exception of the coast opposite to the Isle of Wight), Berks, Wilts, Dorset, Somerset, Devon, and part of Cornwall.

It was not till the year 527 that the first Angles arrived. From that time they made a succession of descents under various petty chiefs, whose names have not been preserved, upon the coasts of Suffolk and Norfolk. In 547 however a much more numerous body of them than had yet appeared landed under the conduct of Ida on the coast between the Tweed and the Forth, and eventually established themselves in the country to the north of the Humber. Tacitus, who in his 'Germany' has mentioned neither the Saxons nor the Jutes, merely notices the Angli along with several other tribes as lying beyond the Longobardi, and surrounded by the natural protection of their rivers and woods. As far however as anything can be made of his vagu-

account, he appears to place them somewhere in the peninsula of Jutland. This is the situation which is assigned to them by Bede and other ancient English writers. "From the Angles," says Bede, "that is to say, from the country called Anglia, and which from that time till now is said to have remained waste, between the provinces of the Jutes and the old Saxons, descended the East Angles, the Mercians, the race of the Northumbrians, and all the rest of the nations of England." Alfred, in his 'Orosius,' also places the Angles in the Danish countries on the Baltic. And Ethelwerd, a writer of the 11th century, describes Old Anglia as situated between the Saxons and the Jutes, and as having the city of Schleswig for its capital. The Angles obtained possession of the whole of what is now called England, with the exception of the parts already mentioned as occupied by the Jutes and Saxons; in other words, of all England to the north of the Bristol Avon and the Thames, except the present counties of Essex, Middlesex, and part of Hertford. They also extended their settlements over a great part of the south of Scotland.

This is the generally-received account; but it is only right to state that there are grave difficulties in the way of its strict acceptance, at least as to the dates. Mr. Kemble ('Saxons in England,' chap. i.) has shown the probability "that a large admixture of German tribes was found in England long previous to the middle of the 5th century;" and that "bodies, more or less numerous, of coast-Germans, perhaps actually of Saxons and Angles, had colonised the eastern shores of England long before the time generally assumed for their advent." He even goes so far as to say—and his opinion must be allowed great weight—"I confess that the more I examine this question, the more completely I am convinced that the received accounts of our migrations, our subsequent fortunes, and ultimate settlement, are devoid of historical truth in every detail."

Be that as it may, it will be convenient to have in a summary form the received view of the kingdom founded by the several invading bands; the dates are those assigned in the valuable summaries of Anglo-Saxon history, given by Sir F. Palgrave in his Appendix of 'Proofs and Illustrations' to his 'Rise and Progress of the English Commonwealth,' pp. cccix-cccxl.

1. Kent, consisting of the present county of that name, founded by Hengist and Horsa, whose followers were Jutes, A.D. 457. From Ælle or Eric, the son and successor of Hengist, the kings of Kent acquired the name of Æscingas. Kent subsisted as an independent state till its conquest by Cenwulf, king of Mercia, in 796. In 823 it was finally annexed to Wessex by Egbert; but for at least a century after that date it is still mentioned as a separate though subordinate kingdom.

2. Sussex, consisting of the present county of that name, founded by Ella, whose followers were Saxons, A.D. 491. In A.D. 686 it was conquered by Ceadwalla, king of Wessex, and appears to have remained ever after in subjection either to that state or to Mercia. In 828 it finally submitted to Egbert; and "from this period," says Sir F. Palgrave, "Sussex and Surrey appear to have been considered as integral portions of the empire of Wessex, but as annexed to the kingdom of Kent and passing with it."

3. Wessex, including (in its greatest extent) Surrey, Hants with the Isle of Wight, Berks, Wilts, Dorset, Somerset, Devon, and part of Cornwall, founded by Cerdic and his son Cynric, whose followers were Saxons, A.D. 519. The Jutes of the Isle of Wight were conquered by Cerdic and Cynric, A.D. 530; but in 661 the island was wrested from Wessex by Wulfere, king of Mercia; some time after which it appears to have asserted its independence, which it maintained under kings of its own till the beginning of the 10th century, when it submitted to Edward the Elder. In the reign of Egbert (A.D. 800-836) the kingdom of Wessex attained a supremacy over the other states, which it never lost afterwards.

4. Essex, including the present counties of Essex and Middlesex, and the southern part of Hertfordshire, supposed to have been founded by Æscwin, or Ercenwine, whose followers were Saxons, A.D. 527. "It is doubtful," says Sir F. Palgrave, "whether this monarchy ever enjoyed independence." It certainly became subject to Mercia in the course of the 7th century, and in 823 it finally submitted to Egbert of Wessex.

5. Northumbria, consisting of the sometimes separate but commonly united states of Bernicia and Deira; the former (from the native name Bryneich) including the county of Northumberland, and the south-eastern counties of Scotland as far as the Forth, founded by Ida, whose followers were Angles, A.D. 547; the latter (from the native name Deifyr) including the counties of Cumberland, Durham, Westmoreland, York, and Lancaster, founded by Ella, whose followers were also Angles, A.D. 560. These two states appear to have coalesced before the beginning of the 7th century; and after the year 655 they were never separated, so long as they retained their independence. The limits of the kingdom of Northumbria to the north varied greatly from time to time, according to the fortunes of the almost constant warfare which it carried on with the Scots, the Picts, and the kingdom of Strathclyde. The Northumbrians made a formal submission to Egbert of Wessex in 829. In 867 the country was conquered by the Danes; and from this time it may be considered to have remained independent under the princes of Danish race till 924, when both the Danes and English inhabitants acknowledged the supremacy of Edward the Elder. Northumbria however continued to be governed by princes

of its own, who, although nominally subject to the English monarch, took the title of kings till 952. After this its rulers were only designated earls; the district forming sometimes one earldom, sometimes two, under the names of Bernicia and Deira, or Northumbria and York. It was not till some time after the Norman Conquest that the territories which had formed this Saxon state came to be considered as strictly included within the realm of England.

6. East Anglia, including Norfolk, Suffolk, Cambridge, and part of Bedfordshire, founded by Uffa, whose followers were Angles, and from whom the kings of this state took the name of Uffingas, A.D. 571. The East Angles placed themselves under the sovereignty of Egbert of Wessex about the year 823, but they continued for some time after this under the immediate government of their own kings. The country was conquered by the Danes in 883; and it was not completely brought back under subjection to the English crown till after the accession of Athelstane in 925. From this time it appears to have been governed by ealdermen, or dukes.

7. Mercia, including the counties of Chester, Derby, Nottingham, Lincoln, Shropshire, Stafford, Leicester, Rutland, Northampton, Huntingdon, Hereford, Worcester, Warwick, Gloucester, Oxford, Buckingham, and parts of Hertford and Bedford, said to have been founded by Crida, whose followers were Angles, A.D. 585. About the middle of the 7th century Mercia was conquered by Oswio, king of Northumbria; but after a few years it recovered its independence; and before the end of the next century it had reduced to subjection both the neighbouring states of East Anglia and Kent. It was eventually subjugated however about the year 825, by Egbert of Wessex, and although for some time considered as a separate kingdom, it continued ever after dependent upon that state, with the exception of a short period in the latter part of that century, during which it was overrun and taken possession of by the Danes.

This assemblage of states has been commonly called the Heptarchy, for which Mr. Turner has proposed to substitute the Octarchy, on the ground that Deira and Bernicia ought to be considered as two distinct kingdoms. But in truth it may be doubted if there ever was a time when so many as seven of the states co-existed separately and independently. Various small districts also appear to have for longer or shorter periods preserved an all but nominal independence in the midst of the larger states, to some one or other of which they were severally considered as annexed. Such were the Isle of Wight; the Suthrige, or Southern Kingdom, now Surrey; the district of Hwiccas, or Magesettam, which was conterminous with the ancient bishopric of Worcester; and others, of which the annals were for the first time collected by Sir Francis Palgrave. But above all it would be difficult to show that either term is perfectly admissible, if it be intended to imply (as in strict propriety both heptarchy and octarchy would seem to do) that the several states were all connected together into any sort of union or confederacy; that they formed in fact any political system entitled to be designated by one word at all. We know that they were constantly at war with one another, and of the existence of any general controlling authority, except such as one king was occasionally enabled to maintain over the rest by his sword, their history affords no trace. To certain of the kings however by whom this temporary supremacy appears to have been asserted in the most marked manner, Bede, and after him, the Saxon Chronicle, have attributed the title of Bretwalda, that is, as it has been interpreted, Wielder, or Emperor of Britain; and it is probable that a species of superior honour and dignity, such as this title would imply, may have been claimed by the princes in question, and accorded to them by those of their neighbours whom they had brought under subjection, or who, although unsubdued, preferred not to provoke their enmity. Upon the whole, the title of Bretwalda cannot well be regarded as any thing more than an ostentatious and empty assumption on the part of some of the Saxon kings, or an epithet of distinction bestowed upon them by the flattery of the chroniclers. It certainly carried with it no real or legal authority.

ENGLISH CHANNEL, called by the French La Manche, is that narrow sea which separates the southern shores of England from the northern shores of France. On the west it opens into the Atlantic Ocean by a wide mouth, between the Land's End and the French island of Ouhant (Ouessant), where it is about 100 English miles across. On the east it is united to the North Sea by the Strait of Dover (Pas de Calais of the French.) West of the Strait of Dover the Channel rapidly increases in width; and between Brighton and Havre is more than 90 miles across. Farther west however it is narrowed by the peninsula of Cotentin, which projects from the French coast into the Channel, and terminates in Cape de la Hogue, its most north-western point. West of the peninsula is the widest part of the Channel, which between St. Alban's Head in Dorsetshire and the harbour of St. Malo is nearly 140 miles across. The remainder of the Channel to its junction with the Atlantic is between 100 and 110 miles wide.

It appears certain that a current from the west is generally, if not constantly, running up the Channel. This is evident from the eastern tides being stronger than the western or ebb tides, and their running longer in stormy weather from the west. It is also observed, that at the same time the surface of the Channel is raised two feet or more above that of the North Sea, and consequently discharges a great

quantity of water into that sea. The ports of the Channel are some feet deeper in strong westerly winds than at ordinary times. The French ports along the Channel are shallow, and none of them are deep enough to admit men-of-war, while England has some of its finest harbours on the coast-line of the channel. The French government has for a series of years made efforts to deepen the harbour of Cherbourg on the French coast of the Channel. [CHERBOURG.] The Channel is well stocked with fish, which gives constant occupation to a considerable number of fishermen on the coasts of England and France.

ENGLISH HARBOUR. [ANTIGUA.]

ENNIS, county of Clare, Ireland, a market and assize town, a municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Dromcliffe, is situated on the river Fergus, in 52° 50' N. lat., 8° 58' W. long; distant 115 miles S.W. by S. from Dublin. The population in 1851 was 7840, besides 4365 in the Union workhouse and other public institutions. Ennis is governed by 21 town commissioners, and returns one member to the Imperial Parliament. Ennis Poor-Law Union comprises 20 electoral divisions, with an area of 112,490 acres, and a population in 1851 of 40,345.

The name of the place was originally Ennis Cluainradhma, so called from Clonroad, a favourite dwelling place here of the O'Briens, lords of Thomond. In 1240 Donogh Carbrac O'Brien built a monastery at Ennis for Franciscan friars, of which the ruins are still standing. The town contains some good houses, but has altogether a mean appearance. Besides the parish church the town contains chapels for Roman Catholics, Independents, and Wesleyan Methodists; the court-house, the county jail, the infirmary, two hospitals, a workhouse, a market-house, and a town-hall. A short distance from the town is Ennis College, one of the four classical schools founded by Erasmus Smith. There is a moderate trade in grain and cattle. There are a brewery, large flour-mills, and a valuable limestone quarry. Ennis was incorporated by charter of James I. Fairs are held in April and September. In the vicinity of the town are several good mansions.

(Fraser, *Handbook of Ireland*; Thom, *Irish Almanac*.)

ENNISCORTHY, county of Wexford, Ireland, a market and corporate town, and the seat of a Poor-Law Union, chiefly in the parish of St. Mary's of Enniscorthy, and partly in the parish of Templeshannon, is situated in 52° 35' N. lat., 6° 35' W. long; distant 13 miles S.S.E. from Wexford, and 65 miles S.S.W. from Dublin. The population in 1851 was 5993, besides 1735 inmates of public institutions. The town is governed by 21 commissioners. Enniscorthy Poor-Law Union comprises 33 electoral divisions, with an area of 196,689 acres, and a population in 1851 of 53,862.

Enniscorthy dates from the erection of a castle here by Raymond le Gros, one of the early Anglo-Norman conquerors. Gerald de Prendergast, another Anglo-Norman noble, founded a monastery here for Augustinian friars about 1230; and Donnell Cavanagh, an Irish potentate, founded a Franciscan convent for friars of the strict observance in 1460. Some ruins of both edifices still remain. The castle is in good preservation. It consists of a square keep flanked by round towers, and stands at the west end of the bridge, on the bank of the Slaney. Enniscorthy was taken by Cromwell in 1649. It was stormed and burned by the Irish rebels in 1798.

The town is situated on rising ground on both banks of the river Slaney, which is here navigable for sloops. The bridge which crosses the Slaney and connects the two parts of the town is a neat stone structure of three arches. Besides the church, which is a plain building, the town contains a Roman Catholic and a Methodist chapel, a Quakers' meeting-house, a court-house, market-house, workhouse, and hospital; also a presentation convent. Enniscorthy possesses a good retail trade; and nearly all the corn of the county of Wexford passes through its market. Coal, timber, iron, limestone, &c., are brought up by the Slaney from Wexford. Two quays, which facilitate the trade, were constructed chiefly at the expense of the Earl of Portsmouth. A factory for flannel, frieze, and blankets, and a large brewery and distillery afford employment. A market is held three times a week; and a fair every month. Enniscorthy was incorporated by charter of the 11th James I. The valley through which the Slaney flows is exceedingly rich and fertile and the scenery on its banks both above and below the town of Enniscorthy is very beautiful. In the vicinity of the town are several pleasant villas and mansions.

(Fraser, *Handbook of Ireland*; Thom, *Irish Almanac*.)

ENNISKILLEN, county of Fermanagh, Ireland, chiefly in the parish of Enniskillen, but partly in the parish of Rossory; a market-town, the capital of the county, a municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated in 54° 22' N. lat., 7° 38' W. long, distant 81 miles N.W. from Dublin. The population in 1851 was 5792, besides 869 inmates of public institutions. The town is governed by 21 town commissioners, and returns one member to the Imperial Parliament. Enniskillen Poor-Law Union comprises 42 electoral divisions, with an area of 203,610 acres, and a population in 1851 of 53,548.

Enniskillen is well built and beautifully situated. The principal part of the town is built on an island on Lough Erne, and two bridges connect the island, which is covered to the water's edge with the

buildings of the town and its defences, with the suburbs on each side. The extended boundary of the borough includes the island and the two suburbs which are situated north-east and south-west of the island, in the parishes of Enniskillen and Rossory respectively. The country around swells into highly cultivated eminences; and numerous mansions occupy the shores of the lake above and below the town. From its position, commanding the only pass into Ulster within a distance of 50 Irish miles, Enniskillen is a place of considerable military importance.

The town contains a handsome church, chapels for Roman Catholics, Presbyterians, and Wesleyan Methodists, infantry and artillery barracks, a new market-house, a jail, court-house, and hospital. A small fort is situated at each end of the town; and the royal school, founded by Charles I., which occupies a conspicuous place, is one of the most richly endowed in Ireland. The manufacture of linen, a small factory for cutlery, two distilleries, a brewery, and a tannery, afford employment. Many of the females are employed in straw-plaiting. Timber, coal, and other commodities, are imported by barges from Belleek, at the western end of Lough Erne. A brisk retail trade is carried on. Fairs are held in May, August, and November.

Enniskillen was altogether the work of the Protestant settlers introduced into Ulster by the new patentees. [FERMANAGH.] It was erected into a corporation in 1612; but had increased so far as to cover the greater part of the island in 1641, when, through the exertions of Sir William Cole, it proved a most important asylum for the Protestants on that border of Ulster. Throughout the war of the Revolution the local levies of Enniskillen and its neighbourhood did excellent service to the cause of the Prince of Orange; their exploits have been recorded in Hamilton's 'Actions of the Enniskilleners.'

(Fraser, *Handbook of Ireland*; Thom, *Irish Almanac*.)

ENNISTYMON, county Clare, Ireland, in the parish of Kilmahecon, a small market-town, and the seat of a Poor-Law Union, is situated in 52° 55' N. lat., 9° 20' W. long., distant 12 miles W. by N. from Ennis, and 104 miles W.S.W. from Dublin. The population of the town in 1851 was 1729, exclusive of 1070 inmates of the workhouse and 12 in the bridewell. Ennistymon Poor-Law Union comprises 20 electoral divisions, with an area of 99,281 acres, and a population in 1851 of 31,612. This little town is delightfully situated on the river Ennistymon, and surrounded by a low range of picturesque hills. The river falling over some ledges of rock forms a rapid of great beauty. The town, which has very little trade, contains a church, a Roman Catholic chapel, the district bridewell, and a Union workhouse. In the vicinity are the ruins of Glen Castle, which formerly belonged to the O'Briens; there are also several large and handsome mansions. Six fairs are held in the course of the year.

ENOS. [ADRIANOPIE.]

ENS, the Provinces of the, constitute the archduchy of Austria, which, with Styria, Carinthia, Carniola, Gorz, Trieste, part of Istria, the Tyrol, and Vorarlberg, form what are denominated the hereditary dominions of the house of Austria. The archduchy is divided into the two provinces of the Lower and Upper Ens, commonly called Lower and Upper Austria, and has (exclusive of the duchy of Salzburg, which until 1849 was included in the archduchy) an area of about 12,298 English square miles, and 2,244,363 inhabitants. Lower Austria is the most ancient possession of the house of Austria, and was acquired by conquest from the Avari in the year 796. Charlemagne, who subjected it, formed it into a margraviate; it became a Bavarian fief, and so continued until Count Leopold of Babenberg was recognised as its independent possessor in 944. It continued in the possession of the princes of Babenberg, who added Upper Austria to it and raised the whole into a duchy, until Ottokar, king of Bohemia, expelled them in the middle of the 13th century. In 1276 however Rudolph of Hapsburgh wrested the duchy out of his hands, and his descendants have remained in possession of it to the present day. They assumed the title of archdukes in 1359, but were not recognised as such until the year 1453.

The province of the *Lower Ens*, or *Lower Austria*, lies nearly in the centre of the Austrian dominions, on both sides of the Danube, between 47° 26' and 49° 1' N. lat., 14° 26' and 17° 1' E. long. It is the eastern portion of the archduchy, and it is bounded N. by Bohemia and Moravia, E. by Hungary, S. by Styria, and W. by Upper Austria. The area is 7674 square miles; the population in 1850 was 1,538,047.

Surface.—The Lower Ens is walled in both on the north and south by ranges of mountains. A branch of the Noric Alps, of limestone formation, not only occupies its southern districts, but spreads its branches over the whole country south of the Danube, with the exception of the most eastern parts. Its most elevated points are the Schneeberg, in the south-west of the Lower Wienerwald, which has two peaks, the Alpengipfel (Alpine peak), 7383 feet, and the Grosser Riese (Great Giant), 7331 feet high. A series of wooded heights, denominated the Wiener Wald (Vienna Forest), separates the Upper from the Lower Circles of the Wienerwald, and runs from south-west to north-east. On the left bank of the Danube, and throughout the western and nearly the whole of the eastern districts of the northerly portion of the Lower Ens, the Bohemian and Moravian chains of the great Sudetsch range [AUSTRIA, vol. i. col. 715] extend their last offsets

GEOG. DIV. VOL. II.

in all directions until they subside in the valley of the Danube. A succession of these heights, called the Maunhart group, running from north to south, divides the Upper from the Lower Mannhart circles, and gives their name to them. The most elevated point in this quarter is the Yauerling, close to that river, in the south of the Upper Mannhartsberg circle, which is 3330 feet high. In the northern and eastern parts of the Lower Mannhartsberg circle the ranges of hills are of inferior height. The Cetian Mountains on the right bank of the Danube are connected with the Noric Alps. Many of these chains are densely wooded; others are entirely naked. The most extensive forests are the Wiener (Vienna), Ernstbrunn, Hochleiten, and Maunhart; the line of the first of these divides the Lower from the Upper Wienerwald circle. It is estimated that the area occupied by the mountains of the Lower Ens is at least one-third of its whole surface; they are furrowed by numberless valleys, which give the province a beautifully varied and picturesque appearance.

The mines of the Lower Ens are not of any great importance. The Annaberg no longer yields silver. There are iron-mines at Reichenau, Pütten, Schottwien, Erdweis, Weitra, and other spots, but the quantity raised is but inconsiderable. There are numerous quarries of marble, freestone, &c., particularly in the south; gypsum and calcareous rocks, from which much lime is made, are abundant; mill-stones, granite, slate, alum, potter's clay, quartz for making glass and china, and porphyry are among the other mineral products. Coals are raised in the south and in some other parts.

Hydrography and Communications.—The fine valley of the Danube spreads out on both banks of the river in a continuous level from Korneuburg as far as Krems, and the greater part of the streams which water the Lower Ens discharge themselves into that river. The Danube itself traverses the province from west to east for about 156 miles, entering it a little to the north-east of Neustädte, and quitting it between Hainburg and Theben, which latter town is within the Hungarian borders. Between these towns it has a fall of more than 510 feet (450 Vienna feet), and its current is accordingly so rapid that it flows beneath St. Sophia's bridge, in Vienna, at the rate of nine feet per second. Its breadth across the island of Lobau, close to Vienna, is 3050 Vienna fathoms (18,986 English feet); but in some parts, particularly below Marbach and at Thaleru below Krems, its channel is so narrowed by the high lands that it rushes forward with a violence which in former times rendered the navigation extremely perilous. The tributaries of the Danube, so far as the Lower Ens is concerned, are of no great length or volume of water. On the right bank are the Ens, Ips, Erlaf, Billach, Traisen or Traisen, Schwechat, Great Fischau, and Leitha, all of which flow from the Alpine Mountains in the southerly districts of the Lower Ens, and are remarkable for the green colour of their waters; the Great Fischau has also the peculiar characteristics of seldom varying in the body of its water and never freezing. The Danube on its left bank receives the Krems, which irrigates the south of the Upper Mannhartsberg circle, flowing through the beautiful valley of the Krems, anciently called the 'Vallis Anrea,' or Golden Valley, and falling into the Danube at Krems; the March, which next to the Danube is the largest river in the Lower Ens, and which, entering the province from Moravia, forms its boundary on the side of Hungary for about 48 miles, and is navigable to its mouth, where its breadth is about 1420 feet; and the Kamp. [AUSTRIA, vol. i. col. 719.] The only streams which are not tributary to the Danube are some rivulets which, like the Salza and the Mürz, flow down from the Alpine heights in the south of the province and join the Mürz; and the Lainsitz in the north-west, where it takes the name of the Braunau at Gmünd and of the Schwarzbach at Schwarzbach, under which designation it ultimately falls into the Moldau, a tributary of the Elbe.

Independently of the Donau Canal (Canal of the Danube), near Vienna, which is merely an enlarged arm of the Danube, the only canal in the Lower Ens is the Vienna or Neustadt Canal, which opens out from the preceding and terminates at Wiener-Neustadt, about 34 miles S. from the capital.

There are some large natural sheets of water, but none deserving of the name of lakes; the largest is the Erlaf, or Zeller-see, which is about 4993 feet long, 1890 broad, and from 620 to 430 feet deep. Near the Mitter-see there is a beautiful waterfall 200 feet high, and close to it is a spot called the Brüllender Stier (Roaring Bull), where the roar of a subterranean cascade is heard.

The mineral waters of Baden, 19 miles S.W. from Vienna, are in considerable repute; those of Medling, Deutschaltenburg, Heiligenstall, and Döbling are also used.

The railways in Lower Austria are—a portion of the Northern States; the Vienna and Glognitz; a portion of the Vienna and Presburg; and the Vienna and Stockerau; all of which are noticed under AUSTRIA, col. 723.

Climate, Soil, Productions.—The varied character of the surface occasions considerable difference of climate. The mountainous nature of the north-western and southern parts of the province renders the temperature colder than it is in the lowlands about the Danube and in the eastern districts. The average annual temperature in Vienna is about 51° Fahr.: the summer heat is between 77° and 83°, and the maximum heat does not exceed 97°; the winter cold varies between 10° and 12° below the freezing point, and has never been greater

than 22°. The weather is very variable, and on the lofty summit of the Schneeberg it changes, according to Blumenbach, almost every hour. About Annaberg, in the south of the Lower Wienerwald, the country is so desolate that it goes by the name of the Siberia of Austria.

The soil of the Lower Ens differs much in productiveness. The richest tracts are in the centre of the province, from the confluence of the Ens eastward as far as the Pulnafeld on the right bank of the Danube; and on the left bank, from Krems they extend until they spread over the south-eastern parts of the Upper Mannhartsberg to the efflux of the March into the Danube. The lands about the Lower March indeed, which are called the Marchfeld, are a delta, which under efficient cultivation might become the granary of the Austrian metropolis. There is an extensive level also in the vicinity of Vienna which in parts is extremely fertile. On the whole, the Lower Ens does not rank among the more productive provinces of the empire. It is a manufacturing rather than an agricultural province.

The productive land in the Lower Ens was thus occupied in 1846:—Arable, 1,994,173 (English) acres; vineyards, 114,178 acres; meadows and gardens, 637,831 acres; pasture, 358,044 acres; woodland, 1,598,696 acres. The grain grown in the same year was, in English quarters, as follows:—Wheat, 261,619; rye, 1,144,228; barley, 231,944; oats, 1,157,756; maize, 6982; also 2,964,323 bushels of potatoes. Vegetables of most kinds are very largely cultivated. A good deal of fruit is also grown. Some hemp and flax are raised. The forest-trees are chiefly beech, oak, maple, linden, elm, alder, pine, and fir.

The rearing of horned cattle has not yet recovered from the blow which it received during the repeated invasions of the French armies. The total quantity in the Lower Ens in 1846 was 109,091 oxen and steers, and 251,634 cows. A portion of the stock is of a very superior native breed. Although the establishments for breeding horses belonging to the crown and several noblemen have done something towards improving the race, this branch of economy is not pursued with much activity; the stock in 1846 was 70,361. Independently of several extensive sheep-walks in many of the upland districts, every peasant feeds his little flock of from 10 to 30 sheep. Upwards of one half of the whole stock, which was 500,705 in 1846, are of breeds improved by crossing with merinoes and other foreign races. The largest flocks are those on the imperial estates. Much of the wool obtained is exported. Goats and swine are not bred in great numbers. Poultry is fed on a large scale for the Vienna market. Some honey and wax are made. The stock of game is much diminished.

The Lower Ens ranks next to Bohemia in a manufacturing point of view; and the principal seats of industry are the districts south of the Danube, the northern being chiefly agricultural. Flax and hemp yarns are spun wherever the materials are grown, and several thousand hands are employed chiefly in the manufacture of house-linens. Cotton is also spun somewhat largely, 8817 persons being employed in cotton-spinning in 1848, of whom 1425 were under 14 years of age. Cottons of the finer sorts are manufactured rather extensively at Vienna. Large calico-printing works are carried on at Neunkirchen, Friedau, St. Pölten, Kettenhof, &c. Cotton-embroidery, stockings, &c., are made at Vienna and elsewhere. There are some large woollen-factories in Vienna, at Rittersdorf, &c. The silk manufacture has risen to great perfection in the capital, and it is a very important branch of the manufacturing industry in other parts of the province. Iron and steel in bars and sheets of remarkably fine quality are produced in very large quantities. Iron and steel wire is also largely made. Lace, iron-ware, and cutlery; tools, copper-ware, brass-work, buttons, jewellery, and trinkets; articles of wood, leather, glass, mirrors, porcelain, earthen-ware, paper, musical instruments, soap, &c., form so many additional branches of industry. Besides the great printing establishment of the government at Vienna, there are other printing works on an important scale. A good deal of very excellent wine is made.

The Lower Ens has a considerable trade with the neighbouring countries and foreign parts by means of its communications by land with the Adriatic, Germany, Poland, &c., and by the Danube with Hungary, Turkey, and the East.

Divisions, Towns, &c.—The Lower Ens is divided into four circles—the Upper and the Lower Wienerwald, south of the Danube, the former having St. Pölten and the latter Traiskirchen for its capital; and the Upper and Lower Mannhartsberg, north of the Danube, the former having Krems and the latter Korneuburg for its capital. The capitansato of Vienna forms a fifth division. The following are the more important towns:—

Korneuburg, the capital of Lower Mannhartsberg, on the left bank of the Danube, 9 miles N. by W. from Vienna, is a place of little trade, with a population of about 2500.

Krems, the capital of Upper Mannhartsberg, population 6537, is situated at the confluence of the Kroms with the Danube, 38 miles W.N.W. from Vienna. The town is walled, has large infantry barracks and military schools, and wears a very military appearance. There are some chemical works, mustard and vinegar factories, and manufactories of metal buttons.

St. Pölten, the capital of the Upper Wienerwald, is a fortified town, standing on the left bank of the Traisen, 38 miles W. from Vienna

population about 6000. In it are a cathedral and bishop's palace, several schools, an hospital, and a theatre; also some cotton factories, potteries, glass-works, and paper-mills.

Traiskirchen, the capital of the Lower Wienerwald, is a small place of little more than 1000 inhabitants, situated about 15 miles S. by W. from Vienna.

Baden, on the Glognitz railway, 20 miles S.S.W. from Vienna, population about 4000, is a much-frequented bathing place, and well provided with suitable establishments for visitors. In Baden is an imperial castle, and in its vicinity is the castle of Weilburg. *Bruck*, on the left bank of the Leitha, 23 miles S.E. from Vienna, has a population of about 3000, manufactures of machinery and wire, and a botanic garden. *Feldsburg*, 40 miles N.N.E. from Vienna, population 2500, is famous for its wine, and for the splendid palace of Prince Lichtenstein. *Hainburg*, on the right bank of the Danube, 30 miles E.S.E. from Vienna, population 4000, is a place of considerable trade: here is the largest tobacco manufactory in Austria. *Klosterneuburg*, on the right bank of the Danube, 8 miles N.W. from Vienna, population about 4000, has manufactures of leather and fancy cotton goods. At Klosterneuburg is one of the oldest and richest Augustine monasteries in Austria: it has a library of 30,000 volumes. *Mödling*, on the Glognitz railway, 8 miles S. by W. from Vienna, population 3500, is an old looking town, but has some manufactories of woollens and muslins. *Neustadt*, or *Wiener-Neustadt*, on the Glognitz railway, 25 miles S. from Vienna, population 9323, is a garrison town, and was formerly the residence of the emperors. It contains the imperial castle, an ancient cathedral, a Cistercian abbey with a very extensive library, a grammar school, a military academy, and a museum; and carries on considerable manufactures of sugar, beer, and paper. *Stockerau*, 15 miles N.W. from Vienna, population 3659, is connected with Vienna by the Stockerau railway, and has a considerable linen manufacture; soldiers' clothing is also largely made. *Waidhofn*, 81 miles W.S.W. from Vienna, population about 3000, is the centre of the iron manufacture.

The inhabitants of this province, as well as those of the other division of the archduchy of Austria, are of German descent. After the Avari were driven out, it was re-peopled by Bavarians, Swabians, Saxons, and Franconians, principally indeed by the first mentioned; a circumstance which accounts for the similarity in language and manners between the native Austrian and his Bavarian neighbour. In the eastern and north-eastern districts there are many Slavonians, here denominated Croats.

The majority of the population are Roman Catholics. According to the census of 1846 there were 1,474,904 Roman Catholics, 673 Greek Catholics, and 390 Greeks not in the Union; 14,136 Protestants, and 4296 Jews.

The public provision for education consisted of 1 university, 13 schools of arts, 1 school of philosophy, 8 gymnasia, 6 theological academies, 30 special and 29 general schools, in all 88 upper schools. The popular schools numbered 2173, being 18 head schools, 1098 lower schools, 20 girls, 11 infants, and 1026 adult schools. The number of children capable of attending school was 168,486, actually in attendance 164,719. The adult schools were attended by 59,288 persons, 37,449 males and 21,839 females.

The public libraries and scientific institutions, especially in VIENNA, are numerous and of much importance. The benevolent institutions are also numerous and well supported.

The province of the *Upper Ens*, or *Upper Austria*, forms the western part of the archduchy, and is situated on both banks of the Danube, but chiefly on the south, between 46° 57' and 48° 46' N. lat. The duchy of SALZBURG, which was incorporated with it in the year 1816 now forms a separate division. Upper Ens is bounded N. by Bohemia, E. by the Lower Ens, S. by Styria, Carinthia, and the Tyrol, and W. by Bavaria. Its area is 4625 English square miles: the population in 1850 was 706,316.

Surface, &c.—The Upper Ens is a mountainous country. The parts south of the Danube contain some of the most elevated Alpine regions in the Austrian dominions, and those north of it are intersected by lower ranges which are offsets of the great Bohemian forest range. The Rhetian Alps occupy a small portion of the south-west, and terminate at the Dreiherrnspitz, from which point the Noric Alps occupy the whole of the southern circles of Hausruck, and Traun; but the loftiest peaks belong to Salzburg. There are many wide and numerous small valleys among the mountain masses that overspread the land south of the Danube. The only level country in the province is the immediate borders of the Danube. In the Mühl circle, which is north of the river, the most elevated point is the Plückenstein, close to the common boundary of Bavaria, Bohemia, and the Upper Ens: its height does not exceed 2177 English feet.

The Upper Ens is not rich in native products. Gold and silver are however found on the Gastein range at Kauris and Schellgaden. Copper abounds in several places; and a plentiful supply of iron is procured from the mountains of the Traun circle, whence copper and lead are also obtained. Salt also abounds especially in the Traun circle, where is the Salzkammergut (Salt-domain of the Crown), which contains an area of 236 square miles, and has about 80 villages and hamlets, and above 17,000 inhabitants: the salt mines yield upwards of 40,000 tons annually. Coals are dug in several quarters, but princi-

pally in the Traun circle; and there are extensive peat-mosses. Marble of good quality, alabaster, and gypsum are obtained.

Hydrography, &c.—Among the numerous streams of the Upper Ens there are five navigable rivers: the Danube, which enters the province in the north-west, below Passau, and quits it after receiving the Ens at the south-eastern corner of the circle of the Mühl; the Inn, which forms the western frontier for a short distance, and receives the Saal, another navigable river that divides the Upper Ens in part from Bavaria; the Ens; and the Traun, which last stream flows out of a small lake not far from Aussee, in Upper Styria, then crosses into the circle of the Traun, at its south-western end, turning from the west to the north, passes through the lakes Halstätt and Traun, takes a north-easterly direction along the western side of the circle, throws itself over a precipice 60 feet high near Lambach, washes the eastern side of the town of Wels, in the Hausruck circle, and ultimately falls into the Danube, opposite Steyeregg, after a course of about 70 miles. It is navigable after quitting the Traun-see, and the obstruction from the fall at Lambach has been obviated by a side canal 1020 feet in length. Among the minor streams are—the Ayer, which unites the Mond and Kammer lakes, and joins the Danube near the Zizeleau and the Salzach or Salza, which however belongs principally to Salzburg.

The Upper Ens abounds in lakes, of which the following are the largest:—The Traun or Gmunder-see, in the west of the Traun circle, 39,457 English feet long, 9812 feet in its greatest breadth, and 620 feet in its greatest depth. The Halstätt-see at the south-western extremity of the same circle, inclosed between high mountains, 26,622 feet long, 7062 feet broad, and 622 feet in its greatest depth. The Atter or Kammer-see, in the south of the Hausruck circle, 64,375 feet long and 10,906 feet broad; and the Matt or Mond-see (Lake of the Moon, from its crescent-like shape), which lies west of the southern end of the Atter-see, and is 35,000 feet long and 6687 feet broad. There is an immense number of smaller lakes, of which, in the Traun circle alone, 27 have been counted. Swamps and morasses of considerable extent occur in many parts, particularly near the Mond and Traun lakes.

The only railway in the Upper Ens is the line, chiefly for goods, which runs from Budweis through Linz to Gmunden, 120 miles: the carriages on this line are drawn by horses.

Climate, Soil, Productions.—The climate of the Upper Ens is much colder than that of the Lower Ens, though it lies in the same latitude; and much more so in the south than in the north. The warmest parts are in the valley of the Danube. On the whole it is not insalubrious, although not so healthy as the adjacent provinces.

Many extensive tracts, particularly among the alpine masses of the south, are extremely sterile. The valleys of the northern part of the Tauern group abound in clay, limestone, slate, quartz, &c. The lowlands of the northern parts of the Traun, and several districts in the Hausruck, and the western tracts along the Inn, are highly fertile.

Agriculture is said to be in a more advanced state in the Upper than in the Lower Ens. The productive land in the Upper Ens (including Salzburg, which was not then separated from Upper Ens) was thus occupied in 1846:—Arable 1,211,649 English acres; meadows and gardens 725,394 acres; pasture 636,300 acres; woodlands 1,562,262 acres. The grain grown in the same year was, in English quarters:—wheat, 245,254; rye, 561,859; barley, 227,362; oats, 600,916; and maize 436; of potatoes the quantity obtained was 1,692,691 bushels. A large quantity of fruit is grown. The vine is very little cultivated; only 38 acres were returned in 1846 as vineyards.

The province abounds in pastures, and the rearing of horses and cattle is general. The stock of horses of all kinds in the Upper Ens (including Salzburg, which has a much prized breed of very large horses), was only 54,450 in 1846. The horned cattle are of a large breed: the stock in 1846 was 99,790 oxen and 413,214 cows. The sheep are of an inferior race, and none of them yield fine wool, though some pains have been taken of late years to improve them: their number in 1846 was 341,400. Goats abound in the upland parts. The lynx, wolf, and bear are occasionally met with; foxes, stags, deer, marmots, polecats, squirrels, martens, hares, and wildfowl are more or less plentiful. Fresh-water fish are abundant: and the beaver and otter are at times seen on the banks of the Danube, Mühl, and Aschach. The pearl muscle is found in some of the rivulets in the upper part of the Mühl circle.

The manufactures of this province, though less extensive than those of the Lower Ens, are considerable. The peasantry in general manufacture their own linens and woollens, and make what leather articles they require. Much linen thread is spun as well as woollen and cotton yarn, especially in the Mühl circle, where some thousand hands are employed, and there are numerous factories where linens and cottons are printed: cotton spinning employed 1164 persons in 1848. The manufacture of cotton cloths is also extensive. There is a considerable manufactory of woollens and carpets belonging to the crown, in Linz; and others in Wels, &c. About St. Wolfgang in the Traun cloth of goats' hair is prepared. Large quantities of steel and iron-ware tools, &c., are made in the Upper Ens, particularly in Steyer and the districts to the south of it; Steyer, in fact, has been called the Birmingham of Austria, but its manufactures are of coarser workman-

ship. There are copper and brass works in several places. The preparation of wood for domestic and other purposes gives considerable employment to all the parts south of the Danube. Bleaching-grounds and tanneries are numerous. Paper, glass, leather, earthenware, chemicals, beer, and spirits are manufactured pretty extensively.

The exports of the Upper Ens are very considerable, and consist principally of salt, timber, and wood for fuel, yarns, linens, woollens, carpets, ironware, tools, nails, and screws, cutlery, flax, cotton-yarn, cottons, stockings, cheese, beer, fruit, cattle, earthenware, mill and polishing stones, stone for building, &c.

Divisions, Towns, &c.—The Upper Ens is divided into three circles:—Mühl, which has Linz for its capital, Hausruck, capital Wels, and Traun, capital Steyer. Linz is noticed under its title, Steyer and Wels with the other principal towns of the province we notice here:—

Steyer, the capital of Traun, is situated at the junction of the Ens and Steyer, 20 miles S.E. from Linz: population, 10,000. Steyer is often styled the Birmingham of Austria, but neither the size of the town nor the character of the goods quite entitle it to be put into comparison with the Birmingham of England. It has however large manufactories of fire-arms, and cutlery, and iron goods, and also of cottons and cotton velvets. It is a walled town and has an ancient castle.

Wels, the capital of Hausruck, is on the left bank of the Traun, 16 miles S.W. from Linz: population, 4300. It contains several churches and schools, and a large hospital, has considerable manufactories of cotton, leather, metal wares, &c. It is on the Budweis and Gmunden railway, and is the centre of a considerable traffic. **Ens**, on a steep bank near the junction of the Ens with the Danube, 10 miles E.S.E. from Linz, population 3500, is an ancient walled town, and has some iron and steel works. Ens was the head-quarters of Napoleon in 1809. **Freistadt**, on the Budweis railway, 18 miles N.N.E. from Linz, population 3000, contains a church, a college, and two castles. **Gmunden**, at the efflux of the Traun from the Traun-see (or lake), and the terminus of the Budweis and Gmunden railway, 36 miles S.W. from Linz, population 3300, is the chief town of the salt district, and a place of considerable trade. It is visited for its saline springs and baths. Steam-boats ply on the Traun-see. **Ischil**, the capital of the Salzkammergut, on the Traun, 50 miles S.W. from Linz, population 2000, has become a somewhat fashionable bathing place on account of its saline springs, and picturesque situation and scenery. It contains two churches, schools, and excellent bathing establishments. A suspension-bridge crosses the Ischil. **Kremsmünster**, built round a hill on the left bank of the Krems, population about 1000, is celebrated for its rich abbey, observatory, museum of natural history, and public schools. **Urfahr**, or **Urfer**, on the Danube opposite Linz, with which it is connected by a bridge, and to which it is a sort of suburb, is a market-town with nearly 3000 inhabitants.

The majority of the population of the Upper Ens are of the same stock as the Bavarians. On the banks of the Ens and Traun are some villages peopled with individuals of Slavonian extraction. The proportions throughout the province are said to be five agricultural labourers to two operatives. The Roman Catholic is the predominant religion. According to the census of 1846 there were in the Upper Ens (including the population of Salzburg) 840,635 Roman Catholics, and only 16,058 Protestants of all sects.

The public provision for education consisted of 2 upper grammar schools, 3 gymnasias, 2 schools of philosophy, 14 special and 6 general schools, making in all 27 upper schools. The popular schools numbered 1251, being 8 head and 615 lower schools; 8 girls, 7 infant, and 609 adult schools. The number of children capable of attending school was 92,234; the number in actual attendance, 89,396. The adult or repetition schools (Wiederholungsschulen) were attended by 20,997 males and 19,010 females, in all 40,007.

ENTRAIGUES. [AVERON.]

ENTRE DOURO E MINHO, a province of Portugal, situated between 41° 5' and 42° 8' N. lat., 7° 45' and 8° 45' W. long., is bounded N. by Galicia, in Spain, from which it is divided by the Minho; S. by Beira, from which it is divided by the Douro; E. by Tras os Montes; and W. by the Atlantic Ocean. The greatest length north to south is about 70 miles; the greatest breadth east to west is about 45 miles. The area is 2010 square miles. The population in 1850 was 486,831. The province is divided into two districts, as follows:—

Districts.	Square miles.	Population.
Viana	954	157,191
Braga	1086	299,640
Total	2040	486,831

The districts are subdivided into 12 comarcas, or judicial divisions; 32 concelhos, or communal divisions; and 760 parishes, as follows:—

Districts.	Comarcas.	Concelhos.	Parishes.
Viana	5	13	273
Braga	7	19	487
Total	12	32	760

Surface.—Three mountain ranges cross the province in a direction from north-east to south-west. The most northern range, called the Serra de Estrella, enters the province from Galicia, and extends nearly to the coast. It is the loftiest of the three ranges, its highest summit, Monte Cavarra, having an elevation of 7880 feet above the sea; and it occupies nearly the whole of the country between the Minho and the Lima. The central range, called the Serra de Geres, occupies the country between the Lima and the Cavado. The third range, called the Serra de Santa Catarina, has a more southern direction than the other two, running parallel to the Tamega and extending its ridges westward towards the sea and southward to the Douro. These three mountain ranges, with their offsets, fill up the greater part of the province, but all of them sink down as they approach the coast, where there is a considerable extent of undulating country.

Rivers.—The Minho separates this province from Galicia on the north [GALICIA], and the Douro separates it from Beira on the south. [DOURO.] The principal rivers of the interior are the Lima, the Cavado, and the Tamega. The Lima is the largest of the rivers. It rises in the mountains of Galicia, and after a course of about 70 miles, generally west-south-west, enters the sea below Viana. It is navigable for small craft to about 12 miles from the mouth. The Cavado rises in Trás os Montes, and flowing in a direction mostly parallel to the Lima enters the sea below Barcellos after a course of about 60 miles: it is not navigable. The Tamega rises near Manterey, in Galicia, and flows generally south-south-west, crossing a part of Trás os Montes, and entering this province at Caves. It forms the boundary between the two provinces of Entre Douro e Minho and Trás os Montes for about 12 miles, and has afterwards a course of about 30 miles to the Douro, which it enters about 30 miles above Oporto; its total length is about 90 miles: it is not navigable. In the rainy season it rises 30 or 40 feet, and the current is exceedingly rapid. A portion of the Serra de Marão, which enters from Trás os Montes, flanks the Tamega on the eastern side. The Neiva, the Grisoner, and the D'Ave (united with the D'Este) enter the sea. They are all small. The Souza, also small, flows into the Douro 10 miles above Oporto.

Climate and Productions.—The climate is very pleasant and wholesome. The breezes from the sea and the mountains cool the air in summer, and the winters are mild. The tops of the mountains are mostly sterile, but the sides are covered with good soil, and well wooded with oaks, chestnuts, and fruit-trees. The valleys are exceedingly fertile, watered by numerous streams, and well cultivated. The principal productions are wine, oil, flax, maize, wheat, barley, oats, and vegetables and fruits of all sorts. Pastures are rather scarce, yet a considerable quantity of cattle and sheep are reared. The principal article of exportation is wine, which is shipped at Oporto. The port-wines indeed are mostly produced in this province. Silk fabrics, linens, hats, porcelain, hardware, and cutlery are made in the towns. Iron and steel are imported. There are fisheries along the coast, which occupy a considerable number of the inhabitants.

Towns.—The city of Oporto is locally in this province, but is politically included in Beira, as the capital of the minor province of Porto. [BEIRA; OPORTO.]

Braga is the capital of the province of Entre Douro e Minho and of the district of Braga. It is situated on an eminence between the Cavado and the D'Este, 33 miles N.E. from Oporto. It is a city and the see of an archbishop, who is the primate of Portugal. The population is 17,000. It is a very ancient city, and was the *Braccara Augusta* of the Romans. It is surrounded by old walls and defended by a fortress. Ruins of an amphitheatre and an aqueduct existed at the beginning of the present century, but there are now no remains of them. The streets are narrow and irregular. There are two principal squares, and water is supplied from several fountains. The principal building is the cathedral, a stately fabric of perpendicular gothic; and the archbishop has a palace. About three miles east from the city is a lofty hill commanding a delightful view of the valleys of the Cavado and D'Este, and surmounted by the sanctuary of Jesus do Monte, which is still resorted to as a place of pilgrimage. *Amarante*, 35 miles E.N.E. from Oporto, stands on the western bank of the Tamega, which is here crossed by a good stone bridge. It is a very ancient town, well built, and contains two churches: population, 4000. *Barcellos*, 27 miles N. from Oporto, is pleasantly situated in a plain on the northern bank of the Cavado, which is here crossed by a bridge connecting Barcellos with the suburb of Barcelinhos. Barcellos is inclosed by old walls, and contains a collegiate church and two parish churches: population, 4000. *Caminha*, 55 miles N. by W. from Oporto, stands on the southern bank of the Minho, near its mouth. It is fortified by an extensive line of crown-works, horn-works, ditch, and covered way: population, 3000. The fort of Insoa is constructed on a rock at the entrance of the harbour of Caminha, and forms a cross-fire with the guns of the town. *Esposende*, a small town and harbour, stands at the mouth of the Cavado, on the north bank, 10 miles W. from Barcellos. *Guimarães*, 25 miles N.E. from Oporto, is situated between the D'Ave and the Azeilla, in a fertile plain at the foot of Monte Latito. It is an ancient town, surrounded by old walls, and encircled by suburbs. The streets are wide and the houses well built. It has several good squares, and contains a handsome collegiate church and three parish churches. There are manufactures of hardware, cutlery, and table-linen: population, 6000. *Monção*,

65 miles N. by E. from Oporto, is situated on the southern bank of the Minho. It is an old fortified town, but of no great strength for modern warfare, being commanded by some heights at no great distance: population, 1500. *Ponte de Lima*, 43 miles N. from Oporto, is a small town, so named from the solid stone bridge of 24 arches, mostly of Roman work, which here crosses the Lima. The town stands on the southern bank, 12 miles E.S.E. from Viana. The environs are very beautiful, richly wooded, and bounded by mountains. In the summer and autumn the vines, trained to trellis-work, hang down in festoons, covering a great extent of country, and presenting the appearance of an endless succession of luxuriant arbours. *Valença do Minho*, 65 miles N. from Oporto, is situated on the southern bank of the Minho, opposite to the town of Tuy in Galicia. Valença is a small place, but is strongly fortified with eight bastions and a crown-work, which were put in a state of thorough repair in 1812, and mounted with 50 pieces of cannon. *Viana*, the capital of the district of Viana, 42 miles N. by W. from Oporto, is situated at the mouth of the river Lima, on the northern bank, and has a harbour which admits small vessels not exceeding 200 tons burden. It is defended by the fort of Santiago, a pentagon with five bastions and two ravelins, next in strength to Valença. The town is inclosed by walls with five gates, and has four suburbs. It has three squares and is tolerably well built. It contains a collegiate church and two parish churches. The inhabitants carry on an active fishery: population, 8000. *Vila do Conde*, 15 miles N. by W. from Oporto, stands on the north bank of the D'Ave, near the mouth of the river, and has a small harbour defended by a battery. It has a good coasting and fishing trade: population, 3000.

ENTRE RIOS, one of the Riverine provinces of the Argentine Confederation, South America, owes its name to its situation between the rivers Paraná and Uruguay. It comprehends however only the southern part of the peninsula formed by those rivers, the northern portion forming the province of Corrientes. The boundary between the provinces is formed by the Rio Guayquiraré, which falls into the Paraná, and the Mocoreta, which falls into the Uruguay, between 30° and 30° 30' S. lat. The area is about 32,000 square miles: the population is about 25,000.

The surface is gently undulating; it is only broken by hills along the middle portion or interior of the country. This part is covered with forests of low stunted trees. The southern part of the province is low, and especially along the banks of the Paraná subject to inundations. The northern part is occupied by a low swampy tract, known as the Forest of Montiel. Besides the rivers Paraná and Uruguay [ARGENTINE CONFEDERATION], the province is abundantly watered by numerous small streams. The soil of Entre Rios is in general fertile, and covered with luxuriant herbage. The climate is mild and dry. Frost never occurs. Rain seldom falls more than fifty days in the year. The highest range of the thermometer at the town of Paraná during the years 1844-47 was 96° in January 1844; the lowest, 50°, occurred in the month of June in 1844 and 1846. (McCann.) Cultivation is limited to a comparatively few spots. The principal grain crops are wheat, barley, and maize. Tobacco and cotton of excellent quality are also raised, but the crops are precarious in consequence of frequent droughts. Great damage is also done to all kinds of crops by the immense swarms of locusts and ants which sometimes devastate an entire district. The forest-trees are chiefly mimosa, mandabay, black and white espinello, guebracho, and guayabo, but they are generally small, though in much request for carpenter's work and firewood. Vast herds of cattle are reared, but heavy losses frequently occur owing to the severe droughts to which the province is so often subject. In 1846 so great a drought occurred that the grass was everywhere burnt up; and Mr. McCann states that the whole of the cattle in the province went off from the feeding grounds in search of food and water: many estancias (cattle farms) lost from 5000 to 50,000 head of cattle, and one farm 150,000. Horses are bred in great numbers. Owing to the long-continued state of anarchy in the province there are, in the unsettled parts, numerous herds of wild cattle and horses. The rearing of cattle and horses is the chief occupation of the inhabitants. Mechanical employments are almost entirely neglected. The geographical position of the province admirably adapts it for commercial pursuits; but owing to the closure of the navigation of the two great rivers, and the disturbed state in which the country has so long been kept, comparatively little commercial progress has yet been made. Now however that the rivers are declared open to vessels of all nations, under the guarantee of the principal maritime powers, there seems to be required only internal peace for the rapid development of the great capabilities of the country. The exports are principally of hides, horns, tallow, and jerked beef.

Like the other provinces of the Argentine Confederation, Entre Rios is a federal state, owning but little dependence upon the central government. The government is almost entirely in the hands of a governor, elected for a term of two years. The Congress consists of deputies chosen from the several towns or districts. The revenue is derived chiefly from customs duties.

Except a few families of Guarini origin the country is almost entirely inhabited by the descendants of Spaniards. In the towns however a few foreigners are settled, mostly Italians, who mainly conduct the river navigation, with some French and English traders.

Some of the large estancias (cattle farms) and saladeros (tallow-melting establishments) are the property of and conducted by Englishmen. As mentioned under ARGENTINE CONFEDERATION, Entre Rios took a leading part in the revolt against the supremacy of Buenos Ayres, joining with Corrientes in the engagements with foreign powers, which led to the fall of Rosas, and in all the subsequent proceedings which have had for their main object the opening of the rivers Paraná and Uruguay. [ARGENTINE CONFEDERATION; CORRIENTES.]

Paraná, or *Villa del Paraná*, the capital of the province, is about a mile from the left bank of the Paraná, in 31° 45' S. lat., 60° 47' W. long., and contains about 6000 inhabitants. It is built on the summit of a lofty cliff, which slopes gently towards Santa Fé, which stands on the opposite side of the river, and hence the town derived its original name, Bajada de Santa Fé, or the 'Descent to Santa Fé.' The only public building of any consequence in Paraná is the recently erected government house. A large church which was commenced some years back remains unfinished. The climate is mild and dry, but not healthy. The houses have no fire-places; and all classes live much in the open air. The supply of water is very bad; all that is consumed is brought to the town in carts drawn by oxen. The town at present has a quiet listless appearance. Only a few small vessels belong to it. The exports are hides, hair, tallow, and lime.

Concepcion de la China, formerly called Uruguay city, on the Uruguay, is a small but old town of about 1500 inhabitants. It once carried on some trade with Monte Video, but it is now decayed and ruinous. The houses are mostly built of wood and mud, with thatched roofs. In the centre of the Plaza is a pyramid now falling to pieces. In the vicinity is a large saladero. *Concordia*, on the Uruguay, opposite Salta, from a village of a few mud huts, appears to be growing into a place of some importance. It has about 1000 inhabitants, and carries on a good deal of trade. But the situation is bad, as vessels are unable to reach the town at low water, and are obliged to anchor about two miles below it. It contains a church and a large school-house, endowed by the government. *Gualeguay*, on the river of the same name (33° 10' S. lat.), is a town of between 2000 and 3000 inhabitants, of whom nearly 300 are foreigners, chiefly Basques and Italians. It is a place of a good deal of trade, but vessels cannot approach nearer than about three leagues from the town. In the neighbourhood is the most extensive estancia in this part of the country, belonging to an English subject. It is the property of Mrs. Brittain of Sheffield, and occupies 200 square leagues of land. Several other estancias belonging to English subjects are in the vicinity. *Gualeguay-chu*, near the mouth of the Gualeguay-chu, about 60 miles E.N.E. from Gualeguay, population about 2500, including nearly 300 foreigners, contains a neat church and a good school-house, and is a place of some trade; but the situation is inconvenient, as vessels drawing more than 6 feet of water are sometimes obliged to wait two or three weeks to get across the bar at the mouth of the river. In the neighbourhood are some large tallow-melting establishments.

(Woodbino Parish, Buenos Ayres; M'Cann, *Ride through the Argentine Provinces*.)

ENTREVAUX. [ALPES, BASSES.]

ENYED, NAGY-ENYED, or STRASZBURG, a town in Transylvania, is situated in 46° 18' N. lat., 23° 42' E. long., in a valley on the right bank of the Murosh, and has about 5500 inhabitants. It is built in an old-fashioned style, and contains a Roman Catholic, a Lutheran, and a Reformed Lutheran church, but is most celebrated for its richly endowed Protestant lyceum. On the market-place are the remains of the ancient burgh or castle, with its towers and loopholes, in which the Saxons, who built the town, were accustomed to defend themselves against their Transylvanian assailants in former days. The streets still retain their Saxon names. The population is composed of Hungarians, Germans, Armenians, Greeks, and Wallachians. There are a paper-mill and some manufactures in the town, and extensive vineyards in the neighbourhood.

EPERIES, or PRESSOVA, a royal free town, and the capital of the county of Sáros, in Upper Hungary, is situated in 48° 58' N. lat., 21° 15' E. long., in an agreeable country on the banks of the Tartsza, and has about 9000 inhabitants. It is surrounded with walls defended by bastions, and encircled by extensive gardens and inclosures, among which are the suburbs. The streets are broad, and embellished with several handsome buildings, among which are the county hall, four Roman Catholic churches, a Lutheran church, a synagogue, Protestant and Roman Catholic high-schools, the latter attached to the Franciscan monastery, a chapter-house, town-hall, orphan asylum, and poorhouse. It is the seat of a Greek Catholic bishopric erected in 1807, has a good episcopal library, and an imitation of Mount Calvary, on which several chapels are built. Eperies manufactures woollens and linens, and possesses a large earthenware manufactory and breweries, as well as a considerable trade in cattle, wine, and grain, to which the annual fairs greatly contribute. About 4 miles from the town, the environs of which are agreeably diversified, are the chalybeate springs of Crometo, or Krásyna-vodn, with baths.

EPERNAY. [MARNE.]

EPHESUS, a city of Lydia, Asia Minor, and one of the twelve cities which belonged to the Ionian confederation (Herod. i. 142), was situated near the left bank and close to the mouth of the river

Caystrus, in 38° N. lat., 27° 48' E. long. By the mouth of the river was a lake, formed by the sea, called Selinusia, and close to this was another lake which communicated with it. The city itself stood on elevated ground; the country around was an alluvial plain. About a mile and a half N.E. from the site of the ancient city is the modern village of ATIASALUCK.

There is a myth that the city was originally called Smyrna, from the Amazon of that name; it is also said to have borne three or four other names. The name of Ephesus does not occur in the Homeric poems; and Strabo says there is no proof that the city was in existence at the time of the Trojan war. According to him the oldest inhabitants of the site of Ephesus were Carians and Leleges, most of whom were ejected by the settlers from Greece under Androclus. The temple of Artemis (Diana), to which the city owed so large a part of its fame and consequence, was already built here. From a tradition preserved by Pausanias it would seem that the original temple was outside the city; and it is probable that the subsequent temples were erected on its site. The site of Ephesus was changed more than once. Before about B.C. 300 it appears to have occupied the low marshy plain between the heights and the river. But Lysimachus, who obtained possession of the western part of Asia Minor after the death of Antigonus, conceiving the higher ground to be a more advantageous situation for the city, built the walls which existed when Strabo wrote, and which are doubtless those the ruins of which still remain. The inhabitants however were unwilling to remove to the site which he had inclosed; and he therefore, says Strabo, waited till the rains set in, when he stopped up the channels which carried off the water, thereby flooding the old city, and making the inhabitants glad to occupy the new site. It appears more probable however that the old city, the site of which was too low, was destroyed by the sudden rising of the river in a violent storm, as described in a little poem by Dorus, who appears to have lived about the time of its destruction. Lysimachus gave the place the name of his wife, Arsinoë, but the old name was afterwards restored.

Though the Ionian Ephesus was an important place there is little of consequence related of its history. From the time of Androclus it was the kingly residence of the Ionians. Ephesus was the first of the Ionian towns attacked by Cræsus. It fell successively into the hands of the Lydian and Persian monarchs. It was the scene of a defeat of the Ionians and their allies the Athenians and Eretrians in B.C. 499. Towards the end of the Peloponnesian war the Athenians were defeated here; and in B.C. 407 the Athenian fleet under Antiochus was defeated here by the Spartan fleet under Lysander. From an early period Ephesus was regarded as a sacred city, the temple of Artemis being looked upon with especial reverence; and it is noted that when Xerxes burnt the temples at Branchidæ and elsewhere he spared that of Ephesus. As a commercial city its rise may date from the erection of the new city by Lysimachus, and during both the Macedonian and Roman periods it grew into commercial importance in proportion to the decay of Miletus. After the great defeat of King Antiochus at Magnesia (B.C. 190) the Romans in partitioning Asia Minor gave Ephesus to the king of Pergamum. The king (Attalus Philadelphus), Strabo tells us, in order to improve the harbour, which had become shallow by the deposit of the alluvium of the Caystrus, directed his architects to place a mole in front of the harbour, thinking that by contracting the entrance, which was very wide, both the entrance and the harbour would become deep enough for large merchant ships. But the result was just opposite to his expectations; for the alluvium was now kept within the entrance, and the whole harbour made shallower, whereas before it was in a measure cleared away by the floods and the reflux of the sea. After the death of Attalus III. the Romans having taken possession of his dominions formed the province of Asia Minor, and Ephesus became its chief city, and the usual residence of the Roman governor and of the chief of the Asiarchs; and it was here that the Romans usually landed when they went to Asia. Strabo, who visited it in the reign of Augustus, says that the city was then in a state of great prosperity. It had both ship-houses and a harbour, though the harbour had become more shallow; in all other respects the city owing to its favourable situation was increasing daily. It was already the greatest place of trade of all the cities west of the Taurus. The port, called Panormus, was visited by ships from all the ports of the Mediterranean; and the city was connected by great lines of road with all the markets of the interior. It was probably in much the same condition when visited by St. Paul a few years later. The apostle stayed at Ephesus three years (Acts, xx. 31) and founded a church there, which in the book of Revelations (i. 11; ii. 1, &c.) is placed first among the churches of Asia. The heathen and Christian churches of Ephesus subsisted together for a considerable time. The final destruction of the great heathen temple was effected about A.D. 260 by the Goths, or Scythians, in what is known as their third naval invasion, and with its fall the splendour of the city may be said to have ended. It existed however some centuries longer, though its dimensions were contracted, and its trade was gradually decaying. The third great council of the Christian Church was held at Ephesus in A.D. 341. Of its general history whilst a Byzantine city nothing worthy of mention is recorded. Its final destruction has been sometimes attributed to Timur, who encamped here after his capture

of Smyrna (A.D. 1402); but it is not mentioned by his historian, and there is no doubt that Ephesus had perished long before.

The only vestiges which now remain of the once great city are some confused heaps of ruins, chiefly those of its famous temple and theatre, with the somewhat more perfect lines of the walls by which it was encompassed. "Many other walls indeed remain to show the extent of the buildings of the city, but no inscription or ornament is to be found, cities having been built out of this quarry of worked marble. The ruins of the adjoining town [AIASALUCK], which arose about 400 years ago, are entirely composed of materials from Ephesus, and these old castle and mosque walls have become in their turn our quarry for relics of antiquity." (Fellows, 'Researches in Asia Minor,' p. 206.)

Both Pococke and Kiepert have given plans of the ancient city; they differ in many respects, and though Kiepert's is more in accordance with recent researches, it is possible that neither is accurate in its details. The whole compass of the walls, according to Pococke, is about four miles; in Kiepert's plan it is somewhat less. Hamilton, one of the latest and most careful of the travellers who have examined the ruins of Ephesus, describes the walls of Lysimachus as stretching in a south-east and north-west direction, along the ridge of Mount Coressus, from "immediately to the south of the gymnasium to the tower called the Prison of St. Paul, but which is in fact one of the towers of the ancient wall, closely resembling many others which occur at various intervals. The portion which connected Mount Prion with Mount Coressus, and in which was the Magnesian Gate, appears to have been immediately to the east of the gymnasium." Another wall, which Hamilton supposes to be an older one, extends from the theatre over the top of Mount Prion, and thence to the eastern end of the stadium. Besides these he was able to trace considerable remains of another wall "at the foot of Mount Coressus, extending from near the theatre westward to the port and temple of Diana." This, which he supposes to have been constructed by the Byzantines when the town had diminished in size, is built chiefly of brick. The walls of Lysimachus are, according to Pococke, built in a rough manner, but cased with hewn stone. Fellows says that this wall is "a fine specimen of very early Greek architecture, having only the horizontal line of joints, the others being irregular, as in the Cyclopean: the doorways are also of the early Græco-Egyptian, as seen at Assos." Hamilton gives an engraving of one of these gateways, which is in a nearly perfect state. In some places the wall remains tolerably entire; in others the foundations only are visible, and are ten feet thick.

The goddess Artemis was worshipped at Ephesus when the Ionians settled there. Herodotus mentions a temple of Artemis as existing there in the time of Croesus, who added largely to its wealth: this temple and that of Hera at Samos he speaks of as among the great works of the Greeks. Chersiphron was the original architect, but another architect enlarged it. This enlarged temple is said to have been burnt by Herostratus on the night on which Alexander the Great was born. A new temple was commenced on its site; and so zealous were the Ephesians in the work that the people gave freely their property and the women their ornaments, in order to furnish the money requisite for constructing it with the desired magnificence: yet it was 220 years before it was finished. When Alexander entered Asia on his expedition into Persia he offered to repay all that had been expended upon the temple, and to furnish all that would be required to complete it, if he were permitted to place the inscription upon it; but the Ephesians, determined that the work should be their own, declined his offer. The temple was built on the marshy ground outside the city, Pliny says, as being thus more secure against earthquakes; the foundations were formed of well-rammed charcoal and wood. The length of the temple was 425 feet and the width 220 feet. It contained 128 columns (Pliny says 127, but this is of course an error), each 60 feet high, and each the gift of a king. This was much larger than any other Greek temple: the area of the great Olympieum at Athens was about two-thirds that of the temple at Ephesus; the area of the Parthenon was only one-fourth of it. And its splendour was equal to its size. The altar was chiefly the work of Praxiteles. In the temple was one of the great pictures of Apelles. It also contained some of the works of Thraso. Thirty-six of the columns were richly carved, one of them by Scopas. In the treasury of the temple was stored a large part of the wealth of Western Asia. From the earliest times it was an asylum for debtors and malefactors. The original limits of this asylum were extended to a stadium by Alexander, and still farther by Mithridates. M. Antoninus greatly advanced the limits of the asylum, making them to include a part of the city; but this ordinance being found productive of much inconvenience was abolished by Augustus. The service of the temple was conducted by priests called Megalobuzi, who were eunuchs, who were held in great honour; with them virgins were associated in the superintendence of the temple. The worship of the Ephesian Artemis served as the model of that of other cities and countries; and large numbers of strangers resorted to Ephesus to worship in the great temple: it was probably for the foreign visitors mainly that the "silver shrines for the goddess" were made, "which brought no small gain to the craftsmen" of Ephesus (Acts, xix. 24). It has been already said that the temple was destroyed by the Scythians about A.D. 260. A Christian church

was afterwards erected on the site. At the present time the very site is a matter of doubt. Hamilton thinks he has ascertained its site to be marked by some massive structures "near the western extremity of the town, which overlook the swamp or marsh where was the ancient harbour." The ruins which he fixed on as the site of the temple appear to be the same as those pointed out by Pococke, but the brick arches and other works which Pococke thought to be parts of the great temple, Hamilton with more probability attributes to "the Christians after the destruction of the temple and the removal of the columns by Constantine, when a church was erected on its ruins." Kiepert however places the great temple more to the north and east; but Mr. Falkener, who has more recently made an elaborate survey of Ephesus, thinks "it more to the west and nearer to the sea than in Kiepert's map;" in other words, restores it to the position assigned to it by Pococke and Hamilton, and which certainly most nearly corresponds with the statement of Pliny. The vast ruins of the temple probably long served as a marble quarry. There is little doubt that it furnished materials to many of the buildings in Constantinople as well as in Aiasaluck.

But however it may be with the great temple, according to Sir Charles Fellows, "of the site of the theatre, the site of the tumult raised by Demetrius, there can be no doubt, its ruins being a wreck of immense grandeur. But its form alone can now be spoken of, for every seat is removed, and the Proscenium is a hill of ruins." This theatre, the largest Greek theatre of which the remains have yet been traced, was 660 feet in diameter. The Stadium was another vast structure; its diameter being, according to Chandler, 687 feet. On the north side he found the seats to be constructed on arches, but on the south they are laid on Mount Prion, or Lepre, as it was also called. Besides these there are still visible considerable remains of another vast edifice of Roman date, which has been generally stated to be a gymnasium, but which Fellows thinks is a palace. It stands on the south-east side of the city, and the foundations of a large number of rooms are yet traceable. The outer walls are of brick and stone, of four or five courses of each laid alternately, and constructed with great solidity. A plan and a view of the remains of this edifice, and also several interesting views of the other remains of Ephesus, from sketches made when they were more perfect than at present, are given in vol. ii. of the 'Antiquities of Ionia,' published by the Dilettanti Society. One of these now less perfect buildings is a temple, represented in plates 44 and 45 of that work; it was 130 feet long and 80 broad. The cella is constructed of large coarse stone; the portico is of marble, and of the Corinthian order. The columns are nearly 47 feet high, and the shafts are fluted, and of one piece of stone. The style is Roman, and the temple was dedicated, probably with the permission of Augustus Cæsar, to the deified Julius.

Coin of Ephesus.

British Museum. Actual Size. Silver. Weight, 176½ grains.

The other vast heaps of remains are most of them as yet but imperfectly assigned. Among them are supposed to be the agora, close to which were the Corinthian temple, just noticed, and the large theatre. An Olympieum appears to have stood on Mount Prion. On the south-east of the Mount are the tombs, in one of which Pococke saw a very large marble sarcophagus. There are also the remains of an aqueduct near the city. Chandler and Hamilton both copied some inscriptions at Ephesus, but, according to Fellows, there are none to be seen there now.

(Pococke, *Travels in the East*; Chandler, *Inscriptiones Antiquæ*; *Ionian Antiquities*, and *Travels in Asia Minor*; Leake, *Asia Minor*; Hamilton, *Researches in Asia Minor*; Fellows, *Travels and Researches in Asia Minor*; Gull, *Ephesiaca*; Long, in *Dictionary of Greek and Roman Geography*; Conybeare and Howson, *Life and Letters of St. Paul*, vol. ii.)

EPHORI. [DORIS; DORIANS.]

EPIDAUROS, a celebrated city of ancient Greece, situated on the eastern coast of Argolis, on a small bay in the Saronic Gulf, and surrounded by mountains on the land side, in 36° 45' N. lat., 23° E. long. Its more ancient name was Epicarus, from its earliest inhabitants, who were Carians, and who were subsequently joined by some Ionians from Attica. (Aristot. apud Strab.) When the Dorians got possession of Argos, Epidaurus yielded without resistance to them, and admitted a Dorian colony under Deiphontes. (Pausan. ii. 26, l.) The constitution of Epidaurus was originally monarchical. Afterwards the government was aristocratical; the chief magistrates were called Artynæ, or Artyni, as at Argos (Thucyd. v. 47), and were the presidents of a council of 180; the common people were termed 'konipodes' (κονίποδες), or 'dusty-feet,' in allusion to their agri-

cultural pursuits. (Plutarch, 'Quæst. Gr.' l.) At an early period Epidaurus was an important commercial city, and the mother city of Ægina and Cos, the former of which was once dependent upon it. (Strabo, p. 375.) It also colonised the islands of Calydonus and Nisyra. (Herod. vii. 99.) As a commercial city its consequence had passed away by the 6th century B.C. As the chief seat of the worship of Æsculapius (Asclepius), Epidaurus was for a long period a highly important place. The temple of Æsculapius was situated at the upper end of a valley about five miles from the city, and was one of the richest and most renowned sanctuaries in Greece. In B.C. 293 it was so celebrated that during a pestilence at Rome a deputation was sent from that city to implore the aid of the Epidaurian god. (Liv. x. c. 47.) The temple was always crowded with invalids, and the priests, who were also physicians, contrived to keep up its reputation, for the walls were covered with tablets describing the cures which they had wrought, even in the time of Strabo. The temple stood in a sacred inclosure called the grove (ἄσος), which was less than a mile in circumference, and contained several buildings besides the temple. The name of the sanctuary (ιερόν), is still preserved in the modern name of the spot *Hieron*. The temple, which contained a chryselephantine statue of Æsculapius, was half the size of the Olympieum at Athens. But few vestiges of it are left. Near the temple was a remarkably beautiful theatre, built by Polycleitus (Pausan. ii. 27, 5), which is in better preservation than any other theatre in Greece, except that at Tramezus, near Ioannina; the orchestra is 90 feet long, and the entire theatre 370 feet; when complete it was capable of containing 12,000 spectators: 32 rows of seats still appear above ground. Of the other buildings mentioned by Pausanias, including temples of Athena Cissea, Artemis, Dionysus, and Aphrodite in the city, a temple of Hera on the promontory by the harbour, and two or three temples on the neighbouring heights; and the temples of Aphrodite, Artemis, and Themis, which together with a Tholus (circular building) erected by Polycleitus, and adorned with paintings by Pausias, a stadium, and some other edifices were within the sacred inclosure, there are but few remains.

Coin of Epidaurus.

British Museum. Actual Size. Silver. Weight, 38½ grains.

Epidaurus has acquired some celebrity in recent times as the place where the Congress of Deputies from all parts of Greece assembled, and promulgated on the 1st of January 1822 the constitution known as the Constitution of Epidaurus. Such was the state of Epidaurus at that time that the deputies, unable to find accommodation in the villages, were compelled to live in the open air. Epidaurus "is now a miserable village and can barely muster 100 inhabitants and a few small boats." It has a good and well protected port. The village is surrounded by a small plain, in which vegetables are grown for the market of Athens. (Leake, 'Morea,' vol. ii.; Curtius, 'Peloponnesos,' vol. ii.; and Murray, 'Handbook of Greece,' p. 255.)

There were two other cities of this name; one in Laconia, called Epidaurus Limera, which had also a well-known temple of Æsculapius. There are still some remains of the fortifications. (Leake, 'Morea,' i. p. 211.) This Epidaurus had a capital harbour, from which, according to Apollodorus, it derived its name Limera. (Strabo, p. 368.) The third Epidaurus was a maritime city of Illyria, mentioned by Hirtius ('De Bello Alexandrino,' c. 44).

EPINAL, the capital of the department of Vosges, in France, stands on the Moselle, about 234 miles E. by S. from Paris, in 48° 10' 24" N. lat., 6° 26' 55" E. long., and has 10,183 resident inhabitants in the commune. This is exclusive of troops, students, prisoners, the inmates of hospitals and religious houses, and all classes that go to make up the floating population of a place.

No mention occurs of Epinal earlier than the end of the 10th century, when it was the residence of the bishops of Metz: the lordship however passed subsequently into the hands of the dukes of Lorraine. It was formerly well fortified, and had a fine castle; but the fortifications have been razed.

The town is situated at the foot of the chain of the Vosges, and in a district abounding with delightful situations. The rapid clear stream of the Moselle which here separates into two channels inclosing an island, divides the town into three parts—the Grande Ville which stands on the right bank of the main stream, and at the foot of an eminence crowned with the ruins of the castle; the Petite Ville which is built on the island, and is joined to the Grando Ville by two bridges, one of stone, erected in 1840, and the other of iron, constructed on the suspension principle; and the Faubourg of the Capuchins, which is built along the left bank of the smaller arm of the Moselle, and is named from a convent of monks of that order. The streets of Epinal are well-built, and regularly laid out and clean. The finest edifices in the place are the barracks, the residence of the prefect of

the department, the college buildings, the court-house, and the parish church, which is of gothic architecture, mingled with some parts in the style of a later age. The former Capuchin convent which stands on an eminence and is surrounded by large gardens, is now used as an hospital. The town has also a tribunal of first instance, a communal college, a chamber of commerce, a public library of 20,000 volumes, a museum, an orphan asylum, and a theatre. The manufactures are chemical products, lace, block-tin, wrought-iron, paper, earthenware, and leather; and some trade is carried on in corn, cattle, iron, timber, oak staves, deal planks, &c.

EPINE, L'. [MARNE.]

EPIRUS, (Ἠπειρος, mainland), the name given to that district in Northern Greece which extended from the Aero-ceramanian promontory on the north to the Ambracian Gulf on the south, and from the Ionian Sea to the Chain of Pindus. In more ancient times the term included the entire western coast from the Ceraunian Mountains to the Corinthian Gulf, and the name was used in contradistinction to Coreyra and the other islands lying along the coast. (Strabo, p. 453; Homer, 'Odysse,' xiv. 100; Thuc. i. 5.)

Epirus was a wild and rugged mountainous country corresponding generally with the southern portion of ALBANIA, under which title its physical features are described (vol. i. col. 170.) Then, as now, but comparatively a small part of the country was agricultural; the mountains were the resort of a wild and savage race, and the valleys, though numerous, did not produce sufficient grain for the requirements of the inhabitants. The general pursuits of the inhabitants were pastoral, and the fine cattle and horses of Epirus were celebrated among the Greeks. The population was mostly collected in villages, the towns in Epirus being but few, while those were probably of comparatively late construction. The inhabitants of Epirus were scarcely considered Hellenic. The population in early times had been Pelasgic. (Strabo, p. 221.) The oracle at Dodona was always called Pelasgic [Δωδονα], and many names of places in Epirus were also borne by the Pelasgic cities of the opposite coast of Italy (Niebuhr, 'Hist. of Rome,' i. p. 31); but irruptions of Illyrians had barbarised the whole nation; and though Herodotus (ii. 56) speaks of Thesprotia as a part of Hellas, he refers to its old condition, when it was a celebrated seat of the Pelasgians, rather than to its state at the time when he wrote his history. In their mode of cutting the hair, in their costume, and in their language, the Epirotes resembled the Macedonians, who were an Illyrian tribe. (Strabo, p. 327.) Theopompus (apud Strabo, p. 323) divided the inhabitants of Epirus into fourteen different and independent tribes. Of these the most renowned were the Chaonians who occupied the northern, and Molossians who occupied the southern part of the country, and who successively maintained a preponderance in this district. The Molossians claimed a descent from Molossus, the son of Neoptolemus and Andromache, who according to the myth, migrated from Thessaly into Epirus after the Trojan war, and settled there in obedience to the injunctions of an oracle. Epirus rose into importance by the matrimonial connection of Alexander of Epirus with the king of Macedon. Philip married Alexander's sister Olympias, and gave him his daughter Cleopatra in marriage. Alexander was the first of the Molossian princes who bore the title of king of Epirus, having extended his power over most of the other Epirot tribes. He invaded Italy to assist the Tarentines against the Brutii and Lucani, and was slain near Pandosia. (Liv. viii. 24.) Pyrrhus, the grandson of Alexander, is the best known of the sovereigns of Epirus. The family of Pyrrhus became extinct three generations after his death, and the government was turned into a republic, which subsisted till the year B.C. 167, when the Epirotes were suspected of favouring Perseus of Macedon, and utter destruction was inflicted upon them by the Roman general P. Æmilius, who destroyed 70 towns, and carried away to slavery 150,000 of the inhabitants (Polyb. ap. Strabo, p. 322; Liv., xiv. c. 34; Plut. 'Æmil.,' c. 29), after which the greater part of the country remained in a state of absolute desolation, and even in the time of Strabo where there were any inhabitants they had nothing but villages and ruins to dwell in. (Strabo, p. 327.) Of the other Epirotic nations, the Thesprotians, who occupied the middle portion of the country, were most celebrated. They are

Coin of Epirus.

British Museum. Actual size. Silver. Weight, 131½ grains.

mentioned by Homer, who does not name the Chaonians and Molossians ('Odysse,' xiv. 315), and are considered by Herodotus to have been the progenitors of the Thessalians (vi. 176). In their territory

were the oracle at Dodona, the old city of Ephrya, and the rivers Acheron and Cocytus, celebrated in the old mythology. The most celebrated city in Molossia was Ambracia, a Corinthian colony, founded about B.C. 635. It had a harbour on the Gulf of Arta, and a small naval force. Ambracia received a very severe blow in the defeats by the Athenians and Amphiloehians 423-426 B.C., but their losses were in some measure repaired by a new colony from Corinth. (Thucyd. ii. 68; iii. 105, &c.) Pyrrhus made Ambracia his usual place of residence. (Liv. xxxviii. 9.) It sustained a very remarkable siege during the war between the Romans and Aetolians. (Polyb. xxii. 13.) Under the Roman dominion it sunk gradually into insignificance, and its ruin was completed by the transfer of its inhabitants to Nicopolis, which was founded by Augustus to commemorate his victory at Actium. Its site is marked by the town of ARTA.

EPPING, Essex, a market-town and the seat of a Poor-Law Union in the parish of Epping, is situated in 51° 41' N. lat., 0° 7' E. long., distant 16 miles W. by S. from Chelmsford, and 16½ miles N.N.E. from London. The population of the parish of Epping in 1851 was 2255. The living is a vicarage in the archdeaconry of Essex and diocese of Rochester. Epping Poor-Law Union contains 17 parishes and townships, with an area of 46,442 acres, and a population in 1851 of 15,630.

Epping stands in a pleasant and healthy situation at the northern extremity of the extensive tract known as Epping Forest. The principal part of the town, called Epping-street, consists of a line of irregularly built houses extending more than half a mile. The church, pleasantly situated on rising ground, about 2 miles north-west of the street, and with the houses scattered about it, forms the hamlet called Epping Upland. In the 'Street' is a chapel of ease, originally belonging to the abbot and monks of Waltham. The chapel has been rebuilt, and is vested in trustees for the benefit of the inhabitants. There are chapels for Quakers and Independents, National and British schools, and a reading room. The market is held on Friday, and is well supplied with dairy produce. Butter is produced in large quantities for the London market. Fairs are held on Whit-Tuesday and November 13th. About 2 miles S.W. from Epping is Copped Hall, a mansion erected about a century ago near the site of a former residence of the monks of Waltham, and since that time much improved. It is one of the finest seats in the county. Near it are the remains of an ancient camp, probably British, now overgrown with trees, called Ambreys, or Ambersbury banks.

Epping Forest, now limited to the south-west part of the county, was formerly called the Forest of Essex, being the only forest in Essex, the whole of which was anciently comprehended in it. The metes and bounds of the forest were finally determined on the 8th of September, 1610, by virtue of a commission under the great seal of England. The boundaries as thus settled include 11 parishes and parts of 10 others. The extent of the forest is estimated at 60,000 acres, of which 48,000 acres are estimated to be inclosed and private property: the remaining 12,000 acres are uninclosed wastes and woods. That part of the waste which was called Hainault Forest, was disafforested by the Act 14 and 15 Vict., cap. 43, passed August 1st, 1851. On the first Friday in July a pleasure fair, known as Fairlop Fair, was held round the spot once occupied by an enormous oak called Fairlop Oak.

(Morant, *Essex*; Wright, *Essex*; Young, *Agriculture of Essex*; *Communication from Epping*.)

EPSOM, Surrey, a market-town and the seat of a Poor-Law Union, in the parish of Epsom, is situated on the margin of Banstead Downs, in 51° 19' N. lat., 0° 16' W. long.; distant 16 miles N.E. by E. from Guildford, 15 miles S.W. by S. from London by road, and 18½ miles by the London, Croydon, and Epsom railway. The population of the town in 1851 was 3390. For sanitary purposes the parish is under the management of a Local Board of Health. The living is a vicarage with the curacy of Hoo annexed, in the archdeaconry of Surrey and diocese of Winchester. Epsom Poor-Law Union contains 15 parishes, with an area of 39,559 acres, and a population in 1851 of 18,796.

The name appears to have been originally Ebbasham, 'the home of Ebba.' Epsom contains some good dwellings, and there is a public building called the Assembly Rooms, in which county meetings are held. The parish church, a gothic structure, was almost entirely rebuilt in 1824. In the chancel are some fine monuments by Flaxman and Chantry. The Wesleyan Methodists, Independents, and Calvinistic Baptists have places of worship. There are in Epsom National, British, and Infant schools; a savings bank; almshouses for 12 poor widows, and several charitable endowments. In the centre of the town is a sheet of water, and an ornamental clock tower, which serves for an engine-house to supply the water to the town.

The once celebrated medicinal springs of Epsom, containing sulphate of magnesia, and which gave name to Epsom Salts, are still in existence, though not now resorted to. Brick making, brewing, and malting are carried on in Epsom, and in the vicinity are nursery grounds. The market is held on Wednesday, chiefly for corn; a fair is held on July 25th, for cattle and wool. The famous Epsom races are held on the adjacent downs. The grand stand on the race-course is a large and convenient building. Woodcote Park, Horton Park, the Oaks, and many other seats are in the neighbourhood.

(Manning and Bray, *Surrey*; Brayley, *Surrey*; *Communication from Epsom*.)

EPWORTH. [LINCOLNSHIRE.]

ERBIL, or ARBELA. [BAGHDAD.]

ERETRIA. [EUREA.]

ERFURT, a government or administrative division of Prussian Saxony, is bounded N. by Hanover and Brunswick, E. by the government of Merseburg and the duchy of Saxe-Weimar, S. by Saxe-Gotha, Saxe-Meiningen, and Saxe-Weimar, and W. by Hesse-Cassel. Its area is 1272 square miles, and its population at the close of 1849 was 347,279, above one-fourth of whom are Roman Catholics, and the remainder, with the exception of about 1500 Jews, are Protestants. The surface is in general hilly, being traversed by numerous offsets of the Harz and the Thuringerwald. The soil of the province is favourable for the cultivation of grain, and rather more than one half of its surface is arable land. About one-fifth of it is appropriated to meadows or pastures, and rather more than one-fourth is occupied by woods and forests. It is watered by the Unstrut, the Gera, Werra, Salza, Elan, Heide, Wipper, and Saale. The chief products are corn, flax, tobacco, hops, seeds, and salt. Great numbers of horses, horned cattle, sheep, goats, and swine are reared. In the circles of Weissensee and Schleusingen mines of iron, lead, and copper are worked; marble, gypsum, and sulphur also are among the mineral productions. The manufactures are considerable, and comprise iron and steel-ware, tin-plates, seed-oil, woollen-yarn, cloths, flannels, and carpets; linen and cotton, silk stuffs, hosiery, paper, glass, spirits, wooden clocks, &c. There are a number of mineral springs in the hilly districts.

The province or government of Erfurt is of most irregular shape, being broken into strips by Schwarzburg-Sondershausen (which is entirely inclosed by Prussian Saxony), and the small Thuringian states. The most connected portion of it lies south, west, and north-west of Schwarzburg, and the isolated bailiwick of Volkenrode belonging to Saxe-Gotha. The province also includes some small isolated detached tracts, the most important of which is the Prussian share of the old county of Henneberg, which lies between Saxe-Gotha, Saxe-Meiningen, and Schwarzburg-Rudolstadt on the western slope of Thuringerwald.

The province is divided into nine circles, named from the chief town in each: Erfurt, Nordhausen, Heiligenstadt, Mühlhausen, Worbis, Schleusingen, Langensalza, Weissensee, and Ziegenrück.

Erfurt, the capital of the government, is situated on the Gera a feeder of the Unstrut, in a richly cultivated plain, in 50° 58' N. lat., 11° 3' E. long., on the great road leading from Frankfurt-am-Mayn to the north of Germany, 14 miles by railway W. from Weimar, and has about 25,000 inhabitants. It was formerly the capital of Thuringia, and is a fortress of the second order, possessing two citadels, one the Petersburg, within the walls, and the other Cyriaxburg, on Mount Cyriax, outside of the town. Erfurt has six gates; five public squares, one of which, the market-square, is ornamented with a stone obelisk 50 feet high, erected in 1802, to Charles, elector of Mainz; several broad and well-built streets; 11 Roman Catholic and 8 Protestant churches. The cathedral church of St. Mary is a fine gothic structure; in this church there is a bell called the Maria Clara Susanna, cast in 1492, which weighs nearly 14 tons. The cell of the former Augustine monastery, in which Luther resided from 1501 to 1508, is still shown; it contains several memorials of him. The monastery is now used as an orphan house. Of the numerous religious houses which Erfurt formerly possessed the Ursuline convent alone remains, and has a female school attached to it, which is superintended by the nuns. Among the scholastic institutions in the town are—a high school, a gymnasium, a deaf and dumb school, schools of surgery, design, and architecture. There are also a botanical garden; a library of about 50,000 volumes, formerly belonging to the university, which was suppressed in 1816; an ophthalmic hospital; and a general hospital. Erfurt is the seat of provincial administration and of the provincial tribunals. It has considerable manufactures of cottons and woollens, besides less extensive ones of linen, ribands, leather, soap, earthenware, seed-oil, stockings, shoes, gloves, tobacco, &c., and it carries on a brisk trade in fruits, seeds, grocery, and drugs, grain, &c.

Heiligenstadt, situated on the Leine near the Hanoverian frontier, 50 miles, N.W. from Erfurt, is a regularly built walled town with about 5000 inhabitants. It has a castle, four Roman Catholic churches, a gymnasium, a house of correction, several spirit distilleries, and manufactures of woollen yarns and wooden clocks. From 1807 to 1814 Heiligenstadt was the capital of the department of the Harz in the kingdom of Westphalia.

Langensalza, 20 miles N.W. from Erfurt on the road to Göttingen and Hanover, stands on the Salza and near its mouth in the Unstrut, in 51° 6' 59" N. lat., 10° 38' 38" E. long., and has about 8000 inhabitants. The town is defended by a castle and surrounded by walls which are pierced by four gates. It contains four churches, a high school, a public library, and four hospitals. The manufactures are silk, cotton, and woollen stuffs, gunpowder, and starch. There are a sulphureous spring and baths about two miles from Langensalza, which are much frequented in summer.

Mühlhausen, 10 miles N.W. from Langensalza, is situated in a pretty and very fertile district on the right bank of the Unstrut, in 51° 12' 59" N. lat., 10° 28' 53" E. long., and has a population of about 13,000. It is an old town girt with wet ditches and high walls flanked with towers. There are four Lutheran churches, the finest of which is the Hauptkirche in the Oberstadt, or Upper Town; three hospitals;

a gymnasium; and an orphan asylum in the town. The industrial products of Mühlhausen are linen and woollen stuffs, and carpets; there are also several dye-houses, fulling-mills, tanyards, distilleries, breweries, oil-mills, starch manufactories, and wool-spinning establishments in the town: copper and iron ores are found near the town. Mühlhausen is one of the oldest of the former free towns in Germany; it maintained its democratic government till 1802 when it was ceded to Prussia. Münzer, a fanatic who gathered round him a large number of adherents from among the Thuringian peasantry during the progress of the reformation in Germany by his socialist harangues, made Mühlhausen his head-quarters, and here after the bloody defeat of his followers at the battle of Frankenhausen he was publicly executed.

Nordhausen, 40 miles N.N.W. from Erfurt, is situated on the Zorge, a feeder of the Helme, which runs eastward and joins the Unstrut. The town stands at the southern base of the Harz Mountains in a fine corn country, and has about 13,000 inhabitants. It is built in a mediæval style and is surrounded by a wall flanked with towers. There are four Lutheran churches, one of which contains the Ecce Homo and the Widow of Nain by Lucas Kranach; one Catholic church; and four hospitals. Nordhausen is a busy manufacturing town; its distilleries are among the largest in Germany, and it has numerous woollen factories, tanyards, oil-mills, soaperies, &c. Among its other industrial products are linen, sealing-wax, hats, and chemical products. Nordhausen is built at the head of the Goldener Aue, or Golden Vale, one of the most fertile and beautiful spots in Germany lying along the Helme, which separates the region of the Harz from that of the Thuringerwald. Its manufactures and its important corn-market make Nordhausen one of the most flourishing small towns of Prussia.

Schleusingen, chief town of the circle, formed out of the Prussian part of the old county of Henneberg, is situated on the Schleuse, a feeder of the Werra, 36 miles W.S.W. from Erfurt, and has 3200 inhabitants. The town is walled, entered by two gates, and defended by a castle. It has two churches, a gymnasium, and manufactures of woollens, white lead, hosiery, and paper.

Weissensee, 15 miles N. from Erfurt, between the Helme and the Unstrut, has a population of 2600.

Worbis, 45 miles N.N.W. from Erfurt, between Nordhausen and Heiligenstadt, stands near the source of the Wipper, which after flowing across Schwarzburg-Sondershausen enters the Unstrut between the mouths of the Helbe and the Helme: population about 2000.

Ziegenrück, the chief place in an isolated circle drained by the upper Saale, and inclosed by Reuss, Saxe-Weimar, Saxe-Meiningen, and Schwarzburg, is a small place of about 1000 inhabitants. There are iron forges and slate quarries here, and some manufactures of linen and paper.

Besides the above the following towns may be mentioned:—**Benneckstein**, in an isolated district situated at the foot of the Harz, and surrounded by Brunswick, is 12 miles N.N.W. from Nordhausen and midway between that town and the Brocken: the population is about 3500. **Bleicherode**, 12 miles W. from Nordhausen, between the Bode and the Wipper, has mineral springs, oil-mills, manufactories of serge, and woollen stuffs, and 2800 inhabitants. **Ellrich**, on the Zorge, 7 miles above Nordhausen, was formerly chief town of the county of Holmstein. It has three churches, an hospital, manufactures of broadcloth, flannel, serge, stockings, paper, leather, oil, &c., and a population of 2600. Within a couple of miles of the town is the grotto of Kelle, which is reached by a descent of 100 steps in the calcareous rock, and presents an apartment 300 feet long by 270 feet wide; in its centre is a basin of limpid water about 50 feet deep. **Sömmerda**, 4 miles S.E. from Weissensee, on the right bank of the Unstrut, is a walled town with about 3000 inhabitants, who manufacture iron-ware, broadcloth, and spirits. **Suhl**, a manufacturing town of 8000 inhabitants, on the Lauter a feeder of the Werra, is situated at the base of the Domberg, a part of the Thuringerwald, in the former county of Henneberg, 7 miles N. by W. from Schleusingen. It is a well-built town with three churches, a town school, and a poorhouse. The inhabitants are weavers, gunsmiths, or metallurgists. The industrial products are fustians, white lead, arms, hardware, sheet iron, &c. Iron mines are worked in the neighbourhood. **Tennstädt**, 10 miles E.N.E. from Langensalza on the Schambach, a small feeder of the Unstrut, has sulphureous springs, three churches, an hospital, and about 3000 inhabitants, who manufacture linen, woollen cloth, and thread. There are tufa quarries and vineyards in the neighbourhood. Tennstädt is the birthplace of Ernesti, the great classical commentator.

ERICH, LOCH. [INVERNESS-SHIRE.]

ERIDANUS. [Po.]

ERIE, LAKE. [CANADA; NEW YORK.]

ERITH. [KENT.]

ERIVAN, a town in Russian Armenia, is situated near 40° 10' N. lat., 44° 32' E. long., about 110 miles S. by W. from Tiflis, on the Zenghi, which is here crossed by a handsome stone bridge. The town is built partly on a hill and fortified, besides being defended by a fort or castle which stands on another eminence, is strong by nature on one side and defended on the other by mud walls. After its capture by Prince Paskewitch the castle was not repaired,

but a fortress on a site less exposed to attack from the neighbouring hills has we believe been recently erected. The ruins of the last Persian governor's palace are seen on the steep side of the old fort next the river, which is rapid and not fordable at any season. A stone bridge of a single arch is thrown across the stream just below the castle. Erivan is an ill-built place, but contains a large bazaar, several Armenian churches, a Greek church, an Armenian convent, a public bath, and a few mosques. The site is unhealthy in summer. Caravans from Tiflis to Erz-rum pass through Erivan. The transit trade is considerable, but much less so than when the town belonged to Persia. Some cotton stuffs, leather, and earthenware are manufactured. The town is of considerable extent, but probably does not contain more than 12,000 inhabitants, the greater part of its area being occupied by gardens, which produce fruits and melons proverbial for their excellence.

ERLANGEN, a town in Bavaria, in the circle of Middle Franconia, is situated in a well cultivated plain, near the confluence of the Regnitz and the Schwabach, 11 miles N. from Nürnberg, 24 miles by railway S. from Bamberg, and has a population of about 11,500. It is divided into the Old and New Town, the latter of which was founded by Christian, margrave of Bayreuth, in the year 1686. It is surrounded by walls, and has seven gates. The New Town is handsome, and regularly built. Erlangen has three Lutheran and two Reformed Lutheran churches, a Roman Catholic church, an orphan asylum, an infirmary, and a military hospital. The palace, which was partially destroyed by fire in 1814, has been fitted up for the use of the Protestant university, which was founded by Frederick, margrave of Bayreuth, in 1743. The university of Erlangen has faculties of Protestant theology, arts, and medicine, museums of natural history, a library of upwards of 100,000 volumes, and a botanical garden. The average yearly number of students attending this university is about 350. On the revocation of the edict of Nantes many French Protestants settled in Erlangen and introduced various manufactures. The town has factories for weaving and printing cotton goods, and manufactures stockings and hats on a large scale, also gloves, leather, tobacco, looking-glasses, linen, toys, &c. Erlangen, together with the principality of Bayreuth, became an appendage of the Bavarian crown by the treaty of 1809.

ERLAU (Eger, Jager, Agria), a town in Hungary, capital of the county of Heves, is situated on the Erlau, in a beautiful valley in the midst of richly cultivated lands, skirted by mountains crowned by woods and vineyards; in 47° 53' 54" N. lat., 20° 21' 53" E. long., and has about 19,000 inhabitants, who are mostly Roman Catholics. The Erlaubach divides it into two parts, which are surrounded by fortifications about seven miles in circuit, through which are six gates. The majority of the inhabitants dwell in the suburbs outside the walls. Erlau was founded by Stephen, king of Hungary, who resided in it in A.D. 1010, and made it the seat of a bishop; since 1803 it gives title to an archbishop. It contains a cathedral, four Roman Catholic churches, two monasteries, a Greek church, and a Protestant church. The houses in the town are large, and built in a neat style; the principal ornament is the university, a very handsome and spacious edifice, begun by Count Charles Eszterhazy in 1760, and finished in 1775, at a cost of upwards of 160,000*l.*; there is an observatory 172 feet high, a handsome chapel, and a very spacious examination hall and library attached to the institution. The university has faculties of philosophy and jurisprudence, conducted by 16 professors, and is very numerously attended. Opposite the University stands the cathedral church, which has nothing remarkable about it; but the neighbouring church of the Minorites is a splendid structure. The archbishop's palace is a fine building situated on a hill. Erlau has a county hall, a high school, an ecclesiastical seminary, a training school, several libraries, an hospital, and two mineral springs. It has also an extensive traffic in red wines, the produce of the vineyards in the vicinity. The manufactures consist of linens, woollens, hats, &c.

ERMENONVILLE. [OISE.]

ERNE, LOUGH. [FERMANAGH.]

ERNÉE. [MAYENNE.]

ERPINGHAM, Norfolk, a village and the seat of a Poor-Law Union, in the parish of Erpingham, is situated in 52° 50' N. lat., 1° 16' E. long.; distant 16 miles N. from Norwich, and 122 miles N.N.E. from London by road. The population of the parish of Erpingham in 1851 was 436. The living is a rectory in the archdeaconry and diocese of Norwich. Erpingham Poor-Law Union contains 49 parishes and townships, with an area of 63,638 acres, and a population in 1851 of 21,409. The parish church of Erpingham is a massive structure, with a square tower: it has been lately repaired. The population is chiefly agricultural.

ERROL. [PERTHSHIRE.]

ERZGEBIRGE (the Ore Mountains) is a mountain range in Germany, extending along the boundary of Bohemia and Saxony. It begins about 25 miles S.E. from Dresden, on the left bank of the Elbe, and extends in a west by south direction to the source of the White Elster, about 12° 20' E. long., where it is connected with the Fichtelgebirge. The river Elbe divides its eastern extremity from the Winterberg, the most western of the mountains of Lausitz, or Lusatia. The Ore Mountains extend in length about 100 miles, and their mean width is about 30 miles.

The highest part of the range, which is towards its southern border, forms partly the boundary-line between Bohemia and Saxony, but is mostly within the former kingdom. Its southern declivity, which is steep and scored by narrow valleys, terminates in the valley of the river Eger, about 10 or 15 miles from the upper range. The valley of the Eger lowers gradually from west to east, from 1100 feet to 400 feet above the sea. The northern declivity of the range descends in more gentle slopes towards the great plain of Northern Germany; and these slopes are divided from one another by wide and open valleys. The undulating plain which lies contiguous to it may be from 500 to 600 feet above the level of the sea.

The highest portion of the range occurs on both sides of 13° E. long., but rather to the west of it. Here are the Koilberg, 4212 feet, the Fichtelberg, 3968 feet, the Schwarzb. 3988 feet, and the Hassberg, 3248 feet above the sea. Farther east and farther west the range gradually sinks lower, the Great Chimstein, on the banks of the Elbe, rising only to 1864 feet above the sea.

The range consists chiefly of granite and gneiss, except along the Elbe, where sandstone almost exclusively occurs. It is rich in metallic ores of almost every kind. Gold occurs in a few places. The silver-mines are considerable, their annual produce amounting to 720,000 ounces; the iron-mines yield from 3500 or 4000 tons of iron. The tin-mines of Saxony are the most valuable on the European continent, and produce annually 140 tons. Copper is not abundant, and the annual produce does not exceed 30 tons; but from the lead-mines 400 or 500 tons are annually obtained; and of cobalt 600 tons and upwards. Arsenic, brimstone, and vitriol are likewise abundant; and there is also quicksilver, antimony, calamine, bismuth, and manganese. Coal abounds in the neighbourhood of Dresden and Zwickau. Kaolin, or porcelain clay, occurs in layers six feet thick at Aue, about 12 miles S.E. from Zwickau, whence it is carried to Meissen, and there used in the royal porcelain manufactory. Several kinds of precious stones are found, as garnets, topazes, tourmalines, amethysts, beryls, jaspers, and chalcedonies.

The upper parts of the range are covered with extensive forests, which furnish fuel for the great smelting-works. The lower slopes and valleys are well cultivated, but the produce is not sufficient for the maintenance of the great population which is employed in the mines and in the numerous manufactures of cotton, silk, and linen. Great quantities of corn are annually brought from the plain which lies to the north of the range.

Six great roads pass over this range, the most important of which are those that connect Prague with Dresden and Chemnitz. The great railway from Vienna to Dresden, through Prague, crosses the Erzgebirge at its eastern extremity, and runs at a little distance from the left bank of the Elbe. [EGER; BOHEMIA.]

ERZINGAN. [ARMENIA.]

ERZ-RUM, a town in Armenia, capital of an extensive pashalic in Asiatic Turkey, is situated in an extensive and fertile plain watered by the western branch of the Euphrates, which runs at a few miles' distance from the town. [ARMENIA.] The population in 1828, at the time of the Russian invasion of Turkey, was estimated at about 130,000; in 1836 it did not exceed 15,000, but was then increasing; in 1844 the population reached 44,000, and was still on the increase. Indeed the number of inhabitants fluctuates considerably on account of the great number of strangers who arrive and depart in the caravans. The town is large, and is partly surrounded by an old castellated wall and a ditch. On its southern skirts stands a citadel, encircled by a double wall flanked with towers very close to each other, and with a ditch. The citadel has four gates, and incloses the palace of the pasha and a large part of the Turkish population. But a large portion of Erz-rum is unwall'd, and this part contains the principal bazaars and khans. The streets are narrow, dirty, and like all Turkish towns infested by dogs. The houses for the most part are low, and built of wood, mud, or sun-dried bricks; but the bazaars are extensive, and well supplied with provisions. Erz-rum has nearly forty mosques, a Greek church, a large Armenian church, a custom-house, and numerous caravanserais. Since its restoration to the Turks by the peace of Adrianople, Erz-rum has been slowly rising from its state of decay. Before the Russian invasion considerable quantities of silk and cotton cloth were made here, and much leather was tanned; there were also important manufactures of copper vessels. But since the return of peace manufacturing industry has not recovered its former activity. The country about it produces nothing for export except corn and sheep and cattle. The corn is too heavy an article to pay for conveyance to the sea in a country devoid of roads; the cattle and sheep are sent to Constantinople alive, or as dried meats. The commerce and transit trade of the city is extensive, owing to its position on the great caravan-route from Constantinople and Trebizond to Persia and Mesopotamia. The imports comprise shawls, silk goods, cotton, tobacco, rice, indigo, madder, rhubarb, &c., from the east; and broad-cloth, chintzes, cutlery, and British manufactures by way of Trebizond. The native exports, besides those above mentioned, are horses, mules, and gall-nuts. A few furs are exported to Russia.

Erz-rum stands in 39° 59' 30" N. lat., 41° 46' 23" E. long., at an elevation of 5800 feet (some say 7000 feet) above the sea. The winters are long and extremely cold. [ARMENIA.]

ESPIRITU SANTO. [BRAZIL; CUBA; NEW HEBRIDES.]

ESPRIT, ST. [BAYONNE.]

ESQUIMAUX, the name of a people that inhabits the most northern countries of America. On the eastern coast of America they are met with as far south as 50° N. lat. on the shores of the Strait of Belle Isle. They occupy the whole of the great peninsula of Labrador and the whole eastern coast of Hudson's Bay up to East Main River. On the western side of Hudson's Bay they inhabit the coast north of Churchill River, whence they extend northward over the Barren Lands to the Great Fish River, or Thleweschodezeth, on both banks of which they are found east of 100° W. long. The whole country between this river, the Great Bear Lake, the Mackenzie River, and the Arctic Ocean is exclusively inhabited by them. The coast lying to the west of Mackenzie River is also in their possession; and they seem to be spread as far as Kotzebue Sound, on Behring Strait. They also occupy Greenland and all the other islands between the northern coast of America and the pole as far as they are habitable.

In stature the Esquimaux are inferior to Europeans. A person is rarely seen who exceeds five feet in height. Their faces are broad and round, cheek-bones high, cheeks round and plump, nose small, mouth large, and lips thick. Their eyes are in general of a deep black; but some are of a dark chestnut colour: they appear very small and deeply seated, owing to the eyelids being much encumbered with fat. The hair is uniformly long, lank, and of a jet-black colour. The ears are situated far back on the head. Their bodies are large, square, and robust, the chest high, and shoulders very broad. Their hands and feet are in general remarkably small. They are of a deep copper colour. Some of them wear long beards; but for the most part the beard is plucked out as soon as it appears. They show a good deal of ingenuity in making their dresses and instruments.

Their language is different from that spoken by the other savage nations who inhabit North America. The same language is spoken by all the different tribes of the Esquimaux, though of course each of them has expressions which are peculiar.

[Perry; Mac Keevor; Graah, *Voyage to Greenland*.]

ESSEN. [DESELDORF.]

ESSEQUIBO. [GUYANA, BRITISH.]

ESSEX, an English county, situated on the eastern coast of the island of Great Britain, and lying between 51° 27' and 52° 6' N. lat., 0° 4' W. long., and 1° 17' E. long. It is bounded N. by the county of Suffolk and by the county of Cambridge, W. by Hertfordshire and by the county of Middlesex, S. by the gradually widening estuary of the Thames, by which it is separated from the county of Kent, and S.E. and S. by the German Ocean. The length of a straight line drawn from the north-western to the north-eastern extremity of the county is 53 miles; but the northern boundary of the county, following its turnings, is about 75 miles; the length of a line joining the north-western with the south-western extremity is 37 miles; but the boundary line, from its many windings, extends to 53 miles. The length of a line joining the south-western to the north-eastern extremity of the county is 63 miles; but the boundary along the bank of the Thames and the coast of the ocean is about 85 miles. The area of the county is estimated at 1657 square miles, or 1,060,549 statute acres. The population according to the return of 1841 was 344,979; in 1851 it was 369,318.

Coasts, Islands, &c. The bank of the Thames and the sea-coast of Essex are marshy almost throughout. The marshes extend inland in some places over a breadth of four miles, in other places the breadth is reduced to a very narrow strip. From the eastern end of Canvey Island the marshes cease; and about Leigh and Southend the coast rises into low cliffs. At Shoebury Ness, a low point of land at the mouth of the Thames, 6 miles from the east end of Canvey Island, where the coast turns to the north-east, the marshes re-appear; and with an interval of about a mile just beyond Shoebury, they continue along the coast 11 miles, to the mouth of the river Crouch. Nearly 4 miles from Shoebury a narrow creek, with many ramifications, penetrates inland into the channel of the river Crouch, and with that river cuts off from the mainland several low flat islands, Russells, Haven Gore, New England, Potten, Wallasea, and Foulness. The edge of this creek and its various ramifications, as well as of the Broomhill and Crouch rivers, which unite with it, are embanked, and the islands are embanked all round. From the mouth of the Crouch the coast runs nearly north and south 8 miles to the mouth of the Blackwater River. In this part of the coast the sea encroaches upon the land. The marshes (Burnham Marsh, Southminster Marsh, Dengey Marsh, Tillingham Marsh, and Bradwell Marsh), extend in the southern parts nearly 5 miles inland, but gradually become narrow to the northward to St. Peter's chapel, where they are interrupted by the higher ground running down to the coast; the sand, which is dry at low water, has a breadth of from 2 miles to 2½ miles. Between the estuaries of the Blackwater and the Colne, in the inlet formed

by their junction, the mouth of which inlet, from St. Peter's chapel to St. Oysth Point, is above 5 miles over, is the island of Mersey, separated from the mainland by a marshy tract and an intervening narrow channel. The marshes terminate 4 miles beyond St. Oysth Point, and (with a slight interruption of a mile of marsh-land near the mouth of Holland Creek) a high broken coast extends between 9 and 10 miles to the Naze, the most eastern point of the county. This point formerly extended much farther toward the east. The ruins of buildings have been found at considerable distances from land; and a shoal called West Rock is 5 miles from the shore. From the Naze to Harwich, between 5 and 6 miles in a direct line north and south, the coast forms an inlet lined by salt marshes, and occupied by Horsey Island, Holmes Island, Pewit Island, and one or two smaller islands. The sea-coast terminates at Harwich; but the estuary of the Stour, which is in most parts more than a mile wide at high water, extends up to Catawade bridge, above Manningtree.

The islands have been named in the course of the foregoing description of the coast: we subjoin a few particulars of the chief of them.

Canvey Island is entirely marsh-land, banked in all round. Its extreme length from east to west is 6 miles; its greatest breadth from north to south $2\frac{1}{2}$ miles. Its area is about 3000 acres, chiefly appropriated to grazing sheep and cattle. It is connected with the mainland by a causeway leading to the village of South Benfleet. In 1841 the island contained 39 houses, and a population of 277; in 1851 it contained 16 houses and a population of 111. A timber chapel was built about 1622 for the use of some Dutchmen employed in embanking the island. The chapel has been twice rebuilt: the present chapel will hold 100 persons. A fair is held yearly on the island.

Foulness Island is situated on the shore of the German Ocean, and forms the right bank of the river Crouch at its embouchure. Its extreme length, from north-east to south-west, is almost 6 miles; its greatest breadth $2\frac{1}{2}$ miles. Its area is about 6300 acres, with a population of 640, almost entirely agricultural. The soil is good; the upper part produces corn; the lower part is used for pasturage. The houses are of wood—a material which is here liable to rapid decay. The church, also of wood, is situated near the centre of the island: it will hold 300 persons. A yearly fair is held.

Wallasea, otherwise Wallet or Wallis, is bounded N. by the river Crouch, E. and S. by the Broomhill River, and W. and S.W. by Paglesham Creek. A causeway over Paglesham Creek connects Wallasea with the mainland. The greatest length of the island is from east to west $3\frac{1}{2}$ miles; its greatest breadth is a mile and a half. The water is too salt to be fit for kitchen use, and the inhabitants have to fetch fresh-water from the mainland. The whole island is marsh-land; the area is 3255 acres; in 1851 it contained 13 houses, and a population of 133.

Potten Island, Haven Gore, New England, and Russelys or Rushley belong to the same group as the two foregoing; they are of small extent. In the creeks which surround or separate these islands are fed the small oysters called Wallfleet oysters.

Mersey Island is bounded S. by the estuary of the Blackwater River, S.E. by the German Ocean, E. by the estuary of the Colne, and on all other sides by a creek, which, running through the marshes on its north-west side, separates it from the mainland. The greatest length of the island is from east-north-east to west-south-west nearly 5 miles; the breadth varies from one to two miles. The island is divided into the two parishes of East and West Mersey or Mersea, of which East Mersey comprehends an area of 1957 acres, with a population in 1851 of 291; West Mersey an area of 3365 acres, with a population of 870. There is a passage from the island to the mainland over the Mersey Channel, dry at low water, called the 'Strode,' or 'Stroude.'

Horsey Island is in that inlet which occurs between the Naze and Harwich. Its greatest length is from north-west to south-east about two miles; its greatest breadth rather more than a mile. It consists almost entirely of salt-marshes: a spot rather more elevated than the rest, about one-fourth of the whole, on the south-west side of the island, is banked in. In the marshes there is a decoy for wild-fowl. The area is 1755 acres: the population in 1851 was 161.

Pewit Island and Holmes Island, with one or two others, are near Horsey: all these islands are separated from each other and from the mainland by narrow channels.

Surface, Hydrography, and Communications.—This county has few hills of any considerable elevation; its general slope, as determined by the watershed, is towards the south and east; the coast and the banks of the Thames present a succession of unhealthy marshes commonly known as the hundreds of Essex. High Beach, on the north-west side of Epping Forest, near Waltham Abbey (390 feet high), Langdon Hill, south of Billericay (620 feet high), Danbury Hill, between Chelmsford and Maldon, of nearly the same height, and Tiptrey Heath, near Witham, are probably the highest parts of the county. The chalk downs which form the continuation of the Chiltern Hills just cross the north-western part of the county in their extension towards the north-east.

The rivers of Essex are—the Thames, with its affluents, the Lea (into which flows the Stort), the Roding, the Bourne Brook, the

Ingerburn, and some smaller streams; the Crouch, with its affluent the Broomhill; the Blackwater, with its affluents the Pods Brook, or Witham River, and the Chelmer (into which flow the Sandon Brook, the Ter, and some other streams); the Colne, with its affluent the Roman; the Stour; and the Granta or Cam. The Thames bounds the county on the south side. Its course, though winding, is on the whole nearly from west to east. It is a tidal river, and navigable for the largest merchant ships, and for frigates and other smaller ships of war throughout that part of its course which belongs to this county. The mouth of the Thames contains numerous shoals. [THAMES.] The Lea bounds the county on part of its west side. It more properly belongs to Hertfordshire, in which it has a considerable part of its course. It meets the border of Essex at the point where it receives the Stort, along which the boundary previously runs and flows south past Braxhoun (Herts), Waltham Abbey, Chingford, Layton, and Stratford (all in Essex), 20 miles, into the Thames. The banks of this river are marshy; and the marshes are from half a mile to a mile wide. The stream is frequently divided and flows in several channels, and in some places cuts have been made in order to improve or shorten the navigation, which comprehends all that part of the river which is connected with this county. The Stort rises in Hertfordshire, but soon enters Essex, through which it flows for some miles, and then touches the border again, and flows, sometimes on the border, sometimes in Hertfordshire, into the Lea. Its whole course is about 24 miles, for about 10 miles of which it has been made navigable. The navigation of the Stort and the Lea serves for the conveyance of corn, malt, wool, and other agricultural produce to London; and for the conveyance in return of coals, timber, deals, bricks, groceries, cloth, and other articles of daily consumption. The Roding rises in the western part of the county, near Easton Park, a short distance north-west of Dunmow: it flows southward about 15 miles to the neighbourhood of Chipping Ongar, where it receives the Cripsey Brook (about 9 miles long) from the north-west. From the junction of the Cripsey Brook the Roding flows south-west in a very winding channel 14 miles to Woodford bridge; and from Woodford bridge it flows about 7 or 8 miles nearly south past Ilford and Barking into the Thames. Its whole course is about 36 miles. The banks are low and marshy from the neighbourhood of Ongar. The west bank from Ilford, and both banks from below Barking, are protected by embankments. It is navigable under the name of Barton Creek up to Ilford bridge. The Bourne Brook rises between the villages of Navestock and Havering-atte-Bower, and flows in a winding channel past Romford, and between Dagenham and Hornchurch Marshes into the Thames. Its length is about 12 miles. In the lower part of its course the Bourne Brook is connected with the pool formed by Dagenham Breach. This breach was occasioned in 1797 by the blowing up of a small sluice that had been made for the drainage of the land waters: an opening was formed by the rushing in of the Thames, 300 feet wide, and in some places 20 feet deep; 1000 acres of rich land in the adjacent levels were overflowed, and the surface of nearly 120 acres was washed into the Thames, where a bank was formed nearly a mile in length, and extending half-way across the river. After various ineffectual attempts, the breach was stopped, by driving dove-tailed piles and other expedients, under the direction of Captain Perry, who commenced his works in 1718. Within the embankment there is yet a pool of between 40 and 50 acres. Through the upper part of this pool the Bourne Brook flows. The Ingerburn rises near Havering-atte-Bower, not far from the source of the Bourne Brook, and flows southward, past Upminster, into the Thames. It is about 12 miles long. A stream of about the same length, which rises close to Thorndon Park near Brentwood, falls into the Thames near Purfleet. The Crouch rises on the slope of the hills south of Billericay, and flows east by north about 25 miles into the sea. The tide flows about 13 miles up the river and is kept from overflowing the lowlands on its banks by mounds. In the tide-way there are many arms; and the various channels by which the river communicates with the sea form the group of Foulness, Wallasea, and the adjacent islands. Just above its mouth it receives the Broomhill River (10 miles long), which is navigable for seven miles nearly up to Rochford. The Blackwater, which in the upper part of its course is called the Pant, rises near the village of Wimbish, in the north-western part of the county. It flows first south-east and then south about 30 miles, past Coggeshall to the neighbourhood of Witham. Here it is joined by the Pods Brook, a stream 14 or 15 miles long, which rises near Great Bardfield and flows past Braintree and Witham. From the junction of this stream the Blackwater flows south about 4 miles to the junction of the Chelmer; after which it flows east about 12 miles into the sea, having a course of about 46 miles. From Maldon, which is below the junction of the Chelmer, it is a tidal river; and its estuary, which is at high water from a mile and a half to $2\frac{1}{2}$ miles wide, contains the islands of Northey, Osey, Ramsey, and Pewit. Lawling Creek and Goldhanger Creek are channels in the ooze or strand of this tideway. The Chelmer rises near Debden, and flows south-south-east about 23 or 24 miles to the town of Chelmsford, where it is joined by a stream which rises near Thorndon Park and flows northward to Writtle, and then turns east, its whole course being about 14 miles. From Chelmsford the Chelmer flows east about 10 miles till it falls into the Blackwater near Maldon. Its

whole course is about 34 miles. The Sandon Brook, which rises near Stock, 2 miles north-east of Billericay, and has a course of about 10 miles, joins the Chelmer between Chelmsford and Maldon. The Ter rises between Felstead on the Chelmer and Rayne on the Poda Brook, and flows south-east 13 or 14 miles into the Chelmer, which it joins about 2 miles below the junction of the Sandon Brook. The Colne rises in the north-western part of the county, and flows east about 7 miles to the neighbourhood of Great Yeldham, where it is joined by another stream of nearly the same length. From this junction it flows south-east 6 miles, then east-south-east about 13 miles to Colchester. Below Colchester it becomes a tidewater and flows 8 or 9 miles south-east into the sea at the north-east end of Mersey Island. Its whole course is about 35 miles. The Roman rises about 2 miles north of Coggeshall on the Blackwater, and flows east by south about 13 miles into the tideway of the Colne, which it joins midway between Colchester and the sea. A brook 8 or 9 miles long from Layer Marney and Layer Breton joins the Roman about three miles above its junction with the Colne. The Stour may be considered as equally belonging to Suffolk and Essex. Of the three springs which may claim to be its sources, one which flows past the village of Kedlington is in Suffolk; a second is in Cambridgeshire, and from it a stream flows by the town of Haverhill, on the borders of Suffolk and Essex; the third spring is in Essex, and the stream from it passes Steeple Bumpstead. From the junction of these three streams, which takes place about 5 or 8 miles from their respective sources, the river to its outfall divides the counties of Essex and Suffolk. Its course is first east about 10 miles to the neighbourhood of Long Melford, above which it receives two small tributaries on the Suffolk bank; thence its course is south by east about 8 miles: then east 13 miles to Catawade bridge, above Manningtree. Below Catawade bridge the stream widens into a considerable estuary, 11 or 12 miles long, and for the most part above a mile wide, which unites with the estuary of the Orwell, a Suffolk river, and passes into the open sea between Harwich and Languard Fort. Its whole course is about 50 miles. The Cam rises near Debden, 4 miles from Saffron Walden, and flows first south-west for 2 miles, and then turns north and flows 8 or 9 miles into Cambridgeshire, to which the principal part of its course belongs.

The Thames and the Lea are navigable throughout that part of their course which belongs to this county; the Stort is navigable from Bishop Stortford to its junction with the Lea. The tideway of the Crouch is navigable; near Burnham this river is a quarter of a mile wide, and has depth of water sufficient for a 98-gun ship: a 74 might go almost up to Hull bridge at the head of the tideway. The Blackwater does not appear to be navigable above the junction of the Chelmer. Vessels of considerable burden can get up to Maldon at spring tides. The Chelmer is navigable to Chelmsford. The navigation of the Colne extends to Colchester. The Stour is navigable up to Sudbury. Essex has no navigable canals.

The principal roads in the county are the three roads from London to Norwich, by Ipswich, by Bury, and by Newmarket. The road by Ipswich enters the county at Bow bridge, and crosses the county in nearly its greatest extent from south-west to north-east, passing through the market-towns of Romford, Chelmsford, Witham, and Colchester, 7½ miles beyond which the road crosses the Stour at Stratford bridge and enters Suffolk. The road through Bury branches off from the Ipswich road at Chelmsford, and passes through the towns of Braintree and Halsted, 8 miles beyond which the road crosses the Stour into the town of Sudbury in Suffolk. The road by Newmarket branches off from the Ipswich road at Stratford, crosses part of Epping Forest, and runs through the town of Epping, about 7 miles beyond which it crosses the Stort into Hertfordshire; between 29 and 30 miles from London it re-crosses the same river into Essex, runs northward near Saffron Walden, and finally quits the county at the village of Great Chesterford, 45 miles from London. Numerous roads of minor importance traverse the county.

The Eastern Counties railway is the only railway which passes through Essex. The main line enters the county at Old-Ford; at Stratford it turns northward, and continues for some 17 miles along the valley of the Lea, but for the greater part of the way on the Hertfordshire side of the river. At Roydon it enters the valley of the Stort, along which it runs to Stanstead, 14 miles, partly in Essex and partly in Herts. It then runs due north quitting Essex at Great Chesterford. The Colchester line traverses the county in a north-eastern direction and leaves it near Manningtree, 55 miles. From Stratford a branch runs to North Woolwich, 5 miles. Near Ilford a branch runs south-east to West Tilbury, and is to be continued to Southend. From Witham, on the Colchester line, a branch runs north-west to Braintree, 12 miles; and another south-south-east to Maldon, 5½ miles. From Marks Tey, on the same line, a branch runs north-north-west to Sudbury, 11 miles. A branch is in course of construction from Manningtree to Harwich, about 12 miles.

Geological Character.—A considerable tract in the northern part of the county, stretching along the river Stour from the village of Kedlington to between Sudbury and Noyland, and extending for some distance into the interior of the county, is occupied by diluvial beds, consisting of loam with fragments of chalk. The coast of the north-east part of the county is covered with the sand or gravel of the

upper marine formation, which occupies a considerable part of the counties of Norfolk and Suffolk, and is locally designated 'crag.' At the headland of the Naze it constitutes about 30 feet of the upper part of the cliffs (which are about 45 feet high) resting upon the London clay: south of the Naze its thickness appears to vary from 10 to 40 feet. In the projecting cliff of Harwich it includes friable masses of ferruginous sand, somewhat cemented together, and inclosing shells. Fragments of fossil bones washed out of the strata of this formation, in which they had been imbedded, are found on the beach at Walton, but occur in much greater quantities at Harwich. The cliffs south of the Naze consist of fresh-water deposits, which contain shells and mammalian remains. In the valley of the Stour, while excavating for the Stour railway near Mark's Tey, fossil elephants' teeth were found.

The greater part of the county, including Epping and Hainault or Honhault Forests, is occupied by the London clay. The London clay of the cliffs near Harwich contains beds of stratified limestone: the same cliffs are very productive in the fossils with which this formation abounds. South of Walton, near the Naze, abundance of septaria are found, which are sent by sea to Harwich, where they are manufactured by government into a cement. The principal elevations in the county, High Beach, Langdon and Danbury Hills, and Tiptree Heath, are formed of London clay. The surface of the vegetable mould commonly rests on alluvial beds of rich marl and loam, which often alternate with gravel and sand, and sometimes have a thickness of 30 or 40 feet over the London clay. The sands and clays of the plastic clay formation skirt the district of the London clay on the north-west. Halsted and Coggeshall, with the intermediate tract, are both on the plastic clay. The border of Essex, near Hadleigh, is the most northerly point at which this formation has been found. The north-western extremity of the county, about Saffron Walden, consists of chalk: the great chalk district, in its extension from south-west to north-east, just crosses that part of the county. The chalk appears also at Purfleet, where is an extensive chalk pit, and Gray's Thurrock, on the banks of the Thames. A subterranean forest underlies the marshes on the banks of the Thames.

Climate, Soil, Agriculture.—The climate of Essex is favourable to vegetation: the sea and the numerous estuaries which bound it on the south and east soften the rigour of winter, and keep up a certain degree of moisture in summer. The same cause produces cold fogs and exhalations in spring and autumn, which are prejudicial to the health of those who are not inured to the climate, but improved drainage and the disappearance of the woods before the advance of cultivation, have diminished the source of unhealthiness. The soil all along the coast, and 10 or 12 miles inland, is a friable loam of greater or less tenacity in different parts, but peculiarly adapted to the cultivation of wheat, beans, and oats. The Isle of Mersey, which lies at the mouth of the Colne River, has been long noted for the fertility of its soil, which is a fine alluvial loam composed of the various earths deposited from the river and the sea, like the warp lands along the Humber, or the polders in the Netherlands. The best soils of Essex lie low, and require to be protected from the sea by embankments. Many marshes which formerly produced nothing but herbage, and were subject to inundations, are now converted into arable fields: and a great tract of land, all along the coast, which used to be covered by the sea at high tides, is now laid dry by proper deep and broad ditches, here called fleets, and protected by high and well-constructed sea-walls. In some of these marshes the want of fresh water in summer was often felt severely. But recourse has been had to boring, which has been attended with great success, especially in the marshes at St. Oysth, where the finest springs of water have been found, which flow over the surface, and keep ample reservoirs continually full. The depth at which the water was found did not exceed 50 feet. The soil in the uplands along the coast consists chiefly of good loams varying in tenacity from a strong clay to a light gravel; most of it is of such a nature as to bear both turnips and beans. The whole county has an undulating surface, which is very pleasing in districts where fields and woods are interspersed. The only level tract is that along the Thames, which extends to its mouth and along part of the south-eastern coast. Clay soils prevail in most parts of the county. There are few such light soils in Essex as there are in Norfolk and in Lincolnshire; and except on the borders of Hertfordshire and Cambridgeshire chalk and marl are rare.

In those farms which have marshes attached to them numerous cattle are kept, and the straw is converted into manure, by which the arable land is kept in a high state of fertility. Along the Thames the salt-marshes are extensive, and are profitable from the number of horses which are sent from London to feed there, after they have been over-worked and require rest, or when they have met with some accident. In some cases oxen and sheep are fed on the marshes.

Besides the crops usually cultivated a considerable quantity of cole or rape-seed is raised on rich alluvial soils. It is a profitable crop, owing to the abundant supply of manure brought from London by the Thames. Flax is not cultivated to any great extent, and very little hemp is sown. Some hops are raised in the western part of the county towards Cambridgeshire. The cultivation of carraway, coriander, and teasles is almost peculiar to this county.

In that part of Essex which lies within a few miles of London the

cultivation of the soil partakes to a great extent of the garden culture. Vegetables are raised in great quantities, and very extensive fields are almost entirely devoted to the raising of potatoes. The ground is ploughed and very highly manured with stable dung from London. Mangol wurzel for the London cowmen is also raised in considerable quantities. The meadows within 15 miles of London supply the Whitechapel market with hay, and every cart brings back a load of dung.

The cows and horses in Essex are chiefly reared in Suffolk, and Scotland supplies oxen for fattening. In some parts of the county there are a few large dairies; but in general the number of cows kept on a farm is not considerable. Many calves are fatted, which are killed in the country, or sold at Romford to London butchers. Sheep are kept in large flocks and with considerable advantage. By means of draining the land has been made capable of being folded over even in winter. Essex is not a sheep-breeding county, although many fine lambs are reared; but they are generally bought from the breeders in Wiltshire or Sussex in autumn and sold fat to the butcher in the succeeding spring. There is no peculiar breed of horses. The Suffolk punch is in general use for farm work, and it is scarcely possible to find a breed better adapted for every kind of work. Essex has been long noted for a superior breed of pigs, which has been produced and improved by crosses with foreign breeds, chiefly the Neapolitan and the Chinese.

Divisions, Towns, &c.—Essex is divided into 20 parts, of which 19 are called hundreds, and one, that of Havering-atte-Bower, a royal liberty. We subjoin a list of these divisions, with their situations:—Barstaple, S.; Becontree, S.W.; Chafford, S.; Chelmsford, Central; Clavering, N.W.; Dengey, or Dengie, S.E.; Dunmow, Central; Freshwell, or Freshwell, N.W.; Harlow, W.; Havering-atte-Bower, S.W.; Hinckford, N.; Lexden, N.E. (Colchester division and Witham division); Ongar, Central; Rochford, S.E.; Tendring, N.E.; Thurstable, E.; Uttlesford, or Utelsford, N.W.; Waltham, W.; Winstree, E.; Witham, Central.

There is no city in Essex. There are 19 market-towns: 3 of these are parliamentary boroughs—COLCHESTER, on the Colne; HARWICH, at the mouth of the Stour; and MALDON, on the Pant or Blackwater. CHELMSFORD, the county town, is on the Chelmer. Of these places, as well as of BARKING, on the river Roding; BILLERICAY, on the road from London to Rochford; BRAINTREE; BRENTWOOD, on the road to Chelmsford; COGGESHALL, on the Blackwater; DUNMOW; EPPING; HALSTEAD, on the Colne; LEXDEN, on the Colne; ONGAR, on the Roding; ORSETT, on the road from Romford to Southend; ROCHFORD, on the Broomhill River; ROMFORD, on the Bourne Brook; SAFFRON WALDEN, on one of the feeders of the Granta or Cam; TENDRING, on a small river which flows into the sea at Holland Creek; THAXTED, on the Chelmer; WALTHAM ABBEY, on the Lea; WALTHAMSTOW, on the Lea; WEST HAM, on the Lea; WENSTREE; and WITHAM, a market-town on the Brain River—an account is given under their respective titles. Of the other towns and more important villages an account is subjoined; the populations given are those of 1851.

Burnham, 19 miles S.E. from Chelmsford, population of the parish 1869, is on the left bank of the river Crouch, which is navigable a considerable way above Burnham: there is here a convenient quay. The oyster-fishing employs many of the inhabitants. There is a good coasting trade. Besides the parish church, which is about a mile from the port, there is a chapel for Dissenters. A ferry maintains communication with Wallasea and the other islands at the mouth of the Crouch.

Dagenham, 22 miles S.W. from Chelmsford, population 2494: the lower part of the parish is a marshy district on the left bank of the Thames. The great breach made in the embankment in 1707 has been already noticed. There are National and Infant schools.

Gray's Thurrock, on the left bank of the Thames, 24 miles S.S.W. from Chelmsford, population 1713, consists chiefly of one irregular street on a creek of the Thames, accessible to hoys and other small vessels. The church is cruciform, with a tower on the north side. A considerable amount of trade is carried on. The market on Thursday is chiefly for corn; there are two yearly fairs. Brick-making is extensively carried on. Belmont Castle, a fine mansion in the vicinity, affords extensive river and inland views. In the adjoining parishes of *Little Thurrock* and *Chadwell* are some remarkable caverns or holes in the chalk, to which tradition has assigned the name of 'Cunobelin's Gold-mines.' They are also called 'Dano-Holes,' from having been used by those invaders as lurking-places or receptacles for plunder. There is a station of the Southend railway at Grays.

Hadleigh, 16 miles S.S.E. from Chelmsford, population of the parish 412, formerly had a market which has been discontinued. The church is an ancient edifice in the early English style. Near Hadleigh are the ruins of a castle built by Hubert de Burgh.

Harlow, 17 miles W. by N. from Chelmsford, population 2322, was formerly the seat of a large woollen manufacture and of a considerable trade. The church was originally cruciform, with a central tower rising from the intersection of the transepts; but having been much injured by fire in 1711, a cupola was substituted for the tower: the church is adorned with much painted glass. A new church was opened in 1842. There is a chapel for Baptists. A small market is held on Wednesday. There are three considerable fairs in the year for horses

and cattle. A sum of 8000*l.*, bequeathed by Mr. George Fawbert, has been vested in trustees for the establishment of a day school and library at Harlow, and for apprenticing or otherwise benefiting those educated at the school. There are also National and British schools. Brewing, malting, and rope-making are carried on.

Hatfield, 11 miles N.W. from Chelmsford, population 2034, is on the Pincey Brook, which flows into the Stort. This place was formerly part of the royal demesne, from which circumstance it was called Hatfield Regis: its other designation of Hatfield Broad Oak it obtained from a large oak supposed to have flourished here in the Saxon times. Aubrey de Vere founded in 1135 a Benedictine priory at Hatfield. The church has a western tower and a large porch in the perpendicular style; other parts are more ancient. The Methodists have a place of worship. There are a National and a Charity school.

The Hedinghams formerly constituted one parish; from the time of Henry III. they appear as two: *Sible Hedingham*, on the right bank of the Colne, 18 miles N. by E. from Chelmsford, population 2346; and *Castle Hedingham*, on the left bank of the river, 1 mile farther, population 1394. Sible Hedingham church is a neat building of the time of Edward III. A castle was built here by the De Veres about the beginning of the 12th century. The De Veres retained the castle until 1625. The keep, the only part remaining, is one of the best-preserved Norman keeps in the kingdom. The building forms a parallelogram, 55 feet on the east and west sides, and 62 feet on the north and south, and is upwards of 100 feet high. Castle Hedingham church is of stone with brick battlements, partly in the Norman and partly in the early English style: the tower is later. In the chancel is a superb but somewhat mutilated monument of John de Vere, earl of Oxford, who died in 1539. The Baptists have a chapel. There is a National school at Sible Hedingham. A Benedictine nunnery was founded here in 1190. Coach-making, malting, brick-making, and gardening give employment to some of the population.

Ingatesone, on the London road, 6 miles S.S.W. from Chelmsford, population 860, had formerly a considerable cattle market, and has still a large cattle fair. The church contains several monuments of the Petre family. There are here a chapel for Independents, a Charity school, and an alm-house. Ingatesone Hall, once the seat of the Petre family, is an irregular pile of ancient date.

Manningtree, on the estuary of the Stour, 31 miles S.E. from Chelmsford, population 1176, is a small place, neat and clean, though irregularly laid out. The church, built out of the ruins of a more ancient one, was enlarged in 1839. There are chapels for Independents, Quakers, and Methodists. A market is held on Thursday for corn and cattle, and a fair on Thursday in Whitsun week. A considerable trade in malt is carried on; and corn, coal, deals, and iron are imported.

Mistley, adjacent to Manningtree, is 32 miles S.E. from Chelmsford: population, 1516. Mistley Hall, the seat of the Rigby family, stands on an eminence in the midst of gardens and plantations elegantly laid out. On the bank of the Stour is a quay with warehouses. Ship-building, sail-making, and malting are carried on. A considerable number of good dwellings has recently been built in the neighbourhood.

Newport, 22 miles N.W. from Chelmsford, population 898, formerly a market-town, is situated on the Granta, where that river turns northward towards Cambridgeshire. There is here a station of the Eastern Counties railway. Three annual fairs are held. The church, which has a lofty tower, is in the highest part of the town. The Free Grammar school, founded in 1586, has an income from endowment of 200*l.* a year, and had 48 scholars in 1853. Some vestiges remain of St. Leonard's Hospital, founded in the reign of King John. There is a house of correction at Newport.

Raleigh, or *Rayleigh*, 15 miles E.S.E. from Chelmsford, population 1463, was one of the numerous lordships of Sueno, who having joined the Conqueror at an early period was allowed to retain his possessions. He built a castle here, of which some earth-works remain. The village consists of one wide street of considerable length. At the upper end is the church, an edifice principally in the perpendicular style, with some portions of an earlier date. The Baptists have a chapel. The weekly market has been given up. There is a fair for cattle and horses, which is well attended. Lime-burning is carried on. In the neighbourhood are several good family residences, and some well-laid-out nursery grounds.

Roydon, or *Woodredon*, on the left bank of the river Stort, just before its junction with the Lea, 25 miles W. by N. from Chelmsford, population 902, was formerly a market-town: a station of the Eastern Counties railway is at Roydon. The parish church has an embattled tower.

Kirby le Soken, *Thorpe le Soken*, and *Walton le Soken* form a district called 'the Sokens.' The word Soken is derived from the Saxon Soc, or Soca, signifying both the power to administer justice within a certain limit, and the circuit within which such power was exercised. The villages possess some peculiar immunities, to which they owe their designation. Ruins of buildings have been discovered under the water, particularly on a shoal called the West Rocks, nearly five miles from the shore, which is left dry at great ebbs. The wall thrown up to keep out the sea gave name to Walton parish. There is a church in each parish; that at Thorpe is the largest. The Baptists have a

chapel at Thorpe. A customary market is held there on Wednesday evening. Walton possesses a firm and extensive beach, and is resorted to for bathing by invalids from the eastern parts of Essex. Crescent Pier at Walton is neat and convenient. Besides the parish church, erected about the commencement of the present century, there are at Walton a chapel for Independents and an Infant school. The population of the three parishes in 1851 was as follows:—Kirby, 932; Thorpe, 1294; Walton, 729; total, 2955.

Stansted Montfichet, on the left bank of the river Stort, is 20 miles N.W. from Chelmsford, on the Newmarket road: population, 1719. It consists mainly of two streets containing some good houses. Montfichet was the surname of William Gernon, who built a castle here shortly after the Conquest. The church was erected in 1692. There are British and Free schools. A fair is held on May 1st. Some flour-mills are in the neighbourhood. Brewing and malting are carried on.

Writtle, about 3 miles W. from Chelmsford, population 2423, was formerly a market-town, but declined as Chelmsford rose into importance. A square plot of ground with a moat round it, in which the foundations of a building were dug up in the last century, is supposed to have been the site of a palace of King John. The church contains many elegant monuments. There are here National and Free schools, and almshouses for six poor persons. Malting and brewing are carried on. Some corn-mills are in the vicinity.

The following are some of the more important villages, with the population of the several parishes in 1851, and a few other particulars:—

Ardleigh, 27 miles S.E. from Chelmsford, population 1737; chiefly agricultural. The church has a south aisle and a handsome tower. *Ashdon*, 30 miles N.N.W. from Chelmsford, population 1238, is supposed by some to have been the scene of a battle between Edmund Ironside and Canute; but the battle was more probably fought at Ashingdon, near Canewdon. *Aveley*, on the Marditch river, 26 miles S.S.W. from Chelmsford, formerly a market town: population 811. There are chalk pits in the vicinity. *Great Baddow*, 1½ miles E. from Chelmsford, population of the parish 2122. *Little Baddow*, 4 miles E.N.E. from Chelmsford, population of the parish 622. The church of Great Baddow is an ancient building with a square tower, in which are eight bells. There is a Free school. A brewery and some corn mills are in the parish. *Little Baddow* is on the river Chelmer; the parish church is a good building with a tower. There are some good residences in the neighbourhood. *Great Bardfield*, 16 miles N. by E. from Chelmsford, is on the right bank of the Pant or Blackwater, over which is a brick bridge: population, 1110. A market formerly held here has been long discontinued. There was a church at Great Bardfield previous to the Norman Conquest. The Grammar school, founded in 1584, had 80 scholars in 1850. The income from endowment is a rent charge of 10*l.* a year. The classics are not now taught in the school. *Great Bentley*, 29 miles N.E. by E. from Chelmsford, population 1025, is an ancient village, pleasantly situated on the left side of Brightlingsea Brook. The church is built of flint and stone, and has a tower at the west end. There are here a chapel for Wesleyan Methodists and a National school. *West Bergholt*, thus distinguished from East Bergholt in Suffolk, is 21 miles N.E. from Chelmsford: population, 852. The manor belonged in the 17th century to Sir John Denham the poet. The south aisle is separated from the nave by strong Norman pillars; on the church are a small turret of wood and a shingled spire. The Wesleyan and Primitive Methodists have places of worship. There are three almshouses. Bricks are made, and there are some corn-mills in the vicinity. *Great Birch* and *Little Birch*, 18 miles N.E. from Chelmsford: population of the united parishes 962. The two villages are about a mile apart. The church of Little Birch is in ruins. The church of Great Birch consists of a nave and chancel and a steeple. There are some ruins of an ancient castle. In the vicinity are corn-mills, and malting is carried on. *Blackmore*, 8 miles S.W. by W. from Chelmsford: population, 704. Some ruins exist of a priory, established here for Augustinian canons in the 12th century. Henry VIII. frequently visited this place. Brickmaking is carried on. There is an Infant school. *Boreham*, an ancient village about 3 miles N.E. from Chelmsford, population 1040, occupies an elevated site; in the neighbourhood are extensive plantations. The parish church has an embattled square tower. Boreham House is near the village. New Hall, now a Roman Catholic Nunnery and educational establishment, was a royal residence in the reigns of Henry VII. and Henry VIII. It contained 107 inmates in 1851. *Bradwell-next-Sea*, or *next-Tillingham*, 24 miles E. from Chelmsford, population 1143, was a Roman station: the sea has here made considerable inroads upon the land. The church has a stone tower with a lofty spire. There is a National school. The village is on elevated ground, and commands extensive sea-views. *Brightlingsea* is on the estuary of the Colne, 32 miles E. by N. from Chelmsford: population, 1852. About 500 men and boys were absent at the oyster fishery when the Census was taken. The chief occupation of the inhabitants is furnished by the oyster and sprat fishery. Upwards of 400 persons are said to be licensed to engage in this branch of industry: the matters connected with the fishery are managed by a jury of 14 with a foreman and treasurer. More than 200 smacks of various sizes belong to the port. There is safe

anchorage for vessels of considerable burden. The parish forms a peninsula, surrounded by the marshes of the Colne and its inlets, except on the north-east side. The church tower, 94 feet in height, is a prominent sea-mark. There are a chapel of ease, a Wesleyan Methodist, and two other Dissenting chapels; a National school, and a temperance hall. Brightlingsea is a member of Sandwich in Kent, one of the Cinque Ports. The population has doubled within the present century. *Great Bromley* and *Little Bromley* are about a mile apart, and about 27 miles N.E. from Chelmsford: population of Great Bromley 797, of Little Bromley 405. Two small brooks rise here which run into the Colne. The parish church of Great Bromley is a handsome building; it has a beautifully wrought roof, and some fine stained-glass windows. The tower is of considerable height. *Helion Bumpstead*, 25 miles N. by W. from Chelmsford, population 951, is pleasantly situated on the Cambridgeshire border. The church is an ancient edifice, and contains some interesting monuments. *Steeple Bumpstead*, 24 miles N. by W. from Chelmsford, population 1295; also called Bumpstead ad Turrin, or Little Bumpstead. The manor belonged to Edith, queen of Edward the Confessor. The parish church and school-house are both ancient. In the neighbourhood are some remains of entrenchments. Rope and twine making are carried on, and there are corn mills. *Buttsbury* and *Stock*, two contiguous villages, usually regarded as conjoined, about 5 miles S. by W. from Chelmsford: population of Buttsbury parish 506, of Stock 702. Both villages are ancient. Stock sometimes receives the name of Harford or Herwardstock. Buttsbury church, a very small building, with a square tower constructed of flint and stone, formerly belonged to the nunnery at Stratford-le-Bow. The church at Stock is ancient, and has several tombs and brasses. A superior quality of earth which is found here, is manufactured into the kind of bricks called Stock bricks. There is a National school. *Canewdon*, on the right bank of the Crouch, 20 miles S.E. from Chelmsford: population, 702. Roman antiquities have been found here, and the remains of an encampment exist. It is supposed that Canute resided at this place, from which circumstance it is said the name has been derived. The village being on elevated ground affords extensive and beautiful prospects. Ashingdon, supposed to be the field of battle between Canute and Edmund Ironside, is at a short distance. The church is ancient; it is built on Canewdon Hill, and has a steeple 74 feet high, which is a prominent landmark for the district. A fair is held yearly on June 24th. *Great Chesterford*, an ancient village on the right bank of the Cam, 32 miles N.N.W. from Chelmsford, population 1024, was a Roman station. Coins of several of the Roman emperors have been found. Great Chesterford had formerly a market. The tenure of land here is that of 'borough English,' by which an estate falls to the youngest son or kinsman. There are National and Infant schools. *Chigwell*, 20 miles S.W. from Chelmsford, population 1965, is situated on the left bank of the river Roding, near Epping Forest. From Chigwell Row a most extensive view is obtained over the south of Essex and the Thames into Kent. An Endowed Grammar school, founded in 1629 by Archbishop Harnott, is free to 24 boys belonging to Chigwell and three neighbouring parishes. Many gentlemen's seats are in the vicinity. The parish church, an ancient edifice, has at the south door a Norman arch. There are National and Infant schools. At Chigwell Row is an Independent chapel. A considerable extent of ground is laid out in nurseries and market-gardens. Brewing is carried on. *Chingford*, on the left bank of the Lea, 26 miles S.W. by W. from Chelmsford, population 963, occupies a pleasant situation to the west of Epping Forest. The parish church is a neat structure, recently erected on the site of an ancient church. There is a National school. *The Colnes*: four villages bear this name:—*Earl's Colne*, on the river Colne, 20 miles N.E. by N. from Chelmsford: population, 1518. The church, erected in 1532, has a tower in which are six bells. The Baptists and Quakers have places of worship. The Grammar school, founded in 1520, has an endowment producing 200*l.* per annum, and is free to 42 boys from Earl's Colne and five neighbouring parishes. The number of scholars in 1853 was 30. There are National, British, and Infant schools. Some remains are traceable of a priory founded at the close of the 11th century. The parish has six almshouses. An annual fair is held on March 25th. *Colne Engain*, on the left bank of the Colne, about a mile N.W. from Earl's Colne, population 670; *Wake's Colne*, on the left bank of the river, 2 miles E. from Earl's Colne, population 499; *White Colne*, about a mile N.E. from Earl's Colne, population 459. *Danbury*, 5 miles E. by S. from Chelmsford, population of the parish 1221, supposed to be named from the occupation of the place by the Danes; remains of an encampment and military works are in the vicinity. The village is built on the side of the highest hill in the county: extensive prospects may be obtained from the summit of the hill, on which is the church. The church tower is surmounted with a lofty wooden spire, which, though several miles distant from the coast, is useful as a sea-mark. Some curiously-carved figures of crossed-legged knights are in this church. There are here National and Infant schools. *Debden*, 21 miles N.W. by N. from Chelmsford, population 1034, is a small village seated on elevated ground. The church was originally cruciform with a central tower; but the tower having fallen down, was not restored. There are a Free school and some small parochial charities. *Dedham*, on the right

bank of the river Stour, 28 miles N.E. from Chelmsford: population, 1792. This village was, in the 12th century, one of the chief seats of the clothing trade: it was at one time a market-town. The church is a commodious edifice of the perpendicular style, and has a tower of considerable height. There are a chapel for Independents, a Free Grammar school, founded in 1570, and an assembly room. A fair is held on Easter Tuesday. *Great Easton*, on the left bank of the river Chelmer, 14 miles N.N.W. from Chelmsford: population of the parish, 937. The parish church is a plain edifice, situated on a hill. In the southern doorway is a semicircular arch. There are Charity schools. *Little Easton*, on the right bank of the Chelmer, 13 miles N.N.W. from Chelmsford: population, 396. The church, an ancient edifice, has a square tower. On the south side of the chancel are numerous splendid monuments of the Maynard family. *Easton Lodge and Park*, in the vicinity of Little Easton, are the property of Viscount Maynard. *Elmstead*, 27 miles N.E. from Chelmsford: population, 908. A market was obtained for the place in 1253, but it has been long discontinued; the church, which is ancient, has at the west end a diminutive tower, its top being not higher than the walls of the church. A yearly fair is held. *Pelstead*, 10 miles N. by W. from Chelmsford: population, 1715. The parish church, which is situated on high ground, has an embattled tower. In the church is a monument to Richard, Lord Rich, who died in 1567, the founder of the Free school and almshouses. The Free Grammar school and almshouses were regulated anew by an Act of Parliament passed in 1851. The income from the estates is now nearly 2000*l.* a year. The number of scholars in 1853 was 61. Dr. Isaac Barrow and three sons of Oliver Cromwell were educated at this school. In the vicinity are the remains of Lees priory, some parts of which are now used as a farm-house. *Finchingfield*, 13 miles N. by W. from Chelmsford: population, 2594. There are here, besides the parish church, a chapel for Independents, a Free school, an Infant school, almshouses for widows, and an apprenticeship fund for the benefit of free scholars. Numerous hop-gardens are in the vicinity. *Great Fordham*, on the left bank of the river Colne, 21 miles N.E. by N. from Chelmsford, population 740, so called from a ford over the Colne. The parish church has a tower, surmounted with a lofty spire. There is a chapel of the Countess of Huntingdon's Connexion. *Fyvinger*, 7 miles S.W. from Chelmsford, population 743, an ancient village; the manor once belonged to the knights of St. John of Jerusalem. The church has a brick tower. *Hadstock*, on the borders of the county, close to Cambridgeshire, 26 miles N.N.W. from Chelmsford, population 576, had a market granted to it in 1337, which is not now held. The church is cruciform, with a central tower. There is a Free school. *Havering-atte-Bower*, 18 miles S.W. from Chelmsford, population 423, on the river Roman, otherwise the Bourne Brook. There is a National school. The early kings of England, among others Edward the Confessor, of whose palace remains may be traced, frequently resided here. Many fine residences are in the vicinity. In the neighbourhood are brickfields, hop-gardens, and a brewery. *Henham*, or *Henham-on-the-Hill*, 19 miles N.W. by N. from Chelmsford: population, 911. The parish church, a commodious structure, is seated on a considerable eminence; it has a tower, surmounted with a lofty spire. There is a National school. *Hornchurch*, on the Bowles Brook, 19 miles S.W. by S. from Chelmsford: population, 2378. In Henry III.'s time, the principal street was called Pell-street, from the peltmongers, or skimmers, who carried on business there. The church is a commodious structure. Brick-making, brewing, and malting are carried on, and there is an extensive manufactory for agricultural implements. *Horndon-on-the-Hill*, 19 miles S. by W. from Chelmsford, population 532, is situated, as its name imports, on an eminence, from whence there is a fine view of the shipping on the river Thames, and of the surrounding scenery. The church is in the middle of the town; it has a stone tower, embattled. The market, when Morant published his history of Essex (1768), was very small; it has been discontinued. There is one fair in the year, chiefly for wool. *Great Ilford*, on the river Roding, 22 miles S.W. from Chelmsford, population 3745, a ward of Barking parish. The Roding is here navigable for barges. An hospital for lepers was founded here by Henry II. The chapel of ease, or hospital chapel, is a very ancient building. About half a mile from the town is a church erected in 1831. The Baptists and Wesleyan Methodists have places of worship, and there are National schools, a savings bank, and almshouses. A large house of correction for the county is situated at Ilford. Brick-making, lime-burning, and malting are carried on. There are steam saw-mills and flour-mills. *Kelvedon*, 13 miles S.W. from Chelmsford: population, 1633. The village is partly built on elevated ground, on the right bank of the Blackwater, and on the line of the Eastern Counties railway. The church has a square brick tower. The Independents and Quakers have places of worship. In the vicinity are nursery-grounds. *Laindon* or *Langdon Clay*, a name derived from the long down or range of hills, in the neighbourhood, 12 miles S. by W. from Chelmsford: population, 540. The church is built on high ground. There is an Endowed school. *Basildon*, a hamlet of Laindon parish, said to have been once a town, has a chapel occupying an elevated site. A fair is held here for two days annually in September. *High Laver*, 15 miles W. by N. from Chelmsford: population, 534. In the churchyard John Locke was

interred, he being at the period of his death, 1704, resident at Oates, the seat of his friend Sir Francis Masham. The mansion of Oates was pulled down several years ago. *Laver-de-la-Hay*, the principal of three parishes and villages called the Lavers, 23 miles N.E. by E. from Chelmsford, population 788, has a church consisting of nave, chancel, and stone tower: the population is agricultural. *Laver Marney*, 20 miles N.E. by N. from Chelmsford, population 279, is situated on the Lare Brook; the church has a brick tower. The great entrance tower is still standing of Laver Marney Hall, one of the finest and earliest brick mansions in the country. It was erected in 1520 by Henry Lord Marney. From the tower fine sea views are obtained. *Leigh*, 19 miles S.S.E. from Chelmsford: population, 1370. The houses are principally arranged in one street running along the foot of an eminence and on the bank of the Thames. The summit of the eminence is crowned by the church with its ivy-mantled tower, and the manor-house. The population consists chiefly of fishermen, engaged in the shrimp, oyster, and shell-fish trade. The oyster spawn is brought from the French coast and elsewhere, and placed in the Leigh oyster beds to grow and fatten for market. There are a small custom-house and coast-guard station here. The Wesleyan Methodists have a chapel, and there are National and Infant schools. Some Roman coins have been discovered at Leigh. *Great or Much Leighs*, or *Lees*, 7 miles N.E. from Chelmsford: population, 874. The church is an ancient edifice; it has a Norman door and window. Near it is a round tower built of flints and stones. There is a Charity school. *Little Leighs*, or *Lees*, on the river Ter, 7 miles N.E. from Chelmsford, population 161, has a small church with a wooden spire. *Leas Priory*, founded by Ralph Gernon in 1229, was at the dissolution granted to Sir Richard Rich, who built on its site a splendid family residence: it now forms a part of the estates of Guy's Hospital. *Leyton*, or *Low Layton*, 27 miles S.W. from Chelmsford and 5½ miles N.N.E. from London, population 3901, including 499 in the West Ham Union workhouse, is very pleasantly situated on the left bank of the river Lea. John Strype, the historian and antiquary, was vicar of this parish for nearly seventy years: his tomb is in the chancel of the church. There are chapels for Independents and Wesleyan Methodists, 2 Free schools, and 8 almshouses. Many London merchants reside at Leyton. Roman and other antiquities have been found in considerable number. *Leytonstone*, a hamlet of Leyton, has many handsome villas, a district church recently erected, and a National school. *Littlebury*, 31 miles N.W. by N. from Chelmsford, population 934, on the left bank of the river Granta or Cam, belonged in the 9th century to a monastery in the Isle of Ely. The church occupies the site of an ancient camp. There is a Free school. Agricultural implements are manufactured to a small extent. *Loughton*, 20 miles W.S.W. from Chelmsford: population, 1237. The manor was granted by Harold II. to Waltham Abbey; the houses are chiefly in Loughton-street on the Epping road: very pleasant rural scenery is found here. The church, about three centuries old, is a mile east from Loughton. The Baptists have a chapel, and there are National and British schools. *Great Maplestead*, 18 miles N.N.E. from Chelmsford, population 494, is an ancient village occupying an elevated site. The church has a square tower. There is an Infant school. Hops are extensively cultivated in the vicinity. *Little Maplestead*, 19 miles N.N.E. from Chelmsford, population 367: the Knights Hospitallers of St. John of Jerusalem had a preceptory of their order here, founded in 1186 by Julian de Burgh. The round church of the preceptory is one of the few round churches still existing in England. *Margaretting*, 5½ miles S.S.W. from Chelmsford, population 517, is situated on the road from London to Colchester. A considerable part of the village is built along the road at some distance from the church. *Mountnessing*, or *Mountnessing-street*, 8 miles S.W. by W. from Chelmsford, population 845: some remains exist here of Thoby Priory, founded in 1141 for Augustinian canons. *Nazing*, or *Nasing*, 37 miles W. from Chelmsford: population, 757. The manor was given by Harold II. to Waltham Abbey: the church is situated on an elevation affording fine prospects over the course of the river Lea. There is a Charity school. *Nazing Park*, in the vicinity, is a fine mansion, the seat of the Palmer family. *Black Notley*, 10 miles N.N.E. from Chelmsford: population, 527. Numerous antiquities have been found here. There are corn-mills in the vicinity. Bishop Beal was born in the parish; Ray, the distinguished naturalist, was buried in the churchyard of Black Notley. *Great Oakley*, 34 miles N.E. from Chelmsford, population 1177, on the cross road from Colchester to Harwich. The parish church is a very old building: the spire has been recently rebuilt. There are two Dissenting chapels and a National school. *South Ockendon*, 21 miles S.S.E. from Chelmsford: population, 1021. The church, a very ancient edifice, has a round tower and an elaborately designed Norman door. *Parn-don*, or *Parrington*, 36 miles W. by N. from Chelmsford, population 488, is seated on a hill. A monastery of the Premonstratensian order was founded here by Roger de Parrington; it was removed in 1180 to Maldon. *Plaistow*, 26 miles S.E. from Chelmsford, is in the parish of West Ham: the population of Plaistow ecclesiastical district was 2668 in 1851. Much fertile marsh-land lies between the village and the river Thames; and there are extensive market gardens. There are a church, built in 1830, a Quakers' meeting-house, an Independent chapel, National and British schools, an Infant school, and a Temperance hall. Many villa residences are in the neighbourhood.

Near Plaistow is the Barking Road station of the Eastern Counties railway. *Pleshey*, 7 miles N.N.E. from Chelmsford: population, 351. The church once formed part of a college founded in 1393 by Thomas de Woodstock, afterwards duke of Gloucester. There are some remains of the castle of Pleshey, where Gloucester was arrested by order of his nephew, Richard II. *Prittlewell*, 20 miles S.E. from Chelmsford, population 2462; supposed to be so named from a well in the priory. The village is within a mile of the coast. The sea has made considerable encroachments on the land in this parish. The village of Prittlewell consists of two streets on the slope of a hill, with the church on the summit. The church has a nave and chancel and a side aisle. At the west end is a fine tower in the perpendicular style, embattled, with strong buttresses and rich pinnacles. A priory of Cluniac monks was once here. There is a National school. *Purfleet*, formerly written *Pourteflete*, or *Portflete*, on the left bank of the Thames, 21 miles S.S.E. from Chelmsford, population included in the parish of Thurrock, belonged to the Knights of St. John of Jerusalem; the Marditch stream here enters the Thames, forming a small harbour at the confluence, where is a good quay. Steam-vessels plying between London and Gravesend frequently call here, and the Tilbury and Southend railway has a station here. The village commands a fine view of the Thames. Chalk-pits and caverns occur in the vicinity. At Purfleet are large powder establishments belonging to government. *Purleigh*, 10 miles E. by S. from Chelmsford: population, 1184. The church is situated on a hill, and is a commodious and handsome edifice with an embattled tower. There is a National school. *Radwinter*, 22 miles N.N.E. from Chelmsford, population 916, is situated on the left bank of the Blackwater, near its source, here called the Pant or Freshwell; the church has a massive embattled tower and a lofty spire. Several gentlemen's seats are in the vicinity. *Rainham*, or *Raynham*, on the right bank of the Ingerburn, a feeder of the Thames, 22 miles S.E. by S. from Chelmsford: population, 868. The village stretches along the London road, and commands a fine view of the Thames. There is a station here of the Southend railway, and a convenient quay at the mouth of the river. There is a church and a Wesleyan chapel. *Ridgwell*, or *Redgwell*, 24 miles S. by E. from Chelmsford: population, 808. Roman coins and the remains of a Roman villa have been found here. In 1318 Ridgwell had a weekly market. The church has a square embattled tower with five bells. The *Rodings*, or *Rookings*, between Ongar and Dunmow; ten villages receive this appellation, such as *High Roding*, *Aythrop Roding*, *White Roding*, &c. The name is derived from the river Roding. Of the nine parishes thus designated, the aggregate population in 1851 was 2235. The district is agricultural. *St. Oystich*, 33 miles E. by N. from Chelmsford, at the head of a small creek, which flows into the Colne near the mouth of that river, population 1696, chiefly agricultural. The creek is navigable up to the quays near the village. An abbey for canons of St. Augustine was founded here in or before 1118. The quadrangle of the ancient monastic buildings is almost entire, except on the north side, where it has been replaced by modern apartments; the entrance is by a beautiful gateway of hewn stone mixed with flint, having two towers and two posterns. The church is a large edifice with a handsome tower. There is a chapel for Wesleyan Methodists. Some business is done in corn and coals; malting, brewing, and lime-burning are carried on. *Great*, or *Old Sampford*, or *Sandford*, on the left side of the small river Pant, 22 miles N. by W. from Chelmsford: population, 906. The parish church occupies an elevated site. There is a chapel for Baptists. The straw-plait manufacture is carried on here: a fair is held on Whit-Monday. *Shalford*, on the right bank of the Blackwater, 15 miles N. by E. from Chelmsford, population 816; the church consists of a nave, north and south aisles, and chancel, and a tower. Malting is carried on, and there are several corn-mills. Some good family mansions are in the neighbourhood. *Southend*, 21 miles S.E. from Chelmsford, is pleasantly situated on the side of a wooded hill, near the mouth of the Thames, and is in considerable repute as a bathing-place. The population of the village in 1851 was 1141. The Terrace, in what is commonly called New Southend, or the Upper Town, is a handsome range of buildings. There are a good hotel, an assembly room, a theatre, and a library. A new church has been erected, and there are a chapel for Independents and a National school. The London and Tilbury and Southend railway terminates here, and steamers ply regularly to and from London, and also Gravesend. A convenient pier, with a line of iron rails, has been carried out above a mile from the shore, for landing and embarking steamboat passengers. Vessels of small size are built, and there is a brewery. In the neighbourhood are extensive gardens. *Southminster*, 20 miles E.S.E. from Chelmsford, population 1482; the church is a handsome and commodious edifice; there are an Independent chapel and a National school. Three fairs are held annually. Malting is carried on. *Stanford Rivers*, 14 miles W. by S. from Chelmsford, population 1082, including 145 persons in the Ongar Union workhouse. The place has probably its name from a stone ford over the river Roding. The church chancel is very ancient and contains some curious monuments. There is here an Independent chapel. Several fine mansions are in the neighbourhood. *Stebbing*, 13 miles N. by W. from Chelmsford, population 1398, is situated on high ground, on the left side of a small brook, a feeder of the Chelmer; the church is ancient, and has a

spacious and lofty nave, two aisles, and a large chancel. The Quakers and Independents have places of worship. Near the village are two artificial mounds. Brick-making and malting are carried on, and there are corn-mills. *Stisted*, or *Stistead*, 15 miles N.N.E. from Chelmsford, population 888; on the left bank of the Blackwater. The church has Norman pillars, and on the south side a tower surmounted with a spire. There are a Free school and an Infant school. Brick and tile making and malting give employment; and in the vicinity are some corn-mills. *Stratford*, or *Stratford Langthorne*, 25 miles S.W. from Chelmsford, and 3 miles E. from London: population, 10,586. Stratford is named from the ford over the river Lea, on the left bank of which it is situated. A district church was erected here in 1836. The Baptists and Wesleyan Methodists have places of worship. There are National, British, and Infant schools, and a savings bank. Numerous manufactures are carried on in the district; chemical and print works, coach factories, flour mills, and distilleries employ numerous hands. Many London merchants have residences in the village and its vicinity. *Takeley*, 17 miles N.W. from Chelmsford, population 991; the church has an embattled tower, surmounted with a spire. There is an Independent chapel. A small priory was founded here in the time of Henry I. *Terling*, on the Ter, a feeder of the Chelmer, 7 miles N.E. from Chelmsford: population, 900. The bishops of Norwich had formerly here a palace, and a large chapel which possessed the privilege of sanctuary. Henry VIII. had a residence here. The church, which is ancient, is in the centre of the village; it has a tower with a shingled spire. Malting is carried on. The *Teyes*, are three villages called *Great*, *Little*, and *Mark's Tey*. *Great Tey* is near the head of a small brook, a feeder of the Colne, 19 miles N.E. from Chelmsford: population, 785. The church, which is on the summit of an eminence overlooking the river Roman, has a square tower of stone, in which are eight bells. *Mark's Tey*, 18 miles N.E. from Chelmsford, population 437, is situated on the Roman road from Colchester to St. Albans. *Mark's Tey Hall*, the remaining portion of which is now occupied as a farm-house, still retains part of the old moat. *Thoydon Garnon*, or *Coopersale*, 18 miles W.S.W. from Chelmsford, and about 1 mile N. from Thoydon Bois: population, 1237. The church consists of a nave and chancel, and has a steeple built in 1470 by Sir John Crosby, of Crosby Hall. There are almshouses for four poor widows. *Thoydon Mount*, 16 miles W.S.W. from Chelmsford, on the left bank of the Roding: population, 194. The church was erected by Sir William Smith, in the 17th century. The tower is of brick. Hill Hall, the seat of the family of Smyths, is a fine Elizabethan mansion, situated in a spacious park. *East Tilbury*, 22 miles S. by W. from Chelmsford, population 401, is on the left bank of the Thames, at that part of the river called the Hope. The tower of the church was destroyed by the Dutch in 1667; there is now a battery. *West Tilbury*, 20 miles S.S.W. from Chelmsford: population, 519. Tilbury Fort in this parish is on the left bank of the Thames, where is a ferry over the river to Gravesend on the Kent coast. The fort was originally built as a block-house by Henry VIII. Elizabeth lodged for awhile in the fort, and reviewed the troops collected here in preparation for meeting the Spaniards of the 'Armada.' The fort is maintained for the protection of the Thames. *Tillingham*, 22 miles E. by S. from Chelmsford: population, 1048. The church, erected in 1708, has a western stone tower. The Baptists have a place of worship. Two fairs are held annually. There are almshouses for four poor persons. *Tollesbury*, at the mouth of the estuary of the Blackwater, and on its left bank, 18 miles E. by N. from Chelmsford: population, 1193. The church is a venerable structure of large size. The Independents have a place of worship. Many of the inhabitants are engaged in the oyster fishery. A fair is held annually in June. In this parish is Tiptree Farm, on which so many interesting experiments with improved methods of cultivation have been made of late years by Mr. Mechi. *Tolleshunt D'Arcy*, 18 miles E. by N. from Chelmsford, population 792; the church is built chiefly of stone, and has at the west end an embattled stone tower. Malting is carried on. *Toppersfield*, or *Toppesfield*, 23 miles N. by E. from Chelmsford, population 1051; the church, erected in 1519, is a spacious and handsome edifice. There is a Free school. In 1800 some skeletons, and several Roman antiquities, were discovered here. *Great Totham*, 12 miles E.N.E. from Chelmsford, population 786, is an ancient village. The parish church is a small edifice. In the vicinity are some flour-mills. Bricks are made here. *Upminster*, 20 miles S.E. by S. from Chelmsford, population 1228, is on the left bank of the Ingerburn. Upminster Hall was given by Harold II. to Waltham Abbey. The abbots took up their residence here, and built the mansion of brick. It has a chapel of stone, and an old font. There are a church and an Independent chapel. A brick manufactory employs some hands. *Great Wakering*, 24 miles S.E. from Chelmsford, population 905; is near that part of the coast which is skirted by the Maplin sand; the islands of Great Potten and Russelys belong to this parish. There are here a church with a western tower, an Independent chapel, and a National school for boys and girls. *Great or Much Waltham*, 4 miles N. by W. from Chelmsford, population 2335; is on the right bank of the Chelmer, on the road from Chelmsford to Dunmow; the church is a commodious and handsome building, with a square tower and eight bells. In the parish is Black Chapel, a chapel of ease, constructed of wood. Malting employs some of the population. There are corn-mills near

the village. In the neighbourhood are several fine mansions and gentlemen's seats. *Little Waltham*, on the left bank of the Chelmer, 4 miles N. by E. from Chelmsford: population, 651. The church has a square tower and 5 bells. Corn-mills and malting employ several hands. *Wanstead*, 25 miles S.W. from Chelmsford, population 2207, is on the right bank of the Roding; the church, erected in 1790, is a small edifice. A tessellated pavement and other Roman antiquities were found in the park in 1735. Wanstead Park, occupying a considerable extent of ground, is close to the village; and near Wanstead and Snarcsbrook, a hamlet in the parish, are many villa residences. At Snarcsbrook is the Infant Orphan Asylum, opened June 1843, for 500 orphans. The number of inmates when the Census was taken in 1851 was 404. There are in Wanstead a National school for boys and girls, and an Infant school. *North Weald*, 15 miles W. by S. from Chelmsford, population 842, is known also as North Weald Bassett; the church is an ancient edifice with an embattled tower. The houses are irregularly built; there are several parochial charities. *South Weald*, 14 miles S.W. from Chelmsford, population 3588, of which the hamlet of Brentwood contains nearly two-thirds. The church, partly of Norman date, is very interesting to the architectural antiquary; it contains some fine Norman sculpture. Near the village is South Weald Hall, a fine mansion in a richly wooded park, from which are obtained prospects over a wide range of interesting scenery. Traces of a circular camp have been found in the neighbourhood. Many residences of opulent families are in the vicinity. A Charity school, founded by the Rev. C. A. Belli, is for boys and girls. *Wethersfield*, 17 miles N. from Chelmsford: population 1770, is near the left bank of the Blackwater. The church, which is ancient, consists of a nave and two aisles, with a tower. There are in Wethersfield National and Charity schools for boys and girls; and at Beuzley End a Charity school. A brewery, a brick manufactory, and corn-mills, give employment to some of the population. *Great Wigborough*, 22 miles E.N.E. from Chelmsford: population, 471. The parish belonged anciently to the abbess of Barking; the church is on the summit of a hill, from which is an extensive prospect over the mouth of the Blackwater to the sea. The building consists of a nave and chancel, with a tower. *Wivenhoe* is on the left bank of the river Colne, at the junction of the Roman, 27 miles E.N.E. from Chelmsford: population, 1672. The village is on the slope of a hill, and commands a pleasant prospect down the river. The church, an ancient edifice, has an embattled tower. The Independents have a place of worship. Wivenhoe has a commodious quay and a custom-house; it may be considered the port of Colchester. The fishing of oysters and soles gives employment to many of the inhabitants. Boats for the oyster-dredging are built here. Brewing, malting, and rope-making are also carried on. A fair is held on 4th September. *Wic, Weeks, or Wicks*, 34 miles N.E. from Chelmsford: population, 778. The church is a small edifice, built in 1740. There are a Wesleyan chapel and a National school. Some remains exist of a nunnery for Benedictines, founded in the time of Henry I. Bricks and tiles are made in the parish; and there are corn-mills. *Woodford*, is on the east side of Epping Forest, and to the west of Hainault Forest, 25 miles S.W. from Chelmsford: population, 2774. It is a long straggling place with a number of good houses, inhabited chiefly by London merchants and tradesmen. The church is modern. The Independents and Wesleyan Methodists have places of worship. A group of houses about a mile north from the main part of the village takes the name of Woodford Wells, from a mineral spring, now in little repute. A considerable amount of retail trade is carried on in the village. *Woodham Ferrers, or Ferris*, 8 miles S.E. from Chelmsford: population, 981. The church consists of a nave, two aisles, and chancel, with a square tower; and contains some monuments of the family of Sandy. There are here an Independent chapel, and a National school for boys and girls. *Great Yeldham*, 22 miles N. by E. from Chelmsford, population 716, is situated on the river Colne. The church is a massive stone building; it contains some handsome monuments. There are a Free Grammar school and an almshouse for 6 tenants. In the centre of the village is the Yeldham great oak, 80 feet high, and 30 feet in girth at 4 feet from the ground. Hops are cultivated here.

Divisions for Ecclesiastical and Legal Purposes.—Essex constitutes the largest part of the diocese of Rochester, which is in the ecclesiastical province of Canterbury; and is divided between the three archdeaconries of Colchester, Essex, and St. Albans; a portion of the county is in the diocese and archdeaconry of London. According to the 'Census of Religious Worship,' taken in 1851, it appears that there were then in the county 766 places of worship, of which 433 belonged to the Established Church, 134 to Independents, 63 to Wesleyan Methodists, 59 to Baptists, 24 to Primitive Methodists, 19 to Quakers, and 34 to minor bodies. The total number of sittings provided was 218,467.

By the Poor Law Commissioners the county is divided into 17 Poor-Law Unions: Billericay, Braintree, Chelmsford, Colchester, Dunmow, Epping, Halstead, Lexden and Winstree, Maldon, Ongar, Orsett, Rochford, Romford, Saffron Walden, Tendring, West Ham, and Witham. These Poor-Law Unions include 370 parishes and townships, with an area of 869,085 acres, and a population in 1851 of 341,564; but the boundaries of the Poor-Law Unions are not strictly co-extensive with those of the county. Essex is in the home circuit. The assizes and

quarter-sessions are held at Chelmsford, where is the shire-hall, an elegant structure, and the old county-jail and house of correction. The county-jail is at Springfield, a village about a mile from Chelmsford, on the road to Colchester. The northern and the southern divisions of the county each return two members to the Imperial Parliament.

History and Antiquities.—In the earliest dawn of the authentic history of our island, Essex was inhabited by the Trinobantes, a powerful tribe whose dominions perhaps extended across the Stort and the Lea into Hertfordshire and Middlesex. At the time of Julius Cæsar's invasion (B.C. 55 and 54), Imanuentius, as he is called in Latin, prince of the Trinobantes, had been slain by Cassivellaunus, the chief of a neighbouring tribe. Mandubratius, the son of Cassivellaunus, was driven into exile, and had gone as a suppliant to Cæsar in Gaul. By Cæsar's help Mandubratius was restored to his father's throne, and was afterwards secured in its possession by an express stipulation in the treaty between Cæsar and his British opponents. The alliance of Rome seems to have promoted the aggrandisement of the Trinobantes: Cunobelin, king of that tribe, was a potentate of considerable name, and some coins of his yet extant attest the commencement of civilisation and the arts in this county. [BRITANNIA.] Catadactylus, or, as he is commonly called (after Tacitus), Caractacus, and Togodumnus, sons of Cunobelin, succeeded to their father's power, and had to bear up against the weight of Roman hostility when the invasion was renewed in the reign of Claudius (A.D. 43). After sustaining several severe defeats, the Britons retired into the marshes of Essex, and fighting with the vigour of despair, were enabled for a time to repel their assailants, though with the loss of Togodumnus, one of their leaders. The Trinobantes were subdued by Claudius in person, and their capital, Camulodunum, was taken, and subsequently made the seat of a Roman colony. This colony was however destroyed in the revolt of the Britons under Boadicea, and the Roman garrison was slaughtered. But the overthrow of Boadicea by Suetonius (A.D. 61) put an end to their revolts, and decided, though it did not complete, the reduction of South Britain. In the Roman division of Britain, Essex was included in Flavia Cæsariensis.

Several Roman stations were in Essex. Of these the most important is Camulodunum, of which antiquarians are now pretty well agreed that Colchester is the site. The other stations appear to have been Duro-litum, near Romford; Cæsaromagus, near Widford, a village about a mile south-west of Chelmsford; and Canonium, near Kelvedon. If these positions are fixed with tolerable approximation to accuracy, the Roman road must nearly have coincided with the modern road from London to Colchester, which is probable. Another station of the Itinerary of Antoninus, Ad Ansan, was probably on the border of the county, perhaps at Stratford, just across the Stour, in Suffolk. A Roman road, the line of which is still visible in many places, crossed the county from Bishop's Stortford, in Herts, by Dunmow and Coggeshall to Colchester.

Roman antiquities have been dug up in many parts of the county, but especially at COLCHESTER; around which town are the remains of intrenchments and other military works. Tessellated pavements and other antiquities have been discovered on Mersey Island. Roman remains have also been found at Wanstead; at Canewdon; at Coggeshall; at Toppesfield; at Ridgwell; at Watsoc bridge, between Birdbrook and Steeplo Bumpstead parishes, near the Stour, where is a Roman camp; and at Great Chesterford, which was undoubtedly the site of a Roman station. Colchester appears to have been, in the latter period of the Roman dominion, the seat of a bishop. Adelfius, the bishop of Colon, or Colchester, assisted at the councils of Arles, A.D. 314; Sardica, A.D. 347; and Ariminum, A.D. 359.

When the Saxons established themselves in Britain, Essex, with some parts of Hertfordshire and Middlesex, constituted a small kingdom, the possessors of which were, from their relative situation, called the East Saxons; from them the county has derived its present designation. This kingdom of Essex gradually extended across the Lea into Middlesex and Hertfordshire, and comprehended London, then a flourishing trading place, and which appears to have become the capital of the East Saxon kingdom. The episcopal church of St. Paul in London was founded by Æthelbryht, king of Kent, the first of the Saxon princes who embraced Christianity, and to whom his nephew, Sæbryht, king of Essex, was in subjection. Mellitus, who had been sent from Rome to assist the missionary St. Augustine in evangelising England, was appointed Bishop of Essex, into which kingdom he had been sent as missionary by Augustine. Upon the death of Sæbryht (A.D. 616), his successors restored Paganism and persecuted the professors of Christianity. About 653, Sigebriht, or Sigebert, the Good, being converted by his friend Oswy, king of Northumberland, whom he used frequently to visit, and baptized by Finan, bishop of Lindisfarne, restored Christianity in Essex, and sent for some Northumbrian monks to come and instruct his subjects. Sigebriht was assassinated two years afterwards. About 823, Kent and Essex, which had sunk into mere dependencies of Mercia, were subdued by Egbert of Wessex, and probably united, under the designation of the kingdom of Kent, occupied by Ethelwulf, son of Egbert, as subordinate to his father. Of the kingdom of Kent mention is occasionally made in the history of Ethelwulf and his sons, until the reign of Alfred, by whom the Saxon kingdoms were finally incorporated; and England, with the

exception of those parts which were occupied by the Danes or retained by the Britons, was consolidated under one sceptre.

When Alfred, after the recovery of his throne, assigned to the piratical Northmen, or Danes, a settlement in and about East Anglia (878), Essex was included in the ceded territory. Thirteen or sixteen sail of Danish piratical vessels were destroyed in the mouth of the Stour, near Harwich (884) by the ships of Alfred; but the victorious fleet was destroyed near the Thames mouth by some ships fitted out by the colonists of East Anglia, in violation of their engagements with the king. For a space of about three years (894-896) Alfred had much trouble in resisting the attacks of Hasting, the Danish piratical chief; ultimately however, Hasting was compelled to abandon England, and Essex returned peaceably under the West Saxon sway.

After the death of Alfred (901), and the choice of Edward the Elder as his successor, Æthelwald, son of Ethelbert, Alfred's elder brother, claimed the throne, and having obtained foreign aid, returned and subdued Essex. The subsequent death of the invader in battle (905) put an end to the strife, and restored Essex to the sway of Edward, who subsequently rebuilt or fortified Witham in order to bridle the rebellious temper of the Danish colonists; and some years after (920) fortified Maldon. For about a century after this the Danes continued their attacks, and were on two occasions bought off by the payment of a large sum of money. In 1016 Essex was the scene of a fierce battle between Canute and Edmund Ironside, who had succeeded to the thrones and the hostility of their respective fathers Svein and Ethelred. Canute, by the treachery of Eadric (brother-in-law and foster-father to Edmund), obtained the victory, in a battle fought at Assandun, which some suppose to be Ashdon, near Saffron Walden; others, with more probability, fix the scene of conflict at Assingdon, or Ashingdon, about 3 miles north from Rochford. At Canewdon, a short distance eastward from Ashingdon, are the remains of a camp, supposed to have been that of the Danes; the fosse is yet visible.

In the civil war between King John and his barons, the Earl of Winchester, one of the confederated lords, with an army of foreigners whom he had brought into the country in the year 1215, besieged Colchester castle, and he or some of his party took the castle and plundered the town: but it was retaken by the king, after a few days' siege. During the minority of Henry III. Colchester fell into the hands of the Dauphin Louis (1218).

Essex contains many historical memorials in the form of encampments, castles, and other ruins. Camps may be traced at the village of Danbury (Danes-byrig), on a high hill between Chelmsford and Maldon, at Maldon (probably the work of Edward the Elder), at Witham, at Ambresbury Banks, near Epping, at Ruckholt, near Barking, at South Weald, near Brentwood, at Canewdon, and at Blunt's Walls, near Billericay. Of the castles of the Norman period there are several remains. Those at Colchester, Hedingham, Walden, Ongar, and Raligh have been noticed in this article or under their respective heads. Pleshy castle was probably built by William de Magnaville, to whose father, Geoffrey de Magnaville, the place had been granted by Stephen. The keep, with the moat which surrounded it, was within an intrenchment which had previously formed part of a Roman camp or station; the mound on which the donjon was built, and the bridge which led to it over the surrounding moat, are all that remain of the once proud structure. Of Hadleigh Castle, near Raligh, dilapidated portions of two towers yet remain, forming a picturesque ruin.

Of the halls and manor-houses which succeeded the Norman castles may be mentioned Heron Hall, near East Horndon, Nether Hall, near the confluence of the Lea and the Stort, Tolleshunt Beckingham, or Tolleshunt Magna, between Maldon and Colchester, Layer Marney Hall, in the same neighbourhood, Belhus or Bellas House, near Purfleet, Covey or Covell Hall, near White Roding, Eastbury, near Barking, Dunbury Place, between Chelmsford and Maldon, New Hall, near Chelmsford, and Toppinghoe Hall, between Chelmsford and Witham, some of which are still nearly entire, and of others considerable portions remain. Besides ancient houses which have been already noticed in the course of this article, we may mention Gosfield Hall, near Halstead, which is probably of the time of Henry VII. This mansion is of brick, and incloses a quadrangular court, into which all the lower tier of windows formerly opened. There were no outside windows on the ground floor, and those of the upper story were strongly barricaded, so as to give to the place considerable strength.

At the Reformation Essex possessed several religious houses, of which there are some remains. There were at the time of the suppression seven of the greater monasteries, that is, of those which, according to the valuation of their lands and endowments, possessed a clear yearly revenue of above 200*l.*: they were—the Benedictine abbey of Berking (Barking), Chich (or St. Osyth), Colchester, Walden, and Waltham, and the Cistercian abbey of Coggeshall and Stratford Langthorne. Their aggregate yearly revenue was 4201*l.* 3*s.* 4*d.* gross, or 4099*l.* 11*s.* 2*d.* clear.

Of the smaller religious houses there are remains of Bileigh or Beleigh Abbey, near Maldon; of Tiltey Priory, between Dunmow and Thaxted; of Bycknacre Priory, between Chelmsford and Maldon; of

Latton Priory, near Harlow; of Lees Priory, between Chelmsford and Braintree; and of Thoby Priory, between Brentwood and Ingatestone. The churches of Blakemore or Blackmore Priory, between Ingatestone and Ongar, and of Hatfield Peverel Priory, between Chelmsford and Witham, have been made parochial: the latter has been much altered; it retains a good Norman door, with zigzag mouldings.

Of the early churches, besides those which we have already had occasion to mention, the following deserve notice:—Greenstead church, near Ongar, is a very curious edifice, and one of the most ancient in the kingdom: it seems probable that it was built as a sort of shrine for lodging the body of St. Edmund, king of East Anglia, on its being taken back from London to Bury St. Edmund's, in the early part of the 11th century; and that it was afterwards enlarged to serve as a parish church. The nave is entirely composed of wood, the sides being formed of the trunks of large oaks, split or sawn asunder, and set upright close to one another. They are let into a wooden sill at the bottom, and into a plate at the top, and secured with wooden pins. The remainder of the church is modern. The entire size of the original or wooden part of the church is 29 feet long by 14 feet broad, and 5½ feet high to the spring of the roof. The whole was carefully restored in 1849; every portion of the ancient woodwork having been scrupulously replaced in its original position. Little Maplestead church, near Halstead, is a building of great interest, being the latest of the few round churches in the kingdom; it is of pure Decorated character, and its details are plain, but very good. The chancel end of this church is also semicircular, and is probably the latest erection of that form in England. South Ockendon church, near the Thurrocks, has a round tower, such as may be commonly seen in Norfolk, but not much elsewhere: it has an elaborately and variously enriched Norman door. Corringham and some other churches have Norman portions.

When the Roman Catholic faith regained a temporary predominance under Queen Mary, the persecution was very severe in Essex. Seventeen Protestants (five of them women) were burnt at Colchester, and one died in prison; and two persons (one a woman), were burnt at Stratford.

The year 1571 was remarkable for the settlement of the Flemish refugees at Colchester; they introduced the woollen manufacture into that and several other towns in Essex. Reference has already been made to the preparations at Tilbury to resist the invasion of the Spaniards, who fitted out the 'Invincible Armada' in 1588. On that occasion Colchester furnished two ships and a pinnace to the English fleet. In 1595 the same town furnished three ships for the expedition to Cadiz.

In the war with Spain at the beginning of the reign of Charles I., a Spanish fleet caused alarm by appearing off Harwich; but they made no attempt to land (1625). In the civil war at the close of the same reign, Essex was almost entirely in the interest of the Parliament, and joined in an association for mutual aid and succour with the other eastern counties of Norfolk, Suffolk, Cambridge, and Herts: this was called the Eastern Association. In the year 1648 Essex was the scene of an abortive attempt of the Royalists. A part of the royalist forces which had been raised in Kent under Goring, earl of Norwich, and Sir William Waller, and were pressed by Fairfax and the parliamentary army, crossed the Thames into Middlesex, and retreating thence into Essex, were joined by the Royalists of that county (who had previously seized the parliamentary committee at Chelmsford), and by some royalist gentlemen from Hertfordshire. They retired first to Chelmsford, thence to Braintree, taking in their way Lees House, and thence to Colchester. The siege and capture of the town by the Parliamentarians is mentioned in the article COLCHESTER. The history of the county presents no later events of any interest.

In 1851 the county possessed 15 savings banks—at Barking, Chelmsford, Colchester, Great Dunmow, Epping, Halstead, West Ham, Harwich, Castle Hedingham, Leyton, Manningtree, Rochford, Roinford, Saffron Walden, and Witham: the amount owing to depositors on the 20th November, 1851, was 478,955*l.* 8*s.* 6*d.*

ESSEX. [CONNECTICUT.]

ESSINGTON, PORT. [NORTH AUSTRALIA.]

ESSLINGEN, a town in Würtemberg, in the circle of the Neckar, is situated in a pretty and fertile country on the river Neckar, surrounded by heights crowned with forests and vineyards, 8 miles by railway E. from Stuttgart, and has about 7000 inhabitants. It is an old town, and was a free city of the German empire and the favourite residence of some of the emperors. The inner town has massive walls and towers round it; and the five suburbs, one of which stands on an island in the river, while another is attached to the old burg or castle which crowns a hill, are also protected by stout walls. Esslingen has five churches, one of which, the Frauen-kirche (Church of Our Lady) is distinguished by its fine gothic spire, 230 feet high, and was built in 1440; a handsome town-hall; a richly-endowed hospital; a high school; a training-school for teachers; and an orphan asylum. On the Rothenberg, a hill near the town, is a Greek chapel, erected on the site of the old castle of Würtemberg, over the remains of a Russian princess, queen of Würtemberg; it contains statues of the four Evangelists by Danneker and Thorwaldsen. Esslingen has manufactures of woollens, cotton and woollen yarns, lathered iron and

tin wares, paper, &c., and a good trade in wine and other agricultural products.

ESSLING, or ESSLINGEN, a small village in Lower Austria, about 7 miles E. from Vienna, from which Marshal Massena derived his title of Duke of Essling, bestowed upon him by the Emperor Napoleon I. [ASPERN.]

ESSOVES. [AUBE.]

ESTAING. [AVEYRON.]

ESTAIRES. [NORD.]

ESTHONIA, or REVEL, one of the Baltic provinces of Russia, is bounded N. by the Gulf of Finland; E. by the government of St. Petersburg, from which it is separated by the Lake Peipus and the Narova; S. by Lake Peipus and the government of Livonia; and W. by the Baltic. The area is 7993 square miles, including the islands along the coast—*Dago* (434 square miles), *Worms* (36 square miles), *Nauk*, or *Nouks* (33 square miles), *Wrangel*, *Nargen*, the two *Roogs*, *Odenholm*, *Eckholm*, *Helf*, *Kranholm*, and 59 smaller islands, and the portion of Lake Peipus that belongs to this government, and extends over 142 square miles. The population of Esthonia was estimated in 1846 at 310,400.

Esthonia, which is called by the native inhabitants *Werova*, 'borderland,' or *Meie-Maa*, 'our land,' was subjugated by the Danes in 1220, and in 1346 sold by them to the Teutonic knights, whose grand master, the first duke of Livonia and Esthonia, acknowledged the king of Poland as lord paramount in 1561. After being an object of continued contest between the Russians, Poles, and Swedes, it became at length a province of Sweden in 1660. It was wrested from the Swedish crown by Peter the Great in 1710, and was ceded finally to Russia under the treaty of Nystädt in 1721. The extent of the coast is about 350 miles long, without reckoning its windings. The surface of the province is level, occasionally varied only by isolated hills and eminences. The northern coast from Revel to the mouth of the Narova is several fathoms higher than the Baltic, and strewn with masses of granite: the western coast is lower, but both are edged for some miles inland by a deep bed of sand. The soil of the interior districts of Esthonia, which are the most fertile, is a mixture of loam, sand, and clay; in all parts are large swamps, many of which are impassable, except when hardened by the frosts of winter. The ratio of the cultivated to the uncultivated and wooded soil hardly exceeds one third.

Esthonia contains 228 small lakes, besides the northern end of Lake Peipus. The Narova which flows northward out of the Peipus into the Baltic, skirts the east of the government of Esthonia, but the stream belongs entirely to the province of St. Petersburg. This province has no streams larger than rivulets or brooks, some of which flow under ground, and occasionally contain pearl-mussels. There are sulphureous and saline springs.

As the province lies between 58° 30' and 59° 40' N. lat. the climate must be severe, but owing to the proximity of the sea it is less so than that of some of the neighbouring provinces. The winter lasts from the end of October till May, and is very cold and stormy; there is hardly any spring, summer, which is short and hot, following almost immediately on the melting of the snow; the autumn is dreary and rainy, and the marshy soil then becomes a sea of mud, impassable till the frost hardens it. Rain and snow often fall at the same time: mist prevails all through the year, and for weeks together it drizzles without either clearing up or coming to rain. In October and November the nights and days are scarcely distinguishable, so dense are the clouds. The summer nights, which are as light almost as day, and the *Annoa Borealis* in winter, are pleasant peculiarities of the climate.

The soil, though deficient in fertility, yields more than sufficient for the maintenance of the population. Agriculture is the principal branch of industry, and about one-fifth of the whole surface is under the plough. The chief crops are rye, barley, and oats; some wheat, maize, hemp, flax, hops, and tobacco are also raised. The surplus corn is used for making spirits. The Weissenstein districts, in the south-east, produce much hemp and flax. As the harvest season is attended by heavy rains, the farmers have kilns in which the moist grain is dried, as described in the article *COURLAND*, vol. ii. col. 615. Esthonia has large meadows, and produces abundance of hay; it has likewise good grazing grounds. Vegetables are of universal growth, but little attention is given to fruits. The woods and forests, composed of the fir, pine, elm, birch, larch, and beech, occasionally intermixed with the oak, alder, lime, crab-apple, &c., spread over an area of about 3300 square miles; they are densest in the eastern districts of Wesenberg and Weissenstein. The land is in some parts manured with decayed wood.

Next to agriculture the rearing of cattle is the most important branch of rural industry. The native horses and horned cattle are small. Large droves of oxen from the Ukraine are fattened for the St. Petersburg market. The sheep are of the German white and black species. Goats, swine, and poultry are reared in great numbers. Of wild animals, wolves are the most common; next come bears, lynxes, foxes, badgers, martens, and squirrels; a few elks are to be met with in the Wesenberg forests. The fisheries along the coast and in Lake Peipus are very productive. The mineral products are stone for building, potters'-clay, and gypsum. There is abundance of peat, but wood is alone used for fuel.

The majority of the inhabitants are Esthonians: they are of Finnish descent, of diminutive stature, and have light-coloured hair, blue eyes, a small flat nose, and flattened face. The landholders are universally of German or Danish extraction, and constitute the aristocracy of the country; and there are some Russians and a few Swedes and Finlanders intermixed with them. The estates are all large; their management, the nature of the farm-buildings, and the relation between the aristocracy and the peasantry, are the same as stated in the article above referred to. [COURLAND.] But the dwellings of the peasantry are in general wholly inferior to those of the same class in Courland or almost any other part of Russia. The Esthonian peasant's house has only one apartment, with one opening—the door—through which the smoke has to make its way, for there is no chimney. This apartment serves as bed-room, sitting-room, kitchen, store-room, sheep-pen, and hog-sty. In these houses during the winter the men employ themselves in making sledge-runners, staves, hoops, wooden dishes and spoons, or in preparing sheep-skins for clothing. The women spin, weave, sew, and bleach, cut torches of birchwood, and plait birch-bark into sandals. The peasants were formerly serfs bound to the soil, but by a ukase of the emperor Alexander they are now bound to furnish only a fixed quantity of labour (not the whole time) to their masters; and by giving the lord half a year's notice, a peasant may quit the estate; but as the lord manages to keep him continually in his debt, this abstract right is of little use to the peasant. The peasant cannot acquire or hold landed property; if he leaves one master, it is only to place himself under another.

The Lutheran is the predominant religion of the province; even the Russo-Greeks have not more than eight or ten churches in it. The superintendence of all ecclesiastical affairs in the Lutheran Church is vested in the provincial consistory at Revel. The department of education, which includes a gymnasium at Revel and about fifty other schools, is under the control of the university of Dorpat.

The manufactures of Esthonia are extremely limited; the peasantry are clothed not only with linen but with coarse woollen cloth woven in their own houses. The only establishments of any importance are in Revel, where hats, leather, powder and starch, vinegar, and some iron-ware are made. Ships and boats are constructed in the capital and in the islands, and spirits are made on many estates as well as in the towns: the distilleries of spirits amount to nearly 400.

All transports of corn and other articles are made in winter, and if the season is mild, and consequently the forests and roads are marshy, communication between towns is cut off. In December, when the ground becomes firmly frozen, all the paths and roads are occupied by long files of sledges, each drawn by one small horse and laden with a few small sacks of corn, hastening away to the sea-port towns. All forest-labour is performed in the winter; in other seasons the marshy soil would not support the workmen. The quantity of wood used for fuel in the houses, distilleries, and kilns is enormous; the peasants' shoes and the bark for the house-roofs alone consume a large number of trees.

Revel is the emporium of trade, but for want of water-communications it is not of any great extent. The exports consist of corn, brandy, salt-fish, skins and hides, butter, tallow, smoked herrings and salmon, and salt.

Though public affairs are administered on the same footing as in the other Russian governments, the country retains some vestiges of its ancient constitution, among which are—a provincial college or council, an inferior tribunal of justice, a consistory, and the right of making brandy without a licence from the government.

Esthonia is divided into four circles. There is no town deserving the name in the whole province with the exception of Revel, which is described under its proper head. [REVEL.]

ESTISSAC. [AUBE.]

ESTRELLA, SERRA D'. [BEIRA.]

ESTREMADURA, a province of Spain, is bounded N. by the province of Leon, S. by the province of Sevilla, W. by Portugal, E. by Castilla la Nueva, and S.E. by the province of Cordova. It is situated between 37° 58' and 40° 32' N. lat., 4° 32' and 7° 26' W. long. The greatest length north to south is about 180 miles; the greatest width east to west is about 130 miles. It is divided into the two following modern provinces:—

Provinces.	Area in Square Miles.	Population in 1849.
Badajoz	14,330	336,136
Caceres		264,988
Total	14,330	601,124

Surface.—A range of mountains, which is a continuation of the Montañas de Toledo, enters Estremadura from Castilla la Nueva, and crossing the province from east to west, joins the Serra de Portalegre on the frontiers of Portugal. This mountain range divides the province into two nearly equal parts, of which the northern part constitutes the modern province of Caceres, and the southern that of Badajoz. The northern part, or Caceres, is usually called Estremadura Alta, or Upper Estremadura, and the southern part, or Badajoz, Estremadura Baja, or Lower Estremadura. This central mountain

range separates the waters which flow northward into the Tagus from those which flow southward into the Guadiana. The eastern part, called the Sierra de Guadalupe, has an elevation of from 5000 to 6000 feet above the sea; the central part, called the Sierra de Benito, and the western, called the Sierra de San Pedro, are much lower. The Sierra Morena enters Estremadura from Andalusia, and fills up the whole of the southern part of the province with an irregular mass of hilly ground. The space between this portion of the Sierra Morena and the central mountain range is occupied by the basin of the Guadiana, which extends from east to west through the province of Badajoz, or southern division. The northern division, that of Caceres, is chiefly occupied by the valley of the Tagus, which has also a direction from east to west, and is closed in on the north by the Sierra de Gata, which enters Portugal, and the Sierra de Gredos, which extends in a south-western direction between the rivers Alagon and Tietar. Both of these mountain ridges have a direction from north-east to south-west, and inclose between them the valleys of the Alagon and other affluents of the Tagus.

The geological formation of all the mountain ranges of Estremadura consists of clay-slate alternating with quartzite, and pierced by masses of granite. The slates are generally of blue and black clay, and the beds are in general highly inclined, some being almost vertical. The Estremadura-slate-formation extends through the Sierra Morena to the Guadalquivir. The quartzite occurs in beds which are intercalated with the slate-beds, and is of a fine texture. Besides the granite other igneous rocks are protruded, forming considerable masses in themselves, but small in comparison with the extent of country covered by the slates. A deposit of phosphorite of lime, a rare mineral, and valuable for agricultural purposes, occurs in the clay-slate between the towns of Guadalupe and Logrosan. It sometimes emerges from the surface, and is sometimes below it, in a bed which is in some parts 10 feet deep, and from 6 to 7 feet wide. Lead, silver, iron, and copper, occur more or less in all the mountain ranges, and are wrought in some places, but with little advantage.

Rivers.—The two great rivers which flow across Estremadura are described separately. [GUADIANA; TAGUS.] The other rivers of this province all enter the two great rivers. The Alagon rises in the Sierra de Gata, and flowing southward receives the Jerte from the Sierra de Gredos; it then flows south-westward, and having received the Arago united with the Gata, enters the Tagus on the north bank about 10 miles above Alcantara, after a course of about 70 miles. The Tietar rises in the Sierra de Gredos, and flowing south-westward enters the Tagus, after a course of about 60 miles. The principal rivers which enter the Tagus on the south bank are the Rio del Monte and the Salor, the former having its origin in the Sierra de Guadalupe, and the latter in the Sierra de Benito. The rivers which enter the Guadiana on the north bank are all short, and flow from the central ridge, the spurs of which in many parts flank the river. The rivers which flow into the Guadiana on the south bank above Badajoz and the west bank below it, are numerous, and of considerable length, but of small size; they all flow from the northern slopes of the Sierra Morena.

Climate and Productions.—The climate in summer is very hot, but is not unwholesome, except on the banks of the Guadiana, which in several parts are uncleared and swampy, and infested with mosquitoes and other insects. In winter the climate is much milder than it is on the high plains of the Castiles and Leon, in consequence of which on the approach of cold weather, the flocks of merino sheep, to the number of more than three millions, begin to travel from their summer-pastures, attended by their shepherds and dogs, and gradually take up their usual winter-quarters in Estremadura. These migratory flocks of sheep are called Los Trashumantes, and the system itself is termed the Mesta.

Estremadura is naturally the most fertile province of Spain, and is capable of producing very large quantities of the finest wheat and other kinds of grain; but vast districts are appropriated as sheep-pastures, and others equally or more extensive are abandoned as mere wastes overgrown with various species of cistus (jarales) and other aromatic shrubs. Everywhere except on the tops of the mountains the exuberant vigour of the soil is apparent. Under the Romans and Moors it was carefully cultivated, and still in many parts, and under very imperfect management, produces large quantities of wheat, rye, barley, maize, flax, garbanzos (the common pulse of Spain), wine, and olive-oil.

The swine of Estremadura are of great importance to the inhabitants, not only as supplying food for themselves, but on account of the pork, bacon, and hams, which are sent to the other provinces of Spain. Extensive districts are covered with woods of oak, beech, and chestnuts, the acorns and mast of which afford abundance of provision for the swine. Cork-trees are also numerous, and cork is exported. Olive-trees and fruit-trees flourish in perfection. Game, both quadrupeds and birds, is abundant; and there is plenty of fish in the streams and rivers. Honey and wax are collected from the nests of the wild bees. The manufactures are few, consisting chiefly of leather, hats, and coarse cloths.

Towns.—Badajoz is the capital of Estremadura and of the province of Badajoz. [BADAJOZ.] The other towns of the province of Badajoz, are as follows:—*Albuquerque*, 22 miles N. from Badajoz, is a small

town, with a fortified castle, and a population of 5470. *Jerez (Xerez) de los Caballeros*, 42 miles S. from Badajoz, is a walled town, and has some manufactures of leather, hats, coarse cloth, and soap. The population in 1845 was 5628. *Llerena*, 63 miles S.E. from Badajoz, standing at the Sierra Morena, is an agricultural town, ill-built, and in a state of decay. It has two churches and an hospital, and had in 1845 a population of 6022. *Medellin*, 50 miles E. from Badajoz, stands on the south bank of the Guadiana, and has a large but ruined castle: population, 2000. Cortes was born here in 1485. *Merida*, 32 miles E. from Badajoz, stands on the right or northern bank of the Guadiana. It is the *Emerita Augusta* of the Romans. The Guadiana is here crossed by a fine Roman bridge of 81 arches, and 2575 feet in length. Close to the bridge is an old castle of considerable strength. The town contains a large convent, two churches, and a prison, and a great number of Roman remains, including an amphitheatre, an aqueduct, a circus, baths, and a triumphal arch. It was taken by the Moors in 713, and was finally annexed to the kingdom of Castilla in 1228. The population in 1845 was 4112. *Olivenza*, 16 miles S.S.W. from Badajoz, stands on the eastern bank of the Guadiana, in a fertile plain, and has a good trade in wine, corn, and oil. The population in 1845 was 7587. *Zafra*, 40 miles S.S.E. from Badajoz, is a very ancient town. It was the *Julia Restituta* of the Romans. It is full of remains of grand buildings, such as the palace of the Duke of Feria, the convents of Santa Marina and Santa Clara, which were desecrated and plundered by the French, and other structures, some of which were never completed: population, 4890.

Caceres, 53 miles N.E. from Badajoz, is the capital of the province of Caceres. It was the *Castra Orecilia* of the Romans. It stands in a district where large quantities of swine are reared, and is the principal place in Estremadura for the trade in bacon and hams, which are said to be excellent. The town stands in an elevated situation, and is kept clean by streams which also serve to irrigate the gardens, whence there is a plentiful supply of fruit and vegetables. It contains four parish churches, a fine suppressed Jesuit convent, an hospital, and some remains of sculpture in the plaza: population, 9520. *Alcantara* (in Arabic *Al Kantarah*, 'the Bridge'), 60 miles N. from Badajoz, stands on the south bank of the Tagus, just below the junction of the Alagon. It was the *Norba Caesarica* of the Romans, and is now chiefly distinguished for the magnificent bridge which they here constructed across the Tagus, and which, after the lapse of seventeen centuries, is still a solid and substantial structure. It was built by order of the emperor Trajan, in A.D. 105. The river is here flanked by lofty rocks, and the bridge is 245 feet above the usual level of the stream, which when low is about 40 feet deep, but when flooded rises to a height of about 180 feet. The bridge is of granite, without cement, and rests on six arches: it is 600 feet long, and 28 feet wide. One arch was destroyed by the English in 1809, but was repaired by them with timber in 1812. It was burnt by the Spanish national troops in 1836, and still remains unrestored with stone. The town stands on an eminence overlooking the bridge. It was plundered by the French under General Lapisse in 1809, and roofless houses and churches deprived of their ornaments still attest the state to which the invaders reduced it. The granite-built convent of San Benito is almost a ruin. The church is lofty, the slender pillars of the interior are elegant, and the high altar has some injured pictures by Morales. The town formerly belonged to a military order of monks, the Knights of Alcantara, originally founded in 1156. In 1494 the king was appointed Master, their wealth was absorbed by the state, and the independence and importance of the order were at an end. The population of the town in 1845 was 4273. *Almaraz*, 85 miles N.E. from Badajoz, stands near the north bank of the Tagus, over which there is here a stone bridge of two arches, 580 feet long, 25 feet wide, and 134 feet high, across a picturesque gorge. General Hill fought here a brilliant action, in consequence of which he was made a peer with the title of Baron Hill of Almaraz. The place is a poor village, with a population of only 493, though it occupies a fine position whence four roads diverge in opposite directions. *Coria*, 75 miles N. by E. from Badajoz, is a decayed town, with a population of less than 2000. It stands on the northern bank of the Alagon, which has here changed its course, leaving the bridge dry: the river is crossed by a ferry. The town was the *Caurium* of the Romans; and the walls, of granite, without mortar, 19 feet thick, and of an average height of 30 feet, still remain. The walls are defended by towers; the gates have been modernised. There is an old gothic cathedral, the interior of which is without aisles, and resembles a large college-hall. It contains some interesting sculptures. The town was sacked by the French in 1809, and was the winter-quarters of Lord Hill in 1812. *Placencia*, or *Plasencia*, 105 miles N.N.E. from Badajoz, is encircled on the south by the river Jerte, which is here crossed by three bridges. The town is inclosed by old walls with semicircular towers, and is also defended by a castle, now in a ruinous state. It is the see of a bishop, suffragan to the archbishop of Santiago, and contains a handsome but unfinished cathedral, a bishop's palace, several churches, and three or four large conventual buildings. The town was plundered by the French in 1809, but still possesses many fine pictures as well as sepulchral monuments and other works of art. It is supplied with water by a long aqueduct resting on 80 arches. It has manufactures of leather, hats, and woollen, linen, and hempen stuffs. The population in 1845

was 6800. *Trujillo*, 70 miles N.E. from Badajoz, is situated on a hill of granite, which has been protruded through the slate strata. The ancient city occupies the highest part, and is now chiefly used as a cemetery. The modern town is built lower down on the eastern side. The northern and western sides are rugged and precipitous. The upper town commands the surrounding plain. It is encircled by a wall with flanking towers of granite, and at the northern extremity is a castle, on the site of the ancient Roman fortress. The upper town was much injured by the French, but there are still some very interesting objects in it. The lower town contains a picturesque plaza, in which is the church of San Martin, with some curious tombs, the Casa de Ayuntamiento, or town-hall, the vast palace of the Duke of San Carlos, which was never finished, and other buildings indicative of the former grandeur of the city. The streets are narrow and ill-paved, and the whole place looks poverty-stricken. The population in 1845 was 5212: they are mostly engaged in rural occupations, the only manufacture worth mention being that of earthenware. *Trujillo* was the birth-place of Pizarro. *Valencia de Alcantara*, 43 miles N.N.W. from Badajoz, is a fortified town on an eminence near the frontier of Portugal. It contains a citadel and barracks, and has manufactures of leather, hats, and coarse cloths: population, 4700.

(Miñano, *Diccionario Geográfico*; Madoz, *Diccionario de España*; Ford, *Handbook of Spain*.)

ESTREMADURA, a province of Portugal, situated between 38° 6' and 40° 15' N. lat., 7° 43' and 9° 32' W. long., is bounded N. by Beira, S. by Alemtejo, E. by Beira and Alemtejo, and W. by the Atlantic Ocean. The greatest length north to south is about 135 miles; the greatest width east to west is about 80 miles; but the form is very irregular, and some parts are less than half this width. The area is 7242 square miles. The population in 1850 was 748,461. The province is divided into three districts, as follows:—

Districts.	Square Miles.	Population in 1850.
Leiria	1312	138,414
Santarem	2315	151,830
Lisbon	3615	455,217
Total	7242	748,461

Leiria comprises the northern part of the province, Santarem the central part, and Lisbon the southern part.

The three districts are subdivided into 25 comarcas, or judiciary divisions, 76 concelhos, or communal divisions, and 473 parishes, as follows:—

Districts.	Comarcas.	Concelhos.	Parishes.
Leiria	5	16	109
Santarem	6	22	144
Lisbon	14	38	220
Total	25	76	473

Surface.—The mountain-range which in the province of Beira is called the Serra de Estrella, enters Estremadura, where it is named the Serra de Louzão, Serra do Junto, and Serra de Baragueda. It crosses the province in a direction from north-north-east to south-south-west, and terminates on the coast between Lisbon and Torres Vedras, where it fills up nearly all the country between the Tagus and the sea. The central ridge, or Serra do Junto, has an elevation of about 2300 feet above the sea. Several offsets or spurs extend from it on both sides. Between Torres Vedras and Lisbon, a distance of about 28 miles, the ridges have a general direction from east to west; and along the northern slopes of three of the principal ridges the Duke of Wellington, then Sir Arthur Wellesley, constructed the series of defensive works called the 'Lines of Torres Vedras.' The great mass of the Monte Junto advances directly towards the centre of the first of these ridges, but stopping short at a few miles distance, it sends a rugged offset in a slanting direction towards the heights of Torres Vedras, from which it is only divided by a deep defile. This offset is the Serra de Baragueda. The coast as far as Peniche, or about 50 miles north of the mouth of the Tagus, consists of rocky cliffs, the Cabo da Roca, opposite Lisbon, being 1920 feet high. From Peniche to the mouth of the Mondego the coast is mostly low, and the country for some distance inland is flat, sandy, and barren, or covered with forests of pines. The valley of the Lis however, in which Leiria is situated, is fruitful and cultivated, and the sides of the hills are covered with plantations of olive-trees. The valley of the Zézere and of the western side of the Tagus, especially about Thomar and Santarem, is very fertile, has good pasture-land, and is also planted with vines, olive-trees, and fruit-trees. The country east of the Tagus is mostly low and flat, and in several places unhealthy; but the ground rises towards Alemtejo, from which province several ranges of hills enter Estremadura. One of these ranges extends from Evora past Setúbal, and terminates at Cape Espichel in the Serra de Arrabida, which has an elevation of 1740 feet.

Rivers.—The Tagus enters Estremadura about 15 miles above Abrantes, and has a western course till it receives the Zézere, when it

takes a south-south-west direction, and enters the sea below Lisbon. [TAGUS.] The Zézere, a large and rapid river flowing along the south-eastern base of the Serra de Estrella, enters Estremadura, and flowing first along the eastern base of the Serra de Louzão, takes afterwards a southern course through the plains of Thomar, and enters the Tagus below Punheta. The other rivers which enter the Tagus in this province are all small. On the right, or north-western bank, the only river of importance is the Azembuja, called also the Rio Mayor, which flows round the foot of the heights of Santarem, and passing the small town of Cartaxo, enters the Tagus about 30 miles above Lisbon. The chief affluents of the Tagus on the left bank are the Zatas and the Almansor; both flow from Alemtejo, and enter the river close together by the eastern of the two branches into which it divides above Lisbon. Several small rivers and streams enter the sea from the north-western slopes of the great central mountain-range. The Lis flows by Batalha, receives the Lena below Leiria, and enters the sea about 20 miles south of the mouth of the Mondego. The Alcoa, joined by the Baça, enters the sea below Alcobaca. The Arnoya passes by Obidos, and falls into the sea-lagoon of Obidos. The Marceira has a very tortuous course past Vimiera and Marceira. The Zizambre passes in front of Torres Vedras, and flows west to the sea, through the ravine which separates the Serra de Baragueda from the ridge of Torres Vedras. The two chief rivers of Estremadura south of the Tagus are the Marotea and the Sado, or Sado, both of which flow from Alemtejo, and enter the sea by the Bay of Setúbal.

Climate and Productions.—The climate of Estremadura is in most parts very salubrious. The breezes from the sea and the mountains temper the air in summer, and the winters are very mild. The soil is generally fertile, but some parts are sandy and swampy. Wheat, barley, and maize are cultivated, but wheat and flour to some extent are imported. Legumes and vegetables are produced in abundance. Some of the wines are much esteemed. Olive-oil, chestnuts, oranges, lemons, and other fruits are grown in large quantities. Cattle and sheep are not numerous, but large numbers of swine are fed on the produce of the woods. Game is plentiful in the mountains, and fish on the coast and in the rivers. There are several minerals in the mountains, but none are wrought to any extent. The manufactures are unimportant.

Towns.—The city of Lisbon (Lisboã) is the capital of the kingdom of Portugal, of the province of Estremadura, and of the district of Lisbon. [LISBOA.] *Abrantes*, 80 miles N.N.E. from Lisbon, is situated on the northern bank of the Tagus. The town occupies an eminence, and is surrounded by old walls, outside of which are gardens and plantations of olive-trees. The Tagus is navigable by small vessels as far as Abrantes, which is by this means the medium of an active trading intercourse between Lisbon and the provinces of Beira and Alemtejo. Large quantities of grain, oil, and fruits are sent down the river to the Lisbon market. The town contains four churches: population, 5000. *Alcocer do Sal*, 50 miles S.E. from Lisbon, stands on the northern bank of the Sado. It is defended by a castle on a rocky height. The neighbourhood is marshy, and large quantities of salt are made and exported: population, 2400. *Alcobaca*, 63 miles N. from Lisbon, is situated at the confluence of the Baça with the Alcoa, whence the name. The town is small, but contains five churches, one of which belongs to a Benedictine monastery which was one of the richest and most magnificent in Portugal. Several of the kings of Portugal were buried in it, and have monuments of beautiful workmanship: population, 2000. *Aldea Galega* (the Gallician Village) is situated at the bottom of a bay on the southern side of the Tagus, nearly opposite to Lisbon, and about 10 miles distant. It is a ferry-station on the route to Evora and Badajoz: population, 4000. *Alenquer*, 27 miles N. by E. from Lisbon, stands on the north bank of the river Alenquer, a small tributary of the Tagus. It contains five churches and an hospital, and has large paper-mills: population, 3200. *Alhandra*, 18 miles N.N.E. from Lisbon, is situated on the western bank of the Tagus, and has a small port: population, 1800, who are chiefly employed in fishing, and in tile and brick works. *Almada*, 6 miles S.S.W. from Lisbon, stands on the south shore of the estuary of the Tagus. It has an old castle and a fort to defend the entrance of the river, and contains extensive wine-stores: population, 4000. *Batalha*, 7 miles S.S.W. from Leiria, is a small town, with a handsome convent and church of gothic architecture. It was founded by João I., king of Portugal, in commemoration of the battle of Aljubarota, fought in August 1385, when the Castilians were defeated with great slaughter: population, 1500. *Caldas*, 50 miles N. from Lisbon, is remarkable for its sulphur-baths, royal and public gardens, and a fountain of very fine workmanship: population, 1500. *Chamusca*, 12 miles N.E. from Santarem, is situated near the eastern bank of the Tagus: population, 3200. Good red wine is produced in the vicinity. *Cintra*, 15 miles W.N.W. from Lisbon, is situated near the northern base of the Serra de Cintra, which terminates at the lofty Cabo da Roca. The town is small, containing only about 1000 inhabitants, but is celebrated for the picturesque beauty of the country in which it is situated, and the delicious climate. The La Pena convent, now a royal palace, crowns the highest summit of the mountain, the ruins of an ancient Moorish castle occupy another lofty ridge, and numerous villas are scattered about on the richly-wooded sides of the hill. The view extends to the sea down the beautiful valley in which the small town of *Colhar*

is situated. *Ericeira*, 27 miles N.W. from Lisbon, is a small fishing town on the coast, with a population of 2500. *Leiria*, 75 miles N.N.W. from Lisbon, is the capital of the district of Leiria. It occupies the angle formed by the junction of the Lena with the Lis. It is defended by a castle, and contains a cathedral, two colleges, an hospital, and a small theatre. Much of the town was destroyed by fire when the French retreated in 1811, and the rebuilding was commenced by the Portuguese government in 1813: population, 2500. *Mafra*, 20 miles N.W. from Lisbon, is a large village on the top of a hill, and in front of a vast edifice, which was a combination of a royal palace with a convent. A wall 15 miles in circumference surrounds the royal hunting-grounds belonging to the palace. The convent was formerly inhabited by 300 Franciscan monks, and some of the royal family generally occupied the palace, which still possesses one of the finest libraries in Portugal. The palace as well as the conventual buildings are fast falling into decay. The population of the village is about 3000. *Obidos*, 47 miles N. from Lisbon, stands on an eminence, and is defended by an old Moorish castle. There are extensive remains of a Roman aqueduct. About three miles to the south is the strong position of *Roliça*, which was stormed by the British army, August 17, 1808: population, 3000. *Ourem*, 12 miles S.E. from Leiria, is situated on an eminence, and is surrounded by walls, and defended by a castle: population, 3700. *Palmella*, 18 miles S.E. from Lisbon, occupies a strong position on the slope of a hill, which is crowned by a castle. It contains two parish churches and an hospital, and has a population of 2700. *Punhete*, 73 miles N.N.E. from Lisbon, stands on the eastern bank of the Zezere, which is here crossed by a bridge. It forms a strong military position: population, 1100. *Santarem*, 50 miles N.N.E. from Lisbon, is the capital of the district of Santarem. It stands on the western side of the Tagus, and occupies the summit and eastern and northern sides of a hill. It contains several churches, and there are some palaces now in a ruinous state, which indicate its former grandeur, when the court was held here in the 15th century. The adjacent country is very productive, and it has a brisk trade with Lisbon by the river: population, 8000. *Setubal*, or *St. Ubes* (*St. Ubes* being a corruption of *Setubal*), 20 miles S.E. from Lisbon, stands on the north shore of the Bay of Setubal, which there forms a large and deep harbour, but the entrance is impeded by sand-banks. The quays are wide and convenient. A fine valley extends to some distance round the town. The old walls of the town are in a ruinous state, and would now indeed be of little use, owing to some adjacent heights which command the whole valley, and which are crowned by two or three forts. The houses are tolerably good, but the streets are narrow, crooked, and dirty. There are four squares, each supplied with a fountain, four parish churches, two or three hospitals, and two schools for Latin and the sciences. Great quantities of salt are made in the neighbourhood, and the exportation of this article, and of wine, oranges, and lemons is considerable. An active fishery is also carried on: population, 15,000. *Thomar*, 75 miles N.N.E. from Lisbon, stands on the south-western bank of the Nabão, a small affluent of the Zezere, in a plain covered with gardens and plantations of olive-trees. The town is tolerably well-built, and contains several fountains, two parish churches, of which one is collegiate, and the fine buildings which belonged to the convent of the military order of Christ, where the grand-prior resided: population, 3800. *Torres Vedras*, 28 miles N.N.W. from Lisbon, stands on the Zizambre, in front of the first of the ridges which were fortified by Sir Arthur Wellesley in order to enable him to resist the French army under Massena. The series of redoubts, entrenchments, and other defences, were called the Lines of Torres Vedras. Sir William Napier ('Peninsular War') says, "The Lines of Torres Vedras consisted of three distinct ranges of defence:—1. From Alhandra on the Tagus to the mouth of the Zizambre on the sea-coast, following the inflections of the hills, was 29 miles long. 2. The second line, traced at a distance of 6 to 10 miles in rear of the first, stretching from Quintella on the Tagus to the mouth of the St. Lorenza, was 24 miles long. 3. The third line, intended to cover a forced embarkation, extended from Passo d'Arcos on the Tagus to the tower of Junquera on the coast." The population of the town of Torres Vedras is 2300. *Vimieira*, 36 miles N.N.E. from Lisbon, is a small town about two miles from the mouth of the Maceira. Here Sir Arthur Wellesley defeated the French, August 21, 1808. This victory was the immediate occasion of the treaty for the evacuation of Portugal by the French army, which has been improperly called the Convention of Cintra; it was signed August 22, in the neighbourhood of the field of battle, and 30 miles distant from the town of Cintra. (Napier, 'Peninsular War,' vol. i.)

ESTREMOZ. [ALEMTEJO.]

ESZEK (*Essek*, in Slavonic *Oszek*), capital of Slavonia in Austria, is a royal free town situated in a level and marshy district on the right bank of the Drave, and about 12 miles above its mouth in the Danube. Its site is that of the Mursia, or Mursa of the Romans, which was founded A.D. 125 by the emperor Hadrian, and afterwards became the residence of the Roman governors of Lower Pannonia. It gave title to a bishop from A.D. 335. It now consists of four quarters; the present fortress, begun under the emperor Leopold I. in 1712, and finished in 1719, is well built, contains 147 handsome and lofty houses, an arsenal and barrack, and is regularly fortified:

an esplanade runs round it, and to the north-west of it stands the Falso-Varos (Upper Town), which is approached by an avenue 1100 paces long, is the residence of the merchants and dealers, and has well-attended fairs. South-east of the fortress lies the Also-Varos, or Lower Town, the site of the ancient Mursa, which consists of broad and handsome streets, and has some fine churches; and in the east is the New Town, composed rather of farms and gardens than of lines of streets. The fortress and suburbs contain altogether about 1800 houses, 5 Roman Catholic churches, 4 chapels, a Greek church, and about 12,000 inhabitants. There are several handsome buildings, such as the town-hall, the house of assembly for the states of Veröce, the county in which Eszek is situated, the barracks, engineers' house, officers' pavilion, and arsenal. Eszek has a Roman Catholic high-school, a gymnasium, a Greek school, a military cadet academy, and Franciscan and Capuchin monasteries. A causeway or bridge about 2½ miles in length, 55 feet in breadth, and 9 feet in height, constructed in the year 1712, leads across the Drave and the swamps on its northern bank into the Hungarian county of Baranya. With the exception of some silk-spinning there is little mechanical industry in the town. There is a considerable trade in grain, cattle, and raw hides. Steamers ply between Eszek and the towns on the Danube.

ÉTAMPES, a town in France, capital of an arrondissement in the department of Seine-et-Oise, is a first-class station on the Orleans railway, 35 miles S. by W. from Paris. It is the seat of a tribunal of first instance, of a college, and agricultural society, and has a population of 8083, including the commune. The town stands in 48° 26' 49" N. lat., 2° 9' 23" E. long., on the bank of two little streams, that unite just below the town with the river Juine (or, as it is sometimes called, the river Étampes), which flows into the Essonne, a feeder of the Seine.

The town is mentioned more than once in the chronicles of the first race of French kings. In A.D. 604 Clothaire II. was defeated near *Stampae* (Étampes) by his nephew Thierry, who here took Merovée prisoner, and soon after entered Paris in triumph. In the year 911 Étampes was burnt by the Northmen under Rollo. In the latter part of the same century, or the beginning of the next, Constance, wife of Robert, king of France, built here a castle, and Robert himself converted the castle chapel into a collegiate church dedicated to Sainte Marie. In A.D. 1147 an assembly of the grandees of the kingdom was held in Étampes, a crusade was determined upon, and the Abbé Suger and Raoul de Vermandois were appointed regents of France in the absence of Louis VII. The castle was held for the king in the 11th and 12th centuries by officers who had the titles of Prévôt, Bailli, or Vicomte. There was a Jews' synagogue at Étampes, which, on the expulsion of that people from France by Philippe Auguste, A.D. 1182, was converted into a church, that of Notre Dame, yet standing. After the death of Philippe Auguste the castle of Étampes ceased to be a residence of kings, and was used as a state prison. In the 14th century Étampes was given by Philippe le Bel to his brother Louis, count of Evreux. The town and castle surrendered after a siege to the Bourguignons, who massacred the Orleanist garrison in 1411. In the 16th century Étampes, with its territory or county, was erected into a duchy in favour of Jean de Brosses, whose wife was mistress of François I. In the religious wars of France, A.D. 1562, the town was taken by the Germans brought into France by the Prince of Condé. In A.D. 1567 it was taken by assault by the Huguenots; in 1589 it was the rendezvous of the troops of the League, from whom it was taken by Henri III. In A.D. 1590 it was taken from the party of the League, into whose hands it had again fallen, by Henri IV., who caused the fortifications of the castle to be razed. The town was unsuccessfully besieged by Turenne during the civil war of the Fronde in 1662. In the revolutionary frenzy of 1792, a seditious band of about 800 men entered the market-place, and fixed the price at which corn must be sold. Simoncau, mayor of the town, in opposing this violence and in defending the freedom of trade, was murdered by the ruffians. The National Assembly decreed that a monument should be erected to his memory in the market-square of Étampes; but the decree has not yet been executed.

The town is in a tolerably fertile valley. It is pretty well built, and surrounded by shady promenades. The tower of Guinotte is all that remains of the ancient castle. There are four churches. That of Notre-Dame has a lofty tower and spire; the semicircular arch may be observed in it. The architecture and the style of the sculptures mark the edifice as a work of the 13th century. The church of St. Basil, founded by King Robert, has a handsome portal decorated with graceful columns, and statuary representing a scene at the Last Judgment. The church of St. Giles is also very ancient, probably not later than the 11th century; it has the semicircular arch, with zigzag mouldings. The church of St. Martin is perhaps the finest ecclesiastical edifice in the town. There are in the town several houses built about the time of the revival of the arts. One of these, it is said, was built and inhabited by Diana de Poitiers, duchess of Étampes, and mistress of François I. The town-hall is an ancient turreted building. There is also a large public granary, three stories high, capable of containing nearly 1400 tons' weight of wheat. Near the town are remains of an ancient building, probably of Roman origin, but popularly called the 'Tower of Brunehaut.' A modern castle has been erected upon these ruins.

The population of Étampes manufacture soap, leather, woollen-yarn, counterpanes, and hosiery; and trade in wool, corn, flour, and honey. There are more than forty mills of different kinds on the two brooks which water Étampes. Sandstone is quarried in the neighbourhood, and much garden-stuff is grown for the supply of Paris. The corn-market of Étampes is a very important one; it is held on Saturday in every week, and attracts the farmers of the Beauce and Gatinais districts. A vast number of flour-mills in and about the town are constantly at work for the supply of Paris. Geoffroy de St. Hilaire was a native of Étampes.

ETHIOPIA (*Aithiopia*) was the name given by the ancient geographers to the countries south of Egypt. In a general and vague sense they called all the inhabitants of the south part of Africa, from the Red Sea to the Atlantic, Ethiopians. Herodotus (iv. 197) speaks of the Ethiopians as inhabiting the whole of South Libya (Libya with him being synonymous with our Africa), as distinguished from the Libyans who inhabited the Mediterranean coast and the interior adjoining it. He also speaks of the Ethiopian Troglodytes (iv. 183) who lived to the south of the Garamantes, and tells strange stories of them; but these particular Ethiopians must be considered included under the general name. Strabo places the Hesperian Ethiopians near the Atlantic Sea, and south of the Pharusii and Negretes, who were themselves south of the Mauri. In this general sense, Ethiopians corresponded with the inhabitants of the countries south of the Great Desert, of which the ancients knew very little. Herodotus (vii. 70) also speaks of Asiatic Ethiopians, who formed part of the great army of Xerxes, and of long-lived Ethiopians (iii. 17), whom he places on the shores of the southern sea; but their localities are not easily determined. The historian however observes that the Asiatic Ethiopians were black, like those of Libya, but differed from them in language, and had straight hair; whereas those of Libya had very curly hair, by which term some modern writers have somewhat hastily concluded that the woolly hair of the negro is intended. But Eastern Ethiopia, properly called Ethiopia above Egypt (Herodotus, vii. 69), and also Ethiopia Orientalis, was a distinct and better-defined country. It included those regions which we now call by the name of Nubia and Sennaar, with parts of Kordofan and the northern part of Abyssinia: it may be said to extend from the debatable ground sometimes called Ethiopian Egypt on the north to the Abyssinian highlands on the south, though on the south the limits were unknown or undefined; and from the desert on the west to the hilly and desert country between the Nile and the Red Sea on the east. Meroë, which lay above the confluence of the Astaboras (Takkazze) and the Nile, was the ancient capital of Ethiopia, in the limited and more definite sense of Ethiopia above Egypt, in which sense we shall now consider the term. The Troglodyte bordered upon Ethiopia to the east, extending along the coast of the Red Sea. To the west of Ethiopia were the Blemmyes, a barbarian tribe, of whom wonderful stories were told as having no heads, but eyes and a mouth fixed in the breast.

The physical features of Ethiopia are described under NUBIA and SENNAAR; ABYSSINIA and KORDOFAN may also be referred to. Here, a few words must serve to point out the general character of the country. Although Ethiopia was scarcely so strictly confined as Egypt to the Valley of the Nile, the Nile was the great central feature of the country, and along its banks the towns and cities were nearly all placed; the high civilisation of Ethiopia was confined to the insular district of Meroë and the country known as Ethiopian Egypt. The Ethiopian Nile is in many respects a very different river from the Nile of Egypt. In the southern part of the country both the White and Blue branches of the river receive numerous affluents. The two streams join at Khartoum, below which the Nile traverses a gloomy defile for 14 or 15 miles, when it emerges as a broad majestic river into "immense plains of herbage bounded only by the horizon." Through these plains it flows past Meroë to Damer, where it receives the Takkazze, or Atbara, the Astaboras of the ancients, and the last affluent of any consequence which the Nile receives. At its junction with the Nile the Takkazze is said to be two-thirds of a mile wide; the Nile itself being from a mile and a half to two miles wide. A little lower what is called the Fifth Cataract of the Nile is reached, and thenceforward for more than 600 miles succeed alternate rapids and cataracts, so that the river is of little service for navigation, while high limestone banks restrain its annual overflow, the source of so much prosperity to the Egyptian territory. The southern part of Ethiopia is humid, owing to the proximity of the Abyssinian highlands, and there is a good deal of fertile soil. Along the vast plains of the island of Meroë, and the country on either side, periodical rains are said to occur, and the land supports a luxuriant vegetation. North of Meroë the climate becomes more and more dry, and the soil (except where watered by the overflow of the Nile) more arid; but the remains of rude canals prove that the ancient occupants of the land rendered it available for agricultural purposes by means of artificial irrigation. In the northern districts however there must always have been much waste and desert land; and both the east and west was a dry and thinly-peopled country, becoming at length a sandy desert. As the land in the southern parts receded from the river it appears to have been devoted to pasture, the inhabitants being chiefly herdsmen; beyond were jungles abounding with wild beasts, the prey of savage tribes who lived chiefly by hunting. Some of the

border tribes, the Elephantophagi and Struthophagi, seem to have depended chiefly on hunting elephants and ostriches. In the northern hills were gold-mines, which yielded a considerable amount of treasure. The Macrobi were workers in metal, and had attained a high state of cultivation.

Ethiopia was a country early reduced to a fixed social state. Its religion and sacred language were the same, or nearly the same, as the religion and language of Egypt. Its government was monarchical, but the monarch was subordinate to an all-powerful hierarchy, more absolute than that of Egypt. Diodorus (iii. 6) says, "In Ethiopia, when the priests think proper, they send a message to the king with orders for him to die, the gods having so communicated their pleasure, which no mortal should dispute."

It has been long a subject of discussion among the investigators of antiquity whether the arts of civilised life descended from Ethiopia to Egypt, or ascended from Egypt into Ethiopia. Here, as in many other contested historical points, much discrimination is required; but the balance of probability appears to be in favour of the tradition that Ethiopia was the parent of Egyptian civilisation and religion. It was a very ancient tradition, that at a very remote period religious colonies came down from Meroë into Egypt. Herodotus (ii. 29) says, "At Meroë, the great city of the Ethiopians, the people worship only Zeus and Dionysus (Ammon and Osiris), and then they honour greatly. They have an oracle of Zeus, and they make their expeditions whenever and wherever the deity, by his oracular answers, orders them." The probable explanation of this passage seems to be that the priests of Meroë sent colonies into other countries, and Egypt was naturally one of the first lands to which they would resort. The procession of the Holy Ship, with the shrine of the ram-headed Ammon (the Zeus or Jupiter of the Greeks and Romans), which took place annually at Thebes, and which was carried across the Nile to the Libyan side, and brought back after a few days, was said to be in commemoration of the first advent of the god from Ethiopia by the river. This ceremony is sculptured on several Egyptian and Nubian temples, and especially on the great temple of Karnak. Homer probably alludes to it when he speaks of Jupiter's visit to the Ethiopians and his twelve days' absence. Diodorus (iii. 3) says that "the people above Meroë worship Isis and Pan, and besides them Hercules and Zeus, considering these deities as the chief benefactors of the human race." Heads of Isis have been found by Cailliaud at Naga, near Shendy (about 17° N. lat.), in Upper Nubia, the sculptures bearing all the marks of an original style, though of a coarser art than that displayed in the same figures in the Egyptian temples. The head of Isis is placed above that of Typhon, as in some of the temples of Egypt. These temples of Naga however may be supposed, from their style and sculptures, to be of a later date than those at El-Mesaourah, which are also in the district of Shendy, in a valley in the desert, at some distance from the Nile, and about 12 miles E. from Naga; they consist of eight temples of small dimensions, the largest, which stands in the centre, being only 34 feet long, connected by galleries and terraces, with a great number of small chambers, the whole being surrounded by a double inclosure. There are no tombs nor remains of private habitations in the neighbourhood. Traces of a large tank are seen, protected from the sand by mounds of earth all round it, the water of which served probably for religious and other purposes. No sculptures or hieroglyphics adorn the walls; only on the six pillars which form the portico of the larger temple are there hieroglyphics and figures in the Egyptian style. This temple seems to be of a much later date than the rest. (Cailliaud, 'Voyage à Meroë.') It is supposed that this secluded inclosure may have been the sacred city of Meroë, the college of its priests, and the original seat of the oracle of Jupiter Ammon, whence issued those religious colonies which carried religion and civilisation from Ethiopia as far as the Delta and the Oasis of the Libyan Desert. According to the tradition of the country the name of El-Mesaourah was that of the ancient fakirs, or recluses, who inhabited these edifices.

The ruins of Meroë itself are now believed to be those discovered by Cailliaud at Assour, above the confluence of the Takkazze and the Nile, and its situation between the two rivers probably gave rise to the appellation of the Island of Meroë. The extent of the ruins is said to be more considerable than that of Napata, near Barkal, or of any other place yet examined in Nubia; they are also in general more dilapidated, and vast mounds of rubbish appear heaped up everywhere, as if formed by the ruins of private as well as public buildings. The latter consist, as at Napata, of temples and pyramids. Of the temples there is not one the remains of which can be traced with any certainty; the front wall of the largest appears to have been 25 feet thick. The pyramids, about 80 in number, stand in groups on the borders of the desert. The largest is about 60 feet at the base, but most of them are much smaller, and generally in a ruinous state. Most of the pyramids have little exterior sanctuaries attached to them, and in one of them Cailliaud found the roof arched with a key-stone, as in those of Mount Barkal.

The connection between Egypt and Ethiopia was renewed at various periods remote from each other, and under various circumstances. Herodotus says that he saw in the records of the priests of Memphis (ii. 100) 18 Ethiopian kings registered among the 330 successors of Menes, who preceded Sesostris. Whatever we may think of this scroll

of kings, still it shows that a tradition existed of a very remote influence of Ethiopia over Egypt. This perhaps was the epoch when the worship of Ammon and Osiris was introduced into the latter country. Osiris, according to tradition, led a colony from Ethiopia into Egypt, which received also from the parent state the practice of deifying kings, together with hieroglyphical writing, the usage of embalming, the whole sacred ritual, and the forms of their sculptures. (Diodorus, iii. 3.) Sesostris is said to have subsequently conquered Ethiopia; but this was probably a partial incursion, for Herodotus says that Ethiopia was never conquered by any foreign power. We hear nothing of the intercourse between Ethiopia and Egypt for many centuries afterwards, during which the latter country made great progress in civilisation and the arts, and built its stupendous monuments. In the 8th century B.C. the Ethiopian invasion of Egypt took place, and Sabakos, an Ethiopian king, reigned over both countries. Herodotus, who lived between two and three centuries later, says that Sabakos evacuated Egypt in obedience to an oracle, a circumstance which, if correct, shows that the power of the Ethiopian hierarchy still continued in full vigour. Still we find other Ethiopian kings ruling successively over at least part of Egypt; among these was Tirhakan, mentioned in the Scriptures as having fought against Sennacherib. (2 Kings, xix. 9.) This period of renewed intercourse between Egypt and Ethiopia, under circumstances highly favourable to the latter, was probably the time when the improved arts of Egypt were introduced into Ethiopia, and it was then perhaps that the splendid structures of Mount Barkal were executed. Again, under the Ptolemies there is evidence to show that the Græco-Egyptian colonies found their way into the regions of the Upper Nile and along the shores of the Red Sea, and even as far as Axum and Adule in Abyssinia [ADULE; AXUM]: these colonies or adventurers probably spread the Egyptian arts as improved by the Greeks into Ethiopia. All these vicissitudes may account for the various styles of building and sculpture found along the banks of the Upper Nile. The monuments of Assour and El-Mesaurah are probably older than those of Naga, and these much older than those of Barkal, which appear to be anterior to the temple of Soleb. We know from a passage of Diodorus that after the Ptolemies came to reign in Egypt a great change took place in Ethiopian politics. In the time of the second Ptolemy the Ethiopians had a king, Ergamenes, who had a knowledge of Greek manners and philosophy. Being weary of the yoke of the hierarchy he went with a band of soldiers to the inaccessible place (by some supposed to be Barkal, but more probably the sacred inclosure of Meroë, El-Mesaurah), which contained the golden temple of the Ethiopians, and massacred all the priests.

Of the manners of the Ethiopians we know little, except what we may infer from their monuments and the scanty records we have of their religion and institutions, as above stated. Their sacred language appears to have been the same as that of the Egyptian priests. From some sculptures at Barkal it has been supposed that human sacrifices were occasionally offered. A peculiarity in the Ethiopian institutions is, that their women sometimes went to battle, and were not excluded from the throne. Strabo (Casimb., p. 820) speaks of the Ethiopian warrior queen named Candace. (See also 'Acts of the Apostles,' viii. 27.) On the propyla of one of the temples of Naga, besides the hero or king, is a female figure likewise of regal dignity, with a large knife in each hand, going to cut off the heads of a number of captives; the vulture is hovering over her head. The figures of both king and queen are remarkable for the magnificence of their dress, and though they have many characteristics of Egyptian style, they are much thicker than the Egyptian form, especially the female, which is remarkably large from the vest downwards. (Cailliaud's Plates, 14. 16.)

After the Romans became possessed of Egypt, we read of several expeditions into Ethiopia, but of no permanent impression made by them upon that region. Cuius Petronius, prefect of Egypt under Augustus, is said to have advanced as far as Napata, called Tenape by Dion, the first town of Ethiopia after Meroë. He defeated queen Candace, who was obliged to sue for peace. But the Romans ultimately kept none of their conquests in that quarter. In subsequent times it appears that they conquered again, and retained a strip of territory along the banks of the Nile of seven days' march above the first cataract, but this was given up by Diocletian to the Nubæ or Nabatæ, on condition that they should prevent the Ethiopians and the Blemmyes from attacking Egypt. Of the vicissitudes and ultimate dismemberment of the ancient kingdom of Meroë we have no information.

The early Christian historians seem to restrict the name of Ethiopians to a people occupying part of the country now called Abyssinia. Procopius and Cedrenus call the Axumites Ethiopians. [ADULE; AXUM.] From those times the name of Ethiopia has been given more particularly to Abyssinia, and the Geez, or sacred language of that country, has been called Ethiopian.

The origin of the name 'Ethiopia' is uncertain. Salt says that *Itiopjawan* is the favourite term by which the Abyssinians designate themselves; but this name was probably introduced among the Abyssinians by the half Greeks of the kingdom of Axum. The word in Greek has the appearance of being significant, and is sometimes interpreted 'dark-coloured;' but like many other Greek names of

nations, it is probably a native Asiatic or African term corrupted into the semblance of a genuine Greek word.

Ethiopian Languages.—Under the general designation of the Ethiopian languages, three different dialects are usually comprised—namely, the ancient Ethiopian, or Geez, the Tigré, and the Amharic. The ancient language properly called the Ethiopian is now extinct, or at least survives only as the language of books and of learned men (whence it is also called 'lesana mas'haf,' or book-language); and its place is now supplied by the two other dialects, of which the Tigré approaches nearest to the Ethiopic, whilst the Amharic has more widely departed from it.

The Ethiopian belongs to the family of languages usually called the Semitic, and among them it shows the closest affinity to the Arabic. It is written from the left to the right, in a peculiar alphabet, which however appears to be of Semitic origin. The alphabet consists of 26 consonants and 7 vowel sounds; but the latter are not expressed by distinct characters, nor by points or accents, but by slight changes in the shape of the consonants, so that each character represents an entire syllable. Gesenius calculates that about one-third of the roots and primitive words of the Ethiopian language exists also in Arabic; and a considerable portion of the remainder is found in Hebrew, or in the Chaldee and Syriac dialects.

The literature extant in the Ethiopian language is almost exclusively biblical and ecclesiastical: among the chief works are—a complete translation of the Old and New Testament, made by an unknown author from the Alexandrian text of the Greek version, probably not anterior to the 4th century; and an apocryphal writing, peculiar to themselves, called the book of Henoch. There exists moreover a translation of the Didascalia, together with 56 canones and 81 constitutions or rules of the early Christian church, considered by the Ethiopians as apostolical; besides a collection of the decrees of the councils, extracts from the writings of the early fathers, liturgies, martyrologies, and histories of saints. The profane literature of the Ethiopians comprises several chronicles.

(Heeren, *Historical Researches*; Gau, *Antiquités de la Nubie*; and the antiquarian works of Rossellini, Wilkinson, &c.; 'Egyptian Antiquities,' in *Lib. of Ent. Knowledge*; Cailliaud, *Voyage à Meroë*; and the *Travels* of Rüppell, Waddington, Lord Valentia, &c.)

ÉTIENNE-DE-BAIGORRY. [PYRÉNÉES, BASSES.]

ÉTIENNE-EN-DÉVOLMY. [ALPES, HAUTES.]

ÉTIENNE-LES-ORGUES. [ALPES, BASSES.]

ÉTIENNE, ST., a large manufacturing town in the department of Loire in France, stands in a narrow valley on the Furens, a small feeder of the Loire, in 45° 26' 9" N. lat., 4° 23' 43" E. long., 288 miles S.S.E. from Paris, and has 53,741 inhabitants including the commune. It is situated at the junction of the railroads that lead to Lyon and Roanne, from which it is distant respectively 35 and 51 miles; and to the two towns just named railways from Paris are nearly completed, one through Dijon and Chalon, the other through Orleans and Bourges; the latter is completed to Varennes within 30 miles from Roanne. By these railroads, by the Loire, which is navigable from Roanne, and by the Rhone, the coals and other important products of St.-Etienne find easy and rapid outlets to all parts of France. The older part of the town is ill built; the modern part is well built, with spacious squares, lofty houses, wide and regular streets; and the whole, always enveloped in the dense smoke of its numerous workshops and factories, is superlatively dirty. The finest street is that through which the road from Paris to Marseilles runs; it divides the town into two nearly equal parts. In the middle of this street and of the town stands the town-house, which, with the exception of an ancient church that dates from the 11th century, is the most remarkable structure in St.-Etienne. The handsome obelisk, fountain, and the termini of the railroads to Lyon and Roanne, also deserve attention. The town is well lighted with gas.

St.-Etienne stands in the centre of one of the most important coal-fields in France, from which about 500,000 tons of coal are raised annually. It is especially famous for the manufacture of silk-ribands and fire-arms, including rifles and fowling-pieces. Its ribands, which are exported to all parts of the world, are unequalled for richness of colour and beauty of pattern; of the quantity manufactured an idea may be formed from the statement that their value amounts annually to upwards of 40,000,000 francs. When government orders for fire-arms fall off, the workmen turn their attention to making fowling-pieces, of which 30,000 a year are sometimes disposed of, besides a great number of pistols, &c. The manufacture next in importance is that of hardware and cutlery. To these leading objects of industry are to be added manufactures of scythes, nails of all kinds, saw-blades, foils, anvils, vices, files, silk and cotton velvets, &c. The town has also many dye-houses and tanyards; and in the suburb of *Terre-Noire* there are important iron-forges and furnaces.

St.-Etienne is the seat of tribunals of first instance and of commerce: it has a consultative chamber of manufactures, a council of *Prud'-Hommes*, a college, a school for deaf mutes, a mining school, a small theatre, a public library, and a museum which contains a collection of the minerals and fossils of the neighbourhood and also specimens of the staple manufactures of the town.

According to some accounts the town originated in a Roman station named *Forum*, whence the town and river were named by corruption *Furens* and *Furania*: according to others it sprung up round a castle

built here in the 10th century by the counts of Forez. For some centuries after this last-mentioned period Furania was a small place of no importance. In the troubled reign of Charles VII. the townspeople obtained permission to inclose their town with walls. In the civil wars of the 16th century it was taken and plundered. From 1585 to 1629 it was three times visited, and all but depopulated, by destructive plagues.

ETIVE, LOCH, an inland lake in the northern part of Argyleshire, branching off from the Linnhe Loch, and running about 20 miles inland, first in an easterly and afterwards in a north-easterly direction. It varies in breadth from half a mile to two miles. The Awe River falls into it at the village of Bunawe, which is about half way up the lake. On the north side of the loch are the ruins of Ardchattan Priory (near the modern mansion), the scene of a parliament held by Robert Bruce after his victory over the MacDougals of Lorn. The priory dated from the 13th century. Near Connel Ferry, farther down the lake, is a vitrified fort; and on the southern side of a projecting flat rock at the mouth of the loch, are the ruins of Dunstaffnage Castle, captured by Bruce. It was previously the stronghold of the MacDougals, and since then it has been a royal castle. From this castle the stone in the coronation-chair in Westminster Abbey was removed to Seeno Palace, whence it was taken by Edward I. Loch Etive is navigable for small coasting-vessels. Besides the Awe, the Etive River at its south-eastern extremity, and one or two small mountain-streams, fall into the loch.

ETNA. [*Ætna*.]

ETON, Buckinghamshire, a town and the seat of a Poor-Law Union, in the parish of Eton, is situated on the left bank of the river Thames, in 51° 29' N. lat., 0° 36' W. long., distant 42 miles S.S.E. from Buckingham, and 22 miles W. by S. from London by road. The Windsor station of the Great Western railway, which is about three-quarters of a mile from Eton, is 21 miles distant from London; that of the South-Western railway is 26 miles from London. The government of the town of Eton is parochial, but without churchwardens. The district is under the management of a Local Board of Health. The population of the parish in 1851 was 3666, besides 130 in Eton College, which is extra-parochial. The living is a rectory in the peculiar jurisdiction and incumbency of the Provost of Eton College. Eton Poor-Law Union contains 19 parishes, chapelries, and hamlets, with an area of 41,560 acres, and a population in 1851 of 21,482.

Eton, though in a different county, forms in effect one town with Windsor. The line of houses is interrupted only by the river Thames, which is crossed by a cast-iron bridge, erected in 1824 by Mr. Hollis. Eton parish church, a chapel of ease to the College Chapel of Eton, formerly the parish church, has been recently erected, in great part by subscription. This church is a handsome building in the early English style; it was consecrated June 1st, 1854, and advantageously replaces the former brick edifice. The spire forms a very ornamental feature in the general landscape. The building cost about \$0000, of which the Queen and Prince Albert contributed a portion; part was also contributed by the College authorities, and a considerable amount by old Etonians. The sittings are all free. The town consists chiefly of one long street, which is well paved. The college, and the tenants of the college property, pay for the watching, lighting, and sewerage of the college district. Pory's Charity school is for the education of 60 boys and 30 girls. Eton College is the distinguishing feature of Eton, and has rendered the town famous for four centuries.

ETON COLLEGE was founded and endowed by Henry VI. as the 'College of the Blessed Marie of Eton by Wyndesore.' The foundation charter, which is in good preservation, is dated at Windsor, 12th September, 1440. It was confirmed by Act of Parliament at Westminster, May 4th, 1441. The original foundation was a provost, 10 priests, 4 clerks, 6 choristers, 25 poor grammar scholars, with a master to teach them, and the like number of poor men. It now consists of a provost, 7 fellows, 2 conductors, 7 clerks, 70 king's scholars, 10 lay-clerks, 10 choristers, and a number of inferior officers and servants. The scholars must be born in England, of parents lawfully married. By the foundation statute, they should be clothed in some coarse uniform, but this is not done; and their education should be gratis, but a sum of 6*l.* or 7*l.* a year is now charged for their instruction. Practically, however, the children of persons who are really poor do not pay anything; but generally speaking, there is little difference in the relative situation or comparative opulence of the parents of the oppidians (scholars who are not on the foundation) and the collegers. The foundation scholars are admissible from the age of eight to sixteen, and unless elected at the age of seventeen, and put on the roll for admission to King's College, Cambridge (another foundation of Henry VI.), they are superannuated at eighteen. The scholars who are elected may continue in college till nineteen; and even at eighteen they may leave the college and continue as oppidians. The annual election to King's College takes place in July or August, after an examination of the upper class by the provosts of Eton College and King's College, Cambridge, the vice-provost of Eton, two fellows of King's College, called 'posers,' and the head master of Eton. The successful candidates are not immediately transferred to Cambridge, but remain at school until a vacancy occurs on the foundation of King's College. On their removal to Cambridge the Eton scholars are received on the foundation and maintained out of its endowments.

GEOG. DIV. VOL. II.

and after three years they succeed to fellowships. On an average four scholars go to Cambridge yearly. There are two scholarships at Merton College, Oxford, for foundation scholars who are not elected for King's College, Cambridge. There are some other exhibitions, amongst which are several for superannuated scholars. In 1829 the Duke of Newcastle founded and endowed three scholarships of the value of 50*l.* each; and in 1842 Prince Albert instituted an annual prize of 50*l.* for promoting the study of modern languages. Besides the scholars on the foundation, Eton College is attended by about 600 scholars called 'oppidians,' many of whom are the sons of persons of rank and fortune, and board with the masters, from whom they receive instruction as stipendiary pupils. The school is divided into an upper and a lower, and each is subdivided into three classes. There are a head master and a lower master, 12 assistant-masters in the upper school, and four in the lower school, and a mathematical master. There are masters for the French, Italian, and German languages, and other branches of education.

At the dissolution of the monasteries the revenues of Eton College were estimated at 1100*l.* In 1506 the total income of the college was 652*l.*, and the disbursements amounted to 645*l.* The income of the college from its endowments at present amounts to about 7000*l.* a year, derived from its reserved rents, corn-rents, sale of woods, and also from manors, by fines and heriots.

The college buildings form a conspicuous and ornamental object, especially if viewed from the terrace of Windsor Castle. They consist of two quadrangles, built partly of freestone, but chiefly of brick, in a style somewhat resembling the north front of St. James's Palace. In one quadrangle are the school and the chapel, with lodgings for the foundation scholars; and in the other are the library, which contains a rich and valuable collection, the provost's house, and the apartments of the fellows. A few years back the college was considerably enlarged. The new school buildings, which have a frontage of 120 feet, form an elegant structure in the Tudor collegiate style. They are devoted to masters' apartments, separate sleeping-rooms for the 49 senior collegers, a boys' library, museum, &c. A sanatorium for the scholars has also been recently erected. The chapel, which is built of stone, is a handsome structure, though much less elaborate than was intended by the founder. Its length is 175 feet, including an ante-chapel, which is 62 feet long. It has recently been restored with great care and at considerable expense; and the stalls of the most discordant character, which were erected by Provost Godolphin, have been replaced by elegant gothic canopies. Several modern painted windows contribute to the ornament of the chapel. In the centre of one quadrangle is a bronze statue of Henry VI., and in the chapel is another statue of the same king by Bacon. The extensive playing-grounds on the north-west of the college are ornamented with numerous stately trees.

(Lipscomb, *Buckinghamshire; Land We Live In*, vol. ii.; *Communications from Eton*.)

ETRURIA was the name given by the ancient Romans to one of the principal divisions of Central Italy: it was bounded E. by the Tiber, W. by the Mediterranean, or Tyrrhenian Sea, and N. by the river Macra and the Apennines. By the Romans the inhabitants were called indifferently Tusci and Etrusci, though Tusci appears to be the older form. The Greeks called them Tyrrheni, or Tyrseni (*Τυρρηνοί*, *Τυρσηνοί*), and the country Tyrrhenia. The most ancient Roman form, Turseus, has been identified by some modern scholars with the Thrsenos of the Greeks. The natives of Etruria, however, called themselves Rasena or Rasenua.

Respecting the origin of the Etrurians there has been much diversity of opinion among modern writers, arising from the conflicting character of the ancient traditions of their migrations, and the statements of Greek and Roman writers concerning them, together with the entire absence of any production of an Etruscan poet or annalist. The most commonly received theory is that founded on the tradition preserved by Herodotus, which makes the Etruscans to have been a tribe of Lydians, who, on account of a protracted famine, left their country under Tyrrhenus (or Tyrsenus), the king's son, and settled in this part of Italy, having vanquished its earlier occupants—the Umbri or Siculi. They took the name of Tyrrhenians, or Tyrsenians, in honour of their leader. This is the theory accepted by most Greek and Roman writers (see the list of subsequent authorities in Dennis's 'Etruria,' vol. i. p. xxxii.), and also with more or less modification by many recent ones. But this tradition did not meet with universal acceptance even among ancient writers, having been expressly rejected by Dionysius on the ground that Xanthus, a very early Lydian historian, does not mention any such colonisation, though he speaks of others, which render such a one the more improbable; whilst Hellanicus makes the Tyrrhenians of Etruria to be Pelasgians who had migrated from Thessaly. Dionysius however rejects the Pelasgic origin also, and asserts his belief that the Etrurians were an aboriginal or indigenous race, they being wholly dissimilar in manners, religion, and language from any other people. This opinion has found a hearty supporter in Miceli, a recent Tuscan author of considerable reputation, but out of Italy it has met with little acceptance. Niebuhr was the first to show clearly that the Etruscans were in reality a mixed people; and he conjectures that they were formed probably of two leading races,—the Pelasgi, who occupied chiefly the southern parts of Etruria, and were much the more numerous, but existed mainly in a

state of vassalage, having been conquered by the other race, a tribe of northern invaders from the mountains of Rhaetia—the true Rasena or Etruscans. This hypothesis, even when not admitted by later writers, has considerably modified their views. Müller ('Etrusker,' vol. i.) has made an ingenious effort to reconcile these theories by supposing that a body of Tyrrhenian Pelasgians who had settled early on the Lydian coast, being compelled to migrate, repaired to the coast of Etruria, and there founded the cities of Tarquinii and Argylla, mingling gradually with the Etruscans or Rasena of the interior, whom with Niebuhr he supposes to have come originally from the Rhaetian Mountains. Lepsius again discards altogether the hypothesis of a separate nation of Rasena, and supposes the Etruscans to be derived from a mixture of the invading Pelasgians with the Umbrians, the original occupants of the country; and Deunis, who supports the Lydian origin of the Etruscans ('Etruria,' vol. i. Int.), while admitting the connection of the Rasena with the Rhaetian and Noric Alps, appears inclined to adopt the assertion of Livy that the emigration was from the plains to the mountains on the invasion of Poenale by the Gauls.

While therefore it cannot be said that anything like agreement has yet been arrived at respecting the origin of the Etruscans, we may perhaps venture to assert that certain conclusions have been pretty generally admitted. Their mixed origin, for instance, is clearly established. Unfortunately, the Etruscan language is still an almost unknown tongue; but it is not now doubted that while it is radically distinct from the other languages of Italy, it has many words and inflections in common with its nearest neighbour, the Umbrian; at the same time the researches of Lepsius and others have shown that it has an unquestionable Pelasgian element, and those of Stenb appear to prove its connection with that once spoken in the Rhaetian Alps and even now not wholly lost; while Klenze, Schwegler, and others have adduced arguments tending to establish the affinities of the Rasenic element with the Gothic or Scandinavian group of the Indo-Teutonic. On the whole the view which seems most to accord with the present state of our knowledge of Etruria is that the original occupants of the soil were Umbrians; that a tribe of Pelasgians invaded the country and obtained possession of the southern portion of it, and a dominant influence over the whole; that at a later period a tribe from the Rhaetian Mountains descended upon the land and subjugated the dominant Pelasgians; and that these three races gradually intermingled, and from their union sprang the Etruscans properly so called.

Several centuries before the time assigned for the building of Rome we find these Tusci or Etrusci settled in Italy, both north and south of the Apennines, in the plains of the Po, and on the banks of the Arno. They had extended their dominions across the centre of the Peninsula from the Adriatic to the Mediterranean. Cupra maritima, now Grottanara, in the territory of Fermo, on the Adriatic coast, and Cupra montana, which stood near the banks of Lesis, not far from the present village of Masaccio, in the province of Ancona, were Etruscan colonies. Of the great plain of the Po, the Etrusci occupied the central part, from the left bank of the Ticinus and the right bank of the Trebbia, which separated them from the Ligurians on that side to the Athesis, or Adige, which divided them from the Veneti, who remained in possession of the coast of the Adriatic as far as the mouths of the Po. (Livy, v. 33.) South of the Po the Ligurians retained possession of the highlands of the Apennines as far eastward as the sources of the Arno, which river formed at first the boundary between them and the Etruscans, who afterwards extended to the Macra, where they built Luna. The Etruscan towns in the plain of the Po are said to have been twelve, like those of Middle Etruria, south of the Apennines; but Mantua and Felsina (Bologna) were the only two remaining in the time of Pliny. The others had been destroyed by the Gauls long before. The Etruscan origin of Adria has been disputed. For the names of the other Etruscan towns north of the Apennines see Mazzocchi's 'Catalogo alfabetico de' Luoghi compresi nell' Etruria circumpadana.'

Towards the south, Etruria is known to have extended as far as the Tiber previous to the existence of Rome. But the Etruscans at one period went also far beyond that river. There was a tradition of their having conquered the Volsci, who afterwards recovered their independence. (Servius in 'Æneid,' xi. 567.) Their regular settlement in Campania, where they are said to have also built twelve towns, was however of a later date, probably in the 2nd or 3rd century of Rome, when the Etruscan power, south of the Apennines, was at its height, and after they had lost by the Gallic irruption all that they possessed in the plains of the Po. The Etruscan colony founded at Capua would fall, according to Cato's statement, about the year 283 of Rome. The war of the Etruscans against Cumæ, in which they were defeated by the Syracusans in a naval fight, had happened some time before. According to this calculation the Etruscan dominion in Campania did not continue long, as the country was conquered by the Samnites about the year 330 of Rome. The extent of the Etruscan possessions in Campania, and the number of towns which they built or colonised there, is a matter of much doubt. (Niebuhr, vol. i. 'On the Opicans and Ausonians,' and, for a conflicting opinion Micali, vol. i. chap. 7.)

The permanent power of the Etruscans lay in Etruria Proper, or Etruria Media, as it has also been called, which corresponds in great

measure to the present Tuscany, with the addition of that part of the Papal State which lies on the right bank of the Tiber. For a geographical description of the country we refer to TUSCANY. The Etruscans had twelve principal states, each having its representative city, all situated between the Arno and the Tiber, for the country between the Arno and the Macra was annexed at a later period by conquest over the Ligurians. Each state formed an independent community, the twelve being bound together by a sort of loose confederacy: at times indeed very loose, for we find repeatedly one state going to war without the assistance or interference of the rest. Of the twelve cities no complete list is preserved by any ancient writer; eight are mentioned by Livy (xxviii. 45) on the occasion of his enumerating the allies who volunteered to assist in equipping Scipio's armament against Carthage. Modern authors have differed as to the enumeration of these twelve cities; we adopt that of Dennis, which appears to be sanctioned by ancient writers: in the south were Tarquinii, the oldest and chief city of Etruria, Veii, Falerii, Cere, and Volsinii; in the north Vetulonia and Rusellæ on the coast, Clusium and Arretium in the valley of the Clanis, Corymum and Perusia on the heights near the Thrasymene, and in the extreme north Volaterræ; but some other towns have strong claims to be reckoned among the twelve, the members of which probably varied at different periods of Etruscan history, some of the newer towns as Capena, Fesula (Fiesole), and Populonium taking the place of Vetulonia and one or two others which fell into decay. Besides these there were numerous other towns, some of which acquired considerable celebrity either on account of their strength or opulence, or of their historical associations.

The sites of the twelve representative cities appear to be as follows:—Tarquinii, the modern city of the same name [TARQUINII]; Veii, near the village of Isola Farnese (Dennis, vol. i. p. 2); Falerii at Civita Castellana; Cere near Cervetri, between Rome and Civita Vecchia; Volsinii near Bolsena; the most probable site assigned to Vetulonia appears to be between Magliocic and the sea, from which it is about 5 miles distant (Dennis, ii. ch. 48); Rusellæ, on the slope of Moseona about 5 miles N. from Grosseto; Clusium, Chusi; Arretium, Arezzo; Corymum, Cortona; Perusia, Perugia; Volaterræ, Volterra. Of all these towns vestiges more or less perfect and extensive are yet remaining; of some indeed the sites are only marked by heaps of shapeless and half buried ruins, others are scarcely traceable among the buildings of the more recent towns which occupy their place and yet bear their name, but of some the ruins are still such as to command admiration as well as respect: and besides these the massive walls and extensive fortifications, and the numerous extraordinary tombs with their rich and various contents, belonging to the many other towns of Etruria which have been laid bare by Italian antiquaries and treasure seekers, attest the wealth as well as the populousness of the country. For, as Mr. Dennis observes, "Etruria was of old densely populated, not only in those parts which are still inhabited, but also, as is proved by remains of cities and cemeteries, in tracts now desolated by malarial, and relapsed into the desert; and what is now the fen or the jungle, the haunt of the wild-beast, the buffalo, the fox, and the noxious reptile, of old yielded rich harvests of corn, wine, and oil, and contained numerous cities mighty and opulent, into whose laps commerce poured the treasures of the East, and the more precious produce of Hellenic genius. Most of these ancient sites are now without a habitation, furrowed yearly by the plough, or forsaken as unprofitable wildernesses; and such as are still occupied are, with few exceptions, mere phantoms of their pristine greatness—mean villages in the place of populous cities." ('Cities and Countries of Etruria,' i. Int. p. xxix.)

Such of the twelve cities as have the places which now occupy their sites printed in the above enumeration in small capitals, will be found noticed and their more important remains mentioned under the title so indicated; for more full descriptions of them, as well as of all the principal places where Etruscan remains have been discovered we refer the reader to the work of Mr. Dennis above quoted, which will indeed be found by the general reader a sufficient guide in every branch of Etruscan antiquities.

The little we know of the national history of Etruria previous to its wars with Rome, is gathered from fragments and incidental notices in Greek and Roman writers. The Etruscan power appears to have been at its height in the 3rd century of Rome, about the beginning of the 5th century before Christ. Their dominion extended over the country of the Umbrians to the Adriatic on one side, and to the Gulf of Luni on the other; and this also was the period of their naval greatness, when their powerful fleets secured for them an almost undisputed supremacy over the adjoining sea, which derived from them the name of the Tyrrhenian. After Persenna had dictated a humiliating peace to Rome, the Tuscans overran Latium, and conquered Campania. They at first allied themselves with their maritime rival Carthage against the Phœceans, who had settled at Aleria in Corsica, but afterwards the allies quarrelled together for the possession of that island. They fought against the Cumans and Syracusans united about the year 279 of Rome, and were defeated. Half a century later they lost Campania to the Samnites, after which the Romans began to encroach on that part of Etruria which lay between Mount Ciminus and the Tiber. Veii was the first Etruscan city that fell by the Roman arms; Falerii and Fescennia next; then

Sutrium submitted; Cere and Tarquinii became the allies of Rome; and the Ciminus ridge with its haunted forests formed the boundary between Rome and Etruria. The Roman arms halted nearly a century longer before they passed that boundary. The total defeat of the confederated Etruscan forces at the lake Vadimonis, in the year 444 of Rome, opened to the Romans the access into the Etruria Transcimina. Vulsinii and Vulcia fell before the slow but sure progress of their arms; the other cities, such as Arretium, Perusia, Volaterrae, Populonium, disguised their submission under the name of alliance, but Etruscan independence was gone. This appears to have been a period of general corruption of manners, when all national spirit and independence became extinct, but wealth, luxury, and internal peace remained, and sensual pleasures were the chief occupation of the people; and this was also the time when the earlier Roman writers who speak of the Etruscans, such as Plautus, Cato, and Varro, became acquainted with that people. The wars and proscriptions of Sulla gave a final blow to the existence of the Etruscans as a nation; their towns were destroyed, and their lands were given to military colonists. The proscriptions of Octavianus after the battle of Perusia, completed the desolation of Etruria. The language itself gradually became obliterated among the people, and was only known to the priests, with whom it became finally extinct, probably by the spreading of Christianity in the 4th century of our era.

With regard to the political and social institutions of the Etruscans, we ought to bear in mind that all the accounts we have of them were written after their subjugation to Rome, and that a nation which had a political existence of eight or ten centuries must have undergone considerable changes in its manners and institutions. All the accounts are agreed in representing the Etruscans as forming a confederacy of twelve principal cities, each of which was a sovereign state, and ruled over the population of its respective district. Mention is made of a general annual assembly of deputies from the cities; but the ordinary meetings appear to have been rather for religious than political purposes, though they were made available for discussing measures which concerned the general welfare; yet it appears certain that the decisions of the assembly were not binding on the respective cities. In the city itself were two orders, the hereditary families of patricians, or senators, and the commonsalty. Political and religious power were in the hands of the former, who elected from their own body the annual magistrate called 'luemmo,' or 'lanchnie.' We know that the luemmo occasionally contrived, especially in times of war, to protract his term of office, and sometimes to retain it for life; but all attempts to make it hereditary appear to have failed. The patrician and hierarchical order appears to have maintained to the last its sway among the Etruscans, the arts of divination, of which it was in exclusive possession, being a powerful instrument in its hands, among a people so much fashioned to religious observances and rites, for repressing all attempts of the commonsalty. Accordingly, we hear of no struggles of the kind in Etruria, as at Rome; but we hear of revolts of slaves against their masters, as in the case of the Vulsinii, for the Etruscans had numerous slaves. The country people were mostly serfs, probably the descendants of the conquered Umbri and Pelasgi. The sway of the Etruscans over the people whom they conquered appears to have been mild: they did not destroy their towns, but surrounded them with walls, or built new ones; they taught them agriculture and other arts, and they instructed them in religion.

The Etruscans were celebrated among ancient nations for their strong attachment to their national religion, which was bound up with all their institutions and habits. It was partly of native, partly of oriental invention. They believed in two principles, a good and an evil one, each having its respective agents or genii, and their paintings and sculptures are often representative of the perpetual struggle between the two. Their three chief deities, whose temples were in every Etruscan city, were Tinia (Jupiter), Capra (Hera, or Juno), and Menvra (Minerva). Twelve gods, six male and six female, formed the upper hierarchy. Nine great gods (Dii Novensides) had the power of hurling the thunderbolts. The most awful and mysterious of their deities were the shrouded gods (Dii Involuti), whose behests, gods as well as men were forced to obey. Other inferior divinities presided over the various elements and phenomena of this earth, as well as over the occupations and domestic comforts of man. Among the most characteristic features of the Etruscan mythology were the female deity Lusa, or Mean, the goddess of Fate, so frequently represented in Etruscan painting, winged, and with a hammer in her hand; the more awful deities of the lower world, Mantus and Mania (the Etruscan Pluto and Proserpine), with Charon, the messenger of death; and the Genii, the tutelary spirits of every individual, with the Lares, or presiding spirits of families. Their religion was distinguished by the fulness and minuteness of its ceremonial observances, and especially by their attention to divination and augury. From some sculptures found on their monuments it appears that the offering of human sacrifices was at one time in practice among them. The Romans regarded the Etruscan religion, in all its parts, with great veneration, and borrowed largely from it. Cicero speaks very favourably of Etruscan theosophy, saying that they referred everything to God, and that all their religious institutions were studiously calculated for the prosperity and security of the state.

The Etruscans were fond of good living and of sumptuous

banquets, and they are called gluttons, fat, and corpulent by the Roman satirists. Virgil (xi. 735) accuses them of being given to all kinds of sensual pleasures. Their women seem to have had no great reputation for chastity (Plautus, 'Cistell.' 2, 3, 20; and Horace, iii. 'Odo' x. 11; and see Dennis, v. i., Int. p. xlii. note 9); yet we find the female sex in higher honour among them than among most nations of antiquity. The women reclined at table on the same triclinia with the men, as appears by their monuments. Their funerals were pompous, and accompanied by athletic games, but the combats of gladiators appear to have been of late introduction.

Although there may in recent times have been often entertained a somewhat exaggerated notion of Etruscan civilisation, there can be no doubt that Etruria was by far the most cultivated and refined nation of ancient Italy. Rome, as well as a great part of Italy, is acknowledged to have derived its earlier civilisation from Etruria. No Etruscan writings have come down to us, yet there is ample evidence that Etruria possessed a national literature; not only are her sacred books, histories, and poems spoken of by ancient writers, but the names of many of her authors are mentioned; indeed, it was customary for the Romans to send their sons to Etruria to be instructed in her higher learning. In the arts the Etruscans had made great progress. As Müller however very justly observes, Etruscan art in general was imitative rather than creative, and at every period it bore the marks of a foreign influence. And, accordingly, Dennis, whilst asserting that a distinct national character is generally preserved, admits that Etruscan art is most properly divided into three styles, distinguished by the predominant foreign influence:—1st, the Egyptian, which has also Babylonian analogies; 2nd, the Etruscan, or Tyrrhenian, as it is sometimes called, perhaps in compliment to its more than doubtful Greek character; 3rd, the Hellenic, when, in the meridian of Greek art, the Etruscan was an almost servile copyist of the Greek artist; 4th, the period of decadence.

The existing monuments of Etruscan architecture are merely such rude and massive structures as the walls of cities, sewers, vaults and bridges, and subterranean tombs, which, though they afford evidence of the power, wealth, and constructive skill of the people, are quite insufficient as examples of their architectural ability. Of their temples, the works on which their highest art would be exercised, not a vestige is extant beyond some doubtful foundations. We know however from ancient authorities that their architects were of eminent merit, and that their public and private edifices were richly adorned. But they seem to have turned their attention particularly to works of a practically useful kind, and they were renowned for their success in the art of fortifying walls, the laying out of streets and roads, and the construction of sewers. The Cloaca Maxima at Rome was an Etruscan work; and it shows that they were early acquainted with the use of the arch, though it is not correct to assert, as is often done, that the arch was an Etruscan invention. The walls, which still exist on the site of the ancient cities, are formed in the southern parts of Etruria of large irregular blocks, not fastened by cement, but rudely squared and held in horizontal courses; in the northern parts they are more massive and rude, having a general resemblance to the Cyclopean walls of Central Italy. The best preserved and most interesting of the monuments of Etruria are the cemeteries; which, though presenting many varieties, are all subterranean. Where the site admits they are hollowed out of the solid rock, which, in the better class, has received some architectural decoration. Where the rock is friable the tomb is constructed with masonry, on which loose stones and earth are heaped so as to form a tumulus. In general the interior is made to resemble an abode of the living. The walls are often painted with mythic or festive scenes. The ceiling is sometimes adorned with coffers, and the walls with panelling; benches and stools surround the chambers; weapons and other furniture are suspended from the walls; and easy arm-chairs, with foot-stools attached, all hewn from the living rock, are found in the subterranean houses of these Etruscan 'cities of the dead.' (Dennis.)

Of Etruscan painting we can now best judge by the examples on the walls of the painted tombs of Tarquinii and Clusium. They are of very different dates and style, but generally display rude and conventional design, inaccurate and archaic outlines, and unnatural, or rather fantastic coloring. The earlier examples are decidedly Egyptian in manner; the later are of Aeginetan type. Copies of some of these paintings may be seen on the walls of the Etruscan room in the British Museum. The paintings on the vases are often of a much superior order, but it is probable that they are the work of Grecian artists.

The sculpture and carving of the Etruscans in marble and wood was not greatly celebrated by ancient writers, and the specimens of it discovered in the tombs, though very numerous, are not of a superior order. But the bronze statues of Etruria were very famous; they filled the temples of Rome, and were sought after all over Italy. The Etruscans themselves seem to have greatly delighted in exhibiting them. The city of Vulsinii alone is said to have contained two thousand bronze statues. Some of them were of great size; that of Apollo, on the Palatine, is said by Pliny to have been 50 feet in height, and as wonderful for its beauty as for its weight of metal. Several of the existing specimens of bronze statuary are of superior design and execution. Smaller works in bronze, bronzes, penates, and figures

of various kinds must have been produced in marvellous quantities, innumerable specimens even now being diffused through the museums of Europe. The useful and ornamental works in the same material, and in gold, were also famous; their bronze candelabra and mirrors, and gold craters and cups, being eagerly sought for by Greeks as well as Romans; and, as with their larger works, their skill in these is attested by many existing specimens of exceeding beauty.

The works by which Etruscan art is commonly supposed to be characterised are the painted vases usually termed Etruscan, which form so striking a feature in our museums. They are found in vast numbers in the tombs of Etruria, but they are also found in Campania, the south of Italy, Sicily, and even in Greece; whence, as the subjects painted on them are Grecian in design, and always belong to the Grecian mythology, and the names of Greek artists, as well as Greek words, are frequently found on them, it is evident that they are the work of foreign and probably of Greek artizans. The only point on which authorities now differ is, whether the vases were imported into Etruria or were made by Greek workmen who were settled there. Of the great skill of the Etruscans in the manufacture of pottery there is no question, but the only kinds now assigned to them with any certainty are the red ware of Arretium and the black ware of Clusium. In the production of statues, bassi-relievi and ornaments in terra-cotta, the Etruscans greatly excelled. Not only were their own temples adorned with terra-cotta work, but even some in Rome received similar decorations. They were also skilled in working iron and steel; copper and silver; in the manufacture of all kinds of weapons, domestic utensils, &c., and indeed in all the ordinary handicrafts. They were likewise noted for their superiority as agriculturists; and they understood what has been termed agricultural engineering, being celebrated for the practice of filling up marshes by diverting into them the course of muddy streams, an art still practised with success in Tuscany under the name of 'colmato.' The invention of the termini, or stones fixing the limits of property, is attributed to them. From the Etruscans the Romans derived their method of dividing the months by Ides, Nones, &c., their system of numerals, and also their divisions of weights and measures.

ETSCH. [ADIGE.]

ETSHMIADZIN (Echmiadzin) is an Armenian convent in Russian Georgia, situated about three hours distance (15 miles) west from Erivan, in the plain which separates the mountain masses of Ali-Gheez and Ararat, and in that part of it that lies between the Zenghi and the Kharsakh, feeders of the Araxes. The convent is of great extent, and surrounded by a wall more than thirty feet high. The circuit of the wall is stated to exceed two versts, or nearly one mile and a half. This convent has for many centuries been the seat of the Armenian patriarch called Catholicos. Within the inclosure are several distinct churches, each surrounded by a high wall flanked with round towers. All these churches are rudely built, cruciform, and surmounted each by a sort of cupola that rises from the centre of the roof and is crowned by a low spire. The masonry of all the buildings and walls is very solid, the material a deep red-sandstone. Fronting the principal gate of the cathedral are the apartments of the Catholicos and the other bishops (for each church has its bishop). The cells of the monks are along one side of the cathedral-square, and the refectory—a long vaulted chamber with tables and benches made of massive blocks of stone—on the other. Outside the cathedral, near the door, is a white marble monument to Sir John Macdonald, the English minister, who died some years ago at Tabriz. Among the other structures may be mentioned the Synodal Hall, a long room hung round with portraits of the old Armenian kings. The Catholicos presides over the synod, but the emperor appoints a moderator, without whose concurrence nothing can be decreed—a condition which renders the Czar virtually head of the Armenian church. The convent contains a library, in which are 635 manuscripts; of these 462 are in the Armenian language, and the remainder in foreign languages. A catalogue of the library was published at St. Petersburg in 1840.

(Onsley; Ker Porter; Wilbraham, *Travels in the Trans-Caucasian Provinces of Russia*.)

EU, a town in France in the department of Seine-Inférieure, the seat of a tribunal of commerce and of a college, is situated on the left bank and near the mouth of the little river Bresle, midway between Abbeville and Dieppe, 91 miles N.N.W. from Paris, and has about 4000 inhabitants, including the whole commune. In the middle ages Eu became a strong and flourishing place; but on the threat of a descent by the English it was burnt in 1475 by order of Louis XI., and has never recovered. Only the churches and a few houses that were overlooked escaped the general destruction. The massive ruins of the walls and towers yet remain.

Eu has several churches: the finest, that of Notre-Dame, is a large and beautiful gothic structure, lighted through magnificent painted windows. The crypt contains the monuments of the counts of Eu, of the house of Artois. The college church contains the monuments of

the Duke of Guise, murdered at Blois in 1588, and his wife, Catherine of Cleves. Both of these churches are classed among the historical monuments of France. There is an hospital attended by Sisters of Charity. The market-place is good. La Chaussée d'Eu is a suburb of Eu on the opposite bank of the Bresle. Tréport, at the mouth of the river, is the port of Eu. [SEINE-INFÉRIEURE.] The manufactures of Eu are linseed-oil, soap, locks and other ironmongery, leather, cotton and woollen yarn, glass, sail-cloth, linen, and lace. Eu trades also in corn, hemp, flax, wool, and timber. The products both industrial and agricultural of the neighbourhood of Eu find an outlet at Tréport, whence they are conveyed in small coasters chiefly to the several towns along the Somme and the Lower Seine. The species of timber exported are oak and beech, which are used for ship-building, for making staves, &c.

The territory of Eu was given, with the title of count, by Richard I., duke of Normandy, in 996 to his natural son Geoffroy, whose family held it till 1227. The county next came to the house of De Brienne, in which it remained till 1350, when on the death of Raoul de Brienne it was given to the house of Artois. The house of Cleves afterwards inherited it, and in their favour the county was erected into a duchy in 1539. In 1570 Catherine of Cleves brought the duchy of Eu into the house of Guise by her marriage with Henri of Guise (Le Balafré), who was murdered at the parliament of Blois. On the death of his mother in 1638 Charles of Lorraine took possession of the duchy, and his son Henri sold it for 2,500,000 francs to Mademoiselle de Montpensier, who made a present of it to the Duke of Maine, the natural son of Louis XIV., in order to obtain the liberty of Lauzun. On the death of the heirs of the Duke of Maine their inheritance fell to the Duke of Penthièvre, whose daughter and heiress brought the county of Eu into the family of Orléans by her marriage with the late King Louis Philippe's father.

The château of Eu, which stands in a splendid park traversed by avenues of noble beech-trees, and commands fine views of the valley of the Bresle and the sea, occupies the site of a fortress built here by Rollo. In the beginning of the 11th century Guillaume d'Exmes added to the fortress a castellated residence for his family, and close to it erected the abbey and collegiate church of Eu. In 1049 the castle was taken and plundered by William the Conqueror, who gave it to Robert Guiscard, who enlarged and improved it; and here soon after the marriage of William with Maude of Flanders was celebrated. This castle was entirely destroyed when the order of Louis XI., above alluded to, was executed in 1475. The present château was commenced by the Duke of Guise (Le Balafré) in 1581. Mademoiselle de Montpensier, whose shade seems still to hover about the spot, inclosed the park with walls, planted the trees which now form such noble alleys, and built a small château which was destroyed under Napoleon I. The Duke of Penthièvre repaired and furnished the château. By a decree of the revolutionary government, dated Oct. 4, 1793, the château, then in possession of Louis Philippe's mother, was sequestered, the furniture sold by auction, and the building converted into a military hospital. The events of 1814 restored the property to the Duchess-dowager of Orléans, and her son Louis Philippe commenced the restoration of the château in 1821, and frequently resided in it in summer after his accession to the throne: here he was visited by the Queen of England in 1843. The apartments contain the most complete collection of historical portraits in Europe. When the impotent endeavours of wrangling democrats to govern France were put an end to by Louis Napoleon assuming despotic power, Dec. 2, 1852, one of the first acts of the new government was to compel the sale of the Orléans property; but we are unable to say who is now the possessor of the château of Eu.

EUBCEA (*Εὐβοία*), until lately called Negropont, is an island of the Mediterranean, lying along the coasts of Attica and Boeotia, from which it is separated by the Euripus, a very narrow channel, over which a bridge has been thrown, connecting the island with the mainland. Eubœa is 90 miles in length in a north-west direction, and 30 miles in extreme breadth; but in one part, between Aliveri Bay and Port Petries, it is scarcely 4 miles across from shore to shore. The population in 1851 was 65,066.

The island generally is elevated, and contains among its mountains some of the highest in this part of Europe. Mount Delphi rises on the eastern shore to the height of 7266 feet above the sea, and its summit is scarcely over free from snow; Elias of Karystos, at the southern extremity, is 4748 feet high; Mount Khandhili, 4200 feet, and Telethrius, 3100 feet, are both on the western shore north of Egripos. The general formation of these mountains is gray-limestone, with much clay-slate. The small peninsula to the north-west, which terminates in Cape Lithada, is mountainous, and contains one elevation, Mount Lithada, which rises to the height of 2837 feet above the sea. A little south of the point where this peninsula joins the mass of the island, and on the west coast opposite to Boeotia, is Mount Telethrius, with some hot springs near its base. From Telethrius the mountains spread out north-east to Cape Amoni, the most north-eastern point of the island, and eastward to the coast, filling the northern part of the island, and containing several elevations above 2000 feet. Along the northern coast of the island, opposite to Thesaly, and stretching at the base of this mountain group, is the fertile and extensive plain of Histiaea. South of Telethrius there is high

land, with some interruptions, along the west coast as far as Cape Politika: within these limits is Mount Khandhili, near the coast, and another mountain 2694 feet high. Between Cape Politika and Chalcis, and extending several miles inland, is the fertile plain of Chalcis, bounded on the north and north-east by the high mountains which extend to the eastern coast. The centre of this mountain mass is Delphi, already mentioned, and it contains several other elevations which are between 4000 and 5000 feet. South of the narrow channel on which Chalcis is situated there is a tract of lowland along the Bay of Vathia, backed by the range of Mount Vathia (3821 feet), which appears to be separated by a depression from the group of Delphi, and forms part of the south-east boundary of the plain of Chalcis. Farther south, and near the west coast, there is also the plain of Aliveri. The rest of the island south of Aliveri, along the west coast, and the whole of the eastern coast from the plain of Mandhudi, appears to be mountainous. The southern extremity of the island is filled by the mass of Mount Elias (4748 feet), which presents to the Archipelago an iron-bound and dangerous coast.

To the southward the plains are generally cultivated with corn and olives, but those to the northward, called the Plains of Histiaea, are more particularly devoted to the vine, from which a light red wine is made, which is the common beverage of the Greeks, and forms a staple article of trade. The wine is kept in pig-skins, well coated with resin, which communicates its unpleasant flavour to the contents. A deleterious ardent spirit is distilled from the husks of the grapes. Cotton is also planted more to the northward.

The passage between Thessaly and Eubœa, called the Trikiri Channel, from the town of that name at the eastern entrance to the Gulf of Volo, is about four miles in average width; the narrowest part, which is towards the western extreme, is not quite one mile and a half: the depth of water is regular, steep from both shores, and decreasing gradually from about fifty fathoms at the entrance to thirty fathoms towards the western end of Negropont, off which lie some small rocky islands called Lithada Islands. Passing these islands, and turning to the southward, is the Gulf of Talanda - so called from the town of that name on the Boeotian shore. A remarkable feature in this part of the channel is the amazing depth of water under Mount Telethrin, where for about twelve or fifteen miles there is no bottom with 220 fathoms within half a mile of the shore; but from this point the water shoals gradually towards Chalcis. Towards the north-west extremity of this shore there is a very safe and excellent harbour, called Port Ghialtra, or Port Kalos. There are two villages on its shores, Ghialtra to the westward and Elypsos to the eastward: near the latter are some ancient remains and beautifully-sculptured fragments of white marble.

In the southern part of the channel there are many islands along the Eubœan shore, which offer good anchorage, more especially among the Petalion Islands, which abound in rabbits, but possess only one spring of fresh water. The bed of this part of the channel is level, but compared with the northern part it is shallow; the general depth is from 35 to 40 fathoms.

The eastern side of Eubœa is a continuation of rocky coast, the high land descending precipitously to the shore with few interruptions of level ground, and this only, as already mentioned, towards the northern part of the island. In the bight between capes Doro and Oetonia, it is an unbroken line of precipitous shore, in which it is scarcely possible to find a ravine sufficiently wide to haul a boat up. Fragments of wreck are found at the height of 80 feet perpendicular, washed up by the heavy sea which a north-east wind throws into this bay. These winds, which always blow very strong, are called by the Greeks 'meltem,' probably a corruption of 'mal tiempo.' In addition to this, the Dardanelles current, preserving the course communicated to it by the direction of that strait, sets strong to the south-west into this bay, and renders it a most dangerous coast; no vessel once embayed here can escape destruction. The current being deflected to the southward sweeps round Capo Doro, frequently at the rate of 3 miles an hour. Port Petries is the only refuge which this coast offers, and so little has hitherto been known of this shore that even this shelter has only recently been discovered. The village of Kumi, in the bay of that name, is populous, and being celebrated for its wine, has considerable trade in that article by the small caïques, which however are always obliged to be hauled up on the beach for safety.

Immediately opposite Chalcis the land rises suddenly to hills of considerable height, beyond which lie the plains of Thebes, which town is distant about four hours, or 12 miles. The breadth of the Euripus is here diminished by a rock in mid-channel, on which a fort is built, dividing it into two channels: that towards the main, though rather the broader, is only practicable for small boats, as there is not more than 3 feet of water at any time. Between the rock and the walls of Chalcis is a distance of 33 feet, and the least depth at the highest water is 7 feet. It is here that the extraordinary tides take place for which the Euripus was formerly so noted: at times the water runs as much as 8 miles an hour, with a full under the bridge of about one foot and a half; but what is most singular, is the fact that vessels lying 150 yards from the bridge are not in the least affected by this rapid. It remains but a short time in a quiescent state, changing its direction in a few minutes, and almost immediately resuming its velocity, which is generally from 4 to 5 miles an hour

either way, its greatest rapidity being however always to the southward. The results of three months' observation, in which the above phenomena were noted, afforded no sufficient data for reducing them to any regularity.

In and about Chalcis fragments of antiquity may be seen forming parts of the walls of houses, in common with the grosser materials, like diamonds set in lead. They are generally of white marble, beautifully chiselled; but in no place can any building be traced, or vestiges of walls. The pieces of columns are generally of the Corinthian order, fluted. On Chalcis Island there is the appearance of a rude wall traversing the island; and on the mainland, at the southern shore of the channel, between the two ports, where the land rises to about 400 feet, are the remains of Cyclopean walls of very high antiquity. The blocks of stone, which are very massive, rude and irregular, but fitting closely, are of limestone, and in construction the walls resemble those of Mycenæ. This is most probably the ancient *Aulis*; though there may have been houses at a less elevation and nearer the shore more convenient for commerce, the ascent to these ruins being steep and difficult.

The site of Eretria, next to Chalcis the most powerful city in ancient Eubœa, is near the west coast, a little south of Chalcis. Of the walls which surrounded it, the towers, a theatre, and some other buildings, there are still considerable remains. Near its site is the village of Noa Eretria, which occupies the site of the New Eretris, built after the destruction of the olden city B.C. 490.

Coin of Eretria.

British Museum. Actual Size. Silver. Weight, 86½ grains.

The mountains of Eubœa are said to contain copper, and the marble quarries near Karystos have long been famous. (Strabo, p. 446.) The soil, favoured by the diversities of climate which such a variety of elevation affords, is capable of yielding the productions of tropical as well as of more northern regions, and of supporting an infinitely larger population than now occupies the land. Corn is raised in considerable quantities for the supply of the adjacent mainland as well as the island itself. The chief product however is wine. Cotton, wool, &c., are also exported. The island abounds in sheep of an excellent breed; but bullocks are scarce, and bred principally for agricultural purposes. Of late years agriculture has been considerably improved, chiefly owing to the exertions of a few English and other foreign settlers. In the mountains are abundance of wild boars and deer, and the plains are overrun with hares and rabbits. Among the trees are the olive, oak, fir, chestnut, walnut, mulberry, and oriental plane. In the whole island there is not a stream deserving the name of a river into which the smallest boat could enter, and the inhabitants generally supply themselves with water from wells.

The only towns are CHALCIS, Karystos at the south-end of the island, Kumi at its eastern extremity, and Xerochori, the ancient Histiaea, at the northern end; all except Chalcis small and unimportant places.

The villages are few, and, for the most part, wretchedly poor as well as small places. They generally stand at some distance from the beach, and on an elevation so as to be difficult of access.

Among other remains of the former greatness of the island may be mentioned an aqueduct, apparently of Venetian construction, which commencing at the foot of Mount Delphi winds its way to within half a mile of Chalcis, and forms a very picturesque object. Though it no longer conveys water, it is by no means in a ruinous condition.

On the summit of Mount Elias (the Oche of Strabo) are the remains of an ancient temple, consisting of rude unornamented blocks of limestone, and columns of the same material; and antiquarian remains still exist in various other places.

The first inhabitants of this island were probably a Pelasgic race, which is said to have occupied, before the historical times, most of the islands of the Ægean Sea. The Dryopes from Mount Oeta were said to have founded Carystus and Styra (Herodotus, viii. 46; Thucyd. vii. 57); and the Athenians founded Chalcis and Eretria, before the siege of Troy. Homer ('Iliad,' ii. 536) calls the inhabitants of Eubœa by the name Abantes, and mentions them as having taken a distinguished part in the expedition against Troy. The Hestieots were said to be a colony of the Perrhebi, a Pelasgic tribe: but the Athenians appear to have been from a very remote epoch the principal colonisers of Eubœa. At the dawn of the historical times we find Chalcis and Eretria, two independent but allied towns, which had advanced to a high state of prosperity, holding dominion over the islands of Andros, Tenos, and Ceos, and sending colonies to the coasts of Macedonia and Thrace, as well as to the shores of Italy and Sicily. Naxos, the first Greek settlement in Sicily, and Cuma, one of the oldest in Italy, were colonies of Chalcis. Eretria and Chalcis however quarrelled, and Thucydides (i. 15) mentions the war between

the two states as one of the oldest wars on record among the Greeks. The towns continued still to flourish under the government of their Hippobotæ, or wealthier citizens, until they joined with Cleomenes in his invasion of Attica, which followed the expulsion of the Pisistratidæ, in consequence of which, after the Athenians had repulsed Cleomenes, they invaded Eubœa, about 506 B.C., defeated the Boeotians, who had come to the assistance of Chalcis; and having taken the latter city, they punished it severely, put many of the citizens in fetters, until they ransomed themselves, confiscated all the property of the Hippobotæ, and gave their lands to Athenian colonists, whom they sent over to the island to the number of 4000. (Herodotus, v. 77.) Eubœa now became in great measure a dependency of Athens; although the Athenian supremacy was at times disputed by the Thebans. The Eubœans, with the Athenians, sent assistance to the Ionians of Asia in their war against Darius Hystaspes; and their troops were among those which burnt Sardes (B.C. 499). The first invasion of Greece was the consequence of that expedition. The Satraps, Datis and Artaphernes, landed in Eubœa with an immense force, completely destroyed Eretria, and sent its inhabitants as slaves into Asia. A general revolt of Eubœa against Athens broke out in B.C. 445, but Pericles with 5000 regular troops marched into the island, and recovered possession of it; reducing the towns of Eubœa to the condition of tributaries to Athens. This island was of great importance to the Athenians; it furnished them with corn, supplied them with horses, and was considered of more value to them than all their other colonies put together. During the Peloponnesian war, after the defeat of the Athenians in Sicily, another general revolt of Eubœa took place, and the island placed itself under the protection of Lacedæmon, but afterwards returned to the Athenian allegiance, when Athens had recovered its independence; and from that time its four principal towns, Chalcis, Eretria (which had been rebuilt near the site of the old town destroyed by the Persians), Carystus, and Orcus, possessed a kind of municipal independence under the supremacy of Athens. The Eubœans however joined the Theban league against the Spartans, and fought under Epaminondas. In the general prostration into which the principal states of Greece fell after the death of Epaminondas, Eubœa seems to have been left in great measure to itself. Its principal towns came under the rule of chiefs, or tyrants, as they were called, without any interference on the part of the Athenians. About B.C. 350 Callias and Taurosthenes, sons of the late tyrant Mnesarchus, who were ruling in Chalcis, made overtures to Philip of Macedon, in order to have his assistance in subduing the rest of the island, an opportunity which was eagerly seized by Philip. Plutarch, who was at the same time tyrant of Eretria, applied to the Athenians to check Philip's interference. The Athenians sent an expedition under Phocian, who defeated the Chalcidians after hard fighting; but this led to no favourable result, as Callias remained in possession of Chalcis, and the Macedonian influence was established over the island. When the Romans began to extend their influence to Greece, Chalcis and the other towns of Eubœa contracted alliance with Rome, and they remained steadfast to that alliance during the Ætolian war. (Livy, xxxv, 37, 39.) Chalcis afterwards submitted to Antiochus. (Livy, xxxv, 50, 51.) In the Achaean war, after the defeat at Corinth, Chalcis was taken and destroyed by the Romans, and the island was included in the province of Achaia. It then gradually declined in population and importance; and Pausanias and Dion speak of its fallen state under the emperors.

In the middle ages Eubœa was called Egripo, a corruption of Euripus. On the dismemberment of the eastern empire by the Latins the Venetians obtained possession of Eubœa, which they called Negropont, probably a corruption of Egripo, and 'ponte,' meaning the bridge which united it to the mainland. The Venetians lost the island in 1470, when the Turks took the capital, Negropont, and massacred all the inhabitants. The Venetian doge and general Morosini blockaded it in 1688, but after a murderous siege he was obliged to re-embark with great loss. The people of Eubœa took part in the general rising of the Greeks against the Turks, and the island now forms part of the kingdom of Greece; here as in the other parts of the kingdom the classical names have been restored.

Coin of Eubœa.

British Museum. Actual size. Silver. Weight, 61½ grains.

EULÆUS, RIVER. [BAGHDAD.]

EUPEN, a town in Rhenish Prussia, in the government of Aachen, is situated in a fertile valley at the foot of the Eifel, 12 miles S. from Aix-la-Chapelle, near the Belgian frontier, and has about 11,000 inhabitants. The town is well-built, and extends over a considerable surface, as it includes several gardens and meadows. It contains four churches, a custom-house, an orphan asylum, and several large woollen factories which turn out large quantities of broadcloth and kersey-

meres. A district court for the circle of Eupen and a court of petty sessions are held in the town. In the region of the Eifel between Eupen and Malmedy is a Roman bridge. When the French extended their frontier to the Rhine, Eupen was one of the towns in the department of Ourthe, and was then named *Néau*. The circle of Eupen is, though wooded and mountainous, full of fine pastures. It contains 68 square miles, and produces timber, grain, vegetables, flax, &c.; large quantities of cheese are made. Iron, calamine, and potters' clay are among its mineral products.

EUPHRATES. [TIGRIS.]

EURE, RIVER. [EURE, Department of.]

EURE, a department in the north of France, comprehending a portion of the old province of Normandie, is bounded N. by the department of Seine-Inférieure, E. by the departments of Oise and Seine-et-Oise, from both of which it is in part separated by the river Epte, a feeder of the Seine, S. by the departments of Eure-et-Loir and Orne, and W. by Calvados. The department lies between 48° 39' and 49° 29' N. lat., 0° 20' and 1° 47' E. long. Its greatest length from east to west is 65 miles, from north to south 60 miles. The area of the department according to the cadastral returns of 1851 (which differ considerably from those that accompanied the census of 1846) is 2689.48 square miles. The population in 1851 was 415,777, or 150.88 to the square mile, being 23.83 below the average per square mile for the whole of France. The population was less by 10,000, and the area given 440 square miles more in 1851 than in 1841.

Surface, &c.—The department presents a varied succession of well-cultivated fields, farms inclosed with hedge-rows, large forests, hills of moderate elevation, rivers, bustling manufacturing towns, ancient castles, a few marshes in the south-west, and a small extent of coast along the embouchure of the Seine. The surface on the whole is level; the highest elevations, Mont-Rôti near Pont-Audemer and the rocky promontory of Quillebeuf, are not more than 300 feet above the sea-level. The department belongs almost entirely to the basin of the Seine, which river crosses it from south-east to north-north-west, and divides it into two unequal portions. The Seine also touches the east of the department at two or three points between Elbeuf and its embouchure. On the right bank of the Seine, and between the Andelle and the Epte, lies the richly-cultivated territory of the Norman *Vexin*, and the forest of Lions, which extends also into the department of Seine-Inférieure. In the centre of this forest Henry I. of England built the castle of St. Denis in which he died. On the left bank of the Seine there is a series of five plains, which in most instances consist of a dry soil, and have no watercourses except the rivers that bound them. 1. Between the Seine and the Eure is a narrow well-wooded plain, which also extends into the department of Seine-et-Oise. 2. The district between the Eure and the Iton consists of the plain of St. André and the Terres-Françaises, a portion of the ancient territory of Perche, of which Vernueil was the capital. 3. The Iton, the Eure, and the Rille inclose a third plateau, the north part of which comprises the old territory of *Roumois*, and is separated from the plain of Neubourg (on the south) by a series of depressions or valleys that run east and west between Montfort and Elbeuf. 4. Between the Rille and its feeder the Charentonne lies a fourth plain, which forms part of the district formerly called *Ouche*. The Charentonne, the Rille, and the Toneque inclose the fertile plain of *Lieuvin*, the eastern part of which is in this department, and the western part in that of Calvados.

Hydrography.—The department takes its name from the *Eure*, the ancient *Antara*, which, rising in the department of Orne, runs from north-west to south-east into the centre of the department of Eure-et-Loir, whence turning north-east it passes Chartres and Mantes-la-Jolie. From this last town it runs nearly due north till it reaches the boundary of the department of Eure, along which it runs for a few miles in a north-east direction, and again turning north it passes Pacy and Louviers, and enters the Seine on the left bank near Pont-de-l'Arche, after a course of 93 miles. This river was formerly navigated from Chartres to the Seine, but only that portion of it which is within this department is now navigable. The objects of transport along the Eure are salt, timber, and fuel-wood. Its principal feeders are—the *Vesgre*, which joins it on the right bank near Ivry; the *Blaise*, which joins it on the left bank below Dreux; the *Avre* or *Aure*, which flows from the department of Orne along the confines of Eure and Eure-et-Loir, and enters the Eure at the point where that river becomes navigable; and the *Iton*, which rising in the east of the department of Orne, near the monastery of La-Trappe, flows north-east into the department of Eure, passing Broteuil and Damville; below this last-named town it has an underground course for 9 miles, but reappears through numerous springs near Conches, and passing Evroux, enters the Eure at Planches, after a course of 72 miles. The other rivers are—the *Rille*, which rising in Orne, flows in a northern direction through this department, passes Beaumont, Brienne, and Pont-Audemer, from which to its entrance into the Seine it is navigable for large barges: the *Epte*, which rises in Seine-Inférieure, flows in a southerly direction along the eastern boundary of the department, and joins the Seine on the right bank a little above Vernon; and the *Andelle*, which rises near the source of the Epte, and flowing south-west enters the Seine on the right bank nearly opposite Pont-de-l'Arche. On the two last-mentioned streams are

several important iron-works; the other rivers drive the machinery of a great number of corn-mills, paper-mills, and factories. The Seine is navigated by small steamers and large river barges between Rouen and Paris, and by large sea-going vessels below Rouen. [SEINE.]

Soil and Produce.—The department is almost entirely occupied by the chalk that encircles the Paris basin, and is covered with a vegetable and clayey soil which is very thin on the crests of the hills. Along the Seine there are some tracts covered with barren sand quite incapable of cultivation. A good deal of marsh-land near the mouth of the Seine has been reclaimed by embankments and brought into cultivation.

The extensive cultivation of corn in the plains gives them a rich but monotonous appearance. The roads, as in all parts of Normandy, are lined with rows of apple and pear-trees. Besides corn of all kinds, more than enough for the consumption, hemp, flax, apples and pears for cider, plums, cherries, teasles, weld, leguminous plants, and garden stuffs are abundantly grown. Horses of the Norman breed are reared in considerable numbers; sheep are numerous, and esteemed for their flesh, especially when fed on pastures near the sea. The best fat cattle brought to the Paris markets are from the rich pastures of Roumois and Lieuvin. Hogs of large breed are reared in great numbers. Poultry is abundant and of excellent quality. The rivers abound with tench and other fish, and great quantities of salmon and shad ascend them from the sea.

The vineyards of the department, which are for the most part confined to the valleys of the Eure, the Iton, and the Seine, yield only 1,320,000 gallons of wine. The annual produce of cider is estimated at 29,700,000 gallons. The most common trees in the forests are oak, elm, beech, maple, and birch. The long rows of lofty poplars in the neighbourhood of the Seine are a characteristic feature in the scenery. Farms range from 30 to 300 acres. The farm-houses and farm-buildings are mostly built of wood and covered in with tiles or thatch. The dwellings of the poorer classes are built of wood and clay, and thatched.

Minerals and Manufactures.—The department is rich in iron-ore; building-stone, millstones, and paving-granite are quarried; fullers'-earth and potters'-clay are found. There are mineral springs at various places in the department. The manufactures consist of fine and coarse woollen cloths, linen, thread, calico, paper, printed cottons, cotton-yarn, cutlery, tape, cotton hosiery, blankets, carpets, wind-instruments, horn and boxwood combs, glue, nails, pins, hardware, &c. There are 25 furnaces and foundries for the manufacture of iron, glass-works, numerous flour and paper-mills, dye-houses, felling-mills, marble-sawing works, sugar refineries, bleaching grounds, important copper foundries, zinc works, and a great number of tan-yards. The exports are composed of the various agricultural and industrial products named or indicated; the imports chiefly of the raw material required in the numerous manufactures, and of colonial produce. There are 698 wind and water-mills, and 727 factories of different kinds in the department.

Climate.—The climate is in general mild, moist, and changeable, but healthy, bearing a considerable resemblance to that of England. The west and north-west winds bring rain and fog; these winds, with the north and the south-west, are the most common. Between 95 and 100 days in the year are rainy. The country is better wooded than France generally is. In descending towards Pacy on the Eure, on the road from Paris to Caen, the magnificence of the prospect is very striking. The valley of the Eure, broad and perfectly level, abounds with fine trees, which are planted in the inclosures of the rich meadow-land.

Communications.—The department is crossed by 12 national, 26 departmental, and 47 parish roads. It has great facilities for communication by the Seine, and by the Paris and Rouen railroad, which has 34 miles of its length in this department, all, as far as Pont-de-l'Arche, on the left bank of the Seine. From this line two branch railroads are making, one from near the Vernon station through Évreux and Conches, the other from near Pont-de-l'Arche to Bernay, where it meets the former, and is to be continued through Lisieux to Caen.

Divisions, Towns, &c.—The department contains 1,721,218 acres. Of this surface about a million of acres are arable land, 57,354 pasture-land, 85,826 are orchards, nurseries, and gardens, 309,896 are covered with woods and forests, and 46,471 with heaths and marshes. It is divided into five arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Évreux	11	224	120,374
2. Louviers	5	111	68,859
3. Les-Andelys	6	117	64,717
4. Bernay	6	124	77,202
5. Pont-Audemer	8	127	84,625
Total	36	703	415,777

1. The first arrondissement has *Évreux* for its chief town, which is noticed in a separate article. Of the other towns we mention the following, giving with each throughout the population of the commune:—

Bréteuil, a town of 2153 inhabitants, stands on the Iton, 20 miles S.S.W. from Évreux, near the Forest of Bréteuil, and in a country abounding in iron-ore. A church, which dates from the 11th century, and the remains of a castle built by the Conqueror, and dismantled in 1378 by Du Guesclin, are the most remarkable objects in the town. The manufactures consist of hardware, nails, pins, copper-wire, mill-castings, &c.; there are also iron foundries and smelting furnaces. There is a cold ferruginous spring at Bréteuil. *Conches* stands in a fine wheat and pasture country on the slope of a little hill above the Iton, 12 miles S.W. from Évreux, and has 2094 inhabitants, who are engaged in the manufacture of iron, hardware, shoe and glove leather, &c. It was formerly defended by a strong castle, of which the massive walls, deep moat, and four of the towers still exist. The church of Conches dates from the 16th century; it is lighted through painted windows. *St.-André-la-Marche* is a small place south of Évreux, with 1234 inhabitants. It stands in an extensive plain, which suffers frequently from drought. The barony of St.-André belonged to the family of Bayard, whose coat-of-arms and famous device may be seen on the walls of the church. A little east of St.-André, near the Eure, is *Ivry*, with 1010 inhabitants, near which Henri IV. defeated the Duke of Mayenne, March 14, 1590. A pyramid erected by the Duke of Penthievre to commemorate this victory was demolished by the republicans in 1793, and restored by Napoleon in 1809. Ivry belonged to Raoul, half-brother of Richard I., duke of Normandy, in whose time a strong fortress was built on the hill, at the base of which the town soon sprung up. William the Bastard gave the domain of Ivry to Roger de Beaumont, who in 1071 founded a Benedictine monastery below the castle. In A.D. 1119 Henry I. of England threw a strong garrison into the tower of Ivry, as the castle was sometimes called. Louis-le-Jeune and Henry II. of England had an interview, in presence of the Pope's legate, near Ivry in 1176. In the 15th century an upper town existed, which was built on the hill round the castle, besides the town and monastery of Ivry, which stood in the valley. In 1418 the upper town was taken by Talbot the English general, and the castle capitulated soon after. In 1421 Ivry and its castle were again taken by the English under the Duke of Bedford. They were recovered by the French in 1449 under count Dunois, who demolished the fortress, of which there are now only extensive ruins. *Nonancourt*, on the left bank of the Avre, formerly a strong fortress and the scene of many an interview between the Norman kings of England and the kings of France, is now a small place of 1529 inhabitants. The house in which Henri IV. slept the night before the battle of Ivry is still shown. *Pacy*, in a very beautiful valley on the Eure, with the remains of ancient walls around it, has a population of 1496. The ancient castle of Pacy, the residence of Philippe Auguste and St.-Louis, was dismantled by Charles V., who took the town by assault in 1378. *Ruynes*, near the right bank of the Rille, is the centre of a great manufacture of pins and nails; iron-wire, hardware, calico, tape, sewing-thread, stockings, paper, &c., are also made. It has moreover iron, copper, and zinc works; population, 2050. *Vernueil*, in the south of the department, and near the left bank of the Avre, was formerly defended by a strong castle, of which the keep is still standing, and by three other fortresses, the whole surrounded by ramparts and deep ditches. The fortifications are now for the most part replaced by handsome promenades. The ancient church of La-Madeleine, which is surmounted by a tower richly decorated with sculptured work, is the great ornament of the town. Vernueil has a public library and 3956 inhabitants, who manufacture hosiery, flannels, hardware, pottery, &c., and trade in linen, canvas, wool, and dressed skins for bookbinding. The greatest onion fair in Europe is held here on the 9th of October annually. Under the walls of Vernueil the Duke of Bedford in 1424 gained his last victory over the French, after a battle which lasted two whole days. Vernueil is an ancient place; it was burnt in 1131 by lightning. Henry I., duke of Normandy, rebuilt it, and surrounded it with the strong fortifications above alluded to; and from this time till 1594, when it finally submitted to Henri IV., the town was besieged and taken at least once in a century by the French or English. *Vernon*, a station on the Paris-Rouen railroad, stands on the left bank of the Seine, which is here crossed by a bridge of 22 arches, leading to the suburb of Vernonnet. It has a college, and 7128 inhabitants, who have no manufactures of importance, but trade to some extent in corn, flour, wine, and cut stone. The town is in general ill built; the streets, formed of timber-framed houses, are narrow and crooked, but kept clean by running streams. Promenades in the form of boulevards surround the town. The parish church, and the church of the Hotel-Dieu, an hospital founded by St.-Louis, and an ancient massive tower, are the most remarkable objects. A fine avenue leads from Vernon to the Château de Bizy, which belonged to the Duke of Penthievre, who retired hither with his daughter on the breaking out of the French revolution in 1792. The duke died here March 4, 1793; through his daughter and heiress, who married the Duke of Orléans (Egalité), the château and domain of Bizy came to Louis Philippe, who occasionally resided here before his accession to the throne.

2. In the second arrondissement, the chief town, *Louviers*, formerly *Loviers*, stands in a valley skirted by extensive woods, and watered by numerous branches of the Eure, 14 miles N. from Évreux, and has tribunals of first instance and of commerce, a chamber of commerce,

a council of Prud'-Hommes, and 9998 inhabitants. The old part of the town, which consists of a few broad streets communicating with each other by a multitude of narrow lanes, is entirely built of wood; the new part is built of brick and cut-stone, and presents some pretty streets. The church of Notre-Dame, the nave and choir of which date from 1218, is a very imposing edifice; the south portal, which was completed in 1496, is particularly admired for its bold projections and florid ornaments. The painted windows of this church are distinguished for the angular drawing and quaint designs that characterise an early period of art. The house of the Templars, a most curious specimen of the domestic architecture of the 12th century, the public library, and the theatre are the other most striking objects in the town. Louviers is one of the chief seats of the cloth manufacture in France; it has upwards of 40 factories, in which from 7000 to 8000 hands are employed. It has been long famous for the finest description of cloths (for uniforms, &c.), which range from 30 to 65 francs an ell. Of late years coarser cloths, cassimeres, fancy goods for trowsers, mantles, &c., are also made. There are also several woollen-yarn factories, large tan-yards, bleaching establishments, card factories, steam-engine and mill-work factories, dye-houses, brick-works, &c., and a brisk trade in corn, wood, charcoal, flax, wool, teasles, &c. Richard Cœur de Lion gave Louviers in exchange for the domain of Andelys to the archbishop of Rouen, whose successors held the seignory of the town with the title of count till the first French revolution. Louviers was taken after a vigorous resistance of twenty-six days by Henry V. in 1418. The Duke of Bedford besieged it in 1431, and after a stout defence, which lasted twenty-three weeks, the town was taken and its walls and principal buildings were demolished. Gaillon, 9 miles S.E. from Louviers, on the Paris-Rouen railroad, has 2596 inhabitants, who manufacture carpets, cotton-yarn, striped and checked calicoes, &c. The castle of Gaillon, which originally belonged to the dukes of Normandy, and from the time of St. Louis, to the archbishops of Rouen, was rebuilt in a magnificent style in 1515 by Cardinal Amboise. This building having been injured and in part destroyed by fire in 1703, was soon after restored. It was sold at the time of the first French revolution, and partially demolished. A beautiful portico which separated the first and second courts of the castle was removed stone by stone, and reconstructed in Paris in the court of the Palais-des-Beaux-Arts, of which it forms the grandest ornament. The castle, which now retains few features of its former magnificence, was fitted up in 1812 as a central house of detention for the convicts of the departments of Eure, Eure-et-Loir, Seine-Inférieure, Orne, and Somme. Neubourg stands in a fertile plain southwest of Louviers, and has 2105 inhabitants, who manufacture cotton, and trade in corn, coarse linen, wool, and cattle. There are here the remains of a fine old Norman castle, rich (as almost every spot in this part of France is) in traditions connected with English history. Henry I. of England took and burnt the castle in 1118; on Henry's death the Norman barons assembled here and resolved to support Stephen's claim to the throne of England. In the castle of Neubourg also the marriage of Marguerite of France with the eldest son of Henry II. was celebrated. The proximity of the castle brought much trouble and many a siege upon the town. The remains of the castle were fitted up during the minority of Louis XIV. by the Marquis de Sourdiac, lord of Neubourg, as a theatre, in which the first attempts at French opera were made by the representation of the 'Toison d'Or,' of Pierre Corneille. In the same theatre in more recent times, all the handsome women and pretty girls of all ranks from the adjacent parts of Normandy used to assemble at a ball given on the feast of St. Paul in every year. The plain of Neubourg is entirely devoid of water-courses, it is very fertile in corn; some clumps of trees left here and there tend in some degree to relieve the monotony of its scenery. Neubourg is the birthplace of M. Dupont de l'Eure, the distinguished French legislator and politician. Pont-de-l'Arche, a station on the Paris-Rouen railroad, on the left bank of the Seine, which is here again crossed by a bridge of 22 arches, has 1687 inhabitants, who trade in timber, cattle, fruit-trees, &c. The tide ascends the Seine as far as this town. Pont-de-l'Arche owes its origin to Charles le Chauve, who erected here a palace, in which he convened councils, held assemblies of his nobles, and drew up edicts: he also built a bridge, defended by a citadel, from which the name of the place (in Latin Pons Arcis, 'citadel-bridge') is derived. The citadel was demolished about the beginning of the revolution. Pont-de-l'Arche was burned by the English under Edward III. The walls of the town yet remain flanked by circular towers. The bridge is a picturesque object, with mills in some part of its length, and a lock under one of the arches to facilitate the navigation of the river. On the bank of the river near the town are the remains of a Cistercian abbey, founded A.D. 1190, by Richard Cœur de Lion, in pursuance of a vow which he had made when nearly lost in the rapid current of the Seine. The church of Pont-de-l'Arche, though much dilapidated, is a fine building in the decorated gothic style; it has some rich carving, and handsome painted windows.

3. Of the third arrondissement the chief town, *Les-Andelys*, stands in the territory of the Norman Vexin, on the right bank of the Seine, and has a tribunal of first instance, and a population of 5345, who manufacture cloth, cotton hosiery, linen, pipes, sabots, woollen and cotton yarn, and leather. The town consists of two parts, *Petit-*

Andely and *Grand-Andely*. *Petit-Andely* stands close to the Seine, which is here spanned by a fine suspension bridge of a single arch. A large hospital, which was built by the Duke of Penthievre in 1784, surmounted by a dome, and an ancient inn built of wood, and called *Grand-Cerf*, are the most remarkable objects in this part of the town. *Grand-Andely* is about half a mile inland; it has a very ancient gothic church and a fine specimen of the domestic architecture of the 16th century in the house called *La Grando Maison*, now used as a granary. *Grand-Andely*, the more ancient part, sprung up round an abbey for nuns, founded here in A.D. 511 by Sainte Clotilde, the wife of Clovis, whose holy well is still an object of veneration in the neighbourhood. The abbey was burnt by the Northmen in 884, but was soon after rebuilt. The abbey church, which was early made collegiate, is remarkable for the beauty of its stained-glass windows. On an eminence above the town stand the still majestic ruins of Cœur-de-Lion's famous fortress of Château Gaillard. The building of the castle gave origin to *Petit-Andely*. The Château Gaillard was founded by Richard in 1195, after his return from Palestine. It became one of the strongest places in France; its walls were 8 feet thick, and it was defended by 17 massive towers. Cœur de Lion died in this castle. Philippe Auguste took it in 1203 after an eight months' siege. In 1314 it became the prison of Marguerite and Blanche, the daughters-in-law of Philip the Fair, who were declared guilty of adultery: Blanche spent seven years in it; Marguerite was strangled after being imprisoned two years. David Bruce, king of Scotland, found an asylum in Château Gaillard in 1334, and in 1356 Charles the Bad was shut up in it. The English, after a siege of seven months, took the fortress in 1418, and held it till 1449, when they were driven out by the French. Henri IV. took it in 1589; but it was soon after recovered by the party of the League, who held it till 1591. Henri IV. had it entirely dismantled; the keep alone was spared, which however was partly demolished in 1616 by order of Louis XIII. From the Côte-des-deux-Amants, a hill which stands above the village of Ainfreville, near the junction of the Andelle with the Seine, and connected with which there is an interesting local tradition, there is one of the finest views in Normandy, comprising the valleys of the Seine, the Eure, and the Andelle, the towns of Louviers and Elbeuf, with numerous bridges, old castles, forests, factories, and villages. *Villiers*, a small place near Les-Andelys, was the birthplace of N. Poussin. *Gisors*, in a fertile plain on the Epte, is surrounded by walls and ditches, and was formerly defended by a castle, the keep and a tower of which are still standing. The inclosure of the castle is used as a market-place; the ditch is planted with trees and forms a promenade. The church, dedicated to St. Gervais and St. Protas, dates from the 13th century, but having been often repaired it presents various styles; the portal is in the renaissance style, and the finest specimen of the kind in Normandy. The interior contains a curious monument, on which the representation of a dead body is sculptured in marble. The town has 3624 inhabitants, some cotton-spinning and bleaching establishments, tan-yards, and breweries. In the neighbourhood are copper and zinc works. *Pleury-sur-Andelle*, a mere hamlet in 1830, has now a population of 1065, cotton factories, print-works, and brick and lime kilns. *Lions-la-Fôret*, 14 miles N. from Les-Andelys, is built round and on the site of the ancient castle in which William Longsword died and William the Bastard spent part of his youth. There was a town here in Roman times. The population is 1524.

4. In the fourth arrondissement the chief town, *Bernay*, stands on the left bank of the Charentonne, has tribunals of first instance and of commerce, a college, savings bank, and 6871 inhabitants. Judith de Bretagne, Richard II.'s queen, had this town as part of her dowry, and founded an abbey in it. The abbey-church, the nave of which is remarkable for its severe simplicity and unadorned elegance, is now used as a corn and linen market. In the abbey-buildings the sub-prefect and the mayor reside, and the courts of justice are held. The other important buildings are the churches of Sainte-Croix and De-la-Couture, the college and the hospital. The town was fortified in the 13th century, and was then a place of importance for its market, its fairs, and its woollen manufactures. It was often taken in the wars between the French and English. The fortifications were demolished in 1589. The chief manufactures of Bernay are woollen-cloth; but flannels, tape, linen, leather, &c., are made. There are also dye-houses and bleaching establishments, and a good trade in corn, cider, iron, paper, hides, and cattle. One of the greatest horse-fairs in France is held here during the fifth week of Lent. *Beaumont-le-Roger*, on the right bank of the Rille, and near the fine forest of Beaumont, was formerly defended by a castle, which was for centuries an object of contention with the Normans, French, and English, but which is now in ruins. The town has cloth-factories, bleach-works, glass-works, and 2063 inhabitants. Of the castle, which was originally built about 1040, there are scarcely any remains; but on the summit of the rocky height on which it stood are the picturesque ruins of an ancient abbey. *Brionne*, N.E. of Bernay, an ancient town on the right bank of the Rille, has 3098 inhabitants, who manufacture broad-cloth, oil, and cotton-yarn. Four Roman roads met at Brionne: some Roman remains are seen in the adjacent forest. The Norman castle that formerly commanded the town is now in ruins. *Broglie*, S.W. of Bernay, is a small place of 1024 inhabitants, from which the Duc de Broglie

takes his title, and near which he has a large mansion surrounded by a fine park. Broglie was formerly called *Chambrais*.

5. Of the fifth arrondissement the chief town, *Pont-Audemer*, 40 miles N.W. from Evreux, is prettily situated on the left bank of the Rille, which here becomes navigable. It is surrounded with walls and wet ditches. The streets are regular, well built, and kept clean by running streams. The town has public baths, a small theatre, and 5497 inhabitants, who manufacture hosiery, glue, harness, and cotton-yarn; it has 40 tan-yards, 12 currieries, and 12 establishments for dressing sheep-skins and glove-leather. There is also some trade in corn, cider, flax, hides, &c. *Beuzeville*, W. of Pont Audemer, has brick-kilns, oil-mills, and 2610 inhabitants, who trade in corn, horses, cattle, and sheep, for the sale of which large fairs are held. *Cormeilles*, near the Calonne, a feeder of the Tonque, on the old Roman road from Lisieux to Lillebonne, has 1373 inhabitants. *Quillebeuf*, on a promontory which juts out into the Seine, and on the extremity of which stands its massive church-tower and lighthouse, is a small place of only 1447 inhabitants. The port of Quillebeuf is important as a place of anchorage for large vessels making for Rouen, which here unload part of their cargoes; and as a station for pilots, who are indispensable to guide ships through the shifting sandbanks in this part of the river. Henri IV. threw some fortifications round Quillebeuf, granted it several privileges, and called it *Henricqueville*, intending to make it the rival of Havre. The bore at the mouth of the Seine is observed to great advantage from this place. [BORE; SEINE.] *Routot* and *St.-Georges-du-Vière* are small places of a little over 1000 inhabitants each, which give name to the other cantons.

The department forms the see of the Bishop of Evreux, is comprised in the jurisdiction of the High Court of Rouen, and belongs to the 2nd Military Division, of which Rouen is head-quarters.

(*Dictionnaire de la France; Annuaire pour l'An 1853.*)

EURE-ET-LOIR, a department in France, is bounded N. by the department of Eure, N.E. and E. by Seine-et-Oise, S. by Loiret and Loir-et-Cher, and W. by the departments of Sarthe and Orne. The department extends from 47° 57' to 48° 56' N. lat., and from 0° 47' to 2° E. long. Its length from north to south is 68 miles; its breadth varies from 57 to 36 miles. The area is 2208.7 square miles, and the population in 1851 was 294,892; which gives 133.51 to the square mile, being 41.20 below the average per square mile for all France.

It is formed out of portions of the old provinces of Orléanais and Maine. The districts of Orléanais included in the department are—*Beauce*, which covers all the east and part of the south of the department, and a portion of which about the city of Chartres took the name of *Chartrain*; and *Dunois* in the south-west, of which Château-Dun was the capital. The west of the department, including the arrondissement of Nogent-le-Rotrou, and a portion of that of Dreux, consists of a part of *Haut-Perche* and *Perche-Thimerais*, districts of Maine, which had Nogent-le-Rotrou and Château-Neuf for their respective capitals.

The department lies high upon the watershed between the Bay of Biscay and the English Channel. The surface is in general level, the Beauce districts (which include part of the plateau of Orléans) consist of high and extensive plains destitute of watercourses, springs, and trees; but the south and west of the department are more diversified, and present hills, well-watered valleys, and in some places ponds and marshes. The city of Chartres which stands on the plain of Beauce is 517 feet above the level of the sea, and the highest points in the department exceed this but little. The department takes its name from the two rivers that drain it—the Eure described in last article, and the Loir which rises in the department and drains its south-western districts, receiving the Thironne, the Ozanne, the Conie, and the Yère. [LOIR-ET-CHER.] The only other river is the Huïne, or Huinc, a feeder of the Sarthe, which just enters the west of this department and passes Nogent-le-Rotrou. [ORNE.] None of these rivers is navigable in the department of Eure-et-Loir, but their water power is made to drive the machinery of a large number of corn and other mills. A canal from Pontgouin to the aqueduct of Maintenon connects the upper part of the Eure at Pontgouin with the lower part of the same river at Maintenon. The canal is about 20 miles long. The aqueduct was originally designed to convey the waters of the Eure to Versailles, but the design was given up; and the aqueduct, a vast pile, is fast going to decay.

The greater portion of the department lies on the chalk that surrounds the basin of Paris, the south-eastern district is occupied by the formations that overlie the chalk. The soil is for the most part clayey, mixed with a small quantity of sand; in some parts the clay is mixed with a calcareous earth, in others with large flints. In the west and south-west the soil is in many parts hungry sand covered with heath and furze, the ashes of which are used for manure. The land in all the eastern and southern parts is fertile, well cultivated, and admirably adapted for growing wheat. The corn produced in these districts (and especially that grown in the Chartrain) is of the best quality; it is for the most part sent for the supply of Paris, Beauce having been at all times considered the granary of that capital. The corn market of Chartres is one of the most important in France. In the Perche districts, the culture of bread-stuffs is joined to that of apples for making cider, which is more agreeable than the cider of Normandy, but not so strong. Here the fields are divided by hedge-rows, and the country having vineyards on the hill sides, and a considerable number of trees, is called the 'covered country' to distinguish

GEOL. DIV. VOL. II.

it from the bare plains of Beauce. The produce of Perche is sold in Château-Dun which has a large corn market. Besides wheat, rye, barley, oats, leguminous plants, onions, teasles, weld, flax, hemp, &c., are grown. Hops grow spontaneously in some districts of this department. Oak and birch are the prevailing trees of the forests. Horses well adapted for posting are bred by the farmers of the arrondissement of Nogent-le-Rotrou, which consists almost entirely of the highlands of Perche. Horned cattle are deficient in numbers, owing to the small extent of grass land; sheep valued for the fineness of their wool, pigs, and poultry are numerous and abundant. Of game there are hares, rabbits, red and gray partridges, plovers, lapwings, &c. The rivers contain carp, trout, pike, and crayfish.

The villages and hamlets of Beauce are built of clay and thatched, and are in general far apart. In Perche they are built of clay and stone, and covered with tiles, staves, or sometimes with heath; but in this district the hamlets are very numerous. The people of the plains are called *Beaucerons*; the people of Perche are called *Percherons*. The peasants of both districts commonly wear the blouse and the heavy sabots. The costume of the women of Perche is neat and picturesque; the women of Beauce, though clothed in more costly stuffs, are not distinguished for taste in their costume. In the Beauce district the peasant women work in the fields.

The department is essentially agricultural, with the exception of the arrondissement of Dreux, in which the manufactures are very important. The number of wind- and water-mills for the manufacture of flour is 684, and 400 of these are driven by the waters of the Eure and the Loir. Along the course of the Avre or Aure in the arrondissement of Dreux there are important paper-mills belonging to the Messrs. Firmin-Didot. There are also numerous other paper-mills, tanning- and fulling-mills, cider-mills, cotton-spinning factories, several iron blast-furnaces, forges, and foundries (which are supplied with ore partly from the mines of this department, and partly from those of Eure), and 526 factories and workshops of different kinds. Besides the articles indicated, flannel, serge, druggist, nails, blankets, linen, sieves, and woollen hosiery are manufactured and exported. A great number of caps are knitted of the fine wool of Beauce or of Spain, and sent to Orléans, where they are dyed of different colours, and form an important article of export. The imports are wine, brandy, timber, wool, cloth, colonial produce, &c. Iron mines are worked in the north-west of the department. Stone, marble, granite, and gypsum are quarried. Lime is burned. Marl is very abundant, and is used for manure. Brick-earth and potters'-clay are found. Peat is dug for fuel in the iron districts at the source of the Blaise, a feeder of the Eure, and in a few other districts. There are mineral springs near Chartres, and in the park of Ferté-Vidame.

The surface measures 1,413,575 acres. Of arable land there are 1,075,634 acres, of grass land 55,801 acres, of woods and forests 138,918 acres, of orchards, nurseries, and gardens, 14,782 acres, of vineyards 12,605 acres, and of heath and marsh land 13,900 acres. The amount of wheat exported to Paris and Orléans from the Beauce district alone in ordinary years is 412,500 quarters. The annual produce of wine is only 2,332,000 gallons; it is all of ordinary quality and consumed at home. Of cider the ordinary produce is about 3,850,000 gallons.

The department is crossed by 8 national and 7 departmental roads. The Paris-Orléans railroad runs for some miles along the south-eastern boundary. The Paris-Brest railroad crosses the centre of the department, passing through Chartres, La-Loupe, and Nogent-le-Rotrou; thus far the road is open. From Nogent the line runs south-west to Le-Mans in the department of Sarthe, whence another line running northward to Caen is met by a branch from La-Loupe between Alençon and Seez.

The climate is healthy; the temperature is not subject to sudden changes. The heat of summer is seldom oppressive, the winters are cold and dry; fogs are not infrequent; a good deal of snow falls in the winter; and the crops often suffer from hailstorms. The prevailing winds are the east and west. The west wind blows at times with such violence as to carry sea-birds into the middle of the plains of Beauce.

The department is divided into 4 arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Chartres . . .	8	166	111,517
2. Château-Dun . . .	5	80	65,185
3. Dreux . . .	7	182	71,268
4. Nogent-le-Rotrou . . .	4	54	46,922
Total . . .	24	432	294,892

1. The first arrondissement has *Chartres* for its chief town, which is described in a separate article. [CHARTRES.] Among the other towns we notice briefly the following, with the remark that the population in every case is that of the commune. *Auneau* is a small place E. of Chartres, with some hosiery manufactures and 1652 inhabitants. *Bretigny*, a village 5 miles S.E. from Chartres, gave name to the treaty (1360) by which Edward III. resigned his claim to the throne of France, but obtained the independent sovereignty of all the south-west of France, from the Loir to the Pyrenees, and by virtue of

which John II., king of France, who was taken prisoner at the battle of Poitiers, obtained his liberty, and the cession of all the possessions of the Plantagenets in the north of France, with the exception of a small territory round Calais. The château in which the treaty was signed is now used as a barn. The plain on which the English army was encamped was in memory of this pence immediately exempted from tithes, and this exemption continued till the suppression of tithes at the first French revolution. *Courville*, on the slope of a hill above the Eure, 11 miles by railway W. from Chartres, has a population of 1547. Near it is the fine old castle of Villebon, in which Sully died in 1641. The château of Villebon which is built in the castellated gothic style is one of the best preserved structures of its age in France. The principal façade is broken into three divisions, three lights high, by four massive but elegant round towers, crowned by projecting crenellated parapets. On the opposite front are three similar towers. A wide wet ditch crossed by a drawbridge encircles the building, some of the apartments in which remain in the same state as when the Duke of Sully occupied them. *Callardon*, N.E. of Chartres, has a large corn-market and a remarkably fine gothic church, which dates from the 12th century: population, 1454. Of its old fortifications (for it was strongly fortified, and occupied more than once by the English in the first half of the 15th century) there remain only a tower and a gateway. *Illiers* on the left bank of the Loir, has the remains of a fine old castle, and 2916 inhabitants, who manufacture broadcloth, blankets, hosiery, leather, tiles, and bricks. *Janville*, a small place near the Paris-Orléans railroad, has 1086 inhabitants. *Toury* on the same railway has a population of 1250. The keep of its old castle still remains. *Maintenon*, 12 miles by railway N.E. from Chartres, is a well-built town at the junction of the Voire and the Eure, and is remarkable for its castellated residence, originally built by Philippe Auguste, and afterwards rebuilt by Louis XI. and Charles VIII. The castle was the residence of Madame de Maintenon, Louis XIV.'s wife or mistress. Near it are seen the ruins of the aqueduct commenced by Louis XIV. to bring the waters of the Eure to Versailles. A great portion of the works were demolished by Louis XV., who wanted the materials to build the castle of Crecy near Dreux, for his mistress the Marchioness de Pompadour. There are a well-preserved Roman camp and several Druidical monuments near this town. The château of Maintenon belongs to the De Noailles family, and is in a state of complete repair. *Forcy*, 12 miles from Chartres, has 1283 inhabitants, who manufacture caps and gloves.

2. In the second arrondissement the chief town, *Château-Dun*, stands in 48° 4' 11" N. lat., 1° 20' 20" E. long., on a hill above the Loir, which flows in two arms through a narrow valley of great beauty and fertility, shut in by hills which are covered with vines and plantations. The town was almost entirely destroyed by fire in 1723, and has been since rebuilt on a regular plan. The streets are all straight, and abut in a spacious square on the summit of the hill, from which the whole town can be seen. The castle, one of the towers of which was built in 935 by Thibault le Tricheur, is a remarkable structure; from it there is a fine view of the town and the beautiful scenery of the neighbourhood. *Château-Dun* has 6680 inhabitants, a tribunal of first instance, a college, public library, and some important manufactures of blankets and leather. *Bonneval*, a busy manufacturing town with 2671 inhabitants, stands N.E. of *Château-Dun*. A little way out of the town on the road to Chartres is seen the Château of Condreaux, once the residence of Marshal Ney. There is a large doorman in a prostrate condition a little east of the town. *Bron*, on the Ozanne, a feeder of the Loir, has 2444 inhabitants, who manufacture linen, serge, sieves, tiles, and weaving gear. There are deep marl-pits near Bron. *Cloyes*, south of *Château-Dun* on the Loir, has beet-root sugar manufactories, and 2321 inhabitants. Near Cloyes is *Courtalin*, a village in which markets are held in large covered buildings. There is here a fine château belonging to the Montmorencies, and built in the 15th century. *Orgères*, a small place 16 miles E. from *Château-Dun*, gives name to a large forest in which there is a vast quarry that furnished stone to build the cathedral of Chartres. This quarry became the retreat of a desperate band of robbers from 1797 to 1800.

3. Of the third arrondissement the chief town is *Dreux*, which has been noticed in a separate article. [*DREUX.*] *Auet*, in the north-east of the department, and in a neighbourhood rich in historical associations, stands on the right bank of the Eure, and has 1409 inhabitants. The castle and lordship of Auet, after passing through many noble and royal hands, was given by Charles VII. to Pierre de Brézé in 1449, to recompense him for his aid in driving the English out of Normandy. Louis de Brézé, Pierre's grandson, had for his second wife Diane de Poitiers, who in her widowhood exercised so great an influence over Henri II. In 1552, by Henri's orders, Philibert Delorme built at Auet a château for Diane, which for its imposing architecture, richness of decoration, for picturesqueness of site, and the elegance and varied beauty of its grounds, was unequalled in France. This castellated mansion was demolished in the wild havoc of the first French revolution. One wing has been restored; the principal façade was conveyed to Paris under the Consulate, and re-erected in the court of the Palais des Beaux Arts. The beautiful monument of Diane de Poitiers, which was of black marble and surmounted by a statue of that celebrated beauty, had been dispersed in fragments among the villagers, but was restored by M. Lenoir, and transported by the Duke

of Orléans in 1816 to Dreux, where it is now deposited in the royal chapel. *Château-Neuf*, a well-built town in the Perche district, stands near a large forest S.W. of Dreux, and has 1352 inhabitants. Near to it westward is *Digny*, with a population of 1283. *Ferté-Vidame*, a small place, deserves mention for its fine old castle and park, and for its mineral spring. *Nogent-le-Roi*, S.S.E. of Dreux, on the left bank of the Eure, has 1336 inhabitants. Philippe de Valois died here in 1350. In the abbey-church of the abbey of Coulombs, which was founded in 1028, and stood on the right bank of the river opposite Nogent-le-Roi, was formerly the monument of Jacques de Brézé and Charlotte of France, the natural daughter of Charles VII. and Agnes Sorel. *Senonches*, situated at the edge of a large forest near the source of the Blaise, has steam-engine factories, iron-foundries, and smelting furnaces. The inhabitants number 1973, and trade in timber, charcoal, and lime.

4. In the fourth arrondissement the chief town is *Nogent-le-Rotrou*, which takes its distinctive designation from Rotrou, a count of Perche. It stands in the beautiful valley on the left bank of the Huise, at the foot of a steep hill, on the summit of which is an ancient gothic castle, one of the residences of Sully. The town is in general well built; in the interior there is a square formed of good houses and lined with fine trees, which inclose a large space of greensward, and afford an agreeable promenade. It has three churches, one of which named St-Laurent dates from the 11th century, three hospitals, a tribunal of first instance, a college, a consultative chamber of manufactures, and 6929 inhabitants, who manufacture serge, drugget, sieves, cotton-yarn, and leather. There are dye-houses and fulling-mills, and at the entrance of the town several mills are driven by the waters of a cascade formed by the little river Arcise, a feeder of the Huise. The town trades also in linen, hemp, clover-seed, hay, and straw. Sully's tomb in the chapel of the Hôtel-Dieu, on which there is a long eulogistic inscription, escaped the fury of the first revolution, but his bones were torn out of their resting-place and dispersed. In 1428 the Earl of Salisbury seized upon Nogent-le-Rotrou, but the French soon after recovered it, and threw a garrison into the castle for the purpose of annoying the English army whilst laying siege to Orléans. The Earl of Salisbury again appeared, stormed the town, hung the garrison, and burnt the castle. This castle was built in 1030; it had five towers, one of which still remains. *Authon*, S. of Nogent, has 1584 inhabitants. *La-Loupe*, 15 miles by railway N.E. from Nogent, has a population of 1161. *Champrond*, a small place E. of Nogent, has iron-mines, iron-works, and peat-beds: population about 1000.

The department forms the see of the Bishop of Chartres, is comprised in the jurisdiction of the High Court of Paris, and belongs to the 1st Military Division, of which Paris is head-quarters.

(*Dictionnaire de la France; Annuaire pour l'An 1853.*)

EUROPE is one of the great divisions of the globe, forming the north-western part of the Old Continent, of which it occupies a little more than two-seventenths; Asia contains nearly nine-seventenths, and Africa somewhat more than six-seventenths. The surface of Europe contains about 3,900,000 square miles.

Europe is separated from America by the wide expanse of the Northern Atlantic, which washes its western and northern shores, and from Africa by the Mediterranean Sea. The boundary-line which divides Europe from Asia is only in part indicated by nature. This line runs through the Archipelago, the Strait of the Dardanelles, the Sea of Marmara, and the Strait of Constantinople to the Black Sea, which is traversed by it. In the last century the remaining part of the line was drawn through the Strait of Yenikale and the Sea of Azof, and then along the river Don as far as the point where it approaches nearest to the river Volga, and afterwards along this river to its confluence with the Kama. It then followed the Kama to its sources in the Ural Mountains, and was continued along the crest of this range to the source of the Kara, and thence along that river to the Gulf of Kara. This boundary-line is now abandoned as being too vague, and another is substituted for it. The new line traverses the Black Sea to the western extremity of Mount Caucasus, south of Anapa; it then runs along the watershed of this range east-south-east to its eastern extremity, where it reaches the Caspian Sea at Soomgait, north of the peninsula of Abshoran. Thence it runs through the Caspian Sea, which it leaves at the mouth of the river Ural, whose course it follows up to its sources in the Ural Mountains. The Ural Mountains and the river Kara constitute the remainder of this boundary-line.

The most northern point of the European continent is Cape Nord Kyn, in 71° 6' N. lat.; North Cape, in 71° 10' N. lat., is on an island called Magerö. The most southern points are Punta de Tarifa in Spain (36° N. lat.), and Cape Matapan (36° 17' N. lat.) in Greece. The most western points are Cape St. Vincent (9° W. long.), Cape Roca (9° 28' W. long.), and Cape Finisterre (9° 27' W. long.). The most eastern point is in the Ural Mountains, west of Ekatarinburg (60° 20' E. long.). But some of the islands extend farther south and west than the continent. The most southern point of the island of Candia is 34° 55' N. lat. The Blasket islands on the west of Ireland lie in 10° 5' W. long. Cape Fingberg in Iceland is near 25° W. long., and the most western of the Azores, Corvo and Flores, 31° W. long. The most northern extremity of Nowaya Szemlia is about 77° N. lat. A straight line drawn from Cape St. Vincent to the mouth of the

river Kara on the Frozen Ocean, the north-eastern extremity of Europe, does not much exceed 3000 miles; and another, drawn from Cape Matapan to Cape Nord Kyn, is 2400 miles long.

As every part of Europe is described in the *ENGLISH CYCLOPEDIA* under the natural or political division to which it belongs, and all the more important mountain ranges, rivers, and other great physical features have separate articles, it would be superfluous to repeat such descriptions here. All therefore that we propose to do under the present heading is, to give such a general notice as may facilitate reference to particular articles, adding any additional information that would not readily find a place under the separate headings.

Physical Geography.—Nearly two-thirds of the surface of Europe consist of an immense plain; the remainder is partly mountainous and partly hilly. The plain occupies the eastern part of the continent, and the hilly and mountainous countries extend along its western and southern shores. On the eastern boundary the plain extends across the whole continent from south to north, from the mountain range of the Caucasus and the shores of the Black Sea to those of the Arctic Ocean. In width it extends in this part of the continent from the Ural Mountains to 26° E. long. To the west of this meridian it terminates on the north on the shores of the Baltic, and in the mountain region of Scandinavia; on the south it continues along the southern shores of the Baltic, and extends even farther west to the shores of Holland opposite the British Islands. If small eminences are not taken into account, it may even be said to continue in a south-west direction through Belgium and the northern parts of France to the banks of the Seine, where it terminates between Paris and the mouth of the river. The portion of the plain west of the meridian of 26° is narrowed on the south by the Carpathian Mountains and other ranges which are connected with them. Towards the eastern part it extends over 10 degrees of latitude, but in its progress towards the west it becomes gradually narrower till its mean breadth does not exceed 3 degrees of latitude, except where the peninsula of Jutland joins it. Along the coast of the North Sea it is still narrower.

By this narrow portion of the Great European Plain and the Baltic (which may be considered as its lowest part, being covered with water), the mountain regions which constitute the western portion of the continent are divided into two separate systems. To the north lies the system of the Scandinavian Mountains, and to the south what we shall here call the South European Mountain System. The island of Great Britain may be regarded as a connecting link between these mountain systems.

The Great Plain occupies about 2,500,000 square miles; the South European Mountain region, which extends over the whole of South Europe from Cape La Roca in Portugal to the Strait of Constantinople, and presents a surface more diversified in its form than any other portion of the globe of equal extent, China perhaps excepted, occupies about 1,100,000 square miles; and the Scandinavian Mountain System, which comprehends the whole of the Scandinavian peninsula, or Sweden and Norway, about 300,000 square miles. [ALPS; APENNINES; BALKAN; CARPATHIANS; CAUCASUS; Cevennes; JURA; PYRÉNÉES; URAL MOUNTAINS, &c.]

The coast-line of Europe is formed alternately by wide projecting promontories and deep bays, which divide them from one another. This peculiarity has led a large proportion of its inhabitants to a sea-faring life, and as the winds and weather in the waters that surround this continent are not regulated by the seasons of the year, but are subject to continual changes, this circumstance has given to them that boldness in maritime enterprise which forms the most distinguishing feature in their character, and raises them above most other civilised nations of the globe.

Europe in fact, considered by itself, is only a large peninsula, which is further cut up into a great number of smaller peninsulas by the interior seas and gulfs which penetrate far inland into the main mass of the peninsula; consequently, in proportion to its surface, it presents a much greater extent of coast than any other of the great divisions of the globe, as will appear by the annexed table, which however must be considered only as a rough approximation:—

	Surface in Square Miles.	Coast-line: Miles.	Ratio of one Mile of coast-line to area in Square Miles.
Asia . .	18,000,000	35,000; or including the islands, 40,000.	500; or including the islands, 420.
Africa . .	14,000,000	16,000	900
Europe . .	3,800,000	20,000	190
America . .	15,000,000	32,000 (without the coast of the Arctic Sea).	470

The Atlantic Ocean, with which all the seas that wash the shores of Europe are connected except the Caspian (and this is rather to be considered as an immense inland lake), forms the Bay of Biscay between Cape Finisterre and the island of Ushant; the English Channel, between the northern coasts of France and the southern coasts of England; St. George's Channel, between Great Britain and Ireland; and the North Sea, which separates Great Britain from the Netherlands, Germany, Denmark, and Norway.

The close seas, which are united to the Atlantic by straits, are the White Sea, the Baltic, and the Mediterranean; with the latter the Black Sea and the Sea of Azof are connected.

Seas.	Specific Gravity of its Waters.	Extent in Square Miles.
Mediterranean	1.0293	760,000
Black Sea and Sea of Azof	1.0112	190,000
Caspian		180,000
Baltic	1.0169	160,000
White Sea	1.0140	40,000
Atlantic Sea, in the northern hemisphere	1.0283	

The basin of the Caspian Sea, though it is only drained by two large rivers, the Volga and the Ural, occupies a surface of 350,000 square miles, as far as it belongs to Europe, and runs with its northern boundary along the parallel of 60° N. lat. The basin of the Volga, the largest of the rivers of Europe, contains an area of above 750,000 square miles. The basin of the Black Sea is somewhat larger. Its area in Europe is rather more than 900,000 square miles. The countries which are comprehended in the European part of its basin are drained by the Danube, Dnieper, Dniester, Don, Kuban, and their tributaries. The basin of the Baltic is nearly equal in extent, including the Cattegat and Skagerrack, being on all sides surrounded by countries which belong to Europe; their basin extends over a surface of nearly 900,000 square miles, though perhaps none of its rivers rise more than 350 miles from its mouth in a straight line. The great rivers which fall into the Baltic are the Oder, Vistula, Niemen, Düna, Neva, and the numerous rivers descending from the Scandinavian range, as the Tornea-Elf, Calix-Elf, Lulea-Elf, Pitea-Elf, Scelleftea-Elf, Umea-Elf, Angerman-Elf, Indals-Elf, Ljunga-Elf, Ljusna-Elf, and Dal-Elf; and likewise the Götha-Elf, and Glommen, which fall into the Cattegat and Skagerrack. The basin of the White Sea is drained by the Dwina, the Mezen, and Petschora, and some other smaller rivers, and occupies a surface of about 400,000 square miles. Though the coast-line of the Atlantic from Cape North Kyn to Cape Tarifi comprehends the whole of the shores of the western declivity of Europe, including the British Islands, its basin probably does not much exceed 600,000 square miles. No considerable river flows into the Atlantic between Cape North Kyn and the mouth of the Elbe. Into the North Sea there flow the Elbe, Ems, the Rhine, Schelde, and of the rivers of Great Britain the Spey, Tyne, Forth, Hummer, and Thames; into the English Channel only the Seine; into St. George's Channel the Severn; into the Bay of Biscay the Loire and Garonne; and immediately into the Atlantic the Clyde, the Shannon, the Duero, Tago, Guadiana, and Guadalquivir. The basin of the Mediterranean, including the Archipelago, is by far the smallest of all those which belong to the inland seas of Europe, comprehending only about 250,000 square miles. The largest of its rivers, the Rhône, flows only 500 miles, including its bends. The other rivers, which are of a considerable length, are the Ebro in Spain; the Po and Tiber in Italy, and the rivers of Albania and the Maritza in Turkey. All the rivers which drain the basins of the Mediterranean and Atlantic Sea rise in the South European mountain region; those which fall into the Black Sea rise within the Great Plain, except the Danube and its tributaries, which drain about one-third of the mountain region. The rivers which run to the Caspian rise partly on the watershed of the Great Plain, and partly in the Ural range; and the same is the case with those that drain the basin of the White Sea. The rivers which flow from the east into the Baltic rise on the Great Plain; those which flow into it from the south rise on the edge of the mountain region; and those which fall into it from the north descend from the Scandinavian range.

Climate.—The climate of Europe presents great differences, if we compare it with that of those countries in other divisions of the globe, which lie within the same parallels. It is a well-established fact, that the eastern coast of North America is much colder than the western coast of Europe, under the same latitudes. This difference is in some places equal to 10 degrees of latitude. Thus we find that the mean annual heat of London (51° 31' N. lat.) is nearly 50° Fahr., while at Quebec (46° 48' N. lat.) it hardly exceeds 42° Fahr. At Lisbon (38° 43' N. lat.) it is 61½° Fahr., and at Williamsburg in Virginia (37° 5' N. lat.) only 56° Fahr. It is however worthy of remark, that the eastern countries of Europe, especially those north of the Black Sea, are much colder, and approach in climate those of the eastern coast of America. At Moscow (55° 47' N. lat.) the mean annual heat is not quite 38° Fahr., whilst at Edinburgh (55° 58' N. lat.) it exceeds 47° Fahr.

With respect to climate, Europe may be divided into three zones, the northern, the central, and the southern. These zones may be separated from one another by two lines, of which the northern begins near 60° N. lat. on the western coast, and terminates between 55° and 54° N. lat. on the Ural range on the east; the southern commences about 48° N. lat. on the west, and terminates on the east at the mouth of the Danube (45° N. lat.). In the northern zone only two seasons occur, summer and winter, the former lasting about three months (June, July, and August), and the latter nearly nine

months. These seasons are separated by a spring and autumn of a few days, rarely two weeks' duration. In summer the heat is very great, and the vegetation inconceivably rapid. The winter is severe and boisterous, and brings down immense quantities of snow. In the central zone the four seasons are distinct, and the passage from heat to cold, and vice versa, is very gradual. The heat is less than in the northern zone, and so is the cold during the winter; still frost prevails during two, three, or four months, and snow is common except on the coasts. In the southern zone frost is either not felt at all or only during a few days; and snow is of rare occurrence, or it does not lie on the ground for more than a few days. Vegetation accordingly is very little interrupted. But the countries within this zone have abundant rains during the last three months of the year, and are subject to great and long droughts in summer. These droughts frequently continue for four or five months, and in some places occasionally for eight or nine months.

Inhabitants and Political Divisions.—Nearly the whole population of Europe belongs to that race which is comprehended under the name of the Caucasian race; but along the Ural range, and at the most northern extremity of the continent, a few nations occur which belong to the Mongolian race; to which must be added the Magyars, who inhabit nearly the centre of Europe (Hungary).

The population of Europe amounts to nearly 265,000,000 in round numbers. The Christian religion is that which generally prevails. The Roman Catholic faith is nearly exclusively professed by the inhabitants of Portugal, Spain, and Italy, and also by the majority in France, Austria, Bavaria, Poland, Belgium, and Ireland. Roman Catholics are also numerous in some cantons of Switzerland,

and some provinces of Prussia and Russia. The whole number of the adherents of this faith it is calculated may amount to 130,000,000. To the Greek church belong the Russians and the Greeks; and a great number of the members of this church are dispersed over different parts of Turkey: they amount altogether to about 55,000,000. The inhabitants of Sweden, Norway, and Denmark are nearly exclusively Protestants; and the various sects of Protestants form the great majority in England, Scotland, Holland, Switzerland, Prussia, and the northern and western states of Germany. In France, Ireland, Belgium, and some provinces of Russia, Protestants are numerous. The whole number is about 65 millions. There are Armenians in Russia, Austria, and Turkey; about 400,000 in all.

The Turks and Tartars, with some of the small tribes of Mongol origin along the Ural Mountains, are Mohammedans. Their number is supposed not to fall much short of 6,000,000. Among the Laplanders and Samoyedes there are still some who have not embraced Christianity. The Kalmucks and the Kirghises are mostly Buddhists. At Astrakhan there are a few Hindoos. The Jews are most numerous in some parts of Russia, Poland, Austria, and Turkey. Their number cannot be accurately estimated. In the south-eastern countries of Europe there is a considerable number of gypsies: it is doubtful what their religion is.

The following is a tabular view of the sovereign states of Europe in 1854, and may serve at the same time as a list of articles to which to refer for further particulars. The areas and population are given from the latest and best authorities; wherever it could be got the population is from official documents; where round numbers are given they may be considered as approximations.

States.	Form of Government.	Area in Square miles.	Population.
Andorra (Pyrenees)	Republic, with two syndics and a council	200	10,000
Anhalt-Bernburg	Duchies; absolute sovereign prince	317	52,641
Anhalt-Köthen		307	43,677
Anhalt-Dessau		533	80,082
Austria, Empire of	Absolute monarchy	255,722	36,511,466
Baden	Grand duchy; limited sovereignty, with legislature of two chambers	5,893	1,336,943
Bavaria	Limited monarchy; two chambers	29,628	4,559,432
Belgium	Limited monarchy; two chambers	11,400	4,426,202
Bremen	Republic; senate and burgier-assembly	74	79,017
Britain, Great, Ireland, and settlements, and islands in Europe	Limited monarchy; two houses of parliament	121,280	27,618,044
Brunswick	Duchy; limited sovereignty, with two chambers	1,524	270,825
Denmark, Continental	Absolute monarchy, with provincial states having limited power ^s	21,900	2,296,597
Denmark Islands (including Iceland)		38,695	68,150
France		206,954	35,781,628
Frankfurt (on the Main)	Monarchy; two chambers with limited powers	38	77,950
Greece	Republic; senate and legislative body	15,234	990,373
Hamburg	Limited monarchy; senate and legislative chambers	150	188,054
Hannover	Republic; two burgomasters, senate, and common council	14,830	1,819,253
Hesse-Cassel, or Electorate of Hesse	Limited monarchy; two chambers	3,736	754,590
Hesse-Darmstadt, or Grand Duchy of Hesse	Limited sovereignty; two chambers	3,342	851,311
Hesse-Homburg	Landgraviate; absolute sovereignty	106	21,921
Ionian Islands	Free state; with council and one chamber, under British protection	1,100	228,000
Lichtenstein	Principality; limited, with one chamber	50	6,351
Lippe-Detmold	Principality; limited, with one chamber	436	108,236
Lübeck	Republic; senate and common council	126	54,166
Mecklenburg-Schwerin	Grand duchy; limited sovereignty, with two chambers	4,840	542,763
Mecklenburg-Strelitz	Grand duchy; limited sovereignty, with two chambers	763	99,628
Modena	Duchy; absolute sovereignty	2,330	586,458
Monaco	Principality; under protection of Sardinia	50	7,000
Montenegro	Principality; absolute	1,180	120,000
Nassau	Duchy; limited sovereignty, with two chambers	1,790	429,060
Netherlands (with Duchy of Luxemburg)	Limited monarchy; two chambers	13,590	3,362,625
Oldenburg	Grand duchy; limited sovereignty, with two chambers	2,440	281,923
Papal States	Absolute and elective sovereignty	15,890	2,908,115
Parma	Duchy; absolute	2,395	502,841
Portugal (including Madeira and the Azores)	Limited monarchy, with chamber of representatives	37,750	3,814,771
Prussia	Monarchy, with two chambers having limited powers	108,294	16,346,625
Renss, Principalities of	Limited sovereignty, with one chamber	600	112,175
Russia, Empire of—Russian Dominions	Absolute monarchy	2,039,055	55,504,615
Russia, Empire of—Kingdom of Poland	Absolute monarchy	49,253	4,810,735
San Marino	Republic; sovereign council	27	7,600
Sardinia	Limited monarchy, with two chambers	29,000	4,916,084
Saxony	Limited monarchy, with two chambers	5,770	1,987,832
Saxe-Altenburg	Limited monarchy, with one chamber	509	132,819
Saxe-Coburg and Gotha	Limited monarchy, with one chamber for each duchy	771	150,412
Saxe-Meiningen-Illdburghausen	Limited monarchy, with one chamber	970	166,364
Saxe-Weimar-Eisenach	Limited monarchy, with one chamber	1,401	262,521
Schauenburg-Lippe	Limited monarchy, with one chamber	206	30,226
Schwarzburg-Rudolstadt	Limited monarchy, with one chamber	330	69,038
Schwarzburg-Sondershausen	Grand duchy; limited sovereignty, with two chambers	327	60,847
Sicilies, the Two	Monarchy, with a council (consulato)	43,160	8,704,472
Spain	Limited monarchy, with legislature	182,541	14,216,219
Sweden and Norway	Limited monarchy, with two chambers	293,080	4,762,274
Switzerland	Confederation of republics, with diet	15,250	2,392,740
Turkey	Absolute monarchy	190,000	15,500,000
Tuscany	Grand duchy; absolute sovereignty	8,545	1,778,021
Waldeck	Principality; limited sovereignty, with one chamber	460	59,697
Württemberg	Limited monarchy, with two chambers	7,520	1,733,263
		3,793,964	264,623,756

We add a table of the mammalia which are found in Europe similar to that given under Asia, and from the same authority.

Orders.	Whole No. of known species.	Whole No. of European species.	No. of species peculiar to Europe.	No. of species common to Europe and other Continents.
I. Quadrupeds.	186	1	0	1
II. Carnivora.	731	61	20	41
III. Marsupialia.	110	0	0	0
IV. Rodentia.	604	61	21	40
V. Edentata.	34	0	0	0
VI. Pachydermata.	38	1	0	1
VII. Ruminantia.	159	14	7	7
VIII. Cetacea.	75	21	7	17
Total.	1967	165	55	110

EUSTA'TIUS, ST., one of the Leeward islands in the West Indies, in 17° 33' N. lat., 63° 3' W. long., is a small rocky island, about 25 miles in circumference, rising from the sea in the form of a truncated cone, terminating in a plain surrounded with woods, having a hollow in the centre, which is now a vast den for numerous wild beasts, and is perhaps the crater of an extinct volcano. The climate is in general healthy, but the island is frequently visited by dreadful thunderstorms, and hurricanes which usually occur in August and September. The extraordinary fertility of the soil, aided by the industry of the Dutch, who have cultivated the island to the very summit, have rendered it one of the most flourishing and wealthy of all the Caribbee Islands. The principal article of cultivation is tobacco, but they grow likewise sugar, indigo, and cotton. The island has great abundance of hogs, goats, rabbits, and poultry of all kinds, not only for the consumption of the inhabitants themselves, but for the supply of the neighbouring colonies. This may be one ground of the very jealous policy of the Dutch, which is far more strict than that of the other European nations who possess any of the islands. The only landing-place, naturally difficult of access, is guarded by a fort, and fortified so as to render it impregnable; nor has anything been neglected to render every part of the island equally so. This island belongs to the Dutch, who colonised it about the year 1600. The united areas of St. Eustache and Curaçoa amount to 368 square miles; and the united population of the two islands on the last day of 1852 was 26,311. The Christian population of St. Eustache included 1371 Protestants, 175 Catholics, and 360 Methodists. In Curaçoa there were 12,933 Catholics, 1833 Protestants, and 758 Jews. We know not what amount of Pagan population belongs to each. [CURAÇOA.]

EUXINE. [BLACK SEA.]

EVAUX. [CREUSE.]

EVENUS. [ÆTOLIA.]

EVERGEM. [FLANDERS, EAST.]

EVERSHOT. [DORSETSHIRE.]

EVERTON. [LANCASHIRE.]

EVESHAM, Worcestershire, a municipal and parliamentary borough and market-town, and the seat of a Poor-Law Union, is pleasantly situated on the right bank of the river Avon, in 52° 5' N. lat., 1° 56' W. long., distant 15 miles S.E. by E. from Worcester, 96 miles N.W. by W. from London by road, and 109 miles by the Great Western and Oxford and Wolverhampton railways. The population of the borough of Evesham in 1851 was 4605. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor, and returns two members to the Imperial Parliament. The living is a vicarage in the archdeaconry and diocese of Worcester. Evesham Poor-Law Union contains 30 parishes and townships, with an area of 43,050 acres, and a population in 1851 of 14,338.

Evesham, originally Eovesham, was of some importance prior to the Norman Conquest. An abbey, dedicated to the Virgin Mary, was founded here at the beginning of the 8th century, which possessed numerous endowments and extensive privileges. Clement Lichfield, one of the last of its abbots, built the isolated tower called the Abbot's Tower, to be used as a bell tower. It was erected immediately preceding the Reformation, and is a beautiful specimen of the perpendicular style. The tower is 110 feet in height, and 28 feet square at the base.

An ancient stone bridge of eight arches crosses the river at Evesham. The two principal streets of Evesham are wide and clean: the town is lighted with gas, and paved. The guildhall, erected in the 16th century, in the market-square, was repaired by subscription in 1834. Considerable improvement has been effected in the town of late years. The parish church of All Saints is chiefly of the decorated style; the earliest portion is of the 13th century. It has a tower and spire, and a very handsome porch. St. Lawrence's church was in ruins for nearly a century till 1837, when it was restored. The style is perpendicular. St. Peter's church, Bengeworth, on the left bank of the Avon, was built in the 13th century. The Baptists, Independents, Wesleyan Methodists, Quakers, and Unitarians have places of worship, and there are National, British, and Infant schools, a literary institute, a savings

bank, a medical dispensary, and various charities. The Grammar school, founded by Abbot Lichfield, and re-founded in 1605 by Prince Henry, the eldest son of James I., is free to none; the scholars pay a small quarterage. The income from endowment is 14*l.* a year and a house: the number of scholars on the foundation in 1853 was 12. At Bengeworth is a school founded in 1729, under the will of Alderman John Deacle of London, for poor children of the parish of Bengeworth, of which the founder was a native. The income from endowment is 256*l.* a year; the number of scholars in 1852 was 30. The affairs of this school are in Chancery. Petty sessions and a county court are held. The vale of Evesham is exceedingly fertile, and numerous market-gardens are in the vicinity of the town. A considerable amount of business is done in hops and seeds; there are corn-mills and a linseed-oil mill. Malting, tanning, and the making of agricultural implements are carried on. Many females are employed in sewing kid-gloves for the glove-makers of Worcester. Parchment is made to some extent. The market-day is Monday. Fairs are held on February 2nd, the Monday after Easter, Whit-Monday, and September 21st. The September fair is usually well supplied with cattle and horses. A great battle was fought near Evesham on the 4th of August, 1265, between Prince Edward (afterwards Edward I.) and Simon Montfort, earl of Leicester, in which Montfort was completely defeated, and he and his son fell in battle.

EVORA. [ALEMTEJO.]

EVRAU. [CÔTES-DU-NORD.]

ÉVREUX, an ancient episcopal city in France, the capital of the department of Eure, stands in a pretty valley shut in by hills on the north and south, and watered by the Iton, which flows through the town in three branches, on its way to the Eure. It is situated in 49° 1' 30" N. lat., 1° 9' 14" E. long., at a distance of 60 miles W. from Paris, and has 11,706 inhabitants. The streets of Evreux are broad and neat; the houses are mostly built of wood and plaster. The cathedral, which dates from the 11th century, is a very imposing cruciform structure, though it is not uniform in style. The north transept and the portal leading to it are in the florid gothic, and are greatly admired; the west front is in the Italian style; the interior is lighted through many beautiful painted glass windows, of which those of the Lady chapel, and the rose windows of the choir and transepts are particularly admired. At the intersection of the nave and transepts rises an octagonal tower, built with cut stone, and supported on four pillars. The tower is surmounted by a pyramidal spire of open stonework of the most graceful execution. The abbey church of St. Thaurin, built by Richard II., duke of Normandy, also presents specimens of different styles, introduced in the various repairs it has undergone: it contains the shrine of St. Thaurin, executed in the 13th century. This church was originally built in A.D. 660, over the tomb of St. Thaurin, first bishop of Evreux, the chief events of whose life are depicted on the windows of the choir. Other remarkable objects are—the clock-tower, the public library, the botanical garden, the prefect's residence, the bishop's palace, the prison, the park, and the promenades in the neighbourhood, which is prettily laid out in gardens, vineyards, and meadows. The magnificent Château-de-Navarre, near the town, built by the Duke of Bouillon on the site of a country-house of Jeanne de Navarre, was the residence of the young Pretender previous to 1745, and of the Empress Josephine for some time after her divorce from Napoleon; it was demolished in 1836, its plantations cut down, its streams turned to drive machinery, and its grounds brought into profitable cultivation. There remains however still a pavilion named the little château, which was built in 1749 on the occasion of a visit from Louis XV.

The town has tribunals of first instance and of commerce, two ecclesiastical schools, a college, primary normal school, savings bank, &c. The manufactures are ticking, hosiery, woollen stuffs, vinegar, cotton-yarn, leather, &c.; and the commerce of the town is composed of these articles and of corn, brandy, cider, perry, linseed-oil, linen hides, and groceries. The railway from Paris to Cherbourg, which leaves the Paris-Rouen line at Rosny, below Mantes, and is now in course of construction, passes through Evreux. A branch railway is also in course of construction to Evreux from the Vernon station on the Paris-Rouen line, as stated in the article on the department of Eure. [EURE.]

Evreux stands on or near the site of the ancient *Mediolanum*, the capital of the Auleri Eburonices. The name *Eburonices* was afterwards applied to their chief city, and in the middle ages appears under the corrupted Latin forms of *Ebroice* and *Ebroas*, from which is derived Evreux. The town was taken from the Romans by Clovis. In 892 the Northmen under Rollo sacked and plundered it. After the settlement of the Northmen in this part of France, Evreux and its dependencies were governed by counts, from whom it passed to the house of Montfort in 1118; but Henry I., king of England and duke of Normandy, who was at enmity with that family, seized Evreux and its territory and erected it into a distinct county in favour of one of his natural sons. Montfort however, aided by the Counts of Anjou and Flanders, laid siege to Evreux, which was put into his hands by treason. On this occasion the English garrison was massacred, and the houses and churches given up to pillage. In the beginning of the 12th century

(in 1119) Évreux was burned by Henry I., king of England; and towards the close of the same century (in 1194 and 1199) it was twice taken by Philippe Auguste, king of France, who shortly afterwards acquired permanent possession of it. The county of Évreux was bestowed as an appanage on a branch of the royal family of France, which subsequently acquired the throne of Navarre; but on the death of Charles the Bad, king of Navarre, it reverted to the French crown. In the wars of the English in France, under Henry V. and Henry VI., Évreux was repeatedly taken and retaken; in 1441 it was captured, after a vigorous resistance, by the French. The town was besieged and taken by Marshal de Biron shortly before the battle of Ivry. The castle of Évreux, which stood within the town, was replaced by a residence of the dukes of Bouillon, erected in 1652, and now used as the prefect's residence. The clock-tower stands on the site of the keep of the old castle.

At *Vicil Évreux*, a village near Évreux, there are several ancient remains, including a theatre, an aqueduct, and some fortifications, which are supposed by some to mark the site of *Mediolanum*.

(*Dictionnaire de la France*; Le Brasseur, *Histoire du Comté d'Évreux*.)

EWELL. [SURREY.]

EX, RIVER. [DEVONSHIRE.]

EXCIDEUIL. [DORDOGNE.]

EXETER, Devonshire, the capital of the county, a city and county in itself, and a parliamentary borough, is situated on elevated ground on the left bank of the river Ex, in 50° 44' N. lat., 3° 33' W. long., distant 164 miles W.S.W. from London by road, and 193 miles by the Great Western railway. The city is governed by 12 aldermen and 36 councillors, one of whom is mayor, and returns two members to the Imperial Parliament. The population of the city and county of Exeter in 1851 was 32,818; that of the parliamentary borough 40,688. The livings are in the archdeaconry and diocese of Exeter. For Poor-Law purposes the city of Exeter is managed under a local act.

Exeter is supposed to have been a settlement of the Britons before the Roman invasion. It was then called *Caer-Isc* and *Caer-Rydh*, the former derived from its situation on the Ex or Isc, the latter from the red soil on which the castle is built. By the Romans it was called *Iscæ Dumnoniorum*. Many coins, small bronze statues or penates, tessellated pavements, and other Roman antiquities have been discovered near the walls and in the neighbourhood of the city. In the reign of Alfred the town was called *Exan-Cestre* (Castle on the Ex), whence its present name. About 927 the Cornish men were dispossessed of Exeter by Athelstan, who is regarded as the founder of the existing city. William the Conqueror took possession of the city after a close siege of 18 days. It was besieged on several occasions in later periods of its history.

The city of Exeter was formerly surrounded by walls and strongly fortified. Situated on a high eminence, on the north side of the town, are the ruins of the castle, called 'Rougemont.' It was completely dismantled during the civil war. In the area of the castle-yard a sessions-house has been erected, a neat building, faced with Portland stone; it contains, in addition to two good-sized courts, a grand-jury room, magistrates' room, &c. In front is a large open space, where county, election, and other meetings are held. To the north of the castle is a delightful walk, shaded by fine old elm-trees, called 'the Northernhay.' Nearly in the centre of Exeter is the guildhall, where the assizes for the city are held, as well as the sessions, elections, and other civic business. The building contains several valuable portraits, among others those of Henrietta Maria, queen of Charles the First, of her daughter Henrietta, duchess of Orleans, who was born in Exeter, and of General Monk. Exeter cathedral, as it at present stands, was probably begun soon after the see of Devon was transferred to Exeter from Crediton, in the year 1049. It was considerably altered and enlarged by Warlewast, third bishop of Exeter, a Norman, who came over with the Conqueror. It then assumed its present cruciform shape, but underwent numberless alterations and additions during the 13th and 14th centuries. It now consists of a nave, 76 feet in width and 175 feet in length, with aisles on each side; two short transepts, formed by two Norman towers 145 feet in height; a choir of the same width as the nave, and 128 feet in length; ten chapels or oratories, and a chapter-house. The whole building from east to west (including St. Mary's Chapel) is 408 feet in length. The western front is highly decorated with a profusion of niches and elegantly-carved figures, and presents one of the richest façades of any building in England. The interior is exceedingly fine in its decorations and general appearance. The bishop's throne, which is of black oak, elaborately carved, rises in a pyramidal form to the height of 52 feet; it was erected towards the close of the 15th century. In the cathedral are numerous monuments of interest. The chapter-house is a beautiful edifice, with a handsome oak roof; in this building is contained the cathedral library, consisting of about 8000 volumes. The organ is one of the largest in Europe; the large pipes are nearly 23 feet in height, and 4 feet in circumference. In the north tower are the 'Peter' bell, one of the largest bells in the kingdom, and a large clock of exceedingly curious antique workmanship. The south tower contains a peal of 11 bells.

The city was anciently held in demesne by the crown: its earliest charter was granted by Henry I. The corporation hold a court of

quarter sessions, and the assizes are held by the judges of the western circuit twice a year for the county of the city at the guildhall, and twice a year for Devonshire at the sessions-house. A county court is held in the city. There are places of worship for Baptists, Quakers, Independents, Wesleyan and other Methodists, Unitarians, Roman Catholics, and Jews.

Exeter is on the whole a well-built and clean city. Two main lines of street intersect each other, meeting in the central part of the city; one line is called the High-street and Fore-street, the other North-street and South-street. The older streets are generally narrow, but there are handsome squares and terraces in Northernhay, Southernhay, &c., which contain many well-built houses. Exeter is lighted with gas, and is supplied with water by water-works erected in 1794. The guildhall, in High-street, was rebuilt about the middle of the 15th century; it has a singular portico, supposed to have been added about the close of the 16th century: the portico projects into the street, and forms a prominent feature in the line of buildings. The subscription ball-room is a spacious apartment, measuring 80 feet by 40 feet, and is very handsomely fitted up. A subscription library is in Fore-street. In the cathedral yard is the Devon and Exeter Institution, founded in 1813, for the promotion of arts, &c., the library of which contains several thousand volumes. A museum is connected with the Polytechnic Institution, founded in 1847. Among other public buildings are the custom-house on the quay, the theatre, cavalry barracks, bridewell, county jail, and city prison. A handsome stone bridge of a single arch was erected over the river Ex in the year 1778, at an expense of about 20,000*l.*, a little above the site of an ancient bridge originally built in 1250. The port of Exeter extends from the coast near Lyme Regis to the Ness Point. The ship canal, by which vessels of considerable size come up to the city, was originally formed in 1514, contributions of a portion of their communion plate having been made towards the expense by the parishes interested in the scheme. In 1827 the canal was lengthened and deepened, and a spacious wet-dock constructed at the Exeter termination of the canal. The gross amount of customs duties received at the port during 1851 was 93,184*l.* 10*s.* 1*d.* On December 31st, 1853, the vessels registered at the port were: 41 under 50 tons, tonnage 1197; and 146 above 50 tons, tonnage 19,533. During 1853 there were entered, coastwise, of sailing vessels, inwards 598, in all 57,785 tons; and outwards 216, reckoning 9,961 tons. The colonial and foreign trade included an aggregate of 226 vessels and 14,037 tons inwards, and 65 vessels and 5787 tons outwards. There are few manufactures in Exeter; the inhabitants are chiefly employed in retail trade and in handicrafts.

A considerable import and export commerce is conducted here, the dairy, orchard, and farm produce of the neighbouring districts supplying articles of exchange for commodities of foreign production. There are market-houses in Fore-street and Queen-street; the market-days are Wednesday and Friday; there is a daily market for fish, fruit, &c. Four fairs are held in the course of the year. A great horse-fair is held at Alphington, about a mile from Exeter.

The Free Grammar school was founded by the citizens in the reign of Charles I.; the sons of freemen are instructed gratuitously. There are eighteen exhibitions to the universities of Oxford or Cambridge, six of which are of 40*l.* each, the others much less. The school possesses an income from endowment of 40*l.* a year, and had 60 scholars in 1853. There are several National, British, and Charity schools. The Devon and Exeter Hospital is supported by subscription, and has a considerable income arising from funded property. There are in the city a lunatic asylum, a dispensary, an eye infirmary, an institution for the deaf and dumb, an institution for the blind, a mechanics institution, a savings bank, and several almshouses.

The diocese of Exeter is in the province of Canterbury; it extends over the counties of Devonshire and Cornwall and the Scilly Islands, and comprises 429 benefices. It is divided into four archdeaconries, Exeter, Barnstaple, Totnes, and Cornwall. The chapter consists of the dean, the archdeacons, six canons, a proctor, a chancellor, and seventeen prebendaries. The income of the bishop is fixed at 2700*l.* a year.

(Isaacke, *Exeter*; *Routebook of Devon*; *Handbook of Devon*; *Land We Live In*, vol. iii.)

EXETER. [NEW HAMPSHIRE.]

EXMOUTH, Devonshire, a market-town and watering-place in the parishes of Littleham and Withycombe Rawleigh, is situated at the mouth of the river Ex, on its left bank, in 50° 37' N. lat., 3° 25' W. long.; distant 10 miles S.E. by S. from Exeter, and 170 miles S.W. by W. from London by road. The population of the town of Exmouth in 1851 was 5123. The living is a curacy annexed to the vicarage of Littleham, in the archdeaconry and diocese of Exeter.

Exmouth was a place of some importance in the time of King John, when it was one of the chief ports on the coast. In 1347 it contributed 10 ships and 193 seamen as its proportion of the fleet which Edward III. sent to attack Calais. The origin of Exmouth as a watering-place dates from about the commencement of the 18th century, and till the rise of Torquay it was the first on the Devonshire coast in point of importance as well as of time.

The old town of Exmouth is built on the base, and the new town on the slope and summit of a hill. On the beach is a good bathing

place, as well as baths. The town is well supplied with hotels, lodging-houses, public walks, libraries, assembly and subscription rooms, &c. The houses and shops are well built, and there is a good market. The sea-wall, 1800 feet long, is of much service as a promenade and drive. Exmouth contains a church, chapels for Independents and other Dissenters, and a National school. From Beacon Hill are obtained some fine inland and seaward prospects. With Star Cross, on the opposite side of the Ex, where is the nearest railway station, there is communication by ferry.

(*Borlase, Devonshire; Land We Live In*, vol. iii.; *Routebook of Devon; Handbook of Devon and Cornwall*.)

EYAM. [DERBYSHIRE.]

EYE, Suffolk, a market-town and municipal and parliamentary borough, in the parish of Eye, is situated in 52° 19' N. lat., 1° 8' E. long.; distant 20 miles N. from Ipswich, and 89 miles N.E. by N. from London. Mellis station of the Ipswich, Bury, and Norwich railway, which is 2 miles from Eye, is 91 miles distant from London. The population of the parish of Eye, with which the municipal borough is co-extensive, was 2587 in 1851; that of the parliamentary borough, which includes several adjacent parishes, was 7531. The borough is governed by 4 aldermen and 12 councillors, and returns one member to the Imperial Parliament. The living is a vicarage in the archdeaconry of Suffolk and diocese of Norwich.

Eye is pleasantly situated on a small feeder of the Waveney. This rivulet was probably navigable at one time, and surrounding the town is supposed to have given rise to the name, which signifies in Anglo-Saxon an island. Roman coins have been found in the neighbourhood. The town was incorporated by King John, and sent two members to Parliament from the time of Elizabeth to the passing of

the Reform Act. There was formerly at Eye a castle and a small Benedictine priory. Of the monastic buildings there are some remains. The streets of the town are rather narrow and irregularly built. The public buildings are a town-hall, a freemasons hall, an assembly room (formerly a theatre), and a jail. The church is handsome and spacious, with a fine embattled tower, and an elegant gothic porch. The Baptists and Wesleyan Methodists have places of worship. The Free Grammar school, founded in the 16th century, has an endowment of 60*l.* per annum; the number of scholars on the foundation in 1853 was 30. There are also a Free school, almshouses, and a savings bank. Brewing, coach-making, and the manufacture of agricultural implements are carried on. The corn-market is held on Tuesday, and the general market for butter and vegetables on Saturday. There are two annual fairs.

EYEMOUTH. [BERWICKSHIRE.]

EYGUIÈRES. [BOUCHES-DU-RHÔNE.]

EYLAU, or PREUSSISCH-EILAU, a town in Prussia, in the government of Königsberg, is situated on the Pasmer, in 54° 25' N. lat., 20° 35' E. long., about 20 miles S. from the town of Königsberg, and has an old castle, a church, and about 2500 inhabitants, who manufacture woollen cloths, hats, leather, &c. The name it bears has been given to it in order to distinguish it from Deutsch-Eilau, a town in the Prussian administrative circle of Marienwerder. Eylau is noticed here merely because it gives name to the battle fought there, Feb. 8, 1807, in which the French under Napoleon I. defeated the allied armies of Russia and Prussia.

EYNESFORD. [KENT.]

EYRE-COURT. [GALWAY.]

D

DACCA JELALPORE (*Dhaka*), one of the districts into which the province of Bengal is divided, lies between 23° and 25° N. lat., and between 90° and 91° E. long., and is bounded N. by the district of Mymensingh, E. by Tipperah, S. by Tipperah and Backergunge, and W. by Rajshahy and Jessore. The limits of this district were much more extensive before the year 1800 than they are at present, reaching as far south as the sea, and as far north as the Garrow Mountains. It then contained an area of more than 15,000 square miles, but it is now reduced to somewhat less than 6000 square miles. The surface of this district is uniformly low and level, and being intersected by the Ganges and Brahmaputra, a great part of the soil is periodically covered with water by the overflowing of those rivers during the rainy season. At these times the villages which are built on artificial embankments have the appearance of small islands. The deposits left by these inundations fertilise the soil. The lands are only partially cultivated: towards the north and west are very extensive tracts of jungle; in these are great numbers of wild elephants which cause much loss to the neighbouring farmers, and prevent the extension of cultivation. Towards the south and the east nearly seven-eighths of the land are under cultivation, producing rice, betel-nut, hemp, cotton, and sugar. The abundance of the rice harvests has caused the district to be called the Granary of Bengal.

Dacca is principally known in Europe for its manufactures of cotton goods. The striped and figured muslins of Dacca were long celebrated throughout the world for the beauty and delicacy of their fabric. The productions of Paisley and Manchester have however almost entirely displaced the Dacca muslins.

The ruins of ancient mosques and Hindoo temples are spread all over the country; and in many places are seen the remains of fortresses constructed to oppose the invasion of the Mughas. The settled estates are mostly parcelled out into small talooks, or zamindaries, and these are divided and subdivided into very insignificant farms. The principal towns are DACCA, Rajnaghur, Narraingunge, Furreedpore, and Soonergong. *Rajnaghur* stands on the left side of the Puddah, the grand outlet of the Ganges, in 23° 20' N. lat., 90° 25' E. long., 23 miles S. by W. from Dacca; *Narraingunge* stands on the right side of a branch of the Brahmaputra, about 8 miles S.E. from Dacca, in 23° 37' N. lat., 90° 35' E. long. This town contains more than 15,000 inhabitants, and is one of the greatest inland places of trade in Bengal. Salt, tobacco, indigo, and grain are the principal articles of this trade. Numerous indigo factories are established on the banks of the river where the soil is favourable for the growth of the indigo plant. On the opposite bank of the river is a Mohammedan mosque, to which great numbers of devotees resort from the neighbouring towns to see what is described as the footmark of the prophet of Mecca. Similar footmarks are shown in several other places in India, and impart a peculiar sanctity to the buildings in which they are placed. *Furreedpore* is situated on the right side of the Puddah, or Great Ganges, 5 miles from its banks, and 40 miles from Dacca: it is the residence of the principal civil and judicial officers for the district. *Soonergong* stands on one of the branches of the Brahmaputra, in 23° 39' N. lat., 90° 43' E. long., about 13 miles S.E. from Dacca. This is said to have been in ancient times a large city, and the seat of government before the building of the town of Dacca; it is now little more than a village; it was long celebrated for its manufacture of beautiful cloths, some of which are still made in the village.

DACCA, the capital of the district just described, is situated on a branch of the Ganges, called the Booree Gunga (Old Ganges), about 100 miles above the mouth of the river, in 23° 43' N. lat., 90° 28' E. long. Dacca is comparatively a modern town. In 1603 the seat of government was removed to it by Islam Khan, then governor of Bengal; in compliment to the emperor, the name of the place was then changed from Dacca to Jehangire Nuggur. In the reign of Aurengzebe the town of Dacca exhibited a considerable degree of splendour. Its former limits contain the ruins of many magnificent mosques, and palaces, bridges, and other buildings, but their sites

are now for the most part overrun with jungle. The streets are narrow and crooked, and the houses are for the most part mean. The native population in 1801 was estimated at about 200,000, rather more than one-half of whom were Mohammedans and the rest Hindoos. Several Portuguese, Greek, and Armenian merchants are settled in the place. The city contains about 120 Hindoo places of worship, and about 180 Mohammedan; the Roman Catholics, Armenian and Greek Christians, and Protestants, have also places of worship in Dacca. There are a government college, several mission schools of the Baptist Missionary Society, and schools for children of Hindoos and Mohammedans. The government offices, the jail, the native hospital, the lunatic asylum, and the military orphan asylum, are among the public buildings. There are twelve bazaars. The manufacture of gold ornaments, musical instruments, necklaces, and idols forms extensive sources of employment. The country around Dacca is low and level, and in the wet season is flooded. Rice is largely cultivated.

DA'CIA, the ancient name of a country north of the Danube, bounded E. by the Euxine, or Black Sea, W. by the Tiberius, now the Theiss. The ancient Dacia comprehended Transylvania, the Banat of Temeswar, Hungary, east of the Theiss, the Bukovina, Wallachia, Moldavia, and Bessarabia. When Dacia was made a Roman province it extended from the Theiss to the Hierasus (the Porcos of Herodotus and the modern Pruth), the Carpathians, and the Danube; Bessarabia therefore was not included in the province. The Daci were anciently called Davi, according to Strabo (p. 304, c), and hence, he adds, the name Dacus was commonly applied to a slave in Attica, many of the Athenian slaves being imported from the countries about the Danube. This appears from the plays of Terence, which were founded on a Greek model. The country was inhabited by the Daci and the Getæ: the Daci occupied the part towards Germany and the source of the Danube; the Getæ occupied the part towards the east and the Euxine. (Strabo, p. 304, c). Both the Getæ and Daci spoke the same language. (Strabo, p. 305, a). The Getæ were better known to the Greeks in consequence of their frequent migrations to the banks of the Danube. The Latin name Daci included the Getæ. The principal river of Dacia is the Tiberius, which, with its tributary the Marisus (Maros), falls into the Danube. There are several small rivers besides—the Aluta (the Alt), the Ararus, and others, which also fall into the Danube. Alexander the Great found the Getæ on the north bank of the Danube, where he defeated them and took their town, B.C. 335. In B.C. 292, Lysimachus having penetrated into the heart of their country, was surrounded, and obliged to surrender with his whole army in the plains of Bessarabia. Gold coins with the name of Lysimachus have been found in great numbers at Varhely, a village of Transylvania, which occupies the site of Sarmizegethusa, the Dacian capital, whither they were carried by the conquerors among the plunder, or as part of the ransom of Lysimachus and the other prisoners. In B.C. 10, the Romans made an expedition up the Maros against Cotiso, king of the Daci, but without results. Ovid, who was exiled among the Getæ, has described the people and the climate. Domitian celebrated his pretended exploits against the Dacians by assuming the title Dacicus. (Juvenal, 'Sat.' vi. 204). The first expedition of the emperor Trajan against the Daci was in A.D. 101. The Daci were led by their king Decebalus, and the war, which lasted nearly five years, ended in their submission (Dion Cassius, lxxviii.) to the Romans. Their chief town Sarmizegethusa, afterwards called Ulpia Trajana, in memory of the victory which was gained, was situated near the Iron Gate Pass into Transylvania, near the head of the valley of the Temes. The Column of Trajan in Rome records the leading events of these expeditions. To consolidate his conquest Trajan erected the famous bridge across the Danube below the Iron Gate (some remains of it are still seen below the village of Scala Gladova), and constructed three great roads from the Danube—one from the mouth of the Karaach at Uj Palanka to Tiviscum (Temeswar); a second from Orsova up the valleys of the Cerna and the Temes through the Iron Gate Pass, and along the Maros to the border of Moldavia; and the third

from the famous bridge eastward to the Aluta, along that river and through the Rothenthum Pass in the southern Carpathians, down to Karlsburg on the Maros, where it joined the second road. The Romans abandoned Dacia to the Goths in the time of Aurelian. The Goths in their turn gave way to the Huns about A.D. 376. After the death of Attila, Dacia was seized by the Gepidae Goths, whose kingdom was destroyed by the Longobards and Avars A.D. 566. The next invaders were Scythians or Slaves, who, governed by their 'Chagans,' or Khans, held sway over the country till the time of Charlemagne. Finally, the Magyars overran Dacia, and settled in it during the 9th century. The sculptures on Trajan's column establish the identity of the Dacians with the modern Wallachs in stature, feature, and dress.

(Paget, *Hungary and Transylvania; Dictionary of Ancient Geography.*)

DAGENHAM. [ESSEX.]

DAGHESTAN, a country situated on the western shores of the Caspian Sea, between 41° and 43° N. lat. It is a mountainous country as its name implies, with the exception of a narrow plain that skirts the Caspian shore, and is traversed by the road from Baku to Derbend. Though forming a part of the Russian government of Georgia, the different tribes which inhabit the valleys on the eastern declivities of Mount Caucasus are governed by independent petty sovereigns; only those which possess the low and hilly country towards the sea are subject to the Russians. Corn of different kinds, hemp, tobacco, and madder are grown in the valleys. Cattle breeding is the chief occupation of the inhabitants. The chief town is Derbend, by which name the province of Daghestan is also sometimes designated. [DERBEND.] Kuba, a town built by the Russians since their occupation of the country, stands about 50 miles south from Derbend, and has 5000 inhabitants. It has straight, wide, and regular streets, like most Russian towns, and is strongly fortified. The old town of Kuba, which was the seat of a Khan, was abandoned by the Russians on account of its unhealthy situation in the lower grounds on the coast. *Tarki*, about 70 miles N.N.W. from Derbend, and a few miles from the coast of the Caspian, has a population of 10,000. It was formerly called *Semender*. It is built on the slopes of three hills, the highest of which is crowned by the Russian citadel. [GEORGIA.]

DAGHO, or DAGO, an island at the entrance of the Gulf of Finland, about 41 miles long, and varying from 27 to 37 miles in breadth, lies between 58° 4' and 59° N. lat., 22° 20' and 23° 8' E. long. It is comprehended in the Russian province of Esthonia, and is divided by a small channel called the Scla Sund, from the island of Oesel which lies to the south. Its area is 434 square miles. The inhabitants, about 10,000 in number, are Esthonians; they are employed in husbandry, grazing, and fishing. They also carry on a little trade by the port of Tewenhaven, which lies on the western side of the island near Cape Dagherort. The coasts are cliffy, and shoals render the approach dangerous. There is a lighthouse near the village of Dagherort. The Swedes, to whom the Danes ceded Dagho in 1645, ceded it in their turn to Russia under the treaty of Nystadt, in 1791.

DAHOMY, a celebrated and for some time powerful negro kingdom of Western Africa, lying inland from the part of the coast of Guinea called the Slave Coast. It is bounded west by Ashantee, from which it is divided by the river Volta, and extends east to the Niger. Its southern boundary is the sea, the principal port being Whydah, but Lagos, Porto-Novo, Badagry, the Popoes, and the Nert, have petty kings of their own; and it extends to the base of the Kong Mountains. From east to west the territory extends about 180 miles, and from Whydah on the coast to the northern boundary nearly 200 miles. Its capital, Abomey, is placed in 7° 59' N. lat., and in about 1° 20' E. long. The city contains about 30,000 inhabitants, which number is greatly increased at the periods of the festivals being held. It is about eight miles in circumference, surrounded by a ditch, and entered by six gates, formed of a clay wall, through which are two openings, one for the king exclusively, the other for the people; each opening is ornamented with skulls, and inside them are piles of skulls of men and beasts. In the town are several batteries, and on the coast-road about a mile from the town are two 32-pounder carronades, all uselessly placed for purposes of defence. There are no shops, but two large and several small markets. There are three royal palaces, and several large houses for the ministers, all surrounded by high red clay walls, inclosing large spaces for parks or gardens. The houses are only of one story, with the exception of two in the royal palaces. There are no streets, as each house stands within its own inclosing brick wall. There are barracks, a pottery, and a dye-house, and numerous fetish houses. Within the town there is much waste land and some farms under cultivation. A great drawback on the town is the insufficient supply of water, which is only to be procured from some small oozy reservoirs at some distance on the plain, and from rain-water collected in pits smeared with palm-oil.

The name of Dahomy may almost be said to have been unknown in Europe till some time after the beginning of the last century. Dauma, which was thought to be the same kingdom, is indeed mentioned by Leo Africanus along with several others, of which he merely says that they lie south of Nigritia; and that name

is found placed where Dahomy lies in several maps published towards the end of the 16th century. It occurs so placed even in the 'Maps of Sir Jonas Moore's Mathematics,' published under the care of Dr. Halley in 1681; but in another map published by Halley in 1700 it is omitted, and it does not again appear for a considerable time. The most recent accounts indeed now represent the whole of that part of Africa as occupied by other states. The Dahomans for the first time made their appearance on the coast where the European establishments were in the reign of their king Trudo Andati, of, as other accounts call him, Guadja Trudo, who is said to have succeeded to the throne in 1708. This prince, who appears to have been a person of remarkable talent as well as of inordinate ambition and warlike ferocity, having determined upon securing to himself a share of the European commerce, in forcing his way to the coast captured in 1724 the chief town of the kingdom of Ardra, the most powerful state that lay between him and the sea. Here he found a Mr. Bulstrode Lamb, who resided in the place as factor for the English African Company. Lamb was detained in captivity for nearly three years, but was treated with extraordinary kindness and consideration by the black monarch, who till now had never set his eye upon either a white man or the sea. We believe the earliest account of Dahomy that exists is a very curious letter written by Lamb after he had been for some months in captivity to his superior, Mr. Tucker, governor of the English fort at Whydah (the Juda of the French and Fida of the Dutch). It is dated from Abomey in November 1724, but did not appear in print till it was published at the end of a 'New Voyage to Guinea' by William Smith, Esq., which appeared at London in 1745. Smith had been on the Slave Coast in the beginning of March 1727, when he found that only a few days before his arrival the king of Dahomy had effected the conquest of the state of Whydah, lying along the coast, and had laid in ruins the English, French, and Portuguese forts situated at its capital, Sabi. We have the continuation of the narrative in the 'Full Account of some Part of Guinea,' published at London in 1734 by Captain William Snelgrave, who arrived at this part of the African coast only a few weeks after Smith, and while the king of Dahomy and his troops still occupied the territory. The narrative of Snelgrave, who visited the Dahoman camp, is exceedingly curious. In 1729 he made a second voyage to the same coast. In the interval the king of Dahomy and the governors of the French and English forts had again come into collision; and just before Snelgrave's arrival Mr. Testefole, the English governor, who had imprudently endeavoured to excite the people of Whydah to an insurrection against their Dahoman masters, had been seized by the latter and put to death. Snelgrave has from the information of others brought down his account to the end of March, 1732, at which time a new quarrel had ended in the destruction of the Dutch, English, French, and Portuguese forts at the town of Jaquin, the only other part of the Slave Coast where there were any European establishments. Guadja Trudo died this same year, and was succeeded by his son Bossa Ahadee. A work entitled 'Memoirs of the Reign of Bossa Ahadee, with an Account of a Journey to Abomey in 1772,' was published in 1789 by Mr. Robert Norris of Liverpool, a person who had been engaged for eighteen years in the African trade. It was reprinted, with many corrections and additions by the author, in 'The History of Dahomy, compiled from Authentic Memoirs, by Archibald Dalzel, Esq., Governor of Cape Coast Castle,' 4to, London, 1793. This last-mentioned work brings down the history of Dahomy through the reigns of Ahadee, a detestable tyrant, the scourge of his own subjects and the torment of all his neighbours, for forty years; of his son Adahoonzou II., by whom he was succeeded in 1774, and who continued his oppression and his ferocious wars; and of the first years of that of Adahoonzou's son and successor Wheenoohew, who mounted the throne in 1789. The continuation of the history of Dahomy for some years farther is given in a little work entitled 'A Voyage to Africa, with some Account of the Manners and Customs of the Dahomian People,' by John M'Leod, M.D., 12mo, London, 1820. Mr. M'Leod visited this part of Africa in 1803. At that time Dahomy seems to have exercised sovereignty over all that part of the coast of Guinea. The reigning king was a younger son of Wheenoohew, the elder having been set aside because one of his toes overlapped another. The name of the present king is Gèzo. In 1849, when Lieutenant Forbes went to Abomey on a mission to procure the abandonment of the slave-trade, he found the system of the slave-hunts in full vigour; nor could he prevail in his visit, as the king fairly told him he could not afford it, as the greater part of his revenue was derived from that source. The population of the kingdom, owing to its devastating wars, he estimates at not more than 200,000; the regular army amounts to about 12,000, of whom 5000 are Amazons, but this is increased to about 24,000 when the king takes the field, and the camp-followers more than equal the army in number. These Amazons are supposed not to marry. They live in barracks within the precincts of the palace, and are under the care of eunuchs; they have long distinguished themselves by their fearless bravery, and not less by their sanguinary ferocities. The wars, or rather slave-hunts, are annual, commencing in November or December; and are decided upon at the customs, when the assembled people demand to be led against some town or nation which they name. At the custom or festival in June 1850, an expedition was demanded, for a second time, against Abeahkeutah, one of the Amazons saying, "We are no longer women."

we are men. By fire we will change Abeahkeutah." This was undertaken in 1851, and was unsuccessful; the Dahoman army was defeated, and a great number of the Amazons were killed. [ABEAKHEUTAH.] Since that event the Dahoman power appears to be broken, and they have remained quiet.

The region in which the kingdom of Dahomy is situated is a vast plain rising by a very gentle ascent from the sea. No river worth notice falls into the sea between the Volta and the Brass River, or Niger. The soil is a rich reddish clay, on which scarcely a stone is to be found of the bigness of a walnut. All who have visited the coast, especially before the devastations of the Dahomans, describe it as a scene of matchless beauty and luxuriance. Its vegetable productions comprise maize and other farinaceous crops; yams, potatoes, pine-apples, melons, oranges, limes, guavas, and other tropical fruits; a singular fruit said to possess the property of communicating a sweet taste to the strongest acids and bitters; indigo, cotton, sugar, tobacco, Shea butter, palm-oil, spices, &c. Lieutenant Forbes says the Dahomans have considerable agricultural knowledge, but are very indolent. The land though rich is highly manured, and in the portions they cultivate they rival the Chinese, the men, unlike most Africans, labouring in the fields, the women only bringing water. They grow corn and beans intermixed, and in the palm-plantations are grown corn, yams, and ground-nuts. Their chief food is yams and cassada, with messes of meat and vegetables mixed with palm-oil and pepper, and corn-cake. Their houses are of clay or palm-branches thatched with grass. The country abounds with lions, tigers, leopards, hyenas, elephants, the patakoo or African wolf, monkeys, buffaloes, deer, sheep, goats, hogs, both wild and tame, and several varieties of poultry. It is also infested by boa snakes of immense size, and other kinds of serpents; and there are alligators and hippopotami. White ants and mosquitoes are an abundant source of annoyance. Granite, sandstone, chalk, and iron are found in the country. The government of Dahomy is as absolute a despotism as has anywhere existed, and authority is maintained by the shedding of blood at a rate which has been approached nowhere but in Africa. The customs or festivities held at the court of the monarch on occasion of the annual receipt of duties or tribute, are of the same ferociously sanguinary character with those that take place at Ashantee. The most important are held in March and June. The regular season appears to be in April or May, but instances are mentioned of their lasting for three months, and in these cases they seem to begin earlier in the year. The chief ornament of the royal residence is human skulls, of which, when a number was wanted to pave a court or decorate a ceiling, it was not an unusual process to have some scores of persons massacred for the purpose. The principal trade formerly carried on with Dahomy and the subject states on the coast was in slaves; and since the abandonment of that trade on the part of the principal European powers which used to resort to this part of Africa, the commercial intercourse which those kingdoms hold with other parts of the world has become quite insignificant. The only money of the Dahomans consists of cowry-shells, of which a thousand are stated to represent half-a-crown English. Their language is the same with that of the people of Whydah and the other nations of the coast.

(Lieutenant Forbes, R.N., *Dahomy and the Dahomans*; and the works named in the article.)

DAILY. [AYRSHIRE.]

DAIMIEL. [CASTILLA-LA-NUOVA.]

DALE. [PEMBROKESHIRE.]

DALECARLIA, properly DALARNE (the valley country), a former province of Sweden, which now constitutes the Falun Län, extends from 60° 55' to 62° 12' N. lat., 12° 30' to 16° 40' E. long. Its surface is 12,210 square miles, and its population in 1845 was 145,333. It borders N. on Herjedalen, E. on Gestrikland, S. on Westmanland, Nerike, and Värmland, and W. on Norway. It consists chiefly of the river-basins of the Väster-Dal and Öster-Dal, which unite a few miles west of Falun to form the Dal. The Dal or Dal-Elf runs first south-east and then north-east to the Gulf of Bothnia. [SWEDEN.] About six or seven miles from its mouth it forms the cataract of Elfskarleby, the rival of the famous cataract of Schaffhausen in height and beauty. The Lake Siljan or Siljar, which is traversed by the Öster-Dal above its junction with the Väster-Dal, is 28 miles long and 15 miles broad, where widest. It contains several fine islands. The Lake Runn, further east on the left bank of the Dal-Elf, is 10 miles long and 5 miles wide.

The mountain ridge which divides the sources of the two rivers Dal-Elf from Lake Fimund in Norway, rises to between 3000 and 4000 feet above the sea. It is a southern offset of the Kölen range, and from it there branch off three ridges of considerable elevation. These ranges subside into hills before they reach the meridian of the Lake of Siljar. The country about this lake presents a pleasant intermixture of hills, valleys, and plains, and may be compared to the lower parts of Switzerland for scenery. But the whole country still preserves a considerable elevation, the surface of Lake Siljar being about 560 feet above the sea. The eastern districts are also uneven, but the heights are rather round-backed hills than mountains, and are usually covered with wood. Numerous lakes of different size lie between them. It is only on the borders of Gestrikland that plains of any extent occur.

GEOG. DIV. VOL. II.

The winter in this province is long and severe, the summer short and hot. Wheat does not succeed, but rye and barley and potatoes are raised. The produce however is insufficient for the demands of the population, and the tender bark of pines is mixed with the bread, and also used as fodder for cattle and hogs. The usual domestic animals are reared, but hogs are rather scarce. Game is abundant. Wolves and bears frequent the numerous and extensive forests. Fish abounds in all the lakes, except those near Falun. The forests consist of birch, ash, aspen, pines, and fir, but they seldom grow up to timber-trees.

Near Falun are found copper, silver, gold, and brimstone. The copper-mines west of Falun have been worked for more than 600 years; they formerly yielded 3000 tons of copper annually. The ore is smelted at large works in Falun. The fumes from the metal destroy all vegetation in the vicinity of the town, although these are said not to be injurious to animal life, and are supposed to have protected the town from the ravages of cholera. Porphyry, quarried on the Öster Dal-Elf, is made into vases, candlesticks, &c.

Except in the neighbourhood of Falun, to which place they are attracted by the mines, the population is dispersed over the country in villages, some of which are of considerable size. The Dalecarlians are distinguished by their stature, courage, spirit of independence, and frankness of character. The part which they took under Gustavus Vasa (who worked in the copper-mines of Falun) in liberating their country from the tyranny of Christian II. is always fresh in their memory, and makes them feel proud of their name. Many of them emigrate to Stockholm during the summer, and manufacture fancy basketwork, clocks, watches, &c.

Falun is the chief town. [FALUN; SWEDEN.]

DALGETY. [FIFESHIRE.]

DALKEITH, Edinburghshire, Scotland, a market-town and burgh of barony in the parish of Dalkeith, 6 miles S.E. from Edinburgh by road, and 8 miles by the Edinburgh and Hawick railway. The population of the town was 5086 in 1851. The affairs of the burgh are administered by 15 trustees. The town stands on an elevated piece of ground, between the rivers North Esk and South Esk, and consists of one principal thoroughfare, and several small streets. The town is clean and generally well built; it is lighted with gas, and well supplied with water. Felt and beaver hats, straw hats, and woollen stuffs are manufactured, and there are corn-mills, a brewery, and a tan-work. The corn market held here is one of the most important in Scotland. The parish church is an old gothic building in the principal street. Attached to it is an ancient chapel containing the recumbent statues of an Earl of Morton and his lady. Adjoining this choir is the mortuary chapel of the Buccleuch family. A splendid new church, in the early English style of architecture, was built in 1840 by the Duke of Buccleuch. It is cruciform, and has a steeple 167 feet high. An elegant episcopal chapel is situated within the grounds of Dalkeith palace. The Free Church, United Presbyterians, and Independents, have places of worship. In the town are two libraries and a savings bank. Dalkeith palace, the seat of the Duke of Buccleuch, is an extensive structure, surrounded by a splendid park and grounds. The mansion contains many fine paintings. The North Esk and South Esk unite their waters in the park, a little way beyond the palace, which is situated on an elevated peninsula formed by the two streams. The regality of Dalkeith belonged to the Grahams in the reign of David II. It afterwards passed into the hands of the Earls of Morton, and about two centuries ago was purchased by an ancestor of the Buccleuch family. Charles Edward spent two nights at Dalkeith after the battle of Preston Pans, and the palace has been visited by George IV. and Queen Victoria.

DALMATIA, the Kingdom of, the most southern possession of the crown of Austria, consists of a narrow maritime tract and numerous islands, forming part of the eastern boundary of the Adriatic, and lying between 42° and 45° N. lat., 14° and 19° E. long. It is bounded N. by Croatia, E. by the Turkish sandshak of Iskenderin, S. and W. by the Adriatic. The circle of Ragusa was disjoined from the rest of Dalmatia by two tongues of land, the Klek on the west, and the Sutorina on the east, which were held by Turkey; but these, after having long been a matter of dispute between Turkey and Austria, were ceded to the latter power in 1853, and the whole territory now belongs to Austria. The area, inclusive of the islands, is about 6000 square miles. The population in 1850 was 393,715, exclusive of course of the inhabitants of the two narrow tongues of land then held by Turkey.

Surface.—Dalmatia is divided into four circles, Zara and Spalato, which constitute Old Dalmatia, and Ragusa (the territory of the former republic of that name) and Cattaro, which form New Dalmatia. The whole surface of Dalmatia is a series of mountain ranges, some of which extend even into the Adriatic, and form islands with their loftier summits. With the exception of the Velebit (5439 feet high) on the Hungarian border, which belongs to the Julian Alps, all these ranges are continuations of the Dinaric Alps. The loftiest summits among them are the Dinara, which is 5669 feet high, and gives its name to the main chain, the Svilaya, east of Darnia, 4750 feet high, Mount Mosor, 4210 feet high, Mount Marian, on the peninsula next Spalato, and the Biokovo, near Macarsca, which is 5520 feet high. To the south of these lie the ranges of Ragusa and

Cattaro, among which is the Dubovicza, the most southern mountain in the Austrian dominions. The Montenegrin heights encircle the Gulf of Cattaro. In general character the Dalmatian mountains are bleak and bare: they are full of fissures, ravines, and chasms, and in many places altogether without soil. Limestone is the prevailing rock. The numerous islands which line the coast have originated in the breaking up, by some violent action, of masses of clay and sandstone, while the limestone masses, being of firmer composition, have been left standing. The whole line of coast is barren and naked, except along the narrow tract between the Adriatic and the base of the mountains; forests and underwood lie interspersed at their feet; the background is formed by a continued line of dreary precipitous heights, seldom less than 2500 feet in elevation. The coast is indented in numerous points, and affords a succession of excellent harbours. The interior of the country is furrowed by glens and valleys, many of which are stony and sterile; even the plain extending from Novigrad to the Kerka is covered with stones. On the whole, there is no part of the Austrian empire which has so wild and desolate an aspect as Dalmatia.

Dalmatia is rich in minerals, particularly limestone, gypsum, coal pitch, asphaltum, and sea-salt. No precious metals have been discovered, although Pliny (iii.) reports that the Dalmatian mines yielded as much as 50 lbs. weight of gold per diem in Nero's time. These mines however cannot have been within the limits of the present territory of Dalmatia.

Hydrography, &c.—Few countries are so poorly supplied with water, many parts being destitute of water fit even for the use of cattle: the islands in particular suffer greatly. The Dalmatian rivers run mostly from east to west into the Adriatic. Among the larger streams are the *Zermanya* (anciently the *Tedavus*), which enters from the Hungarian military frontiers, and after a course of about 27 miles falls into the bight of Morlach, near Novigrad. The *Kerka* (anciently the *Titius*), which rises above Knin, issuing from a grotto, and forms several cascades and five magnificent falls, particularly that by Scardona, in its course of about 51 miles; after receiving the *Cicola*, it flows into the Adriatic near Sebenico. The *Cettina* (*Tilurus* or *Nestus*), which springs from the foot of the Yerebiza, near Vrilo, has two falls in its course of about 60 miles, one of which, near Velika-Gubowicja, is from 90 to 100 feet in height: the banks of this river are extremely wild, and generally precipitous, until it reaches a fine valley near Amissa, where it enters the Adriatic. The *Narenta* (Naro of the ancients), the broadest river in Dalmatia, enters it from Turkey, and after watering it for about ten miles, parts into two channels at Fort Ovis, and reaches the canal of Narenta through ten arms. Its waters are saltish until it receives the Norin at Torre di Norin. Among the smaller rivers are the *Sinkotina* and *Ombla*.

The islands along the Dalmatian coast form several fine channels, which are sheltered from the stormy waves of the Adriatic: they are here called canals, and take their names from the adjacent islands; such are the canals of Morlak, Quarnerola, Zara, and Psaman, Mezzo, Spalato, Lissa, Curzola, Narenta, &c.

Dalmatia has numerous lakes, all of which become more or less dry in hot weather, except the Vrana, to the south-east of Zara, which is separated from the Adriatic by a narrow tongue of land, contains an area of about 8570 acres, and has brackish water. The lakes of Novigrad, Yezero (the dry bed of which is at times cultivated), Narin, Kadin, Trocklan, Prolosaz, &c., become dry at certain seasons from the want of natural springs. None of the numerous mineral springs have yet been turned to account, except the warm sulphureous springs at Spalato and Salona.

The roads are generally pretty good. There are no railways.

Climate, Soil, Productions.—No other part of the Austrian dominions is so hot as Dalmatia. In the lowlands the date-bearing palm, the American aloe, and the *Cactus opuntia* thrive in many districts in the open air. The almond blossoms in January. Among the mountains, where the snow sometimes continues till May and even June, the climate is much bleaker. Near the coasts of Zara, about the canal of the Narenta, and elsewhere on the Adriatic, the exhalations which arise from extensive swamps render the climate very unhealthy. Winter is characterised by six weeks of uninterrupted rain.

The arid character of the soil renders Dalmatia on the whole unsuited to agriculture. But there are parts of the country, such as the districts around Darnis, Muk, and Sign, which might be cultivated with success but for the indolence and ignorance of the people. The want of water and sheltering woods is another obstacle to cultivation. Turkey and Hungary supply the constant deficiency in the crops of grain, which do not furnish more than six or at most eight months' consumption. The whole amount of arable land in 1846 was only 348,025 English acres, of vineyards 169,216 acres, meadows 30,378 acres, olive-grounds 38,407 acres, while there were 1,361,405 acres of pasture-land and 1,105,811 acres of woodlands. The quantity of grain grown in the same year was, in English quarters—wheat 46,039, rye 6109, barley 85,751, oats 9818, and maize 30,984. Of potatoes 28,747 bushels were grown.

Figs may be termed almost the staple produce of the country: they grow without cultivation all along the coast, and upwards of three-quarters of a million of pounds are annually exported. The oil is of superior quality, and is used by the natives instead of butter; yet

above 20,000 barrels are annually exported. Much wine of a strong quality is made; the deeper the colour the more powerful the liquor: the *Vino Nero*, a red wine, is nearly black, and the white wine as deep in colour as Malaga: the *Marzenin del Teodo* is the best. The quantity of wine made in 1850 was 7,947,720 gallons. About 1,000,000 gallons are retained for home consumption; the rest is exported to Fiume, Trieste, and Venice. Almonds, dates, dried currants, citrons, pomegranates, oranges, and other fruits are exported. The country abounds in timber, but being in the interior it is of comparatively little value. The coast fisheries employ about 8000 hands: the staple kinds of fish are the sardine and the tunny, both of which are exported in a dried or salted state. The rivers too are well supplied, particularly with the salmon-trout, which attains an enormous size. At some spots the coral fishery is productive, especially near Sebenico. The Morlaks convert the fat of the frog into an oil, which they employ for various purposes. Honey and wax are produced in some quantities.

The rearing of cattle is on a limited scale: the breeds are inferior and small: the whole stock of oxen and cows is under 100,000; of sheep about 700,000, goats 400,000, horses and mules 20,000. Swine are not numerous. Poultry, except geese and ducks, are plentiful.

Of wild animals, Dalmatia possesses the chaglo, or wild dog, wolf, fox, and hare, but it has no deer. Swans, pelicans, falcons, vultures, owls, turkeys, and other wild fowl are abundant.

Manufactures, Commerce, &c.—The manufacturing industry of this country is very small, and scarcely adequate to supply its common wants: it is confined to the townspeople, and its main branches are shipbuilding and the distillery of spirits, among which the liquor called *Maraschino-Rosoglio* has obtained European celebrity. Here and there a little flax and cotton are spun; and small quantities of woollen cloth, coverlids, house-linen, tape, and coarse cottons, twine, cordage, and nettings, soap, vinegar, leather, and hats are made. For every other article of necessity or comfort Dalmatia is dependent on other countries. Coals and graphite are worked to some extent.

Favoured as Dalmatia is by its situation and numerous ports, its commerce is comparatively small. The principal countries with which it trades are the maritime provinces of Austria, Italy, and Turkey. To the first two countries it exports wine, olives, oils, brandy, figs, salt, pitch, bark, salted fish, hides, wool, wax, honey, fruit, &c., and to Turkey the same products, besides foreign produce and manufactures. It has also some transit-trade. Its returns from Turkey consist of horned and fatted cattle, cheese, wools and hides, corn, wood for fuel, drugs, &c. The declared annual value of the exports averages somewhat under 500,000*l.*, of the imports about 400,000*l.* The Dalmatians are well known in the Adriatic and Mediterranean as excellent mariners. The best ships are constructed along the coast of Cattaro. The vessels belonging to Dalmatia in 1847 amounted to—5 ships, with an aggregate burden of 1350 tons; large coasting vessels, 246, of 7876 tons; small coasting vessels, 1121, of 8220 tons; and 663 fishing-vessels, of 1769 tons: in all 2035 vessels, of 19,215 tons.

Number of vessels entered at Dalmatian ports in 1847.

Divisions, Towns, &c.—Dalmatia is divided into four circles, named after their respective capitals Zara, Spalato, Ragusa, and Cattaro: and these circles are subdivided into 26 districts. The circle of Zara comprises the Quarnerio, Dalmatian, and Culadio Islands; that of Spalato the islands of Zirona Grande, Bua, Solta, Lissa, Brazza, and Lesina; and that of Ragusa the islands of Calamotta, Meleda, Lagosta, Curzola, and Pelagosa Maggiore. Dalmatia contains 9 municipal towns, 14 market-towns, and nearly a thousand villages.

The towns of RAGUSA and SPALATO, or SPALATRO, will be noticed under their respective titles: the other more important towns we notice here:—

Zara, the capital of the circle of Zara and of the kingdom of Dalmatia, situated in 44° 8' N. lat. and 15° 15' E. long., lies, in the form of an oval, on a narrow tongue of land which is separated from the continent by a deep moat, over which there is a drawbridge. The city is divided by a straight main street and a cross street into four quarters; the other streets are straight, but narrow, ill-paved, and without sewers; the town is very badly supplied with water. It has two large squares, and, including the suburbs ('Borgo interno' and 'erizzo,' or Albanian Village), about 8000 inhabitants, most of whom speak Italian. Of the six churches (in which there are many good paintings) the most worthy of notice are the cathedral, founded by Henry Dandolo,

doge of Venice, which is a rather fine example of the Lombardic style, and that of St. Simeon, the patron saint of the city, whose remains are deposited in it. Zara is strongly fortified; the harbour is of considerable size, but shallow; vessels of 300 tons have to lie in the open sound. The principal trade is the import of manufactures from Trieste, and the export of maraschino, anchovies, almonds, and other products of the district. Zara is the seat of the government of the province, of a court of appeal, and various subordinate offices; and the residence of a Roman Catholic archbishop. Among the public institutions and establishments are a lyceum, a gymnasium, an archiepiscopal seminary, a normal high school, a public school for females, a school of midwifery, a lying-in and a foundling hospital, a civil and military hospital, a naval and military arsenal, a theatre, a casino, &c. There are several distilleries of rosoglio, which is highly esteemed. Most of the inhabitants however derive their subsistence from the fishery among the neighbouring rocky islets (scoglie), on several of which a little flax is grown.

Cattaro, the capital of the circle of the same name, stands at the foot of a steep mountain, at the south-eastern extremity of the Gulf of Cattaro, 42° 25' N. lat., 18° 46' E. long.: population about 3000. The town is defended by walls and a fort. The streets are narrow and gloomy. The principal buildings are the religious edifices, consisting of a cathedral, a collegiate church, seventeen other churches, and six convents, all belonging to the Roman Catholics; there are also two Greek churches, an hospital, a gymnasium, the residences of the governor and the bishop, and some government buildings. The bazaar, or market, is outside the eastern gate; it is supplied with provisions by the Montenegrins. The harbour is one of the best in the Adriatic, but is little frequented by shipping.

Curzola stands on the north-east coast of the island of the same name, population about 2000: the whole island contains 4268 inhabitants, chiefly employed in fishing and maritime occupations, or in the cultivation of the vineyards and the making of wine. The town is the seat of a bishopric. It is surrounded by a wall, and contains a cathedral and two monasteries. There is a good harbour. *Macarsca*, 34 miles S.E. from Spalato, population about 1700, is a small town with some coasting and fishing trade; it was once the capital of a republic. *Perasto*, on the bay of the same name, 6 miles N.N.W. from Dalmatia, is a small sea-port town of about 1800 inhabitants. *Sebenico*, population with the suburbs about 5000, is situated on a bay of the same name, which is formed by the river Kerka, before it falls into the sea. The bay, which forms a large and excellent harbour, is connected with the sea by the channel of St. Antonio, a narrow strait between lofty rocks. The town is built on the declivity of a mountain, rising amphitheatrically from the sea, and has a striking appearance; but the streets are uneven and irregular, and the ascent to some of the higher parts of the town is by steps. The walls of the town are old and decayed, but there are two forts which lie above and command it, and the harbour is defended by the new and strong fort St. Nicolo, built on a rock at the mouth of the canal. Sebenico is the see of both a Roman Catholic and a Greek bishop. The large cathedral, of Lombardic architecture, is accounted the handsomest in the whole country. There are two Roman Catholic churches and one Greek church, three monasteries, and two nunneries. The adjacent country produces abundance of wine and oil. The inhabitants have distilleries of maraschino, and are reckoned excellent sailors. The coral fishery in the neighbouring seas is now abandoned. *Trau* is the chief town of a district of the same name, in the circle of Spalato: population about 3000. Trau is built on a small island, which is connected with the continent by a wooden bridge 50 paces in length. On the other side there is a channel 350 feet broad between it and the island of Bua, with which it is connected by a mole, with a drawbridge to allow ships to pass, the numerous coasting vessels preferring this channel to the open sea. Trau is an old ill-built town, with narrow crooked streets. It is the seat of a bishopric, has a handsome cathedral, several other churches, three convents, and an hospital. The ancient citadel and fortifications are now in ruins. There is a small pretty good harbour, which is now not much frequented. The inhabitants have a rather considerable trade in the produce of the country,—wine, olives, figs, almonds, and other fruits; these fruits are produced on the island of Bua, which is five leagues in length, in great abundance.

Government, Education, &c.—The general administration of affairs in Dalmatia is vested in the Gubernium, or government-board, established at Zara, which receives its instructions from the Chancery and minister of the Home Department in Vienna. Each circle is divided into districts; each district into 'Haupt-gemeinden,' or head communities; and each of the latter consists of 'Unter-gemeinden,' or subordinate communities. At the head of each circle, in civil matters, is a 'Pretoria,' of each head community, a 'Podesta,' or 'Sandako,' and of each subordinate community, a 'Capo-villa,' or 'Casnazzo.' In each circle is a court for the trial of civil and criminal cases, appeal from these courts being allowed to the supreme court at Zara.

The revenues of Dalmatia arise from the imperial domains, the regalia, which include the monopoly of salt and tobacco; the direct and indirect taxes.

The majority of the inhabitants are descendants of the Slavonian hordes, who invaded these parts in the 7th century and drove out

the old inhabitants. The language of the country is the Herzogovine dialect of the Slavonian, but Italian is the prevalent tongue among the well-educated classes, and is used in the public offices and courts. The remainder of the population is composed of Italians, who are spread throughout the maritime towns and sea-coast; Bosnian Greeks and Servian Morlaks, both of whom took refuge here from persecution in the 14th century; and a few Germans, Jews, Greeks, and gipsies. The Morlaks or 'Morosclachi,' that is, Servians, who dwell next the sea ('Moro'), inhabit the mountain-districts of Zara and Ragusa and some of the islands: the wild Montenegrin is of this race. The population of Dalmatia increases but slowly: in 1808 it was 305,671, in 1825 it was 323,112, and as already stated in 1850 it was 393,715. In general the Dalmatian is of good stature, muscular, robust, hardy in his habits, and frugal in his diet; he lives much in the open air and under tents. The poorest man drinks his wine, and eats his salad, fig, and melon; he is hospitable and talkative, but cunning, and addicted to lying and theft.

The Roman Catholic (which is the established) religion is professed according to the last census by 331,692 of the inhabitants. The ecclesiastical establishment consists of the archbishop of Zara and the 5 bishops of Spalato, Ragusa, Sebenico, Lesina, and Cattaro. The inhabitants who profess the Greek faith, 78,858 in number, are in church-matters subordinate to a bishop resident at Sebenico and the vicar-general at Cattaro. The number of Protestants of all sects returned in the census was only 28; of Jews 110.

The Austrians found the country in a wretched state of ignorance, for the Venetians had done nothing whatever for its intellectual improvement. The Austrian government has extended to Dalmatia the system which prevails through a large part of the empire. [AUSTRIA.] A normal seminary and school for girls have been opened at Zara; national schools of a superior class have been established at Spalato, Macarsca, Ragusa, Cattaro, Sebenico, and Lesina, independently of the schools attached to the convents. And for the more affluent classes, gymnasia have been instituted in Zara, Spalato, and Ragusa, and a lyceum or species of university at Zara, in which town there are likewise an ecclesiastical seminary, an obstetrical school, and a college for educating 37 pupils at the public expense. In 1847 there were in Dalmatia 5 theological academics, 3 schools of philosophy, 26 gymnasia, and 1 special school; in all 35 upper schools. The popular-schools, 252 in number, consisted of 7 head, 182 lower, 35 girls, 1 infant, and 27 adult schools. Of the 224 common schools for children 52 were 'akatholische,' or not under the superintendence of the Roman Catholic clergy: 57 of the schools were Italian only, 58 were Servian (Serbisch), and 119 were mixed. The principal benevolent institutions are the hospitals and foundling asylums at Zara, Sebenico, Spalato, Lesina, and Cattaro, and the infirmary at Ragusa.

Dalmatia derives its name from the Dalmatine, a small district between Sebenico and Scordona. Its territory in former days was much more extensive than at present. The Dalmatians long resisted the Romans, but Augustus brought them under the Roman dominion. (Strabo, p. 315.) After the fall of the western empire, the country became a prey to the Goths and Avari successively; and the Avari maintained possession of it until the beginning of the 7th century, when they were driven out by swarms of Slavonians. This people erected it into an independent sovereignty, which endured until overthrown in the early part of the 11th century by Ladislaus, king of Hungary, who annexed the whole of it, the maritime towns only excepted, to the dominions of the Magyars. These towns, among which was Zara, the most important of them, had long been under the special protection of Venice, which availed itself of the connexion to extend its sway over other parts of the country, and bring the greater part of Dalmatia under subjection. That portion which lay on the right bank of the Zernany, and which Hungary retained, lost the name of Dalmatia altogether; and the same occurred with regard to the portion which forms part of Bosnia, and fell into the hands of the Turks, by whom it was crected into the sandshak of Hersek. The Austrians acquired the Venetian part of Dalmatia in 1798 under the treaty of Campo Formio. Dalmatia was seized by Napoleon in 1805, and in 1808 the republic of Ragusa was by him suppressed, and the territory added to Dalmatia. On the fall of Napoleon in 1814 the Austrians hold possession of Dalmatia, including Ragusa, which they have since retained.

DAMAN (pronounced Damaun, 'the border'), a district formerly of Afghanistan, now of the British territories in India, extends along the right bank of the Indus between 31° and 33° N. lat., and includes the tract of country comprehended between the Salt range, the

Suliman range, the Indus, and Sungur in Upper Scinde. The nature of this district is described under the head AFGHANISTAN, vol. i., col. 86. *Dera-Ishmael-Khan*, the capital of the district, stands on the right bank of the Indus, in $31^{\circ} 50'$ N. lat., $70^{\circ} 58'$ E. long., and is inclosed by a wall of unburnt bricks about a mile and a half in circumference. It has a population of about 8000, composed of Beluchis, Afghans, Hindus, and Juts. Cotton tissues are extensively woven here. The town has some trade, and is connected by a road along the Indus and through the Kohat Pass, with Peshawur.

There is a town called *Daman*, or *Damaun*, in the west of Hindustan, on the Gulf of Cambay, about 60 miles S. from Surat. It belongs to Portugal, and has several churches, a Parsee temple in which the fire has been kept burning (it is said) for above twelve centuries, and a population of about 6000, who carry on some trade and build coasting vessels.

DAMASCUS (*Damas*; *Es Scham*), the capital of Syria, both in ancient and modern times, is situated in a fertile plain at the east base of the Antilibanus, about 180 miles S. by W. from Aleppo, and 60 miles from the Mediterranean, in $33^{\circ} 27'$ N. lat., $36^{\circ} 25'$ E. long. It is one of the most ancient towns in the world, being mentioned as existing in the time of Abraham. (Genesis, xiv. and xv.) It is one of the very few places which have maintained a flourishing existence in all ages. Though often taken and devastated it has always risen again, and has always been mentioned as one of the most delightful situations in the world. It appears to have been in the time of David or of Solomon (1 Kings, xi. 24) the capital of an independent kingdom, which afterwards under the name of the kingdom of Syria was engaged in wars with the Jews. It was subsequently annexed to the empire of Assyria, afterwards to that of Persia; it then fell into the hands of the Macedonians, the Romans, and lastly of the Arabians, A.D. 634, when it was taken by the lieutenants of the kalif Abu-Bekr after the defeat of the forces of the emperor Heraclius in its neighbourhood. In the annals of the Church, Damascus is noted for the conversion and first preaching of St. Paul. It became for a time the residence of the kalifs, and after other vicissitudes was taken by the Turks under Sultan Selim. In the late war between the Porte and Mchemet Ali, pasha of Egypt, Damascus was taken by the troops of the latter, to whom it was formally ceded in 1833, but was restored to the Porte in 1840.

The pashalic of Damascus extends from north to south, from Hamah on the Orontes down to the deserts of Arabia Petraea, south-east of the Dead Sea, a length of about 4 degrees of latitude; and it comprehends the country of Hauran, and the other districts on the east side of the Jordan, the Lake of Tiberias, and the Dead Sea, besides the greater part of Judaea west of the Jordan, including Jerusalem and Nablous. It is bounded E. by deserts, which divide it from the valley of the Euphrates, N. by the pashalic of Aleppo, and W. by the pashalic of Acre. Corn, hemp, flax, madder, tobacco, cotton, silk, and cochineal are the chief products. Live stock are numerous. Except in the west the surface is level, and the cultivable land is extremely fertile. The total population exceeds half a million, exclusive of the Beduins.

The view of Damascus from the neighbouring mountain of Saleyeh, an offshoot of the Antilibanus to the north-west of the city, is very impressive: it comprises the town, with its numerous domes and minarets; the extensive woods, orchards, and gardens with which it is surrounded, clothed in perpetual verdure of various hues; and beyond it the vast level plain stretching to the east farther than the eye can reach, and bounded to the south-east by the distant mountains of Hauran, the ancient Auranitis. The rivers Barada and Phogé, respectively the Abana and Pharpar of the Old Testament, descending from the mountains furnish the city and the plain of Damascus with a constant supply of water. The water of the Barada, which is not good for drinking, is distributed into numerous canals for irrigation, and is the main cause of the extraordinary fertility of the country. The Phogé however has delicious water, which is conveyed by aqueducts and pipes to all parts of the city. The two streams rise at the eastern base of the Antilibanus. The scanty surplus of their waters below Damascus forms a small lake called Bahr-el-Merj. The town is about six miles in circumference, is surrounded by old brick walls falling to ruin in several places, and contained in 1843 a population of 111,552, of whom about 12,000 were Christians and 5000 Jews. The rest are Mohammedan Syrians, Arabs, and Turks. Outside the walls are extensive suburbs. The streets are narrow, and many of them have a gloomy, dilapidated appearance, being lined with dead brick walls, which are entered by small doors that open into the courts of the respective houses. Many of these houses are splendid in the interior, the courts being paved with marble and kept cool by fountains. There are no carriages in Damascus, and but few carts; camels, horses, mules, and asses constituting the means of conveyance. The Mohammedans of Damascus are the most fanatical and intolerant in Turkey, as they have proved by their frequent massacres of the Christian inhabitants.

The city contains many handsome mosques, the principal of which, originally a Christian cathedral dedicated to St. John, is 650 feet long and 150 feet wide; three Franciscan convents, in which the archbishops of the Armonian, Melchite, and Syrian Catholics respectively reside; several Christian churches belonging to the

Greeks, Maronites, Syrians, and Armenians; eight synagogues; an extensive khan; numerous bazaars all well supplied with goods; various hospitals and schools; a large serai, or fortified palace, in which the pasha resides in the centre of the city; and an extensive citadel. The great khan is a sumptuous building, the masonry being formed of alternate layers of black and white marble. The spacious square court within has a handsome fountain in the middle, and is surrounded by a fine arcade of pointed arches, enriched with mouldings. On the ground-floor are the entrances to chambers and magazines, and a staircase and gallery lead to another series of apartments above.

Damascus is a place of great trade, which is carried on by caravans to and from Baghdad, Mecca, Aleppo, &c.; there is caravan communication daily to Beirut, Tripoli, and Acre. British and European goods are imported to a considerable amount. In 1835 (according to Messrs. Michand and Poujeulat, 'Correspondence d'Orient,' there were in Damascus 129 tanners' shops, 22 establishments for printing stuffs, 75 dyers of stuffs, 120 dyers of silk, 34 houses of silk-winders, 748 merchants of damask cloth, 211 grocers, 68 tobacco manufacturers, 72 saddlers, 11 tent merchants, 47 copper-smiths, 50 ironmongers, 54 farriers, 70 fur-merchants, 98 lacemen, 24 corn-merchants, 148 bakers, 58 millers, 122 coffee-houses, 32 confectioners, 59 public baths, 129 butchers, 71 tailors, 43 shops for pipes, 6 watchmakers, 200 haberdashers' stores, 4 glass-manufactories, 19 armourers, 4 soap-factories, 143 weavers, and more than 400 public cooks. The manufacture of Damascus blades, once so famous, has declined long since: but good sabres are still made. Saddles and bridles, both rich and highly finished; fine cabinet-work, inlaid with ivory and mother-of-pearl; and rich jewellery, are among the articles of Damascene industry. The city is the seat of a tribunal of commerce. About 4000 looms were employed a few years ago in the manufacture of silk and cotton goods. The bazaars are better lighted, and have a more elegant appearance than those of Cairo or Constantinople. Every class of commodities has its own street or bazaar: in one they sell nothing but shoes, another is occupied by the goldsmiths, &c. The town is well supplied with snow and ice from the neighbouring mountains; ice-water, mixed with the juice of figs or currants, is a favourite beverage. The best coffee-houses of Damascus are situated in the suburbs, on a branch of the Barada; they are built of wood, and are cool and well shaded from the sun, which is their chief attraction.

Beirut is the port of Damascus. The exports and imports are given under that head. [BEIRUT.] The great Hadji caravan, consisting of from 50,000 to 60,000 pilgrims from various parts of Turkey, goes every year from Damascus to Mecca. Foreign consuls reside in Damascus.

Coin of Damascus. Imperial Greek.

British Museum. Actual size. Copper. Weight, 217½ grains.

DAMIETTA, a town of Lower Egypt, on the right bank of one of the principal branches of the Nile, and about six miles above its mouth, the ancient *l'hatniticure Ostium*, in $31^{\circ} 25'$ N. lat., $31^{\circ} 49'$ E. long. Old Damietta (*Thamiatis*) stood about four miles farther north, and near the sea, which however has now receded from it: its scanty remains are seen near the village of Esbé, about two miles from the shore. *Thamiatis* was a small town in the time of Stephanus Byzantinus, but it increased gradually from the decay of Pelusium, and drew to itself the trade of the latter. It was taken by the Saracens, who surrounded it with strong walls and made it one of the most commercial and wealthy towns of Egypt. It was frequently taken by the early crusaders. In 1249 Louis IX. landed with a large armament, and took *Thamiatis*; but having advanced inland, he was defeated and taken prisoner at Mansoura. The sultans of Egypt, in order to prevent further attacks in that quarter, choked up the mouth of the Nile by sinking large barges, filled with stones, and thus formed a dangerous bar, which prevents large vessels from entering the river. They also razed *Thamiatis* to the ground, and removed the inhabitants farther inland. From these occurrences arose New Damietta.

Damietta has a population of about 28,000. It has some fine mosques, several bazaars, and baths adorned with marble; many of the houses have pavilions on the terraces for enjoying the cool breeze. But in general the town is ill built. It now carries on merely a coasting trade with the Levant, its general trade having been attracted to Alexandria. The merchant-ships had to remain at anchor outside of the bar, and load and unload by means of boats. Rice and dried fish are the chief articles of exportation. The country around is a complete garden, irrigated by numerous canals, and planted with all kinds of fruit-trees, such as orange, lemon, fig, tamarind, pomegranate, &c.

The great marshy Lake Menzaleh begins two or three miles east of Damietta, and extends about 40 miles in length to near ancient Pelusium. It communicates with the sea by several mouths, and with the Damietta branch of the Nile by canals. The fishery of Lake Menzaleh is very productive; various kinds of water-fowl are also caught upon it.

DANUBE (in German *Donau*) is the second of European rivers, being inferior only to the Volga. The root-syllable (Dan or Don) of the name means 'water;' and this is probably the case also with the root-syllable of *Ister*, which is said to be the Celtic name of the river. Its course is about 1770 miles, and the surface drained by it and its numerous tributaries probably exceeds 300,000 square miles.

In its long course from west to east it traverses nearly twenty-two degrees of longitude (from 8° 10' to 30° E. long.); the most northern part of its basin falls only a little north of 50° N. lat., and the most southern does not reach 42° N. lat. But though the countries drained by it do not extend over eight degrees of latitude, they differ greatly in climate and productions, a circumstance owing to the different elevation of the three great plains which are traversed by this river. The most western, the plain of Bavaria, is between 1100 and 1200 feet above the level of the sea; the central plain, or that of Hungary, about 300 feet, and the lower plain, or that of Wallachia, from the Iron-Gate to its mouth, probably less than 100 feet.

The Danube rises from two springs, the Brig or Brigach and the Breg, on the eastern declivity of the Black Forest, in Baden, about 24 miles from the Rhine, near the point 48° 6' N. lat., 8° 9' E. long., at an elevation of 2850 feet above the sea. The waters of the two springs unite and form a mountain torrent. A third stream, originating in a spring in the palace garden of Donaueschingen, joins the infant river, which henceforth takes the name of Donau. Its general course at first is to the east, but afterwards it declines to the north-east, in which direction it continues till it reaches Ratisbon. From this place to Efferding, some miles west of Linz, it runs south-east by east, and from Efferding its general course is east. At Ulm, where it is joined by the Iller from the south, the river becomes navigable for large barges; its surface is here 1255 feet above the level of the sea, and at Donauwörth, where it enters the plain of Bavaria, 1160 feet. Before it enters that plain it runs for the most part of its course along the southern base of the dry and sterile table-land called the Rauhe Alp, which rises to an elevation of 2000 feet and upwards above its level, and contributes to it only a few rivulets. On the south numerous offsets from the Alps approach the river, forming hills of moderate elevation with gentle declivities, and inclosing charming valleys of great fertility. The affluents which descend from these valleys to the Danube are numerous.

The Danube runs through the Bavarian plain from Donauwörth to Passau, changing nearly in the middle of its course from north-east to south-east. At Ingolstadt it is 1140 feet, at Ratisbon 1050 feet, and at Passau 800 feet above the level of the sea. That portion which lies south of the river is an extensive plain, which reaches to the very foot of the Alps, and on which comparatively few hills and rocks are dispersed. It is traversed in a diagonal line by the Isar, which rises in the northern districts of Tyrol, and runs north-east to the Danube, which it joins between Ratisbon and Passau. Timber and fire-wood are floated down the Isar. On the eastern boundary of the plain runs the Inn, which has been noticed under AUSTRIA (vol. i. col. 719). The plain north of the Danube has a much more uneven surface, rising frequently into gentle hills, which however nowhere attain the height of mountains. This plain extends beyond the boundary of the basin of the Danube, to the very banks of the Mayn, and even to the north of this river. Across this plain runs the Ludwigs Canal, which joins the Danube to the Mayn, and is noticed under BAVARIA (vol. i. col. 936). Besides the Altmühl this plain is traversed by the Naab and the Regen, two other considerable affluents of the Danube.

The third part of the upper course of the Danube is that between Passau and Pressburg. At Linz its surface is 650 feet, at Vienna 421 feet, and at its entrance into Hungary 417 feet above the level of the Black Sea. Through all this distance it runs between the steep offsets of the Böhmer Wald, and the northern ranges of the Alps of Salzburg and Styria, which here in some places attain a great elevation (from 3000 to 5000 feet). The level country on the banks of the river is of small extent, except as we approach Vienna, where the mountains recede so far as to leave a considerable plain on both banks. In this part of its course the Danube receives the Traun, the Ens, and the Morava [AUSTRIA, vol. i. col. 719], and divides in several places so as to form islands, especially above and below Linz, and in the neighbourhood of Vienna. But the current of the river here, as well as in the Bavarian plain, is so rapid that it can be navigated by barges only downwards: the barges must be tracked up the river. It has no rapids, but several dangerous whirlpools. The regular steam navigation of the river commences at Linz; but steamers also ply up to Ratisbon, and even to Donauwörth.

In its middle course the Danube first traverses the Lesser Hungarian plain. At Presburg it is 401 feet, and at Buda, which lies in the Great Hungarian plain, 348 feet above the sea. In its course through the lesser plain the current of the river is still rapid, though much diminished. It divides into numerous branches, which inclose

islands, among which the largest is the island of *Schütt*, which is upwards of 50 miles long, and from four to nine miles across. As the adjacent country consists of very soft alluvial soil, the river frequently changes its course. In this plain the Danube is increased by the waters of the Leitha and Raab from the south, and the Waag and Gran from the north.

Between Gran and Waitzen the river flows between two mountain ridges. That on the south is the northern extremity of Mount Bakony, and on the north an offset of the Carpathians, called the Neograd range. At Waitzen it issues from the mountain defile, and changes its eastern into a southern course. In this direction it flows with a slow current and numerous windings through the greater plain of Hungary for nearly three degrees of latitude, till it meets, after its junction with the Drave, the Sirmian range, or Mount Werduik, which again deflects it towards the east. It then skirts the Hungarian plain on the south, dividing it from the hilly Slavonia and Servia, till it arrives near Moldova, where it again passes through a mountain valley. During its course through the Hungarian plain its waters are increased by those of the Sarvitz, Drave, and Save from the west, and the Theiss and Temes from the north. [AUSTRIA, vol. i. cols. 720, 721.] At Buda its surface is 348 feet, at Zambor 272 feet, and at Moldova probably not much more than 200 feet above the level of the Black Sea. Its average breadth between Waitzen and the mouth of the Drave is 600 yards, and its depth varies from 5 to 20 feet.

The mountain valley of the Demir Kapi (the Iron Gate) is formed on the north by the Banat range, an offset of the Transylvanian Carpathians, and on the south by a lateral range of Mount Balkan: it extends from Moldova in the Banat to Tcherniz in Wallachia. In entering this narrow valley the rapidity of the river gradually increases. About four miles below New Orsova, is the Demir Kapi, where a ledge of rocks runs across the bed of the river, over which the water rushes with great noise, producing below it a number of dangerous whirlpools. Vessels drawing not more than 2½ feet could not until lately descend it except in time of floods; but by blasting the rocks a channel has been cut by which steamers now ply from Vienna to Galatz without a portage as formerly. Before these improvements in the bed of the river were accomplished, passengers and luggage were sent down the rapids in cutters, or conveyed by a good road from the station of Drenkova to Orsova, where they were shipped in another steamer on the Lower Danube. At the Demir Kapi the Danube leaves the Austrian dominions and enters Turkey. A few miles lower down it issues from the valley, the country to the north sinks down to a flat, and the current of the river becomes slow and gentle.

On the mountains and hills which inclose the valley of the Demir Kapi on both sides are some Roman antiquities, the most interesting of which are the ledges and shelves that supported the Via Trajana on the Servian side of the defile, and the inscription on the rocky wall of the same side in honour of Trajan. The limestone rocks on each side of the defile abound in caves and fissures in which the gnats and mosquitoes, the scourges of this part of the Danube, take refuge in cold or wet weather. The remains of the bridge built by Trajan over the Danube are a short distance below the rapids of the Demir Kapi.

Along the lower course of the Danube the country on the south below the Demir Kapi by degrees sinks into a flat plain: east of Silistria it presents nearly a level surface with some swamps. The country to the north is the great level of the Wallachian plain, which near the river is low and generally marshy, while the right bank is comparatively high and bold. In this tract the river first runs nearly south from Tchernitz to below Widdin, then turns to the east and continues in that direction to about 30 miles from the Black Sea, where it suddenly bends to the north near Rasova. In this direction it runs upwards of 100 miles to the junction with the Sereth, and hence again eastward to its mouth. In this part of its course the river frequently divides, and forms numerous large islands, especially below Silistria. Its width, where it is not divided by islands, is between 1500 and 2000 yards, and its average depth being above 20 feet, it is navigable by vessels of considerable burden. From the north it receives the Aluta, or Alt, Sereth, and Pruth, which rise in the eastern Carpathians [AUSTRIA, vol. i. col. 721], and from the south the Morava, which is formed by two large rivers the western and eastern Morava, which drain a great portion of the northern declivity of the Balkan Mountains.

After having been joined by the Pruth, the Danube divides into several branches, forming a number of deltoid islands, and flows into the Black Sea by seven mouths, of which the principal are the Kilia, the Sulina, and the Gheorghievskoi (St. George's, which forms the boundary between Turkey and Russia in this part). Besides these outlets a small branch from the St. George mouth communicates with the lake Rassein in the north of the Dobrudscha in Bulgaria, and this lake has two outlets (Jalova and Portitcha) into the Black Sea, which are sometimes called mouths of the Danube. Round the embouchure of the river vast quantities of mud brought down by the stream have accumulated and formed banks; and it is only by constantly raking the mud deposited on its bottom that the Sulina or principal channel is kept practicable for shipping. When easterly winds continue for some time, the depth of water on the bar of the Sulina mouth diminishes rapidly, the increased resistance of the sea against a diminished

force of current causing the mud to accumulate very fast. This cause added to the neglect of Russia in dredging the channel, as she is bound to do by treaty, has left at times only a depth of nine feet water on the bar. In such cases the corn ships on the Danube are obliged to take in the greater part of their cargoes outside the bar by means of lighters, at greatly increased cost and risk. In the present spring (1854) the Russians, at war with Turkey, have blocked up the Sulina mouth altogether. The Turks kept a depth of 16 feet water on the bar of Sulina; of late years the depth has seldom exceeded 13 feet. Russian steamers ply up the Kilia mouth to Ismail. The St. George mouth is almost entirely blocked up with mud; in many parts it has not over 4 feet water, and its channel can be reached through the mud banks round its embouchure only by constant sounding, so intricate and shifting is the passage. To avoid the tedious and difficult navigation of the Danube below Rasso, it has been frequently proposed to cut a navigable canal from Czernavoda to the harbour of Kustendji on the Black Sea, a distance of little more than 30 miles, and nearly parallel to the so-called Trajan's Wall; but it has been stated that the nature of the ground presents very great if not insuperable obstacles to the execution of this project.

Steam navigation was introduced on the Danube in 1830. Vessels of 100 tons ply up to Ulm. The 'up' navigation is very tedious on account of the force of the current in many parts of its course. The steam voyage between Vienna and Constantinople is now made in seven days. Besides its connection with the Rhine by means of the Ludwigs Canal above mentioned, the Danube communicates with the Elbe by the Moldau and canals. This river forms perhaps the greatest natural highway for commerce in Europe; but its advantages have been vastly abridged by the vexatious tolls and still more vexatious sanitary regulations imposed by the different states through which it flows.

The Danube is frozen over in winter in all its upper course, and even in the plain of Hungary from December to March. The breaking of the ice is a moment of great anxiety to the inhabitants of the towns on its banks. If the snow melts and the rains fall gradually, the river rises slowly and the ice breaks off by a few yards at a time; but if a rapid thaw sets in, in the upper part of the stream before the ice has begun to stir lower down, the river becomes swollen suddenly, tosses the ice into the air with a loud explosion like artillery, and sweeps ashore icebergs many tons in weight. So sudden in some seasons is the crash, that persons on the ice have not time to reach the shore, and many lives are lost. When this sudden thaw is apprehended, watchmen are posted on every eminence along the banks of the river, who give notice all along the line, by firing alarm-guns, that the ice is broken.

The Danube was known to the early Greek writers under the name of Istros (*Ἰστρος*), called by the Romans Ister, which was probably the genuine name of this river in the lower part of its course, perhaps from the Iron Gate to the sea. The Romans learned the name Danubius from the natives on the upper course of the stream, with whom they were brought into contact by commerce and by conquest. Herodotus (book iv., chap. 48, &c.) has transmitted to us all that was known in his time of the Danube and its tributaries in the middle and lower part of its course. Strabo observes (p. 304), "the upper parts of the river and the parts at its source, as far as the cataracts, are called Danubius, and flow chiefly through the country of the Daci; the lower parts, as far as the Pontus [the Black Sea], and in the neighbourhood of the Getæ, are called Isterus."

DANZIG, one of the four administrative circles of the province of West Prussia, extends nearly about 100 miles along the Baltic, and is bounded N. by the Gulf of Danzig, E. by the circle of Königsberg, W. by Pomerania, and S. by the circle of Marienwerder. Its area is 3222 square miles, and the population in 1849 was 409,667, almost wholly composed of Catholics and Evangelicals, the ratio between them being very nearly that of nine to ten. The Jews number about 6000. The surface is mostly level, with a gradual slope from the banks of the Vistula to the Baltic. The soil is in many parts sandy and swampy; but in general it is productive, and along the Vistula exuberantly fertile. The produce consists of great quantities of grain, vegetables, and fruit. The circle contains about 800,000 acres of woods and forests. The rearing of horses and cattle, and the fisheries along the coast afford profitable occupation to a large portion of the inhabitants. Amber is obtained on the shore in the vicinity of Danzig. The principal rivers are the Vistula, Schwente, Sorge (which takes the name of Elbing before it falls into the Frische Haff), Thiene, and Motlau. The semicircular inlet of the Baltic along the coast of West and East Prussia is called the *Gulf of Danzig*, which between the Brusterort light on the east and the Rückshöfen light on the west, has a length of about 60 miles, and its depth from the line joining these points to the Frische Nehrung (a narrow spit that separates it from the Frische Haff) is about 80 miles. The north-western part of the gulf is called *Putzig Bay*, which is bounded on the north-east by a spit of land 20 miles long, with a breadth of one to two miles, stretching out in a south-east direction from the Rückshöfen light towards the head of the gulf.

The chief manufactures are woollens, linen, leather, beer, and spirits. A very extensive trade in corn is carried on with foreign countries from the ports of Danzig and Elbing. From the Berlin,

Stettin, and Posen railway a branch runs eastward to Bromberg in the valley of the Vistula, whence a line runs up the left bank of this river through Dirschau to Danzig; from Dirschau a branch runs eastward through Marienburg and Elbing to Königsberg.

The circle of Danzig is subdivided into seven districts, which are named from the chief town in each. These towns are—**DANZIG**: *Neustadt*, 20 miles N.N.W. from Danzig, with about 2000 inhabitants; *Karthaus*, a small place W. of Danzig; **ELBING**: *Marienburg*, on the right bank of the Nogat arm of the Vistula, which is here crossed by a pontoon bridge 546 feet long; the town is surrounded by a rampart, and contains a fine palace (which was once the seat of the Grand Master of the Teutonic Order, and was restored by the present king of Prussia), several breweries, distilleries, tan-yards, cotton and woollen factories, and about 6000 inhabitants, who export corn, fish, timber, quills, bristles, &c.; *Stargard*, a walled town 26 miles S. by W. from Danzig, on the Ferse, which has distilleries, breweries, tanyards, and about 4000 inhabitants; and *Behrendt*, in the western part of the circle, near the source of the Ferse, which has about 2000 inhabitants. *Dirschau*, on the left bank of the Vistula, 20 miles by railway S. from Danzig, has 3500 inhabitants, who manufacture leather and beer. *Putzig*, is a small manufacturing town, 28 miles N.N.W. from Danzig, and near the head of the Bay of Putzig, which is named from it: population about 2200; industrial products broadcloth and iron-ware.

DANZIG, or GDANSK, a fortified city and sea-port of Prussia, capital of the administrative circle of Danzig, in the province of West Prussia, is situated in 54° 21' N. lat., 18° 39½' E. long., on the left bank of the principal arm of the Vistula, about 3½ miles from its mouth in the Baltic at Weichselmünde, and has a population of about 70,000 including its nine suburbs and the garrison. The city is traversed by the Motlau and Radannde, which flow by several channels into the Vistula. The Motlau is deep enough within the town to float vessels of 8 or 9 feet draught, and between the lower part of it and the Vistula there is a harbour for larger vessels. By the mouth of the Vistula only small vessels can enter, as it is made shallow by sandbars; but by a canal cut across a neck of land directly into the gulf, and having a breadth of 120 to 180 feet, with a depth of 15 feet, large vessels can go quite up to the town. The entrance to the canal is protected by piers that run out for about 500 yards into the gulf, in which there is excellent anchorage, good holding ground, and shelter against all winds except the north-east and east. Among the outworks is the intrenched camp on the island of Neufahrwasser, which covers the approach from the Baltic.

The first mention of Danzig occurs in the 10th century, and it was long afterwards a bone of contention between the Danes, Swedes, Pomeranian princes, and Teutonic knights. In 1454 it sought the protection of the kings of Poland, who recognised its independence to the fullest extent, and admitted its citizens to enjoy every right possessed by the Poles themselves. In 1733 it gave shelter to King Stanislaus, but, after enduring a furious bombardment by the Russians and Saxons, was forced to acknowledge Augustus II., his rival, as legitimate sovereign of Poland. Prussia by her acquisitions at last hemmed in this little state so completely, that in 1772 its commerce with the interior was almost annihilated by heavy dues laid on its exports by that power. On the re-partition of Poland in 1793, Danzig was compelled to admit a Prussian garrison, and to make its usages harmonise with the institutions of its new masters. From this time until the breaking out of the war between France and Prussia in 1806, the town again rose to affluence and prosperity, but it experienced another reverse in 1807, on its falling into the hands of the French, by whom it was besieged for four weeks, under the command of Lefevre, subsequently Duke of Danzig. In the same year the treaty of Tilsit erected the town and a surrounding tract of about 230 square miles into a free state under the ancient Danzig code of laws. Under the French its trade was again almost annihilated. In December 1813 Danzig capitulated to the Russians and Prussians, after a siege of eight months. On the 3rd of February following, the king of Prussia was again recognised as its sovereign.

Danzig is one of the strongest fortresses and most flourishing towns in Prussia. Many parts of it are in a fine old style of building, though not regularly laid out; but a great number of the streets are narrow and crooked. The fortifications consist of ramparts, wet-ditches, crossed by four drawbridges, leading to as many gates, nineteen bastions and the citadel of Hagelsberg, and two strong forts on adjacent eminences. By means of gigantic sluice-gates the country around the town on three sides can be laid under water. Within these defences the town is divided into six quarters—the Altstadt, Vorstadt, Rechtstadt, Niederstadt, Langgarten, and Speicher-insel—and is about 2½ miles in circuit. Without the walls there are nine suburbs. The Langgarten, the finest quarter, is traversed by a broad handsome street, planted with lime-trees; the Rechtstadt too has some spacious streets and handsome houses; but the Altstadt (old town) is close, dirty, and ill-constructed. There are no spacious or regular squares. The Speicher-insel contains the storehouses and magazines, which can contain half a million quarters of corn. There are above 20 churches in the city: Lutheran, Reformed-Lutheran, and Roman Catholic. The cathedral or Marien Kirche is a remarkable cruciform edifice; it was commenced in 1343,

and finished in 1508; the roof, which is 98 feet above the pavement, rests on 28 brick columns, and its exterior is ornamented with 10 small towers; it has a lofty steeple, and round the interior are 19 altars and 50 chapels, chiefly founded by citizens of Danzig as burial places for their families. A Dutch painting of the Last Judgment, by John Van Eyck, is suspended against one of the columns. Among the other remarkable buildings are the exchange, called *Arthushof*, a large gothic structure erected in 1879; the senate house built about 1811; the *Grüne Thor*, now converted into a museum; and the theatre. There are also two Mennonite places of worship, two synagogues, and several convents in the town. Danzig has a royal school of navigation; a gymnasium with seven professors and a library of 30,000 volumes; and a great number of endowed schools. It has a board of trade and navigation, a tribunal of commerce, a public library, an orphan asylum, a foundling hospital, four hospitals, and an observatory. There are yards and slips for shipbuilding; sugar refineries, spirit distilleries, breweries, copper-works, and manufactories of silks, woollens, linen, leather, hats and gloves, soap and starch, earthenware, arms, steelware, tobacco, &c. Independently of these branches of industry, the town has a very considerable trade with the adjacent provinces and foreign parts, and exports large quantities of corn, timber, pot and pearl ashes, quills, Danzig brandy, black or spruce beer, zinc, wool, flax-seed, oil-cake, bones, flax and hemp, &c.

The imports are composed of wine, brandy, rum, raw cotton, coffee, herrings, iron and steel-ware, indigo, lime and plaster of Paris, sugar, salt, tobacco, piece goods, coal. In 1849 the arrivals in the port numbered 781, the departures 809. Of the former more than half were in ballast or limestone; of the departures 397 were freighted with corn, and 303 with timber. In 1850 Danzig exported 400,000 quarters of wheat, 62,400 quarters of rye, above 40,000 quarters of barley, 2000 quarters of oats, and 27,700 quarters of peas.

Danzig is 260 miles in a straight line N.E. from Berlin; but the distance by railway through Stettin is 344 miles.

DARABGHERD (*Darab*), a town in Persia, in the province of Farsistan, about 26° N. lat., 54° 50' E. long. It was formerly a town of great extent, but like many other towns in Persia it has fallen from its former splendour. Although a great part of it is in ruins it still contains between 15,000 and 20,000 inhabitants. It stands on the banks of a small river in an extensive plain, which is intersected with villages and cultivated lands. The town is surrounded with groves of dates, oranges, and lemons. The tobacco cultivated in its neighbourhood is esteemed for its mildness, and is largely exported. There are some antiquities in its neighbourhood, including the ruins of an aqueduct, some sculptured rocks, and a caravanserai, hollowed in the very heart of a mountain.

DARDANELLES are fortifications erected on both sides of the Hellespont, which from them takes also the name of the Strait of the Dardanelles. This strait, which divides Europe from Asia and unites the Sea of Marmara to the Archipelago, extends in a south-west direction between 40° and 40° 30' N. lat., 26° and 27° E. long. Its length is upwards of 50 miles, but its width varies. Near the Sea of Marmara it is about 10 miles across, but it narrows by degrees, until opposite the town of Gallipoli it is only about 2 miles wide. Towards the southern extremity it narrows still more, at some places even to one mile and less. A strong current runs always through it from the Sea of Marmara to the Archipelago, and the Turks have erected fortifications at these narrow places for the purpose of rendering it impossible to attack their capital from the side of the Mediterranean Sea.

The fortifications originally consisted of four castles, two in Europe and two in Asia. Two called the New Castles are situated near the entrance of the strait from the Archipelago, where it is more than two miles across. The castle in Europe is called *Kilid Bahr*, and that in Asia, *Kum Kalesi*. About 18 miles farther to the north-east are the Old Castles; that in Europe, the ancient *Sestos*, is called *Sed Bahr*; that in Asia, the ancient *Abydos*, *Khanuk Kalesi*. The name of Dardanelles is now especially applied to some fortifications erected in modern times between the castles, but considerably nearer to the old than to the new castles. The number of guns mounted in all these fortifications and some others of less importance is 689, besides 8 mortars. Among them are several immense guns, from which they discharge stone-shot. The quantity of powder which these large guns require is enormous: the largest is charged with 330 lbs.

DAR-FUR, a country in Africa, between Bornou and Abyssinia, lying between 11° and 16° N. lat., 26° and 30° E. long. Its extent and boundaries are very imperfectly known.

It may be considered as a large oasis placed in the south-eastern corner of the Sahara, and divided by deserts of considerable breadth from Dar-Zuleh or Wadai on the west, and from Kordofan on the east. The southern part of the country is hilly, and contains valleys with brooks and rivulets which have water all the year round. But the northern part is a level country, partly covered with sand, and in other places by rocks: water is obtained only from wells. During the rainy season it exhibits a fine vegetation, but during seven or eight months in the year the whole district is dried up, all the plants fade away, and even the trees lose their foliage.

The periodical rains commence in the middle of June and continue to

the middle of September; they are generally very heavy, and mostly accompanied by lightning. The changes of the wind are not periodical but instantaneous. The greatest heat prevails with a southerly wind, and the greatest quantity of rain falls with a south-east wind. When the breeze is from the north or north-west it is most refreshing, but it does not generally continue long in that quarter. When southerly winds blow the hot air is filled with thick dust.

As soon as the rains begin the agricultural operations commence. The grains raised are wheat, doku, kassob, and sesamum. They plant also beans, kidney-beans, lentils, and some leguminous vegetables peculiar to that part of Africa. Water-melons, together with some other kinds, abound during the wet season, and also before if they are irrigated. Among the fruit-trees are tamarinds and dates. Browne says that tobacco is indigenous in Dar-Fur.

Neither horses nor sheep are numerous. The flesh of the sheep is indifferent, and the wool resembles hair: they have not a large tail, like other sheep in this part of Africa. Goats are more numerous. Asses are of small size. Cattle form one of the chief branches of wealth, and they are paid as tribute to the sovereign. Camels are very numerous, and of all colours and sizes; their flesh is used for food.

The ferocious and wild animals are principally the lion, the leopard, the hyena, the wolf, the jackal, the elephant, the rhinoceros, the giraffe, the hippopotamus, crocodile, and buffalo. Antelopes, ostriches, and civet-cats are also common. Iron and copper are found in the southern districts; besides alabaster, various kinds of marble and common salt occur here. Nitro abounds, but is not used.

The population of Dar-Fur, which is estimated at from 150,000 to 200,000, consists mostly of the descendants of emigrants from Dongola, Sennaar, and Kordofan. Among them are also some families from Egypt, Tunis, and Tripoli. They use the language of Barabra, though they also speak Arabic. Arabs are also numerous in some parts.

Colbe, *Kobbe*, or *Qorbi*, the capital, from whence the caravans or 'kafilas' depart for Egypt, is two miles in length, extending from south to north, but very narrow, and the houses, each of which occupies in its inclosure a large portion of ground, are separated from one another by a considerable space. The town is full of trees of every kind, and contains about 6000 inhabitants, all of them merchants. Other places are *Cubcaba*, or *Kubcaba*, in the western district, the depôt of all the merchandise destined for Soodan and the general resort of the merchants trading to Egypt.

Dar-Fur carries on some trade with Syout, in Upper Egypt. The kafilas travel only once in fifteen months, and pass by way of the great wady El-Khargeh; they consist of about 1100 camels carrying slaves, ivory, horns of the rhinoceros, teeth of the hippopotamus, ostrich feathers, gum, hides, drugs, copper, pimento, tamarinds, and leather sacks for water; also parroquets, monkeys, and guinea-hens. The caravans of Dar-Fur carry from Egypt silk manufactures, cotton cloths (striped, blue, and white), glass, glass wares, imitation corals, coral beads for bracelets, gold lace, Indian merchandise, spices, coffee, a little sugar, gum, benzoin, alum, tartar, oil of vitriol, verdigris, sulphur, nails, utensils, corn, carobs, and fruit. The inhabitants are Mohammedans, and are governed by a despotic sovereign.

(Browne, *Travels in Africa*.)

DARIEN. [PANAMA.]

DARLING RIVER. [NEW SOUTH WALES.]

DARLINGTON, Durham, a municipal borough, market-town, and the seat of a Poor-Law Union, in the parish and ward of Darlington, is situated in a rich fertile country on the eastern slope of a hill on the right bank of the river Skerne, in 54° 31' N. lat., 1° 32' W. long.; distant 18 miles S. by E. from Durham, 241 miles N.N.W. from London by road, and 235 miles by the Great Northern railway. The population in 1851 was 11,228. For sanitary purposes the township is under the management of a Local Board of Health. There are three livings, which are perpetual curacies in the archdeaconry and diocese of Durham. Darlington Poor-Law Union contains 41 parishes and townships, with an area of 60,759 acres, and a population in 1851 of 21,560.

The town consists of a square market-place, of which the church forms the eastern side, and of several streets, or as they are designated gates, which branch from it. There is a bridge of three arches over the Skerne. The parish church, dedicated to St. Cuthbert, is a cruciform building, and has a central tower surmounted by a light spire. The general character of the architecture is early English. In the chancel are three stone stalls of a date considerably later than the walls of the chancel. The Independents, Baptists, Wesleyan, Primitive, and Association Methodists, Quakers, and Roman Catholics have places of worship. The Grammar school, founded by Queen Elizabeth in 1567, has an income from endowment of 220*l.* a year, and had 78 scholars in 1852. There are also National, British, and Infant schools, and a Blue-Coat school; a mechanics institution, a savings bank, and several almshouses. A county court is held in the town.

The trade of Darlington is considerable: for a long period the principal manufactures were of camlets and other woollens: about the close of last century moreens and similar stuffs were made.

The woollen manufacture was superseded in a great degree by that of linens, as huckabacks, diapers, sheetings, and checks. But the chief occupation of the inhabitants now is combing wool and making woollen yarn (which is used for imitation Indian shawls, Brussels carpets, &c.), spinning flax, grinding optical glasses, and the manufacture of brass and iron. There are very extensive worsted mills. The market is on Monday for corn and provisions of all kinds; there is a great market for cattle every fortnight.

DARMSTADT, the capital of the grand duchy of Hesse Darmstadt, and of the province of Starkenburg, stands in 49° 52' N. lat., 8° 37' E. long., 16 miles by railway S. from Frankfurt-am-Mayn, 39 miles N. from Mannheim and Heidelberg, and has 22,500 inhabitants. It is situated on the banks of the small river Darm, between the Mayn and the Rhine (about 10 miles from the latter) at the commencement of the Bergstrasse, a Roman road leading from Darmstadt to Basle. It was formerly a village, but under the emperor Louis the Bavarian, became a town of the principality of Katzenellenbogen, and a castle was erected for its defence. After the extinction of that family it lost much of its importance, until George I., son of the emperor Philip the Great, made it his residence, since which period it has increased considerably both in extent and consequence.

Darmstadt is divided into the old and new town; the former is inclosed within old massive walls, and has a gloomy uninteresting appearance. The new town is similarly defended, and is built in better style, has broad, clean, and well-lighted streets, and handsome houses; but there are many spaces within the walls not occupied with buildings. The town has six gates and five public squares. The principal public buildings are—the new palace, in which the Grand Duke resides; the old palace, which contains a large gallery of paintings, a fine museum of natural history, and a public library of 200,000 volumes; the Exercier-Haus, or riding-school; a very handsome opera-house; an arsenal; barracks; the town church, containing the ducal vaults; the Lutheran and Reformed Lutheran churches; and the Roman Catholic church, a handsome circular structure situated on an eminence and surmounted by a splendid dome, which is supported by 28 large columns. There are a gymnasium, a training-school, and various other schools in the town. The chief manufactures are woollens and linens: the inhabitants are mainly dependent for support upon the expenditure of the court and the garrison; many of them however are engaged in tanning, gardening, &c. The environs are very picturesque, and the soil is highly cultivated. Darmstadt has six fairs every year.

DARNETAL. [SEINE-INFÉRIEURE.]

DARORA. [ARAGON.]

DARTFORD, Kent, a market-town and the seat of a Poor-Law Union in the hundred of Axton, Dartford, and Wilmington, is situated on the river Darent, in 51° 27' N. lat., 0° 13' E. long.; 15 miles E.S.E. from London by road, and 17 miles by the North Kent railway. The population in 1851 was 5763. For sanitary purposes the parish is under the management of a Local Board of Health. The living is a vicarage in the archdeaconry of Maidstone and diocese of Canterbury. Dartford Poor-Law Union contains 21 parishes and townships, with an area of 47,305 acres, and a population in 1851 of 27,214.

Dartford lies in a narrow valley, formed by the river Darent, from which it takes its name (Saxon Darentford), and the principal street is on the Dover road. The chief circumstance of note in its history is that the great insurrection, under Wat Tyler, in the reign of Richard II., broke out here. The first paper-mill at Dartford was built by Sir John Spielman, a German, who introduced the manufacture; the mill stood on the site of the present powder-mills: the first mill established in England for rolling and slitting iron was also near Dartford. The trade of the town is considerable. There are chalk-pits in the vicinity; oil, powder, and paper-mills on the river Darent; corn-mills on a large scale worked by water-power and steam; also a large iron foundry and manufactory of machinery. At a short distance from Dartford are a cotton-mill and silk printing works. The town is lighted with gas. Many new houses have been erected, and the town appears to be steadily improving. Barges from the Thames come up to the wharf below Dartford. The church is a large and ancient edifice, chiefly of the decorated style, and contains some good brasses. The Independents, Wesleyan Methodists, Baptists, and Lady Huntingdon's Connexion have places of worship here. There are National, British, and Infant schools, and a literary institute. The market is on Saturday, and there is a yearly fair.

Near the town are the ruins of a nunnery, founded A.D. 1371, by Edward III., for Augustine nuns, but afterwards occupied by Dominican nuns. The remains consist of a large embattled gateway, with some adjacent buildings, now occupied as a farm-house; the gardens and orchards occupied 12 acres, and were surrounded by a stone wall yet entire. Dartford Heath is of considerable extent, and affords very pleasant prospects.

(Hasted, *Kent*; Dunkin, *History of Dartford*; *Communication from Dartford*.)

DARTMOOR. [DEVONSHIRE.]

DARTMOUTH, Devonshire, a sea-port and market-town, a municipal and parliamentary borough, in the hundred of Coleridge, is situated at the mouth of the river Dart, in 50° 21' N. lat., 3° 35'

W. long., 32 miles S. by W. from Exeter, and 202 miles W.S.W. from London by road. The nearest railway station is at Totnes, on the South Devon line, which is 8 miles N.N.W. from Dartmouth, and 222½ miles from London. The population in 1851 was 4508. The town is governed by 4 aldermen and 12 councillors, one of whom is mayor; and returns one member to the Imperial Parliament. The livings are in the archdeaconry of Totnes and diocese of Exeter.

Dartmouth is delightfully situated on a declivity on the right bank of the river Dart. The hill on which the town stands is so abrupt that the base of the houses in the upper street is almost on a level with the chimneys in the street below. Some of the houses are extremely old, and display some fine specimens of wood-carving; but generally the town is dirty, and the streets are narrow and ill-paved. The town has been recently lighted with gas. A floating bridge has been established across the river Dart. The harbour is safe and convenient, and can accommodate 500 ships. The entrance is between the ruins of Kingswear Castle and the fort and church of St. Petrox, where a battery has been erected. The port extends from the river Teign to the river Erme, a distance of 40 miles.

In ancient records this place is called Clifton-Dartmouth-Hardnesse, originally three adjoining towns: it was incorporated by this name in the reign of Edward III. (1342). From the convenience of its harbour it was very early a place of some note. In the beginning of the 13th century it obtained a market, and other valuable privileges. It sent two members to Parliament from the 14th year of the reign of Edward III. to the passing of the Reform Act, which reduced the number to one. In the reign of Edward I. Dartmouth contributed 31 ships and 800 men towards the naval expedition against France.

Dartmouth was during the parliamentary war strongly contended for by both parties. Prince Maurice succeeded after a siege of four weeks in taking the town, in which he placed a garrison, but General Fairfax afterwards took the town by storm. The trade consists principally in the export of woollen goods and cider, and the import of wine. Dartmouth is one of the quarantine ports of the channel. The number of vessels registered as belonging to the port on December 31st, 1852, was:—Under 50 tons 172, tonnage 4817; above 50 tons 266, tonnage 29,590, and one steam vessel of 19 tons. During 1852 there entered and cleared at the port as follows:—Coasting trade, sailing vessels, inwards 838 vessels, 51,633 tons; outwards 328, tonnage 11,352; steam vessels, inwards 119, tonnage 22,009; outwards 2, tonnage 344. Colonial and foreign trade, sailing vessels, inwards 114, tonnage 7188; outwards 166, tonnage 16,019; steam vessels, inwards 23, tonnage 3956; outwards 22, tonnage 1784.

The church of St. Petrox is beautifully situated at the entrance of the harbour. St. Saviour's church is of the 14th century; the interior is highly ornamented. The pulpit is of stone, richly sculptured and gilt, and the rood-loft is beautifully carved. There are places of worship for Baptists, Independents, and Wesleyan Methodists; and a Grammar school with a small endowment. Newcomen, the inventor of the steam-engine, was a native of Dartmouth.

A market was granted to the town as early as 1226, and a fair for three days at the festival of St. John the Baptist. There are no fairs held here now, but a large cattle-market is held on the Monday before the third Wednesday in every month, and a weekly market on Fridays. A new market-place has been lately erected. The remains of the old castle, consisting of a square and a round tower, the latter of which is the most ancient, and supposed to have been built in the reign of Henry VII., are very picturesque. In the immediate neighbourhood are several handsome mansions.

(Polwhele, *Devonshire*; *Route-Book of Devon*; Murray, *Hand-book of Devon*; Lysons, *Magna Britannia*; *Communication from Dartmouth*.)

DARVEL. [AYRSHIRE.]

DARWAR, a district in the province of Bejapore, situated between 14° and 16° N. lat.; it contains an area of 9122 square miles, and a population estimated at 888,757. Darwar was formerly part of the territory of the Peishwa, and came into possession of the English in 1818. In the following year there occurred a serious failure of the harvest, accompanied by an epidemic, which carried off about 25,000 of the population, which was then in all about 600,000. The district has considerably improved since it came into the possession of the British. *Darwar*, the capital, is situated in 15° 28' N. lat., 75° 5' E. long., about 75 miles E. from Goa. It is a fortified town, and was besieged by an allied force of English and Mahratta troops for twenty-nine weeks in 1791, when it surrendered by capitulation.

DARWAZ. [BADAKHSAN.]

DARWEN, OVER. [LANCASHIRE.]

DATCHET. [BUCKINGHAMSHIRE.]

DAUPHINÉ, a frontier province of south-eastern France, constituted (with the principality of Orange) one of the 32 military governments into which in ante-revolutionary times that kingdom was divided. It included the country between the Rhône, the crest of the Alps, and Provence. It now forms the three departments of Isère, Drôme, and Hautes-Alpes, and the physical character of the country is described under the heads ALPES, HAUTES; DRÔME; ISÈRE.

Dauphiné is one of the most mountainous districts in France; branches from the Alps traverse it, and some of the loftiest summits of that mountain system are close upon or within its boundary: no other part of France has points equally elevated. The country is watered by a number of streams which flow into the Rhône, either immediately or by the Isère, Durance, and other tributaries.

Dauphiné was formerly divided into Haut (upper) Dauphiné and Bas (lower) Dauphiné. Haut Dauphiné comprehended the districts of Les Baronnies, Le Gapençois, L'Embrunois, Le Briançonnais, Le Champsaur, Le Grésivaudan, and Le Royanès or Royanex. Bas Dauphiné comprehended Le Tricastin, or Tricastinois, Le Valentinois, Le Diois, and Le Viennois. Grenoble, Gap, Embrun, Briançon, Vienne, and Valence were its chief towns. Dauphiné had a provincial tribunal, or parliament, which held its sittings at Grenoble. This country was inhabited in ancient times by the Allôbroges, the Caturiges, and other Celtic nations. In A.D. 734 it was invaded by the Saracens, who were expelled by Charles Martel. In the 9th century it formed part of the kingdom of Arles, and was governed by its own counts, who took the title of Dauphins until 1343, when Count Humbert II. seeing himself without heirs, sold his estates for 100,000 gold florins to Philippe, eldest son of King Philippe of Valois, on condition that the eldest son of the kings of France should thenceforth for ever bear the title of Dauphin. Dauphiné was about 124 miles long and 100 broad.

(Chappuy-Montlaville, *Histoire du Dauphiné; Dictionnaire de la France.*)

DAVENTRY, Northamptonshire, a borough and market-town, and the seat of a Poor-Law Union, in the parish of Daventry and hundred of Fawsley, is situated in 52° 16' N. lat., 1° 10' W. long., distant 13 miles W. by N. from Northampton, 72 miles N.W. from London by road. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor. The population of the borough in 1851 was 4430. There are two livings, which are perpetual curacies in the archdeaconry of Northampton and diocese of Peterborough. Daventry Poor-Law Union contains 28 parishes and townships, with an area of 63,301 acres, and a population in 1851 of 21,926.

It has been conjectured that the town of Daventry rose from the decay of the British and Roman stations of Bennavenna and Isanavatia. Bennavenna station was probably on Borough Hill, a short distance east from Daventry, on which is one of the largest ancient camps or forts existing in the island. During the civil war of Charles I. some skirmishes occurred near Daventry. The place has little else of historical interest. The town stands on an eminence, and consists of two principal streets and some smaller ones, which are paved and lighted with gas; the houses are generally neat and well built. The church is a modern building, consisting of nave, side aisles, and chancel. There are—a small chapel of ease; chapels for Independents and Wesleyan Methodists; a Free Grammar school, which had 1 scholar in 1851; National and British schools, and a savings bank. The chief manufactures are those of shoes for exportation, and of whips. The market is on Wednesday, and there are nine annual fairs, chiefly for horses and cattle.

The Dissenting academy at Northampton was removed to Daventry on the decease of Dr. Doddridge, 1752, and continued there till 1789, when, on Mr. Belsham's resignation, it was removed to Wymondley. It was afterwards transferred, under the designation of Coward College, to London, and in 1850 was united with Homerton and Highbury colleges, when the joint institution received the name of New College.

(Baker, *Northamptonshire; Communication from Daventry.*)

DAVID, ST. [FIFESHIRE.]

DAVID'S, ST., Pembrokeshire, an episcopal city in the parish of St. David's and hundred of Dewisland, is situated on the little river Alan, in 51° 52' N. lat., 5° 15' W. long.; distant 26 miles N.W. from Pembroke and 265 miles W. by N. from London. The population of the parish was 2460 in 1851. The living is a perpetual curacy in the archdeaconry and diocese of St. David's.

St. David's was in ancient times a large and populous city, and was during the middle ages resorted to by numerous pilgrims. Its present aspect is that of a poor village, the houses generally, except those of the clergy, being mean and almost ruinous. Still it must be regarded with interest as an ancient and once important episcopal city, with a fine cathedral, and the remains of other magnificent buildings devoted to religious uses. Of the three archbishops' seats appointed when Christianity was introduced into England, namely, London (afterwards transferred to Canterbury), York, and Caerleon, that of Caerleon was removed about 519 to Myynyw (called by the Romans Menevia), which afterwards received the name of St. David's, in honour of the archbishop and saint by whom the transfer was effected. Hence the appellation of 'Menevensis' assumed by the bishops of this see, which was the metropolitan and archiepiscopal see of Wales until 930, when Sampson, the last of twenty-five archbishops, withdrew with his clergy to Brittany, carrying with him his sacred pall of office. The ecclesiastical buildings occupy a spacious area called the Close, on the south side of the city towards the sea-shore. The cathedral is partly Norman with early English and decorated portions: Bishop Vaughan's chapel is perpendicular. The cathedral is cruciform, 307 feet long, with a square tower at the west end 124 feet high; a nave 124 feet in length; a choir, transepts, side aisles, and lateral chapels, one of which is roofed with slabs of freestone. The choir, which is lofty, contains 28 stalls

and a curious moveable pulpit. The bishop's throne is of exquisite workmanship, resembling that in Exeter cathedral. Numerous antiquarian relics are preserved in the building. An altar-tomb of the son of Owen Tudor is similar to that of Prince Arthur in Worcester cathedral. The cathedral has recently undergone considerable repairs and restoration. St. Mary's College was founded in 1365 by John of Gaunt for the maintenance of a master and seven fellows. The chapter-house contains a school-room for the instruction of the choristers, and an elegant dining-room, with kitchen and cellars, for the use of the canons when they assemble to audit the accounts of the see. The present episcopal residence is at Abergwilli, near the city of Caermarthen, in a noble palace rebuilt by Bishop Burgess. The cathedral buildings, named above, are inclosed by a lofty wall about a mile in circumference, having four gates, north, south, east, and west. The principal gate is the eastern, between two massive towers, one of which is 60 feet in height. The little river Alan runs through the area, and was crossed by a marble bridge, worn and polished by the feet of the pilgrims who visited the place. The inhabitants of St. David's are chiefly employed in agriculture. Fairs are held on March 12th and August 5th. In the neighbourhood, and especially at St. David's Head, a rocky promontory three miles from the city, are numerous cairns, tumuli, holy wells, &c. There is also an oratory, dedicated to St. Justinian, which was erected by Bishop Vaughan for the use of pilgrims who were about to embark for Ramsey Island, which lies off St. David's Head. Ramsey Island forms part of the parish of St. David's.

The diocese of St. David's comprehends Pembrokeshire, Cardiganshire, Brecon, Radnorshire, Caermarthenshire, with a small portion of the counties of Montgomery, Glamorgan, and Hereford. There are 412 benefices. The diocese is divided into the archdeaconries of St. David's, Brecon, Cardigan, and Caermarthen. The cathedral establishment includes besides the bishop a dean, 4 archdeacons, a chancellor, 2 canons, 12 non-resident canons, 3 minor-canons, 3 vicars-choral, &c. The income of the bishop is 4500*l.* a year.

DAVIS STRAIT unites Baffin's Bay to the Atlantic, and extends between Greenland on the east and Cumberland Island on the west, in a northern direction, from Cape Farewell to Disco Island (that is, from 60° to 70° N. lat.). Its narrowest part is near the Polar Circle, where it is about 200 miles across. It is the principal resort of the whalers, whales being more numerous here than in other seas near the Pole. But the immense icebergs which even in summer line the western coasts of the strait, and the violence of the currents, render the navigation very dangerous. Many of the icebergs rise some hundred feet above the level of the sea, and the whalers which arrive at the end of April or in the beginning of May find the whole strait blocked up by a barrier of icebergs between Cape Walsingham and the Greenland coast. The current, which runs along the eastern coast of Greenland, turns round Cape Farewell, and continues along the western coast of Greenland nearly up to the Polar Circle, where it crosses the strait to Cape Walsingham, and then continues in a southern direction to Labrador and Newfoundland. By this current the immense icebergs of Davis Strait are carried down to the centre of the Northern Atlantic, where they sometimes are met with as far as 40½° N. lat. The countries on both sides of the strait rise in rocky mountains to a considerable elevation, and exhibit a very scanty vegetation. They are inhabited by Esquimaux.

DAWLISH, Devonshire, a small town in the hundred of Exminster, lies in a valley running from east to west, about midway between the rivers Exe and Teign, in 50° 35' N. lat., 3° 29' W. long., 12 miles S. from Exeter by the South Devon railway, 191 miles S.W. by W. from London by road, and 206 miles by the Great Western and South Devon railways. The population in 1851 was 2671. The living is a vicarage in the archdeaconry and diocese of Exeter.

About fifty years ago Dawlish was merely a collection of fishermen's huts. It is now a fashionable and flourishing watering-place. The situation is exceedingly pleasant. The sea-front lies near the centre of a cove a mile and a half in extent, formed by the projecting cliffs of Langstone on the east and the Parson and Clerk rocks on the west. The climate is warm and equable. The Public Baths, a handsome building of recent erection, is situated on the sands. The parish church, about three-quarters of a mile from the beach, was rebuilt in 1824 except the tower, which is part of the old church and is of very ancient date. The Independents, Wesleyan Methodists, and Plymouth Brethren have places of worship here. A small but curious and handsome viaduct carries the line of the South Devon railway over the stream which runs through the town. The railway runs between the town and the sea.

(Polwhele, *Devonshire; Land We Live In*, vol. iii.; *Route Book of Devon; Murray's Handbook of Devon.*)

DAX. [LANDES.]

DEAD SEA, the ancient *Lacus Asphaltitis*, is situated in the south-east of the Holy Land, near the borders of Arabia. The point 31° 30' N. lat., 35° 30' E. long., is not very far from its centre. It lies in the deepest known depression on the surface of the earth; the level of this sea being 1312 feet below the level of the Mediterranean. The depression in which it lies, called El-Ghor, extends north and south, so as to include the valley of the Jordan, below the Lake of Tiberias, and the wady El-Arabah, which rises gradually

from the southern extremity of the sea to the uplands of Arabia Petraea. The Dead Sea has no visible outlet.

The greatest length of the Dead Sea, which lies due north and south, is hardly 40 miles; the breadth of the northern part, which is widest, varies between 7 and 9½ miles. At about 25 miles from the northern shore a remarkable peninsula advances northward into the sea from the mountains of Moab, leaving on the eastern side a bay from 8½ to 1½ miles wide and about 5 miles long, and on the western side a strait about 7 miles long and 2 miles wide at its narrowest part. To the south of this strait spreads out the southern part of the sea forming what the Arabs call Bahr Lut, or the Sea of Lot, 10 miles long and from 5 to 8 miles broad. It must be remarked however that these dimensions are considerably increased in winter, when the sea is swollen by the rains. The aspect of a country so near the tropics differs greatly at different seasons of the year. Accordingly, the notice of the scenery of the shores which is here given, and which is taken from Lieutenant Lynch's account, whose survey of the Dead Sea was executed in the months of April and May, will be found to differ considerably from the description of M. de Saulcy, who visited the region in January.

The north shore is an extensive marshy flat, with a sandy plain beyond it, and is joined on the north-west angle of the sea by a bed of gravel sloping gradually down from the mountains of Canaan. Near the wady Gumran in this part of the mountains, De Saulcy discovered extensive ruins, which he supposes to be those of *Gomorra*. The beach here consists of minute fragments of angular flint, interspersed with numerous pebbles of bituminous limestone, and there is an almost total absence of round pebbles. A line of bold, lofty, and in most parts perpendicular cliffs runs along the shore at a very little distance, consisting chiefly of bituminous limestone, with in a few places masses of conglomerate of a dull ochre colour. These cliffs rise to the height of 1000 or 1200 feet. They are broken by a few ravines, which in winter are traversed by torrents, whose deposits form little deltoid or alluvial projections along the shore. Except along these ravines the rocks are utterly devoid of vegetation, and present a scene of unvaried desolation and barrenness. Along the marshy beds of the streams that flow through the ravines tamarisks, low canes, and spina christi are almost the only specimens of vegetable life. The principal of these ravines on the western side of the sea are the wady En-Nar and Ain-Jidy or Engaddi; through the former the brook Kedron enters the sea, the cliffs on each side of it being 1200 feet high, and midway down the ravine is the convent of Mar Saba. The mountains here and to the southward consist of horizontal strata of limestone, in which are seen numerous caves. At the foot of the cliffs is a dark coarse gravel. The mountains about Ain-Jidy are 1500 feet high, and abound in caverns. Between the delta of the Ain-Jidy and the mouth of the Arnon on the Arabian shore the sea is about 9 miles wide. There is a current southward through the whole length of the sea, caused by the impetus of the Jordan; and the current deflected from the southern shore causes an eddy northward along the west shore. On the lofty cliff of Sebbeh, opposite the peninsula mentioned above, are remains of the strong fortress of Masada, to which Herod retired with his family and treasures after the capture of Jerusalem by the Parthians. This cliff rises perpendicularly to a height of from 1200 to 1500 feet, and is isolated from the rest of the chain by two deep ravines, the detritus carried down which has formed a sandy alluvium more than two miles wide between the cliff and the sea.

Bold savage cliffs and terraced mountains of limestone in horizontal strata, crossed at intervals by lava streams, continue to within about four miles of the southern shore of the sea. In this interval lies the remarkable isolated mass of rock called Usdum (Sodom). This mountain mass consists of rock-salt; it is incrustated with carbonate of lime, which gives it the tinge of the eastern and western mountains. At about a mile distant from the north point of Usdum a round pillar of salt, cylindrical in front towards the sea and pyramidal behind, 40 feet in height, rests on an oval pedestal from 40 to 60 feet above the level of the sea. Between the base of Usdum and the sea there is a broad marshy flat coated with salt and flaky bitumen. The whole of the southern bay is shallow, and the bottom consists of a slimy black or gray mud. A species of melon grows on the Usdum, oblong, ribbed, of a dark green colour, and in taste exceedingly bitter, like quinine. Along the whole of the western shore at intervals are dead bushes incrustated with salt, as is everything exposed to the spray of this sea.

The southern shore presents a scene of unmixed desolation. On one side the salt mountain of Usdum, rugged and worn, with its conspicuous pillar; on the other the lofty barren hills of Moab; to the south an extensive flat marsh, intersected with sluggish streams, with the high hills of Edom, which border the Ghor to the south behind the Valley of Salt; the glare of light blinding to the eye—the air suffocating—no living thing to be seen.

The eastern shore of the southern bay is separated by a narrow marsh with a few scrubby bushes from hills 2000 feet high, consisting of brown-coloured limestone in horizontal strata, with rose-coloured sandstone beneath. The peninsula mentioned above, and called now as of old *El-Liqan*, or the Tongue, stretches out to the north-west and north in the shape of an extended wing for about 8 miles, and

terminates northward in a bold promontory 40 to 60 feet high. A sharp angular ridge some 20 feet higher runs along its centre; and round its base there is a broad margin of sand incrustated with salt and bitumen. The perpendicular face extending all round it presents a coarse chalky appearance. The surface of the peninsula is rugged and irregular, covered with loose calcareous marl, with incrustations of salt and pieces of pure sulphur, with gypsum and marly clays. At the head of the bay, on the eastern side of the peninsula, is a flat into which the wadys of Beni-Hamed and Kerak open. Here stands the village of Mezraa, inhabited by Arabs resembling negroes, and near it is the plain and so-called ruins of Zoar. These ruins which are commanded by several terrific craters De Saulcy says with reason are those of *Zebodim*. Along the stream that traverses the wady of Beni-Hamed are oleanders 18 feet high, and on the plain groves of acacias and many other shrubs (*Asclepias procera*), the fruit of which is called the Apple of Sodom. This fruit, fair to the eye and bitter to the taste, is about the size of a large apple, and when ripe is filled with fibre and dust. The wady Kerak has no water in summer; on one side of it is a deep yawning chasm, and on the other side are beetling crags blackened by the tempests of ages, and in shape resembling the broken waves of an angry sea. The Arabs of Mezraa cultivate some millet and tobacco.

The Arabian shore to the northward from the wady of Beni-Hamed presents lofty perpendicular rocks of red-sandstone capped with limestone, and broken from within by ravines, in which grow some patches of cane, tamarisk, and a few other shrubs. At about 7 miles northward from the bay is the wady El-Mojeb, through which the Arnon breaks into the Dead Sea. This river, which is 82 feet wide and 4 feet deep in summer, runs through a winding chasm 97 feet wide, formed by perpendicular cliffs of red, brown, and yellow sandstone, capped in the interior with yellow limestone. The cliffs are scored and worn by the winter rains into architectural forms resembling walls of Egyptian masonry. Along the bed of the river castor beans, tamarisks, and canes grow down to the sea-shore. North of the Arnon the shore, in one place enlivened by a small cataract, presents the same lofty rugged brown-parched hills, which form part of the Belka Mountains. Near the wady Zerka-Main, the outlet of the hot springs of Callirrhoe, the shore is lined with huge black boulders of trap interspersed with tufa, and the mountains here seem to be one black mass of scoria and lava stratified. All the rocky hollows along the shore are incrustated with salt. The Zerka-Main rushes in a strong current through a chasm 122 feet wide for a mile from the shore, with sides 150 feet high, formed by red and yellow sandstone overlaid with trap.

The sea inclosed within the boundary just traced is in many respects very remarkable. Its water is a nauseous compound of bitters and salt, and of great density. The density of distilled water being 1, the density of the Atlantic water is indicated by 1·02, of the water of the Dead Sea by 1·18; the first dissolves 5·17ths of its own weight of salt, the second 1·6th, and the third only 1·11th. Accordingly, its buoyancy is also great. A strong man floats nearly breast high above it without the least exertion: fresh hens' eggs float up one-third of their length. Lieutenant Lynch's boats with the same loads drew one inch less in the Dead Sea than in the Jordan. No aquatic animal whatever is found in this sea.

When no wind is stirring the sea seems a vast caldron of dark metal fused and motionless, and the great evaporation envelops it in a vapour of a purple tinge. When lashed by the simoom or the sirocco it presents a sheet of raging foam, but when the wind lulls, as it sometimes does, instantaneously, the waves as suddenly subside, in consequence of the ponderous nature of the water. The spray leaves an incrustation of greasy salt, and causes a pricking sensation when it touches the skin. Generally speaking, during Lieutenant Lynch's survey the wind in the forenoon blew from the southward, in the afternoon from the northward, with a fetid sulphureous smell, owing to the marshes it blows over, and after midnight there was a calm. Sudden and violent hurricanes are frequent. The nights were cloudless, and there was scarcely any deposit of dew, the ground is so heated by the sun during the day. There was a remarkable exception to this however during the night the surveying party spent near the village of Mezraa, when a hot wind blew from the north. The dew on this night dripped through the canvass on the men asleep. On April 28 Fahrenheit's thermometer marked 70° at 6 a.m., 85° an hour and a half later, and 92° at 6 p.m. The heat experienced in the southern part of the sea was most oppressive, causing, in conjunction with the sulphureous vapour, a drowsy sensation amounting almost to stupor. After a blistering hurricane at the head of the eastern bay on April 26, the thermometer five feet from the ground marked 106° at 8 p.m., and 104° at one foot above the ground, and mosquitoes were troublesome.

The depth of water in the northern part of the sea is very great; and it increases rapidly and almost immediately from the shore. The first cast of the lead at the mouth of the Jordan gave one fathom, but a few soundings in a south-east direction towards the wady Ghuweir gave 81 fathoms; farther south the depth in mid-sea increased to 116, 117, 218 (1308 feet) opposite the wady Zerka-Main, but near the shores the depth varied from 6 to 28 fathoms. Opposite the Arnon the mid-sea depth is 188 fathoms (1138 feet). On approaching the peninsula the

depth in the centre is still very great, but it gradually diminishes. Opposite its northern promontory, at the centre of the strait on the west side the depth is 107 fathoms; thence to the southern end and narrowest part of the strait there is a rapid ascent of the bottom, the greatest depth here being only 3 fathoms. The eastern bay also rises rapidly from 24 fathoms to one fathom at its southern extremity. In all this northern part of the sea the bottom for the most part consists of mud (yellow, gray, brown, or blue), with cubical and rhomboidal crystals of salt; a hard bottom was found in one or two places only, and in a few others sand and salt. The temperature of the water decreases from the surface to a depth of 10 fathoms, where there is a stratum of cold water; below this the temperature increases. For instance, the surface-water was found to mark 76° Fahr., at 10 fathoms depth 59°, and at 174 fathoms, or 1044 feet, 62°. The coldest water is found at the uniform depth of 10 fathoms.

In the south bay, which, according to De Saulcy, occupies the valley of Siddim, the depth is in summer comparatively inconsiderable, nowhere more than two fathoms and a half, or 15 feet, and the water shoals rapidly towards the southern extremity of the sea, so that for a mile from the shore the depth varies from half a foot to a foot. A ford is marked on some maps from the south of the peninsula to the western shore, but Lynch could not find it. There may be a ford however later in the summer. There is a frothy scum and flakes of bitumen floating on the water. The bottom is black or gray slimy mud. Along the shore are many dead bushes, the soil marshy, overlaid with salt and bitumen, and yielding to the foot. The utter desolation of the scenery, the profound silence, and the general absence of any living thing, are very impressive everywhere along the Dead Sea, and especially in this part of it. It is not however to be supposed that animals do not live along its shores; flocks of ducks and other birds, herons, storks, doves, humming-birds, brown hares, partridges, snipe, butterflies, and cat-birds are among the animals seen by Lieutenant Lynch's party at different parts along the coast. A duck was once seen upon the sea, and now and then a dead quail was picked up that had died of exhaustion; tracks of panthers, tigers, and gazelles were observed. It must be acknowledged however that it is rare to see any animal (except mosquitoes perhaps) near the sea in summer, unless it be after storms; not that there is any exhalation from the sea itself that is offensive or fatal to them, but that perhaps the same sulphureous and other nauseous vapours that rise from the sour and slimy marshes along the shore are disagreeable and injurious to the lower animals as well as to man. The Arabs who dwell in the wadys and upon the mountains along the coast are ragged, filthy, lean, and hungry, but well-formed savages.

The bottom of this remarkable sea seems to consist of two submerged plains, one averaging 13 feet and the other 1300 feet below the surface, and in the deepest part of the northern plain is a ravine corresponding to the bed of the Jordan; and it has been inferred further from the sudden break-down in the valley of the Jordan between the Jabok and the Dead Sea [JORDAN], from the geological structure of the mountains, the nature of the watercourses, and the clear marks of volcanic agency, that the whole Ghor subsided in consequence of some extraordinary convulsion. On this supposition the northern plain may have been always water, the south plain may once have been dry land. M. de Saulcy, who visited the country in 1850 and 1851, comes to the conclusion that the sites of Sodom, Gomorrah, and Zoar are to be sought on the western shores of the Dead Sea, and that the common belief of these cities being buried by the waters of the Dead Sea has no foundation in the history of their destruction. He adds that the mountain of Usdum, or Esdum, "bears on all its declivities flanking its northern part, the extensive ruins of a city; ruins among which you can distinguish, on a careful examination, many foundations of walls." A mile and a half distant, to the north-west, near the wild rock-strewn wady Ez-Zouera, at the southern end of the Canaanitish Mountains, he discovered the ruins of another town which he considers to be those of Zoar.

(Lynch, *Expedition to the River Jordan*, 1849; De Saulcy, *Discovery of the Site of the Destroyed Cities of the Plain*, London.)

DEAL, Kent, a municipal and parliamentary borough and market-town in the parish of Deal, hundred of Bewsborough and lathe of St. Augustine, is situated close to the sea on a bold open beach between the North and South Forelands, in 51° 14' N. lat., 1° 23' E. long., 18 miles E. by S. from Canterbury, 74 miles E.S.E. from London by road, and 102 miles by the South-Eastern railway. The population in 1851 was 7067. The borough is governed by 6 aldermen and 18 councillors, one of whom is mayor; and with Sandwich and Walmer returns two members to the Imperial Parliament. The living is a rectory in the archdeaconry and diocese of Canterbury.

In the reign of Henry VIII. Deal was but a little fishing village about half a mile from the coast, but it is now a good-sized town running close along the shore. The former village is now called Upper Deal, while the present town has grown into existence in modern times. It has arisen in a great measure to supply the wants of the seamen belonging to the ships passing up and down the channel or riding at anchor in the Downs. The town is much resorted to for sea-bathing. The climate of Deal is healthy; the soil is dry, and the air pure and free from marshy vapours and from fogs. Deal was annexed to the Cinque Ports in the 13th century as a member of

Sandwich, and though now of much greater importance still ranks as one of its members. At the south end of the town is a strong castle erected in 1539 by Henry VIII. In the fine roadstead called the Downs, between the shore and the Goodwin Sands, vessels of all dimensions, to the number of occasionally four or five hundred, ride windbound and with safety, except during heavy gales, when some put into Ramsgate for greater security. The pilots of Deal have a high character, and the boatmen are an intrepid race of men. Their courage is often manifested in affording assistance to vessels in distress. The town is well paved and lighted, and watched by a police force. It contains a custom-house, a yard for naval stores, a naval and military hospital, barracks, a pilot-house, a town-hall, and a jail. The inhabitants are chiefly engaged in boat-building, sail-making, and other pursuits subservient to maritime business; but there is a considerable trade occasioned by supplies required for shipping detained in the Downs by contrary winds.

Besides the parish church, a new church, and a chapel of ease, there are chapels belonging to Independents, Wesleyan Methodists, and Baptists. There are also National schools and a Nautical school. Markets are held on Tuesday and Saturday, and two small fairs in April and October. There is a savings bank.

The village of Walmer adjoins Deal. Walmer Castle, the official residence of the Warden of the Cinque Ports, is about half a mile from Deal. Sandown Castle, erected by Henry VIII. about the same time as Deal Castle, is about a mile east of Deal.

(Hasted, *Kent*; *Land We Live In*; *Communication from Deal*.)

DEBA. [BASQUE PROVINCES.]

DEBENHAM. [SUFFOLK.]

DEBRECZIN, or DEBRECZYN, a royal free town in the western part of Upper Hungary, is the capital of the county of Bihar, and the largest town in the kingdom, Pesth only excepted. It stands in the centre of an extensive sandy but fertile plain, about 120 miles E. from Pesth, to which a railway is in course of construction. The town is open, and has a rustic appearance; for the houses, which are about 4000 in number, seldom exceed one story in height, and are as humble in their exterior as common cottages. Including the three suburbs, from which it is separated by a slight palisade, Debreczin contains about 60,000 inhabitants. The streets are unpaved, and the foot-passenger has consequently to wade either through mud or sand, according to the season of the year, with the aid of a few planks, laid down for crossing the streets. Debreczin has several handsome buildings, among which are the town-hall, the Protestant and Roman Catholic churches, the Franciscan and Piarist monasteries, and the handsome Protestant Collegium, to which a small church and a library of 20,000 volumes are attached. There is also a Roman Catholic gymnasium, a school of design for mechanics, &c., an orphan asylum, three dispensaries, three hospitals, and a house of correction. The inhabitants derive their subsistence from agriculture and the manufacture of coarse woollens, sheep-skins for clothing, pottery, leather, saltpetre, soap, and tobacco-pipes (about 13 millions per annum are made with horn mouth-pieces and red or black clay heads). Other industrial products comprise cutlery, combs, buttons, pearl necklaces, &c. Four periodical fairs are held in wooden booths outside the town, and are the resort of buyers and sellers from all parts of the kingdom. Debreczin is noted for the excellence of its bread. It suffers greatly from want of water in summer.

DECAZEVILLE. [AVEYRON.]

DECCAN (Dacshina, the south) was anciently understood to comprehend the whole of the peninsula of India south of the river Nerbudda and the southern boundaries of Bengal and Bahar, and included nearly one half of the territory generally known under the name of the Mogul empire. The name Deccan now denotes the countries lying between the Nerbudda and the Gap of Coimbatore. The Deccan therefore comprehends the following divisions: Candeish, Gundwana, Orissa, Berar, the Northern Circars, Boeder, Aurungabad, Hyderabad, Bejapoor, and Mysore.

The interior of this extensive region is an elevated table-land encircled by lofty hills called the Ghauts, which are bordered by low plains extending to the sea-shore. The table-land extends from 12° to 22° N. lat. Between 12° and 16° its average breadth is about 150 miles, but north of 16° it widens gradually to 400 miles. The hills on the table-land are barren, but some of the valleys are very fertile. Over the whole surface a black soil prevails favourable to the growth of cotton. The physical features of the Deccan are described under HINDUSTAN.

The first Mohammedan invasion of the Deccan occurred at the close of the 13th century, in the reign of Feroze. About the year 1350 the Afghan Hussun ascended the throne under the title of Sultan Alla ad Dien Hussun Kongoh. He was the first acknowledged independent sovereign of the Deccan, and became the founder of the Bhaminee dynasty, of which twelve members in turn succeeded him. After this the Deccan was again divided, and a large part was formed into a province of the Mogul empire. About the close of the 17th century Aurengzebe reduced the country under his immediate sway; but in 1717 Nizam ab Mulk, who had been sent as viceroy into the Deccan, made himself its virtual sovereign; and the whole country continued independent of the Mogul empire until 1818, when a large part of it came under the dominion of the English.

What is known as British Deccan comprises the electorates of Poona, Ahmednuggur, Darwar, and Candeish; the remainder is under the sway of Hindoo or Mohammedan princes. The lands in this part of India are held under various descriptions of tenure. In most villages of the Deccan are to be found some Ramosis, who are thieves by birth, and who have lands given to them free from government tax, that they may hold themselves responsible for the safety of property in the district where they reside. The condition of the cultivators and of the inhabitants generally has been much improved since the Deccan came into the possession of the English government.

(Rennell, *Memoir*; Mill, *History of British India*.)

DEDDINGTON. [OXFORDSHIRE.]

DEDHAM. [ESSEX.]

DEE, the River, rises in Merionethshire, of which it drains the eastern districts and also the south-eastern part of Denbighshire. It afterwards separates Denbighshire from the detached portion of Flintshire and from Cheshire, but the lower part of its course is entirely within Cheshire. The Lake of Bala, or Llyn Tegid, which may be considered as the source of this river, receives several mountain streams, one of which is called Dee. [BALA.] The waters of this mountain lake are discharged at its north-eastern corner by a stream of considerable size and depth, which is soon increased by other considerable mountain streams, as the Treveryn and Alwen. The Dee so far flows in a fine open valley; at Corwen the river begins to descend from the mountain table-land of North Wales, and in 10 miles from Corwen to Trevor it probably falls above 300 feet; its course in this part is consequently extremely rapid, though without cataracts. In this part of its course the Dee flows through the beautiful vale of Llangollen. Near Trevor the valley is spanned by the Cysylltau aqueduct, which carries the Ellesmere Canal across the valley at a height of 120 feet above the Dee. The aqueduct is 1007 feet long, and is supported on 18 stone piers. It is a very striking structure, but is surpassed both in magnitude and beauty by the viaduct which at a short distance from it carries the Shrewsbury and Chester railway across the Dee at a height of 150 feet above its surface. This viaduct consists of 19 arches of 90 feet span, and is 1530 feet in length; it is built almost entirely of stone. Below Trevor the Dee enters the plain, in which it runs with numerous windings upwards of 35 miles to the tideway at Chester. Here it is joined by the Alyn from the west, and changes its western course into a northern. At Chester the Dee is about 100 yards wide, and runs farther down in an artificial channel along the marshes for about 9 miles. The river now enlarges into a spacious estuary 3 miles across, which at high water forms a noble arm of the sea: but at ebb-tide it is dry, and resembles an extensive dreary waste covered with sand and ooze, through which the river runs in a narrow and insignificant stream. It enters the sea near the island of Helbree, where the estuary is about 6 miles wide. In its natural state the Dee is wholly unnavigable; but by means of a weir at Chester a sufficient depth of water is maintained to allow small boats to pass two or three miles above Chester. The whole course of this river from Bala Pool to the beginning of the estuary is upwards of 80 miles.

DEE, RIVER. [ABERDEENSHIRE.]

DEEG. [BHURTPUR.]

DEEPING MARKET. [LINCOLNSHIRE.]

DELAWARE, next to Rhode Island the smallest state of the United States of North America, extends from 38° 28' to 39° 47' N. lat., and from 74° 56' to 75° 46' W. long. It is bounded N. by Pennsylvania, E. by Delaware Bay and the Atlantic Ocean, and S. and W. by Maryland. It comprehends the north-eastern portion of the peninsula which lies to the east of Chesapeake Bay, and more than one-third of its surface. Its length from north to south is about 92 miles; its breadth varies from 10 to 36 miles. Its area is 2120 square miles, or somewhat more than that of the county of Norfolk. The total population in 1850 was 91,532. The following table shows the increase of the population and the proportion of slaves in this state since 1820:—The total population in

1820	was 72,749, including 12,958 free coloured persons and 4509 slaves.		
1830	„ 76,748, „ 15,855 „ 3292 „		
1840	„ 78,085, „ 16,919 „ 2605 „		
1850	„ 91,532, „ 18,073 „ 2200 „		

The federal representative population in 1850 was 90,616, in which number three-fifths of the slaves are included. This entitles the state to send one representative to Congress. To the Senate, like each of the other United States, Delaware sends two members.

Coast-line, Surface.—The coast is low and sandy, and has no natural harbour except at the northern extremity along the banks of the river Delaware. Rehoboth Bay, formed by a long and narrow strip of sand, is too shallow to admit vessels drawing more than six feet of water. In order to form a serviceable harbour a breakwater has been constructed by the general government opposite the village of Lewistown, and above Cape Henlopen, at a cost of nearly three millions of dollars. It is two-thirds of a mile in length, 75 feet wide at bottom, and 22 feet wide at top. A dyke more than half the length of the breakwater, and parallel to it, protects it against the ice brought down by the river.

The watershed runs nearly through the midst of the peninsula, along the western boundary-line of Delaware, but rather within it.

In its northern portion Delaware is undulating, and near Christiana Creek are some hills perhaps 400 to 500 feet high; but south of the creek it nowhere rises to 100 feet above high-water mark; and it gradually becomes more flat towards the Atlantic Ocean. Farther south it is an extensive flat abounding with swamps, from which the small rivers ooze rather than flow to the Chesapeake Bay and the Atlantic Ocean. Some districts of the country towards the sea are marshy and subject to inundations. At the southern extremity is the Cypress Swamp, 6 miles from east to west and 12 miles from north to south, covered with trees and plants, and harbouring numerous wild animals and reptiles. Cypress Swamp has an area of about 50,000 acres: a part of it belongs to Maryland.

Hydrography, Communications.—Except the DELAWARE, which forms its eastern boundary, and is noticed in a separate article, all the rivers of the state are small. The most important is the *Brandywine*, which enters the northern end of the state from Pennsylvania, and flows in a generally southern course past Wilmington, a mile below which it unites with Christiana Creek, which also rises in Pennsylvania, and the united stream forms Wilmington Harbour, which is navigable for large ships, and falls into the Delaware two miles below the town. The other rivers mostly rise within the state, and after a short course fall into the Delaware; they are generally wide in proportion to their length, and navigable by vessels of light draught several miles from their mouth, and hence perhaps they are commonly called creeks. The principal are Duck, Jones, Mispillon or Mospihon, Mother or Murder, and Broad-Kill creeks, and the Indian and Appoquinnimink rivers.

The Chesapeake and Delaware Canal, which connects the bays so named, is an important work. It commences at Delaware city, on the Delaware, and is carried in a generally western direction for 13½ miles to Back Creek, a navigable branch of the Elk River in Maryland. It is 66 feet wide and 10 feet deep, and is navigable by steamers and vessels of considerable burden. It was completed in 1829 at a cost of 2,250,000 dollars.

The state is tolerably well furnished with the ordinary turnpike and bye roads. The most important line of railway yet completed is the Newcastle and Frenchtown railway, which runs from Newcastle on the Delaware to Frenchtown (Maryland) on the Elk River, 16½ miles, thus connecting the Delaware and Chesapeake Bays, and in conjunction with the steamboats stationed at each end forming a convenient line of communication between Philadelphia and Baltimore. The Philadelphia, Wilmington, and Baltimore railway crosses the state farther north, and is the usual land line of communication between those cities. Other lines are projected, but these are the only ones yet constructed within this state.

Geological Character.—In the northern part of Delaware the rocks belong to the primary formations; but the middle and southern parts, forming by far the larger portion, belong to the Atlantic plain, and are almost wholly of the tertiary series. Much of this part is swampy. Towards the west the country becomes sandy, and sandstone rocks occur in the low hills which form the watershed of the peninsula. Bog iron-ore is found in the swamps, and is worked to some extent. Kaolin, or porcelain clay, of excellent quality is obtained in the north, and is sent to supply the porcelain works at Philadelphia. Shell-marl occurs in considerable quantities, and is much used for agricultural purposes.

Climate, Soil, and Productions.—The soil is in many places excellent, but generally it is thin and sandy. In the northern parts of the state along the Delaware, and for eight or ten miles inland, it is a rich and very productive clay, which becomes more and more sandy towards the south. The central part is a light poor sand; the southern part is still less productive. Almost everywhere it is however carefully cultivated. In the southern part of the state there is some good grazing land. The climate is in general healthy and mild, but much severer in the northern than in the southern district, though the two are hardly more than a degree apart. In the neighbourhood of the swamps endemic sickness prevails to a considerable extent.

The natural productions are similar to those of the middle Atlantic states. The forests are not extensive, but large timber grows in the north, and considerable quantities in the Cypress Swamp in the extreme south, and woods of various kinds occur throughout the state.

Agriculture is the principal occupation of the inhabitants. Grain and flour are the chief articles of export. In 1850 the number of farms under cultivation in the state was 6063; the extent of improved lands was 580,862 acres, of unimproved lands 375,282 acres, which together were valued at 18,880,031 dollars. The total produce of the principal crops in 1850 was as follows:—Wheat, 482,251 bushels; maize, 3,145,538 bushels; rye, 8066 bushels; oats, 604,518 bushels; barley, 56 bushels; buckwheat, 8015 bushels; potatoes, 240,542 bushels; sweet potatoes, 65,443 bushels; peas and beans, 4120 bushels; hay, 30,159 tons; water-rotted hemp, 570 tons; flax, 11,050 lbs.; clover and other grass seeds, hops, &c., are also raised to some extent. Fruits and vegetables are produced in abundance: the value of orchard products in 1850 was 46,574 dollars; of market-garden products, 12,714 dollars. Some wine is made.

The number of horses in the state in 1850 was 13,852; asses and mules, 791; milch cows, 19,248; working oxen, 9797; other cattle, 24,166; sheep, 27,503; swine, 56,261. The products of animals

were thus returned:—Wool, 57,705 lbs.; butter, 1,055,308 lbs.; cheese, 3187 lbs.; the value of animals slaughtered in the year, 873,665 dollars. Bees'-wax and honey, 41,248 lbs.

Manufactures, Commerce, &c.—Although mainly an agricultural state, there is in the north, where water-power is abundant, considerable manufacturing industry; the trade of the state is also important, and from Wilmington the whale-fishery has been successfully prosecuted. In 1850 the number of manufacturing establishments producing to the value of 500 dollars and upwards, was 513, of which 12 were cotton-factories, employing 413 males and 425 females, and a capital of 460,000 dollars; 8 woollen-mills, employing 140 persons, and a capital of 148,500 dollars; 15 iron-works, employing 300 persons, and a capital of 388,500 dollars; and 16 tanneries, employing 108 persons. The other establishments consist of grist, flour, saw, gunpowder, and paper-mills, smitheries and machine-shops, &c. Ship-building is carried on to some extent at Wilmington. The total number of ships built in the state in the year ending June 30, 1852, was 16 schooners, 5 sloops, and 2 steamers, with an aggregate tonnage of 2923 tons. Salt is made from sea-water at Lewis and Rehoboth.

Delaware has scarcely any direct foreign commerce, both the exports and imports being made through Philadelphia, Baltimore, and New York. In 1847 the exports were returned at 235,459 dollars, the imports at 12,722 dollars. In 1849 the exports had fallen to 38,229 dollars, the imports to 1400 dollars. Since that year no entry has been made of either exports or imports in the Treasury returns. The total shipping owned in the state in 1850 amounted to 16,719 tons, all of which was employed in the coasting-trade and fisheries.

Divisions, Towns, &c.—Delaware is divided into three counties,—Newcastle in the north, Kent in the middle, and Sussex in the south; and these are subdivided into 25 hundreds. Dover is the capital of the state, but the principal town is Wilmington. The following are the only places which require notice here: the population, when not otherwise expressed, is that of 1850:—

Dover, the capital of the state, population about 700, is built on high ground between the two principal branches of Jones Creek, in 39° 10' N. lat., 75° 30' W. long., 114 miles E.N.E. from Washington. The streets are wide and laid out at right angles. The state-house, a spacious and handsome edifice, occupies one side of a large central square, in which are also placed the county buildings. There are in the town four churches, an academy, two schools, and a costly monument erected in memory of Colonel Haslett, who was killed in the battle of Princetown. The trade of the town is chiefly in flour with Philadelphia.

Wilmington, the principal port of the state, 37 miles N. by W. from Dover, stands on rising ground between the Brandywine River and Christiana Creek, about a mile above their confluence, and two miles above the Delaware River: the population, which was 13,979 in 1850, had increased in 1853 to 16,153. The streets are wide, and cross each other at right angles; the houses are chiefly of brick, and well built. The town is well supplied with water from the Brandywine by means of extensive waterworks. The public buildings are—a city hall, two market-houses, the usual county buildings, an arsenal, 19 churches, several academies, and a spacious hospital. Wilmington has now no foreign commerce, but it carries on an extensive coasting-trade, and has several vessels engaged in the whale-fishery. Vessels drawing 14 feet of water ascend to its wharfs in Christiana, and vessels of 8 feet draught to those on the Brandywine. Its vessels possess an aggregate tonnage of about 10,000 tons, of which about 2600 tons are propelled by steam. The manufactures of Wilmington are also important, full advantage being taken of the large amount of water-power furnished by the Brandywine. Flour-mills are the most numerous, and some of them are among the largest in the Union. Gunpowder is made to a considerable extent. The town stands in the midst of a busy and fertile country, and since communication has been opened by railways with the principal towns in this part of the Union, Wilmington has been steadily increasing in business and prosperity. Five newspapers are published in the town.

Christiana stands on the left bank of Christiana Creek, 38 miles N. by W. from Dover: population of the town and district 3902. There are extensive flour and gunpowder-mills, cotton-factories, &c. The Philadelphia, Wilmington, and Baltimore railway passes through Christiana. *Delaware City*, on the right bank of the Delaware, at the entrance of the Chesapeake and Delaware Canal, 28 miles N. from Dover, though styled a city, is really a small village of about 60 dwelling-houses, warehouses, stores, &c. *Georgetown*, the capital of Sussex county, 34 miles S. by E. from Dover, contains the court-house, jail, and other county buildings, and, with the surrounding district, 2318 inhabitants. *Newcastle*, the port of entry and capital of Newcastle county, stands on the Delaware, 31 miles N. from Dover: population, 3500. Next to Wilmington, from which it is 5 miles distant, Newcastle is the chief port of the state. It is an old town, and was formerly the capital of Delaware. It contains a court-house, jail, market-house, arsenal, five churches, several schools, and a public library of 4000 volumes. There is a large manufactory of steam-engines, locomotives, &c. The harbour is well protected by piers. The shipping of the port in 1850 amounted to 7259 tons, of which 1345 tons were propelled by steam. The shipping is almost wholly engaged in the coasting-trade. Newcastle is connected by the Wil-

mington and Frenchtown railway with those towns and also with Baltimore and Philadelphia.

Government, Judicature, Education, &c.—The right of voting belongs to all free white male citizens, 21 years of age, who have resided one year in the state, and one month in the county for which they offer to vote. The legislative body, styled the General Assembly, consists of a senate of 9 members elected for four years, and a house of representatives, consisting of 21 members, elected annually. The governor is elected for four years: his salary is 1333½ dollars.

The revenue from all sources for the year 1853 was 95,206 dollars, the expenditure was 60,419 dollars. The state has no debt, and has an invested capital of 350,637 dollars, and a school-fund of 435,505 dollars. The militia of the state is composed of 9229 men, of whom 447 are commissioned officers.

The judiciary consists of a superior court, presided over by a chief-justice and an associate-justice, with salaries of 1200 dollars a year each, and two other associate-justices with salaries of 1000 dollars each; a court of chancery, presided over by a chancellor, with a salary of 1100 dollars; and an orphans' court, presided over by the chancellor and a judge of the superior court. The judges hold office during good behaviour.

In order to place a free school within reach of every family, 236 districts are laid off, numbered, and incorporated, in each of which a school is maintained. The number of scholars (only white children being admitted) was 10,230 in 1853. Besides these there are about 40 academies and grammar-schools in the state, and two colleges. Delaware College, at Newark, had 6 professors in 1853, with 45 scholars, and a library of 7500 volumes. St. Mary's Roman Catholic College, at Wilmington, had 3 professors in 1850, and 107 students. Among religious sects the Presbyterians are much the most numerous in Delaware: in 1850 they had 42 ministers and 2600 members. The Methodists are the next most numerous sect: there are also many Episcopalians, Roman Catholics, Baptists, and Quakers. Eleven newspapers are published in the state.

This country was first settled by the Swedes, whom Gustavus Adolphus sent there in 1637. In 1655 it passed into the hands of the Dutch, who ceded it in 1664 to the English. Its name is derived from Lord Delaware, the governor of Virginia, who in 1610 was the first to enter the bay, which thence received his name.

(Colton, *Statistical Gazetteer of the United States*, 1853; Hassell and Smith; Darby; Warden; *American Almanac*, 1854, &c.)

DELAWARE, a river in the United States, rises in the state of New York, between 42° and 42° 45' N. lat., and afterwards forms the boundary-line between New York and New Jersey on one side, and Pennsylvania and Delaware on the other side. It terminates its course of 305 miles about 5 miles below Newcastle in Delaware, about 39° 30' N. lat., and 75° 40' W. long.

The Delaware is formed by two branches, the principal of which, called the Mohawks, issues from a small lake near the borders of Schoharie county, New York, 42° 45' N. lat., at an elevation of 1886 feet above the sea. The other branch is called the Papachton; both rise on the western declivity of the Catskill Mountains, hardly 30 miles from the tide-water in the Hudson River. Both branches flow in a west-south-west direction for about 50 miles, and unite on the boundary of Pennsylvania. The river, now called the Delaware, flows south-east for about 60 miles to the junction of the Neversink River. Hence it runs in a south-western and southern direction to the junction of the Lehigh at Easton, 65 miles, where it again turns to the south-east. After a course of 35 miles in that direction to Bordentown, it resumes its south-western course to the place where it enters the Delaware Bay, 5 miles below Newcastle. The tide ascends in this river 120 miles from its mouth to the rapids at Trenton. The frequent changes in its course are caused by four ridges of the Appalachian Mountains, through which the river breaks in an oblique line. In passing through the Kittaning or Blue range it traverses a remarkable ravine, two miles long, known as Delaware Water Gap, where the rocks rise precipitously 1600 feet from the edge of the water, in many places scarcely leaving room for a road. Though in its course above Trenton it forms 25 rapids within 60 miles, having a total fall of 165 feet, they are insufficient to prevent the navigation, which at seasons of high water extends by both branches into the state of New York. Ships of the line may ascend to Philadelphia, 45 miles above Delaware Bay, where the tide rises 5 or 6 feet, and sloops as far as Trenton, 80 miles above the bay.

The importance of this river has been greatly increased by the discovery of extensive coal-beds near the sources of its two largest tributaries, the Lehigh and Schuylkill. The Lehigh joins the Delaware at Easton, and the Schuylkill 5 miles below Philadelphia. Though both these rivers, whose sources are between 1400 and 1500 feet above the sea, and whose course does not exceed 100 miles, are extremely rapid, a great portion of their course has been rendered navigable by dams and locks, so that the produce of the coal-mines can be brought down to Philadelphia.

The navigation of the Delaware River as noticed under DELAWARE State, is united to that of Chesapeake Bay by the Chesapeake and Delaware Canal, and they are further connected by the Newcastle and French-town railway. The Delaware is united with the Hudson River and the bays of New York by the Delaware and Hudson, the Morris,

and the Delaware and Raritan canals. By the Union Canal the Schuylkill navigation is connected with that of the Susquehanna. The Lehigh Canal connects the Delaware with the coal-mines of Mauch Chunk on the Lehigh.

DELAWARE BAY extends in a north-west direction, between 39° and $39^{\circ} 30'$ N. lat., $74^{\circ} 50'$ and $75^{\circ} 40'$ W. long. Its entrance between Cape May in New Jersey and Cape Henlopen in Delaware is nearly 20 miles wide. It afterwards grows wider, forming on the east an open bay, 80 miles wide, between Cape May and Egg Island; it then gradually narrows, and is considered to terminate 5 miles below Newcastle, at the embouchure of the River Delaware. Its whole length is about 75 miles. The navigation is difficult and dangerous on account of numerous shoals. Its low and sandy shores were without harbours, even for small vessels, until the government of the United States constructed the magnificent breakwater within Cape Henlopen, noticed under DELAWARE, State of.

DELEMONT. [BERN.]

DELFT, a large town in the province of South Holland, 10 miles by railway N.W. from Rotterdam, is an ancient and gloomy place on the Schie, with 17,000 inhabitants. Many of the streets are divided by narrow stagnant canals; in the centre of the town are two handsome streets with broad canals and shaded with trees. The greater part of the country-houses inhabited by the wealthy merchants of Rotterdam are situated on the banks of the canal near Delft. This town was formerly famous for its pottery, to which it gave its name; but this manufacture has been supplanted even in Holland by the superior pottery of England; the earthenware of Delft is now of the coarser kind, and not more than 200 persons are employed in the manufacture. The principal buildings are—the New Church, which contains the monuments of Grotius and William I., prince of Orange, who was murdered at Delft, July 10, 1584; the town-house, which stands on one side of a large market-place, and opposite to the new church; and the old church, which is distinguished by a leaning tower, and contains the tombs of Leuwenhoeck the naturalist, and Admiral Van Tromp. At the entrance of the town, on an island formed by canals, is the state arsenal of Holland, formerly the Dutch East India House. Manufactures of woollen cloths and tobacco-pipes are carried on. There is also a considerable trade in butter.

DELHI, formerly a large province of Hindustan, lying between 28° and 31° N. lat., bounded N. by Lahore, E. by Oude and northern Hindustan, S. by Ajmeer and Agra, and W. by Ajmeer and Lahore. It extends east and west from the hilly countries to the central desert, a distance of 240 miles, and in breadth, from north to south, about 200 miles. The province is generally level. To the north of the city of Delhi is a ridge of low hills, which joins the mountains between the Sutlej and the Jumna. Except on the banks of the rivers by which it is traversed, the soil of the province is in a high degree arid and unproductive, but great pains have been taken to remedy this disadvantage by means of irrigation. The province is watered by the Ganges, the Jumna, the Caggur, the Chittung, and the Seraswati. In addition to these rivers several artificial canals of great extent have been made. The canal of Ali Merdan Khan receives the pure water of the Jumna, not far from its source in the mountains, and conducts it 120 miles to the city of Delhi. This canal supplies the inhabitants of Delhi with water for domestic purposes, that of the Jumna Kurnal being much impregnated with earthy salts. The canal of Sultan Feroze Shah commences from Ali Merdan Khan's Canal a little below Kurnal, and is carried to the westward through Hurriana to the frontiers of Bikaner. The Great Doab Canal joins the Jumna a few miles below the place where it issues from the northern mountains, and is carried to the same river nearly opposite to Delhi, a distance of 150 miles. It passes through Saharunpoor, Rampoor, Shamlee, and some other towns, and gives fertility to an extensive tract of country. Wheat, barley, gram, and other grains are produced in that portion of the province which lies between the Jumna and the Sutlej, but the long-continued droughts in the western parts of Delhi are unfavourable to husbandry, and except in the rainy season the country is sterile and uncultivated. The Rohilla district, lying between the east bank of the Ganges and the kingdom of Oude, has a fertile soil and a genial climate, and is well watered. This district produces sugar and wheat abundantly.

The city of Delhi was taken by Mahmood about the year 1011, and laid under contribution. The province was afterwards the seat of empire under the Guarian or Afghan monarchs. The Mogul dynasty was founded by Baber in 1525, the last of the Afghan monarchs having been slain by him in battle. The throne continued in the possession of this monarch and his descendants until the establishment of the English in India.

In the year 1788 the Rohillas became masters of the imperial city. In 1803 Lord Lake, after defeating Dowlut Rao Scindiah, took possession of the city and territory of Delhi, and assigned lands for the support of the Mogul, thenceforth entitled King of Delhi.

The consequences of the immediate administration of the government by the British have been highly favourable to the inhabitants. The whole population is well clad, which, in a climate where clothing is not of prime necessity as a protection from the elements, is considerable evidence of prosperity. The tenure of the land has not been interfered with by the English, as in other provinces of India.

Settlements are made with the village proprietors according to immemorial usage.

The district now called Delhi, one of the six administrative divisions of the North-Western Provinces, includes only a small portion of the former province. The area is about 8300 square miles, of which about one-half is under cultivation. The population is about a million and a half, of whom about a million are Hindoos.

(Rennell, *Memoir; Parliamentary Papers.*)

DELHI, the capital of the province above described, is situated on the right bank of the Jumna, in $28^{\circ} 40'$ N. lat., $77^{\circ} 16'$ E. long. According to tradition this city was founded 300 years before the Christian era by Delu. It formerly stood on the left bank of the Jumna, and is said to have covered a space of 20 square miles. The present city was built in 1631 by the emperor Shah Jehan. The city is about seven miles in circumference, and is surrounded by walls constructed of large blocks of gray granite: several towers and bastions occur in the walls at intervals. It has seven gates of freestone, and contains the remains of several fine palaces, the former dwellings of the chief omrahs of the empire. These palaces are each of considerable extent, and surrounded by high walls, containing baths, stabling, and numerous out-buildings. There are several beautiful mosques in good preservation, of which the largest, built by Shah Jehan, is constructed of white marble and red sandstone. There are two fine streets, one 90 feet broad and 1500 yards long, the other 120 feet wide and a mile in length. Down the middle of the first of these streets is an aqueduct, supplied with water from Ali Merdan Khan's Canal. The other streets are narrow, but contain many good brick houses. The Mogul's Palace, built by Shah Jehan, on the west bank of the Jumna, is surrounded on three sides by a wall 30 feet high, and more than a mile in circumference. The chief hall of audience is an open quadrangular terrace of white marble, richly ornamented with mosaic work and sculptures in relieve; and the chapel of Aurengzebe, also of white marble, although small, is of beautiful workmanship. The gardens are said to have cost a crore of rupees—one million sterling. The principal buildings of European erection are the arsenal, a church, and the college, with the residences of the officials. One of the most generally useful works of the emperor Shah Jehan in this city is the well, excavated by great labour out of the solid rock upon which the Jumna Musjeed is built. The water is raised from a great depth by complicated machinery to a succession of reservoirs, and fills a pond, from which the inhabitants obtain a supply.

This city has at various times undergone great vicissitudes. In 1803 the city and territory of Delhi passed into the possession of the British, and from that time the king of Delhi has been a merely nominal sovereign, receiving a pension from the British government. The population of the city is estimated at 200,000. The trade of Delhi is still extensive, particularly in shawls, which are brought from Cashmere to be embroidered with gold and silk. The jewellers and ivory carvers of Delhi are celebrated for their skill and the delicacy of their workmanship. A considerable trade is carried on in precious stones and in carnelians.

Among the ruins of the ancient city on the eastern side of the river are some splendid mausoleums in good preservation. About 1825 a college or madriasa was established by the General Committee of Public Instruction, and funds were assigned for its support by the Company's government, in addition to which a sum equal to 17,000*l.* was presented to the college by Nawaub Islamaid-ood-Dowlah, late minister of the king of Oude. There is another school at which the children of the native gentry are taught the English language. In addition to these establishments about 300 schools have been opened in Delhi and its vicinity for the instruction of poor children. There are several missionary churches and schools in the city. A jail, a lunatic asylum, and other public buildings have been recently erected by the Company's government.

Delhi is distant from Calcutta, by the Birbhūm road, 956 miles; from Bombay, by Ahmedabad and Ajmeer, 880 miles; from Madras, by Ellichpore, 1275 miles.

(Rennell; *Memoir of a Map of Hindustan*; Mill, *History of British India*; Heber, *Journals in India*; Stoeckeler, *Handbook of India*; *Parliamentary Papers.*)

DELOS, an island of the Archipelago, the smallest of the Cyclades group, lies in the strait between Mycone and Rheneia. According to the poetic tradition, it was originally a floating island, until Jupiter fixed it fast to the bottom of the sea in order to afford a secure resting-place for Leto or Latona to bring forth Apollo and Diana. (Strabo, p. 485.) It had several ancient names, as Ortygia, Cynthia, and Asteria. It was celebrated from the earliest times as a seat of the worship of Apollo, who was said to have been born there. His temple and that of his mother, Latona, were in the town of Delos, which was built on a little plain on the west side of the island, at the foot of a lofty mountain, called Cynthus. (Strabo, p. 485.) The river Inopus ran into the sea to the south of the town; and in the sacred inclosure was a diminutive circular basin. (Herod. ii. 170; Tournefort, *Voyage du Levant*, tom. i.) Delos was a place of meeting for the Ionians in the time of Homer; and athletic sports, with dancing and singing, were carried on there in honour of Apollo. (Thucyd. iii. 104.) Polycrates, of Samos, consecrated the adjoining island, Rheneia, to the

Delian god, and joined it to Delos by a chain. Delos fell into the power of the Athenians in the time of Peisistratus, and then a partial purification of the island took place by the removal of the tombs which were within sight of the temple. In the year B.C. 426 a complete purification of Delos was made by the Athenians; all the tombs there were removed, and it was proclaimed that no one should thenceforth die or be born in the island, but that all persons likely to die or bring forth should be sent over to Rheneia. (Thucyd. i. 8; iii. 104.) The Athenians instituted at Delos a festival, which returned at the beginning of every fifth year, called the Delia, and sent thither annually a sacred vessel, called the Theoris, in commemoration of the delivery of Athens by Theseus from the Cretan tribute. (Plat. 'Phædo.') The Persians regarded Delos with so much veneration, that when they were sailing to Eubœa, in B.C. 490, they would not land there, but sent to offer a most sumptuous sacrifice to the Delian Apollo. (Herod. vi. 97.) It was probably on account of the respect which all parties paid to this temple that the Athenians selected it as the depository of the tribute which they collected from their allies after the Persian war. (Thucyd. i. 96.) In B.C. 422 the Athenians removed the whole population of Delos to Adramyttium, where they were allowed to settle by the satrap Pharnaces (Thucyd. v. 1), and where many of them were afterwards treacherously massacred by the Persians. (Thucyd. viii. 108.) When Corinth was destroyed by Mummius, Delos succeeded to the commerce of that city, and was for a time very flourishing; but the generals of Mithridates having landed there in the war between that monarch and the Romans, the island was laid waste by them, and remained in a state of great desolation. (Strabo, p. 486.) In the days of their prosperity the Delians carried on a very extensive slave-trade with Cilicia, and 10,000 slaves are said to have been landed and sold in a single day. (Strabo, p. 668.) The island was formerly famous for its palm-trees; there are none now on the island. Delos is little more than a mass of bare rock about five miles round. The town Delos stood in a plain at the foot of Mount Cynthus, a bare granite rock 400 or 500 feet high, on the sides and summit of which are some architectural fragments of white marble. The building that stood on the summit seems to have been an Ionic temple. The town is now a heap of ruins. Whole ship-loads of columns and other architectural remains were carried off centuries ago to Venice and Constantinople. The chief buildings lay between the circular basin and the harbour. The ruins of the great temple of Apollo may be distinctly traced; and there are still remains of the colossal statue of Apollo dedicated by the Naxians. The only inhabitants now are a few shepherds and goatherds from Myconus.

Coin of Delos.

British Museum. Actual size. Copper. Weight, 55 grains.

The island of *Rheneia*, half a mile distant, is larger than Delos, being ten miles round. It consists of two parts connected by an isthmus. The southern part was the burial place for Delos, and still contains numerous tombs. On both Delos and Rheneia are ruins of many private houses. Both islands are now called *Dhiles*.

(Leake, *Northern Greece*.)

DELPHI, now CASTRI, a town of Phocis, celebrated for its oracle of Apollo. Its original name was Pytho, which some derive from *πυθέσθαι*, 'inquire'; others from the serpent Pytho, which Apollo slew here; and Homer does not call it by its more modern appellation. There was a legend that two eagles sent by Jupiter from the east and west met at Delphi, and in the temple was a stone adorned with two golden eagles and other devices, which was called the navel-stone, signifying that Delphi was the navel of the earth: representations of this may be seen on many ancient monuments. The oracles were delivered by a priestess, who sat upon a tripod placed over the mouth of the cavern in which the serpent Pytho was buried, and who, having exhaled the vapour, pronounced some prophecy in verse or prose; if in prose, it was afterwards set to verse by the poets attached to the temple. The great reputation of the Delphian oracle made it the richest shrine in Greece, as every person who was satisfied with the response he obtained made a point of offering some costly donation to the temple. The first stone temple at Delphi was built by Trophœus and Agamedes; this having been destroyed by fire B.C. 548, a new one was built by the Amphictyons from the proceeds of a voluntary subscription to which Amasis, the king of Egypt, largely contributed. The Alcmaonides, who contracted to build it, very liberally substituted Parian marble in the front of the building for the common stone of which they had undertaken to construct the edifice. (Herod. ii. 180; v. 62.) The wealth of Delphi naturally attracted plunderers. The Persians under Xerxes made an unsuccessful attempt to get possession of the treasures accumulated there. (Herod. viii. 37.) The Phocian leaders in the sacred war did not hesitate to appropriate them as a fund for the payment of their mercenaries (Strabo, p. 421); and Brennus, or Bran, the Gallic king, subsequently carried off the

greater part of the offerings which remained. (Strabo, p. 188.) There were however still some objects for the rapacity of Nero, who carried off 500 bronze statues at once. (Pausan., 'Phoc.' 5.) The city of Delphi, which was the largest in Phocis (Pausan., 'Phoc.' 84), was situated in the narrow vale of the Pleistus, on an elevation, sixteen stadia in circumference, at the foot of the south side of Parnassus (Strabo, p. 418); and as the focus of the Dorian religion, and the seat of the most celebrated oracle in Greece, it naturally became populous and wealthy. The population consisted of Dorians, who formed the privileged class, and of the descendants of the bondsmen of the temple. The constitution was originally monarchical (Müller, 'Dor.' iii. 6, § 10); the kings were also called Prytanes. (Müller, iii. 8, § 3.) The Dorian families made an oligarchy, from which the priests, the Pythian court of justice, and a limited senate, were chosen. (Müller, iii. 9, § 17.) Delphi was from very early times the rendezvous of an important federal union, or amphictyony, the organisation of which is attributed by Strabo to Acrisius. (Thirlwall, 'Hist. Greece'.)

Coin of Delphi.

British Museum. Actual size. Silver. Weight, 22½ grains.

The topography of Delphi, and the remains still existing there, are accurately described by Leake, 'Northern Greece,' vol. ii.; and by Ulrich, 'Reisen und Forschungen in Griechenland.'

DELTA, the name of the fourth letter of the Greek alphabet. It was originally given by the Greeks to that part of Lower Egypt which, being comprised between the two main branches of the Nile and the sea, had a triangular form, somewhat resembling the Greek letter Δ. The same name has since been extended to all those alluvial tracts, whether of triangular form or not, at the mouths of rivers which empty themselves into other rivers, into lakes, or into the sea by two or more diverging branches. Of the different circumstances which contribute to the formation of deltas two are essential: first, the river, in the lower part of its course, must open out or spread sufficiently to have the motion of its waters considerably retarded; and secondly, it must either be habitually or periodically charged with fine detrital matter, which it deposits when its motion is diminished or its progress checked.

The principal deltas of Europe are those of the Rhône, the Danube, and the Po. Many other rivers however form deltas, such as the Ebro, the Vistula, the Neva, the Dwina, the Don, &c. The delta of the Rhine has been, as it were, obliterated by the irruption of the Zuydersee, though the whole of Holland is a formation of deltoid islands, created by the anastomosing branches of the Rhine, the Meuse, and the Schelde. The deltoid form of the mouths of the Petchora is no longer recognisable in the group of islands at its embouchure.

In Asia, the principal deltas are those of the Ganges, the Indus, the Irrawaddi, the Cavery, the Euphrates, the Oural, the Lena, and the Kolima.

The Volga, before entering the Caspian, is split into a great number of branches; but the space which they inclose, in strictness, bears little resemblance to a delta.

In Africa, the Nile and the Niger; and

In America, the Mississippi and the Orinoco form the principal deltas.

DELVINO, a town, or rather large village in the interior of Albania (Turkey in Europe), in a rich plain at the foot of the south-western slope of the mountain range of Khimara. It is 45 miles N.W. from Janina, and about 15 miles N.E. from Butrinto. It was formerly the residence of a pasha, and had a population of 8000, but the population is now said to be greatly reduced. There is a castle at Delvino, and a Greek bishop still resides in the town.

DEMREA. [ABYSSINIA.]

DEMERRARA. [GUYANA, BRITISH.]

DEMETRIO, SAN. [ABRUZZO.]

DEMONA, VAL DI. [NAPLES; SICILY.]

DENBIGH, Denbighshire, the county town, a municipal and parliamentary borough, and market-town in the parish of Denbigh, is situated in the vale of Clwyd in 53° 10' N. lat., 3° 23' W. long.; distant 213 miles N.W. from London. The population of the borough in 1851 was 5493. It is governed by four aldermen and twelve councillors, one of whom is mayor; and with Ruthin, Holt, and Wrexham returns one member to the Imperial Parliament. The Epiphany and Trinity quarter-sessions are held here; the other sessions and assizes are held at Ruthin. The living is a rectory in the diocese and archdeaconry of St. Asaph.

The town of Denbigh is built on the rugged sides of a steep insulated hill, the summit of which is crowned by the picturesque ruins of the castle; the principal street contains several good private residences. The original town was situated on the summit of the rock, but about the middle of the 16th century most of the streets were demolished, and the town was almost deserted; a new and

much more convenient town was then formed about the bottom of the rock. The walls of the old town were of great strength.

Denbigh castle appears to have been erected by Henry Lacy, earl of Lincoln, upon whom Edward I. conferred the lordship of this place on the death of Llewellyn, the last prince of Wales. The castle walls were of extraordinary strength: the outer and inner faces were built in the usual way, and the interval was filled with rough stones of all sizes and with a grouting of hot mortar, which, on cooling, formed a mass as hard as stone. The grand entrance to the castle, a magnificent pointed archway, with the statue of the founder in a niche over it, in tolerably good preservation, still remains: there are also portions of two large octagonal towers which flanked the entrance. The walls, which run round the brow of the hill, inclose a considerable area, partly used for pasture, and partly as a bowling-green. Edward IV. was besieged in this castle by the army of Henry VI., but he made his escape before the castle surrendered. Charles I. came here on his flight from Chester after the battle of Rowton Heath in 1645, and the tower in which he is said to have lodged is now called the King's Tower. The garrison withstood the Parliamentarians for above two months, and then surrendered only by order of the king. After the restoration of Charles II. the castle was dismantled, but owing to the excessive thickness of the walls it was found necessary to blast them with gunpowder.

The town is well-paved and lighted, and possesses a mechanics institution, a dispensary and infirmary, a lunatic asylum, and a new and handsome market-place. The parish church is at Whitechurch, about a mile from the town; it is very ancient. It has been recently repaired. A chapel near the castle gate, within the old town walls, once belonged to the old castle, and was dedicated to St. Hilary. There is a church for the Welsh portion of the inhabitants. The Independents, Calvinistic and Wesleyan Methodists, Baptists, and Plymouth Brethren have places of worship. There are National schools, a British school, two Endowed schools, a Free grammar school, and a Blue-Coat school. Denbigh has a considerable manufactory of gloves and shoes; tanning is extensively carried on. The markets are held on Wednesday and Saturday; there are six fairs in the year. The neighbourhood is greatly celebrated for the beauty of its scenery.

(*Land We Live In*, vol. iii.; Pennant, *North Wales*; Cliffe, *Book of North Wales*; Parry, *Cambrian Mirror*; Bingley, *North Wales*; *Communication from Denbigh*.)

DENBIGHSHIRE, a county of North Wales, of very irregular form. It is bounded N. by the Irish Sea; N.E. by the county of Flint; E. by that of Chester, from which it is separated by the Dee; S.E. by a detached part of Flintshire, and by Shropshire, from both of which it is also separated by the Dee; S. by Montgomeryshire; S.W. by Merionethshire; and W. by Caernarvonshire, from which it is separated by the river Conway. A small detached part of the county is included between Shropshire and Montgomeryshire. Its greatest length, from north-west (Llan Drillo Rhôs, near Little Orme's Head) to south-east (Llan Gedwyn, on the river Tanat), is 41 miles; its greatest breadth from the extremity of the county near Eaton Hall (which is in Cheshire) to the source of the Rhaiadr, which flows into the Tanat, is about 29 miles. The area of the county is about 603 square miles: the population in 1851 was 92,583.

Surface, Hydrography, and Communications.—The Hiraethog hills, which occupy the western side of the county towards Caernarvonshire, extend from the north-western extremity of Denbighshire, near Little Orme's Head, in a south-south-east direction, skirting the valley of the Conway, to which they present their steepest side; on the east side several ridges of hills varying in length from 5 to 10 miles, run out laterally from the principal range. The Hiraethog hills, with these lateral branches, form one of the most extensive and dreary wastes in the principality of Wales, stretching in length from 25 to 30 miles, from the neighbourhood of Little Orme's Head to near the town of Corwen (Merionethshire), on the Dee; and in breadth according to the extent of the lateral ridges. The general covering of these hills is heath or ling: the hollows and flats abound with excellent peat for fuel. The principal summit of the Hiraethog range is Modwl Fithin, 1660 feet high. In the branch ridges the highest summit is Bronbanog, near the source of the Clwyd, 1572 feet. The eastern side of the county, adjacent to Flintshire, is occupied by part of two parallel ranges of hills (the western range called the Clwydian hills), which commence on the coast of Flintshire, and entering Denbighshire run southward more than 20 miles towards the valley of the Dee, and are united by the hills which form the northern side of that valley to the Hiraethog range already described. The whole may be considered as forming one range 60 to 65 miles long, in the form of a horse-shoe, or of the letter U, and inclosing the beautiful and fertile vale of Clwyd. The Clwydian hills and the parallel range inclose a valley watered by the river Allen (Alyn or Alyn) a tributary of the Dee. The principal summits of the Clwydian and parallel ranges vary in height from 1491 feet to 1858 feet. The Berwyn hills, which separate the basin of the Dee from that of its tributary, the Ceiriog, and the hills which separate the basin of the Ceiriog from that of the Tanat (whose waters flow, though not immediately, into the Severn), occupy the southern part

of the county. Cefn Ucha, in the Berwyn range, south of the town of Llangollen, is 1816 feet high.

The waters of Denbighshire find an outlet into the sea chiefly by the Conway, the Clwyd, and the Dee, not one of which has its estuary within the county. The Conway carries off the waters of the western slope of the Hiraethog hills: the Clwyd drains the country inclosed between the Hiraethog and the Clwydian hills, except a small part which is drained by the Alwen, a feeder of the Dee; the Dee receives by several tributaries the waters of the rest of the county. The Conway is noticed under CAERNARVONSHIRE. Its Denbighshire tributaries are all small, for the hills on whose slopes they rise are near the main stream: these tributaries are the Serw, which flows from Llyn Scrw and joins the Conway near its source, the Clettwr, the stream from Cerniog, the Afon Hwch, the stream which passes Eglwys Fach, and many other smaller streams. The Clwyd rises near the hill Bronbanog. [CLWYD.] The width of the valley of the Clwyd allows the formation of several large affluents. The Dee touches the border of the county 4 or 5 miles below the town of Corwen (Merionethshire), and after separating it from Merionethshire for a mile or two, quits the border and crosses Denbighshire in a winding course from west to east through the vale of Llangollen, passing the town of Llangollen, and Wynnstay, the seat of Sir W. W. Wynn. A little below Wynnstay it reaches the border of the county, and divides it from Shropshire, a detached part of Flintshire, and Cheshire, until it finally quits Denbighshire a little above Eaton Hall. That part of the course of the Dee which is upon or within the border of the county, may be estimated at more than 40 miles; the river is not navigable till after it leaves Denbighshire. Of those feeders of the Dee which belong to Denbighshire, the Rhaiadr or Moch, the Alwen, the Ceiriog, the river which rises at Minera and passes near Wrexham, and the Alyn, or Alyn, are the chief. [DEE.] The Rhaiadr, or Moch, is a small stream which forms the boundary of Denbighshire and Merionethshire. Its length does not exceed 7 or 8 miles, but it forms in its course the celebrated waterfall of Pistill Rhaiadr. This fall, which is the loftiest and perhaps most picturesque waterfall in North Wales, is broken into two parts; its total height is about 200 feet. The southern border of the county is skirted for about 5 miles by the Tanat, which flows by the Vyrnwy into the Severn. The Ywrch, the Cwmrhiw, and one or two other affluents of the Tanat belong to Denbighshire, but they are small. Some small streams in the northern part of the county flow directly into the sea between the Conway and the Clwyd. The Dolwen, the largest of them, has a course of not more than 8 miles.

There is in Denbighshire a navigable feeder of the Ellesmere Canal. It is taken from the Dee near Llan Tysilio, in this county, and follows the valley of that river to the neighbourhood of Ruabon, where there is a short railroad from the canal to Ruabon brook. The canal then turns abruptly, and crossing the river Dee, over which it is carried by the aqueduct of Pont Cysylltau, runs southward to the river Ceiriog, over which it is carried by another aqueduct bridge, and thence into Shropshire. There is another large aqueduct bridge over the Ceiriog, built of stone, which is 600 feet in length, and is supported on 10 arches at an elevation of 65 feet above the river.

Of the roads which cross Denbighshire the most important is the parliamentary mail road from London to Holyhead, which was, until recently, the principal channel of communication between the Metropolis and Dublin. It enters Denbighshire near the village of Chirk, and runs northward to near the Dee, where it turns to the west, and passing through Llangollen, enters Merionethshire. It afterwards re-enters Denbighshire, which it finally quits by crossing the Conway at Bettws-y-Coed. The mail road from London to Holyhead, by Chester, enters Denbighshire between St. Asaph and Abergele, and quits it at the bank of the Conway. The Chester and Holyhead railway enters the county near Rhyl and passes along the coast to the bank of the Conway, a distance of about 14 miles, where it enters Caernarvonshire. The Chester and Shrewsbury railway enters the county a few miles north from Wrexham, and proceeding southward quits it near Chirk, a distance of about 12 miles.

Geology, Mineralogy, &c.—In describing the geological character of this county, we shall notice the principal rocks which are found in it in the order of superposition, beginning with the uppermost, the red marl or new red-sandstone. This rock occupies part of the coast on the north of the county, and skirts the Clwyd from its mouth to above Ruthin. It is found also occupying a considerable tract in the eastern part of the county, along the Dee, extending from that river to the town of Wrexham: and again it is found in the valley of the Ceiriog, near the village of Chirk. The coal measures which underlie the red marl, and which form the coal-field of Flintshire, extend from that county into Denbighshire as far as Wrexham, and again appear in the valley of the Dee, extending from Ruabon to Chirk. Coal is dug near Wrexham and in the neighbourhood of Ruabon. Common, cannel, and peacock coal are found in these coal-measures. The coal-measures rest on a base of shale and sandstone, answering in position and character to the millstone grit of Derbyshire; this base rises to the surface, and occupies a narrow strip of the county extending from Flintshire south-east to Wrexham, and from that town south by west to Chirk; after which it continues into Shropshire, skirting the Flintshire and Ruabon coal-fields. The shale is succeeded by carboni-

ferous limestone or mountain limestone, which extends from the coast, in the neighbourhood of Great and Little Orme's Head (both these promontories consist of this rock), and forms part of the mass of the hills that extend from the Hiraethog hills to the vale of Clwyd. A considerable part of that vale, and the upper part of the valley of the Alen, separated from it by the Clwydian hills, are also occupied by this limestone, which extends south-east from the vale of Clwyd across the vale of Llangollen into Shropshire. The older red-sandstone, which underlies the mountain limestone, occupies a narrow belt of the surface, skirting the district which has just been described as occupied by the limestone. The Hiraethog hills are formed principally of transition limestone. The rest of the county is occupied by the clay slates and grauwacke slates, which are so abundant in Wales. (Conybeare and Phillips's 'Outlines of the Geology of England and Wales'; Greenough's 'Geological Map of England and Wales'; 'Geological Map of the Society for Diffusion of Useful Knowledge'.)

The coal-mines of Wrexham and Ruabon have been already mentioned. There are some old lead-mines near Abergelle, on the coast: others in the range of limestone hills which run parallel to the Clwydian hills on the east, and others again in the neighbourhood of Ruabon. On the western side of Great Orme's Head copper is worked. Iron ore is dug at Ruabon and in the neighbourhood of Wrexham. Slate is quarried near Chirk; millstones are procured in the hills which bound the valley of the Ceiriog, and freestone for building in various places, especially near the coal-field.

Divisions, Towns, &c.—The ancient districts and subdivisions of North Wales were superseded by the modern counties and hundreds, which were introduced as late as the reign of Henry VIII. By statute in the 27th year of Henry's reign, four shires were formed in Wales, of which Denbigh was one: these were subdivided into hundreds; and it was enacted that the English laws should from thenceforth be in force through Wales, all laws, customs, and tenures inconsistent therewith being for ever abolished. The present hundreds are six—namely, Bromfield, Chirk, Isled, Isdulas, Ruthin, and Yale. The county contains one principal borough and market-town, namely, DENBIGH: two market-towns, which are contributory boroughs to Denbigh, namely, WREXHAM and RUTHIN; one borough which has no market, Holt; and two market-towns, Llangollen and LLANRWST. Holt and Llangollen we notice here, the other towns will be found described under their respective titles.

Holt is on the river Dee, which here separates Denbighshire from Cheshire, 6 miles N.E. from Wrexham: population of the borough 1029 in 1851. In the civil war of Charles I. Holt Castle was garrisoned for the king, but was seized in 1643 by the parliamentary troops. Scarcely any relics of it are left. The town is an irregular assemblage of streets or lanes; the main street leading down to the bridge of ten arches over the Dee, by which Holt is united to the village of Farnon. This bridge was built in 1345; there are relics of a guard-house in the middle. The chapel of Holt is a plain building in the perpendicular style. There are a chapel for Baptists, and a Free school. The population is chiefly engaged in agriculture. There are two cattle fairs in the year.

Llangollen stands on the right bank of the river Dee, and on the parliamentary mail-road from London to Holyhead, 184 miles from London; the Llangollen road station of the Chester and Shrewsbury railway, which is 4 miles from Llangollen, is 198 miles from London: the population of the entire parish, which extends over an area of 20,176 acres, was 5260 in 1851. The vale of Llangollen is much resorted to by tourists on account of its picturesque beauty and its antiquarian remains. The streets are narrow, and the houses are built of a dark shaly stone. The bridge was built by John Trevor, bishop of St. Asaph, who died in 1357; it consists of five arches, the widest not having more than 28 feet span. The inhabitants are engaged in agriculture, in quarrying stone, in burning lime, and in the manufacture of flannel, cotton goods, and earthenware, and in iron-works and collieries. The market is on Saturday; there are five fairs in the year. The Ellesmere Canal passes through the parish. The church is a plain edifice. There are places of worship for Independents, Baptists, and Calvinistic and Wesleyan Methodists. Castell Dinas Brân, whose remains nearly cover the summit of the conical hill on which it is placed, is on the north bank of the Dee, just opposite to Llangollen. It was built of the coarse stone of the country, with here and there a few freestone mouldings. Llan Egwest, or Valle Crucis Abbey, is just within the parish of Llan Tysilio, and on the border of that of Llangollen. There are some beautiful remains of the church and of a part of the abbey, the latter now converted into a farm-house. A short distance from the abbey is the remainder of a round pillar, called the pillar of Eliseg, probably the most ancient British inscribed pillar existing.

The following are some of the more important villages, with the populations in 1851 and a few other particulars:—

Abergelle, 11 miles N.N.W. from Denbigh, population of the parish 2855, lies at a short distance from the coast. It is much resorted to in the summer as a bathing place. A considerable quantity of limestone is shipped here from the Llysfaen quarries. During the summer a small market is held on Saturday. Gwrych Castle is an extensive modern mansion in a fine situation. *Chirk*, 22 miles S.E. from

Denbigh, population of the parish 1590, is a village near the north bank of the Ceiriog, on the road from Oswestry to Ruabon and Wrexham. A considerable number of the inhabitants are employed in coal-pits, stone-quarries, lime-works, and some paper-mills. Three fairs are held in the year. The Ellesmere Canal runs by the village; the Shrewsbury and Chester railway has a station at Chirk. Chirk Castle, built by Roger Mortimer in the 13th century, on the site of one erected in 1011, is a large oblong square, built round a quadrangular court, and inclosed by massive walls strengthened by round towers at the corners: a fifth tower is close to the entrance. The interior is handsomely fitted up, and contains, among other apartments, a gallery 100 feet long, adorned with the portraits of many public characters of the time of Charles II. From the castle grounds the prospects are of great beauty and extent: it is said that seventeen counties may be seen from one spot. *Gresford*, 23 miles E.S.E. from Denbigh: population of the township 614. The church, an interesting structure partly of the perpendicular style, is situated on an eminence. The Shrewsbury and Chester railway has a station at Gresford. Near the village are vestiges of a British fortress. *Pentre Voelas*, 14 miles S.W. from Denbigh, population 561, is chiefly noteworthy as being a rather favourite station for tourists and anglers. At Cerniog, a few miles from Pentre Voelas, the finest view of the entire Suowdon rungo may be obtained. Near the village is Castell Coch, an earthwork of uncertain date. *Ruabon* (or according to the Welsh orthography, Rhiw Abon) is a village at the junction of the roads from Oswestry and Llangollen to Wrexham, 25 miles S.E. from Denbigh: the population of the entire parish, which covers an area of 14,364 acres, was 11,507 in 1851. The church, which is spacious, is adorned with some elegant monuments of the Wynn family, especially one by Rysbrack, to the memory of the first Sir Watkin Williams Wynn, who died in 1747. There are several Dissenting meeting-houses in the parish, also two sets of almshouses. Many of the inhabitants are employed in the collieries and iron-works: the iron-ore is partly dug in the adjacent hills, and partly brought from Lancashire. The Ellesmere Canal passes through the parish; there is a mineral railway to Ruabon Brook, and the Shrewsbury and Chester railway has a station here. A market is held every Monday. Three fairs are held in the year. Wynnistay, the seat of the Wynn family, is at Ruabon, the entrance to the park being immediately from the village. The grounds are of great extent and very beautiful. The house contains some good pictures. In the parish is an ancient British fortified post: the area is about 4 acres, and it is defended by two ramparts and two ditches: the inner rampart is a massy wall, on the top of which is a carriage drive. In the vicinity of this post, in 1161 or 1162, Owen Cyfeiliog, prince of Powys, defeated the English, and commemorated his victory in a poem called 'Hirlas Owain,' 'the Drinking Horn of Owain.'

Divisions for Ecclesiastical and Legal Purposes.—The county of Denbigh is for the most part comprehended in the diocese and archdeaconry of St. Asaph: a small part is in the diocese and archdeaconry of Bangor, and several parishes are in the peculiar jurisdiction of the Bishop of Bangor. A very small part is in the diocese and archdeaconry of Chester. According to the 'Census of Religious Worship,' taken in 1851, there were then in the registration county (which includes a population of 4332 more than the county proper) 341 places of worship, of which 98 belonged to Calvinistic Methodists, and 73 to other bodies of Methodists; 76 to the Church of England; 49 to Independents; 31 to Baptists; and 14 to smaller bodies. The total number of sittings provided was 78,120. The county is divided by the Poor-Law Commissioners into three Unions, Llanrwst, Ruthin, and Wrexham, which include 82 parishes and townships, with a population in 1851 of 69,375, but the boundaries of the Unions are not strictly coextensive with those of the county. Denbighshire is included in the North Wales circuit: the assizes are held at Ruthin; and the quarter sessions alternately at Ruthin and Denbigh. County courts are held at Denbigh, Llanrwst, and Ruthin.

History, Antiquities, &c.—Denbighshire, before the conquest of South Britain by the Romans, was comprehended in the territory of the Ordovices, a powerful tribe, into whose dominions Caractacus in his last struggle against the Romans transferred the seat of war, and whose subjugation was not completed till the time of Agricola. In the Roman division of the conquered part of the island, Denbighshire was included in Britannia Secunda. Of monuments of the time preceding the Roman conquest may be noticed two kistvaens, or stone colls, mentioned by Camden: and perhaps the tumuli at Llan Aruon yn Yale. At Abergelle are the remains of a British post, called Coppayr Wylfa, or the Mount of the Watch Tower; but we know not to what period it is to be referred.

When the Saxons established themselves in Britain, Denbighshire, as being on the frontier towards Mercia, one of the kingdoms of the heptarchy, or rather octarchy, established by that people, became the scene of frequent struggles. To the time of these struggles we may refer some existing monuments, as the pillar of Eliseg, near Llangollen; and the famous dyke, or ditch, called Offa's Dyke, made by Offa, king of Mercia, as a barrier against the predatory incursions of the Welsh. This ditch is strengthened at intervals by small forts on artificial mounds: several of the mounds yet remain. The ditch is on the Welsh side of the mounds. The dyke crossed that detached

part of the county which is contained in the parish of Llan y Myneich, entered Denbighshire by the hills on the south side of the valley of the Ceiriog, passed near Chirk Castle and Ruabon, and so into Flintshire. Although insufficient as a military work to keep off invaders, it was the recognised boundary of England and Wales; and heavy penalties were denounced against all Welshmen who should be found in arms on the English side. A dyke, called Wat's, or Watt's Dyke, equal to that of Offa in depth, though not in extent, runs parallel to it through this county. It enters Denbighshire 2 or 3 miles to the east of Offa's Dyke, crosses the Ceiriog and the Dee, and runs through Wynnstay (once called Wattstay) Park, past Wrexham, and across the Alyn into Flintshire.

About the year 828, Denbighshire was overrun by Egbert, king of Wessex, who had acquired for that kingdom the permanent supremacy of the Anglo-Saxon kingdoms. The Britons however seem to have recovered the territory appropriated by Offa, which included part of Denbighshire. The country thus restored to its original masters was included in Powys or Powysland, one of the subdivisions of Wales. The consolidation of the power of England under the Norman princes again subjected the Welsh to the pressure of a superior hostile power. Denbighshire fell into the power of Edward I. in 1277, being ceded by Llewellyn, the last prince of North Wales, at the close of his first struggle with the ambitious and politic king of England. In the subsequent revolt of the Welsh prince and his brother David in 1282, it reverted to its native masters, but the death of Llewellyn and the execution of David as a traitor, again and finally placed it under the English dominion.

In the insurrection of Owen Glyndwr, in the civil war of the Roses, and again in the great civil war of the 17th century, Denbighshire became the scene of contest. In 1645 a considerable body of Welsh and Irish royalists under the command of Sir William Vaughan, marching to the relief of Chester, were attacked and defeated near Denbigh by a detachment of the parliamentary army under General Mytton. In February 1645-6, the castles of Ruthin and Holt were simultaneously attacked by Mytton, and surrendered after a siege of two months. The conqueror then marched to Denbigh, the castle of which he besieged in July: it held out till November, when it surrendered on honourable terms. In the year 1659, Sir Thomas Myddleton and Sir George Booth made a premature attempt to restore the Stuarts. Denbighshire has not been the scene of any public event of interest since that time.

In 1851 the county possessed three savings banks—at Denbigh, Ruthin, and Wrexham. The total amount owing to depositors on the 20th of November, 1851, was 56,593*l.* 11*s.* 7*d.*

DENDER. [FLANDERS, EAST; HAINAUT.]

DENDERAH, the Tentyra of the Greeks and Romans, a ruined town of Upper Egypt, near the left or west bank of the Nile, and nearly opposite Keneh, is celebrated for its temple, which is the best preserved and one of the most splendid in all Egypt. Its remains occupy a vast extent of ground, and consist of various buildings and propylæ, besides the temple itself. They are inclosed, with the exception of one propylon, within a square wall, the side of which is 1000 feet, and built of sun-dried brick. The wall is in some parts 35 feet high and 15 feet thick. The handsome portico in front is formed of 24 columns ranged in four rows, with quadrangular capitals, having a colossal head of Isis, or as some say of Athor on each side, surmounted by another quadrangular member, each face of which contains a temple doorway with two winged globes above, and other decorations. The shafts of the columns are perfectly cylindrical and of equal diameter all through, and the whole height, including the base, the quadrangular capital, and dé above that, is 46·10 English feet. The front is adorned with a beautiful cornice and a frieze covered with figures and hieroglyphics, over the centre of which the winged globe is predominant. On all the walls, columns, architraves, and ceiling there is nowhere a space of two feet that is not covered with some figures in basso-relievo of human beings, animals, plants, emblems of agriculture, or of religious ceremonies. The interior chambers of the temple are likewise covered with sculptures, among which the figure of Isis is repeated in numberless instances, as she appears to have been the presiding deity of the place. The light in the chambers comes in through small holes in the wall; the sanctuary itself is quite dark. The ceiling of the portico is occupied by a number of mythological figures, among which the French savans thought they recognised the signs of the zodiac; but as the Crab is wanting, recent travellers and archaeologists are of opinion that it is no zodiac, but a collection of mythological emblems, without any reference to astronomy. On the east side of the temple there are some apartments, both on the ground floor and upper story. On the ceiling of one of the latter, under the roof of the temple, there was another assemblage of mythological figures resembling those on the ceiling of the portico, though fewer in number and differently arranged. This was called a planisphere or zodiac, because in the middle of it figures similar to the signs usually adopted to represent the twelve constellations were observed. These figures however probably represent merely gods and goddesses and religious processions. The so-called zodiac of Denderah have given rise to a warm discussion connected with the truth of the Mosaic history of the world. It is now generally believed that the temple of Denderah, with its zodiac,

is not older than the period of the Ptolemies. The circular zodiac in the upper chamber of the temple of Denderah, which was sculptured on a kind of sandstone, was cut out of the ceiling by a Frenchman, with the permission of Mehemet Ali, and shipped for France in 1821, when it was purchased by the French government, and is now in the Museum at Paris.

(Belzoni; Richardson; Hamilton; Champollion; Visconti; Halma, *Examen des Zodiacues Egyptiennes*; Letronne, *Observations sur l'Objet des Représentations Zodiacales, &c.*; *Egyptian Antiquities*.)

DENDERMONDE, or TERMONDE, a fortified town in East Flanders, is built at the confluence of the Dender and the Schelde, about 18 miles by railway E. from Ghent, 16 miles W. from Malines, and contains 8000 inhabitants. There are four churches, five chapels, a town-house, an hospital, a lunatic asylum, an orphan house, two convents, several schools, and a college in the town. In the church of Notre Dame, which is a very old structure, surmounted by an octagonal tower, there are two pictures by Vandyk, and an ancient sculptured font. The house in which Téniers lived is still shown. The town, which is fortified and defended by a citadel built in 1581 by the Duke of Parma, is said to have been founded in the 8th century. It was besieged by Louis XIV. in 1667 with 50,000 men, who were obliged to retire by the opening of the sluices on the part of the besieged, whereby the surrounding country was laid under water. In 1706 it was besieged and taken by Marlborough, an event more than once alluded to by 'My Uncle Toby' in Sterne's 'Tristram Shandy.' In 1745 it fell into the hands of the French. Dendermonde is the seat of many branches of manufacture, the most important of which are woollen cloths, cotton-yarn, lace, hats, soap, cordage, and pottery. The surrounding country is fertile and well cultivated, and considerable business is transacted at the weekly market in grain, linseed, hemp, and oil. Many Roman antiquities have been dug up in the neighbourhood. (*Dictionnaire Géographique de la Province de la Flandre Orientale*.)

DENIS, ST., an ancient well-built town in the department of Seine, in France, stands at the distance of 5 miles from Paris on the Paris and Boulogne railroad, in 48° 56' N. lat., 2° 21' E. long., and has 12,213 inhabitants, including only the commune. It is traversed by the Croud and the Rouillen, small streams that enter the Seine on the right bank at a short distance from the town, and by a canal which connects the Seine with the canal of the Ourcq. The town was formerly fortified, but the ramparts are now converted into handsome promenades. It lies within the line of detached forts which form the outworks of the new fortifications of Paris; one of these forts is built across the road which enters the town from the north.

St.-Denis dates its rise from the foundation of a chapel erected A.D. 240, over the tomb of St. Dionysius, or Denis. The chapel was afterwards replaced by an oratory, and in the beginning of the 7th century by a magnificent church erected by Dagobert I., who also founded the abbey of St.-Denis, and was buried in the abbey church in A.D. 638. Succeeding kings added to the wealth and decorations of the abbey which was to receive their ashes. The church, commenced on a larger scale by Pepin le Bref, was finished by Charlemagne. The present abbey church dates from 1130, when Abbot Sugor, regent under Louis le Jeune, built the portal, towers, vestibule, apsis, and the crypt, which contains the royal tombs. The nave was completed in 1281 by Abbot Odon. The western front is divided by buttresses into three compartments, which are crowned by a range of battlements. In each compartment is a wide semicircular arched doorway, the ascent to which is by a flight of steps running along the whole front. The upper part of the centre compartment is occupied by the clock. The doors are covered with grotesque but well-executed bronze figures in bas-relief. This church formerly contained the tombs of most of the kings of France and of several other eminent individuals. By a decree of the National Convention, dated July 31, 1793, the monuments were ordered to be demolished. In three days 51 tombs were destroyed and 51 royal graves brutally desecrated, the bones found in them being thrown pell-mell into two ditches opened on the north side of the church. Under the Directory the lead was stripped off the roof, the stained-glass windows removed, and it was even in agitation to demolish the structure altogether. Under the Consulate and the Empire the restorations commenced; these were continued through many subsequent years, and were completed in the reign of Louis Philippe, so that the church of St.-Denis presents now an appearance of greater splendour than it presented before the rude hands of republican violence assailed it. The mass of royal remains were removed by order of Louis XVIII. from the ditches into which they had been cast, and placed, together with those of Louis XVI. and Marie Antoinette, in the central vaults below the high altar. The crypt, which is entered by a descent of steps on either side of the choir, contains statues of the kings of France arranged chronologically from Clovis to Louis XVI.

The abbey of St.-Denis was suppressed in 1792. The abbey buildings, a huge structure, are now occupied by the institution for the Orphans of Members of the Legion of Honour. Among other remarkable buildings at St.-Denis are the former convent and church of the Carmelites, and the infantry barracks to the north of the town.

The trade of St.-Denis is considerable. Printed calicoes and other

cotton goods are manufactured: there are several establishments for washing wool, bleaching linen, casting sheet-lead, and making saltpetre, soda, and other chemical products. There are also several flour-mills for the supply of Paris. Other articles of trade are corn, wine, vinegar, wood, wool, and cattle. There are several fairs held in the year. At one of these, called the fair of Landit, which commences on the 11th of June and lasts a fortnight, vast numbers of sheep and a great quantity of manufactured goods are sold.

(Dulaure, *Histoire des Environs de Paris*; *Dictionnaire de la France*; Murray, *Handbook of France*.)

DENMARK, or **DANMARK** (the land or Mark of the Dane), also termed the Danske Stat (the States of Denmark), is a kingdom lying, independently of its colonial possessions, between 53° and 58° N. lat., and 7° and 13° E. long. It is bounded N. by the Skager Rack, a gulf of the North Sea; N.E. by the Cattogat, another gulf of the North Sea, which, with the Sound, separates Denmark from Sweden; S.E. by the Ost-See, or Baltic; S. by parts of the free states Lübeck and Hamburg, the grand-duchy of Mecklenburg-Schwerin, and the kingdom of Hanover; and W. by the North Sea.

Area and Subdivisions.—The entire area of the kingdom of Denmark is about 21,900 square miles: the population in 1850 was 2,296,597. The following table shows the principal divisions of the kingdom, with the extent and population of each: we add also a list of the colonies which belong to Denmark:—

Circles.	Capitals.	Area in Eng. square miles.	Population in 1850.
Kingdom of Denmark.			
Copenhagen	Copenhagen	2,833	129,695
Sjælland and Moen	Rønne	213	378,765
Bornholm	Odense	1,284	27,927
Fünen and Langeland	Mariboe	647	137,818
Laaland, Falster, &c.	Aalborg	9,696	79,017
Jütland			604,525
The Duchies.			
Schleswig	Schleswig	3,545	363,000
Holstein (1815)	Kiel	3,269	479,361
Lauenburg	Ratzeburg	413	46,486
		21,900	2,296,597
Colonies.			
Færø Islands	Thorshavn	495	8,150
Iceland	Reikiavik	38,200	60,000
Greenland	Lichtenfels	3,950	9,400
West Indies:—			
St. Cross	Christianstadt	110	23,720
St. Thomas			13,666
St. John's			2,228

The subsequent details refer only to the European dominions of the Danish crown, namely, the insular portion, Jütland, Schleswig, Holstein, and Lauenburg.

Surface, Hydrography, &c.—Continental Denmark, which may be designated the north-western peninsula of Germany, in its greatest length from north to south is about 305 miles; in breadth it varies from about 33 to 106 miles, the average being about 70 miles. Its length of coast on the North Sea and Skager Rack is about 460 miles, and along the Cattogat, Little Belt, and Baltic, about 650 miles; the whole extent of coast is accordingly not less than 1110 miles. Many parts of this long coast-line are almost useless, in consequence either of the want of deep water, or of the numberless banks, bars, and islands which line it. The shores too of the islands that lie next the Baltic are so flat and irregular as to be unapproachable in most quarters by vessels which draw much water.

The surface of Denmark presents an almost uniform plain, elevated only a few feet above the level of the sea, but occasionally relieved by some small groups of hills, whose wooded summits break the monotony of the landscape, and in combination with numerous inlets of the sea and small lakes, give the country a very pleasing appearance.

Denmark possesses no mountains, but a range of hills traverses the whole peninsula from south to north, keeping in general near to the eastern coasts, and terminating with Capo Skagen (Skagens-Odde), the extreme point of Jütland. The loftiest summits of the range are the Himmelsberg, in the bailiwick of Skanderborg, in Jütland, which is above 1200 feet high; the Dagbjerg-Daas, 700 feet, in the bailiwick of Viborg, and the Askehoy, 690 feet. There is also a range of hills, called the Fünen Alps, in the island of Fünen, which runs from the north-easternmost point to the south-easternmost at Svenborg, bending always towards the south-western coast: its highest summit does not much exceed 400 feet. [FÜNEN.] The chief mass of the Sjælland hills inclines towards the eastern coast, and extends from the northern mouth of the Sound to the southernmost extremity of the island; the most elevated point is the Mangelberg, near Hirschholm, to the north-west of Copenhagen, which is 560 feet in height.

The western coasts of Schleswig and Holstein are quite flat, and are protected from the North Sea, or West Sea as it is termed by the

Danes, in contradistinction to the Ost-See (East Sea, or Baltic), by sand-hills and dykes in Schleswig. The eastern coasts of Schleswig, as well as the island coasts, are abrupt and precipitous, formed of chalk or limestone, and called Klinte by the natives: the Moens-Klint, on the eastern side of the island of Moens, which stretches above 10 miles out into the sea, is remarkable for its fossils and numerous waterfalls. The north-eastern shores of Sjælland, or Zealand (Sjælland in Danish), are separated from Sweden by the Sound or Far-Sound, (Ore-Sund, so denominated from the resemblance of its form to the human ear), the well-known entrance into the Baltic, which is about 70 miles in length, from the Swedish point of Kullen-Cattogat to Falsterboe, and a mile and a half (7986 feet) in breadth between Helsingör (Elsinore) and Helsingborg, where it is narrowest; in mid-channel it varies from 10 to 19 fathoms in depth. Between the western side of Sjælland and the north-eastern side of the Island of Fünen lies a second entrance into the Baltic, called the Great Belt, which is about 9 miles wide at its narrowest point between Nyeborg and Korsoer, and varies 5 to 25 fathoms in depth, but on account of sandbanks and rocks, is difficult of navigation for large ships. Between the western coast of Fünen and eastern coast of Schleswig and the island of Alsen, or Als, is a third entrance, called the Little Belt, which is not more than three-quarters of a mile, or 4100 feet wide, next Middelfahrt, where it is most confined; it is about 40 miles in length, is hazardous to navigate, and just above Middelfahrt is commanded by the fortress of Fredericia.

The coast of Denmark is indented in several parts with bays and inlets, here called Fiords, or Vügen, the latter name being applied to the smaller bays. The largest of these fiords are the Ise-Fiord, on the northern side of the island of Sjælland, which is connected with the Roeskilder-Fiord on the east, and Liim-Fiord on the west; it is about 74 miles in its greatest length, and contains several islands. The Liim-Fiord, which intersects Jütland, occupies nearly 252 square miles; the narrow isthmus which formerly existed between the Liim-Fiord and the North Sea, was during a violent storm in 1825, broken through in two places. Liim now consequently insulates the northern part of Jütland, the openings however are too shallow to admit vessels of much burden. Kingkiöpings and Nissum fiords are to the south of the last-mentioned bay; Maringer and Randers fiords are on the eastern coast of Jütland; and the Apenrade, Flensburg, and Ecken fiords, on the eastern coast of Schleswig. The Kieler-Fiord some distance south of the Ecken-Fiord, in the duchy of Holstein, forms the noble harbour of Kiel, which admits vessels of war of the largest size to anchor within it, and which has during the present month (April 1854) been the rendezvous of the British fleet in the Baltic. A canal, as will be noticed presently, connects the Kieler-Fiord with the German Ocean.

Denmark abounds in small lakes, the most considerable of which are—the Mossee (about 5 miles long and a mile and a quarter broad), the Viborg, Skanderborg, Garboel, and Langesee, in Schleswig; the Arrese, Esrumsee (celebrated for its fish, and united by a canal with the Great Belt), the Tüsee, and Loroese, in Sjælland; the Arreskoese in Fünen; the Marienboerse in Laaland; the Floener and Selentersco in Holstein; and the Ratzeburgersee in Lauenburg.

As no inland point in Denmark is more than 35 or 40 miles from the sea, the country has no large rivers. The Elbe forms the southern boundary of Lauenburg, from the town of Lauenburg to the Mas-Queller, where it discharges itself into the North Sea. The Danish streams which flow into it are the Delvenau, Bille, Alster, and Stoer. The largest of the navigable rivers of Denmark is the *Eyder*, which was considered the north-western boundary of the empire of the Franks in the days of Charlemagne, and of the German empire in after-times; it flows out of an inland sheet of water near Bördeshu in Holstein, passes westward through Rendsburg, and skirts Friedrichstadt, dividing Holstein from Schleswig, is navigable along nearly the whole of its course of about 105 miles, and enters the North Sea at Tönningen, at the south-western extremity of Schleswig, where it is 800 feet in width. The Trave, a Holstein river also, rises near Giselrade, flows southward through the Lauenburg and Lübeck territories, is navigable throughout the greater portion of its course of about 65 miles, receives the Steckenitz, and winding north of Lübeck, falls into the Baltic at Travemünde. The other streams which water Denmark and the adjacent islands, and to which the Danes give the name of Aac, scarcely deserve the name of rivers; the largest of them are the Gudene, in Jütland, which rises in the Tyrrild Heide, in Jütland, flows through several lakes, and enters the Cattogat near Randers; the Nipsaa, in Schleswig, which enters the North Sea at Ribe; the Schol, Wid, and Bredeaa, in the same duchy; and the Susaa, in Sjælland, which flows into the sea at Nestved.

Denmark contains four large canals. The Schleswig and Holstein, or Kieler Canal, which connects the North Sea with the Baltic, was formed by rendering the Eyder navigable from Rendsburg to Klüvensik, whence the canal takes an easterly direction through the northern extremity of Lake Flensburg, then crosses the range of hills which traverse the peninsula of Jütland and Schleswig from north to south, and terminates in the Kieler-Fiord. Its greatest elevation above the level of the Baltic is 27 feet; its length from Rendsburg to its termination is about 27 miles; it has seven bridges and as many

sluices; is 100 feet broad at the surface and 24 feet at the bottom; it is 10 feet deep, and capable of receiving vessels of 150 tons burden. The Steckenitz Canal in Lauenburg, which unites the Elbe with the Baltic by connecting the Delvenau with the Möllnersee, Steckenitz, and Trave, was constructed in 1890, and establishes a communication between Lauenburg on the Elbe and Lübeck on the Trave. The Daneskiold Canal, on the island of Sialand, which was constructed by Count Daneskiold Samsoe, between the years 1810 and 1812, gives access from the south-eastern waters of the Great Belt to that quarter of the island which is richest in grain and timber; it begins at Noesdybroe, near Ringstedt, and is carried for about 23 miles to Nestwed, near the Baltic shore. The Odense Canal connects Odense, the capital of Fünen, with the sea.

The royal roads, or roads which the mails travel, traverse all the more important routes in the kingdom; they are under the management of the royal engineers, and are wide and well kept.

Only three railways have as yet been constructed in Denmark. One runs from Kiel in a generally south-western direction to Altona (opposite Hamburg), 65 miles, with short branches to Rendsburg and to Glückstadt. The others run from Copenhagen, one westward to Roeskilde, 17½ miles, and the other northward to Elsinore.

Climate, Soil, Productions.—The proximity of the sea renders the climate of Denmark temperate, considering its latitude. The cold is greatest in Jütland, and least in the adjoining islands. The weather is in general very variable; rains and fogs are of constant occurrence; storms are frequent; the winter cold is not severe, but the summer heats are at times overpowering. The humidity of the atmosphere is a great advantage to a country whose soil is of so sandy a nature. The thermometer seldom ranges above 20° Reaumur (77° Fahrenheit). The barometer varies from 28½ to 28° 6'. The upper soil consists of a dense layer of clay or sand in most parts, mixed with gravel in some places; the subsoil is a dark-blue clay (blaaer), entirely destitute of earthy matter, but partially intersected by a fine yellow sand. In some of the islands this clay is of a reddish tint. Remains of vegetable substances, but none of any large land-animals, are found in these clays. In Jütland, the most sterile region in Denmark, the soil lies immediately upon a bed of bog-turf covered by sand from 1 to 3 feet in depth. Sands and heaths are the characteristic features in continental Denmark; and drift-sand renders a considerable portion of the western coasts almost uninhabitable. Together with extensive tracts of moors and swamps, the inland parts of Jütland and the islands are characterised by a rich marshy loam, of which bituminous marl is the chief constituent. The surface of the islands presents partial tracts of moor, heath, and woodland; but in general the soil is fertile, and well suited to cultivation. The component parts of the 21,900 square miles of surface of which Denmark consists, may be thus subdivided: about 10,000 square miles of sand capable of arable cultivation, 2850 of heath, 2700 of black rich earth, 2000 of loam and marl, 1000 of meadows and swamps, 910 of marshes, 940 of woods and forests, 750 of grazing grounds, 300 of drift-sand, and the remainder of lakes and streams.

Denmark is pre-eminently an agricultural state. The most fertile parts are the islands of Laaland and Falster, and next to them Sialand and Fünen; but agriculture is not so skilfully or actively pursued in these parts as in Holstein and Lauenburg, particularly in the Northern and Southern Ditmarshes of Holstein on the Baltic coast, where the most perfect tillage in Denmark prevails. Jütland has the least productive soil of any part of the kingdom, a considerable portion of its western districts, as well as those of Schleswig and Holstein, from the Eyder to the Liim-Fiord, being wholly unavailable for agricultural purposes. The Danes, as agriculturists, have been steadily improving for some years past, and extensive tracts of land are annually brought into cultivation. The cultivator of the land is however rarely proprietor of the soil, and he is over-burdened with dues and services; his capital moreover is usually too small, and property is too much subdivided. Of the available land about four-fifths have been applied to useful purposes; while of the cultivated land about nine-tenths consist of arable land, the remainder comprising meadows, pastures, and woods and forests. The average yearly produce of the cultivated soil is estimated at 400,000 quarters of wheat, 1,600,000 of rye, 4,500,000 of oats, 2,000,000 of barley, 125,000 of buckwheat, 250,000 of peas and beans, 250,000 of rapeseed, 2,250,000 tons of potatoes, 2500 cwt. of hops, and 450,000 lbs. of tobacco. A large quantity of wheat, rye, barley, oats, buckwheat, peas and beans, and rapeseed are exported; also some malt, meal, and flour. Of the grain exported, above four-sevenths, and of rapeseed more than four-fifths, are from the Danish duchies. Much flax and hemp is also raised, but little of superior quality, and in the whole scarcely enough for domestic purposes. Denmark produces the usual kinds of vegetables; but horticulture is not carried to any extent, except in the vicinity of the towns, especially Copenhagen, Altona, and Glückstadt. Large crops of the commoner descriptions of fruit are produced; but attention is paid rather to quantity than quality.

There is much very fine pasture land in several parts of the kingdom; and the rearing of horses and cattle is an object of great attention. The light Danish and heavy Holstein breeds of horses are equally valuable in their way, the one for cavalry purposes and the other for draught. The Jütland breed is similar in figure and

extraction to the Holstein, but has not so fine a head. The king has large studs at Friedrichsburg and Jägerpreiss; and numerous establishments of this kind are kept up by individuals, particularly in Fünen. The number of horses annually exported is very considerable. The rearing of horned cattle is on an extensive scale, chiefly with a view to the making of butter and cheese and salted beef. Great attention has been given to the improvement of the breeds of cattle, and the number exported is very large, a great stimulus having been given to the trade by the removal of the prohibitory duties on the importation of cattle into England. A great deal of beef is also exported. Of butter alone several millions of pounds' weight are annually exported. Cheese, lard, salt meat, hides, and skins are likewise exported in great quantities. Large flocks of sheep are kept: the best native breeds are the Eyderstedt and Frisian in Schleswig, and the Jütland race; but they are reared rather for the sake of their flesh and milk (from which last cheese is made), than for their wool. The stock has been improved by crossing with the Merino breed. The quantity of wool annually obtained is said to be about 5,000,000 lbs. about one-fourth of which is exported. Of swine, Denmark possesses three species, the best of which is the Jütland sort. Poultry of all kinds are raised, particularly geese. Much honey and wax is made in Fünen, Falster, and Bornholm, and also from the bees on the heaths in the duchies of Schleswig and Holstein; but neither the one nor the other is adequate to the domestic consumption.

The fisheries form a very essential branch of national industry: the bays and inlets and the mouths of the Danish rivers being well stocked with fish, afford abundant and profitable employment to the inhabitants in almost every part of the long line of coast. The fishing-grounds of the Liim-Fiord, and indeed of the whole north-eastern coast of Jütland, are the most important with regard not only to the herring trade, but other descriptions of fish, such as mackerel, cod, salmon, eels, flat-fish, shell-fish, &c.; they employ upwards of 250 boats and 1000 men belonging to the adjacent coast, besides a great number of vessels from other parts, among which are above 100 large barks called Quassen, which resort here from Sialand, Fünen, and Bornholm. The average annual produce of salted herrings in this quarter alone is 50,000 tons, of which nearly 20,000 tons are exported. The herring fishery in the Great Belt gives occupation to more than 100 vessels. Oysters are in Holstein a crown monopoly. Seals are taken on the Jütland coast about Eyderstedt, and their fat is converted into oil. There is an association for the herring fishery at Altona, who are the proprietors of twenty or thirty vessels. The Danes also take an active part in the cod-fishery of the North Sea and the whale fishery off the shores of Greenland.

The fine forests which once enriched the Danish soil have gone to decay from want of care and from wasteful consumption. This has especially been the case in Denmark Proper and the duchy of Schleswig. One-fourth of them is crown property. The woods stretch northward from the Schley along the eastern coast of Jütland to the Liim-Fiord; there are long tracts of them also in the south-western parts of Fünen from Bogense to Svenborg. The woods of Sialand, Falster, and Laaland are of low growth. The pine is the prevalent tree, intermixed with the beech, oak, and birch. Denmark is dependent for her supplies of timber on Norway, Prussia, Russia, and other countries; and the inhabitants are compelled in many parts from the positive absence of wood to resort to any substitute, such as manure, straw, haulm, &c., for fuel. There is little inland game but what is found in the royal and other forests, but great numbers of wild waterfowl are killed on the islands along the Schleswig coasts and in other parts.

Denmark possesses no mines or metals whatever, nor any minerals of importance except coals, freestone, and salt: the coal-pits in Bornholm have been abandoned, and there is but one salt-work, that at Oldesloe in Holstein. The supply of salt is drawn from Portugal, Liineburg, &c. Amber is collected on the Hittze, a sandbank on the western coast of Jutland; it is both of the white and deep yellow kinds. Potters' and porcelain earths are also obtained. Peat is got wherever there are swamps, and every village in those parts has bog-land assigned for its supply.

Mineral waters have been brought into use at Glücksburg in Schleswig and at Bramstede in Holstein, and there are saline springs near Oldesloe in the same duchy.

In a country where agricultural pursuits are so much in demand for labour than the population is competent to supply, any great development of manufacturing industry cannot be looked for. The Danish capital is the chief seat of commerce, and we refer to the article COPENHAGEN for the details of its importance: its principal productions are silk, wool, and cotton goods, leather, soap, refined sugar, and tobacco. There is made on an extensive scale in and about Altona, and some is so fine as to be worth 30s. or 40s. a yard. There are large tobacco manufactories, but they are said not to produce more than one-eighth of the quantity consumed. The wooden manufactures, principally of the coarser kinds of goods, are chiefly in Copenhagen, Frederica, and other parts of Denmark Proper; and the cotton in the same capital, Altona, Roeskilde, Christianfelde, and Hanerau. Randers is the principal seat of the glove manufacture, and Friedrichshavn, Lyngby, and

Haraldskjaer, of the manufacture of iron-ware, next to the metropolis. Linens are made at Kiong and Holsteinborg, and in most parts constitute the occasional employment of the cottagers for the purpose of supplying their own wants. Straw hats, sail-cloth, glass, soap, leather, saltpetre, gunpowder and arms, plated goods, china and earthenware, beer and spirits, thread, paper, refined sugar, soda, and potashes are among the productions of Danish industry. Brandy distilleries and breweries are numerous. The making of wooden shoes is an important branch of industry in various parts of Jütland. The peasants' families make their own woollen clothing in general, which is composed of a coarse stuff termed wadmél; and indeed there are few articles of domestic use, whether utensils or for apparel, which are not made by their own hands.

Probably no country in Europe is better adapted or more favourably situated in many respects for commerce than Denmark. It is the key of the Baltic, and possesses peculiar advantages for a ready and cheap intercourse with all the maritime nations of Europe. Copenhagen is the central point of the Danish foreign trade, but Altona appears to be making greater progress at present. Navigation, in which above 50,000 hands are employed, is a great source of profit to the country. The Danes navigate their vessels on cheaper terms than many of their competitors, and are excellent mariners, on which account they are the carriers for other countries, particularly to the Mediterranean and Levant. The trade between the mother country and the West India colonies is quite free; the busiest traffic is carried on with the island of St. Thomas. The value of the native produce and manufactures annually exported to all parts in 1851 was 1,654,338*l*; the imports in the same year amounted to 3,165,161*l*. Both in the exports and imports a much larger portion of the commerce is with Great Britain than with any other single state. The imports from England in 1851 were 596,165*l*, and the exports to England were 680,849*l*. The trade with Sweden and Norway is the next in importance, the total value of both exports and imports amounting to about three-fourths of the British trade. Hamburg and America also share somewhat largely in the trade of Denmark. Among the articles of exportation are grain, butter, cheese, brandy, salted and smoked meats, horned cattle, horses, skins and hides, whale and train oils, eider-down, woollens, fish, tallow, bristles, &c. The imports are wines, salt, silk, wools, cotton, cotton manufactures, timber, coals, colonial produce, brandies and spirits, glass, flax and hemp, drugs, and other articles of domestic consumption. There is a brisk intercourse by sea between the several ports. The chief places of trade are Copenhagen, Altona, Kiel, Koersøer, Helsingør, Odense, Viborg, Randers, Flensburg, Schleswig, Aalborg, Rendsburg, Tondern, Aarhuns, Glückstadt, Neustedt, and Itzehoe.

Inhabitants.—The people of Denmark, with the exception of a few thousand Jews, resident in Copenhagen, Altona, and other towns, are of German descent, but of five distinct races:—The Danes, who inhabit Slesland and the circumjacent islands, Jütland, and a small portion of Schleswig, were the Normans of former times; they use a dialect of the German, and number probably somewhat under 1,500,000: the pure Germans, who inhabit the duchies of Holstein and Lauenburg and the greater part of Schleswig, and whose numbers are about 700,000: the Frieslanders, who dwell along the western coasts of Schleswig and on the small islands in the North Sea: the Angles, who live between the Bight of Flensburg and the Schley on the Baltic; whose united numbers are nearly 80,000: and the Normans, who people Iceland and the Farøe Islands. The population of Denmark, its duchies, and the adjacent islands in 1820 was 1,662,000; in 1840 it was 2,194,950; and in 1850, as already mentioned, it was 2,296,597.

The Dane is of a strong, well-knit, muscular make; his features are regular, his eyes blue, and his hair commonly light. "The gift of the Dane," says Rottlie, a native writer, "is strength, where others have inherited liberty. He is susceptible of high, strong, and enduring feelings, but he is not easily roused; he has more common sense than wit, and being of a patient disposition looks at every side of a question, and requires much time for deliberation." The peasants are industrious and generally of a contented disposition; their highest ambition being to obtain possession of a small piece of land. This universal desire, and the facilities afforded for carrying it into effect, has led to a remarkable subdivision of the land. It is said that half the soil of Denmark is possessed by petty proprietors. The consequence is that the farms are commonly of small size, and though cultivated with great industry seldom worked with sufficient capital. There are, besides the small landholders, a large number of labourers who rent houses with small pieces of land attached, for which they pay rent by a certain number of days' work, on the 'metayer' system.

The population of Denmark is collected in 98 towns, 45 market-towns (all in the three duchies), and 4065 villages, besides isolated farms and dwellings.

The Lutheran is the predominant religion, but every other is tolerated. The members of other religious communities are but comparatively few in number. The affairs of the national church are under the superintendence of the eight bishops of Slesland, Læland, Fünen, Ribe, Aarhuns, Viborg, Åls, and Aalborg. The bishoprics are in the gift of the crown. There are twelve religious communities in

Denmark Proper and the duchies; a missionary college at Copenhagen, called the 'Collegium de cursu evangelii promovendo,' founded in 1714; and a seminary for approved candidates in divinity in the same city.

Much has been done for the education of all classes in Denmark. By law every child between the ages of 7 and 14 years must attend some school; and free schools are provided for all children whose parents are unable to pay for their education. There is in the ministry a department of public worship and instruction; and ministers who have the superintendence of those matters are appointed for the several duchies as well as for the kingdom. The masters are appointed, and the course of study regulated in the public schools, by the ministers of public instruction. Besides the primary schools there are several seminaries for educating teachers; between 30 and 40 gymnasia, or grammar-schools; and two universities—one in Copenhagen, founded in 1478, and attended by about 1000 students; and the other in Kiel, founded in 1665, and attended by about 300 students. There are also schools for the deaf and dumb, and various special schools; as well as several public libraries, and various societies for scientific and national purposes, which are noticed under the head of COPENHAGEN. The number of periodical journals published in Denmark is very large when compared with the population; but the press is under a somewhat strict censorship.

Government, Finance, &c.—Denmark was an absolute and hereditary monarchy, founded on three fundamental laws:—the Act of Sovereignty of 1661, the King's Law (Konge Loven) of 1665, solemnly ratified by the whole nation, and the Native Subjects' Law (Ind Føds Retten) of 1776. In 1848 however Frederick VII., shortly after his succession to the throne, promulgated a new constitution, by which Common States were appointed, to consist of 52 delegates (of whom the king named eight), who were to be elected by the votes of the deputies of the provincial assemblies, and of the clergy, prelates, and landed nobility of the duchies, and the consistories of the universities of Copenhagen and Kiel, and assembled at fixed periods. They have the right to discuss and to decide upon all new laws affecting the common interests of the monarch, and the control over all matters of finance. By this constitution nothing was changed in the general ordinances of 1831 and 1834 respecting the provincial assemblies noticed below. As Duke of Holstein and Lauenburg, the king is a member of the German Confederation, and furnishes a contingent of 3600 men to the confederate army. The sovereign must be of the Augsburg Confession of Faith, and must uphold its ascendancy in his dominions. He attains his majority on reaching his 14th year. The sovereign fixes the allowances to be made to the members of the royal family of his own free will. By a general law of May 28, 1831, and a decree of May 15, 1834, the kingdom was divided into four electoral districts, each of which has at present its provincial assembly: these districts are the Danish Islands, Jütland, Schleswig, and Holstein. The four provincial assemblies must be called together at least once in two years: their consent is necessary to all alterations in laws affecting persons or properties, public imposts, or requisitions for the national service; and they are allowed to propose laws for the sovereign's adoption, and to lodge complaints against any of the public authorities.

The privy council is the highest board in domestic affairs: it is composed of the king, as president, a vice-president, and eight members. The ministry consists of a minister for home affairs, a minister for the finances, &c., for foreign affairs, for justice and police, for the duchies of Schleswig, Holstein, and Lauenburg, for the war department, for naval affairs, and for public worship and instruction. There is a governor for Lauenburg; and the West Indian Islands have a governor also. A land-vogt, or lieutenant, governs the Farøe Islands, and a stifts-ammann, or high bailiff, is at the head of the public authorities in Iceland.

The supreme court of justice holds its sittings at Copenhagen, and there are royal courts in the duchies and lower courts in the various towns. All civil cases must in the first instance be carried before a 'Court of Conciliation,' composed of persons selected from the vicinity, on account of their position, character, or intelligence. Their decision is registered, and has the force of a legal decree in cases where both parties to the suit have signified their readiness to abide by the judgment; otherwise the suit may be carried for decision into the proper courts. From all the lower courts appeals are allowed both in civil and criminal cases to the supreme courts.

The state of the finances will be best shown by the following official statement of the estimated receipts and expenditure for the entire monarchy for the year 1853-4:—

Receipts, 1853-4.

General.—For the whole Monarchy.	
Surplus from the Domains—	£
For the Kingdom of Denmark	40,777
For the Duchy of Schleswig	40,725
For the Duchy of Holstein	76,639
For the Duchy of Lauenburg	31,680
For the West Indian Colonies	1,061
Carried forward	£103,882

Brought forward	£193,882
Interest and Payments on State-paper	181,148
Sound, River, and Canal dues	241,368
Surplus from Customs, Stamps, Excise, &c.—	
For the Kingdom of Denmark	471,105
For the Duchy of Schleswig	128,250
For the Duchy of Holstein	124,348
Surplus from Postage—	
For the Kingdom of Denmark	1,963
For the Duchy of Schleswig	283
For the Duchy of Holstein	559
For the Duchy of Lauenburg	555
Lottery	11,925
Miscellaneous	146,250
Special.—For the Kingdom of Denmark.	
Direct Taxes	426,707
Indirect Taxes	101,857
Iceland	3,144
Miscellaneous	13,233
For the Duchies of Schleswig and Holstein.	
Direct Taxes	216,908
Indirect Taxes	45,581
Miscellaneous	151,503
Total	£2,400,517

Expenditure.

General.—For the whole Monarchy.	£
Civil List	90,000
Appanages to the Royal Family	36,211
Privy Council	6,086
Interest and Payments on the National Debt	804,408
Pension List	181,080
Foreign Department	25,942
War Department	510,878
Navy Department	181,141
Finance Department	50,194
Miscellaneous and Extraordinary Payments	26,848
Special.—For the Divisions of the Monarchy.	
For the Kingdom of Denmark.	
Parliament	6,750
Home Department	119,719
Justice Department	54,388
Education Department	28,276
War Department	5,377
Navy Department	326
Finance Department	13,708
Extraordinary Payments	23,890
National Debt	5,636
For the Duchies of Schleswig and Holstein.	
Cabinet	164,419
Provincial Estates	7,875
Payments in common with Holstein	10,665
Total	£2,353,818

The National Debt amounted in 1853 to 13,612,500*l*.

The numerical strength of the Danish army on the peace footing nominally amounts to nearly 40,000 officers and privates; but the number actually employed is under 10,000. A sufficient number of officers and others always remain at the disposal of the crown to call a force of 25,000 men at any time into active service. The militia, when called out, musters about 60,000 rank and file.

The navy in 1853 was composed of 5 ships of the line, mounting 390 guns; 7 frigates with 346 guns; and 11 sloops, brigs, schooners, and cutters, mounting 148 guns: in all 23 vessels and 884 guns. To these must be added 79 gun-boats, bomb-vessels, &c., and 5 steamers of 1009 horse-power.

The fortresses and fortified ports of Denmark are Copenhagen, Cronburg Castle, Korsøer, Fredericia, Friedrichsørt, Friedrichshavn, Rendsburg, Christiansøe near Bornholm, Nyborg, and Glückstadt. The chief military and naval establishments are the Cadet Academy, Copenhagen; the Arsenal and Archive of Charts, in the same city; a cannon and ball foundry at Friedrichsværk; an invalid hospital at Ekefnørde; and arsenals at Rendsburg and Randers.

History.—The oldest history of Denmark is pure tradition, derived from the suspicious source of the Icelandic Legends or Saga. The first fact of which we can speak is that the Cimbr, a branch of the Normans or Scandinavians, were the earliest known inhabitants of the peninsula of Jütland and Schleswig, which was thence called the Cimbric Chersonesus. They first became known to the Romans from their taking part with the Teutones, about 100 years before the Christian era, in the invasion of Gaul and Italy, in the times of Marius. About A.D. 250 the Goths overran the Scandinavian territories under Odin or Wodin, and imposed rulers of their own on Sweden, Denmark, and Norway. Skjold, Odin's son, is the first name which has descended to us as sovereign of Denmark; but we possess no record of his time beyond numerous legendary fragments. Denmark appears however to have been divided into a variety of petty states, of which Skjold's descendants assumed the lordship for many centuries, and to have been inhabited by a warlike race of men, whose principal occupation was piracy. The Normans, or Angles, under which designation the Swede and Norwegian as well as the Dane were

included, during the 8th and 9th centuries, established their dominion in parts of England; which they distracted by their inroads until the middle of the 11th century: they also made themselves masters of Normandy under Rollo, colonised the Orkneys and Hebrides, the Isle of Man, Iceland, and part of Ireland, and pushed their settlements as far south as Spain, Italy, and Sicily. Of this pre-historic period the vestiges, consisting of tumuli, cromlechs, &c., are very numerous, and have engaged a large amount of attention and research among the antiquaries of Northern Europe.

The first Danish monarch with respect to whom we are enabled to speak with certainty was Gorm, or Worm, the Old, a Skjoldinger, who brought Jütland under his sway in 863, and succeeded between that date and the year 900 in uniting every state in Denmark to his dominion. In 1000, Sven, his grandson, subjugated part of Norway, and in 1014 the greater part of England, where he soon after died; in 1016, his grandson Knud the Second, or Canute the Great, possessed himself of the whole of England and part of Scotland; and in 1030, of the remainder of Norway. To this monarch Denmark was indebted for her greatness, laws, and internal organisation, and the establishment of Christianity as the religion of the country. His successors however were not endowed with capacity enough to preserve his dominion in its integrity; England threw off their yoke in 1034, and Norway two years afterwards. A new dynasty out of the female line of Canute's descendants mounted the throne in 1047, in the person of Sven Magnus Estritson the Third, and held the sceptre for 400 years afterwards. The male descendants of Magnus Sven became extinct with Waldemar the Third in 1375: and Olaf the Fourth, of the female line, Waldemar's grandson, dying in 1387, his mother, Margaretta, styled the Northern Semiramis, ascended the throne of Denmark. She acquired Norway by inheritance, and having subdued Sweden by force of arms, united the three northern kingdoms under one crown by the Calmar union in 1397. The Swedes however could never be brought to endure this league, and after a long series of contests ultimately renounced the union in 1523. These contests undermined the prosperity of the Danish monarchy no less than the perpetual broils between the sovereign and his nobles on the one hand, and the nobility and clergy on the other; the population decreased greatly, and the adjacent seas swarmed with Danish pirates, while trade and navigation dwindled to insignificance. Margaretta's line having forfeited the throne in 1439, and Erick the Seventh having been deposed, the Danish States elected Christian Count of Oldenburg king. From his grandson, Christian II., surnamed 'The Wicked,' the crown was transferred to Frederick the First, duke of Schleswig and Holstein, who received the crown of Denmark and Norway in 1523. His son Christian the Third united the duchies of Schleswig and Holstein in perpetuity to the crown of Denmark in 1533, and brought the turbulent Norwegians to recognise the Danish kings as their sovereigns 'for ever.' In his reign the Reformation was established throughout the united kingdoms, and a code of laws, entitled the 'Recess of Kolding,' was promulgated. The struggles arising out of his partition of the greater part of Schleswig and Holstein between his brothers, became a source of much subsequent mischief to Denmark, and was not terminated until 1773, when the alienated territory was recovered by the cession of Oldenburg and Delmenhorst to its then possessor, the grand-duke of Russia. In the 17th century Sweden wrested from Denmark the provinces of Jemteland and Herjedalen, together with the islands of Gottland and Oesel, the extensive districts of Schonen, Halland, Blekingen, and Båhus. In 1660 the three estates of the realm acknowledged Frederick and his successors as absolute sovereigns of Denmark, in solemn diet at Copenhagen; and they confirmed the surrender of their rights by presenting him with the 'Arfve-Enevolds-Regierungs-Akt.' This gave occasion to the promulgation of his 'Konge-Lov,' in 1665; the fundamental law of settlement which prevailed in Denmark until our own day. In 1720 Sweden ceded the right of receiving the Sound dues to the Danes, and the long-disputed claim of Denmark to the sovereignty of Schleswig was fully recognised. The subsequent hundred years were a period of continued tranquillity, during which the state rose, and enjoyed prosperity: the happiest fruits of this interval of peace were, the abolition of servitude among the peasantry, begun by Christian the Seventh in 1767, the extinction of the negro slave trade, and the establishment of greater liberty of the press. During the wars of the French Revolution, Denmark observed a strict neutrality; but in contesting the right of search as to her mercantile shipping, insisted upon by England, which led her into a defensive alliance with Russia, Prussia, and Sweden, she brought upon herself the loss of her East and West India colonies, and suffered severely in the naval fight off Copenhagen in 1801. The treaty which ensued restored those colonies to her. The peace of Tilsit, in 1807, in which there were secret articles stipulating that the whole Danish navy should be delivered over to the French emperor, occasioned however a fresh rupture with England, which commenced with the appearance of a formidable force under Earl Cathcart and Lord Gambier on the coast of Slesland, and was carried to open hostilities upon the refusal of the Danish government to surrender their fleet, consisting of fifteen ships of the line, fourteen frigates, and three brigs, as well as their timber and the naval stores then in the yards and arsenals of Copenhagen. Upon

this refusal, Lord Gambier bombarded the Danish metropolis, from the 2nd to the 5th of September, forced it to capitulate after a considerable part of the town had been burnt, and carried away the fleet to England. In November following a formal declaration of war was issued by the English government, and Denmark was again stripped of her colonial possessions, and not only lost the islands of Anholt and Heligoland, but the whole of her foreign commerce. By the treaty of Kiel on the 14th of January, 1814, Denmark accepted Pomerania in exchange for Norway. This province was in 1815 ceded by her to Prussia, in consideration of her receiving the duchy of Lauenburg and a large sum of money. In making peace with England, she recovered her colonial dominions, but with the loss of her fleet and the island of Heligoland. In 1845 Denmark sold her East Indian and African colonies to England.

The most important event in the recent domestic history of Denmark is the protracted struggle between the duchies of Schleswig and Holstein and the Danish government. A difference of long-standing between Denmark and the duchies respecting the succession to the crown, which was settled on somewhat different principles by the laws of the two countries, had been increasing in intensity as it became more certain that the reigning family would be soon left without a direct male heir. In the excitement following the great revolutionary outbreak of 1848, the duchies resolved to resort to arms; and at once making the quarrel one of races, they appealed to their German brethren for assistance, in order to secure a separation from Denmark. Prussia sent an army to aid the duchies, but Denmark put forth all her resources, and the struggle continued for a long time with varying success. Austria at length prepared to support Denmark, and Prussia eventually withdrew her forces.

The duchies, though forsaken by their allies, continued to offer the most determined resistance, but eventually Austria and Prussia stepped in as mediating powers, and as they were prepared to enforce their arbitration by sending troops to occupy some of the strongholds of the country, the duchies were compelled to submit, and the authority of the king of Denmark again became paramount. The future relations of the duchies of Schleswig and Holstein and the kingdom of Denmark were finally settled by a decree dated January 28th, 1852. The question of the succession to the Danish throne had been referred to a convention of plenipotentiaries of the principal powers of northern and western Europe. The treaty, as eventually agreed upon and signed by the representatives of England, France, Russia, Austria, Prussia, Sweden, Norway, and Denmark, set aside the line of Augustenburg, and settled the succession to the crown of Denmark upon Prince Christian, of the Sonderburg-Glücksburg line, and his male-heirs. The integrity of the Danish monarchy, though its desirableness was fully recognised, was not however, as is sometimes stated, formally guaranteed by this treaty.

DENNY. [STIRLINGSHIRE.]

DENT. [YORKSHIRE.]

DEOGHUR, a district in the province of Gundwana, forming part of the dominions of the Raja of Nagpore, and lying principally between 21° and 22° N. lat. It is separated into two divisions, designated Deoghur above the Ghauts and Deoghur below the Ghauts. The division above the Ghauts is an elevated tract of country, having the valley of the Nerbudda to the north and the plains of Nagpore to the south. Its surface is undulating, hills and dales occurring in regular succession; the general direction of the hills is east and west. The division below the Ghauts lies to the south; it is crossed by several ranges of hills branching off from the Vindhyan chain. In the time of Aurengzebe this country was in a very wild and unsettled condition; the raja was little more than the nominal head of numerous petty chiefs, and was tributary to the throne of Delhi. Shortly after that time the Bhoonsla family obtained the chief power in this part of India, and Deoghur became the central part of their dominions. The title of raja, with a small part of the revenue, was still allowed to the Goond princes; and the show of sovereignty, but without any of its power, is still given to the ancient royal family. *Deoghur*, the capital, is in 21° 43' N. lat., 78° 35' E. long. It was formerly a place of some consequence, but has long since fallen into decay.

DEOGHUR, or BAIDYANATH, a place of great sanctity in the district of Birbhoom, in the north-western extremity of Bengal, in 24° 32' N. lat., 86° 40' E. long. At a particular season of the year, pilgrims of all ages, both male and female, resort to this place with small bottles filled with water from the Ganges, to be poured over the principal idol of the temple which they are about to visit. Some of the pilgrims take with them a larger stock of the sacred water than they require to satisfy their own devotional feelings: this surplus is made a subject of traffic.

DEPTFORD. [GREENWICH.]

DEPWADE, Norfolk, a hundred in the eastern division of the county, which has been constituted with adjoining parishes a Poor-Law Union. Depwade hundred is bounded N. by the hundred of Humbleyard, E. by the hundred of Loddon, S. by the hundreds of Earsham and Diss, and W. by the hundred of Shropham. Depwade Poor-Law Union, the boundaries of which are much more extended than those of the hundred, contains 43 parishes and townships, with an area of 68,888 acres, and a population in 1851 of 26,082.

DERA-GHAZE-KHAN. [HINDUSTAN—Lahore.]

DERA-ISHMAEL-KHAN. [DAMAN.]

DERBEND, the ancient *Albana*, a fortified town in the Russian part of Daghestan, is situated on the western shore of the Caspian Sea near 42° 12' N. lat., 48° 25' E. long., at a distance of 135 miles N.N.W. from Baku, and about the same distance S.S.E. from Kizliar, at the head of the delta of the Terek. The population is about 12,000. A branch of the Caucasus, which runs eastward to the Caspian Sea, terminates about a mile from its shores, forming what was anciently called the Albanian or Caspian Pylæ, now the Pass of Derbend. As the mountain ridges in no other place come so close to the sea the extremity of this steep and nearly inaccessible ridge offered a very advantageous point for erecting fortifications to command the road along the coast. The town is built on the declivity with which the range terminates, and which forms a parallelogram about 15 miles in length, but only 400 yards across. The walls which inclose the town on the north and south are continuous to the sea. There are two large iron gates in these walls through which the road passes, and which may be shut at pleasure. Hence the town derives its name, which signifies 'the shut-up gates:' the Turks call it *Demir Kapu* (Iron Gate). The walls, which are of great antiquity and very strong, are built of hewn stones, 26 feet high, and 8 feet thick. They are strengthened with round and square towers. To the west of the town is the citadel, on a more elevated eminence, which is also well fortified. Many coarse stuffs of silk and wool are made here. Its commerce by the Caspian Sea is not considerable, the harbour being so shallow that only boats can land, and vessels remain at a distance of nearly a mile from the shore. The town is very ancient. The first Darius is said to have fortified the pass to check the incursions of the Scythians or Slaves. The present walls probably formed part of the fortifications erected by Chosroes, king of Persia, as a bulwark of his kingdom in this direction. Derbend was afterwards taken by the Arabians, and their chiefs who lost their lives in the enterprise are said to have been buried in the sepulchral mounds which are seen to the north of the town. The Russians first took it from the Persians in 1722, but restored it in 1735. They took it a second time in 1795, and have kept it since.

DERBY, the county town of Derbyshire, a municipal and parliamentary borough, and the seat of a Poor-Law Union, in the hundred of Morleston and Litchurch, is situated in a wide and fertile vale on the banks of the Derwent, a feeder of the Trent, in 52° 55' N. lat., 1° 28' W. long., distant 126 miles N.N.W. from London by road, and 132 miles by the North-Western and Midland railways. The borough is governed by 12 aldermen and 36 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. The population of the borough of Derby was 40,609 in 1851. The livings are in the archdeaconry of Derby and diocese of Lichfield. Derby Poor-Law Union contains 7 parishes and townships, with an area of 3329 acres, and a population in 1851 of 43,690.

Derby is supposed to have risen from the ruins of the Roman station *Derventio*, which was on the site of Little Chester, a hamlet just out of the boundary of the borough and on the opposite side of the river. There appears to have been here a British town upon the British road, the *Rykneld*, or *Icknield-street*. Coins of brass, silver, and gold, with antiquities of various kinds, have been found, and the foundations of buildings are still sometimes discovered. At Little Chester are the foundations of a Roman bridge over the Derwent.

In the time of the Saxons Derby was called *Northworthige*; the name of *Deoraby* is said to have been given it by the Danes, by whom it had been captured. The town was recovered from the Danes by *Ethelfleda*, countess of Mercia, and daughter of King Alfred, who took the castle by storm, about 918. It was again taken by the Danes, and was recovered from them by King Edmund I. in 942. In the time of Edward the Confessor, Derby was a royal borough. The town of Derby has received many charters from different sovereigns: it claims to be a borough by prescription. The town has sent burgesses to Parliament since the 26th year of Edward I.

The situation of Derby is very pleasant, being surrounded with rich and beautiful scenery. In the older parts of the town the streets are narrow and winding. Much improvement has taken place in the buildings and the general appearance of the town of late years. The dwelling-houses are mostly built of red brick, the public buildings of stone. Derby is lighted with gas; and it is supplied with water from the Derwent. The town-hall, a handsome building with an Ionic portico, erected in 1828, was destroyed by fire on October 21st, 1841. The outside and centre walls were preserved and retained as part of the new town-hall, in the plan for which the portico was omitted, and a clock and bell-tower placed in front. This building is used for all municipal and judicial purposes. The other public buildings include the county hall, the county prison, the borough jail, and the new county lunatic asylum.

Derby has some fine old churches. All-Saints or All-Hallows church is on the east side of the town, near to the river: the body of the church, a Roman Doric edifice by Gibbs, was first opened for divine service in 1725; the tower, erected about the time of Henry VIII., is in the perpendicular style and of peculiar beauty; its general arrangement and details are admirable. This tower, which has been recently restored, is 178 feet high, and its situation adds to the effect of its elevation and its fine architecture. St. Alkmund's church, rebuilt in 1846, is a handsome and commodious edifice in the

St. Helen's church, and has a tower of the 14th century, surmounted with a spire. The height of the spire from the ground is 207 feet. St. Michael's church is another gothic building with an embattled square tower; the date of erection is uncertain. St. Werburgh's church has frequently suffered from its nearness to the brook: floods having sapped the foundation, in 1601 the tower fell; it was rebuilt on the east side for greater security, but in 1698 the church itself fell. St. John's church is an elegant building of mixed gothic styles. The Independents, Wesleyan Methodists, Primitive Methodists, New Connexion Methodists, Baptists, General Baptists, Quakers, and Unitarians have places of worship. The Roman Catholics have a fine cathedral church, erected about twelve years ago. This building, which is in the decorated style, is 127 feet long, and 45 feet wide; the nave is 80 feet long, the chancel 27 feet by 20 feet; the tower is 117 feet high.

The Free Grammar school in Derby, originally founded in 1162, has an income from endowment of 334 6s. 8d. a year, and an interest in ten exhibitions at Emmanuel College, Cambridge. The number of scholars in 1853 was 53. There are several National, Diocesan, British, and Infant schools. The Philosophical Society, established by Dr. Darwin in 1783, has a good library, with apparatus, a museum, &c. The Athenæum, the Town and County Museum, the Town and County Library, the News Room, the Mechanics Institution, the Mechanics Hall, the Temperance Hall, the Savings Bank—sufficiently indicate by their names their several purposes. The Arboretum is a piece of ground of about 16 acres in extent, well laid out and arranged with trees and shrubs, so as to combine instruction with recreation, for the benefit of the inhabitants at large. The original arboretum, a piece of ground about 11 acres in extent, carefully arranged by Mr. J. C. Loudon, was given to the town by Joseph Strutt, Esq.; an adjacent portion of about 5 acres has since been purchased and laid out in a similar manner. The Derbyshire General Infirmary, opened in 1810, has accommodation for 80 patients, exclusive of the fever-wards, for which a new wing was lately added: a dispensary, ladies' charity, several sets of almshouses, and numerous other charities are in the town. There are a stone bridge of three arches, a wooden bridge, and a towing-bridge over the Derwent, and three stone bridges crossing the Markeaton brook, which flows through the town into the Derwent.

The principal manufactures are of silk and cotton goods, porcelain, jewellery, and ornamental articles made of the various kinds of spar found in the county, red and white lead, lead-pipe, sheet-lead, cast-iron, ribbed stockings, and bobbin-net and other lace. Silk-hosiery is extensively made. In the early part of the 18th century the art of spinning or 'throwing' silk, which had been exclusively possessed by the Italians, was introduced into Derby by a Mr. Crotchet, who did not succeed in business. In 1717 Mr. John Lombe, who had obtained access to the machinery of the silk-throwsters of Piedmont in Italy, agreed with the corporation of Derby to rent an island in the river Derwent, 500 feet long and 52 feet wide. Here he erected at a cost of 30,000*l.* an immense silk-mill. This building has since become the property of the corporation, the lease having expired. In 1718 Lombe took out a patent, and was proceeding successfully in his business when he died. He was succeeded by his brother William, and afterwards by his cousin, Sir Thomas Lombe. The whole machinery of the mill, which was very extensive, was moved by one water-wheel. Many throwing-mills have since been erected at Derby, and this branch of industry may be regarded as the staple of the town. The spars of the county, especially the fluor-spar, or 'blue John,' are wrought into vases and other ornaments; and the black marble of Ashford is wrought into vases, columns, chimney-pieces, &c.

The assizes for the county are held at Derby, also the Epiphany, Midsummer, and Michaelmas sessions; the Easter sessions are held at Chesterfield. A county court is held in Derby. Borough and petty sessions are held. Wednesday, Friday, and Saturday are market-days; the principal market is on Friday. A cattle-market is held once a week on Tuesday. There are nine fairs in the year for cattle, cheese, pedlery, &c., which are well attended.

The river Derwent was several years since rendered navigable from the town of Derby to its junction with the Trent, but since the opening of the Derby Canal the navigation has been disused. The Derby Canal branches from the Trent and Mersey (or Grand Trunk) Canal at Swarkeston, a few miles south of Derby, runs northward, and intersects the Derwent at Derby, a towing-bridge being thrown across that river. From Derby the course of the canal is eastward until it joins the Erewash Canal at Sandiacre. Over the Markeaton Brook, which runs through Derby, the canal is carried in a cast-iron trough or aqueduct. From Derby a short branch of this canal extends to Little Eaton, three or four miles north of Derby, with two arms to the quarries on Little Eaton common. Derby is favourably situated with respect to railway communication to all parts of the country. The railway station at Derby is very extensive in its arrangements, and serves to accommodate several lines which meet here in connection with the Midland railway.

There were formerly four religious houses at or close to Derby: an abbey (St. Helen's) of Augustine canons, a nunnery of Benedictines, and houses of Dominicans and Cluniacs. St. Helen's abbey was founded by Robert de Ferrariis, or De Ferrers, second Earl Ferrers. This abbey appears to have been first established in Derby town, and afterwards removed to a site about a mile north of Derby, where

there has since been the village of Darley or Darley Abbey. There was here an hospital for leprosy persons. In the vicinity of Derby, on the Nottingham road, is a convent of the Sisters of Mercy; the buildings, which are in the gothic style, are extensive, and present a pleasing appearance.

(Hutton, *History of Derby*; Glover, *History of Derby*; *Land We Live In*, vol. iii.; *Parliamentary Papers*; *Communication from Derby*.)

DERBYSHIRE, a midland county of England, bounded N.E. by Yorkshire, from which it is partly separated by the rivers Derwent, Rother, and Sheaf; N.W. by Cheshire, from which it is in this quarter separated by the river Etherow; W. by Cheshire, from which it is here separated by the river Goyt, and by Staffordshire, which latter county bounds it also on the S.W.; S.E. by Leicestershire, from which it is partly separated by the Trent; and E. by Nottinghamshire, from which it is separated by the Erewash. Its form is irregular; the greatest length is from north to south, 56 miles; the greatest breadth is from east to west, 34 miles. The area of the county is 1030 square miles. The population in 1851 was 296,084. The county is comprehended between 52° 41' and 53° 30' N. lat., 1° 10' and 2° 4' W. long. Besides the main part of the county bounded and situated as above, there is a small detached portion near the southern extremity inclosed between the counties of Warwick, Leicester, and Stafford. It contains the villages and parishes of Measham, Stretton-in-the-Fields, and Wilsley, and the village and chapelry of Chilcote.

Surface, Hydrography, and Communications.—The southern and south-eastern parts may be considered as on the whole flat, yet they have an easy ascent towards the north-western portion, which comprehends one of the most elevated and rugged districts in England. This part (which is commonly known by the name of the Peak) is occupied by a part of that range of highlands which some geographers have designated the Pennine chain, which separates the waters that flow into the sea on the eastern side of the island from those on the western side. This chain of mountains enters the county at or near its northern extremity, and the principal ridge runs in an irregular line south-south-west till it enters Staffordshire a few miles south-west of Buxton. Along this ridge are the following heights:—Dane Head Stones, 539 feet high; Blakelow Stones, which Farey considers to be the highest point of the ridge and of the county generally; Kinder-scout, which Farey states to be 1800 feet high; and the northern and middle peaks of Axe-Edge Hill, the southern peak being in Staffordshire. The northern or great summit of Axe-Edge Hill is 1751 feet above the level of the sea. Lord's Seat, to the east of the principal ridge of the Pennine chain, is above 1700 feet high. This ridge divides the basin of the Mersey from that of the Trent, one of that large system of rivers which has the Humber for its estuary. From this the principal ridge of the chain, lateral ridges proceed, one of which, branching from the principal ridge near Axe-Edge Hill and running south-east, separates the basin of the Derwent from that of the Dove. The ridge which forms the eastern boundary of the basin of the Derwent, and which extends in a winding course about sixty-seven miles, does not wholly belong to Derbyshire. It branches off from the Pennine chain, in Yorkshire, and approaching the border of that county towards Derbyshire, runs along the boundary, then enters Derbyshire, and proceeds in a south-eastern direction across the east moors of the county into Nottinghamshire. In this ridge is the hill called Ox Stones, 1377 feet high, between Sheffield (Yorkshire) and Hathersage. Alport or Orpit Hill, south-east of Wirksworth, is 980 feet high.

The whole district of the Derbyshire highlands called the High Peak is an elevated area, rising at intervals into a succession of lofty hills, intersected by numerous narrow valleys. The hills are mostly bleak and barren, or covered with a thin mossy verdure intermingled with gray rock. Some of the peak-hills rise to a great height: Ashop Moor is stated to be 1880 feet and the peak 2000 feet above the level of the sea. The valleys are frequently richly wooded and of great picturesque beauty. The broadest and the deepest valleys are in the higher parts of the Peak. The picturesque beauty of the valleys is increased by the frequently precipitous character of the hills or rocks which bound them. Matlock High Tor and other rocks in Matlock Dale, and the rocks which skirt some parts of the valley of the Dove, are of this precipitous character. In the smaller and narrower dales the projections of one side have frequently corresponding recesses on the other.

The rivers of Derbyshire rise mostly in the north-western and more elevated part of the county, and have a course towards the south or south-east. This is the case with the Derwent and its principal affluent the Wye, with the Dove, which is the boundary river of Staffordshire and Derbyshire, and those of its tributaries which belong to the latter county. In the eastern part of the county about Chesterfield, which is separated from the other parts by the ridge of highland which bounds on the east side the valley of the Derwent, the direction of the stream that drains it (the Rother) is north-east. In the extreme north-west there are a few streams that flow westward into the Etherow or Goyt, and so into the Mersey.

The *Derwent* rises in a place called 'the Trough,' on the borders of Yorkshire and Derbyshire, where the principal ridge of the Pennine chain enters the latter county, and has a south-south-easterly course.

In its progress the Derwent receives on the right bank the Westend River, the Ashop, and the Noe: on the left bank it is joined by the river Wye, and the brooks Burbage and Barbrook. The Wye rises near the Axe Edge Hill in the principal ridge of the Pennine chain, and flows to the south-east through Miller's Dale and Monsal Dale, and past the town of Bakewell into the Derwent: its whole course is more than 20 miles. From the junction of the Wye the Derwent continues to flow in a south-south-easterly direction to Derby, and receives on the left bank the river Amber, and on the right bank the Ecclesburn. Below Derby the Derwent runs south-east with a sinuous course of about 12 miles into the Trent. Its whole course is about 60 to 65 miles. The scenery of the Derwent is very varied and frequently very beautiful. The banks are often luxuriantly wooded, but in some places they rise into bare precipitous rocks, while the stream itself at times flows in a smooth still current, and at others forces its way impetuously over a rugged rocky bed. The course of the Wye is generally through narrow dells with precipitous sides: it receives a small tributary, the Lathkill, just before it falls into the Derwent.

The Dove rises on the border of Staffordshire and Derbyshire, in the slope of the Axe Edge Hill, and is throughout its course the boundary between the counties. Its course is nearly south, with but little variation eastward for about 20 miles, to Hanging Bridge by Ashbourne, near which it receives a stream which comes from the village of Parwick, and the Schoo, which rises near Wirksworth, and flows by Ashbourne into the Dove, after a course of about 10 miles. The Dove, in the upper part of its course, and especially along the famous Dove Dale, is one of the most beautiful of English streams. In parts the mingling of graceful foliage with the picturesque rocks which rise abruptly from the bed of the river, and the clear sparkling water with its brilliant reflections produce a richness and beauty of effect which, in its way, can scarcely be surpassed. After receiving the Schoo, the Dove is joined by the Churnet, its largest Staffordshire tributary, and by several minor streams, and falls into the Trent just below Burton. The whole course of the Dove may be estimated at 45 miles. The waters of this river have a clear blue tint, deepening through various shades to a dark purple. It frequently overflows its banks in the spring; and the fertilising effect of these floods has given rise to the distich:—

"In April, Dove's flood
Is worth a king's good."

Sometimes, however, the waters rise with such rapidity and violence as to be very destructive.

The Erewash rises in Nottinghamshire, near the village of Kirkby, and flowing west-south-west for about three miles reaches the border of Derbyshire, and then flows, first south-west and then south by east along the boundary of the two counties into the Trent. Its whole course is about 20 miles. The Mease rises in Leicestershire, near Ashby-de-la-Zouch, and flows first south-south-west, then west, and then north-north-west into the Trent. Its course, which is about 20 miles, is for a short distance in the detached portion of Derbyshire, partly on the border of the county, and partly beyond the border in the counties of Leicester and Stafford.

The Trent crosses Derbyshire in a direction nearly north-east. It touches the border five or six miles north-east of Lichfield, just at the point where the Mease falls into it, and flows about 10 miles nearly north, along the border of Derbyshire and Staffordshire, past Burton-upon-Trent, in Staffordshire, near which, after receiving the Dove, it quits the border and runs nearly due east through Derbyshire for about 11 miles to the border of Leicestershire. It then turns east-north-east and runs for about 10 miles along the border, separating Derbyshire from Leicestershire and Nottinghamshire, till it receives the Erewash, after which it quits Derbyshire altogether. The Derwent falls into it about 5 miles above the junction of the Erewash. About 31 miles of the course of the Trent are thus upon or within the Derbyshire border. The Trent is navigable from Burton-upon-Trent, but in 1805 the navigation was given up by agreement with the proprietors of the Trent and Mersey Canal, which runs by its side, and the navigation of the river now commences at the junction of the Derwent.

The Goyt rises near Axe Edge, and flows north-north-west along the border of Derbyshire and Cheshire, about 14 miles, till its junction with the Etherow, which has a south-west course of about 15 or 16 miles chiefly on the border of the same counties. The springs of the Etherow are in Yorkshire and Cheshire. The united stream of these two rivers flows into the Mersey at Stockport. They receive many small streams from the adjacent part (the High Peak) of Derbyshire. The Rother rises in the East Moor, a mile or two east of Chatsworth Park, and flows eastward about 8 miles to Chesterfield, where it turns to the north-east and flows into Yorkshire. About 23 miles of its course belong to Derbyshire. It joins the Don at Rotherham in Yorkshire. The Dawley (10 miles long) is its only Derbyshire tributary that requires notice. This rises on the Nottinghamshire border and flows north past Bolsover. The Sheaf, which joins the Don at Sheffield, the Wallin, the Poulter, and the Ryton, whose waters flow directly or ultimately into the Idle, rise in Derbyshire.

Derbyshire has several canals and railroads. The canals are—1, Grand Trunk, or the Trent and Mersey Canal; 2, the Erewash Canal;

3, the Derby Canal; 4, the Cromford Canal; 5, the Nutbrook Canal; and 6, the Chesterfield Canal. The Peak Forest and the Ashby-de-la-Zouch Canals have a small portion of their extent just within the county, but rather belong, the former to Cheshire and the latter to Leicestershire. We shall not therefore notice them here.

The Trent and Mersey Canal belongs to Derbyshire from its commencement in the river Trent, at Wilden Ferry (at the junction of the Derwent), to Monk's Bridge, where the canal is carried for a mile and a quarter over the flat meadows of the Dove valley on an embankment 13 feet high, with aqueduct bridges over the Dove and one or two other streams, containing 23 arches of from 12 to 15 feet span: 12 of these arches are over the main branch of the Dove. This canal was begun in 1766, and its whole extent is 93 miles. It extends through Derbyshire, Staffordshire, and Cheshire.

The Erewash Canal commences in the Trent, midway between the junction of the Derwent and that of the Erewash River, and runs northward along the valley of the Erewash, first on the west and then on the east side of that river, and terminates in the Cromford Canal at Langley Bridge; that part of its course which is on the east side of the Erewash belongs to Nottinghamshire. Its whole length is nearly 11 miles. It has aqueduct arches over the Nut Brook and the Erewash River.

The Derby Canal is described under the town of DERBY.

The Cromford Canal commences in the Erewash Canal at Langley Bridge, and runs northward to the Codnor Park Iron-Works, following the valley of the Erewash, and having the first part of its course on the east side of that river in Nottinghamshire, and the latter part on the west side in Derbyshire. From Codnor it sends off a branch, two miles and a half or three miles long, along the valley of the Erewash, on the right or Derbyshire side of that river, to the village of Pinxton, while the main line of the canal turns westward to the valley of the Derwent, crossing the river Amber in its way; it then turns to the north-west, and follows the valley of the Derwent, first on the left and then on the right side of that river, to Cromford Bridge, where it terminates: the length of the canal is nearly 15 miles. Between the valley of the Erewash and that of the Derwent, this canal is carried through the higher ground by a tunnel more than a mile and a half long. There are three aqueduct bridges on the line of this canal. One is over the Erewash; one, Bull Bridge aqueduct, which is over the Amber, is 600 feet long and 50 feet high: the third aqueduct is over the Derwent, at Wigwell, and is 600 feet long and 30 feet high; the span of the river arch is 80 feet. A railway from Mansfield communicates with the Pinxton branch, and the Cromford and High Peak railway communicates with the main line of the canal near its termination at Cromford Bridge.

The Nutbrook Canal commences at the collieries at Shipley, on the right of the road from Derby to Mansfield, and runs nearly south for four miles and a half into the Erewash Canal. Several railways lead from the neighbouring collieries to the Nutbrook Canal, the conveyance of coal being its chief object.

The Chesterfield Canal commences in the tideway of the Trent, below Gainsborough, and has the greater part of its course in Nottinghamshire, and a small part in Yorkshire. It enters Derbyshire from Yorkshire near the village of Kilmarsh, in the valley of the Rother, and runs southward along that valley to Chesterfield. Its whole length is 46 miles, of which about 12 miles are in Derbyshire. Many railways communicate with the canal, and are intended to convey coal and iron from the collieries and iron-works.

The principal mineral railway is the Cromford and High Peak railway. The others are chiefly private property, and are designed to convey the produce of mines, collieries, and iron-works to the various canals. The Cromford and High Peak railway commences at the Cromford Canal, near its termination at Cromford, and runs in an irregular line north-west to the Peak Forest Canal, which it joins at Whaley Bridge, three or four miles west of Chapel-en-le-Frith. It passes near Wirksworth and Buxton. Its length is nearly 3½ miles, and it has six inclined planes.

The passenger railways of Derbyshire are chiefly connected with the Midland line, which has its great central station at Derby. The west branch of the Midland railway enters the county a short distance north of Burton, and proceeds in a direction generally northward past Derby and Chesterfield, a few miles beyond which it enters Yorkshire; its length within Derbyshire is about 40 miles. From Derby a branch is carried eastward to meet the Nottingham branch of the Midland at the Long Eaton station; its length in Derbyshire is about 9 miles. From the Ambergate station of the Midland railway a line called the Manchester, Matlock, and Midland Junction is carried westward through Matlock and along Darley Dale to Rowsley. The length of the Matlock line, which is wholly in Derbyshire, is 11½ miles. The North Staffordshire railway, which leaves the Midland at Burton, runs along the border of Derbyshire and occasionally within the county, but it belongs more properly to Staffordshire. A short branch of the North Staffordshire railway leaves the main line at Rocester, and runs near the boundary of Derbyshire and Staffordshire to the town of Ashbourne, about 7 miles. The Manchester, Sheffield, and Lincolnshire railway skirts the northern boundary of the county, and has a short branch to Glossop.

The great road from London to Manchester, Carlisle, and Glasgow enters Derbyshire at Cavendish Bridge, over the Trent, just above its junction with the Derwent, runs north-west through Derby and Ashbourne, and quits the county at Hanging Bridge, over the Dove. Two other roads to Manchester branch off from that just described; one at Ashbourne, which runs north-north-west through Buxton, and quits the county at Whaley Bridge; another at Derby, which runs through Matlock, Bakewell, and Chapel-en-le-Frith. Numerous other important roads pass through the county.

Geology and Mineralogy.—That part of Derbyshire which lies south of a line drawn through Ashbourne, Duffield, and Sandiacre is almost entirely occupied by the red marl or now red-sandstone, the formation which overspreads so large a portion of the midland counties. There are a few spots in which the magnesian limestone, which ordinarily underlies it, rises to the surface; and just on the Leicestershire border, near Ashby-de-la-Zouch, the coal-measures emerge from beneath it, and form one or two small detached coal-fields. The strata of the red marl present considerable variety; among them are some micaceous gritstone beds producing a good freestone; other strata are not concreted, but appear as sand, red, white, and yellow; others are more clayey, and from them bricks and tiles are made. The strata of the red marl formation are generally horizontal or nearly so. Several deposits of gypsum are found in this formation, and are quarried in several places, as at Darley Abbey, in the tongue of land formed by the Derwent and the Trent, and in the southern extremity of the county. The gypsum which is quite white, or only faintly streaked with red, is used by the potters of Staffordshire (as plaster of Paris) for their moulds; some fine blocks are selected for the turners of alabaster ornaments, and the inferior sort is used by plasterers for ordinary purposes or for making the plaster floors often seen in this county. Some of the best land in or near Derbyshire lies on the red marl; in general however it is inclined to be too tenacious and cold. This formation also occupies a very small portion of the county at its eastern extremity.

The newer magnesian or conglomerate limestone, which crops out from under the red marl of Nottinghamshire, and skirts it on its western border, extends into the eastern part of Derbyshire, where it occupies the part east of a line drawn north and south through Bolsover. The general colour is yellow, of various shades, from a bright gamboge to a light straw colour or white. Many of the beds have a granular texture, and cannot be calcined; they have generally passed with the inhabitants for gritstone rather than limestone. This limestone is quarried for building, also for flooring and staircases. Towards the bottom of the series are several beds of compact blue limestone, imbedded in blue clay, and abounding with shells. This blue limestone yields excellent lime: it is quarried at Bolsover, where also pipe-clay is obtained: the pipe-clay separates the limestone beds. The strata of the magnesian limestone form a better subsoil for arable than for grass land.

The coal-measures underlie the magnesian limestone, and crop out from beneath it on the west. These coal-measures form a portion of that important coal-field which occupies a considerable part of the west riding of Yorkshire, and extends into Nottinghamshire and Derbyshire, being bounded on the east by the magnesian limestone, and on the south by the red marl. The strata range from north to south, and dip to the east. The Derbyshire portion of this coal-field is east of a line drawn from between Hathersage and Sheffield to Little Eaton near Derby. There are twenty gritstone beds, some of them of great thickness, and numerous strata of slate-clay, as shale, bind, and clunch: some of the shale-beds contain rounded or ovate masses, and even thin strata of argillaceous ironstone, with impressions of mussel shells, and coaly impressions of vegetables. A hard argillaceous rock, called crowstone, forms in some places the floor of the coal-beds. Every variety of coal seems to be found in this field, hard stone coal, cannel, peacock, and caking coal. The beds which lie between the seams of coal are worked for various purposes. The workings of the ironstone are generally begun at the surface, and pursued until they become dangerous from the loose nature of the stratum in which they lie: the ironstone which is marked with impressions of mussel shells (called the mussel band) is worked as an ornamental marble. From the gritstone-beds are quarried grindstones for cutlers: the binds, where they are hard and black, are used as black chalk; others, when decomposed, make good brick earth: the clunch is sometimes of that kind which is used for fire-bricks; where it crops out to the surface it becomes soft clay. Potters' clay of various colours and qualities occurs in this coal-field.

Millstone-grit and shale form a series of strata, having an aggregate thickness of about 870 feet; the millstone-grit, 360 feet thick, forming the upper part, and the shale and its associated rocks, 510 feet, the lower part of the formation. The hills formed by it usually present a bold escarpment, crowned by rude piles of crags, exhibiting some of the wildest rock scenery of the district. The shale occupies a lower district between this and the carboniferous limestone, but in this lower tract are occasional insulated mountains, crowned with a cap of millstone-grit. Kinderhook is one of these. The shale contains some alternating beds of fine-grained siliceous grit and nodules of ironstone; and it has some subadjacent and apparently local beds of shale limestone, which afford a beautiful black marble.

Carboniferous or mountain limestone occupies the tract bounded on the south by the red marl, and on all other sides by the millstone-grit and shale just described. There are one or two places in the southern part of the county where the limestone crops out. On the eastern side of the county the strata dip under the shale; but on the western side, by a great fault, the lowest bed of the limestone is elevated and brought into contact on the same level with the shale. The limestone is divided into four beds by three intervening beds of toadstone. In each bed of this limestone thin beds of clay are found, with imbedded masses of toadstone, and various organic remains. The lowest bed, which is the most esteemed by the lime-burners, has very few dark coloured strata; but in the three upper beds these are more common, and the second bed contains some very fine black strata, which are quarried as black marble. The upper bed is also quarried as marble, and contains white chert or china-stone, which is extensively used in the Staffordshire potteries. The beautiful fluor spar called 'Blue John,' from which vases and other ornaments are made, is found in a mountain of limestone.

The outcrop of the carboniferous limestone forms the lead district of Derbyshire. Numerous veins have been worked in it chiefly for lead; but ores of zinc, iron, manganese, and copper also occur. Lead ore is found occasionally in the toadstone which intervenes between the limestone-beds, but commonly the veins are cut off by the toadstone-beds. The veins which contain lead have generally a direction east and west; some of them approach the perpendicular (rake veins); others are nearly horizontal (pipe veins), and are rather beds of spar and ore, lying between the strata of limestone, and in most cases connected with the surface by a rake vein.

The limestone strata of Derbyshire are subject to very remarkable derangements or faults. They are characterised also by numerous caverns and by the frequent engulfment of the streams by subterraneous courses termed swallow holes. The caverns appear to have been excavated wholly or chiefly by the agency of water. There are several varieties of the toadstone, which sometimes passes into ordinary basalt: among the substances inclosed are the quartz crystals locally termed Derbyshire diamonds.

Of the limestone caverns the most remarkable is that now generally known as 'Peak's Hole,' or the 'Devil's Cave,' near Castleton. It is situated at the extremity of a deep and narrow rocky chasm in the valley in which Castleton stands, where craggy projections hide it from the traveller until he approaches pretty near. The entrance is a tolerably regular arch of about 40 feet high and above 100 feet wide, extending in length nearly 300 feet. At the end of this vestibule, as it may be termed, the arch contracts, and the visitor is obliged to stoop until he emerges into a spacious vault, called the 'bell house.' A second contraction, where the rock closes almost down upon the surface of a stream of water which occupies the passage, conducts to a third cavern, said to be 200 feet wide, and in some parts 120 feet high: this is succeeded by a series of cavernous chambers at the extremity of the farthest of which the rocks close down upon the stream of water in such a way as to preclude all access to the caverns which are supposed to lie beyond. The water which thus obstructs farther progress is a stream engulfed at a spot called Perry-foot, three miles from Castleton, on the Manchester road; it re-appears in the innermost recess of the cavern, through the successive chambers of which it flows, and emerges into daylight at the entrance. After heavy rains this stream is so much swelled as to render it impossible to reach the farther part of the cavern. Eldon Hole is a perpendicular chasm in a limestone rock near Castleton more than 180 feet deep, with a sloping passage to an interior cavern or series of caverns. It is supposed that a second chasm of unknown depth descends from the bottom of this cavern. Another series of grottoes (Bagshaw Grottoes), extending about 2000 feet, adorned with stalactites, was first explored about the commencement of the present century. There are several other caverns in the Peak.

The mineral springs of Derbyshire are numerous and important. The most celebrated warm springs are those at Buxton and Matlock. There are also warm springs at Stony Middleton, where it is supposed that the Romans established a bath. The most celebrated of the sulphureous waters is at Kedleston Park, three miles north-west from Derby. They are valued for their antiscorbutic qualities. There are several chalybeate springs.

Soil, Climate, Agriculture.—On the high hills and moors of Derbyshire there are great tracts of rough pasture which with a moderate outlay might be improved or converted into arable land. In the valleys, or on the less abrupt hills, a very fertile red marly loam is frequently met with. Of this kind are the lands about Barton, Blount, and Ash, and in several places in the southern and eastern part of the county. The soil on the surface naturally partakes of the nature of the rocks which are found immediately below it; and where any particular stratum rises to the surface, or crops out as it is called, the soil is chiefly made up of the same earthy substances, which have been more or less decomposed by the action of the air and mixed with vegetable matter.

Most of the soils in the county may be ranked among the clays and loams of various degrees of fertility, there being but a very small proportion of sandy soils in Derbyshire. Where these occur, they are mostly alluvial, apparently washed out of the loam and brought

together by currents, or the decomposition of the grit and micaceous sandstone in the grit or limestone shale.

The climate of Derbyshire varies according to the situation and height of the land above the level of the sea. The quantity of rain that falls in the mountainous parts is much greater than that in the low country: at Chatsworth, for instance, the annual fall of rain is about 28·41, and at Derby 24·77 inches. The time of harvest is rather late in exposed situations, and is frequently much protracted by abundant rains in the month of October.

The wheat produced on the red land is good and heavy. When the wheat has failed during the winter, and looks poor and thin in spring, it used to be a common practice to sow barley amongst it; the mixed produce was called 'blend,' and was ground to a coarse meal of which bread was made for the labourers. Spring wheat has been found a better substitute, and blond is now seldom met with. Haver cake made of oatmeal is still a common bread of the labourers, although wheaten bread is now very generally preferred.

Potatoes are raised in considerable quantities, both in garden plots and in the fields, where they are planted in rows and moulded up with the plough. The produce on good loams, well manured, especially on land ploughed up from grass, is very great.

A large proportion of the lands is in permanent pastures, of which some are very rich. Derbyshire cheese is noted as of a good quality, and the best is often sold for Cheshire or Gloucester when made of the shape and colour of these cheeses. The common Derbyshire cheese is not generally coloured. It resembles some kinds of Dutch cheeses, and keeps well.

There are some very highly productive meadows along the course of the rivers in this county, but an improved system of embankment and irrigation is still wanting in many favourable situations. The meadows along the Dove and other rivers are from their situation very subject to sudden floods, which endanger the safety of the cattle grazing in them. Some of the upland pastures are very rich, and will fatten the heaviest oxen. There are many woods and coppices scattered through the county. The coppices are allowed to grow for 20 or 25 years before they are cut, in order that the poles may acquire a considerable size, and be proper for supporting the roofs and sides of excavations in mines and coal-pits, or fit to make ladders of.

The horned cattle of Derbyshire have no peculiar character. The various improved breeds are met with in the richer pastures, and hardier animals on the mountains. The sheep on the hills are similar to those found on the Cheviot Hills; in the valleys the Leicester and South Down breeds, and various crosses, are generally preferred by the best farmers. The Derbyshire breed of horses is good, and many are bred in this county which are fitted for the carriage and the saddle, as well as for the farm, and form an important article in the profits of some of the larger farms.

Divisions, Towns, &c.—The divisions of Derbyshire for civil purposes were anciently called wapentakes; and of these divisions the Domesday Survey mentions five: Scurvedale (Scarsdale), Hameston (supposed to be what is now called the High Peak Hundred), Morleston (Morleston), Walcress (supposed to be what is now the hundred of Repton and Gresley), and Apultre (Appletree); besides a district called Peche Fers (Peak Forest). A document of a somewhat later date (the 'Hundred Roll,' A.D. 1273) speaks of the wapentakes of Peck (Peak), Scurvedale, Apeltre, Repindon (Repington or Repton), Greslegh (Gresley), Littlechirch (Litchurch), and Wyrkesworth (Wirksworth). Other records speak of the hundreds of Risley (Gresley?), and Sawley. The present division is as follows. The Wirksworth division is still called wapentake: the others are called hundreds.

1. High Peak, north and north-west, and central; 2. Wirksworth west and central; 3. Scarsdale, east and central; 4. Morleston and Litchurch, south-east; 5. Appletree, south-west and central; 6. Repington or Repton and Gresley, south.

There is in Derbyshire only one parliamentary borough and market-town, Derby; the other market-towns are sixteen. Of the following an account will be found under their respective articles:—Alfreton, between Dorby and Chesterfield, Ashbourne, Ashover, near the East Moor, Bakewell, on the Wye, Belper, on the Derwent, Buxton near the head of the Wye, Chapel-en-le-Frith, in the High Peak, Chesterfield, on the Rother, Crich, between the Amber and Derwent, Ilkeston, in the valley of the Erewash, and Wirksworth, between Derby and Matlock. Of the other towns, namely, Cromford, Dronfield, Heanor, Tideswell, and Winster, with the town of Melbourne, we subjoin an account. There are several other places which formerly had markets.

Cromford is chiefly on the right bank of the Derwent; 15 miles N. from Derby; population of the township 1190. It lies in a deep valley, inclosed on the north, south, and west, by lofty limestone rocks. The late Sir Richard Arkwright erected here a spacious cotton-mill on the left bank of the Derwent; it is now occupied by the Messrs. Arkwright, his grandsons, who employ in these mills and those at Masson, a little higher up the Derwent, several hundred persons. The houses and mills are chiefly built of gritstone. The church is a plain building, begun by the late Sir R. Arkwright, and finished by his son. There are places of worship belonging to the Wesleyan Methodists; National and British schools; and almshouses for six poor widows. Lead-mines are worked in the neighbourhood;

lapis calaminaris is ground and prepared, and red lead manufactured. There is here a station of the Manchester and Matlock Junction railway. The Cromford canal terminates here, and the Cromford and High Peak railway joins the canal a short distance south of the town. The market is held on Saturday, and there are two fairs in the course of the year.

Dronfield is on the road between Chesterfield and Sheffield, about 30 miles N. from Derby: population of the township, 2469. The parish church is beautifully situated on a hill; it has a fine tower and spire, chiefly in the decorated style. There are meeting-houses for Quakers, Wesleyans, and Independents. Some manufactures are carried on, chiefly of iron goods, as railway wheels, cast-iron chains and nails, axes, chisels, and other edge-tools, and agricultural implements. The market has been discontinued.

Heanor is 9 miles N.E. from Derby: population of the township 3427. The church is of the early English style. There are Independent, Baptist, and Wesleyan and Primitive Methodist meeting-houses in the parish. Heanor is well situated for trade, the Erewash Canal passing through the parish, and the neighbouring district having many coal-pits. There are manufactories for cotton goods, hosiery, and bobbin-net lace. The market was on Wednesday, but has, we believe, been discontinued.

Melbourne, 8 miles S.S.E. from Derby; population of the town 2227. The church, which is partly Norman, contains several monuments of the Hardinge family. The Independents, Baptists, Wesleyan Methodists, and Swedenborgians have chapels. There are here a mechanics institute and a National school. A customary market is held on Saturday. Viscount Melbourne has a handsome seat here.

Tideswell is about 35 miles N.N.W. from Derby; population of the township 2635. It is a small town situated in a bottom amid bleak naked hills. The houses are low, irregularly situated, and ill-built. A rivulet of clear water runs through the town; the ebbing well, which is supposed to have given name to the town, has ceased to flow. The church is a fine building in the form of a cross, built about the middle of the 14th century. The chancel is lighted by nine richly ornamented gothic windows, and contains the monument of Robert Purglove, suffragan bishop of Hull in the reign of Mary, and founder of a Free school and almshouses for twelve poor people at Tideswell. The Roman Catholics, Independents, and Wesleyan and Primitive Methodists have places of worship in the town. The market is on Wednesday.

Winster is 24 miles N.N.W. from Derby: population of the township 928. This little town runs along the side of a steep eminence. The houses are built of limestone, and are partly thatched and partly covered with stone: they are intermingled with orchards and gardens. The church has been recently rebuilt. The Wesleyan and Primitive Methodists have chapels. The market is on Saturday. The inhabitants are chiefly engaged in mining. On the commons in the neighbourhood of Winster are numerous barrows.

The following are some of the more important villages, with their population in 1851, and a few other particulars:—

Ashford, 25 miles N.W. from Derby, population 777, adjoins Bakewell, of which parish it is a chapelry. The church is ancient. In the village are extensive marble works. There are also quarries of limestone, and lead mines. The scenery of the Wye about Ashford, particularly along Monsal Dale, is exceedingly beautiful, and is much resorted to by tourists and anglers. *Beauchief*, 32 miles N. from Derby, population 133, is noteworthy as containing some remains of Beauchief Abbey, a Premonstratensian monastery founded in 1183 by Robert Fitz Randolph. *Beighton*, 34 miles N. by E. from Derby, on the north-eastern border of the county: population of the parish, 1123. The church is ancient. There are Methodist chapels and a Free school. Scythes and reaping-hooks are largely manufactured here, and at Hackington, a hamlet to Beighton. At Birley is a spring of mineral waters, which has been much resorted to for bathing and drinking. The North Midland railway crosses the river Rother at Beighton by a very large and substantial bridge, and enters Yorkshire. There is a station here. *Bradwell*, a large village 34 miles N.N.W. from Derby: population, 1334. The inhabitants are chiefly miners; some hatmaking is carried on. The Wesleyan and Primitive Methodists and Unitarians have places of worship. The village possesses an Endowed Free school, and some parochial charities. Bradwell cavern is an extensive natural cavern containing many recesses or grottoes, and is remarkable for the beauty of its stalactites. *Brailsford*, a large village 7 miles W.N.W. from Derby: population of the parish, 708. The church is handsome and has a lofty tower. The Wesleyan and Primitive Methodists have places of worship, and there is a National school. *Brampton*, 27 miles N. from Derby: the parish is very extensive, being 7 miles by $6\frac{1}{2}$ miles: population, 4409. Besides the parish church there is a new church at New Brampton. The Wesleyan and Primitive Methodists have places of worship, and there is a National school. There are large factories of iron, earthenware, and needles. *Brimmington*, 26 miles N. by E. from Derby: population of the chapelry, 1103. There are here a church built in 1817, chapels for Wesleyan and Primitive Methodists, and a National school. *Castleton*, 35 miles N.N.W. from Derby: population of the township, 867. The church is ancient, and has a tower with eight bells. There is a Wesleyan chapel. In the parish are some lead

mines which employ many of the inhabitants. Twine-spinning is carried on. The village is chiefly dependent upon tourists and other visitors; the houses are mostly of a very poor description. At **Castleton** are the Peak and other caverns mentioned more fully elsewhere. **Peveril Castle**, on the summit of the lofty hill directly over the entrance to the Peak cavern, appears to have been erected by William Peveril, a natural son of William the Conqueror: only the keep of the castle now remains, and it is in a very ruinous condition. **Chellaston**, 4 miles S. by E. from Derby: population of the parish, 499. The church was rebuilt in 1842. The Wesleyans and Baptists have places of worship here. Gypsum is extensively worked. **Chelmorton**, 25 miles N.W. by N. from Derby: population of the chapelry, 238. The church is ancient; it contains a good stone font. The Independents, Primitive Methodists, and Unitarians have places of worship. There are some barrows in the vicinity. **Claylane**, 20 miles N. from Derby: population of the township, 2278. The Midland railway has a principal station here. The village is situated on elevated ground in the midst of an important mineral district. There are a church, a Wesleyan chapel, a British school, and a mechanics institute. There are here extensive collieries and iron-works. **Codnor** and **Loscoe**, 9 miles N.N.E. from Derby: population of the hamlet of Codnor, 1439; of Loscoe, 451. A church and school-house were erected in 1844. The Methodists and Baptists have places of worship. At Loscoe there is a colliery. The Erewash railway has a station at Codnor. **Codnor Park**: population, 735. The Butterly Iron Company have extensive iron-works and collieries here. Iron, lead, limestone, and coal are abundant. The railway runs to Codnor Park. Some remains of the walls of Codnor Castle are still standing. **Cubley** or **Big Cubley**, 13 miles W. from Derby: population, 387. The church is Norman, with a lofty tower. There is a National school. A market was formerly held here. **Darley**, 22 miles N.N.W. from Derby: population of the township, 1375; a village picturesquely situated on the left bank of the Derwent. The church is a spacious edifice of the Norman style; in the churchyard is a yew-tree of very large size. The Wesleyan Methodists have a chapel, and there is a National school. There are here extensive flax-spinning mills. **Darley Dale** is exceedingly beautiful, and of considerable extent. **Derby**, 7 miles N.N.E. from Derby: population, 1208. The church is in the early English style, and contains some good monuments. There are a Wesleyan chapel and a Free school; also some parochial charities. In the parish are extensive collieries. Iron-stone and cement are found. **Dethick**, 17 miles N. from Derby: population of the chapelry of Dethick and Lea, 866. The church is in the perpendicular style. The inhabitants are employed in lead-smelting, and the manufacture of hats and hosiery. There are Wesleyan and Unitarian chapels, and a Free school. **Duffield**, 4 miles N. from Derby, population of the township, 2926, is situated on the right bank of the river Derwent. The church, which has been lately restored, is a spacious and very handsome building, with a lofty spire. The Wesleyans, Baptists, and Unitarians have places of worship. In the neighbourhood are some good mansions. **Little Eaton**, 3½ miles N. from Derby: population of the chapelry, 692. Besides the church there are places of worship belonging to Independents and Wesleyan Methodists; also a National school. Paper mills and stone quarries give employment to many of the inhabitants. **Long Eaton**, 10 miles E. from Derby: population of the township, 933. Besides the church, which has been lately repaired, there is a Wesleyan chapel. Fancy net-making is carried on. At Long Eaton several lines of railway meet. **Eckington**, 31 miles N.N.E. from Derby: population of the parish, 4958. The inhabitants are chiefly occupied in the manufacture of nails, spades, edge-tools, and cutlery. There is an iron foundry. The church is large and ancient. Wesleyan and Primitive Methodists have places of worship. There is a Free school. A small market for butter and eggs is held on Friday. Two cattle fairs are held annually. **Edensor**, 24 miles N.N.W. from Derby: population of Edensor and Chatsworth township, 346. The ancient church has several costly monuments to members of the Devonshire family. The houses and cottages are modern, built by the present Duke of Devonshire in the Elizabethan, Italian, and Swiss styles. Chatsworth is in the parish of Edensor. **Eyam**, 30 miles N.N.W. from Derby: population of the township, 1079. The church is ancient, and covered with ivy: in the churchyard is an antique stone cross, richly carved. The village acquired a painful celebrity from the ravages of the plague in 1666: the tomb of Mrs. Mompesson, whose devotedness during the visitation is so well known, is in the churchyard. The country around Eyam is exceedingly picturesque, and abounds in caverns and rocky scenery. There are many quarries and mines. Some druidical remains exist in the neighbourhood. **Church Gresley**, population 1257, and **Castle Gresley**, population 190, situated 12 miles S.S.W. from Derby. Besides the church, which is ancient, there are chapels belonging to Wesleyan and Primitive Methodists. The inhabitants are chiefly employed in the collieries, potteries, and fire-brick works. **Hartington**, 22 miles N.W. from Derby: population of the parish, 2089. The church is old. The Wesleyan Methodists have a place of worship. A market for butter and eggs is held on Wednesday. In the neighbourhood are tumuli and other antiquities. **Hathersage**, 32 miles N.N.W. from Derby, population of the township, 832, is situated in a wild mountainous district. The church is in the perpendicular

style; in it are several curious old tombs. In the churchyard, according to local tradition, Little John, the companion of Robin Hood, was buried; two upright stones about 11 feet apart are said to mark the grave. The Wesleyans and Roman Catholics have chapels. Needles, pins, edgetools, and mill-stones are manufactured here. **Heage**, 9 miles N. from Derby: population of the chapelry, 2278. The chapel of ease was enlarged in 1836. There are Independent and Wesleyan and Primitive Methodist chapels, a Free school, and a National school. The iron, marble, and stone works are on an extensive scale. On the Cromford Canal are large warehouses and wharfs. **Higham**, population 417: about 15 miles N. by E. from Derby. A market formerly held here was discontinued in 1785; the market-cross is still standing. A cattle fair is held in January. The Wesleyan Methodists have a place of worship. The parish possesses Free and Infant schools, and several parochial charities. **Holbrook**, 5½ miles N.E. from Derby: population of the chapelry, 981. The church was rebuilt in 1841, by W. Evans, Esq., M.P., who also supports a Free school and an Infant school. The Independents and Methodists have chapels here. There are several stone quarries of considerable extent. In the neighbourhood are some good mansions. **Hope**, 35 miles N.N.W. from Derby: population of the township, 429. The church is ancient and very handsome. The Wesleyans have a chapel. There are a National school and some parochial charities. The inhabitants are employed in the quarries and cotton-mills. **Ironville**, 12 miles N.N.E. from Derby; the population of the ecclesiastical district, formed in 1850, was 2276 in 1851. Ironville is a busy and populous district. The inhabitants are employed in the iron-works, smelting, &c. There are National and Infant schools, and a mechanics institute. **Killamarsh**, 32 miles N.N.E. from Derby: population, 1070. The church, which is of the Norman style, stands outside the village; the chancel has been lately rebuilt. There is an Industrial Free school. Collieries and iron-works give employment to many of the inhabitants. The Chesterfield Canal passes through the village. **Measham**, 15 miles S. from Derby: population of the township, 1607. The church is large and handsome. There are Wesleyan Methodist and Baptist chapels, and National and British schools. Several silk-mills are in the village. **Middleton**, population 1012, about 15 miles N.N.W. from Derby, possesses a small chapel of ease, and chapels for Independents and Wesleyan and Primitive Methodists. There are several marble quarries. **Stoney Middleton**, 29 miles N.W. from Derby: population, 593. The chapel of ease was built in the last century. There are chapels for Wesleyan Methodists and Unitarians, and an Endowed school. The village is picturesque, and the scenery in the vicinity is exceedingly beautiful. In the neighbourhood are smelting-works and limekilns. **Milford**, 6 miles N. from Derby: population of the ecclesiastical district, 1933. Besides the church there are Wesleyan and Primitive Methodist chapels, and schools founded by the Messrs. Strutt. There are extensive cotton and bleaching-works, and an iron-foundry, in which all the machinery for the cotton-mills is cast and made. Gas-works at Milford supply the town of Belper. **Monyash**, 24 miles N.W. from Derby: population, 473. The church is ancient. The Primitive Methodists and Quakers have chapels, and there is an Endowed Free school. The market is held on Thursday; fairs are held in February, September, and October. **New Mills**, a large village, 39 miles N.W. from Derby: population of the ecclesiastical district 4366. Besides the church, there are Wesleyan, Primitive, and Association Methodist chapels, also a handsome Roman Catholic chapel of recent erection, in the early English style. The inhabitants are mostly employed in the extensive calico-printing works. **South Normanton**, 14 miles N.N.E. from Derby: population of the parish, 1340. The church, which is spacious, is of the decorated style. There are chapels for Primitive and Wesleyan Methodists, and a National school. **Ockbrook**, 5 miles E. from Derby: population, 1763. The church, partly Norman, was repaired and enlarged in 1835. There are chapels for Wesleyan and Primitive Methodists, and a National school. The Moravians have a large establishment, comprising, besides dwellings, schools for boys and girls, a chapel, &c. **Pleasley**, on the border of Nottinghamshire, 26 miles N.E. by N. from Derby: population, 654. The church is of considerable antiquity. There is a mechanics institute. A market was formerly held here; the market-cross is still standing. In Pleasley Vale are two large cotton and merino-mills. **Repton**, 6½ miles S.S.W. from Derby: population, 1863. The church is remarkable for its elegant spire 188 feet in height. The chancel, partly of Anglo-Saxon date, is more ancient than the other parts of the building, except the crypt, which is probably the most perfect remaining example of an Anglo-Saxon crypt. The Wesleyans and Independents have places of worship. Part of the refectory of the Augustinian priory is still standing, and the gateway forms the entrance of the Grammar school. This school was founded in 1556 by Sir John Porter, who devoted all his estates in Derbyshire and Lancashire to founding and endowing this school, and an hospital at Etwall. The income from the endowment is about 3000*l.* a year; there are several exhibitions to Oxford and Cambridge. The school is free to the sons of inhabitants of Etwall and Repton parishes, and to eight scholars on the foundation, appointed by the governors in rotation. The number of scholars in 1853 was 60, of whom 34 were free. Repton is a place of great antiquity. It was the

residence of the Mercian kings, whose place of sepulture was the original priory. *Ripley*, 10 miles N. by E. from Derby: population of the chapelry, 3071. Besides the church, erected in 1820, there are chapels for Baptists, Wesleyan Methodists, and Unitarians, and a National school. The town is well built, and contains some good houses and shops. A customary market is held on Saturday: fairs are held on Wednesday in Easter week and the 23rd of October. In the neighbourhood are several large collieries and a cotton factory; also the extensive works of the Butterly Iron Company. The Cromford Canal and the Erewash railway pass close by Ripley. *Sandiacre*, 9 miles E. from Derby: population, 1065. Besides the church, there are places of worship belonging to the Wesleyan and Primitive Methodists; also a National school. The principal manufacture is that of lace and warp net. There is a starch factory. The Erewash railway and canal pass through the village. *Sawley*, 8½ miles E. by S. from Derby: population of the township, 1001. Besides the church, which was enlarged in 1838, there are chapels belonging to the Baptists and Wesleyan Methodists, and a National school. The Midland railway has a station here. *Stapenhill*, 11 miles S.S.W. from Derby: population, 2604; is situated on the right bank of the Trent opposite the town of Burton-upon-Trent. The church, an elegant edifice, standing on an eminence, was erected in 1830, at the expense of the vicar. There are a Wesleyan chapel, and National and Infant schools. *Staveley*, 28 miles N.N.W. from Derby: population, 3998, is a busy and populous place. There are very extensive iron-works and coal-mines. The Chastorfield Canal passes through the village; and there are tram-roads from the collieries. Staveley is a station on the Midland railway. The church contains some ancient monuments and stained-glass windows. There is a chapel for Methodists. A good school-house has been recently erected by the Duke of Devonshire. At Netherthorpe, a hamlet of Staveley, is an Endowed Grammar school, founded in 1586. *Tansley*, 18 miles N. from Derby, in the parish of Crich: population, 593. There are here a church, erected in 1840, a chapel for Wesleyan Methodists, and a National school. There are several cotton-mills and a small-ware manufactory. *Tickenhall*, or *Ticknall*, 8 miles S. from Derby: population, 1241. The village is a mile and a half long. There are here a church, a very handsome structure, rebuilt in 1812, chapels for Wesleyan Methodists and Baptists, an Endowed school, and an hospital for decayed housekeepers. In the neighbourhood are extensive lime-kilns. *Whittington*, 26 miles N. by E. from Derby, and 2½ miles from the Chesterfield station of the Midland railway: population, 874. In addition to the church, there are chapels belonging to the Wesleyan and Primitive Methodists. The Grammar school, founded in 1674, has an income from endowment of 63*l.* a year, and is free to 30 poor children. The number of scholars in 1852 was 80. There are manufactures of stone bottles and earthenware. *Whitwell*, 34 miles N.N.W. from Derby: population, 1355. The church, which is spacious, is cruciform, and contains several ancient monuments. There is a National school. The village is scattered, and the population chiefly agricultural. At Steeley Farm, one mile and a half from Whitwell, are the picturesque remains of a Norman church. *South Wingfield*, 14 miles N. by E. from Derby: population, 1092. Besides the church there is a Wesleyan chapel; the parochial charities are of considerable value. A castellated manor-house was erected at Wingfield about the middle of the 15th century by Ralph Cromwell, secretary to Henry VI. The ruins are now greatly dilapidated, but are still very beautiful. The inhabitants are chiefly employed in framework knitting. *Youghreave*, 21 miles N.N.W. from Derby: population of the parish, which is very extensive, 3764. The church, which is partly Norman, contains a curious font. There are two Dissenting meeting-houses. On the Derwent, at Youghreave, is a large paper-mill. In the parish are many antiquities of the British period.

Divisions for Ecclesiastical and Legal Purposes.—Derbyshire is in the diocese of Lichfield: it constitutes the archdeaconry of Derby, which is subdivided into 19 rural deaneries. According to the 'Census of Religious Worship,' taken in 1851, it appears that there were then in the county 776 places of worship, of which 404 belonged to various bodies of Methodists, 250 to the Established Church, 45 to Independents, 39 to Baptists, and 38 to minor bodies. The total number of sittings provided was 184,093. By the Poor-Law Commissioners the county is divided into nine Unions: Ashbourne, Bakewell, Belper, Chapel-en-le-Frith, Chesterfield, Derby, Glossop, Hayfield, and Shardlow. These Unions include 272 parishes and townships, with an area of 509,220 acres, and a population in 1851 of 259,967; but the boundaries of the Unions are not strictly co-extensive with those of the county.

Derbyshire is in the midland circuit: the assizes and the quarter sessions are held at Derby, except the Easter sessions, which are held at Chesterfield. Until the year 1569 this county and Nottinghamshire formed but one shrievalty. Until the reign of Henry III. the assizes for both counties were held at Nottingham: afterwards, until Derby was made a distinct shrievalty, they were held alternately at Nottingham and Derby. County courts are held at Alfreton, Ashbourne, Bakewell, Belper, Chapel-en-le-Frith, Chesterfield, Derby, and Wirksworth.

Derbyshire has some peculiar laws and regulations of very high

antiquity in reference to the working of the lead-mines. The principal part of the county where lead ore is found in any considerable quantity is called the 'King's Field,' and comprehends nearly all the wapentake of Wirksworth and a considerable part of the High Peak hundred. The 'King's Field' has been from time immemorial let on lease. The lessees have each in his respective district a steward and barmasters. The steward presides as judge in the barmote courts, and, with 24 jurymen, chosen every half-year, determines all disputes which arise respecting the working of the mines. Debts incurred in working the mines are cognisable in these courts. The courts meet twice a year, or oftener if need be. The court for the High Peak district meets at Monyash, that for the wapentake district at the town of Wirksworth. The office of the barmaster is principally to put miners into the possession of veins that they have discovered, and to collect the proportion of ore to which the lessee of the crown or the lord of the manor has a claim.

There are four members of parliament returned for the county (two for the northern and two for the southern division), and two for the borough of Derby.

History and Antiquities.—Before the Roman conquest Derbyshire appears to have been included in the territory of the Coritani, who, with the Cornabii, occupied the whole of the midland district from the Lincolnshire coast to the upper part of the Severn and the Dec. Upon the conquest of South Britain by the Romans, and its division into provinces, Derbyshire was included in the province of Flavia Caesariensis, not (as Pilkington, and after him, Messrs. Lysons state) of Britannia Prima.

The barren moors of this county abound in masses of gritstone; and single stones of vast size appear above the surface: many tors (as Mock Beggar Hall, on Stanton moor, between Winster and Bakewell, Robin Hood's Mark, on Ashover common, &c.) and rocking stones have been found, and many rock basins; but all these, to which it was once common to ascribe a druidical origin, seem referrible, like the granite tors of Cornwall and Devonshire, rather to natural causes. There are however many circles of stones, some upright stones, and tumuli or barrows of earth and stones (called in Derbyshire 'lows'), and some rude military works which are unquestionably memorials of the early inhabitants. The most remarkable of these monuments is the stone circle of Arbelow, or Arbor-low, 5 or 6 miles north-west of the town of Winster. An elliptical area of 52 yards by 46 (having the greater diameter in a direction north and south), is inclosed by a ditch 6 yards broad, and an outer bank formed of the soil thrown out from the ditch, 5 yards high on the inside. About 30 rough unhewn stones about 6 to 8 feet long by 3 feet broad, and one foot thick, lie irregularly round the inclosure, having their smaller ends pointing towards the centre: there is reason to think these once stood obliquely on one end. About 14 smaller stones are intermingled with these in an irregular manner, and there are two stones lying near the centre, one of which is larger than any other within the area. Near this circle are some tumuli, one of which is of large size. Numerous tumuli occur on Stanton Moor, north of Winster, where are also many rocking stones, locally called roo-tors, and some upright stones. The tumuli and other primeval antiquities of this county are fully described in Bateman's 'Vestiges of the Antiquities of Derbyshire.'

The ancient British road, the Rykeld-street, and the Roman road, which usually coincided with it, cross this county in its whole extent from south-west to north-east, from the borders of Staffordshire to those of Yorkshire. Chesterfield has been supposed to be a Roman station, the Lutudarum of Ravennas; and the first part of the name of the town (Chester, which with its kindred forms cester and easter usually indicates the site of a Roman station), and the discovery of Roman coins there, give probability to the supposition. A second Roman road has been traced from Brough in Hope Dale to Buxton, both of which are supposed to have been Roman stations. At Brough three sides of the station, which was an oblong 310 feet by 270 feet, are still perfect; and the foundations of a temple and another large building, with other antiquities, have been discovered. At Buxton several Roman baths have been discovered, and three of their roads meet here. Another Roman road, locally designated Long-lane, runs through the county from the river Dove near Bocester, which from its name was probably a station, to Derventio, and appears to have continued in the same line thence into Nottinghamshire. There are some traces of other roads.

Derventio, now Little Chester, appears to have been the most considerable Roman station in the county. Melandra Castle station is on a moderate elevation at the meeting of two mountain streams: it is nearly square, 366 feet by 336 feet; the ramparts and part of the ditch still remain, and the gates and the site of the Pratorium may be discovered: there are the foundations of many buildings on the side sloping to the water. It has been conjectured that there were Roman stations at several other places in the county.

Of Roman antiquities the most remarkable are an altar preserved at Haddon Hall, a silver plate found in Risley Park, and the pigs of lead found near Matlock. In the Saxon division of England, Derbyshire was comprehended in the kingdom of Mercia; and Repandun, or Repton, on the south bank of the Trent, was one of the royal residences. Derbyshire was overrun by the Danes in their great invasion of England in the time of Ethelred I. and Alfred. At the

Norman conquest considerable grants of land within the county were made to Henry de Ferrers, whose son Robert was the first Earl Ferrers. Another Robert, son of the first Earl Ferrers, was created Earl of Derby in 1138. William Peveril, a natural son of the Conqueror, received also considerable grants. He built the castle of the Peak, and he or his son is supposed to have built the original Bolsover Castle. [BOLSOVER.] The Peak Castle is now an 'ill-shapen ruin,' situated on the verge of the rocky precipice that forms the roof of the Peak cavern at Castleton. In the civil war in the time of John, William earl Ferrers, who had obtained a new grant of the earldom of Derby, and who was one of the king's party, took the castles of the Peak and Bolsover. In the reign of Henry III. the Earl of Ferrers and Derby was one of the most active of the insurgent barons; but having been worsted and taken prisoner by Henry, the king's nephew, at the battle of Chesterfield, he was deprived of the earldom of Derby, with the vast possessions attached to it. These were afterwards given to Edmund, earl of Lancaster, son of Henry III., and thus eventually formed part of the domains of the duchy of Lancaster. No public events of interest are connected with Derbyshire until after the Reformation. The earldom of Derby was conferred by Henry VII. upon his supporter, Lord Stanley, in whose family it has ever since continued.

Derbyshire contains various relics of the middle ages—baronial, ecclesiastical, and monastic. Besides the Peak Castle there are some remains of Codnor Castle, near Heanor, the ancient residence of the Greys of Codnor; these remains are partly converted into a farmhouse. Haddon Hall, the seat of the Duke of Rutland, is on the left bank of the Wye, below BAKEWELL. Hardwick Hall is a curious specimen of the style of domestic architecture in Elizabeth's reign, and has remained unaltered since the time of its erection; it is between Chesterfield and Mansfield, and belongs to the Duke of Devonshire. Some of the furniture is perhaps older than the house itself, and was removed from the old hall, now in ruins, near the present mansion. Hardwick contains some embroidery done by Mary queen of Scots, who was imprisoned here and at Chatsworth and South Wingfield for some time. South Wingfield manor-house was built in the reign of Henry VI., and ruined in the civil wars of Charles I.: the remains present some beautiful features.
